Eugenoform (*u-jen'-o-form*). The sodium salt of eugenolcarbinol; it is an antiseptic and bactericide. Dose, 8–15 gr. (0.5–1 gm.).

Eugenol. (See Illus. Dict.) Syn., *Eugenic acid; Caryophyllic acid; Para-oxy-meta-methoxy-allyl benzol.* **E.-Acetamid,** $C_{12}H_{15}O_3N$, a crystalline substance obtained from interaction of eugenol-sodium and acetic acid followed by heating with ammonia; soluble in water and alcohol; melts at 110° C.; used in the form of a fine powder as a local anesthetic and wound antiseptic. **E. Benzoate, E., Benzoyl-.** See *Benzoyl-eugenol.* **E. Cinnamate, E., Cinnamyl.** See *Cinnamyl-eugenol.*

Eugoform (*u'-go-form*). A grayish-white, nearly odorless, fine insoluble powder obtained by the acetylization of the product of the action of formaldehyd on guaiacol. It is recommended as a dusting-powder or in ointments (2.5% to 10%) in skin-diseases. Syn., *Acetylized guaiacol-methylene.*

Eulactol (*u-lak'-tol*). A dietetic preparation of milk and eggs.

Eulexin (*u-leks'-in*). A proprietary remedy for diabetes mellitus; it is said to consist of jambul, Paraguay tea, cascara sagrada, aromatics, and glycerin. Dose, 1–8 c.c. every 4 hours.

Eulogia (*u-lo'-je-ah*) [εὐλογία, a euphemistic term (Mod. Gr.)]. Smallpox.

Eulysin (*u'-lis-in*). 1. A greenish-yellow resin found with bilin in bile. 2. $C_{24}H_{36}O_3$, a yellow, fatty mass obtained as a transformation-product of decacrylic acid.

Eumenol (*u'-men-ol*). A nontoxic fluid extract of *Aralia cordata*, Thunb., China (Tang-Kwei), Japan (Tsiku-Setz or Nin-Yin, Chima-Kina of the Ainos). It is said to be an efficient emmenagog. Dose, 1 teaspoonful (5 cm.) 3 times daily.

Eunatrol (*u-nat'-rol*). Oleate of sodium, recommended as a cholagog. Dose, 1 gm. twice daily.

Eunol (*u'-nol*). A preparation of naphthols and eucalyptols; it is bitter, insoluble in water, readily soluble in ether, alcohol, chloroform, or olive oil. It is used in the treatment of skin-diseases.

Euonymin. (See Illus. Dict.) A crystalline glucosid obtained from the bark of *Euonymus atropurpureus*, Jacq. It forms a brownish powder slightly soluble in water, readily soluble in alcohol or ether. It is used as a purgative. Dose, ½–3 gr. (0.03–0.2 gm.). Syn., *Euonymina.* **E., American, Brown.** See *Euonymin* (1) (Illus. Dict.). **E., American, Green,** a resin from *Euonymus atropurpureus;* a green powder soluble in water.

Euonymit (*u-on'-im-it*). See *Dulcitol* (Illus. Dict.).

Euphorbism (*u-forb'-izm*). Poisoning by means of species of *Euphorbia;* it is marked by acute inflammation of the digestive tract and asphyxia.

Euphorbon (*u-forb'-on*). $C_{13}H_{22}O$. A neutral substance found by Flückiger as a constituent of euphorbium.

Euphthalmin (*ūf-thal'-min*) [εὖ, well; ὀφθαλμός, the eye]. $C_{16}H_{25}NO_3HCl$. The hydrochlorid of the mandelic acid derivative of β-eucain. It is a colorless crystalline powder, soluble in cold water and used as a mydriatic in 2% to 10% solutions.

Euphthalminized (*ūf-thal'-min-īzd*). Said of an eye in which mydriasis is effected by means of euphthalmin.

Eupion (*u'-pe-on*) [εὖ, well; πίων, fat]. A constituent of wood-tar; a mixture of the lower members of the paraffins forming a yellow liquid. **E., Amber,** oil of amber. **E., Animal,** a limpid oil with fragrant odor and pungent, sweet taste, obtained from Dippel's animal oil by distillation and continued rectification.

Eupione (*u'-pe-ōn*). C_4H_8. A volatile yellow oil produced by fractional distillation of caoutchouc. Sp. gr., 0.69; boils at 14.5° C.; soluble in alcohol. Syn., *Caoutchene.*

Eupyrin (*u-pi'-rin*). A compound of vanillin-ethyl carbonate and paraphenetidin; tasteless yellow crystals soluble in water; used as an antipyretic. Dose, for adults, 15–24 gr. (1.0–1.5 gm.); for children, 5–8 gr. (0.3–0.5 gm.).

Euquinin (*u-kwin'-in*). Quininethylcarbonate; a crystalline, tasteless compound. Dose, 5–30 gr. (0.32–2 gm.).

Euresol (*u'-re-sol*). The commercial name of resorcin monacetate, a honey-like mass of an oily nature; dissolved in acetone it is recommended in skin-diseases.

Eurobin (*u'-ro-bin*). The commercial name of chrysarobin triacetate; it is insoluble in water, but dissolves freely in acetone, chloroform, and ether. It is used in a 2% to 3% ointment in the treatment of skin-diseases.

Eurodontia (*u-ro-don'-she-ah*) [εὐρώς, decay; ὀδοῦς, a tooth]. Dental caries.

Euromesocephalus (*u-ro-mez-o-sef'-al-us*) [εὐρύς, broad; μέσος, the middle; κεφαλή, the head]. Having a long bitemporal diameter.

Europisocephalus (*u-ro-pis-o-sef'-al-us*) [εὐρύς, broad; ὀπίσω, behind; κεφαλή, the head]. Having the skull broad in the occipital region.

Europium (*u-ro'-pe-um*). The provisional name given by Eug. Demarcay to a supposed new element. The atomic weight is 151, approximately, and it lies midway between gadolinum and samarium.

Europrocephalus (*u-ro-pro-sef'-al-us*) [εὐρύς, broad; πρό, in front; κεφαλή, the head]. Having a skull broad in front.

Eurybin (*u'-re-bin*) [*Eurybia*, mother of the Titan Astræus]. A yellowish, bitter, amorphous powder, soluble in water and alcohol, obtained from *Olearia moschata*, Hook.

Eurygenesis (*u-re-jen'-e-sis*) [εὐρύς, broad; γεννᾶν, to produce]. The origin of man by the amelioration of species precursors.

Eurygnathism (*u-re-nath'-izm*). The condition of having large jaws.

Eurygnathus, Eurygnathous (*u-re-nath'-us*) [εὐρύς, broad; γνάθος, jaw]. Large-jawed.

Eurynter (*u-rint'-ur*) [εὐρύνειν, to make broad]. An instrument used in dilating. Cf. *Colpeurynter*.

Euryon (*u'-re-on*) [εὐρύς, broad]. The craniometric point at the end of the greatest transverse diameter of the skull.

Eurysma (*u-riz'-mah*) [εὐρύνειν, to dilate]. 1. Dilation. 2. A structure which has undergone dilation.

Eurythrol (*u-rith'-rol*). An extract from the spleen of oxen, having a honey-like consistency and an aromatic taste and odor. Dose, 1 to 2 teaspoonfuls in soup daily.

Eusemia (*u-se'-me-ah*) [εὖ, well; σῆμα, a sign]. A favorable sign or prognostic.

Eustachitis (*u-sta-ki'-tis*). Inflammation of the eustachian tube.

Eustachium (*u-sta'-ke-um*). The eustachian tube.

Eutectic (*u-tek'-tik*) [εὖ, well; τίκτειν, to produce]. 1. Well combined, stable; applied to a chemic combination which in passing from a liquid to a solid state acts as a simple body, maintaining a constant temperature and its constituent substances remaining associated during solidification. 2. [εὖ, well; τήκειν, to melt.] Melting easily; said of a compound substance which has a lower fusing-point than its constituents have separately. 3. A eutectic substance.

Eutexia (*u-teks'-e-ah*). 1. The condition of being stable and well combined. 2. The quality of fusing at a low temperature.

Euthermic (*u-thurm'-ik*) [εὖ, well; θέρμη, heat]. Promoting warmth.

Euthymol (*u-thi'-mol*). A nontoxic liquid antiseptic said to contain oils of eucalyptus and wintergreen, extract of wild indigo, boric acid, menthol, and thymol. It is used as a spray or internally in doses of 1 fld. dram (4 c c.) in water three or more times daily.

Eutocous (*u-tok'-us*) [εὖ, well; τόκος, childbirth]. 1. Having an easy delivery. 2. Prolific.

Eutrichosis (*u-trik-o'-sis*) [εὖ, well; θρίξ, hair]. A healthy, normal development of the hair.

Euxanthate (*u-zan'-thāt*). A salt of euxanthic acid.

Euxanthone (*u-zan'-thōn*). $C_{13}H_8O_4$. A substance obtained from euxanthin by heat or by action of sulfuric acid, occurring as pale yellow needles or scales soluble in hot alcohol, other, or alkalis, melting at 232° C.

Evacuator (*e-vak'-u-a-tor*) [*evacuare*, to empty]. An apparatus fitted to a catheter for washing out crushed calculi in lithotrity.

Evagination (*e-vaj-in-a'-shun*) [*ex*, out of; *vagina*, a sheath]. Protrusion from a sheath or invaginating structure. French, *évagination*. Cf. *Invagination*.

Evalvate (*e-val'-vāt*). Destitute of valves; evalvular.

Evaporometer (*e-vap-or-om'-et-ur*) [*evaporare*, to evaporate; μέτρον, measure]. An apparatus for the study of the evaporation from cultivated plants and soils under the influence of different conditions of meteorology, soil, and culture.

Evenimation, Evenomation (*e-ven-e-ma'-shun, -o-ma'-shun*) [*e*, from; *venom*]. The process of counteracting the effects of a venom.

Evidement (*a-ved-mon(g)*) [Fr.]. Splitting open the foci of disease and scraping them clean with the sharp curet.

Evil. (See Illus. Dict.) **E., Aleppo.** See under *Aleppo* (Illus. Dict.). **E., Fox,** alopecia. **E., King's,** scrofula.

Evittate (*e-vit'-āt*) [*e*, out of; *vitta*, a band]. Destitute of bands or stripes.

Evolution. (See Illus. Dict.) **E., Threefold Law of** (Huxley): (1) Excess of development of some parts in relation to others. (2) Complete or partial suppression of parts. (3) Coalescence of parts usually distinct.

Exanthem. (See Illus. Dict.) **E., Forchheimer's,** a maculopapular, rose-red eruption on the soft palate and uvula regarded by Forchheimer as characteristic of rubeola in the absence of any cutaneous eruption. **E., Manning's,** septicemic exanthem, a grave complication of scarlatina and diphtheria.

Exanthropes (*eks-an'-thro-pēz*) [ἐξ, out of; ἄνθρωπος, man]. Sources of disease originating externally.

Exanthropic (*eks-an'-throp-ik*). Situated external to the human body; relating to exanthropes. Syn., *Extra-anthropic*.

Exasperate (*eks-as'-pur-āt*) [*exasperare*, to make rough]. Rough, covered with sharp points.

Excitoglandular (*ek-si-to-gland'-u-lar*). Arousing or exciting the glandular function.

Excitometabolic (*ek-si-to-met-ah-bol'-ik*). Exciting metabolic processes.

Excitomuscular (*ek-si-to-mus'-ku-lar*). Exciting muscular activity.

Excitor. (See Illus. Dict.) 2. A discharger. 3. An electrode which, placed in contact with a nerve, causes excitation.

Excortication (*eks-kor-te-ka'-shun*). See *Decortication* (Illus. Dict.).

Excursion (*eks-kur'-shun*) [*ex*, out; *currere*, to run]. The extent of movement, as of the eyes from a central position.

Excurvation. (See Illus. Dict.) 2. Outward curvature.

Exdermoptosis (*eks-durm-o-to'-sis*) [ἐξ, out of; δέρμα, the skin; πτῶσις, a falling]. Hypertrophy of the sebaceous glands with retention of the secretion.

Exercise. (See Illus. Dict.) **E., Cumulative,** that which is increased from day to day. **E., Double Concentric,** a variety of gymnastics in which movements of the patient are combated by the assistant. **E., Double Excentric,** a form of gymnastics in which movements of the assistant are combated by the patient. **E., Thumb,** a method of increasing adduction power in cases of low degree exophoria. It consists in the patient holding the thumb at arm's length on a level with the eyes and gazing fixedly at the nail while the thumb is brought accurately between the eyes as closely as possible without any failure of the eyes to converge. The instant divergence or diplopia is detected, withdraw the hand again to arm's length and thus continue these rhythmic exercises for several minutes, several times a day.

Exesion (*eks-e'-shun*) [*exedere*, to corrode]. The gradual superficial destruction of organic parts, particularly bone, in consequence of abscesses and other destroying agencies.

Exhauster (*eg-zawst'-ur*) [*exhaurire*, to pour out]. An instrument for the removal of soft cataracts.

Exhaustibility (*eg-zawst-e-bil'-it-e*). Capacity for being exhausted. **E., Faradaic**, the cessation of excitability in a muscle under repeated stimulation. Cf. *Reaction, Myasthenic.*

Exhaustion. (See Illus. Dict.) 2. The pharmaceutic process of dissolving out one or more of the constituents of a crude drug by percolation or maceration. **E., Heat, E., Solar.** See *Insolation* (Illus. Dict.). **E. Hypothesis.** See under *Immunity.*

Exhibition. (See Illus. Dict.) 2. The administration of a remedy.

Exinanition (*eks-in-an-ish'-on*) [*exinanitio*, an enfeebling]. Excessive exhaustion.

Exocardia (*eks-o-kar'-de-ah*) [ἔξω, out; καρδία, the heart]. Displacement of the heart.

Exocystis (*eks-o-sist'-us*) [ἔξω, without; κύστις, the bladder]. Prolapse of the urinary bladder.

Exogenous. (See Illus. Dict.) **E. Disease.** See *Exopathy.*

Exognathion (*eks-o-nath'-e-on*) [ἔξω, without; γνάθος, the jaw]. The alveolar process of the superior maxilla.

Exognosis (*ex-og-no'-sis*) [ἐξ, out of; γιγνώσκειν, to know]. Diagnosis by exclusion.

Exolution (*eks-o-lu'-shun*) [*exolvere*, to unloose]. Syncope, trance.

Exometra (*eks-o-met'-rah*) [ἔξω, outward; μήτρα, the womb]. Prolapse or inversion of the uterus.

Exomphalia (*eks-om-fa'-le-ah*) [ἐξ, out; ὀμφαλός, navel]. Protrusion of the navel.

Exomphalocele (*eks-om-fal'-o-sēl*) [ἐξ, out of; ὀμφαλός, the navel; κήλη, a tumor]. An umbilical hernia.

Exomphalos. (See Illus. Dict.) 3. An individual with an umbilical hernia or undue prominence of the navel.

Exoncoma (*eks-ong'-ko-mah*) [ἐξόγκωμα, anything swollen]. A protruding tumor.

Exoncosis (*eks-on-ko'-sis*). The formation of a prominent tumor.

Exopathy (*eks-op'-ath-e*) [ἔξω, out; πάθος, disease]. A disease having its origin in some cause external to the organism. Syn., *Exotery.*

Exorbitism (*eks-orb'-it-izm*). See *Exophthalmos* (Illus. Dict.).

Exosepsis (*eks-o-sep'-sis*) [ἔξω, outside; *sepsis*]. Sepsis originating outside the body.

Exosmometer (*eks-oz-mom'-et-ur*). See *Endosmometer* (Illus. Dict.).

Exosplenopexia, Exosplenopexy (*eks-o-sple-no-peks'-e-ah, -peks'-e*) [ἔξω, without; σπλήν, spleen; πῆξις, fixation]. An operation substituted for splenectomy, which consists in attaching the spleen in the abdominal wound and fixing it there by its capsule.

Exostosis. (See Illus. Dict.) Syn., *Osteoncosis; Osteoncus; Osteophyte.* **E. apophytica**, one existing at the point of insertion of a tendon or fascia. **E. bursata**, one originating in an articular surface and inclosed in a cartilaginous or synovial capsule. **E., Button-like.** See *E. eburnea clavata.* **E., Cancellous.** See *E., Parenchymatous.* **E., Cartilaginous**, one in which the bony and cartilaginous elements are equal in amount. **E., Cauliflower, E., Cellular.** See *E., Spongy.* **E., Dental**, a localized or diffuse hypertrophy of the cementum of a tooth; more correctly termed *hypercementosis.* **E. eburnea.** See *E., Ivory* (Illus. Dict.). **E. eburnea clavata**, small, round, flat growths on the cranium having the appearance of ivory buttons. **E., Epiphyseal**, one located on the epiphysis of a bone. **E., False**, an outgrowth from bone which has not the nature nor the constitution of bone. **E., Hyponychial.** See *E., Subungual.* **E., Laminar**, one made up of superimposed laminas. **E., Parenchymatous**, a bony tumor developed from the cancellous structure. **E., Parosteal**, one having its origin in the connective tissue. **E., Periosteal**, one having its origin in the periosteum. **E. spongiosa, E., Spongy**, one composed almost completely of spongy bone-tissue. **E. steatomatodes.** See *Osteosteatoma* (Illus. Dict.). **E., Subungual, E. subungualis**, a form originating beneath the nail.

Exotery (*eks-ot'-ur-e*). See *Exopathy.*

Exothermic (*eks-o-thur'-mik*) [ἔξω, outside; θέρμη, heat]. 1. Relating to the giving out of heat. 2. A substance which gives out heat in its production. Cf. *Endothermic.*

Exothyropexy (*eks-o-thi-ro-peks'-e*) [ἔξω, outside; *thyroid*; πῆξις, fixation]. Exposing the enlarged thyroid gland by a median incision and drawing it outside.

Exoticosymphysis (*eks-ot-ik-o-sim'-fe-sis*) [ἐξωτικός, foreign; σύμφυσις, a growing together]. The union of a substance or body with the organism.

Exotospore (*eks-o'-to-spōr*) [ἐξωτικός, outward; σπόρος, seed]. E. Ray Lankester's term for the malarial germ which is brought by the stab of the mosquito (*Anopheles*) into the human bloodvessels; it is so named from being formed outside the human body.

Experiment. (See Illus. Dict.) **E., Balancing.** See under *Goltz* (Illus. Dict.). **E., Check, E., Control.** See under *Control* (Illus. Dict.). **E., Croaking, E., Embrace, E., Goltz's.** See under *Goltz* (Illus. Dict.). **E., Dropping.** See *Hering's E.* (Illus. Dict.). **E., Müller's.** 1. See *Valsalva's Experiment* (Illus. Dict.). 2. See *Test, Valsalva's.* **E., Passive**, one in which the conditions are determined by nature and the observer simply notes what is occurring. **E., Pfeiffer's.** See *Reaction, Pfeiffer's.* **E., Rinné's.** See *Test, Rinné's.* **E., Stenson's.** See under *Stensen* (Illus. Dict.). **E., Torricelli's**, one designed to show the amount of atmospheric pressure by means of a cistern barometer.

Expression. (See Illus. Dict.) **E., Credé's Method of.** See *E. of the Placenta* (Illus. Dict.). **E., Rectal**, assisting the expulsion of the fetal head by means of two fingers inserted into the rectum and hooked into the mouth or under the chin.

Exsanguinate (*ek-sang'-gwin-āt*) [*ex*, priv.; *sanguis*, blood]. 1. To render bloodless. 2. Bloodless.

Exsection (*ek-sek'-shun*). See *Excision* (Illus. Dict.).

Exsertor (*ek-surt'-or*) [*exserere*, to protrude]. A muscle which protrudes a part.

Extasis (*ek'-sta-sis*). See *Ecstasy* (Illus. Dict.).

Extension. (See Illus. Dict.) **E., Buck's.** See *Buck's Apparatus* (Illus. Dict.).

Extensometer (*eks-ten-som'-et-ur*) [*extendere*, to stretch out; *metrum*, measure]. A micrometer to measure the expansion of a body.

Exterioration (*eks-te-re-or-a'-shun*) [*exterior*, outer]. The faculty of mind by which the image of an object seen is referred to the real situation of the object.

Externalize (*eks-tur'-nal-īz*) [*externus*, external]. 1. In psychology, to transform an idea or impression which is on the percipient's mind into a phantasm apparently outside him. 2. To refer to some outside source, as the voices heard by the subject of psychomotor hallucinations.

Extirpator (*eks-tur-pa'-tor*) [*extirpare*, to root out]. An instrument for extracting the roots of cuspid teeth.

Extraamniotic (*eks-trah-am-ne-ot'-ik*). Outside of the amnion; between the amnion and the chorion.

Extraarticular (*eks-trah-ar-tik'-u-lar*). Outside the joint.

Extracapsular (*eks-trah-kap'-su-lar*). Outside the capsule.

Extracellular (*eks-trah-sel'-u-lar*). External to the cells of an organism.

Extracranial (*eks-trah-kra'-ne-al*). Outside of the cranial cavity.

Extract, Extractum. (See Illus. Dict.) **E.s, Animal,** liquid extracts obtained by prolonged digestion of finely chopped organs of animals, in glycerin, boric acid, and alcohol, and believed to contain the active principle of the organ. See *Musculin*, *Ovarin*, *Testin*, *Thyroidin*, etc. **E., Compound,** one prepared from more than one drug. **E., Dry,** one which can be pulverized. **E., Ethereal,** one in which ether is the solvent. **E., Gelatinous,** one containing gelatin. **E. gradus.** See *E. tenue.* **E., Green,** one prepared from a plant in a green state. **E. gummosum, E., Gummy,** one containing gum. **E., Gum-resinous,** one in which the chief constituents are gum and resin. **E., Hard,** an extract evaporated to hardness. **E. justum.** See *E. spissum.* **E., lactis,** one said to contain the inorganic constituents of milk and to be free from albumin, milk-sugar, and casein, and adapted as a means for the administration of calcium. **E., Liquid, E. liquidum,** a fluid extract. **E., Powdered,** an extract dried and pulverized. **E., Resinous,** one in which the base is resin. **E., Saccharated,** the dry extract of a drug triturated with milk-sugar. **E., Saponaceous,** one containing resinous substance so combined with other matters that it is inseparable from them. **E. siccum.** See *E., Dry.* **E., Soft,** an extract evaporated to the consistence of honey. **E., Solid,** one made solid by evaporation. **E. spissum,** one of a consistency that will not run, but may be drawn out into threads. **E. subspissum,** one having a consistency intermediate between that of a thick and that of a thin extract. **E. tenue,** one having a honey-like consistency. **E., Thick.** See *E. spissum.* **E., Thin.** See *E. tenue.* **E., Vinous,** an alcoholic extract.

Extractiform (*eks-trak'-te-form*). Of the nature of an extract; resembling an extract.

Extractor. (See Illus. Dict.) **E., Comedo-,** a hollow punch for emptying comedones of their inspissated sebum.

Extractoresinous (*eks-trak-to-res'-in-us*). Resembling resin and consisting of an extract.

Extradural (*eks-trah-du'-ral*). Situated or occurring outside of the dura.

Extraembryonic (*eks-trah-em-bre-on'-ik*). Situated without or not forming a part of the embryo; it is said of certain structures of the ovum.

Extraepithelial (*eks-trah-ep-e-the'-le-al*). Outside of an epithelium.

Extragenital (*eks-trah-jen'-it-al*). Not situated upon the genitals; applied to chancres.

Extraligamentous (*eks-trah-lig-a-ment'-us*). External to a ligament.

Extralobular (*eks-trah-lob'-u-lar*). Outside of a lobe.

Extranuclear (*eks-trah-nu'-kle-ar*). Outside the nucleus of a cell.

Extraorganismal (*eks-trah-or-gan-iz'-mal*). External to the organism.

Extraperitoneal (*eks-trah-per-it-on-e'-al*). External to the peritoneal cavity.

Extraradical (*eks-trah-rad'-ik-al*). Applied to hydrogen atoms not replaceable by a negative or alcoholic radical, but replaceable by a base.

Extrarenal (*eks-trah-re'-nal*). External to the kidney.

Extrasystole (*eks-trah-sis'-to-le*). A heart-contraction occurring earlier than the normal systole if the heart-muscle is irritated during the diastolic period.

Extrathoracic (*eks-trah-tho-ras'-ik*). External to the thoracic cavity.

Extratriceps (*eks-trah-tri'-seps*). The outer head of the triceps muscle.

Extravasation. (See Illus. Dict.) 2. The escaped blood or excretion.

Extravascular (*eks-trah-vas'-ku-lar*). Outside the vessels or vascular system.

Extraventricular (*eks-trah-ven-trik'-u-lar*). External to a ventricle.

Extromelus (*eks-trom'-el-us*). See *Ectromelus* (Illus. Dict.).

Exudate. (See Illus. Dict.) **E., Fibrinous,** coagulation of fluid soon after its escape from the vessels within the spaces into which it has exuded. **E., Serofibrinous,** serous fluid in which flocculi of coagulated matter float.

Exutoria (*eks-u-to'-re-ah*) [*exurere*, to burn]. Substances which cause a superficial ulceration of the skin when applied.

Eye. (See Illus. Dict.) **E., Amaurotic Cat's.** See *Amaurosis* (Illus. Dict.). **E., Aphakic,** the eye deprived of its crystalline lens. **E., Brassy.** See *Chalkitis.* **E., Cat's-.** See *Æluropsis* (Illus. Dict.). **E.-stone.** (See Illus. Dict.) 2. See *Copper, Aluminated.* **E., Tea-leaf,** a peculiar pathologic condition of the eye which exists among the lower classes of the Southern States, especially negroes. It is produced by poultices, particularly one of tea leaves. **E., Third Rail,** a diseased condition of the eye due to the presence in it of minute particles of metal fallen from elevated railways.

F

Face. (See Illus. Dict.) **F., Adenoid,** a stupid, half-idiotic expression combined with a long, high nose flattened at the bridge, narrow nostrils, open mouth displaying irregular upper teeth, a drooping jaw, and broadening between the eyes. **F.-ague.** See *Brow-ague* (Illus. Dict.). **F. grippée,** the pinched face observed in those affected with peritonitis. **F., Mask-like,** a face frequently seen in alcoholic multiple neuritis in which an expressionless band stretches across the nose and cheeks between the eyes and lips; the skin remaining motionless while the eyebrows, forehead, and lips may be moving freely.

Facies. (See Illus. Dict.) **F., Corvisart's.** See under *Signs* (Illus. Dict.). **F., Hutchinson's,** the peculiar facial expression caused by immobility of the eyeballs in ophthalmoplegia externa. **F. leontina, F. leprosa,** the disfigurement of the face in leprosy by the puffed, knotty thickening of the skin over the eyes, giving to it a wild, morose appearance. **F., Parkinson's.** See *Signs and Symptoms* (Illus. Dict.). **F. tortualis.** See *F. hippocratica* (Illus. Dict.). **F., Wells's.** (Spencer.) See *F. ovarina* (Illus. Dict.).

Faciolingual (*fa-si-o-lin'-gwal*). Relating to the face and tongue.

Fæx. (See Illus. Dict.) **F. medicinalis liquida,** liquid yeast. It is used in the treatment of acne in the young. Dose, ½ teaspoonful to 1 tablespoonful mixed with water once or twice daily with meals. **F. medicinalis sicca,** dry yeast. It is used internally in smallpox to diminish suppuration; also in bronchopneumonia in the course of measles. Dose, 1½ teaspoonfuls mixed with 80 c.c. of boiled water in high rectal injection.

Falcadina, Falcadine (*fal-kad-ē'-nah, fal'-kad-ēn*) [*Falcado,* a village of northern Italy]. The popular name for a disease occurring in the Italian province of Belluno in 1786 and known in Norway as radesyge (*q. v.*). Cf. *Scherlievo.*

Falcular (*fal'-ku-lar*) [*falx,* a sickle]. Sickle-shaped.

Falculate (*fal'-ku-lāt*). Furnished with a falcular nail.

Falx. (See Illus. Dict.) **F. magna, F. major.** See *F. cerebri* (Illus. Dict.). **F. minor, F. parva.** See *Falcula* (Illus. Dict.).

Familial (*fam-il'-yal*). Characteristic of a family.

Fango (*fan'-go*). Clay from the hot springs of Battaglio (Italy); it is used as a local application in gout. **F.-therapy,** the therapeutic application of heat and pressure by means of heated fango or other mud.

Fantascopy (*fan-tas'-ko-pē*). See *Retinoscopy* (Illus. Dict.).

Faradization. (See Illus. Dict.) **F., General,** the therapeutic application of the electric current to the organism as a whole rather than to any part.

Faradocutaneous (*far-ad-o-ku-tā'-ne-us*). See *Electrocutaneous.*

Farcy (*far'-se*). The infectious disease (known as glanders when confined to the mucosa of the nose) caused by *Bacillus mallei* in horses, mules, and asses, and communicable to man. It is characterized by granulomas under the skin along the course of the lymphatics and in the lymphatic glands; they proceed as a rule to abscess-formation and suppuration. [Abbott.] **F., Acute,** cases in which the lymphatics are conspicuously involved, presenting along their course the cloudy nodular swellings known as farcy buds. The local seats of the infection are acutely inflamed, presenting the characters of an acute phlegmon. The mortality is high, death ensuing in 2 or 3 weeks. **F., Chronic,** is characterized by little lymphatic involvement. There are local abscesses in the extremities; they break down and ulcerate. The disease often lasts for months, with frequent recurrence of the local suppuration. It is not necessarily fatal.

Farsightedness (*far-sīt'-ed-nes*). Hypermetropia.

Fascia. (See Illus. Dict.) 3. See *Fimbria* (Illus. Dict.). 4. A bandage. **F.æ, Abdominal,** those in the abdominal walls. **F., Abernethy's,** the subperitoneal areolar tissue that separates the external iliac artery from the iliac fascia overlying the psoas. **F., Antibrachial,** the continuation of the brachial aponeurosis on to the forearm; attached to the superior borders of the anterior and posterior annular ligaments of the wrist. **F., Aponeurotic, F. aponeurotica.** See *F., Deep.* **F. aponeurotica femoris.** See *F. lata* (Illus. Dict.). **F. ascialis.** See *Ascia* (Illus. Dict.). **F., Axillary, F. axillaris,** a fibrous layer extended across the axilla in a concave manner, attached ventrally to the fascia investing the border formed by the pectoralis muscles, dorsally attached to the border formed by the latissimus and greater teres muscles and below to that of the serratus muscle. **F., Bicipital.** See *F., Semilunar.* **F., Brachial, F. brachialis, F. brachii.** See *F. of Arm* (Illus. Dict.). **F., Broad.** See *F. lata* (Illus. Dict.). **F., Buccal, F. buccalis.** 1. The buccopharyngeal fascia. 2. The buccopharyngeal fascia and parotid fascia regarded as one. **F., Buccinator, F. buccinatoria,** the part of the buccopharyngeal fascia covering the buccinator muscle. **F., Buccopharyngeal,** one covering the external aspect of the buccinator muscle and extending backward beneath the masseter muscle to the pterygomaxillary ligament and thence over the lateral wall of the pharynx to join the deep cervical fascia. **F., Buck's,** the sheath of the corpora cavernosa and the corpus spongiosum, which arises from the symphysis pubis by the suspensory ligament of the penis and is continuous with the deep layer of the superficial perineal fascia. **F. bulbi** (oculi), Tenon's capsule. **F. clavicularis,** the clavicular part of the coracoclavicular fascia. **F., Colles'.** See under *Colles* (Illus. Dict.). **F. colli.** 1. The deep and superficial fasciæ of the neck regarded as one. 2. The deep cervical fascia. **F., Cooper's, F. cooperi.** 1. The fascia transversalis. 2. The cellular layer beneath the dartos. **F. coracoclavicostalis, F., Coracoclavicular, F., Costocoracoid.** See *Ligament, Coracoclavicular* (Illus. Dict.). **F., Crural, F. cruralis, F. cruris.** See *F., Deep, of Leg* (Illus. Dict.). **F., Crural, Anterior,** in comparative anatomy, a fibrous layer extending from the fold of the flank to the patella and inner surface of the leg and united to the fascia lata. **F., Cruveilhier's.** See under *Cruveilhier* (Illus. Dict.). **F., Deep,** a strong layer of fibroconnective tissue covering the muscles and forming an almost continuous investment to the body under the superficial fascia to which it is attached. Cf. *F., Superficial.* **F. deltoidea,** a continuation of the fascia of the arm and covering the deltoid muscle. **F., Denonvilliers',** the rectovesical fascia between the prostate gland and rectum. **F. dentata cinerea, F. dentata hippocampi, F. denticulata.** See *Fasciola* (Illus. Dict.). **F., Dorsal, F. dorsalis,** the fascia of the back. **F. dorsalis pedis.** See *F. of the Dorsum of the Foot* (Illus. Dict.). **F. endoabdominalis, F. endogas-**

trica. See *F. transversalis* (Illus. Dict.). **F. endothoracica,** the layer of connective tissue connecting the costal pleura with the walls of the thorax. **F. epicrania,** the fibers uniting the two parts of the occipitofrontalis muscle. **F. femoris.** See *F. lata* (Illus. Dict.). **F., Fibroareolar.** See *F., Superficial.* **F., Gluteal,** the one investing the gluteal muscles. **F. humeri.** See *F. of Arm* (Illus. Dict.). **F. hypogastrica.** See *F., Pelvic* (Illus. Dict.). **F., Iliopectineal.** See *F., Obturator* (Illus. Dict.). **F., Iliopsoas,** the iliac fascia. **F. infraspinata, F., Infraspinous,** a tendinous fascia covering the infraspinatus and teres minor muscles where they are not covered by the deltoid muscle. **F.æ of Intersection,** the bands of fiber forming part of the continuity of some muscles. **F.æ of Investment,** those covering the muscles of a limb and holding them in position. **F., Laryngeal,** a layer of fibroelastic connective tissue between the thyroid and arytenoid cartilages extending from the vocal membrane up to the lateral border of the epiglottic cartilage where it is continuous with the hyoepiglottic and thyroepiglottic ligaments. Syn., *F., Thyroarytenoepiglottic.* **F. linguæ, F., Lingual,** the connective tissue uniting the muscles of the tongue with the mucosa. **F. lumbalis, F. lumbaris, F., Lumbodorsal, F. lumbodorsalis, F. lumborum.** See *F., Lumbar* (Illus. Dict.). **F., Oculopalpebral.** See *Tenon's Capsule* (Illus. Dict.). **F., Orbital, F., Orbitoocular.** See *Tenon's Capsule* (Illus. Dict.). **F.æ of Origin,** those serving for the origin of muscles. **F., Palpebral,** the tarsal ligament of the eyelids. **F., Parotid, F. parotidea,** a backward extension of the masseteric fascia closely covering the parotid gland. **F.æ, Partial,** aponeuroses covering the muscles of a limb and retaining them in position; they are chiefly attached by their extremities to bones. **F. pectinea,** the pubic part of the fascia lata. **F., Pectoral,** the superficial investment of the pectoral area. **F., Pelviprostatic,** the process of the rectovesical fascia forming the sheath of the prostate gland. **F., Pharyngeal, F. pharyngis,** the pharyngeal part of the buccopharyngeal fascia. **F., Prevertebral,** a band of connective tissue covering the front of the cervical vertebras and the prevertebral muscles, adherent to the basilar process above and running to the third thoracic vertebra below. It is attached to the esophagus and pharynx by loose connective tissue. **F. propria, F. propria of the Scrotum,** Sir A. Cooper's name for the infundibuliform fascia together with the underlying areolar tissue. **F. propria of the Spermatic Cord.** See *F., Infundibuliform* (Illus. Dict.). **F., Pyriform,** that lining the inner surface of the pyriform muscle. **F. repens,** an open spiral bandage. **F., Retrorenal,** Zuckerkandl's name for the dorsal layer of the fibrous capsule of the kidney. **F. scarpæ.** See *Scarpa's F.* (Illus. Dict.). **F. sculteti.** See *Bandage of Scultetus* (Illus. Dict.). **F. semicircularis.** See *Tænia semicircularis* (Illus. Dict.). **F., Semilunar, F. semilunaris,** a fibrous band extending downward and inward from the inner aspect of the biceps humeri and its tendon and connecting with the fascia investing the antibrachial muscles arising from the inner condyle of the humerus. **F. solaris, F. stellata,** the knotted bandage. **F., Spermatic, External.** See *F., Intercolumnar* (Illus. Dict.). **F., Spermatic, Internal.** See *F., Infundibuliform* (Illus. Dict.). **F. subcutanea.** See *F., Superficial.* **F., Subscapular, F. subscapularis.** See *Aponeurosis, Subscapular* (Illus. Dict.). **F., Superficial, F. superficialis,** a loose fibrous membrane lying immediately beneath the skin and connecting it with the deeper parts. It consists mostly of two very closely connected layers, the more superficial of which (panniculus adiposus) is of looser texture and acts as the matrix of subcutaneous fat. Cf. *F., Deep.* **F., Suprahyoid,** a fold of the cervical fascia running between the two bellies of the digastric muscle and fastened to the hyoid bone. **F. supraspinata, F., Supraspinous.** See *Aponeurosis, Supraspinous* (Illus. Dict.). **F., T-,** a T-bandage. **F. tarini, F., Tarinus',** the fascia dentata tarini; the gyrus dentatus. **F., Tenon's, F. tenonis,** Tenon's capsule. **F., Thyroarytenoepiglottic.** See *F., Laryngeal.* **F. tortilis,** a spiral bandage. **F., Triangular, F. triangularis,** the triangular ligament. **F., Tyrrell's.** See *F., Denonvilliers'.* **F. uncinata.** See *F. dentata* (Illus. Dict.). **F., Vertebral.** See *Aponeurosis, Vertebral* (Illus. Dict.). **F. volaris.** See *F., Palmar* (Illus. Dict.).

Fascicle. (See Illus. Dict.) **F., Fornicate,** the white matter of the fornicate gyrus, the fibers of which extend longitudinally and ramify upward and backward into its secondary gyri. Syn., *Fillet of the corpus callosum.* **F., Fundamental,** a part of the anterior column extending into the oblongata. **F.s, Gyral,** fibers connecting the adjacent gyri, arching over the bottom of the intervening fissure and lying close to the cortex. Syn., *Association fibers.* **F., Solitary.** See *Solitary Bundle* (Illus. Dict.). **F., Uncinate.** See *Fasciculus uncinatus.*

Fasciculus. (See Illus. Dict.) **F. arciformis olivæ,** superficial and deep transverse and curved fibers extending across the lower part of the olivary bodies and continuous with the fibers of the restiform bodies. **F. arcuatus.** 1. See *F. uncinatus.* 2. See *F., Longitudinal Superior.* **F., Arnold's.** See *Bundle, Arnold's.* **F. cerebellospinalis.** See *Tract, Direct Cerebellar* (Illus. Dict.). **F. cuneatus,** Burdach's column, the continuation of the posteroexternal column. **F., Dorsal.** See *F., Longitudinal Inferior.* **F. exilis,** a set of fibers springing from the inner condyle of the humerus or the coronoid process of the ulna and uniting with the flexor pollicis longus muscle. **F., Goll's,** the column of Goll. **Fasciculi graciles,** the posterior pyramids. **F., Gratiolet's,** a longitudinal bundle of fibers lying between the cerebellum and the occipital lobe. **F., Habenal.** See *Meynert's Fasciculus* (Illus. Dict.). **F., Longitudinal Inferior,** a bundle lying close to the outer wall of the medicornu and postcornu and connecting the occipital and temporal lobes. Syn., *Inferior longitudinal bundle.* **F., Longitudinal Posterior.** See *F., Posterolongitudinal.* **F., Longitudinal Superior,** a bundle of fibers passing through the oblongata external to the cingulum and beneath the lower border of the frontal and parietal gyri. **F. occipitofrontalis,** a distinct bundle below and external to the callosum and between the cingulum and the superior longitudinal bundle, being separated from the latter by the foot of the corona radiata. **Fasciculi occipitothalamici,** the bundles of nerve-fibers uniting the thalamus with the occipital lobe. **F., Perpendicular** (of Wernicke), a broad band of vertical fibers extending in width from the point of the occipital lobe to the dorsal point of the parietal lobe and extending from the superior occipital lobule to the inferior occipital gyrus and fusiform lobule. **F., Posterolongitudinal,** a bundle of fibers connecting the corpora quadrigemina and the nuclei of the fourth and sixth nerves with the parts below. **F., Respiratory.** See *Solitary Bundle* (Illus. Dict.). **F. restiformis,** the restiform body. **F. retroflexus.** See *Meynert's F.* (Illus. Dict.). **F., Sphenoid,** the part of the corona radiata which enters the temporosphenoidal lobe. **F. subcallosus,** a tract of long fibers lying beneath the

callosum and connecting the frontal, parietal, and occipital lobes. **F. teres,** the funiculus teres. **F. teres pontis, Fasciculi teretes,** a white fibrous band in the floor of the fourth ventricle composed of the middle fibers of the lateral tract with fibers from the restis. Syn., *Eminentiæ teretes.* **Fasciculi teretes cordis.** See *Columnæ carneæ* (Illus. Dict.). **F. thalamomammillaris.** See *Bundle, Vicq d'Azyr's* (Illus. Dict.). **F. trineuralis, F., Trineural.** See *Solitary Bundle* (Illus. Dict.). **F. unciformis, F. uncinatus,** a bundle of medullated axons extending between the uncus and the basal portions of the frontal lobe, and connecting the temporal sense area with the olfactory sense area. [Barker.] **F., Ventral.** See *F., Longitudinal Superior.* **F. ventrolateralis superficialis.** See *Tract, Gowers'* (Illus. Dict.).

Fascitis (*fas-ī′-tis*). Inflammation of a fascia.

Fatigue-spasm (*fa-tēg′-spazm*). See *Fatigue-Diseases* (Illus. Dict.).

Fatuism (*fat′-u-izm*). See *Fatuity* (Illus. Dict.).

Faucal (*faw′-kal*). See *Faucial* (Illus. Dict.).

Favosoareolate (*fa-vo-so-ar-ē′-o-lāt*) [*favus,* a honeycomb; *areola*]. Pitted with reticular markings.

Febralgene (*feb-ral′-jen*). A proprietary antipyretic and sedative. Dose, 2½–5 gr. (0.116–0.333 gm.).

Febricide (*feb′-ris-īd*). [*febris,* fever; *cædere,* to kill]. Destructive to fever.

Febriculose (*feb-rik′-u-lōs*) [*febris,* fever]. Slightly feverish.

Febriculosity (*feb-rik-u-los′-it-e*). Feverishness.

Febrinol (*feb′-re-nol*). A proprietary antipyretic and analgesic remedy.

Febris. (See Illus. Dict.) **F. acuta,** ague. **F. castrensis.** 1. Typhus fever. 2. Remittent fever. **F. castrensis epidemica,** malarial and typhoid fever. **F. complicata** (Veale), Mediterranean fever. **F. exanthematica articulosa.** Synonym of *Dengue.* **F. hungarica.** Synonym of *Typhus.* **F. innominata,** a fever in which the clinical signs are lacking. **F. nervosa,** those febrile conditions which appear to be primarily nervous in pathology. **F. petechialis,** typhus. **F. recidiva.** Synonym of *Relapsing Fever.* **F. undulans,** typhomalarial fever. **F. variolosa,** a form of smallpox described by Sydenham with alarming initial symptoms but mild in its subsequent course. Called by de Haen *variolæ sine variolis.*

Feeding. (See Illus. Dict.) **F., Extrabuccal,** the introduction of food into the system by other channels than the mouth; by subcutaneous nutritive enemas, or intravascular injection of food materials; feeding after gastrotomy, through gastric fistulas.

Feeling. (See Illus. Dict.) **F.s, Entoperipheral,** sensations due to stimulation of the peripheral nerves distributed to the interior of the organism. **F.s, Epiperipheral,** sensations due to stimulation of the peripheral nerves distributed to the surface of the body, including all the nerves of special sense. **F.s, Presentative,** primary sensations caused by direct stimulation. **F.s, Representative,** sensations produced by indirect stimulation; revived feelings; ideas.

Fel. (See Illus. Dict.) **F. metallorum,** crystallized silver nitrate. **F. naturæ,** aloes. **F. phasiani,** the bile of the pheasant. **F. porci,** hog's bile. **F. tauri depuratum.** See *F. bovis purificatum* (Illus. Dict.). **F. taurinum.** See *F. bovis* (Illus. Dict.).

Fellifluous (*fel-if′-lu-us*) [*fel,* bile; *fluere,* to flow]. Flowing with gall.

Fellitin (*fel′-it-in*). A proprietary preparation of ox-gall for use in frost-bite.

Felted (*felt′-ed*). Matted and tangled.

Female. (See Illus. Dict.) **F.s, Dimorphic,** females of the same species with two distinct forms.

Femoralis (*fem-or-a′-lis*) [L.]. 1. See *Femoral* (Illus. Dict.). 2. See *Quadriceps extensor femoris,* in *Muscles, Table of* (Illus. Dict.).

Femoroarticular (*fem-or-o-ar-tik′-u-lar*). Articulating with the femur.

Femorocalcaneous (*fem-or-o-kal-ka′-ne-us*). Connected with the femur and the calcaneum.

Femorocaudal (*fem-or-o-kaw′-dal*). Relating to the femora and the tail.

Femorococcygeous (*fem-or-o-kok-sij′-e-us*). Relating to or united with the femur and the coccyx.

Femorocutaneous (*fem-or-o-ku-ta′-ne-us*). Relating to the integument of the femur.

Femorogenital (*fem-or-o-jen′-it-al*). Relating to the femur and the genitals.

Femorophalangeus (*fem-or-o-fal-an′-je-us*). In comparative anatomy the analog of the plantaris and flexor digitorum brevis muscles of man.

Femoropopliteal (*fem-or-o-pop-lit′-e-al*). 1. Relating to or contained in the thigh or popliteal space. 2. Relating to the dorsal aspect of the thigh.

Femoropopliteotibial (*fem-or-o-pop-lit-e-o-tib′-e-al*). Relating to the femur, popliteal space, and tibia.

Femoropretibial (*fem-or-o-pre-tib′-e-al*). Relating to the thigh and the ventral aspect of the leg.

Femorovascular (*fem-or-o-vas′-ku-lar*) [*femur; vasculum,* a little vase]. Relating to the femoral canal.

Fence (*fens′*) [abbreviation of *defence*]. A. Siebert's term for cross-scarification of the skin surrounding an erysipelatous area to which a germicide is applied to prevent the progress of the disease.

Fenestra. (See Illus. Dict.) **F. cochleæ, F. cochlearis, F. triquetra,** the fenestra rotunda (see Illus. Dict.), a round opening communicating with the cochlea, on the inner wall of the tympanic cavity situated in a small niche looking outward and backward. It is from 3 to 4 mm. below the fenestra ovalis. Syn., *Porta labyrinthi; Round window.* **F. semiovalis, F. vestibularis, F. vestibuli,** the fenestra ovalis (see Illus. Dict.), an oval orifice leading to the vestibule of the labyrinth; it is situated in the recess above the promontorium on the inner wall of the atrium. Syn., *Oval window; Foramen ovale.*

Fenthozon (*fen′-tho-zon*). A proprietary disinfectant and deodorant said to consist of acetic acid, 26 gm.; phenol, 2 gm.; menthol, camphor, and oil of eucalyptus, of each 1 gm.; and oils of verbena and lavender, of each 0.5 gm.

Feralboid (*fer-al′-bo-id*). A peptonized albuminate of iron. It is used in anemia, neurasthenia, etc. Dose, ⅓–⅔ gr. 3 times a day. Syn., *Feraldoid.*

Fercremol (*fer′-krē-mol*). A brown tasteless compound of iron and hemoglobin, containing 3% of iron. Dose, 3–8 gr. (0.2–0.52 gm.).

Ferisol (*fer′-is-ol*). A derivative of cinnamic acid and guaiacol; a very soluble powder. Dose, 15 gr. (1 gm.); intramuscularly, 15 ♏ of a 10% solution.

Fermang (*fer′-mang*). A proprietary peptonate of iron and manganese.

Fermanglobin (*fer-man-glō′-bin*). Hemoglobin combined with iron and manganese; used in anemia. Dose, 1 teaspoonful to a dessertspoonful (5 c.c.–10 c.c.).

Ferment. (See Illus. Dict.) **F., Amylolytic,** one changing starch into sugar. The amylolytic ferments include ptyalin, the diastatic ferment of the pancreatic juice, vegetable diastase, and other ferments which may be obtained from bacteria. **F., Animal,** one secreted by the animal organism. **F., Chemic.** See *Enzyme* (Illus. Dict.). **F.s, Coagulating,** the milk-curdling ferment (chymosin) and fibrin-forming ferment (thrombin). **F., Digestive,** an enzyme either of animal or vegetable production which acts

upon a certain kind of food. The digestive ferments embrace the amylolytic, proteolytic, invertive, emulsive, and the milk-curdling ferments. **F., Glycolytic.** 1. One existing in the liver, which changes starch into sugar; also any ferment capable of decomposing sugar. 2. Lépine's name for the internal secretion of the pancreas which reaches the general circulation without entering the intestinal tract. **F., Hydrolytic.** See under *Hydrolytic* (Illus. Dict.). **F., Insoluble.** See *F., Organized* (Illus. Dict.). **F., Inversive, F., Inverting.** See *Invertin* (Illus. Dict.). **F.s, Oxidation, F.s, Oxidizing,** ferments existing in the cells and tissues of the body which act as oxygen-carriers and act on hydrogen peroxid and neutral oxygen as well; their activity is destroyed by heat. Syn., *F.s, Tissue; Oxydases; Oxidoses.* **F., Piarolytic,** one which decomposes fat. **F., Soluble.** See *Enzyme* (Illus. Dict.). **F., Steatolytic,** one that splits fat into fatty acids and glycerin, as steapsin of the pancreatic juice and similar ferments found in seeds of poppy, castor-oil beans, Indian hemp, corn, etc.

Fermentable (*fur-ment'-a-bl*). Capable of being fermented.

Fermental (*fur-ment'-al*). Endowed with capacity to produce fermentation.

Fermentation. (See Illus. Dict.) **F., Alcoholic, F., Spirituous,** the conversion of saccharine substances into alcohol; it is due to yeast germs.

Fermentescent (*fur-ment-es'-ent*). Becoming fermented.

Ferralbumose (*fer-al'-bu-mōz*). A meat precipitate treated with artificial gastric juice and ferric chlorid.

Ferralia (*fer-a'-le-ah*) [*ferrum*, iron]. Medicinal preparations of iron.

Ferrate (*fer'-āt*). A salt of ferric acid.

Ferrated (*fer-a'-ted*). Combined with iron; containing iron.

Ferratin (*fer'-at-in*). A chemic compound of iron and albumin, introduced as identical with the organic iron component of all food. It is used in anemia and malnutrition. Dose, 7½ gr. (0.5 gm.) 3 times daily. **F., Schmiedeberg's,** a nuclein in combination with iron contained in the liver. Syn., *Zaleski's hepatin.*

Ferratogen (*fer-at'-o-jen*). An iron nuclein obtained by cultivating yeast on a medium impregnated with iron. It is used in treatment of chlorosis, the preparation containing 1% of metallic iron. Syn., *Ferric nuclein.*

Ferric (*fer'-ik*). 1. Pertaining to or of the nature of iron. 2. Containing iron as a trivalent or quadrivalent radicle. **F., Chlorid,** iron perchlorid. **F., Sulfate,** iron tersulfate.

Ferrichthol (*fer-ik'-thol*). A form of ichthyol sulfonate of iron which contains 3.5% of organically combined iron together with 96.5% of ichthyol sulfonic acid. It is odorless and tasteless and is used in the treatment of anemia and chlorosis. Dose, 2 gr.

Ferricyanid (*fer-e-si'-an-id*). A sal of hydroferricyanic acid.

Ferricyanogen (*fer-e-si-an'-o-jen*). $Fe_2(C_3N_3)_4$. The hexatomic radicle found in the ferricyanids.

Ferrinol (*fer'-in-ol*). Iron nucleid, a compound of nucleol and iron oxid containing 6% of iron.

Ferripton (*fer-ip'-ton*). A proprietary preparation said to contain 4% of iron, 7% of proteids, and 89% of water. It is used in anemia and chlorosis.

Ferripyrin (*fer-e-pi'-rin*). See *Ferropyrin.*

Ferrisalipyrin (*fer-e-sal-e-pi'-rin*). Antipyrin ferrous salicylate, a yellow-brown powder showing a green fluorescence.

Ferrocyanate (*fer-o-si'-an-āt*). See *Ferrocyanid* (Illus. Dict.).

Ferrocyanic (*fer-o-si-an'-ik*). Composed of iron and cyanogen.

Ferrocyanuret (*fer-o-si-an'-u-ret*). See *Ferrocyanid* (Illus. Dict.).

Ferroferric (*fer-o-fer'-ik*). Containing iron in both ferric and ferrous combinations.

Ferrohemol (*fer-o-he'-mol*). Hemol containing 3% of added iron. Dose, 8 gr. (0.5 gm.).

Ferrol, Ferroleum (*fer'-ol, fer-o'-le-um*). A proprietary 50% emulsion of cod-liver oil containing iron phosphate.

Ferromagnesium-sulfate (*fer-o-mag-ne-se-um-sul'-fāt*). $FeSO_4 . MgSO_4 + 6H_2O$. A greenish powder, used in anemia and chlorosis. Dose, 0.5 gm.

Ferromagnetic (*fer-o-mag-net'-ik*). Having iron as a constituent and possessing magnetic properties.

Ferrometer (*fer-om'-et-ur*) [*ferrum*, iron; *metare*, to measure]. An apparatus for estimating quantitatively the iron in a minimum quantity of blood.

Ferropyrin (*fer-o-pi'-rin*). $(C_{11}H_{12}N_2O)_3Fe_2Cl_6$. A hemostatic containing antipyrin, 64%; iron, 12%; chlorin, 24%. An orange-red, impalpable powder, soluble in hot water, alcohol, and benzol; slightly in ether; melts at 205° C. It is styptic, antiseptic, and astringent, and is applied externally for gonorrhea and nose-bleed. It is used internally in anemia, chlorosis, neuralgia, in doses from 8 to 15 gr. (0.52–0.97 gm.). Application, 1% to 1½% solution for gonorrhea, 20% solution for nose-bleed.

Ferrosine (*fer'-o-sēn*). A granular or fine red powder used as a pigment and said to contain iron oxid, 70% to 75%; lime and albumin, 10% to 20%; water, 10% to 15%.

Ferrosodium-citro-albuminate (*fer-o-so-de-um-sit-ro-al-bu'-min-āt*). A hematinic containing 30% ferric oxid. Dose, 23 gr. (1.5 gm.); children, 4–8 gr. (0.2 gm.) in soup or syrup.

Ferrosoferric (*fer-o-so-fer'-ik*). Containing iron as a bivalent and a trivalent radicle.

Ferrosoferrous (*fer-o-so-fer'-us*). Applied to a salt which is compounded of two ferrous salts.

Ferrosol (*fer'-o-sol*). A double combination of ferric saccharate and saccharate of sodium chlorid occurring as a clear black-brown liquid; used in the treatment of chlorosis, anemia, and neurasthenia. Dose, 1 teaspoonful (5 cm.) 3 times daily.

Ferrosomatose (*fer-o-so'-mat-ōz*). A combination of 2% of iron with somatose; an odorless, tasteless powder, soluble in water. It is used as a tonic in chlorosis, anemia, and debility. Dose, 75–150 gr. (5–10 gm.) daily. As a laxative, dose, 10 gm.

Ferrostyptin (*fer-o-stip'-tin*). A preparation of iron and formaldehyd occurring in cubic crystals or crystalline powder soluble in water, melting at 120° C. It is used as a noncaustic, antiseptic hemostyptic in dentistry. Dose, 5–8 gr. (0.3–0.5 gm.).

Ferrovin (*fer'-o-vin*). A readily absorbable iron preparation, used in anemia.

Ferruginated (*fer-u'-jin-a-ted*). Having the properties of iron.

Ferruginous. (See Illus. Dict.) 2. Having the color of iron rust.

Ferrum. (See Illus. Dict.) **F. caseinatum.** See *Iron Casein.* **F. sanguinis,** hemoglobin.

Fersan (*fer'-san*). A proprietary food-product made from the red corpuscles of beef-blood.

Festucine (*fes'-tu-sēn*) [*festuca*, a straw]. Straw-colored.

Fetal. (See Illus. Dict.) **F.-markings,** furrows and embryonic markings found in the adult kidney.

Fettmilch of Gärtner. A preparation obtained by putting equal parts of milk and sterile water into the drum

of a centrifuge, which is then revolved 4000 times per minute. The fat in the milk collects at the center, and may be drawn off with a tube inserted. The milk obtained should contain the same amount of fat as mother's milk, and by the addition of 35 gm. of lactose to the liter, a milk is produced which resembles human milk very closely in composition. This should be sterilized.

Fever. (See Illus. Dict.) **F., Absorption,** a fever often occurring during the first 12 hours after parturition. **F., Acclimating, F., Acclimation-.** Synonym of *Texas Fever*. **F., Adenomeningeal,** a slow puerperal fever attended with cerebral disturbance. **F., African Hemoglobinuric.** Synonym of *Blackwater-fever*. **F., Albumose,** a fever produced experimentally in an animal by injecting protoalbumose or deuteroalbumose. **F., Algid.** See under *Algid* (Illus. Dict.). **F., Angiocardiac, F., Angeiocardiac,** that attending endocarditis. **F., Aphthous.** See *Foot and Mouth Disease* (Illus. Dict.). **F., Army,** typhus fever. **F., Arthritic,** fever with swelling of the joints. **F., Auriginous,** jaundice. **F., Autumnal,** typhomalarial fever prevalent in the autumn. **F., Bath,** a feverish condition due to excess in the use of warm baths. **F., Bilious Remittent.** 1. Sometimes used as a synonym of *Mediterranean fever*. 2. Relapsing fever. **F., Bilious Typhoid.** Synonym of *Yellow Fever*. **F., Black.** (See Illus. Dict.) 2. See *F., Spotted* (2). **F., Blackwater.** (See Illus. Dict.) Syn., *F., Hemoglobinuric; F., Bilious remittent; F., Bilious hematuric*; *F., Hematuric*. According to R. Koch and others, in the majority of cases it is the result of quinin-poisoning in malarial patients. **F., Bone,** septicemia in workers in bone from wounds received on the fingers. **F., Boohoo.** See *Boohoo* Illus. Dict.). **F., Bookhar,** the fever in India due to heat. **F., Brain.** (See Illus. Dict.) 2. Synonym of *Typhus*. **F., Brain-water,** that attending hydrocephalus. **F., Breakbone.** Synonym of *Dengue*. **F., Bubonic Typhus,** typhus fever with inflammation, swelling, and suppuration of the inguinal, parotid, axillary, submaxillary, or mammary region. **F., Bulam,** yellow fever. **F., Cavité,** an acute contagious disease confined almost exclusively to Cavité naval station in the Philippines. It is marked by sudden onset, high temperature, severe muscular pain, and extremely tender and painful eyeballs, the incubation-period varying from 2 days to 2 weeks. **F., Charcot's,** a septic fever occurring in cases of jaundice due to impacted gallstones. **F., Chinese Catarrhal,** influenza. **F., Coprostasic,** that caused by constipation. German, *Kothfieber*. **F., Cyprus.** Synonym of *F., Mediterranean*. **F., Danube.** See under *Danube* (Illus. Dict.). **F., Fatigue,** that following excessive muscular exercise. **F., Flock,** a train of symptoms developed in operators in flock mills by the inhalation of dust; it resembles shoddy fever. **F., Fourteen-day.** Synonym of *Typhus*. **F., Fracture,** fever due to fracture of a bone. **F., Gaspard's Putrid,** putrefaction of the intestinal contents. **F., Gastric Remittent.** Formerly used as a synonym of *Mediterranean fever*. **F., Glandular.** See *F., Pfeiffer's Glandular*. **F., Gnat,** malaria. **F., Grain-gaugers',** a train of symptoms affecting those who measured the foreign grain in the docks of Marseilles; it was regarded as due to the inhalation of fine dust in the grain. **F., Haitien,** an endemic form of yellow fever modified by race and acclimatization in Haiti. **F., Hematuric Bilious,** blackwater fever. **F., Hemoglobinuric.** See *F., Blackwater* (Illus. Dict.). **F., Hill,** the pernicious malarial fever of the hill regions of India. **F., Homotonic,** simple continued fever. **F., Inanition,** fever sometimes observed in infants during the first 3 days of life, due apparently to lack of nourishment. **F., Irish.** Synonym of *Typhus*; also of *Relapsing fever*. **F., Jaccoud's Dissociated,** fever with irregularity and slowness of the pulse in tuberculous meningitis of adults. **F., Littoral,** malarial fever in coast regions. **F., Local,** one due to a local inflammation. **F., Manila,** a special type of pernicious fever occurring in the hot months (April and May) in Manila and sometimes becoming epidemic. **F., Mediterranean.** (See Illus. Dict.) It is due to *Micrococcus melitensis*, Bruce. **F., Melanuric (Remittent),** blackwater fever. **F., Metabolic,** a form of fever common in children during the summer, due to increased metabolism and increased tissue-waste clogging the system owing to inability of the excretory organs to dispose of the waste rapidly enough. Syn., *Bilious attack; Bilious cold*. **F., New.** (See Illus. Dict.) 2. The smallpox. **F., Oroya.** See *Verruga* (Illus. Dict.). **F., Paratyphoid,** a condition clinically identical with typhoid fever, but due to a bacillus differing from *B. typhosus* and *B. coli communis*. **F., Peach.** See under *Peach* (Illus. Dict.). **F., Pfeiffer's Glandular,** an acute infectious fever, characterized by inflammatory swelling of the lymph-glands, anemia, and prostration. Syn., *Acute cervical lymphadenitis*. **F., Purulent,** the pyrexia attending suppuration. **F., Roman,** a malignant malarial fever occurring in the Roman Campagna. **F.-root.** See *Triosteum perfoliatum*, L. (Illus. Dict.). **F., Septan (Intermittent).** See *Septan* (Illus. Dict.). **F., Sextan (Intermittent).** See *Sextan* (Illus. Dict.). **F., Silesian** (of 1847), relapsing fever. **F., Singultous,** fever attended with hiccough. Syn., *Lyngodes; Lyngyodes*. **F., Southern.** Synonym of *Texas fever*. **F., Spotted.** 1. Synonym of *Typhus*. 2. The local name among the Eastern foothills of the Bitter Root Mountains for an endemic disease characterized by initial chill, constipation, fever, rapid pulse, enlarged spleen, muscular soreness, severe pain in head and back, and an eruption of macular spots, varying from bright-red to purple or brownish-red in color. It is due apparently to a hematazoon to which the name *Pyroplasma hominis* has been given. A tick, *Dermacentor reticulatus*, is believed to be the chief agent in spreading the disease. Syn., *Blue disease; Black fever* (2); *Tick fever*. **F., Surgical.** See *F., Traumatic* (Illus. Dict.). **F., Sweating.** 1. Intermittent fever in which the sweating stage of the paroxysms is very pronounced. 2. See *F., Miliary* (Illus. Dict.). **F., Tertian (Intermittent).** See *Tertian* (Illus. Dict.). **F., Texas.** See *Texas Fever* (Illus. Dict.). It is caused by the parasite *Pyrosoma bigeminum*, Theobald Smith, 1889, which invades the red blood-corpuscle and is transmitted by the cattle tick *Boophilus bovis* (Riley), Curtice. Syn., *Acclimating or Acclimation fever; Southern fever; Texas cattle fever; Tick fever; Spanish fever; Redwater; Blackwater; Hematuria; Murrain; Dry murrain; Bloody murrain; Yellow murrain; Hollow horn; Hollow-tail; Bovine malaria*. **F., Thermic.** Synonym of *Heatstroke*. **F., Third-day (Intermittent).** See *Tertian* (Illus. Dict.). **F., Tick.** 1. Texas fever. 2. Spotted fever (2). **F., Tonic.** See *F., Sthenic* (Illus. Dict.). **F., Triple Quartan Intermittent,** quartan intermittent fever in which there is daily repetition of the paroxysms or in which, besides the regular attack, there is a mild one on the intervening days. **F., Triple Quotidian (Intermitttent),** an intermittent fever marked by three paroxysms every day. **F., Triple Tertian (Intermittent),** an intermittent fever characterized by two paroxysms occurring on alternate days and one

on the intervening day. **F., Tropical,** yellow fever. **F., Typhotyphus,** Pepper's name for mild typhus marked by laxity of the bowels, tympanites, epistaxis, and bronchial disturbance, the eruption occurring on the fourth day and the crisis from the tenth to the fourteenth day. **F., Undulant** [Hughes]. Synonym of *Mediterranean fever*. **F., Uniform,** simple continued fever. **F., Urban,** a fever enduring about 3 weeks and similar to mild typhoid except that specific symptoms are absent. **F., Uremic,** one due to poisoning from urinary ptomains; it has been observed after operations on the urinary tract or in urinary diseases. **F., Urethral,** one due to operation on the urethra; it may be due to septic infection. **F., Walking Typhoid.** See *Ambulatory Typhoid* (Illus. Dict.). **F., Water-brain.** See *F., Brain-water*. **F., White,** a slight fever attending chlorosis, to which it was thought to be due. **F., Winter,** pneumonia. **F., Wound.** See *F., Traumatic* (Illus. Dict.).

Fiat, Fiant (*fi'-at, fi'-ant*) [pres. subj., third person, sing. and pl. of *fieri*, to be made]. Let there be made.

Fiber. (See Illus. Dict.) **F.s, Accelerating,** nerve-fibers which convey impulses that hasten the rapidity and increase the force of the heart-beat. Syn., *F., Augmentor; F., Augmented; Nervi accelerantes cordis*. **F., Achromatic.** See *Karyomitoma* (Illus. Dict.). **F.s, Annular,** those forming a circle around an organ or part. **F.s, Arciform, F.s, Arcuate,** transverse curving fibers intersecting the longitudinal fibers of the reticular formation; they are divided into deep and superficial sets. The first spring mainly from the decussation of the pyramids and the raphé and bend outward and backward; one part passes to the nucleus gracilis and the cuneate nucleus and one part (internal arciform fibers) through the olivary nucleus and thence into the restis. The superficial arciform fibers spring from the same source and proceed to the restis; one part (external arciform fibers, Rolando's arciform fibers) passing outward at the anterior median fissure runs outward on the pyramid and olive and the other part passes out laterally behind the pyramid. **F.s, Association,** white nerve-fibers situated just beneath the cortical substance and connecting the adjacent cerebral gyri. **F.s, Augmented, F.s, Augmentor.** See *F.s, Accelerating*. **F.s, Auxiliary.** See *F.s, Secondary*. **F., Axial.** (See Illus. Dict.) 2. The central spiral filament, probably contractile, of the flagellum of the semen-cell. **F.s, Bergmann's, F.s, B.-Deiters',** the processes of certain superficial neuroglia cells of the cerebellum which radiate toward the surface and are connected with the pia mater. **F.s, Bernheimer's,** a tract of nerve-fibers extending from the optic tract to Luys' body. **F.s, Bogrow's,** a tract of nerve-fibers passing from the optic tract to the thalamus. **F.s, Charcot's.** See *Radicular Fasciculus, Internal;* and *R. Fibers, External* (Illus. Dict.). **F.s, Collateral,** the delicate lateral branches of the nerve-process of a neuron. The paraxons. **F.-cone.** See under *Cone*. **F., Darkschewitsch's,** a tract of nerve-fibers extending from the optic tract to the ganglion of the habenula. **F.s, Dartoic,** the muscle-fibers of the dartos. **F., Elastic.** See under *Tissue, Yellow Elastic* (Illus. Dict.). **F.s, Henle's.** See under *Henle* (Illus. Dict.). **F.s, Herxheimer's.** See *Spirals, Herxheimer's* (Illus. Dict.). **F.s, Involuntary Muscular,** straight or slightly bent, elongated, spindle-shaped, nucleated cells bearing more or less distinct longitudinal striations, which make up involuntary or unstriped muscles. Syn., *F.s, Nonstriated; F.s, Unstriped; F.s, Unstriated*. See *Muscular Tissue* (Illus. Dict.). **F.s, Meynert's,** a tract of nerve-fibers connecting the pregeniculum with the nuclei of the ocular muscles. **F.s, v. Monakow's,** a tract of nerve-fibers extending from the pregeniculum to the eyeball. **F.s, Moss.** See *Moss-f.s*. **F.s of Mummery,** scaffolding in which the gelatinous tissue and calcospherites are deposited in dental pulp. **F., Muscle-, F., Muscular,** any elongated anatomic element made up of muscular constituents. **F., Nerve-.** See under *Nerve* (Illus. Dict.). **F.s, Osteogenic.** See *F.s, Sharpey's Intercrossing*. **F.s, Prussak's.** See under *Prussak* (Illus. Dict.). **F.s, Purkinje's.** See under *Purkinje* (Illus. Dict.). **F.s, Radicular, Internal.** See *Radicular Fasciculus, Internal* (Illus. Dict.). **F.s, Retzius',** the rigid filaments of Deiters' cells in the organ of Corti. **F., Ritter's,** a delicate fiber, regarded as a nerve-fiber, seen in the axis of a retinal rod near the peripheral end of which it forms a small enlargement. **F.s, Rivet-,** protoplasmic processes on the basal surface of the columnar cells of stratified squamous epithelium; German, *Haftfasern*. **F.s, Rolando's Arciform.** See *Rolando* (Illus. Dict.). **F.s, Sappey's,** smooth muscular fibers found in the check ligaments of the eyeball close to their orbital attachment. **F.s, Secondary,** in a fibrous structure, those of secondary importance. Syn., *Auxiliary fibers*. **F.s, Sharpey's Intercrossing,** the collagenous fibers forming the lamellas which constitute the walls of the Haversian canals in bone; same as osteogenic fibers. **F.s, S.'s Perforating,** calcified white or elastic fibers which connect the lamellas in the walls of the Haversian canals. **F.-sheath.** See *Sheath, Fibril* (Illus. Dict.). **F., Smooth Muscular,** a muscular fiber-cell. See under *Muscle, Unstriped or Involuntary* (Illus. Dict.). **F.s, Spindle,** achromatic fibrils. **F., Spiral,** the coiled fiber peculiar to spiral fiber-cells (*q. v.*, under *Cell*). **F.s, Stilling's,** the association fibers of the cerebellum. **F., Straight,** the uncoiled fiber in a bipolar ganglion cell. See under *Cell, Spiral-fiber*. **F.s, Striated** or **Striped Muscular.** See *F.s, Voluntary Muscular*. **F., Sweat,** a nervous fibril which on stimulation produces sweating. **F.s, Sympathetic,** those of the sympathetic nerve. **F., T,** a branch given off at right angles to the axis-cylinder of a nerve-cell. **F., Unstriated Muscular, F., Unstriped Muscular.** See *F., Involuntary Muscular*. **F.s, Vascular.** See under *Vascular* (Illus. Dict.). **F.s, Vasodilator,** fibers of a vasodilator nerve. **F., Voluntary Muscular,** narrow, cylindric, fusiform columns marked by regular transverse stripes, which compose voluntary or striped muscles. See *Muscular Tissue* (Illus. Dict.). **F.s, Wernicke's.** See *Radiation, Optic* (Illus. Dict.). **F.s, White.** See under *Tissue, White Fibrous* (Illus. Dict.). **F.s, Yellow Elastic.** See under *Tissue, Yellow Elastic* (Illus. Dict.).

Fibriform (*fib'-ri-form*) [*fibra*, fiber; *forma*, shape]. Shaped like a fiber.

Fibril. (See Illus. Dict.) 3. The subdivision of a muscular fiber. **F., Achromatic.** See *Karyomita* (Illus. Dict.). **F.s, Ebner's Dentinal,** delicate fibrils contained in the matrix of the dentin. **F., Nuclear.** See *Threads, Nuclear*. **F.s, Remak's,** the fibrils composing a nonmedullated nerve-fiber.

Fibrillation. (See Illus. Dict.) 2. Huxley's name for the propensity of periplastic substance to break up into definite lines. **F., Muscular.** See *Fibromyitis* (Illus. Dict.).

Fibrin. (See Illus. Dict.) Syn., *Materia fibrosa; Coagulable lymph*. **F., Canalized,** a hyaline, peculiarly lustrous substance permeated by numerous channels, found in the region of the chorion frondosum at four months and after; which, according to Minot,

arises through a degenerative metamorphosis of the chorionic ectoderm; German, *Langhans' canalisirtes Fibrin*. **F.-globulin**, Hammarsten's name for a globulin-like substance which coagulates at about + 64° C., in blood-serum and in the serum from coagulated fibrinogen solutions. **F. of Henle**, a light flocculent precipitate which is separated when semen is diluted with water. **F., Vegetable**, gluten-casein.

Fibrinoglobulin (*fi-brin-o-glob'-u-lin*). See *Fibringlobulin*.

Fibrinolysis (*fi-brin-ol'-is-is*) [*fibrin*; λύειν, to loose]. The partial dissolution which takes place in fibrin if allowed to stand in contact with the blood from which it was formed.

Fibrinoplastin (*fi-brin-o-plas'-tin*). See *Paraglobulin* (Illus. Dict.).

Fibrinosis (*fi-brin-o'-sis*). A condition marked by excess of fibrin in the blood.

Fibroadenoma (*fi-bro-ad-e-no'-mah*). Adenoma having fibrous tissue.

Fibrocalcareous (*fi-bro-kal-ka'-re-us*). Applied to fibrous tumors which have undergone calcareous degeneration.

Fibrocartilage. (See Illus. Dict.) **F., Acromioclavicular.** See *Cartilage of Weitbrecht* (Illus. Dict.). **F., Circumferential**, a band which widens the margin of an articular cavity and increases its depth. **F.s, Connecting**, those interposed between the articular surfaces of the centra of the vertebræ and of the pubes; the intervertebral and the interpubic disks. **F.s, Falciform, F.s, Interarticular** (of the knee). See *Semilunar Cartilages* (Illus. Dict.). **F., Intermediary, F., Intermediate**, one at the carpal end of the ulna and radius binding them firmly together. **F.s, Intervertebral.** See *Intervertebral Discs* (Illus. Dict.). **F.s, Investing.** See *Stratiform F.s* (Illus. Dict.). **F., Palpebral, F., Tarsal.** See *Tarsus* (2) (Illus. Dict.). **F., Scapuloclavicular.** See *Cartilage of Weitbrecht* (Illus. Dict.). **F., Semilunar.** See *Semilunar Cartilages* (Illus. Dict.). **F., White.** See under *Cartilage*. **F., Yellow.** See *Cartilage, Reticular* (Illus. Dict.).

Fibroconnective (*fi-bro-kon-ek'-tiv*). Having a fibrous structure and the function of connecting.

Fibrocystic (*fi-bro-sist'-ik*). Containing fibrous and cystic matter.

Fibrocystoid (*fi-bro-sist'-oid*). Having the structure of a fibrocyst.

Fibrocystoma (*fi-bro-sist-o'-mah*). Fibroma combined with cystoma.

Fibrofatty (*fi-bro-fat'-e*). Consisting of fibrous tissue and fat-corpuscles.

Fibrogen (*fi'-bro-jen*). See *Fibrinogen* (Illus. Dict.).

Fibroid. (See Illus. Dict.) **F., Paget's Recurrent.** See under *Paget* (Illus. Dict.). **F., Substitution.** Synonym of *Cirrhosis*.

Fibroidectomy (*fi-broid-ek'-to-me*) [*fibroid*; ἐκτομή, excision]. Excision of a uterine fibroid.

Fibrolaminar (*fi-bro-lam'-in-ar*). Relating to a fibrous layer.

Fibromatosis (*fi-bro-mat-o'-sis*). See *Fibrosis* (Illus. Dict.).

Fibromatous (*fi-bro'-mat-us*). Relating to a fibroma.

Fibromucous (*fi-bro-mu'-kus*). Consisting partly of mucosa and partly of fibrous tissue.

Fibromuscular (*fi-bro-mus'-ku-lar*). Made up of connective tissue and muscle.

Fibromyotomy (*fi-bro-mi-ot'-o-me*) [*fibromyoma*; τέμνειν, to cut]. The surgical removal of a fibromyoma.

Fibromyxosarcoma (*fi-bro-miks-o-sar-ko'-mah*). 1. A tumor containing sarcomatous and myxoid tissue. 2. A fasciculated sarcoma which has undergone myxoid degeneration.

Fibroneuroma (*fi-bro-nu-ro'-mah*). A neuroma with fibroid tissue.

Fibronuclear, Fibronucleated (*fi-bro-nu'-kle-ar, -nu'-kle-a-ted*). Relating to a tissue which shows many nuclei and fibers.

Fibropericarditis (*fi-bro-per-e-kar-di'-tis*). Fibrinous pericarditis.

Fibroplastic Substance (Alex. Schmidt). See *Paraglobulin* (Illus. Dict.).

Fibropolypus (*fi-bro-pol'-ip-us*). A fibroid polypus.

Fibropsammoma (*fi-bro-sam-o'-mah*). A tumor consisting of fibromatous and psammomatous elements.

Fibroreticulate (*fi-bro-re-tik'-u-lāt*). Consisting of a fibrous network or marked with interlacing fibers.

Fibrosarcoma. (See Illus. Dict.) **F., Mucocellular** (of the ovary), a form marked by a layer of large, round, bladdery cells lying between the fibrils of the connective tissue. Syn., *Krukenberg's ovarian tumor*.

Fibula. (See Illus. Dict.) Syn., *Perone*. 2. A clasp serving to unite the edges of a wound or the opening of a canal.

Fibulation (*fib-u-la'-shun*). See *Infibulation* (Illus. Dict.).

Ficiform (*fis'-e-form*) [*ficus*, a fig; *forma*, form]. Fig-shaped.

Ficoid, Ficoidal (*fi'-koid, fi-koid'-al*) [*ficus*, a fig; εἶδος, likeness]. 1. Fig-shaped. 2. Resembling the genus *Ficus*.

Ficus. (See Illus. Dict.) 3. A genus of urticaceous trees and shrubs. **F. rubiginosa**, Desf., a species indigenous to New South Wales; yields a resin containing sycoceryl alcohol.

Field. (See Illus. Dict.) **F. of Audition, F., Auditory**, the area surrounding the ear, in every portion of which a given sound is audible to the ear. **F.s, Cohnheim's.** See *Area, Cohnheim's* (Illus. Dict.). **F. of Fixation.** See *F. of Vision* (Illus. Dict.). **F., Flechsig's Oval.** See *Tract, Flechsig's* (Illus. Dict.). **F.s of Innervation**, special expansions in which the motor nerves to the voluntary muscles terminate. Syn., *Motor nerve-plates; Motor nerve organs; Motor sprays*. **F., Meynert's**, the reticular formation of the pons. **F.-ration.** See under *Ration*. **F. of Regard**, that occupied by dimly visible objects about the point of regard. **F., Retinal, F., Visual.** See *F. of Vision* (Illus. Dict.). **F., Wernicke's.** See *Triangle, Wernicke's*.

Figura (*fig-u'-rah*). See *Figure*. **F. venosa.** See *Sinus terminalis* (Illus. Dict.).

Figurate (*fig'-u-rāt*). Having a fixed and definite shape; arranged in a definite shape; said of skin-eruptions.

Figure (*fig'-ūr*) [*figura*, a form]. The visible form of anything; the outline of an organ or part. **F., Achromatic** (**Spindle**), **F., Achromatin**, a fusiform figure assumed by the achromatic fibrils in a dividing cell. **F.s, Adhesion**, Rindfleisch's term for the pattern produced in living protoplasm by the adhesion of the two interpenetrating substances, the reticular framework and the intervening matrix. **F., Bistellate.** See *Amphiaster* (Illus. Dict.). **F., Chromatic** (**Nuclear**), **F., Chromatin**, one of the figures formed by the chromatic fibrils of the nucleus during karyokinesis. **F., Nuclear** (spindle or division). 1. Flemming's name for any one of the forms assumed by the nucleus during karyokinesis. 2. Strassburger's name for the spindle stage of karyokinesis. **F.s, Purkinje's.** See under *Purkinje* (Illus. Dict.).

Fikongo (*fi-kong'-go*). The African name for *Brachystelma fringeri* (*q. v.*).

Filaceous (*fi-la'-shus*) [*filum*, a thread]. Consisting of threads.

Filament. (See Illus. Dict.) **F., Axial,** the central filament of the spermatozoon flagellum. **F.s, Purkinje's.** See *Purkinje's Fibers* (Illus. Dict.). **F., Terminal.** See *Filum terminale* (Illus. Dict.).

Filamentation. See *Reaction, Thread.*

Filarial (*fi-la'-re-al*). Relating to the genus *Filaria.*

Filicin (*fil'-is-in*) [*filix*, a fern]. 1. A yellowish-white, sticky, odorless powder extracted from the root of *Dryopteris filix-mas*, Schott, soluble in chloroform, partly in ether, melting at 180°. 2. Filicic acid.

Filicism (*fil'-e-sizm*). Poisoning from overdosage of extract of male-fern.

Fillet. (See Illus. Dict.) **F. of the Corpus callosum,** Mayo's name for the fornicate fascicle.

Filmogen (*fil'-mo-jen*). A protective vehicle for applying medicaments in skin-diseases, consisting of pyroxylin dissolved in acetone with a small quantity of castor oil. Syn., *Liquor adhæsivus.*

Filter. (See Illus. Dict.) **F., Chamberland's Bougie, F., Chamberland-Pasteur,** a tubular vessel of unglazed porcelain through the pores of which drinking-water is forced by pressure for removal of microbes.

Filtrate (*fil'-trāt*) [*filtrum*, felt]. In filtration, the liquid which has passed through a filter.

Filtrum. (See Illus. Dict.) **F. ventriculi,** small vertical channels on the back of the larynx between Morgagni's cartilage and the inner edge of the arytenoid cartilage. They end between the vocal cords at the dorsal end of Morgagni's ventricle.

Filum. (See Illus. Dict.) 2. See *F. terminale* (Illus. Dict.). Syn., *Terminal filament; Central ligament* of the spinal cord; *Nervus impar.* **Fila olfactoria,** the bundles of fine fibers composing the olfactory nerves.

Fimbria. (See Illus. Dict.) 2. A fiber. 3. A fringe or border. **Fimbriæ synoviales,** the synovial fringes. See *Gland, Haversian* (Illus. Dict.).

Fimbriatum (*fim-bri-a'-tum*) [*fimbria*, a fringe]. The corpus fimbriatum.

Fimicolus (*fim-ik'-ol-us*). See *Fimetarious* (Illus. Dict.).

Finger. (See Illus. Dict.) **F.-cot,** a covering of rubber or other material to protect the finger or to prevent infection. Syn., *Dactylotheca.* **F.s, Dead.** See *Night Palsy* (Illus. Dict.). **F., Drumstick.** See *Clubbed Fingers* (Illus. Dict.). **F., Dupuytren's.** Same as *Dupuytren's Contraction.* **F., Giant-.** See *Macrodactylia* (Illus. Dict.) **F.s, Glossy.** See *Glossy Skin* (Illus. Dict.). **F., Hippocratic.** See under *Hippocratic* (Illus. Dict.). **F., Jerk-, F., Snap, F., Spring.** See *Trigger-finger* (Illus. Dict.). **F., Morse,** an affection analogous to writers' cramp, resulting from operating the Morse key in telegraphy. **F.-nail Poison,** the inspissated juice of the green pineapple, with which aborigine Javanese women coat à long sharp finger-nail of each hand; it is also used by the Malays to poison their kreeses.

Finsen's Light-treatment. See *Phototherapy.*

Fire. (See Illus. Dict.) 2. A popular name for inflammation affecting the skin. **F., St. Anthony's, F., Wild,** erysipelas.

Fisetin (*fis'-et-in*). Chevreul's name for quercitin derived from *Rhus cotinus.* Syn., *Fisetic acid.*

Fish-disease. See under *Disease.*

Fish-roe Bodies. Mycetoma.

Fish-spine Disease. See *Disease, Fish-slime.*

Fish-tongue. See *Carp's-tongue.*

Fissiparism, Fissiparity (*fis-ip'-ar-izm, fis-ip-ar'-it-e*) [*findere*, to cleave; *parere*, to produce]. Propagation by fission; fissiparous generation.

Fissure. (See Illus. Dict.) **F., Henle's,** interstices, filled with connective tissue, between the muscular fibers of the myocardium. **F., Prelimbic,** the anterior portion of the callosomarginal fissure. **F., Prepyramidal,** one in front of the pyramid separating the tonsil from the cuneate lobule. **F., Primary** (of His), His' *Bogenfurche*, a fold extending along the mesal line of the hemisphere producing an external groove and an internal ridge. It begins at the olfactory lobe, which it divides into a ventral and a dorsal part, and, continuing backward in a curved direction, joins the hippocampal sulcus. **F., Summit.** See *F., Supertemporal* (Illus. Dict.). **F.s, Transitory,** the fissures that appear on the human cerebrum between the third and fourth months of gestation and afterward disappear for the most part; they are supposed to be mechanical in origin. They have not been observed in animals.

Fistula. (See Illus. Dict.) **F., Abdominal,** one in the abdominal wall communicating with some of the abdominal viscera. **F., Alveolar,** one due to necrosis of an alveolus. **F. ani congenita,** an anomaly of the anus the derivation of which is attributed to the remains of the posterior part of the blastopore. **F., Anoperineal,** an anal fistula opening on the perineum. **F., Bimucous,** one making a communication between two mucous surfaces. **F., Cicatricial,** one lined with a cicatricial membrane. **F., Coccygeal.** See *Pilonidal Sinus* (Illus. Dict.). **F., Cutaneobiliary,** one leading from the external surface into the gallbladder or a bile-duct. **F., Cysticocolic,** one leading from the gallbladder to the colon. **F., Labiform,** one characterized by lip-like protrusions at the outer margin. **F., Lacteal.** See *F., Mammary* (Illus. Dict.). **F., Ostial.** See *F., Labiform.* **F., Rectovesicovaginal,** a double fistula affording communication between the rectum, the vagina, and the urinary bladder. **F. sacra,** the sylvian aqueduct. **F., Sacral,** a congenital fistula occurring in the lumbosacral region.

Fistulization (*fis-tu-li-za'-shun*). The act or process of becoming fistulous.

Fit. (See Illus. Dict.) **F.s of the Mother,** colloquial synonym of hysteria. **F.s, Pontobulbar,** convulsions occurring in Jacksonian epilepsy due to disturbance of the pons or bulb.

Fixation. (See Illus. Dict.) 2. The operation of rendering fixed by means of sutures a displaced or floating organ. Cf. *Vaginofixation, Ventrofixation.*

Fixative (*fiks'-a-tiv*) [*figere*, to fasten]. 1. Applied to any substance used to fix tissues in the structural condition and shape found in life or for fastening a microscopic section to a slide. 2. See *Body, Immune.*

Flannel (*flan'-el*) [OF., *flanelle*]. A variety of soft loosely woven woolen cloth. **F., Vegetable,** a fabric made from the wood of *Pinus sylvestris;* it is said to be beneficial when worn by rheumatic patients.

Flap. (See Illus. Dict.) **F., Anaplastic,** a skin-flap aiding in the restoration of a neighboring part. **F., Autoplastic,** one to replace a part that is destroyed.

Flatness (*flat'-nes*). The percussion-note produced by airless bodies.

Flavedo (*fla-ve'-do*) [L.]. 1. Yellowness. 2. A disease of plants causing them to assume a yellow color. **F. icteritia,** the yellowness of jaundice.

Flemingin (*flem-in'-jin*). A pigment obtained from warras (*q. v.*, Illus. Dict.) occurring in small needles.

Flemming's Germ-centers. See under *Germ.*

Flesh. (See Illus. Dict.) **F.-quotient,** Argutinsky's

term for the relationship of the carbon to nitrogen in flesh; it is, on an average, 3.24:1.

Flexure. (See Illus. Dict.) **F., Basicranial,** the forward bend of the embryo at the base of the skull. **F., Caudal,** the bend at the lower portion of the embryo. **F.s, Cephalic, F.s, Cranial, F.s, Encephalic,** certain bends, occurring at an early period of development, in the cranial part of the embryo. **F., Diencephalic,** Wilder's name for the curve in the encephalic segment by which, in all mammals, birds, and reptiles, the mesal portion of the prosencephalic cavity is made to lie dorsad of the diencephalic cavity, instead of cephalad of it, and almost on the same plane as the fishes and *Amphibia*. **F., Hepatic** (of the colon), an abrupt bend in the ascending colon to the right of the gall-bladder at the under surface of the liver. Syn., *Flexura dextra; F. prima; F. hepatica coli.* **F., Mesencephalic,** the chief and earliest cephalic flexure occurring at the ventral end of the notochord, at which point the medullary tube and the formative substance of the walls of the cranium bend forward decidedly. Syn., *F., Cranial* (Osborn); *F., Principal cephalic.* **F., Splenic** (of the colon), an abrupt turn beneath the lower end of the spleen connecting the descending with the transverse colon. Syn., *Flexura secunda; F. sinistra; F. lienalis.* **F., Suprasternal,** in veterinary anatomy one in the colon lying upon the abdominal prolongation of the sternum.

Flint's Arcade. See under *Arcade.*

Flint-disease. Synonym of *Chalicosis.*

Float (*flōt'*) [ME. *floten*, to float]. A label enclosed in a glass capsule to float upon the surface of a fluid exposed in a basin.

Floccilegium (*flok-sil-e'-je-um*) [*floccus*, a flock of wool; *legere*, to pick out]. Carphology.

Floccule, Flocculus. (See Illus. Dict.) Syn., *Lobus nervi pneumogastrici.* **F., Accessory,** the paraflocculus. **F., Associated,** Henle's name for the paraflocculus. **F. secundarius,** the paraflocculus. **Flocculi secundarii.** See *Mediflocculus, Paraflocculus, Suprafloccului.*

Floccus. (See Illus. Dict.) **F. laminosus.** See *Flocculus* (Illus. Dict.). **Flocci volitantes.** See *Muscæ volitantes* (Illus. Dict.).

Floridins (*flor'-id-ins*) [*flos*, a flower]. Respiratory pigments related to hemoglobin, of a violet and purplish-red color, found in some of the invertebrate animals.

Floss (*flos'*) [OF. *flosche*, soft]. Silk which has not been twisted. **F.-silk.** See *Silk* (Illus. Dict.).

Fluate (*flu'-āt*). See *Fluorid* (Illus. Dict.).

Fluavil (*flu'-av-il*). $C_{20}H_{32}O_2$. A transparent yellowish resin found with alban in gutta percha.

Fluctuli (*fluk-tik'-u-le*) [pl. of *fluctuculus*, a wavelet]. Bergmann's name for the fine wave-like markings on the surface of the lateral wall of the third ventricle, ventrad of the anterior commissure.

Fluid. (See Illus. Dict.) 2. Liquid or gaseous. **F., Coley's.** See under *Coley.* **F., Colostric.** See *Colostrum* (Illus. Dict.). **F., Darby's Prophylactic,** a solution of potassium hypochlorite. **F., Haffkine's Prophylactic,** not a serum nor a lymph, but a fluid culture of pest-bacilli, grown for several weeks under conditions most favorable to the development of the toxic properties; it is finally deprived of its infective quality by being heated to a temperature that is fatal to the living bacteria but which does not alter the specific toxin (Abbott). **F., Labyrinthine,** the perilymph. **F., Lang's Fixative and Hardening,** mercuric chlorid, 5 parts; sodium chlorid, 6 parts; acetic acid, 5 parts; water, 100 parts. **F., Subarachnoid.** See *Cerebrospinal Fluid* (Illus. Dict.). **F., Van Gehuchten's Fixative and Hardening,** consists of glacial acetic acid, 10 parts; chloroform, 30 parts; absolute alcohol, 60 parts.

Flumen (*flu'-men*) [L.; pl. *flumena*]. 1. A flow. 2. A name given by Duret to the principal cerebral fissures.

Fluobenzene (*flu-o-ben'-zēn*). C_6H_5F. A crystalline compound of fluorin and benzene.

Fluoborate (*flu-o-bo'-rāt*). A salt of fluoboric acid.

Fluochromate (*flu-o-kro'-māt*). A salt of fluochromic acid.

Fluoform (*flu'-o-form*). See *Fluoroform* (Illus. Dict.).

Fluorescein. (See Illus. Dict.) **F.-sodium,** a 2% alkaline solution employed in diagnosing corneal lesions and in the detection of minute foreign bodies in that tissue; and is suggested as a means of diagnosing apparent death by injection of 16 gr. If circulation remains, the mucosas will be stained yellow within a few minutes. Syn., *Uranin.*

Fluorescence. (See Illus. Dict.) **F. Screen,** a screen coated with materials which fluoresce when exposed to *x*-rays.

Fluoroform. (See Illus. Dict.) **F.-water, Aqua fluoroformii,** a watery solution (2.8 %) of fluoroform; an odorless, tasteless, nonirritant, nontoxic liquid. It is used in tuberculosis and lupus. Dose, 1 tablespoonful 4 times daily. Syn., *Fluoroformol.*

Fluoroformol (*flu-or-o-form'-ol*). See *Fluoroform-water.*

Fluorol (*flu'-or-ol*). NaF. Sodium fluorid, an antiseptic.

Fluorometer (*flu-or-om'-et-ur*) [*fluere*, to flow; *μέτρον*, a measure]. A device for adjusting the shadow in skiagraphy; a localizer in *x*-ray examination.

Fluoroscope (*flu'-or-o-skōp*) [*fluere*, to flow; *σκοπεῖν*, to examine]. The device for holding the fluorescent screen in *x*-ray examination. Syn., *Cryptoscope.*

Fluoroscopy (*flu-or-os'-ko-pe*). The process of examining the tissues by means of a fluorescent screen.

Fluoroxyl (*flu-or-oks'-il*). See *Epidermin* (Illus. Dict.).

Fluorphenetol (*flu-or-fen'-et-ol*). An organic fluorin compound.

Fluorrheumin (*flu-or-ru'-min*). The commercial name of fluorphenetol-difluoro-diphenyl, prepared as an ointment and used in the treatment of rheumatism. Dose, 5 gm. externally.

Flux. (See Illus. Dict.) **F., Alvine,** diarrhea. **F., Bilious,** bilious diarrhea. **F., Bloody,** dysentery. **F., White,** chronic tropical diarrhea.

Fly. (See Illus. Dict.) **F.-fungus.** See *Saprolegnia.* **F., Telini.** See *Mylabris cichorii.*

Foam-liver. See under *Liver.*

Focal. (See Illus. Dict.) **F. Depth,** the capacity of an objective to define objects out of focus. **F. Distance,** the distance from the center of a lens or mirror to its focus.

Foehn. A local warm, dry, southerly or southeasterly wind of Switzerland, appearing with particular violence in the northeastern portions of the Alps, chiefly from late summer to spring. It belongs exclusively to the Alps from Geneva to Salsburg, but over this region is of very great climatic importance. The effect of the foehn on invalids and even on healthy persons is depressing. [Weber.] Cf. *Harmattan, Khamsin, Mistral, Sirocco, Simoon, Solano.*

Fogging Maneuver. In repression treatment of esophoria, the reduction of vision to about $\frac{20}{200}$ by combining prisms (varying with the muscular imbalance), bases in, with a convex sphere; with which combination glasses the patient reads a half hour at night before retiring.

Foil [*folium*, a leaf]. A thin sheet of metal used for filling teeth. **F. Carrier, F. Plugger,** a kind of

tweezers used to convey the foil to the cavity in the tooth. **F. Crimpers,** an instrument for folding foil.

Fold. (See Illus. Dict.) **F.s, Amniotic, F.s of the Amnion.** See *Head-fold* and *Tail-fold* (Illus. Dict.) and *F., Lateral Amniotic.* **F., Anterior Amniotic, F., Anterior, of the Blastoderm,** the cephalic fold. **F.s of the Axilla,** the anterior and posterior walls of the axilla. **F., Caudal.** See *Tail-fold* (Illus. Dict.). **F., Cephalic.** See *Head-fold* (Illus. Dict.). **F., Choroidal,** the transverse cerebral fissure. **F., Circular,** one in the mucosa of the tympanum extending between the head of the malleus, its long process, the receptacle and tendon of the tympanic tensor. **F., Cordal,** one in the mucosa of the tympanum enclosing the tympanic branch of the facial nerve and attaching it to the tympanic scute between the incus and malleus. **F., Costocolic,** extends from the diaphragm opposite the tenth and eleventh ribs to the splenic flexure of the colon, and forms a shelf-like structure above which lies the spleen. **F., Douglas'.** See *Douglas' Semilunar Fold* (Illus. Dict.). **F.s, Douglas'.** See *Rectouterine Folds* (Illus. Dict.). **F.s, Duncan's,** the folds of the loose peritoneal covering of the uterus seen immediately after delivery. **F., Entosylvian,** the insula. **F., Exoccipital,** the tip of the occipital lobe. **F., Falcate,** one in the mucosa of the tympanum running backward from the suspensory fold between the malleus and the incus internally and the lower border of the tympanic scute externally. **F., Falcial,** the part of the callosal gyrus lying ventrad of the genu of the callosum. **F., Genitoenteric,** an anomalous fold of peritoneum lying between the broad ligament and the base of the mesentery of the sigmoid flexure. Syn., *Plica genitoenterica.* **F.s, Glossoepiglottic,** three folds in the mucosa extending from the base of the tongue to the epiglottis. **F., Head.** See *Head-fold* (Illus. Dict.). **F., Hensing's,** a more or less triangular fold of the peritoneum which is attached to the abdominal wall from the lower extremity of the kidney to the iliac fossa by its lower border, and to the posteroexternal aspect of the colon, at times also to the cecum, by its anterior or internal border The apex is fixed in the lumbar fossa, the lower free border extending from the iliac fossa to the intestine. Syn., *Parietocolic fold; Superior ligament of the cecum.* **F.s, Houston's.** See under *Houston* (Illus. Dict.). **F., Hypoblastic,** a fold of the hypoblast extending dorsally and in contact with the rudimentary central nervous system and ultimately giving origin to the notochord. **F., Ileoappendicular.** See *F., Treves' Bloodless.* **F.s, Ileocecal.** See *Pouches, Ileocecal* (Illus. Dict.). **F., Ileocolic,** a semilunar fold of the peritoneum which is attached to the anterior layer of the mesentery, the anterior aspect of the ascending colon, and the cecum as far as the vermiform appendix. Syn., *Luschka's fold.* **F., Lateral Amniotic,** the folds of somatopleure on the sides of the embryo which with the cephalic and caudal folds form ultimately the amniotic sac. **F., Marshall's Vestigial.** See under *Marshall* (Illus. Dict.). **F., Mesentericoparietal.** See *Ligament, Tuffier's Inferior.* **F., Nélaton's,** a transverse fold of mucosa at the junction of the middle and lower thirds of the rectum, about 10 to 11 cm. above the anus. **F., Parietocolic.** See *F., Hensing's.* **F.s, Pawlik's,** the anterior columns of the vagina which form the lateral boundaries of Pawlik's triangle and serve as landmarks in locating the openings of the ureters. **F., Pituitary,** the two layers of dura enclosing the hypophysis. **F.s, Placental,** Minot's term for two folds in the uterine mucosa at each side of the mesial line at the attached side of the uterus of the rabbit and into which the allantois grows, forming the complete placenta. **F., Postmarginal.** See *Precuneus* (Illus. Dict.). **F., Pterygomaxillary,** a fold of mucosa in the mouth dorsad of the last molar tooth and formed by the projection of the pterygomaxillary ligament. Syn., *Plica pterygomaxillaris.* **F.s, Rathke's,** two projecting folds of the fetal mesoderm which are placed between the orifice of the intestine and the allantois, and unite in the median line to form Douglas' septum. **F.s, Rectal, F.s of the Rectum.** See *Houston's Valves* (Illus. Dict.). **F.s, Rectouterine.** See under *Rectouterine* (Illus. Dict.). **F.s, Rectovesical.** See under *Rectovesical* (Illus. Dict.). **F., Rosenmüller's.** See *Valve, Rosenmüller's.* **F., Sacrosciatic.** See *White Line* (Illus. Dict.). **F., Salpingonasal,** the fold of mucosa extending from the edge of the pharyngeal opening of the eustachian tube to the posterior nares. **F., Schultze's.** See under *Schultze* (Illus. Dict.). **F.s, Semilunar** (of peritoneum). See *Rectouterine Folds* (Illus. Dict.). **F., Stapedial,** one in the tympanic mucosa enclosing the stapes. **F., Suspensory,** a fold of the tympanic mucosa continuous with the circular and falcate lobes, proceeding from the suspensory ligament of the malleus and extending between its head and the tympanic tegmen. **F.s, Synovial.** See *Glands of Havers* (Illus. Dict.). **F., Tail-.** See *Tail-fold.* **F., Tentorial,** the middle occipital gyrus. **F., Thyroarytenoid,** the inferior or true vocal cord. **F., Treves' Bloodless,** a quadrilateral fold of the peritoneum attached by its upper border to the ileum, opposite the mesenteric attachment, and by its lower border to the mesoappendix or to the appendix itself. The outer or right border is attached to the inner aspect of the cecum as far down as the appendix, the left or inner concave margin being free. Syn., *Ileoappendicular fold.* **F.s of the Tympanum.** See *F., Circular, F., Cordal, F., Falcate, F., Stapedial, F., Suspensory.* **F., Urachal,** the peritoneum surrounding the urachus. Syn., *Plica urachi.* **F.s, Vesicouterine.** See *Vesicouterine Folds* (Illus. Dict.). **F., Vestigial.** See *Marshall's Vestigial Fold* (Illus. Dict.). **F.s, Visceral,** the intermediate thickenings between the visceral arches and clefts of the lateral wall of the cervical region of the embryo.

Follicle, Folliculus. (See Illus. Dict.) **F.s, Closed,** the solitary and agminated glands of the small intestine. **F., Dental,** the dental sac and its contents, the developing tooth. **F., Hair,** the depression containing the root of the hair. **F.s, Lieberkühn's.** See *Crypts, Lieberkühn's* (Illus. Dict.). **F.s, Littré's.** See *Glands, Littré's* (Illus. Dict.). **F.s, Lymph, F.s, Lymphatic.** See *Glands, Lymphatic* (Illus. Dict.). **F.s, Malpighian.** See under *Malpighian* (Illus. Dict.). **F.s, Mucous,** the mucous glands. **F.s, Nabothian.** See under *Glands.* **F., Nail,** the fold of matrix embracing the root of the nail. **F., Ovarian,** the Graafian vesicle. **F.s, Palpebral,** the meibomian glands. **F.s, Peyerian, F.s, Peyer's,** Peyer's glands. **F., Solitary,** one of the small discrete lymph follicles found in the intestinal mucosa. **F., Spleen, F., Splenic,** a malpighian corpuscle.

Folliculitis. (See Illus. Dict.) **F. abscedens infantum,** follicular furunculosis of children. **F., Agminate,** inflammation of a set of follicles.

Folliculoma (*fol-ik-u-lo'-mah*). A tumor originating in a follicle. **F. ovarii malignum,** a malignant tumor of a graafian vesicle.

Folliculosis (*fol-ik-u-lo'-sis*). A disease of the follicles.

Fontanel. (See Illus. Dict.) 2. See *Issue* (Illus. Dict.). **F., Casser's, F. of Casserius.** See

under *F.s, Lateral.* **F., Frontoparietal.** See *F., Anterior* (Illus. Dict.). **F., Gerdy's,** an abnormal or supernumerary fontanel existing between the two parietal bones at the point at which the sagittal suture ceases to be serrated and becomes nearly rectilinear. **F., Great, F., Pulsatile, F., Sincipital.** See *F., Anterior* (Illus. Dict.). **F.s, Lateral,** two membranous spaces, one in front between the parietal, frontal, and temporal bones (the anterior lateral or sphenoid fontanel) and one behind between the parietal, occipital, and temporal bones (the posterior lateral, mastoid, or Casser's fontanel). They usually disappear the year after birth. **F., Nasofrontal,** an abnormal one at the union of the nasal and frontal bones. **F., Occipital, F., Occipitoparietal, F., Posterior Median, F., Small.** See *F., Posterior* (Illus. Dict.). **F., Supraorbital,** in comparative embryology, a cordate membranous space between the occipital cartilage and the skull.

Fonticulus. (See Illus. Dict.) 3. Same as *Fontanel.* **F. major, F. quadrangularis,** the anterior fontanel. **F. minor, F. triangularis,** the posterior fontanel.

Foot. (See Illus. Dict.) **F., Friedrich's,** pes cavus, with hyperextension of the toes, observed in hereditary ataxia. **F., Morand's.** See under *Morand* (Illus. Dict.). **F., Splay-,** talipes valgus. **F.-switch** (Scheppegrell's), an appliance by means of which an electric current may be controlled by means of the foot, while the hands are engaged. **F., Tabetic.** 1. An extension of the foot in preataxic tabes observed when the patient is lying down. An affection of the foot in the beginning of tabes described by Charcot and marked by numbness and formication followed by hypertrophy of the head of the astragalus, scaphoid, cuneiform, and metatarsal bones. **F., Weak,** anterior metatarsalgia.

Forage (*for'-aj*) [OF., *fourage*]. Fodder. **F.-poisoning,** the preferred term for the so-called epizootic cerebrospinal meningitis of horses. It is attributed to a fungus upon the ensilage.

Foramen. (See Illus. Dict.) **F., Apical,** the opening at the end of the root of a tooth which admits its vascular and neural supply to the dental pulp. **F., Bozzi's,** the macula lutea. **Foramina conjugationis,** the intervertebral foramina. **F., Ferrein's.** See *Fallopius, Hiatus of* (Illus. Dict.). **F., Galen's,** the opening of the anterior cardiac vein in the right auricle. **F., Interclinoid, Common,** a canal formed by an anomalous process connecting the anterior, middle, and posterior clinoid processes of the sphenoid bone. **Foramina, Key and Retzius', Foramina, Lushka's.** See under *Key* (Illus. Dict.). **Foramina repugnatoria.** (See Illus. Dict.) 2. Those through which venomous serpents eject their poison. **F., Sciatic, Inferior or Lesser.** See *F., Sacrosciatic, Small* (Illus. Dict.). **Foramina, Stenson's,** the incisive foramina which transmit the anterior palatine vessels. **Foramina, Transverse Accessory,** anomalous foramina in the transverse processes of the cervical vertebræ transmitting an inconstant accessory vertebral artery. **F., Weitbrecht's,** a foramen in the capsule of the shoulder-joint, through which the synovial membrane communicates with the bursa lining the under surface of the tendon of the subscapularis muscle.

Foraminulate, Foraminulous, Foraminulose (*for-am-in'-u-lāt, -us, -ōs*). Furnished with very minute openings.

Force. (See Illus. Dict.) **F., Absolute Muscular,** the maximum capacity of shortening shown by a muscle subjected to maximum stimulus. **F., Animal,** according to the doctrine of Wm. Cullen (1712–1790), the *vis-vitæ* or life-giving element; an undefined dynamic something (different from Hoffmann's ether or Stahl's soul). Also called *nerve-force, nerve-principle, brain-energy.* [Park.] **F., Plastic,** the generative force of the body.

Forceps. (See Illus. Dict.) **F., Duck-bill,** forceps furnished with duck-bill-shaped beaks used for extraction of roots of teeth. **F., Sequestrum,** strong forceps with serrated jaws of medium length; they are used for holding or removing the detached portion of bone forming a sequestrum.

Forcipal (*for'-sip-al*). Relating to forceps.

Fore. (See Illus. Dict.) **F.gilding,** a term introduced by Apathy to designate the histologic process of treating perfectly fresh nerve-tissues with salts. Cf. *After-gilding.* **F.-type.** See *Archetype* (Illus. Dict.).

Formacoll (*form'-ak-ol*). Formaldehyd-gelatin.

Formagen (*form'-aj-en*). A proprietary dental cement.

Formal (*form'-al*). See *Methylal* (Illus. Dict.).

Formalbumin (*form-al'-bu-min*). See *Formaldehyd-casein.*

Formaldehyd. (See Illus. Dict.) Syn., *Formol; Formalin; Formalose; Oxymethylene.* **F. Acetate,** $C_5H_8O_4$, a heavy, colorless liquid, soluble in water; boils at 170° C. It is antiseptic. **F. Bisulfite,** $H.COH.Na_2S_2O_8$, an antiseptic. **F.-casein,** a condensation-product of casein and formic aldehyd; a coarse yellow powder without odor or taste; used as a wound antiseptic. Syn., *Formalbumin.* **F.-cotoin,** yellow crystals with odor of cinnamon, soluble in alkalis. It is used in tuberculous diarrhea and in chronic catarrh of the bowels. Dose, 4–8 gr. (0.25–0.5 gm.). Syn., *Fortoin; Methylenedicotoin.* **F.-gelatin,** a combination of 2% of formic aldehyd added to a warm aqueous solution of gelatin; the resultant mass is powdered and used as a surgical dressing. Syn., *Glutol.* **F., Para,** $(CH_2O)_3$, obtained from formic aldehyd by heat; a white crystalline powder, soluble in water; melts at 171° C. It is antiseptic and astringent and used internally in cholera nostras and as a surgical dressing. Dose, 8–15 gr. (0.52–0.97 gm.) several times daily. Syn., *Triformal; Polymerized formic aldehyd.* **F. Sulfocarbolic Acid,** $2(CH_2OH).C_6H_3.OH$; used as a wound antiseptic.

Formalith (*form'-al-ith*). The proprietary name for diatomaceous earth saturated with a solution of formic aldehyd.

Formalose (*form'-al-ōs*). A 40% solution of formic aldehyd.

Formamid (*form'-am-id*). CH_3NO. A clear, oily liquid obtained from ethyl formate by action of ammonia; sp. gr. 1.146 at 19° C.; soluble in water; boils at 200°–212° C., with partial decomposition. Syn., *Methane amid.*

Forman (*form'-an*). See *Ether, Chlormethyl-menthyl.*

Formate (*form'-āt*). A salt of formic acid.

Formation (*form-a'-shun*) [*formare*, to form]. A thing formed or the process by which it is formed. **F., Claustral, F., Claustrum,** Meynert's name for the fifth layer of the cortex from the similarity of the cells to those in the claustrum. Syn., *Claustral layer of the cerebrocortex; Fifth layer of the cortex cerebri; Formatio claustralis; Spindle-cell formation.* **F., Granular, F., Granule-like,** Meynert's name for the layer of small, irregular cells composing the fourth stratum of the cortex in the five-strata type. **F., Granulose.** See *Membrana granulosa* (Illus. Dict.). **F., New.** See *Neoplasm* (Illus. Dict.).

Formatol (*form'-at-ol*). A dusting-powder containing formic aldehyd.

Formes Frustes (*form-a froos-ta*) [Fr.]. Incomplete forms of Graves' disease.

Formic, Formicic (*form'-ik, form-is'-ik*) [*formica,*

an ant]. Relating to or derived from ants, or pertaining to formic acid.

Formin (*form'-in*). $C_6H_{12}N_4$. A condensation-product of formic aldehyd and ammonia; an alkaline crystalline powder, soluble in water, slightly soluble in alcohol. It is a uric-acid solvent, diuretic, and vesical antiseptic. Dose, 1–1.5 gm. in the morning in aqueous solution. Syn., *Urotropin; Hexamethylenetetramin.* **F. Salicylate.** See *Saliformin.*

Formochlor (*form'-o-klor*). A solution of formic aldehyd and calcium chlorid. It is used as a disinfectant by spraying or vaporizing.

Formoforin, Formoform (*form-o-for'-in, form'-o-form*). A dusting-powder to relieve perspiring feet, and said to consist of formic aldehyd, 0.13%; thymol, 0.1%; zinc oxid, 34.44%; and starch, 65.27%. If the formic aldehyd is omitted it may be used on purulent sores.

Formoguanamin (*form-o-gwan'-am-in*). Same as *Guanamin.*

Formomethylal (*form-o-meth'-il-al*). C_3H_8O. An ethereal oil obtained from the distillation of a mixture of methyl alcohol, sulfuric acid, and manganese peroxid. It is anesthetic.

Formonetin (*form-on'-et-in*). $C_{24}H_{22}O_7$. A dissociation product of ononin by action of ononin with hydrochloric or sulfuric acid. It is a crystalline substance, insoluble in water or ether. It gives a beautiful violet with concentrated sulfuric acid and manganic oxid.

Formonitril (*form-o-ni'-tril*). Hydrocyanic acid.

Formopyrin (*form-o-pi'-rin*). A combination of antipyrin with formic aldehyd; white crystals soluble in hot water, alcohol, and acids, melting at 156° C.

Formose (*form'-ōz*). A sweetish syrup obtained by Loew on the condensation of formic aldehyd in the presence of bases. It consists of a mixture of a nonfermentable sugar (formose) and a fermentable sugar (*a*-acrose), a hexose which is the starting-point of further syntheses.

Formula. (See Illus. Dict.) **F., Brenner's.** 1. See *Brenner's F.* (Illus. Dict.). 2. With the same current strength the cathodal closing contraction is four times as strong as the cathodal opening contraction. **F., Dental,** one showing the number and arrangement of teeth. **F., Glyptic,** a chemic formula designed to illustrate the structural and spatial conception of the molecule. **F., Magistral, F. magistralis,** a magistral prescription. **F., Official,** one given in an official publication. **F., Officinal,** a pharmaceutic formula which, though not official, is commonly followed by pharmacists. **F., Reuss',** the formula by means of which the amount of albumin contained in pathologic exudates and transudates can be approximately calculated when the specific gravity that depends upon the amount of albumin present is known: $E = \frac{3}{8}(S - 1000) - 2.8$; E = percentage of albumin contained in the fluid; S = specific gravity of the fluid. **F., Vertebral,** one used to indicate the number and arrangement of the vertebræ.

Formyl, Formylum. (See Illus. Dict.) Syn., *Formoxyl.* 2. The trivalent radicle, CH‴. Syn., *Formylene.* **F.-amid.** See *Formamid.* **F. Bromid,** bromoform. **F. Chlorid, F. Perchlorid,** chloroform. **F.-phenetidin,** $C_9H_{11}NO_2$, a substance obtained from phenetidin hydrochlorate by action of formic acid with anhydrous sodium formate; it occurs in colorless crystals, without odor or taste, soluble in alcohol, ether, and hot water, melting at 60° C. It is antiseptic. Syn., *Paraoxyethyl-formanilid.* **F.-piperidin,** an oily, aromatic liquid obtained by interaction of formamid and piperidin; soluble in water and alcohol; boils at 221° C. **F. Sulfid,** sulfoform. **F. Tribromid,** bromoform. **F. Trichlorid,** chloroform. **F. Triiodid,** iodoform.

Fornical (*for'-nik-al*). Relating to the fornix.

Fornix. (See Illus. Dict.) **F. ascendens.** See *Fornicolumn* (Illus. Dict.). **F. centralis, F. cerebri.** See *Fornix* (1) (Illus. Dict.). Syn., *Psalidium; Psalis.* **F. conjunctivæ,** a freely movable fold of conjunctiva between the lids and the cornea. **F. tricuspidalis.** See *Fornix* (1) (Illus. Dict.). **F. vaginæ, F. of the Vagina.** See under *Vagina* (Illus. Dict.). **Fornices vasculosi renum.** See *Arcus vasculosi renales.*

Fortoin (*for'-to-in*). See *Formaldehyd-cotoin.*

Fossa. (See Illus. Dict.) **F., Acetabular, F. acetabuli,** a depression in the center of the acetabulum. **F., Amygdaloid.** See under *Amygdaloid* (Illus. Dict.). **F., Anconeal.** See *Olecranoid F.* (Illus. Dict.). **F. anterior major (humeri).** See *F., Coronoid.* **F. anterior minima (humeri),** a slight depression on the ventral aspect of the humerus which receives the border of the head of the radius in extreme flexion of the forearm. **F., Anterior** (of the skull). See *F., Precranial.* **F. anthelicis, F. of the Anthelix,** the depression between the crura of the anthelix at its upper and anterior end. Syn., *F. triquetra; F. navicularis auris; F. triangularis; F. innominata.* **F. arcuata.** See *F. subarcuata.* **Fossæ articulares,** prearticular processes of the atlas. **F. basilaris,** a depression on the upper aspect of the basilar process of the occipital bone. **F., Biesiadecki's,** a peritoneal recess which is bounded in front by a more or less well-defined fold, the inner surface of which looks upward over the psoas toward the root of the mesentery, the outer extending toward the crest of the ilium. Syn., *F. iliacosubfascialis.* **F., Brösike's,** a recess in the peritoneal cavity which is situated in the first part of the mesojejunum and behind the superior mesenteric artery. Syn., *Parajejunal fossa; Mesentericoparietal fossa.* **F., Buccal,** an embryonic fossa bounded by the inferior and superior branches of the facial arches, which ends in a culdesac not connected with the intestinal canal. **F. cæca.** See *Foramen, Cecal* (Illus. Dict.). **F. cæcalis,** a fold of peritoneum forming a pouch upon the surface of the right iliopsoas muscle and extending to the apex of the cecum. **F.s, Cerebellar,** two shallow concave recesses on the lower part of the inner surface of the occipital plate for the reception of the hemispheres of the cerebellum. Syn., *Inferior occipital fossas.* **F.s, Cerebral,** two shallow concave recesses on the upper part of the internal surface of the occipital plate for the reception of the hemispheres of the cerebrum. Syn., *Superior occipital fossas.* **F. cerebralis anterior,** one of the precranial fossas. **F. cerebralis media,** one of the mesocranial fossas. **F. cerebralis posterior,** one of the postcranial fossas. **F., Claudius',** a triangular space containing the ovary; it is bounded anteriorly by the round ligament, above by the external iliac vein, and below by the ureter. Syn., *Ovarian fossa.* **F. cochleæ, F. cochlearis,** a slight depression in the petrosa receiving the base of the modiolus. **F. cochleariformis.** See *Receptacle, Tympanic Tensor.* **F., Coronal.** See *F., Precranial.* **F., Coronoid, F. coronoidea,** a trilateral concave depression into which the apex of the coronoid process of the ulna fits in extreme flexion of the forearm. **F.s, Costal, Fossæ costales,** the facets on the bodies of the vertebras where articulation occurs with the heads of the ribs. **F.s, Costotransverse,** depressions (usually three) on each side, upon the dorsal aspect of the three upper segments of the sacrum. **F.s, Cranial.** See *F.s, Mesocranial, F.s, Precranial,*

F.s, Postcranial. **F. cranii anterior,** one of the precranial fossas. **F. cranii media,** one of the mesocranial fossas. **F. cranii posterior,** one of the postcranial fossas. **F. cystica, F. cystidis felleæ,** the fissure for the gallbladder. **F. Douglasii,** Douglas' pouch. **F. elliptica.** See *Fovea hemielliptica* (Illus. Dict.). **F., Epigastric.** See *F., Infrasternal.* **F. glossoepiglottica,** a slight oblong depression on each side of the glossoepiglottic ligament. **F., Hartmann's,** a small, infundibular fossa of the peritoneum lying between Tuffier's inferior ligament and the mesoappendix. Syn., *F. ileocæcalis infima; F. subcæcalis.* **F. helicis, F. of the Helix.** See *F. scaphoidea* (Illus. Dict.). **F. hemielliptica.** See *Fovea hemielliptica* (Illus. Dict.). **F. hemisphærica.** See *F. hemisphærica* (Illus. Dict.). **Fossæ hepatis,** the fissures of the liver. **F. hypophyseos.** See *F., Pituitary* (Illus. Dict.). **F. ileocæcalis anterior,** an inconstant pouch of the peritoneum upon the upper border of the ileocecal valve; open above and on the left side. Syn., *F. ileocæcalis superior.* **F. ileocæcalis infima.** See *F., Hartmann's.* **F. ileocæcalis superior.** See *F. ileocæcalis anterior.* **F., Ileocolic.** See *F., Luschka's.* **F. iliacosubfascialis.** See *F., Biesiadecki's.* **F. iliopectinea,** Scarpa's triangle. **F. incudis,** a depression in the upper part of the dorsal wall of the tympanic cavity which accommodates the short process of the incus. **F. infraspinata, F., Infraspinous,** the recess on the posterior surface of the scapula occupied by the infraspinous muscle. **F., Infrasternal.** See *Infrasternal Depression* (Illus. Dict.). **F., Inguinal.** See *Pouch, Inguinal* (Illus. Dict.). **F. innominata.** See *F. anthelicis.* **F., Intercondylar, F., Intercondyloid.** See under *Intercondylar* (Illus. Dict.). **F., Intercrural, F. intercruralis.** See *Interpeduncular Space* (Illus. Dict.). **F., Ischiorectal, F. ischiorectalis.** See under *Ischiorectal* (Illus. Dict.). **F., Jobert's,** one formed in the popliteal region, above by the adductor magnus, below by the sartorius and gracilis. It is well seen when the knee is bent and the thigh rotated strongly outward. **F., Landzert's,** a fossa in the peritoneal cavity that is bounded behind by the parietal peritoneum covering the psoas, the renal vessels, the ureter, and a part of the left kidney, and below by the mesocolic fold. Syn., *Paraduodenal fossa; Recessus venosus.* **F., Luschka's,** a narrow fossa bounded by the ileocolic fold in front, and by the enteric mesentery, the ileum, and a small portion of the upper and inner walls of the cecum behind. Syn., *Ileocolic fossa.* **F., Mastoid, F. mastoidea,** the groove extending along the inner surface of the mastoid portion of the temporal bone, and forming part of the lateral sinus. **F. maxillaris, F., Maxillary.** See *F., Canine* (Illus. Dict.). **F. maxima.** See *Olecranoid F.* (Illus. Dict.). **F.s, Mental, F. mentalis,** two shallow depressions, one on each side of the mental protuberance of the mandible. **F., Mesentericoparietal.** See *F., Brösike's.* **F.s, Mesocranial, F.s, Middle of the Skull,** one of the three pairs (right and left) of fossas into which the interior base of the cranium is divided; they are deeply concave on a much lower level than the precranial fossas and lodge the sphenotemporal lobes of the cerebrum. Cf. *F.s, Precranial, F.s, Postcranial.* **F., Morgagni's.** 1. The fossa navicularis of the urethra. 2. The concave interspace between the upper border of the superior constrictor muscles of the pharynx and the basilar process of the occipital bone. **F. navicularis.** (See Illus. Dict.) 2. A depression at the dorsal extremity of the vulva between the vaginal orifice and the posterior commissure. 3. See *F. scaphoidea* (1 and 2). **F. olecranii, F., Olecranon.** See *Olecranoid F.* (Illus. Dict.). **F. ovalis, F. ovalis auris.** See *Fovea hemielliptica* (Illus. Dict.). **F., Ovarian, F. ovarii (peritonæi).** See *F., Claudius'.* **F.s, Pacchionian.** See under *Pacchionian* (Illus. Dict.). **F., Paracecal, F. paracæcalis,** an infrequent peritoneal pouch behind and to one side of the cecum. **F., Paraduodenal.** See *F., Landzert's.* **F., Parajejunal.** See *F., Brösike's.* **F. pararectalis.** See *Pararectal Pouch* (Illus. Dict.). **F., Paravesical.** See *Paravesical Pouch* (Illus. Dict.). **F., Parietal, F. parietalis.** See under *Parietal* (Illus. Dict.). **F., Patellary.** See *F. hyoidea* (Illus. Dict.). **F. perinæi,** the ischiorectal fossa. **F. petrosa.** See *Fossula petrosa.* **F. phrenicohepatica,** a pouch of the peritoneum between the left lateral ligament of the liver and the extremity of the left lobe. **F., Popliteal, F. poplitea.** Same as *Popliteal Space.* **F., Portal,** the portal fissure. **F.s, Postcranial,** the lowest in position of the three pairs (right and left) of the cranial fossas; they lodge the cerebellum, pons, and oblongata. Each fossa is formed by the posterior surface of the pyramid and inner surface of the mastoid portion of the temporal bone and the inner surface of the occipital bone below the horizontal limb of the occipital cross. **F., Posterior** (of the skull). See *F., Postcranial.* **F., Postscapular.** See *F., Infraspinous.* **F.s, Precranial,** the most elevated in position of the three pairs (right and left) of fossas into which the internal base of the skull is divided. They lodge the frontal lobes of the brain and are formed by the orbital plates of the frontal bones, the cribriform plate of the ethmoid bone, and the small wings of the sphenoid bone. Cf. *F.s, Mesocranial, F.s, Postcranial.* **F., Prescapular.** See *Supraspinous F.* (Illus. Dict.). **F. pterygomaxillaris, F., Pterygomaxillary, F. pterygopalatina, F., Pterygopalatine.** See *F., Sphenomaxillary* (Illus. Dict.). **F., Pubovesical, F. pubovesicalis.** See *Abdominovesical Pouch* (Illus. Dict.). **F., Radial, F. radialis,** the depression on the humerus above the capitellum which accommodates the head of the radius in extreme flexion of the forearm. **F. rectouterina, F., Rectouterine.** See *Douglas' Pouch* (Illus. Dict.). **F.s, Retromalleolar,** the longitudinal grooves on each side of the tendo Achillis. **F. rhomboidalis, F. rhomboidea,** the fourth ventricle. **F. rotunda.** See *Fovea hemisphærica* (Illus. Dict.). **F., Scaphoid, F. scaphoidea.** (See Illus. Dict.) 2. A shallow depression at the base of the internal pterygoid plate in which the tensor palati has its origin. Syn., *F. tensoris palati; F. navicularis.* **F. sellæ turcicæ.** See *F., Pituitary* (Illus Dict.). **F. semielliptica.** See *Fovea hemielliptica* (Illus. Dict.). **F. semilunaris,** one running transversely at the ventral part of the superior vermiform process. **F. semilunaris major** (ulnæ), the great sigmoid cavity. **F. semilunaris minor** (ulnæ), the lesser sigmoid cavity. **F. semiovalis.** See *Fovea hemielliptica* (Illus. Dict.). **F. sigmoidea cubitus, F. sigmoidea major,** the great sigmoid cavity. **F. sigmoidea minor,** the lesser sigmoid cavity. **F. sigmoidea ossis temporalis,** one on the inner aspect of the mastoid portion of the temporal bone in which the mastoid foramina open. **F. stylotympanomastoidea.** See *F., Glenoid* (Illus. Dict.). **F. subarcuata, F., Subarcuate,** an orifice situated in the newborn on the superior margin of the petrosa, through which the vessels pass to the temporal bone. This opening disappears after birth and is represented in the adult by a depression beneath the arcuate eminence. **F. subauricularis,** the depression just below the external ear. **F., Subcecal,**

F. subcæcalis. See *Pouch, Subcecal* (Illus. Dict.). **F., Subclavicular.** See *F., Mohrenheim's* (Illus. Dict.). **F., Subinguinal.** See *Triangle, Scarpa's* (Illus. Dict.). **F., Suborbital.** See *F., Canine* (Illus. Dict.). **F., Subpyramidal,** a depression beneath the pyramid and behind the fenestra rotunda of the middle ear. **F. subrotunda.** See *Fovea hemisphærica* (Illus. Dict.). **F., Subspinous.** See *F., Infraspinous.* **F., Sulciform,** a shallow furrow in the inner fore part of the cavity of the vestibule of the ear, behind the fovea hemielliptica and the fovea hemisphærica and into which the vestibular aqueduct opens. Syn., *Fossula sulciformis; Sinus sulciformis; Sulcus ad aquæductum vestibuli.* **F., Supraclavicular, F. supraclavicularis major,** a depression above the clavicle within which lie the axillary bloodvessels and nerves as they emerge from the chest into the armpit. **F. supraclavicularis minor,** the area between the sternal and clavicular origins of the sternocleidomastoid muscle. **F. supracondyloidea (femoris),** a depression on the dorsal aspect of the femur immediately above the internal condyle. **F., Suprascapular.** See *Supraspinous F.* (Illus. Dict.). **F. suprasphenoidalis.** See *F., Pituitary* (Illus. Dict.). **F., Suprasternal, F. suprasternalis,** that area included between the ventral borders of the sternocleidomastoid muscle, the interscapular ligament, the lower border of the mandible, and lines extended between the angles of the jaw and the mastoid process of the temporal bones. **F., Supratonsillar,** the embryonic space above the tonsil covered by a triangular extension of membrane from the anterior pillar; it sometimes persists to adult life. Syn., *Palatal recess.* **F., Sylvian.** See under *Sylvian* (Illus. Dict.). **F., Tarinus'.** See *Tarinus' Space* (Illus. Dict.). **F. tensoris palati.** See *F., Scaphoid* (2). **F. tonsillaris.** See *Amygdaloid F.* (Illus. Dict.). **Fossæ transversales, F.s, Transverse,** the depressions upon the transverse processes of the dorsal vertebras for articulation with the tubercles on the ribs. **F. triangularis, F. triquetra.** See *F. anthelicis.* **F., Trochlear,** a hollow in the frontal bone below the internal angular process furnishing attachment to the pulley of the superior oblique muscle. **F., Tympanicostylomastoid,** a very small depression, said to be larger in women than in men, dorsad of the glenoid fossa, bounded by the tympanic tubercle in front and by the mastoid process behind. **F., Urachal,** the prevesical space. **F. uterorectalis.** See *Douglas' Pouch* (Illus. Dict.). **F. uterovesicalis, F., Vesicouterine.** See *Pouch, Vesicouterine* (Illus. Dict.). **F. vesicorectalis,** Douglas' pouch. **F., Waldeyer's.** See *F., Brösike's.*

Fossula. (See Illus. Dict.) **F. petrosa,** a shallow depression upon the temporal bone in which opens the inferior aperture of the tympanic canal. **F. sulciformis.** See *Fossa, Sulciform.*

Fossulate (*fos'-u-lāt*). See *Foveolate.*

Fourmis (*fur'-mis*). Onychomycosis in solipeds.

Fourth Disease. See under *Disease.*

Fovea. (See Illus. Dict.) **F., Anterior.** See *F., Superior.* **F., Inferior,** an angular depression on the floor of the fourth ventricle, holding the ala cinerea and situated external to the lower end of the terete funicle. Syn., *F., Posterior; F., Terete.* **F. pharyngis,** an abnormal depression in the pharynx at the orifice of the eustachian tube. **F., Posterior.** See *F., Inferior.* **F., Postoccipital.** Wilder's name for a hollow at the occipital extremity of the cerebrum corresponding with the longitudinal sinus. **F., Preoccipital,** Wilder's name for a depression on the ventral border of the cerebrum corresponding with the petrosa. **F., Superior,** a slight depression above the middle of the floor of the fourth ventricle external to the terete eminence. Syn., *F., Anterior.*

Foveau-Trouvé Apparatus. A device for phototherapy. It consists of a parabolic mirror with an incandescent or arc lamp in the focus; the former is joined to a concentrating cone which terminates in two quartz plates with a chamber between them; cold water circulates through this chamber and through the whole apparatus, absorbing the heat-rays. The quartz plate is pressed directly upon the part to be treated.

Foveolate (*fo-ve'-o-lāt*). Marked with slight depressions, dimples, or pits.

Fraces (*fra'-sēz*) [L.]. Lees of olive oil.

Fracture. (See Illus. Dict.) See *Signs, Allis', Keen's* (Illus. Dict.), *Cleemann's, Desault's, Hueter's, Lagoria's, Morris'.* See also *Law, Arav's; L., Treevan's.* **F., Bennett's,** a longitudinal fracture of the first metacarpal bone, extending into the carpometacarpal joint and complicated by subluxation. **F., Buttonhole,** one in which a missile has perforated the bone. **F. by Contrecoup,** fracture of the skull at another point than the one struck, usually opposite. **F., Dentate,** one in which the ends of the fragments are so toothed and interlocked as to prevent displacement. **F., Fissured.** See *F., Capillary* (Illus. Dict.). **F., Formed,** a fracture suggesting the instrument which caused it. **F., Gosselin's.** See *Gosselin* (Illus. Dict.). **F., Hair.** See *F., Capillary* (Illus. Dict.). **F., Helicoid,** a spiral fracture from twisting of the long bones. Syn., *F., Spiral.* **F., Hickory-stick.** See *F., Greenstick* (Illus. Dict.). **F., Linear.** See *F., Capillary* (Illus. Dict.). **F., Radish.** See *F., Transverse.* **F., Saliswitch, F., Sally-switch,** greenstick fracture. **F., Silverfork,** Colles' fracture. **F., Spiral.** See *F., Helicoid.* **F., Starred, F., Stellate,** one in which there are fissures radiating from one point. **F., Transverse,** one directly across the shaft of a long bone. Syn., *Radish fracture; F. en rave.* **F., Wagstaff's,** separation of the internal malleolus. **F., Willow,** a greenstick fracture.

Fragiform (*fraj'-e-form*) [*fraga,* strawberries; *forma,* form]. Strawberry-shaped.

Fragmentatio, Fragmentation. (See Illus. Dict.) **F. cordis, F. of the Myocardium.** See *Myocardium, Fragmentation of.*

Frangulin. (See Illus. Dict.) It is used as a purgative. Dose, 1½–3 gr. (0.099–0.198 gm.).

Frank's Rule for Detecting Movable Kidney. See under *Kidney.*

Fränkel's Exercise Treatment. See under *Treatment.*

Franklin Plate. See under *Plate.* **F. Theory of Color.** See under *Color.*

Franklinic. (See Illus. Dict.) **F. Taste,** an acid taste perceived on applying the positive pole of the electrode of the static machine at a minimum distance of 1 or 2 mm.

Frauding (*frawd'-ing*). See *Coitus interruptus.*

Fraxinin (*fraks'-in-in*). Same as *Mannite.*

Free-martin (*fre'-mar-tin*). When twin calves are born of different sex, the female is usually sterile and is termed by Bewick and others a free-martin.

Fremitus. (See Illus. Dict.) **F., Hepatic, F., Hydatid.** See *Hydatid F.* (Illus. Dict.).

Frenal (*fre'-nal*). Relating to the frenum.

Frenator (*fren'-at-or*) [*frenare,* to curb]. 1. Anything that inhibits, curbs, or checks. 2. Dupré's name for any one of the muscles which move the head on the atlas and axis.

French. (See Illus. Dict.) **F. Chalk.** See *Talc* (Illus. Dict.). **F. Crown,** an expression used by Shakespeare for the *corona veneris.* In "Midsummer Night's Dream" Quince says to Nick Bottom: "Some

of your French crowns have no hair at all." **F. Mixture.** See *Boulton's Solution* (Illus. Dict.).

Frenching. A disease of the cotton plant due to the fungus *Fusarium vasinfectum*, Atkinson. It causes a variegated appearance of the leaves.

Frenule, Frenulum, Frænulum. (See Illus. Dict.) **F. pudendi.** See *Fourchet* (1) (Illus. Dict.). **F. Tarini.** See *Tænia semicircularis* (Illus. Dict.). **F. veli medullare anterius.** See *Frenulum* (2) (Illus. Dict.).

Frenum. (See Illus. Dict.) **Frena, Glossoepiglottic,** three folds of mucosa connecting the root of the tongue with the epiglottis. **F. linguæ, F. of the Tongue,** a narrow fold of mucosa in the mesal line of the under side of the tongue extending between the symphysis of the mandible and the tip of the tongue. Syn., *Frenulum linguæ; Vinculum linguæ.* **F. pudendi,** the fourchet. **Frena, Synovial,** the folds of a tenosynovial membrane extending between the tendon and the surface of the membrane.

Fretum. (See Illus. Dict.) 2. A strait, a channel. **F. oris,** the isthmus of the fauces.

Friction-sound. (See Illus. Dict.) **F., Beatty-Bright's,** the friction-sound produced by inflammation of the pleura.

Friesland Green. See under *Pigments.*

Fright. (See Illus. Dict.) **F., Precordial,** the precordial sensations of anxiety felt immediately before an attack of melancholic frenzy; it is attributed to disorder of the sympathetic and vagus centers.

Frigoritherapy, Frigotherapy (*fri-gor-e-ther'-ap-e, frig-o-ther'-ap-e*) [*frigus*, cold; θεραπεία, therapy]. 1. A method of treatment devised and named by Raoul Pictet, of Switzerland. The patient is placed in a well of metal lined with thick fur; the well surrounded by a shell filled with a combination of sulfurous and carbonic acids in a liquid state, kept at 110° below zero, the duration of treatment ranging from 5 to 15 minutes. See *Crymotherapy.*

Fringe. (See Illus. Dict.) **F.s, Haversian, F.s, Synovial.** See *Glands of Havers* (Illus. Dict.).

Frit [*frigere*, to roast]. The mass produced by partial fusion of the materials from which glass is made. It is used in dentistry.

Frog. (See Illus. Dict.) **F.-belly,** tympany of a child's abdomen. **F., Rheoscopic.** See *Rheoscope, Physiologic* (Illus. Dict.).

Frohmann's Solution. A local anesthetic used in dentistry and said to consist of cocain hydrochlorate, 0.2; morphin hydrochlorate, 0.25; sodium chlorid, 0.2; antipyrin, 1–2; guaiacol, 2 drops; distilled water, 100.

Front. (See Illus. Dict.) **F., Olympian,** enormous frontal development.

Fronto-. (See Illus. Dict.) **F.-anterior.** See *Occipitoposterior* (Illus. Dict.). **F.-auricular,** relating to the forehead and the external ear. **F.-cerebellar,** lying between the cerebellum and the cortex of the frontal area of the cerebrum. **F.-glabellar,** relating to the forehead and the glabella. **F.-gonial,** uniting with the gonia and the frontal region. **F.-lacrimal,** relating to the forehead and the lacrimal bone. **F.-lateral,** relating to the front and to the sides. **F.-malar,** relating to the frontal and to the malar bones. **F.-maxillary,** relating to the frontal bone and the upper jaw bones. **F.-mental,** running from the top of the forehead to the point of the chin or relating to the forehead and chin. **F.-nasal,** relating to the frontal bone and the nose. **F.-nasomaxillary,** relating to the frontal, nasal, and maxillary bones. **F.-nuchal,** relating to the forehead and the nape of the neck. **F.-parietal,** relating to the frontal and parietal bones. **F.-sphenoidal,** relating to the frontal and sphenoid bones. **F.-temporal,** relating to the frontal and temporal bones. **F.-zygomatic,** relating to the frontal bones and the zygoma.

Fructosuria (*fruk-to-su'-re-ah*) [*fructus*, fruit; οὖρον, urine]. The presence of levulose (fruit-sugar) in the urine.

Fucusol (*fu'-ku-sol*) [*Fucus*, a genus of *Algæ*]. $C_5H_4O_2$. An oily, liquid isomer of furfurol obtained by the distillation of *Algæ* of the genus *Fucus*, sphagnum, and lichens with sulfuric acid. Syn., *Fucus aldehyd.*

Fugu. A common name for fish of the genus *Tetrodon*, twelve species of which have poisonous ovaries. **F.-poisoning,** fish-poisoning well known in Japan, due to eating the roe of fish belonging to the genus *Tetrodon.*

Fuhs's Test for Albumin. See under *Tests.*

Fuligin (*fu'-lij-in*) [*fuligo*, soot]. See *Asbolin.*

Fulminating. (See Illus. Dict.) **F. Gold.** See under *Gold.* **F.-pane.** See *Plate, Franklin.*

Fulminurate (*ful-min'-u-rāt*). A salt of fulminuric acid.

Fulvescent (*ful-ves'-ent*) [*fulvus*, yellow]. Tawny or dull yellow in color.

Fumarate (*fu'-mar-āt*). A salt of fumaric acid.

Fumaric (*fu-mar'-ik*) [*fumaria*, fumitory]. Relating to or obtained from the genus *Fumaria.*

Funda (*fun'-dah*) [L., a sling, pl. *fundæ*]. 1. A four-tailed bandage. 2. An old device for extracting the head of the decapitated fetus. **F. Retzii.** See *Ligament of Retzius* (Illus. Dict.). **F. superficialis vesicæ,** the looped muscular fibers near the point of attachment of the urachus to the urinary bladder.

Fundus. (See Illus. Dict.) **F.-reflex Test.** See *Retinoscopy* (Illus. Dict.).

Fungal (*fun'-gal*). Belonging to or like fungi.

Fungate. (See Illus. Dict.) 2. A salt of fungic acid.

Fungating (*fun'-gat-ing*). Applied to ulcers assuming a fungous appearance.

Fungus. (See Illus. Dict.) **F. articuli.** See *Arthritis fungosa* (Illus. Dict.). **F.-disease of India.** Synonym of *Mycetoma.* **F., Fly-.** See *Saprolegnia.* **F. medullaris,** a medullary sarcoma. **F., Umbilical.** See *Granuloma* (Illus. Dict.).

Funicle (*fu'-nik-el*) [*funis*, a rope]. A slender cord.

Funiculate (*fu-nik'-u-lāt*). Furnished with a funiculus.

Funiculus. (See Illus. Dict.) **Funiculi arciformes olivæ.** See *Fibers, Arciform.* **F., Cuneate Lateral, F. of Rolando,** a longitudinal prominence caused by Rolando's gelatinous substance on the surface of the oblongata, between the cuneate funiculus and the line of roots of the spinal accessory nerve. **Funiculi siliquæ,** certain fibers of the lateral tract of the spinal cord enclosing the base of the olive. **F. siliquæ externus,** a tract of nerve-fibers lying immediately outside of the external aspect of the olive. **F. siliquæ internus,** a tract of nerve-fibers lying between the restis and the olive and encircling the base of the latter. **F. teres,** a column on each side of the median furrow on the floor of the fourth ventricle. Syn., *Fasciculus teres; Corpus teres.*

Funis. (See Illus. Dict.) **Funes cordis.** See *Columnæ carneæ* (Illus. Dict.). **F. furcalis,** a form of velamentous insertion in which there is divergence of the vessels causing them to enter the placenta at different points.

Funnel. (See Illus. Dict.) **F.-breast, F.-chest.** See under *Breast.* **F.-drainage.** See under *Drainage.* **F.s, Golgi's, F.s, Golgi and Rezzonico's,** funnel-shaped structures, composed of spiral threads

described by Golgi and others as surrounding the axis-cylinder of a myelinic nerve-fiber and supporting the myelin. They appear to be artificially produced in the process of staining. **F.s, Lantermann's.** See *Lantermann's Notches* (Illus. Dict.). **F., Nephridial,** the funnel-shaped beginning of a renal tubule.

Furfural, Furfuraldehyd (*fur'-fur-al, fur-fur-al'-de-hyd*). See *Furfurol* (Illus. Dict.).

Furfuramid (*fur-fur'-am-id*). $C_{15}H_{12}N_2O_3$. A derivative of furfurol by action of concentrated ammonia-water; brown needles freely soluble in alcohol or ether, insoluble in water; decomposed by acids and melting at 117° C.

Furfuron (*fur'-fur-on*). A proprietary liniment for gout and rheumatism said to consist of soap, camphor, salicylic acid, acetic ether, ammonia, and extract of peppermint.

Furfurous (*fur'-fur-us*). See *Furfuraceous* (Illus. Dict.).

Furrow. (See Illus. Dict.) **F., Dorsal, F., Spinal.** See *Groove, Vertebral,* or *Spinal Gutter* (Illus. Dict.). **F., Inguinal,** the fold of the groin. **F.s, Liebermeister's,** depressions on the superior surface of the liver due to pressure of the ribs. **F., Sibson's.** See *Groove, Sibson's.*

Furunculin (*fu-rung'-ku-lin*). A preparation of yeast intended for use in furuncles, gastric and intestinal catarrhs, etc.

Furunculus. (See Illus. Dict.) **F. anthracoides,** a small carbuncle. Syn., *Anthracoid furuncle.* **F. gangrænescens, F. gangrænosus,** anthrax. **F. major,** a large furuncle involving the subcutaneous connective tissue. Syn., *Phyma furunculus.* **F. malignus,** anthrax. **F. minor,** a small furuncle generally developing from a sebaceous follicle. Syn., *Phyma simplex.* **F. verus.** See *Boil* (Illus. Dict.). **F. vespajus,** a large, indolent furuncle, bearing a fancied resemblance to a wasp's nest from its having a number of openings through which it suppurates. Syn., *Wasp's-nest boil.*

Fusel-oil (*fu'-zel*). A volatile oily liquid obtained in rectifying whisky and brandy; it consists largely of amyl alcohol and is poisonous. It is used as a solvent.

Fusion. (See Illus. Dict.) 2. An intimate blending or coherence of separate parts or structures. **F. Faculty,** the ability to blend in the brain the two impressions received from the eyes. **F., Potential,** the fusion of two images perceived simultaneously by both eyes. **F. Tubes,** a miniature stereoscope used in cases of concomitant convergent strabismus to test the ability of the eyes to perceive two images simultaneously and to fuse them.

G

Gabet (*gab-a*). See *Cagot* (Illus. Dict.).

Gadberry's Mixture. A combination of iron sulfate, 100 gr.; quinin sulfate, 100 gr.; nitric acid, 100 min.; potassium nitrate, 300 gr.; water enough to make 16 fluid ounces.

Gadolinium (*gad-o-lin'-e-um*). See *Elements, Table of* (Illus. Dict.).

Gaduol (*gad'-u-ol*). See *Morrhuol* (Illus. Dict.).

Gaiacyl (*gi'-as-il*). A calcium salt of guaiacol-sulfonic acid, occurring as a grayish-violet powder, soluble in water and alcohol, insoluble in oils. It is used as a local anesthetic in a 5% to 10% solution.

Gaiethol (*gi'-eth-ol*). See *Guaethol.*

Gait. (See Illus. Dict.) **G., Ataxic,** a gait in which the steps are slow and deliberate, but marked by irregular movements, the feet jerking outward with a swinging motion bringing the heels down with a stamp, the toes following with a flapping sound. **G., Charcot's,** the gait of Friedreich's ataxia. **G. of Chronic Lead-poisoning,** an uncertain, stooping gait due to paralysis of the dorsal muscles. **G., Cow,** a swaying movement due to knock-knee. **G. of Diffuse Sclerosis.** See *G., Paraparetic.* **G., Festinating.** See *Festination* (Illus. Dict.). **G., Helicopode,** one in which the feet describe semicircles; it is observed in certain cases of hemiplegia and in hysteria. **G., High-action, G., High-stepping,** that of peroneal paralysis, in which the foot cannot be flexed, abducted, or entirely adducted, and hangs with trailing toes; locomotion is effected by flexing the thigh on the abdomen. **G., Oppenheim's,** a modification of the spastic gait of disseminated sclerosis, consisting in large and irregular oscillations of the head, trunk, and extremities. **G., Paraparetic,** that observed in chronic myelitis in which the steps are short and the feet dragged from inability to lift them. **G., Paretic,** a gait in which the steps are short, the feet dragged, the legs held more or less widely apart, and as the disease progresses there is uncertainty, shuffling, and staggering. **G. of Peroneal Paralysis.** See *G., High-action.* **G., Spasmodic, G., Spastic,** a gait in which the feet are raised by elevating the pelvis and whole limb. **G., Steppage,** that in which the toes are lifted high and the heel brought down first. **G., Tabetic.** See *G., Ataxic.*

Galactase (*gal-ak'-tāz*) [γάλα, milk]. An enzyme of milk discovered and named by Babcock and Russell. It is a normal constituent, is soluble, and is active in ripening cheese.

Galactochloral (*gal-ak-to-klo'-ral*). $C_8H_4Cl_3O_8$. Glossy scales soluble in alcohol, with properties similar to chloralose, obtained by heating a mixture of galactose and chloral in presence of hydrochloric acid.

Galactometastasis (*gal-ak-to-met-as'-tas-is*). See *Galactoplania* (Illus. Dict.).

Galactopathy (*gal-ak-top'-ath-e*) [γάλα, milk; πάθος, disease]. The application of a wet pack of warm milk (not boiled) used in the Transvaal, South Africa, in zymotic diseases. A sheet is saturated in warm milk and wrapped around the patient, and surrounded by blankets for 1 hour. It is followed by a warm bath or sponging, and the process may be repeated in 4 hours.

Galactotoxicon (*ga-lak-to-toks'-ik-on*). The active agent in poisonous milk.

Galactotoxin (*gal-ak-to-toks'-in*). A basic poison generated in milk by the growth of microorganisms. See *Tyrotoxicon* (Illus. Dict.).

Galactotoxism (*gal-ak-to-toks-izm*) [γάλα, milk; τόξικον, poison]. Milk-poisoning.

Galactozymase (*gal-ak-to-zi'-māz*) [*γάλα*, milk; *ζύμη*, leaven]. A ferment found in milk capable of liquefying starch.

Galam (*ga'-lam*). See under *Gum*. **G. Butter.** See *Bambuc Butter*.

Galassi Pupillary Phenomenon. When the orbicularis oculi is brought into energetic use and the eye closed with vigor, there is a narrowing of the pupil, which dilates when the eye is opened.

Galbulus. (See Illus. Dict.) 2. [*galbus*, yellow.] Yellowness of the skin.

Galega (*gal-e'-gah*) [*γάλα*, milk]. Goat's rue. A genus of plants belonging to the order *Leguminosæ*. **G. officinalis**, L., a European species said to be an efficient galactagog. Dose of fl. ext., 8–15 gr. (0.52–1 gm.). Dose of tincture containing 6.5% of extract, 50–100 drops 5 times daily.

Galeodes (*gal-e-o'-dez*) [*γαλεώδης*, weasel-like]. A genus of spider-like insects of the family *Solpugidæ*. **G. arabs**, Koch, a poisonous species of Arabia. **G. araneoides**, Pallas, a species indigenous to central Asia and the Caucasus, is the common magic worm of the Kalmucks and the bychorch or bychorcho of the Russians, who fear it greatly for its poisonous bite. **G. fatalis**, Herbst, a species common and greatly dreaded in Persia. **G. intrepida**, a poisonous Asiatic species widely distributed. **G. limbata**, a poisonous species of Mexico. **G. phalangista**, Walckenaer, a poisonous species of Egypt.

Gall. (See Illus. Dict.) 2. See *Galla* (Illus. Dict.). 3. An abrasion. **G., Rose.** See *Bedegar* (Illus. Dict.). **G. stones** (see Illus. Dict.), **Courvoisier's Law Concerning**, when the common duct is obstructed by a stone, dilation of the gallbladder is rare; when the common duct is obstructed by other causes, dilation of the gallbladder is common.

Gallabromol (*gal-ah-bro'-mol*). See *Gallobromol*.

Gallacetophenol (*gal-as-et-o-fe'-nol*). See *Gallacetophenon* (Illus. Dict.).

Gallal (*gal'-al*). Basic aluminium gallate; it is used as a dusting-powder.

Gallanilid (*gal-an'-il-id*). See *Gallanol*.

Gallanol (*gal'-an-ol*). $C_{13}H_{11}O_4N + 2H_2O$. The anilid of gallic acid obtained by boiling tannin with anilin; a gray powder soluble in alcohol, ether, or boiling water. It is used in skin-diseases in 3% to 20% ointment or as a dusting-powder when mixed with French chalk. Syn., *Gallanilid; Gallinol*.

Gallate (*gal'-āt*). A salt of gallic acid.

Gallianin (*gal-e'-an-in*). A fluid consisting of 4 parts by volume of ozone dissolved in 1 part of an indifferent vehicle. It is used in veterinary surgery, in heatstroke, acute pneumonia, etc. Dose for horses, 5–20 c.c. injected into the jugular vein once daily; 30 c.c. for cattle; 1–3 c.c. for dogs.

Gallicin (*gal'-is-in*). $C_6H_2(OH)_3COOCH_3$. A methyl ether of gallic acid forming fleecy needles which melt at 202° C.; soluble in alcohol or water. It is recommended as a dusting-powder.

Gallinated (*gal'-in-a-ted*). Applied to wines to which glucose has been added before fermentation (Gall's process).

Gallinol (*gal'-in-ol*). See *Gallanol*.

Gallobromol (*gal-o-bro'-mol*). $C_7Br_2O_5H_4$. A compound obtained from bromin by action of gallic acid; small gray crystals soluble in alcohol, ether, or boiling water. It is sedative, antiseptic, and astringent. Dose, 30–45 gr. (2–3 gm.) per day. Application in 1% to 4% solution or paste. Syn., *Dibromogallic acid*.

Galloformin (*gal-o-form'-in*). A compound of formic aldehyd and gallic acid. It is used as an internal antiseptic.

Gallol (*gal'-ol*). See *Aluminium Gallate, Basic*.

Galtah (*gal'-tah*) [*gala*, throat, as galtah is a form of surra in camels in which the throat affection is one of the prominent symptoms]. Vernacular term in India for trypanosomiasis.

Galtia (*gal'-she-ah*). In India, vernacular for trypanosomiasis.

Galvanization. (See Illus. Dict.) **G., Spinogastric**, that in which the kathode is placed over the stomach and the anode is moved up and down the spine. **G., Subaural**, the application of the kathode under the ear and of the anode on the opposing side. Syn., *G. of the sympathetic* (Remak).

Galvanocaustics (*gal-van-o-kaws'-tiks*). The science of the caustic action of galvanism.

Galvanofaradaic, Galvanofaradic (*gal-van-o-far-ad-a'-ik, -ad'-ik*). Relating to faradism and to galvanism.

Galvanology (*gal-van-ol'-o-je*) [*galvanism; λόγος*, science]. The science of galvanism.

Galvanolysis (*gal-van-ol'-is-is*). See *Electrolysis* (Illus. Dict.).

Galvanoplasty (*gal-van-o-plas'-te*) [*galvanism; πλάσσειν*, to form]. Electroplating.

Galvanoscopy. (See Illus. Dict.) 2. The application of galvanism to physiologic or clinical examination.

Galvanosurgery (*gal-van-o-sur'-jer-e*). The surgical use of galvanism.

Galvanotaxis (*gal-van-o-taks'-is*). See *Galvanotropism* (Illus. Dict.).

Galvanothermy (*gal-van-o-thur'-me*) [*Galvani*, an Italian physician (1737–1798); *θέρμη*, heat]. The galvanic production of heat.

Galvanotonic (*gal-van-o-ton'-ik*). Relating to galvanotonus; both galvanic and tonic.

Gandabiroja, Gandhabiroja (*gan-dah-bir-o'-jah*). The vernacular name in India for the turpentine of *Pinus longifolius*, Roxb. (*q. v.*).

Gangliate, Gangliated (*gang'-gle-āt, -ed*). 1. Furnished with ganglia. 2. Intertwined or intermixed.

Ganglioblast (*gang'-gle-o-blast*) [*γάγγλιον*, ganglion; *βλαστός*, germ]. An embryonic ganglion-cell. Syn., *Esthesioblast*.

Gangliogen (*gang'-gle-o-jen*) [*γάγγλιον*, a ganglion; *γεννᾶν*, to produce]. See under *Retinogen* (Illus. Dict.).

Ganglion. (See Illus. Dict.) **G. abdominale centrale**, the celiac plexus. **G., Acusticofacial.** See *G., Vestibular;* also *Intumescentia gangliformis* (Illus. Dict.). **G., Auditory**, a prominence on the lateral wall of the fourth ventricle traversed by the auditory striæ. Syn., *Tuberculum acusticum*. **G., Blandin's**, the sublingual ganglion, a small gangliform enlargement lying between the lingual nerve and the sublingual gland. **Ganglia, Gastroepiploic**, the gastroepiploic glands. **G., Gudden's.** See under *Gudden* (Illus. Dict.). **Ganglia hordeiformia**, the thoracic ganglia. **G., Laumonier's**, the carotid ganglion. **G., Lobstein's**, a small gangliform swelling of the great splanchnic nerve a short distance above the diaphragm. **G., Lōwit's**, the bulbus arteriosus. **G. maxillare, G. Meckelii minus**, the submaxillary ganglion. **G., Neubauer's**, the large ganglion formed by the union of the lower cervical and first thoracic ganglia. **G. olivæ**, the dentatum. **G. olivare**, the superior cervical ganglion. **Ganglia, Respiratory.** Same as *Centers, Respiratory*. **G., Soemmerring's.** See *Intercalatum* (Illus. Dict.). **G. Tarini.** See *Pons Tarini* (Illus. Dict.). **G., Trosier's.** See *Sign, Trosier's*. **G. unciforme.** See *Fasciculus unciformis*. **G., Vieussens'**, the solar plexus.

Ganglioneure, Ganglioneuron (*gang'-gle-o-nūr, -nu'-*

ron) [*γάγγλιον*, a ganglion; *νεῦρον*, nerve]. A neuron the cell-body (nerve-cell) of which lies within the spinal or the cerebral ganglia.

Ganglionica (*gang-gle-on'-ik-ah*). Drugs affecting the sensibility of the regions supplied by the sympathetic nerve.

Gangræna, Gangrene. (See Illus. Dict.) Syn., *Local death; Hot mortification.* See *Sign, Béhier-Hardy's.* **G., Atrophic,** that due to embolism or thrombosis. **G., Carbolic Acid,** dry gangrene from carbolized dressings. **G. by Coagulation.** See *Necrosis, Coagulative* (Illus. Dict.). **G., Cold,** that unattended by fever. **G. by Colliquation, G. by Liquefaction.** See *Necrosis, Colliquative* (Illus. Dict.). **G., Emphysematous.** See *Edema, Malignant* (Illus. Dict.). **G., Fulminant, G., Gaseous, Gangrène foudroyante, G. gazeuse.** See *Edema, Malignant* (Illus. Dict.). **G., Glacier-,** a stationary form. **G. græcorum,** dry gangrene. **G., Humid.** See *G., Moist* (Illus. Dict.). **G., Mixed,** dry gangrene with moist patches. **G., Pott's,** senile gangrene. **G., Raynaud's.** See under *Raynaud;* also *Sphaceloderma* (Illus. Dict.). **G., Tachetic,** a form marked by the appearance of ecchymotic spots of greater or less extent, on various parts of the body. It is believed to be due to blood-poisoning. French, *Gangrène tachetée.*

Ganister, Gannister (*gan'-is-ter*) [MHG., *ganster*, a spark]. A very hard siliceous variety of fire-clay forming the floor of coal-seams in Yorkshire and Lancaster, England. The ganister miners and grinders are subject to the formation of fibroid tissue in the lungs (*ganister disease*) from the irritation produced by breathing the fine dust.

Gap [ME.]. A cleft, fissure, or opening. **G., Bochdalek's,** the interval existing in the diaphragm between the costal and lumbar attachments of this muscle.

Garantose (*gar'-an-tōs*). See *Sodium benzoyl sulfonicimid.*

Garbled (*gar'-buld*) [OF., *grabeler*, to inspect closely]. Applied to crude drugs which have been separated from worthless material and made ready for market.

Garcia Rigo's Method. See under *Stains.*

Garden, Patients'. A garden connected with an asylum or sanatorium, formerly called airing court.

Gardenia (*gar-dē'-ne-ah*) [*Alex. Garden*, M.D., 1730–1791]. A genus of rubiaceous plants. **G. gummifera,** L., an Asiatic species, contains in the leaves and bark a resin used in dyspepsia. **G. jasminoides,** Ell., a species of China and Japan, has very fragrant flowers and the fruit is used as a cooling remedy in fever and tuberculosis. **G. lucida,** Roxb., an East Indian species, contains a resin dekamali or dikamali; used in dyspepsia and as a vulnerary.

Gardenin (*gar-dē'-nin*). A substance obtained from *Gardenia lucida;* said to be identical with crocin.

Garofen (*gar'-o-fen*). A vegetable analgesic and antipyretic stated to contain no opium in any form and no coal-tar products. It is intended as a substitute for morphin and acetanilid.

Garrapáta. See *Argas talaje,* in *Table of Parasites* (Illus. Dict.).

Gas. (See Illus. Dict.) **G., Clayton's,** sulfurous acid gas generated by means of the Clayton furnace, for disinfection and for destroying rats and other vermin. **G., Olefiant.** See *Ethylene* (Illus. Dict.). **G. Phlogisticated,** nitrogen. **G. Sepsis.** See under *Sepsis.*

Gascoin's Powder. See under *Powder.*

Gas-eye (*gas'-i*). A peculiar disease prevalent among the employes of the gas-pumping stations in the natural gas regions of the United States. The eyes are inflamed, tender, and sensitive to light.

Gaskaral-H (*gas'-kar-al*). A proprietary astringent and diuretic remedy. Dose, 50–60 c.c. of the infusion (1 : 20). Syn., *Aghara.*

Gasometer (*gas-om'-et-ur*) [*gas; μέτρον*, a measure]. A device for estimating the amount of gas present.

Gasometric (*gas-o-met'-rik*). Relating to the measurement of gases.

Gasometry (*gas-om'-et-re*). See *Analysis, Gasometric* (Illus. Dict.).

Gasserectomy (*gas-ur-ek'-to-me*) [*Gasserian; ἐκτομή*, excision]. Excision of the gasserian ganglion.

Gasteralgia (*gas-ter-al'-je-ah*). See *Gastralgia* (Illus. Dict.).

Gasteremphraxis (*gas-ter-em-frak'-is*). 1. See *Gasterangiemphraxis* (2) (Illus. Dict.). 2. Overdistention of the stomach.

Gasterhysterotomy (*gas-ter-his-ter-ot'-o-me*) [*γαστήρ*, stomach; *ὑστέρα*, the uterus; *τέμνειν*, to cut]. An abdominal incision of the uterus.

Gasteric (*gas-ter'-ik*). Same as *Gastric.*

Gasterin (*gas'-ter-in*). A preparation of the gastric juice of dogs; it is used as pepsin.

Gastradenitis (*gas-trad-en-i'-tis*). See *Gastroadenitis* (Illus. Dict.).

Gastralgokenosis (*gas-tral-go-ken-o'-sis*) [*γαστήρ*, belly; *ἄλγος*, pain; *κενός*, empty]. A sensory neurosis due to emptiness of the stomach.

Gastraneuria (*gas-tra-nu'-re-ah*) [*γαστήρ*, stomach; *νεῦρον*, a nerve]. Impaired or defective action of the nerves of the stomach.

Gastraneurysma (*gas-tra-nu-ris'-mah*). See *Gastrectasis* (Illus. Dict.).

Gastrasthenia. See *Gasterasthenia* (Illus. Dict.).

Gastratrophia (*gas-tra-tro'-fe-ah*) [*γαστήρ*, stomach; *ἀτροφία*, atrophy]. Atrophy of the stomach.

Gastric-juice. (See Illus. Dict.) **G., Hydrochloric Acid in** (Maly's theory of), that there occurs a reaction between the phosphates and chlorids of the blood which results in the formation of HCl. This diffuses through the gastric glands into the stomach. [Raymond.] **G., Psychic,** Pawlow's term for the gastric juice caused to be secreted by simply showing food to hungry animals.

Gastritis. (See Illus. Dict.) **G., Atrophic,** a chronic form with atrophy of the mucosa. **G. bacillaris,** that due to bacilli. **G., Croupous, G., Diphtheric, G. membranacea,** a rare form characterized by formation of a false membrane and necrotic hyaline products upon the mucosa. It may occur as an extension of pharyngeal diphtheria or secondary to other infectious diseases. **G., Hypertrophic,** gastritis with hyperplasia of the mucous membranes. **G., Phlegmonous, G., Purulent, G. submucosa,** acute interstitial suppurative inflammation of the stomach-walls; it occurs as a circumscribed abscess or as diffuse purulent infiltration. **G., Toxic, G. venenata,** acute gastric inflammation due to ingestion of poisonous or corrosive substances.

Gastroadynamic (*gas-tro-ah-din-am'-ik*) [*γαστήρ*, stomach; *ἀδύναμος*, without strength]. Marked by gastric symptoms and prostration.

Gastroanastomosis (*gas-tro-an-as-to-mo'-sis*) [*γαστήρ*, stomach; *ἀναστομόειν*, to bring to a mouth]. An hourglass contraction the formation of a communication between the two pouches of the stomach; it was first performed by Wölfler. Syn., *Gastrogastrostomy.*

Gastroarachnoiditis (*gas-tro-ar-ak-noi-di'-tis*). Combined inflammation of the stomach and the arachnoid.

Gastroataxia (*gas-tro-ah-taks'-e-ah*). See *Gasteroataxia* (Illus. Dict.).

Gastroataxic (*gas-tro-ah-taks'-ik*). Characterized by gastric symptoms and ataxia.

Gastroatonia (*gas-tro-at-o′-ne-ah*). Atonic dyspepsia.

Gastroblennorrhea (*gas-tro-blen-or-e′-ah*). An excessive catarrhal discharge of mucus in the stomach.

Gastrobronchitis (*gas-tro-brong-ki′-tis*). Gastritis combined with bronchitis.

Gastrocholecystitis (*gas-tro-ko-le-sis-ti′-tis*). Gastritis combined with cholecystitis.

Gastrocolostomy (*gas-tro-ko-los′-to-me*) [γαστήρ, stomach; κόλον, colon; στόμα, mouth]. The formation of a fistula between the stomach and colon.

Gastrocystitis (*gas-tro-sis-ti′-tis*). Gastritis combined with cystitis.

Gastroenterocolitis (*gas-tro-en-ter-o-kol-i′-tis*) [γαστήρ, stomach; ἔντερον, intestine; κόλον, colon]. Combined inflammation of the stomach, small intestine, and colon.

Gastroenterocolostomy (*gas-tro-en-ter-o-ko-los′-to-me*). The formation of a passage between the stomach, small intestine, and colon.

Gastroenteropathy (*gas-tro-en-ter-op′-ath-e*) [γαστήρ, stomach; ἔντερον, intestine; πάθος, disease]. Any disease affecting the stomach and intestines.

Gastroenteroptosis (*gas-tro-en-ter-o-to′-sis*) [γαστήρ, stomach; ἔντερον, intestine; πτῶσις, falling]. Prolapse of the stomach and intestines.

Gastroesophagitis, Gastroœsophagitis (*gas-tro-e-sof-aj-i′-tis*). Combined inflammation of the stomach and the esophagus.

Gastrogastrostomy (*gas-tro-gas-tros′-tom-e*). The same as *Gastroanastomosis*.

Gastrogenital (*gas-tro-jen′-it-al*). Relating to the stomach and the genital apparatus.

Gastrograph (*gas′-tro-graf*) [γαστήρ, stomach; γράφειν, to write]. An apparatus for registering the peristaltic movements of the stomach from the outside. Syn., *Gastrokinesograph*.

Gastrohelcoma (*gas-tro-hel-ko′-mah*) [γαστήρ, stomach; ἕλκος, ulcer]. Ulcus ventriculi.

Gastrohelcosis (*gas-tro-hel-ko′-sis*). Ulceration of the stomach.

Gastrohepatitis (*gas-tro-hep-at-i′-tis*) [γαστήρ, stomach; ἧπαρ, liver]. Gastritis and hepatitis occurring simultaneously.

Gastrohyperneuria, Gastrohypernervia (*gas-tro-hi-pur-nu′-re-ah, -nur′-ve-ah*) [γαστήρ, stomach; ὑπέρ, over; νεῦρον, a nerve]. Morbid activity of the nerves of the stomach. Syn., *Gastrypneuria*.

Gastrohypertonic (*gas-tro-hi-pur-ton′-ik*) [γαστήρ, stomach; ὑπέρ, over; τόνος, tone]. Relating to morbid or excessive tonicity or irritability of the stomach.

Gastrohyponervia, Gastrohyponeuria (*gas-tro-hi-po-nur′-ve-ah, -nu′-re-ah*) [γαστήρ, stomach; ὑπό, under; νεῦρον, a nerve]. Defective activity of the nerves of the stomach.

Gastrohysteropexy (*gas-tro-his-ter-o-peks′-e*) [γαστήρ, stomach; ὑστέρα, uterus; πῆξις, a fastening]. See *Hysteropexy* (Illus. Dict.).

Gastrohysterorrhaphy (*gas-tro-his-ter-or′-af-e*). See *Hysteropexy* (Illus. Dict.).

Gastrohysterosynaphy (*gas-tro-his-ter-o-sin′-af-e*). See *Hysteropexy* (Illus. Dict.).

Gastroid (*gas′-troid*) [γαστήρ, stomach; εἶδος, likeness]. Like a stomach.

Gastrointestinal (*gas-tro-in-tes′-tin-al*). See *Gastroenteric* (Illus. Dict.).

Gastrojejunostomy (*gas-tro-jej-u-nos′-to-me*) [γαστήρ, stomach; *jejunus*, dry; στόμα, mouth]. The formation of a passage from the stomach to the jejunum.

Gastrokinesograph, Gastrokynesograph (*gas-tro-kin-es′-o-graf*) [γαστήρ, stomach; κίνησις, motion; γράφειν, to write]. See *Gastrograph*.

Gastrolaryngitis (*gas-tro-lar-in-ji′-tis*) [γαστήρ, stomach; *laryngitis*]. Gastritis simultaneous with laryngitis.

Gastrolienal (*gas-tro-li′-en-al*). See *Gastrosplenic* (Illus. Dict.).

Gastrolobin (*gas-tro-lo′-bin*) [γαστήρ, stomach; λοβός, the pod of leguminous plants]. A glucosid found in the leaves and twigs of *Gastrolobium bilobum*, R. Br., a leguminous plant of Australia.

Gastrologist (*gas-trol′-o-jist*) [γαστήρ, stomach; λόγος, science]. One who concerns himself with the study of the stomach and its disorders.

Gastrolysis (*gas-trol′-is-is*) [γαστήρ, stomach; λύσις, a loosening]. The breaking up of adhesions between the stomach and adjacent organs.

Gastromalacosis, Gastromalaxia (*gas-tro-mal-ak-o′-sis, gas-tro-mal-aks′-e-ah*). See *Gastromalacia* (Illus. Dict.).

Gastromegaly (*gas-tro-meg′-al-e*) [γαστήρ, stomach; μεγάλη, large]. Abnormal enlargement of the stomach.

Gastromeningitis (*gas-tro-men-in-ji′-tis*). Simultaneous inflammation of the stomach and of the meninges of the brain.

Gastrometrotomy (*gas-tro-met-rot′-o-me*). See *Gastroenterotomy* (Illus. Dict.).

Gastromucous (*gas-tro-mu′-kus*). Characterized by gastric disturbance and abnormal secretion of mucus.

Gastromycosis (*gas-tro-mi-ko′-sis*) [γαστήρ, stomach; μύκης, fungus]. Gastric disease due to invasion of fungi.

Gastromyeloma (*gas-tro-mi-e-lo′-ma*) [γαστήρ, stomach; *myeloma*]. A medullary sarcoma of the stomach.

Gastromyxin (*gas-tro-miks′-in*). A proprietary preparation of pepsin.

Gastronephritis (*gas-tro-nef-ri′-tis*). Simultaneous inflammation of the stomach and kidneys.

Gastronervia, Gastroneuria (*gas-tro-nur′-ve-ah, -nu′-re-ah*) [γαστήρ, stomach; νεῦρον, nerve]. The action of the nerves of the stomach.

Gastronesteostomy (*gas-tro-nes-te-os′-to-me*) [γαστήρ, stomach; νῆστις, the jejunum; στόμα, a mouth]. See *Gastrojejunostomy*.

Gastroomental (*gas-tro-o-men′-tal*). See *Gastroepiploic* (Illus. Dict.).

Gastropancreatitis (*gas-tro-pan-kre-at-i′-tis*). Simultaneous inflammation of the stomach and pancreas.

Gastroparalysis (*gas-tro par-al′-is-is*) [γαστήρ, stomach; παράλυσις, paralysis]. Paralysis of the stomach.

Gastroparietal (*gas-tro-pa-ri′-et-al*) [γαστήρ, stomach; *paries*, a wall]. 1. Relating to the stomach-wall. 2. Relating to the stomach and the abdominal wall.

Gastroperitonitis (*gas-tro-per-it-on-i′-tis*). Simultaneous inflammation of the stomach and peritoneum.

Gastropexis, Gastropexy (*gas-tro-peks′-is, -e*) [γαστήρ, stomach; πῆξις, a fixing in]. The fixation of a displaced stomach in its normal position by suturing it to the abdominal wall.

Gastroplasty (*gas-tro-plas′-te*) [γαστήρ, stomach; πλάσσειν, to form]. Plastic operation on the stomach.

Gastropleuritis (*gas-tro-plu-ri′-tis*). Simultaneous gastritis and pleurisy.

Gastroplication (*gas-tro-pli-ka′-shun*) [γαστήρ, stomach; *plicare*, to fold]. An operation for relief of chronic dilation of the stomach consisting in suturing a large horizontal fold in the stomach-wall.

Gastropneumonia (*gas-tro-nu-mo′-ne-ah*) [γαστήρ, stomach; πνευμονία, pneumonia]. Gastritis simultaneous with pneumonia.

Gastropneumonic (*gas-tro-nu-mon′-ik*). See *Pneumogastric* (Illus. Dict.).

Gastropulmonary (*gas-tro-pul′-mon-a-re*). See *Pneumogastric* (Illus. Dict.).

Gastropyloric (*gas-tro-pi-lor′-ik*). Relating to the stomach and the pylorus.

Gastrorrhaphy. (See Illus. Dict.) 2. See *Gastroplication.*

Gastroschisis (*gas-tros'-kis-is*) [γαστήρ, stomach; σχίσις, a cleaving]. See *Celioschisis* (Illus. Dict.).

Gastrosia, Gastroxia. (See Illus. Dict.) **G. fungosa,** that in which the organic acids are due to mold-vegetation in the stomach.

Gastrospasm (*gas'-tro-spazm*) [γαστήρ, stomach; σπασμός, spasm]. A spasm of the stomach.

Gastrostegous (*gas-tro-ste'-gus*) [γαστήρ, stomach; στέγος, a roof]. Covering the stomach.

Gastrosuccorrhea, Gastrosuccorrhœa. (See Illus. Dict.) **G. mucosa** [Dauber, 1896], a continuous secretion of mucus from the gastric mucosa.

Gastrothoracodidymus (*gas-tro-tho-rak-o-did'-im-us*) [γαστήρ, stomach; θώραξ, thorax; δίδυμος, a twin]. A double monster united at the thorax and abdomen.

Gastrotoxin (*gas-tro-toks'-in*) [γαστήρ, stomach; τοξικόν, poison]. A cytotoxin found in the stomach.

Gastrotrachelotomy (*gas-tro-tra-kel-ot'-o-me*) [γαστήρ, stomach; τράχελος, neck; τέμνειν, to cut]. An operation differing only from Cesarean section in that the uterus is opened by a transverse incision of the cervix.

Gastrotubotomy (*gas-tro-tu-bot'-o-me*) [γαστήρ, stomach; *tuba*, a tube; τέμνειν, to cut]. See *Laparosalpingotomy* (Illus. Dict.).

Gastrotympanites (*gas-tro-tim-pan-i'-tez*) [γαστήρ, stomach; τυμπανίτης, tympanites]. Gaseous distention of the stomach.

Gastrourethritis (*gas-tro-u-re-thri'-tis*) [γαστήρ, stomach; οὐρήθρα, urethra]. Simultaneous inflammation of the stomach and of the urethra.

Gastrypalgia (*gas-trip-al'-je-ah*) [γαστήρ, stomach; ὑπό, under; ἄλγος, pain]. Slight gastralgia.

Gastrypectasia, Gastrypectasis (*gas-trip-ek-ta'-ze-ah, -ek'-ta-sis*) [γαστήρ, stomach; ὑπό, under; ἔκτασις, a stretching]. Slight distention of the stomach.

Gastryperneuria (*gas-trip-ur-nu'-re-ah*). See *Gastrohyperneuria.*

Gastryperpathia (*gas-trip-ur-pa'-the-ah*) [γαστήρ, stomach; ὑπέρ, over; πάθος, a disease]. Any severe disease of the stomach.

Gastryponeuria (*gas-trip-o-nu'-re-ah*). See *Gastrohyponeuria.*

Gat. An African name for the leaves of *Catha edulis.*

Gatism (*ga'-tizm*) [Fr., *gâtisme*, incontinence of feces]. Rectal or vesical incontinence.

Gaultherase (*gahl'-thur-āz*). An enzyme found in the bark of *Betula lenta*, in the leaves and berries of *Gaultheria procumbens*, in the root of *Spiræa ulmaria*, and in several species of *Polygala.* It effects the hydrolysis of gaultherin, forming methyl salicylic acid and glucose.

Gaultherin (*gahl'-thur-in*). 1. A glucosid obtained from the bark of the black birch (*Betula lenta*, L.), which by the action of alkali is converted into an oil almost identical with the volatile oil of wintergreen. 2. A sodium salt of methyl salicylate (oil of wintergreen) in a nearly pure condition.

Gaultherolin (*gahl-ther'-ol-in*). Methyl salicylate.

Geisoma, Geison (*ji-so'-mah, ji'-son*) [γείσωμα, γεῖσον, anything projecting]. The superciliary ridge of the frontal bone.

Gelanthum (*jel-an'-thum*). A mixture of gelatin, tragacanth, rose-water, and thymol recommended as an ointment-vehicle.

Gelatiniferous (*jel-at-in-if'-ur-us*) [*gelatin; ferre*, to bear]. Producing gelatin.

Gelatiniform (*jel-at'-in-if-orm*) [*gelatin; forma*, form]. Resembling gelatin.

Gelatinosa (*jel-at-in-o'-sah*). Wilder's term for substantia gelatinosa.

Gelatol (*jel'-at-ol*). An ointment base consisting of a mixture of oil, glycerin, gelatin, and water.

Gelatose (*jel'-a-tōz*). A product of the action of gastric juice on gelatin. It is capable of osmosis. **G. Silver.** See *Albargin.*

Gelid (*jel'-id*) [*gelidus*]. Ice-cold.

Gelidium. (See Illus. Dict.) **G. cartilagineum,** Gaill., affords in part the Japanese isinglass or agar-agar of commerce.

Gelification (*jel-if-i-ka'-shun*). Gelatinization, the conversion of a substance into a jelly-like mass. Syn., *Gelatination.*

Gelone (*jel-ōn'*). A proprietary plaster composed of an outer insoluble agar compound and an inner soluble glue variously medicated.

Gelotherapy, Gelototherapy (*jel-o-ther'-ap-e, jel-o-to-ther'-ap-e*) [γελᾶν, to laugh; *therapy*]. Treatment of disease by induction of laughter.

Gelsemism (*jel'-sem-izm*). Poisoning from use of *Gelsemium sempervirens.* In light cases marked by dizziness, ptosis, and weakness of the legs; in severe cases by tremor, anesthesia, and dyspnea.

Gelsemperin (*jel-sem'-pur-in*). A preparation from *Gelsemium sempervirens.* Dose, ½–1 gr. (0.008–0.066 gm.).

Gemellary (*jem-el'-ar-e*) [*gemellus*, a twin]. Relating to or like twins.

Gemelliparous (*jem-el-ip'-ar-us*) [*gemellus*, a twin; *parere*, to bring forth]. Bearing twins.

Genesiac (*jen-e'-ze-ak*). See *Genesial* (Illus. Dict.).

Genesic, Genetic. (See Illus. Dict.) 2. A drug acting on the genital apparatus. 3. A disease affecting the genital organs.

Geni apophyses [Fr.]. See *Tubercles, Genial* (Illus. Dict.).

Geniohyoid (*je-ni-o-hi'-oid*) [γένειον, the chin; *hyoid*]. 1. Relating to the chin and the hyoid bone. 2. See *Muscles, Table of* (Illus. Dict.).

Genion (*je'-ne-on*) [γένειον, the chin]. In craniometry, the point at the apex of the lower genial tubercle.

Genitality (*jen-it-al'-it-e*) [*genitalis*, pertaining to generation]. Capacity for taking part in generation.

Genitor (*jen'-it-or*) [L.]. A parent, a father; an animal chosen for breeding purposes.

Genius (*je'-ne-us*) [*gignere*, to beget]. Some dominant, distinctive quality. **G. epidemicus.** 1. The predominant characteristic of an endemic or epidemic disease (inflammatory, catarrhal, etc.). 2. The totality of conditions (atmospheric, supernatural, etc.) which favor the prevalence of an endemic or epidemic disease. **G. morbi,** the special or predominant feature of a disease.

Genonusi (*jen-on-u'-se*) [γένος, sex; νόσος, a disease]. Diseases of the reproductive organs.

Genoplasty (*jen'-o-plas-te*) [γέννς, cheek; πλάσσειν, to form]. See *Genyplasty* (Illus. Dict.).

Gentiana. (See Illus. Dict.) **G. quinqueflora,** Hill, five-flowered gentian, a species of the United States; is a tonic, alterative, and emmenagog. Dose of fl. ext., 30–60 ♏ (1.8–3.7 c.c.).

Gentianin (*jen-she-an'-in*). A crude bitter substance extracted from the root of *Gentiana lutea*, L., soluble in alcohol; it is used as a tonic in dyspepsia, hysteria, etc. Syn., *Crude gentianic acid; Crude genistin.*

Gentianose (*jen'-she-an-ōz*). $C_{16}H_{66}O_{31}$. A crystallizable polysaccharid obtained from gentian root.

Gentilitious (*jen-til-ish'-us*) [L., *gentillicius*]. Peculiar to a family or race.

Genu. (See Illus. Dict.) **G. eversum, G. excurvatum, G. extrorsum, G. varum,** a leg distorted inward, throwing the knee outside of normal line. **G. valgum,** leg distorted outward, throwing the knee inside of normal line.

Genucubital (*jen-u-ku'-bit-al*) [*genu*, knee; *cubitus*, elbow]. Relating to or supported by the knees and elbows.

Genufacial (*jen-u-fa'-shal*) [*genu*, knee; *facialis*, of the face]. Relating to the knees and face.

Genupectoral (*jen-u-pek'-to-ral*) [*genu*, knee; *pectus*, breast]. Pertaining to the knee-chest posture—the patient resting upon the knees and chest.

Genychiloplasty (*jen-e-ki'-lo-plas-te*) [γένυς, cheek; χειλος, lip; πλάσσειν, to form]. Plastic surgery of both cheek and lip.

Genyoplasty. See *Genioplasty* (Illus. Dict.).

Geobios (*je-o-bi'-os*) [γῆ, the earth; βίος, life]. The totality of the land-dwelling or terrestrial plant and animal world. Cf. *Limnobios*, *Halobios*.

Geoform (*je'-o-form*). A tasteless, odorless, nontoxic compound of guaiacol and formic aldehyd; it is used as an antiseptic.

Georget's Stupidity. Simple mental confusion without hallucination or delusion.

Georgopathia, Georgopathy (*je-or-go-path'-e-ah, je-or-gop'-ath-e*) [γεωργος, a husbandman; πάθος, disease]. Pellagra.

Geosote (*je'-o-sōt*). See *Guaiacol Valerianate*.

Geraniol (*je-ra'-ni-ol*). $C_{10}H_{17}OH$. A colorless, highly refractive liquid with strong odor of roses, separated from oil of Indian geranium (*Andropogon nardus*, L.). It is an isomerid of borneol.

Geranyl (*jer'-an-il*). $C_{10}H_{17}$. The radicle of geraniol.

Geratology. (See Illus. Dict.) **2.** See *Gereology*.

Gereology, Geræology (*jer-e-ol'-o-je*) [γεραιός, venerable; λόγος, science]. The science of old age; the structural changes and diseases incident to it, its hygiene, etc.

Germ. (See Illus. Dict.) **G.-centers, Flemming's,** the areas in the adenoid tissue of the spleen and lymphatic glands in which leukocytes are formed. **G.s, Cohnheim's Tumor-,** small aberrant or heterotopic masses of embryonic tissue from which new growths may originate. **G.-force,** plastic or constructive force. **G.-ridge.** Same as *G. Epithelium* (Illus. Dict.).

Germanium (*jer-man'-e-um*). See *Elements, Table of* (Illus. Dict.).

Germiletum (*jer-mil-e'-tum*). An antiseptic, said to consist of a solution of borohydrofluoric and borosalybenzoic acids, boroglycerin, and formaldehyd with potassium permanganate, menthol, thymol, and aromatics.

Germol (*jer'-mol*). A bactericidal, reddish-brown liquid preparation analogous to cresol.

Gerodermia (*jer-o-dur'-me-ah*). See *Geromorphism* (Illus. Dict.).

Gerontatrophy (*jer-on-tat'-ro-fe*). See *Geromarasmus* (Illus. Dict.).

Gerontic (*jer-on'-tik*) [γεροντικός, belonging to an old man]. Pertaining to old age.

Gerontin (*jer-on'-tin*). See under *Leukomains, Table of* (Illus. Dict.).

Gerontopia (*jer-on-to'-pe-ah*). See *Presbyopia* (Illus. Dict.).

Gerontopityriasis (*jer-on-to-pit-ir-i'-a-sis*). See *Pityriasis senilis* (Illus. Dict.).

Gersuny's Paraffin Prosthesis. See under *Prosthesis*.

Gestation. (See Illus. Dict.) **G., Duration of.** See Table under *Pregnancy* (Illus. Dict.).

Ghé. The root of *Oldenlandia umbellata*, L.

Ghee, Ghi [Hind.]. Butter clarified and liquefied by slow boiling and used as a base for ointments and as a dressing for wounds.

Giant. (See Illus. Dict.) **G.-finger.** Synonym of *Macrodactylia*.

Gibber (*gib'-ur*) [*gibba*, a hunch, a hump]. A sac-like enlargement. **G. inferior thalami.** See *Pulvinar* (1) (Illus. Dict.). **G. ulnæ,** the olecranon.

Gigantocyte (*ji-gant'-o-sīt*) [γίγας, giant; κύτος, cell]. A large nonnucleated red blood-corpuscle.

Gigartina (*jig-ar-te'-nah*) [γίγαρτον, a grape seed]. A genus of marine *Algæ* of the order *Gigartinaceæ*. **G. acicularis,** Lamour., occurs on the rocks of the Mediterranean and Adriatic and constitutes to a large extent the Corsican mass of commerce. Cf. *Alsidium helminthochortus*, Ag. **G. lichenoides.** See *Gracillaria lichenoides*, Agardh.

Gigathism. Incorrect spelling of *Githagism*.

Gillenia trifoliata. (See Illus. Dict.) Dose of fl. ext. as expectorant, 3–8 ♏ (0.2–0.5 c.c.); mild emetic, dose, 20–30 ♏ (1.2–1.8 c.c.).

Gillenin. (See Illus. Dict.) Dose, 4–6 gr. (0.26–0.4 gm.).

Gilvor (*jil'-vor*) [*gilvus*, pale yellow]. The earthy complexion accompanying certain forms of cachexia and dyscrasia.

Githagism (*gith'-a-jism*) [*gith*, a black-seeded plant; *agere*, to carry]. The condition of chronic poisoning produced in man and animals attributed to the seeds of corn-cockle (*Lychnis githago*, Scop.), which often find their way into cereal foods.

Glabrification (*gla-bri-fi-ka'-shun*) [*glaber*, smooth; *facere*, to make]. The process of becoming smooth, glistening, and hairless.

Glabrificins (*gla-brif'-is-ins*). See *Antibodies*.

Gland. (See Illus. Dict.) **G., Admaxillary,** an accessory parotid or salivary gland. **G., Amygdaloid,** an almond-shaped indurated gland. Cf. *Bullet-gland*. **G., Bullet-,** a swollen or indurated gland, as found in the inguinal and cervical region in cases of syphilis; also called amygdaloid. **G.s, Clapton-Havers'.** See *G.s of Havers* (Illus. Dict.). **G.s, Cobelli's,** a ring of mucous glands in the mucosa of the esophagus, just above the cardia. **G.s, Fraenkel's,** minute glands opening immediately below the edge of the vocal cords. **G.s, Gley's,** the parathyroid glands. **G., Hemolymph,** glands discovered in 1884 by Heneage Gibbes, chiefly in the retroperitoneal region. They are intermediate between the spleen and ordinary lymph-glands. Their function is mainly hemolytic. There are two types to which the names splenolymph and manolymph or marrow-lymph are applied. **G.s, Huguier's.** See under *Huguier* (Illus. Dict.). **G.s, Integumentary,** the sebaceous and sudiparous glands. **G., Intercapsular,** along, narrow, paired organ found in the human embryo corresponding in position and general appearance to the hibernating glands of the lower animals, but from its inner lymphoid structure it is supposed to be a hemolymph gland; no trace of it persists to adult life. **G., Manolymph, G., Marrow-lymph,** a name given to a variety of hemolymph gland (*q. v.*). **G.s, Manz'.** See under *Manz* (Illus. Dict.). **G., Merocrine.** See under *Merocrine*. **G.s, Parathyroid,** small lymphatic glands lying near the thyroid but differing from it in histologic structure and not accessory to it. Syn., *Gley's glands; Sandstroem's glands*. **G.s, Sandstroem's.** See *G.s, Parathyroid*. **G.s, Schüller's,** urethral glands, diverticula of Gärtner's ducts. **G., Splenolymph,** a term applied to certain hemolymph glands intermediate between the spleen and ordinary lymph-glands. **G., Suzanne's,** a mucous gland found in the floor of the mouth close to the median line. **G.s, Tiedemann's.** See *G.s, Bartholin's* (Illus. Dict.). **G., Virchow's,** a lymphatic gland situated behind the clavicular insertion of the sternomastoid. Syn., *Jugular gland*. **G.s, Waldeyer's.** See under *Waldeyer* (Illus. Dict.). **G.s, Wasmann's,**

the peptic glands. **G.s, Willis'**, the corpora albicantia.

Glandaceous (*glan-da'-shus*) [*glans*, an acorn]. Yellowish-brown in color.

Glanders (*glan'-derz*). An infectious disease of horses, mules, and asses, communicable to man and caused by a specific microorganism, *Bacillus mallei*. It occurs in all countries and at all seasons and is known as glanders when the principal seat of its activity is the mucosa of the nostril, and as farcy when it is confined to the subcutaneous lymphatics. [Abbott.] **G., African.** See *Lymphangitis epizootica*.

Glandiform (*glan'-de-form*) [*glans*, an acorn; *forma*, form]. 1. Acorn-shaped. 2. Adenoid.

Glandulen (*glan'-du-len*). A preparation of the bronchial glands of sheep, used in the treatment of tuberculosis. Dose, 12–20 gr. 3 times daily.

Glanduliform (*glan-du'-le-form*). Shaped like a gland.

Glass. (See Illus. Dict.) **G., Liquid**, a saturated solution of potassium silicate. **G.-wool**, white silky threads obtained by the action of a powerful blast on a falling stream of molten glass; it is used in draining wounds and in filtering strong acids and alkalis. Syn., *Slag-wool*.

Glassing, Glazing (*glas'-ing*). Synonym of *Applying Spectacles*.

Glassy (*glas'-e*). 1. Having the appearance of glass; vitreous; hyaline. 2. Expressionless.

Glastine (*glas'-tēn*) [*glastum*, the herb woad used in dyeing blue]. Bluish in color, as glastine bile.

Gliabacteria (*gli-ah-bak-te'-re-ah*) [γλία, glue; *Bacterium*]. Bacteria in the zooglea stage, embedded in a gelatinous matrix.

Gliacoccus (*gli-ah-kok'-us*) [γλία, glue; κόκκος, berry]. A micrococcus invested with a gelatinous envelope.

Gliacyte (*gli'-ah-sīt*) [γλία, glue; κύτος, cell]. A neuroglia cell.

Gliomyoma (*gli-o-mi-o'-mah*). Glioma combined with myoma.

Glioneuroma (*gli-o-nu-ro'-mah*). Glioma with neuromatous characteristics.

Gliosis. (See Illus. Dict.) **G. cervicalis**, syringomyelia.

Glischrin (*glis'-krin*). Malerba's name for a nitrogenous mucus formed in urine by *Bacterium glischrogenum*.

Glischrobacterium (*glis-kro-bak-te'-re-um*) [γλίσχρος, viscid; *Bacterium*]. The microorganism *Bacterium glischrogenum* causing mucous degeneration of the urine.

Glischrogenous (*glis-kroj'-en-us*) [γλίσχρος, viscid; γεννᾶν, to produce]. Giving rise to viscidity.

Glissonitis (*glis-on-i'-tis*). Inflammation of Glisson's capsule.

Globomyeloma (*glo-bo-mi-el-o'-mah*) [*globus*, a ball; *myeloma*]. A round-celled sarcoma.

Globular Value. The relative amount of hemoglobin contained in a red corpuscle. It is a fraction of which the numerator is the percentage of hemoglobin and the denominator the percentage of corpuscle.

Globularetin, Globularrhetin (*glob-u-lar-e'-tin*). $C_{12}H_{14}O_3$. A decomposition-product of globularin by the action of dilute acids. It is a powerful diuretic, stimulates the secretion of bile, and in large doses causes acute irritation of the intestine. It is used with globularin in gout, etc. Dose, ½ gr.

Globularin (*glob-u-lar'-in*). $C_{30}H_{44}O_{14}$. A glucosid from the leaves of *Globularia alypum*, L., occurring as a white amorphous powder soluble in water and alcohol and insoluble in ether. Its action upon the heart and nervous system is similar to that of caffein, while it diminishes the quantity and specific gravity of the urine and its contained urates and uric acid. It is used in connection with globuretin in gout, rheumatism, etc.

Globule. (See Illus. Dict.) **G.s, Directing, G.s, Directive, G.s, Extrusion, G.s, Polar.** See *Bodies, Directing*. **G., Dobie's**, a small round body rendered visible in the center of the transparent disc of a muscular fibril by staining. **G.s, Morgagni's**, small hyaline bodies found between the crystalline lens and its capsule before and after death, especially in cases of cataract. They are due to coagulation of the albuminous fluid contained in the lens. Syn., *Morgagni's spheres*.

Globulolysis (*glob-u-lol'-is-is*). See *Cytolysis*.

Globus. (See Illus. Dict.) **G. martialis**, iron potassiotartrate. **G. uterinus**, the hard round ball formed by the contracted uterus after expulsion of the fetus.

Glœosporium (*gle-o-spo'-re-um*) [γλοιός, viscid; σπόρος, spore]. A genus of fungi. **G. fructigenum**, Berk., causes apple canker and bitter rot of apples.

Gloiopeltis (*gloi-o-pel'-tis*) [γλοία, glue, gelatin; πέλτη, a little shield]. A genus of marine *Algæ* of the order *Gigartinaceæ*. **G. tenax**, Agardh., a species found in the Chinese Sea. It yields with hot water a gelatin known in Japan and China under the name *Satsuma funori*, used in place of gum or glue as an adhesive substance, and as a starch and glaze in laundry work. It constitutes in part the Japanese gelatin or agar-agar of commerce.

Glome. (See Illus. Dict.) 2. One of the two rounded prominences which form the backward prolongations of the frog of a horse's foot. Cf. *Periople*.

Glomer (*glo'-mur*) [*glomus*, a ball]. A conglomerate gland.

Glomerular (*glom-er'-u-lar*). Relating to a glomerule of the kidney.

Glomerule. (See Illus. Dict.) **G. of the Spleen**, round masses of lymphoid tissue developed in the adventitia of the arteries of the spleen.

Glomus (*glo'-mus*) [L., a ball; pl. *glomeres*]. 1. A fold of the mesothelium arising near the base of the mesentery in the pronephros and containing a ball of bloodvessels. Syn., *Glomerule of the pronephros*. 2. The part of the choroid plexus of the lateral ventricle which covers the thalamus. Syn., *G. chorioideum*.

Glonoinism, Glonoism (*glon-o'-in-izm, glon'-o-izm*) [GlONO, the letters of the formula representing nitroglycerin]. Intoxication by nitroglycerin.

Glossinose (*glos'-in-ōz*). Synonym of *Trypanosomiasis*.

Glossodynamometer (*glos-o-di-nam-om'-et-ur*) [γλῶσσα, tongue; *dynamometer*]. An apparatus for estimating the capacity of the tongue to resist pressure.

Glossokinesthetic (*glos-o-kin-es-thet'-ik*) [γλῶσσα, tongue; *kinesthetic*]. Relating to the subjective perception of the motions of the tongue in speech.

Glossolabial (*glos-o-la'-be-al*) [γλῶσσα, tongue; *labium*, lip]. Relating to the tongue and the lip.

Glossomanteia, Glossomantia (*glos-o-man'-ti-ah*) [γλῶσσα, tongue; μαντεία, divination]. Prognosis of a disease based on the appearance of the tongue.

Glossopalatine (*glos-o-pal'-at-ēn*) [γλῶσσα, tongue; *palatum*, palate]. Relating to the tongue and the palate.

Glossopalatinus (*glos-o-pal-at-i'-nus*). See under *Muscles*.

Glossopeda (*glos-o-pe'-dah*) [γλῶσσα, tongue; *pes*, foot]. Synonym of *Foot-and-mouth Disease*.

Glossotrichia (*glos-o-trik'-e-ah*) [γλῶσσα, tongue; θρίξ, hair]. Hairy tongue.

Glou-glou (*gloo'-gloo*). A gurgling sound supposedly produced in the stomach by the respiratory pressure of the diaphragm; only heard when the stomach has

become more or less vertical and while a tight corset is on. It is explained as being due to a temporary biloculation of the stomach by the corset.

Glucase (*glu'-kās*). The enzyme that hydrolyzes maltose. It is found in the blood, tissues, and juices of the animal body and in various species of yeast.

Glucate (*glu'-kāt*). A salt of glucic acid.

Glucin (*glu'-sin*). The sodium salt of amidotriazin-sulfonic acid; a substance resembling saccharin, but inferior to it in sweetness.

Glucocyamin. See *Glycocyamin* (Illus. Dict.).

Glucolysis (*glu-col'-is-is*). See *Glycolysis* (Illus. Dict.).

Glucophenetidin (*glu-ko-fen-et'-id-in*). A condensation-product of paraphenetidin and glucose occurring in white, silky needles.

Glucoproteid (*glu-ko-pro'-te-id*). See *Glycoproteid.*

Glucosamin. See *Glycosamin*, under *Chitin* (Illus. Dict.).

Glucusimid (*glu-ku'-sim-id*). See *Saccharin* (Illus. Dict.).

Glusid (*glu'-sid*). Synonym of *Saccharin.*

Glutamin (*glu-tam'-in*). An amid compound constituent of the juice of the beet, gourd, mustard, and other plants.

Glutannol (*glu-tan'-ol*). A proprietary intestinal astringent said to consist of vegetable fibrin and tannic acid. Dose, 4–15 gr. (0.25–1 gm.).

Gluten. (See Illus. Dict.) **G.-casein.** See *Casein, Vegetable* (Illus. Dict.).

Glutenin (*glu'-ten-in*). A proteid of wheat.

Gluteofascial (*glu-te-o-fas'-e-al*) [γλουτός, buttock; *fascia*, bundle]. Relating to the fascia of the gluteal region.

Gluteotrochanteric (*glu-te-o-tro-kan-ter'-ik*). Relating to the gluteal muscle or region and the trochanter.

Glutinoid (*glu-tin'-oid*). See *Gelatinoid* (Illus. Dict.).

Glutinpeptone Sublimate (*glu-tin-pep'-ton*). A hydrochlorated glutinopeptonate of mercury containing 25% of corrosive mercury bichlorid and obtained by the action of hydrochloric acid on gelatin. It occurs as a hygroscopic white powder or a noncorrosive liquid used hypodermically in syphilis. Dose, 15 gr. (1 gm.).

Glutoform, Glutol (*glu'-to-form, glu'-tol*). See *Formaldehyd Gelatin.*

Gluton (*glu'-ton*). A dietetic substance obtained from gelatin by the action of acids at a high temperature for several hours. It forms a yellowish-white powder which does not gelatinize in strong solutions, but is readily soluble in water.

Glybolid (*gli'-bo-lid*). The proprietary name for an antiseptic paste made of equal parts of boralid and glycerin. Syn., *Glybrid.*

Glycamyl (*gli'-kam-il*). Glycerite of starch. See *Amylum glyceritum* (Illus. Dict.).

Glyceric (*glis-er'-ik*). Derived from glycerid or glycerin. **G. Anhydrid.** See *Glycid* (Illus. Dict.).

Glycerin. (See Illus. Dict.) Syn., *Glyceryl alcohol; Glyceryl hydroxid.* **G. Borosalicylate,** an antiseptic compound obtained from boric and salicylic acids heated in the presence of glycerin. **G.-chloral-camphor,** a trituration of chloral hydrate, 5 parts, and camphor, 3 parts, to which 25 gm. of glycerin is added and the mixture warmed; it is used as an application in ulcus molle. **G. Lacto-carbolate,** a mixture of glycerin with lactic and carbolic acids; it is applied in laryngeal tuberculosis. **G., Sulfurated,** a glycerin containing 5% of sulfur; it is applied in diphtheria.

Glycerite. (See Illus. Dict.) **G., Acid, Boric.** See *Boroglycerin* (Illus. Dict.). **G., Acid, Carbolic,** a mixture of glycerin, 80 parts, with carbolic acid, 20 parts; it is used as an internal and external antiseptic diluted with water. Dose, 5–20 ♏ (0.3–1.2 c.c.). Application, reduce with water to ¼ or ⅙. **G., Acid, Gallic,** glycerin, 80 parts; gallic acid, 20 parts. An antiseptic and astringent. Dose, 20–60 ♏ (1.2–3.7 c.c.). **G., Acid, Sulfurous,** sulfur dioxid in glycerin; an antiseptic syrupy liquid used externally in skin-diseases, etc. **G., Aluminium Acetate.** See *Aluminium Acetoglycerinate.* **G., Boroglycerin,** a thick, sweet, colorless liquid consisting of 31% of boric acid in glycerin. It is an external antiseptic. **G., Egg Yolk.** See *Glyconin* (Illus. Dict.). **G. of Tannin,** glycerin, 80 parts; tannic acid, 20 parts; an astringent syrupy liquid used in erysipelas, skin-diseases, etc. Dose, 20–60 ♏ (1.2–3.7 c.c.). **G., Tar,** a compound of tar, glycerin, alcohol, and water; a dark-brown liquid with taste and odor of tar; used as an antiseptic and expectorant. Dose, 60–120 ♏ (3.7–7.5 c.c.).

Glyceroborate (*glis-er-o-bo'-rāt*). A compound made by heating together equal parts of glycerin and a borate.

Glycerolate, Glycerolatum (*glis'-er-o-lāt, glis-er-o-la'-tum*). Same as *Glycerite.* **G., Aromatic,** a sticky transparent substance consisting of tragacanth, 4 parts; acetone, 30 parts; glycerin, 46 parts; water, 18 parts; aromatic perfume, 4 parts; it is recommended in treatment of skin diseases.

Glycerophosphate (*glis-er-o-fos'-fāt*). A combination of glycerin and phosphoric acid with a base.

Glyceryl (*glis'-ur-il*). C_3H_5. The trivalent radicle of glycerin. Syn., *Glycerule.* **G. Acetate.** See *Acetin* (Illus. Dict.). **G. Borate.** See *Boroglycerin* (Illus. Dict.). **G.chloriodobenzoate.** See *Benzoiodohydrin.*

Glycine (*gli'-sēn*) [γλυκύς, sweet]. A genus of leguminous plants. **G. subterranea.** See *Voandzeia subterranea.*

Glycinin (*glis'-in-in*). A globulin having properties similar to legumin; it is found in bog-bean, *Menyanthes trifoliata*, L.

Glycobenphene (*gli-ko-ben'-fēn*). The proprietary name of an antiseptic preparation used in skin diseases, said to contain glycerin, boric acid, benzoic acid, phenol, and zinc oxid.

Glycoblastol (*gli-ko-blas'-tol*). A proprietary hair restorer said to consist of alcohol, glycerin, and capsicum.

Glycocholate (*gli-ko-ko'-lāt*). A salt of glycocholic acid. Syn., *Bilate.*

Glycocinacetyl (*gli-ko-sin-as-et'-il*). See *Acetoglycocoll.*

Glycocol, Glycocoll. (See Illus. Dict.) **G. Hydrochlorate,** $C_2H_5NO_2Cl$, astringent acid crystals soluble in water. **G., Propionic.** See *Alanin* (Illus. Dict.).

Glycoformal (*gli-ko-form'-al*). A disinfectant composed of an aqueous solution of formic aldehyd and glycerin.

Glycogelatin (*gli-ko-jel'-at-in*). An ointment base consisting of glycerin and gelatin.

Glycogenal, Glycogenol (*gli-ko'-jen-al, -ol*). A substance allied to glycogen. It is used in tuberculosis by inhalation and internally. Dose, 15–23 gr. (1.0–1.5 gm.).

Glycoheroin (*gli-ko-her'-o-in*). A proprietary liquid expectorant said to contain heroin and hyoscyamin. Dose, 1 fld. dr. (4 c.c.).

Glycol. (See Illus. Dict.) **G.-chlorhydrin.** See *Ethylene-chlorhydrin.* **G.-monacetin,** $C_4H_8O_3$, a reaction-product of potassium acetate with ethylene bromid and alcohol; an oily liquid, miscible in water and alcohol; boils at 182° C. Syn., *Ethyleneglycol monacetate.*

Glycolamin (*gli-kol-am′-in*). Synonym of *Glycocol.*

Glycolic, Glycollic (*gli-kol′-ik*). Derived from glycol.

Glycolignose (*gli-ko-lig′-nōs*) [γλυκύς, sweet; *lignum*, wood]. $C_{30}H_{46}O_{21}$. A glucosid contained in fir wood. Syn., *Glucolignose.*

Glycoline (*gli′-kol-ēn*). A purified petroleum for use in atomizers.

Glycoproteids (*gli-ko-pro′-te-ids*) [γλυκύς, sweet; πρῶτος, first]. Compound proteids which on decomposition yield a proteid on one side and a carbohydrate or derivatives of the same on the other. Some glycoproteids are free from phosphorus (mucins, mucinoids, and hyalogens) and some contain it (phosphoglycoproteids). [Hammarsten.]

Glycosal (*gli′-ko-sal*). Monosalicylic glycerin ester, a white powder readily soluble in hot water and alcohol, less freely in ether and chloroform. It is antirheumatic. Dose, 8–150 gr. per day. Applied in 20% alcoholic solution.

Glycosemia (*gli-ko-se′-me-ah*) [γλυκύς, sweet; αἷμα, blood]. See *Glycemia* and *Glycohemia* (Illus. Dict.).

Glycosolveol (*gli-ko-sol′-ve-ol*). A proprietary remedy for diabetes said to be obtained from peptone by action of oxypropionic acid and from trypsin by action of a compound of theobromin.

Glycosuria. (See Illus. Dict.) For tests see *Glucose*, under *Tests.* **G., Alimentary,** that due to excessive ingestion of carbohydrates. **G., Anxiety** (of v. Noorden), a transitory form due to worry. **G., Artificial,** a condition resulting from Claude Bernard's famous experiment of puncturing the diabetic center in the bulb. Also called *traumatic glycosuria* or *artificial diabetes.* **G., Diabetic,** that in which sugar and oxybutyric acid and its derivative are passed in the urine. **G., Lipogenic,** the glycosuria of obese subjects which does not amount to true diabetes. **G., Persistent.** Synonym of *Diabetes mellitus.* **G., Toxic,** that observed after poisoning by chloral, morphin, or curare, and after inhalation of chloroform and carbonic oxid gas, or after the ingestion of phloridzin. **G., Traumatic.** See *G., Artificial.* **G. of Vagrants,** Hoppe-Seyler's term for a transient form occurring in underfed vagrants.

Glycothymolin (*gli-ko-thi′-mol-in*). An antiseptic cleansing solution for the treatment of diseased mucous membrane. Said to consist of glycerin, sodium, boracic acid, thymol, menthol, salicylic acid, eucalyptol, and other antiseptics.

Glycovanillin (*gli-ko-van-il′-in*). $C_6H_3(OCH_3)(OC_6H_{11}O_5)CHO + 2H_2O$. The glucosid of vanillin, formed by the oxidation of coniferin with dilute chromic acid; white crystals melting at 192° C. Syn., *Glucovanillin.*

Glycozone (*gli′-ko-zōn*). A combination of pure glycerin with 15 times its own volume of ozone at 0° C. It is a healing agent, used in gastric ulcer, etc., in teaspoonful doses diluted with water.

Glycuronuria (*gli-ku-ron-u′-re-ah*) [γλυκύς, sweet; οὖρον, urine]. The presence of glycuronic acid in the urine.

Glycyphyllin (*glis-e-fil′-in*) [γλυκύς, sweet; φύλλον, a leaf]. $C_{21}H_{24}O_9$. A crystalline glucosid contained in the leaves of *Smilax glyciphylla*, Sm. It splits into phloretin and isodulcit.

Glykaolin (*gli-ka′-ol-in*). A compound of aluminium silicate, salol, and glycerin made into a smooth paste; it is indicated in treatment of wounds, ulcers, sprains, burns, etc. Syn., *Pasta alumini silicatis composita.*

Glymol (*gli′-mol*). A proprietary preparation said to be obtained from petroleum; it is used in diseases of the nose and throat.

Gnathocephalus (*nath-o-sef′-al-us*) [γνάθος, the jaw; κεφαλή, the head]. A monster lacking all parts of the head except large jaws.

Going-light (*go′-ing-lit*). See *Asthenia of Fowls.*

Goiter. (See Illus. Dict.) Syn., *Bronchocele; Nithsdale neck; Derbyshire neck; Swelled neck; Induratio thyreoideæ.* **G., Aberrant, G., Accessory,** that of an accessory thyroid gland. **G., Aerial.** See *Aerocele.* **G., Amyloid,** a form associated with amyloid degeneration of the small arteries, capillaries, and follicles. **G., Cancerous, G., Carcinomatous,** carcinoma of the thyroid gland. **G., Exophthalmic.** (See Illus. Dict.) See *Signs, Abadie's, Dalrymple's, Graefe's* (Illus. Dict.), *Ballet's, Becker's, Bryson's, Joffroy's, Mann's, Marie's, Möbius', Vigouroux's.* **G., Perivascular,** one surrounding an important blood-vessel. **G., Pituitary,** Virchow's name for cystic and follicular degeneration in the hypophysis similar to that occurring in the thyroid gland. **G., Pneumoguttural.** See *Aerocele.* **G., Retrovascular,** one traversed anteriorly by a large bloodvessel.

Goitriferous (*goi-trif′-ur-us*) [*goiter; ferre*, to bear]. Giving rise to goiters.

Gold. (See Illus. Dict.) **G.-amalgam,** an alloy of gold and mercury. **G. Arsenite,** an alterative used in secondary and tertiary syphilis. Dose, $\frac{1}{64}$–$\frac{1}{12}$ gr. (0.001–0.005 gm.). **G., Balsam of,** a mixture of 1 part of fulminating gold dissolved in 4 parts of juniper oil. **G.-blindness.** See under *Blindness.* **G. Bromid, Auric, G. Tribromid.** See *Aurum brom.* (Illus. Dict.). **G. Bromid, Aurous,** AuBr, yellowish-gray friable mass insoluble in water; it is used in nervous diseases. Dose, antiepileptic, $\frac{1}{10}$–$\frac{1}{5}$ gr. (0.006–0.012 gm.) 2 or 3 times daily; anodyne, $\frac{1}{20}$ gr. (0.003 gm.) 2 times daily. Syn., *G. Monobromid; Aurum monobromatum.* **G. Chlorid.** See *Aurum chloridum* (Illus. Dict.). **G. Cyanid, Auric,** $Au(CN)_3 + 3H_2O$, large, colorless, hygroscopic plates soluble in water; used in tuberculosis. Dose, $\frac{1}{20}$–$\frac{1}{10}$ gr. (0.0033–0.0065 gm.). Syn., *G. tricyanid.* **G. Cyanid, Aurous,** AuCN, lemon-yellow crystalline powder, insoluble in water, alcohol, or ether; it is used in tabes dorsalis. Dose, $\frac{1}{16}$–$\frac{1}{4}$ gr. (0.004–0.016 gm.) several times daily. Syn., *G. monocyanid.* **G., Fulminating,** $Au_2O_3(NH_3)_4$, a compound obtained from auric oxid or auric hydrate by action of ammonia; a greenish-brown powder exploding with great violence on heating or percussion. **G. Iodid,** AuI, greenish or lemon-yellow powder used as an alterative. Dose, $\frac{1}{64}$–$\frac{1}{6}$ gr. (0.001–0.008 gm.). Syn., *Aurous iodid.* **G. Monobromid.** Same as *G. Bromid, Aurous.* **G. Monocyanid.** Same as *G. Cyanid, Aurous.* **G. Mosaic,** tin bisulfid. **G. Oxid,** Au_2O_3, a brown powder soluble in hydrochloric acid; it is alterative and antituberculous. Dose, $\frac{1}{20}$–$\frac{1}{4}$ gr. (0.003–0.016 gm.). **G., Potable,** a name given to various liquids alleged falsely to contain gold. **G. and Potassium Bromid,** $AuBr_3KBr + 2H_2O$, red acicular crystals soluble in water. It is antiepileptic and sedative. Dose, $\frac{1}{6}$–$\frac{3}{8}$ gr. (0.011–0.04 gm.) hypodermically. **G. and Potassium Cyanid,** $2KAu(CN)_4 + 3H_2O$, large crystals or white powder. An active antiseptic. Antidotes: emetics, iron persulfate and protosulfate, artificial respiration, ammonia, chlorin, etc. **G. Purple.** See *Cassius' Purple*, under *Pigments, Conspectus of* (Illus. Dict.). **G. Salt, Chrestien's** or **Figuier's,** gold and sodium chlorid. **G. and Sodium Bromid,** $AuBr_3NaBr + 2H_2O$, black crystals, used in epilepsy in solution 2:100 of distilled water. Dose, 8 ♏ (0.5 c.c.) subcutaneously and gradually increased to 30 ♏ (1.8 c.c.). **G. and Sodium Chlorid.** See *Aurum et Sodium* (Illus. Dict.). **G. Tribromid.** See *Aurum*

brom. (Illus. Dict.). **G. Tricyanid.** See *G. Cyanid, Auric.*

Goldman's (Hugo) Formula for the treatment of pulmonary tuberculosis: Creasote carbonate and ammonium sulfichthyolate, each 15 gm.; glycerin, 30 gm.; peppermint-water, 10 gm. Dose, 10–30 drops 3 times a day.

Gombin (*gum'-bin*). The mucilaginous constituent of *Hibiscus esculentus*, L.

Gomenol (*go'-men-ol*). A syrup used in pertussis said to be prepared from the leaves of *Melaleuca leucadendron*, L. Dose, 5–50 ♏ (0.333–3.333 c.c.) in capsules.

Gonæ (*go'-ne*) [L.]. The genitals.

Gonal (*go'-nal*). A proprietary remedy for gonorrhea, cystitis, etc., said to be the active principle of sandalwood oil. Dose, 10–20 ♏ (0.66–1.33 c.c.).

Gonangiectomy (*go-nan-je-ek'-to-me*) [γόνος, generation; ἀγγεῖον, vessel; ἐκτομή, excision]. Excision of a portion of the vas deferens.

Gonarthritis. (See Illus. Dict.) 2. Synonym of *Gonorrheal Synovitis.*

Gonarthromeningitis (*gon-ar-thro-men-in-ji'-tis*) [γόνυ, knee; ἄρθρον, joint; μῆνιγξ, membrane]. Inflammation of the synovial membrane of the knee.

Gonatalgia (*gon-at-al'-je-ah*). See *Gonalgia* (Illus. Dict.).

Gonecystopyosis (*gon-e-sist-o-pi-o'-sis*) [γόνη, semen; κύστις, cyst; πύωσις, suppuration]. Suppuration of a gonecyst.

Gongyloid (*gon'-jil-oid*) [γογγυλίς, a turnip; εἶδος, likeness]. Having an irregular round shape.

Goniometer (*go-ne-om'-et-ur*) [γωνία, an angle; μέτρον, measure]. An apparatus for measuring lateral curvatures, adduction and abduction in hip-joint disease, the angle of ankylosed joints, etc., and the angles of crystals. **G., Vesical,** an apparatus to measure the angle formed by the long axis of the urethra with a line drawn from the internal urethral orifice to the mouth of the ureter.

Goniometry (*go-ne-om'-et-re*). The measurement of angles.

Gonion (*go'-ne-on*) [γωνία, an angle]. In craniometry, the outer side of the angle of the inferior maxilla.

Gonococcemia (*gon-o-kok-se'-me-ah*) [*gonococcus;* αἷμα, blood]. The presence of gonococci in the blood.

Gonococcia (*gon-o-kok'-se-ah*). Same as *Gonohemia.*

Gonocyte (*gon'-o-sīt*) [γόνος, seed; κύτος, cell]. Van Beneden's name for the ovum which contains only the female pronucleus, the male part having been expelled as directive bodies. **G., Male,** a spermatozoid.

Gonohemia (*gon-o-he'-me-ah*) [*gonococcus;* αἷμα, blood]. Generalized gonorrheal infection.

Gonopepsin (*gon-o-pep'-sin*). A preparation said to consist of pepsin, boric acid, infusion of cranberries, and water; it is intended as a gonorrheal injection.

Gonorol (*gon'-or-ol*). A proprietary remedy for gonorrhea said to contain the active principles of sandalwood oil.

Gonotoxemia (*gon-o-toks-e'-me-ah*). Toxemia attributable to infection with the gonococcus.

Gonotoxin (*gon-o-toks'-in*). A nondialyzable toxin produced both in the cocci and in the culture-media by gonococci.

Gossypol (*gos'-ip-ol*). A crystalline compound isolated from cotton-seed.

Gouania (*gu-an'-e-ah*) [*Antoine Gouan,* French botanist, 1733–1821]. A genus of the *Rhamneæ.* **G. domingensis,** L., chew stick; a West Indian species; the sap is tonic; the bark and wood are antiseptic and stomachic and are used in treatment of gonorrhea. **G. tomentosa,** Jacq., the sap is used in Mexico in skin-diseases and as a depilatory.

Goundou (*goon'-doo*). An affection first mentioned by Macallister (1882) which occurs among the negroes of the western coast of Africa. It consists of the growth of two bony, ovoid, symmetric tumors which arise at the root of the nose on each side and which by their growth narrow the nasal fossas and interfere with vision. It usually begins in late childhood, being accompanied at the onset by violent headache, epistaxis, and mucopurulent discharges from the nose. It is held by some as due to a central nerve lesion. Syn., *Anakhre: Henpuye:* French, *Grosnez.*

Gout. (See Illus. Dict.) **G., Anomalous,** that marked by unusual symptoms or at first affecting unusual parts of the body. **G., Asthenic, G., Atonic,** a form of chronic gout marked by enlargement of the joints and thickening and distention of the ligaments and tissues. **G., Edematous,** that in which the swelling is not attended with heat, redness, nor severe pain. **G., Irish.** Synonym of *Osteoarthritis.* **G., Poor Man's,** gout due to exposure, poor food, and excess in the use of malt liquor. **G., Retrocedent.** (See Illus. Dict.) Syn., *Anomalous, Misplaced,* or *Wandering gout; Arthritis aberrans; A. erratica.* 2. Gout which leaves the joints suddenly to appear in the brain, stomach, or other internal organ. Syn., *Abarticular, Displaced, Extraarticular, Flying, Metastatic, Migrating, Recedent, Retrograde,* or *Transferred gout.* **G., Suppressed.** See *G., Latent* (Illus. Dict.). **G., Tophaceous,** a form marked by a deposit of sodium urate on the joint cartilages and the formation of bony or cartilaginous growths around the ends of the bones.

Graafian (*grah'-fe-an*). Described by Reinier de Graaf, a Dutch anatomist (1641–1673).

Gracilaria (*gras-il-a'-re-ah*) [*gracilis,* slender]. A genus of marine *Algæ* of the order *Sphærococcaceæ.* **G. confervoides,** Grev., a cosmopolitan species. It is gathered in the lagoons of Venice and is dried and sold as a remedy for consumption. It yields a gelatin on boiling and evaporating. **G. lichenoides,** Agardh., Ceylon agar-agar, *Fucus amylaceus,* a species said to yield starch and sugar as well as gelatin. From it is prepared a widely used food resembling noodles, particularly adapted to the use of invalids. In Japan it is known as *Dschin-Dschin.* The prepared gelatin forms in part the agar-agar of commerce. **G. wrightii,** Agardh., an Australian species. It is eaten with little preparation by the coast natives.

Gradatory (*grad'-at-o-re*) [*gradus,* a step]. Adapted for walking.

Graft. (See Illus. Dict.) **G., Animal,** a piece of tissue transplanted from an animal to man. Syn., *G., Zooplastic.* **G., Autoplastic,** a graft taken from the patient's own body. **G., Frog-skin,** one of sterilized skin from the abdomen of the frog, transferred to the surface of a chronic ulcer. **G., Heteroplastic,** a graft taken from a person other than the subject. **G., Omental,** a small strip of omentum used to strengthen the line of suture in enterorrhaphy. **G., Periosteal,** one of periosteum to cover denuded bone or to be placed where bone has been removed to favor new formation. **G., Zooplastic.** See *G., Animal.*

Grainage (*grān'-ej*). Weight expressed in grains or fractions of grains.

Grammolecular (*gram-mo-lek'-u-lar*). Relating to a grammolecule. **G. Solution,** a solution in which a grammolecule of the active chemical is contained in each liter.

Grammolecule (*gram-mo'-le-kūl*). In a solution or mixture, the weight of an atom or molecule of the

active chemical expressed in grams. Syn., *Grammole; Mole; Mol.*

Gramnegative (*gram-neg'-at-iv*). Incapable of staining by Gram's method.

Grampositive (*gram-pos'-it-iv*). Capable of staining by Gram's method.

Granatonin (*gran-at'-on-in*) [*granatum*, the pomegranate]. Pseudopelletierin.

Grandiflorin (*gran-de-flor'-in*). An energetic poisonous alkaloid obtained from the fruit of *Solanum grandiflorum*, var. *pulverulentum*, Leutn., of Brazil.

Grando (*gran'-do*) [L., a hailstone; pl., *grandines*]. See *Chalaza* and *Chalazion* (Illus. Dict.). In the plural, large tubercles.

Granula (*gran'-u-lah*) [*granum*, a grain]. Altman's term for the granules or cytoblasts of protoplasm; the microsome of Hanstein.

Granulase (*gran'-u-lāz*) [*granum*, grain]. An enzyme found in cereals converting starch into achroodextrin and maltose.

Granulatio, Granulation. (See Illus. Dict.) **G.s, Bayle's,** miliary tubercles. **G.s, Bright's,** the granulations of granular nephritis. **G.s, Cerebral,** pacchionian bodies. **G.s, Erethistic, G.s, Erethitic,** an acestoma in which severe pain and hemorrhage are caused by slight irritation. **G., Exuberant, G., Fungous,** an acestoma secreting thin mucopurulent matter due to local edema or to excessive formative power. **G.s, Fibroid.** See *Milk-spots* (Illus. Dict.). **G.s, Gray,** miliary tubercles. **G.s, Virchow's,** granulations consisting principally of endymal cells and neuroglia fibers, commonly found in the walls of the ventricles of the brain in progressive general paralysis.

Granule. (See Illus. Dict.) **G.s, Alpha, G.s, Beta, G.s, Delta, G.s, Epsilon, G.s, Gamma.** See under *Color-analysis.* **G.s, Altmann's,** round bodies staining readily with carbolfuchsin, and regarded as cell-derivatives which have grown through the assimilation of fat. They are probably allied to Russell's bodies. **G.s, Bettelheim's.** See *Hemokonia.* **G.s, Chromophil.** See *Bodies, Nissl's.* **G.s, Claude Bernard's,** the granules in the secreting cells of the pancreas. **G.s, Edematin,** the microsomes forming the mass of the nuclear sap. They have been identified with the "cyanophilous granules" of the nucleus. **G.s, Interstitial,** occur in the sarcoplasm of striated muscle-fibers; they consist of fat and probably also of lecithin. **G.s, Leukocyte-,** the amphophil, basophil, eosinophil, neutrophil, or oxyphil bodies observed in leukocytes. Cf. *Color-analysis: Bioblast.* **G.s, Lymph,** lymph-corpuscles. **G.s, Malpighi's,** malpighian corpuscles. **G.s, Neusser's,** basophilic granules sometimes found in the leukocytes of the blood, near the nuclei. They are regarded by Neusser as being closely connected with the uric acid diathesis, but their presence has been noted also in other conditions. **G.s, Nissl's.** See *Bodies, Nissl's.* **G.s, Osseous,** very small granules of inorganic matter which are found in the matrix of bone. **G.s, Schultze's.** See under *Schultze* (Illus. Dict.). **G.s, Vitelline, G.s, Yolk.** See *Spheres, Vitelline* (Illus. Dict.). **G.s, Zimmermann's.** Synonym of *Bizzozero's Blood-plates.* **G.s, Zymogen, G.s, Zymogenous,** certain granules in the pancreatic cells supposed to give origin to the pancreatic ferments.

Granulia. (See Illus. Dict.) **G., Pharyngolaryngeal** (of Isambert). See *Disease, Isambert's.*

Granuliform (*gran-u'-le-form*) [*granulum*, a little grain; *forma*, form]. Resembling small grains.

Granulobacillus (*gran-u-lo-bas-il'-us*). See under *Bacteria, Synonymatic Table of* (Illus. Dict.).

Granulofatty (*gran-u-lo-fat'-e*). Applied to cells in tissue undergoing fatty degeneration, which contain granules of fat. Syn., *Granuloadipose.*

Granuloma. (See Illus. Dict.) **G. annulare,** H. R. Crocker's name for a peculiar disease midway between an inflammation and a neoplasm, characterized by the formation of pale-red or violaceous red nodules on the wrists, backs of the hands, and neck, which develop slowly and form circles by confluence. The lesions are firm; the mucous layer enormously thickened. **G. trichophyticum,** granuloma due to *Trichophyton.* **G. tropicum,** frambesia.

Granuloplasm (*gran'-u-lo-plasm*) [*granulum*, a small grain; *plasma*, something formed]. The granular protoplasmic mass in the inner part of a cell.

Grape-fruit. The fruit of *Citrus decumana*, L., a tree of the East Indies, but cultivated in Asia Minor, Europe, and America. Syn., *Pomelo; Popelmus.*

Graphic (*graf'-ik*) [γράφειν, to write]. Relating to writing or recording, or to the process of making automatic tracings of phenomena, showing degree, rhythm, etc.

Graphomotor (*graf-o-mo'-tor*) [γράφειν, to write; *movere*, to move]. Relating to graphic movements.

Graphorrhea (*graf-or-e'-ah*) [γράφειν, to write; ῥέος, anything flowing]. A flow of written words; an intermittent condition in certain forms of insanity marked by an uncontrollable desire to cover pages with usually unconnected and meaningless words.

Graphoscope (*graf'-o-skōp*) [γράφειν, to write; σκοπεῖν, to view]. A convex lens devised for the treatment of asthenopia and progressive myopia.

Gratiosolin (*gra-ti-os'-ol-in*). $C_{46}H_{84}O_{25}$ (?). A glucosid isolated from *Gratiola officinalis*, occurring as a reddish-yellow mass, which splits by action of dilute acids or alkalis into sugar and gratiosoletin ($C_{40}H_{34}O_{17}$). Drastic properties are attributed to it.

Gravative (*grav'-ah-tiv*) [*gravis*, heavy]. Attended by a sense of weight; said of the pressure-pains of tumors.

Grave. (See Illus. Dict.) 2. Serious, severe, dangerous.

Gravidocardiac (*grav-id-o-kar'-de-ak*) [*gravid; cardiac*]. Relating to cardiac disorders due to pregnancy.

Gravimetric (*grav-im-et'-rik*). Determined by weight. **G. Analysis.** See *Analysis.*

Gravistatic (*grav-is-tat'-ik*) [*gravis*, heavy; στατική, the art of weighing]. Due to gravitation; applied to a form of congestion.

Green. (See Illus. Dict.) **G.-stain,** fungoid deposits upon the enamel surfaces of the teeth, generally at their cervicolabial portions.

Greenheartin (*grēn-hart'-in*). $C_{30}H_{26}O_6$. A yellow coloring-matter isolated by de Urij from *Nectandra rodiæsi*, Hook, the greenheart tree of Dutch Guiana.

Grèhant's Method for determining urea in blood and tissues. It makes use of a solution of mercury, 1 gm. in 10 c.c. of pure nitric acid, for decomposing the urea; the CO_2 and N are liberated, enabling one to estimate the urea.

Gripe. (See Illus. Dict.) **G., Cutting on the.** See under *Cystotomy.* **G.s, Dry.** See *Colic, Metallic.* **G.-stick,** a tourniquet. **G.s, Watery,** cholera infantum.

Grippotoxin (*grip-o-toks'-in*). A name for the toxin elaborated by *Bacillus influenzæ.*

Groin. (See Illus. Dict.) **G., Green.** See *Appendix, Gangrenous.*

Groove. (See Illus. Dict.) **G., Alveolingual,** one between the tongue and the lower jaw. **G., Anal,** a depression in the embryo indicating the anus. **G., Anterolateral.** See *Fissure, Anterior Lateral* (Illus. Dict.). **G., Basilar** (of the occipital bone), one on the internal aspect of the basilar process sloping up-

ward and forward. **G., Blessig's,** the slight groove in the embryonic eye that marks off the fundus of the optic cup from the zone that surrounds the periphery of the lens and corresponds in position with the future ora serrata. **G., Carotid.** See *G., Cavernous* (Illus. Dict.). **G.s, Developmental,** fine depressed lines in the enamel of teeth which mark the junction of the primitive lobes. **G., Dorsal,** the medullary groove. **G., Harrison's.** See under *Harrison* (Illus. Dict.). **G., Interventricular.** See under *Furrow* (Illus. Dict.). **G., Mastoid,** the digastric fossa. **G., Mesiolingual,** a developmental groove extending over the juncture of the fifth cusp, on upper molars. **G., Musculospiral,** one on the external aspect of the humerus which lodges the musculospiral nerve and the superior profunda vessels. **G., Nasal.** (See Illus. Dict.) 2. A furrow in the embryo leading from the mouth to the nasal cavities. **G., Nephric,** one in the embryo indicating the future nephric canal or segmental duct. **G., Neural,** the medullary groove. **G., Obturator,** the furrow at the superior and external border of the obturator foramen lodging the subpubic vessels and nerves when they emerge from the pelvic cavity. **G., Olfactory.** See *Olfactory Sulcus* (Illus. Dict.). **G., Peroneal,** one on the external aspect of the os calcis lodging the tendon of the peroneus longus. **G., Posterolateral.** See *Fissure, Posterolateral* (Illus. Dict.). **G., Primitive.** See *Primitive Streak* (Illus. Dict.). **G., Pterygopalatal, G., Pterygopalatine.** 1. One in the ventral aspect of the pterygoid process of the sphenoid. 2. A furrow on the vertical part of the palate bone. **G., Radial.** See *G., Musculospiral.* **G., Scapular,** the scapular notch. **G., Schmorl's,** that resulting from emphysematous inflation of those portions of the lungs which lie between the ribs. **G., Sibson's,** a groove formed in some individuals by a prominence of the lower border of the pectoralis major. **G., Sigmoid.** See *G., Cavernous* (Illus. Dict.). **G., Spiral** (of the humerus). See *G., Musculospiral.* **G., Sternal,** one lying between the sternum and the pectoral muscles. **G., Subcostal,** a deep furrow lying along the lower border and inner surface of a rib for lodgment of the intercostal vessels and nerves. **G. of Sylvius,** the sylvian fissure. **G., Ventricular.** See *Furrow, Interventricular* (Illus. Dict.). **G., Verga's Lacrimal,** a more or less pronounced groove extending downward from the lower orifice of the nasal duct.

Ground. (See Illus. Dict.) **G.-bundle,** the principal bundle of nerve-fibers in a group, as the ground-bundle of the ventral and lateral columns of the spinal cord. **G.-b., Anterior, of Flechsig,** that portion of the anterior columns outside of the direct pyramidal tracts and running throughout the entire length of the cord; they are made up of fibers having a short course. **G.-b., Posterior, of Flechsig,** Burdach's column. **G.-itch.** See *Itch, Coolie.* **G.-water Theory.** See under *Pettenkofer.*

Gruber's Test for hearing: If the end of the finger be inserted into the ear after the sound of a vibrating tuning-fork held before the ear has completely ceased, and the tuning-fork be then firmly placed upon the finger, a weakened sound becomes again audible and remains so for some time.

Gryochrome (*gri'-o-krom*) [γρῦ, a morsel; χρῶμα, color]. Nissl's term for a somatochrome nerve-cell the stainable portion of which consists of minute granules which tend to form threads or heaps.

Guacamphol (*gwah-kam'-fol*). See *Guaiacamphol.*

Guacetin (*gwas'-et-in*). See *Guaiacetin.*

Guachamacin (*gwah-shaw-mah'-kin*). A toxic alkaloid isolated by Schiffer from guachamaca. It is closely allied to, if not identical with, curare.

Guaconization (*gwah-kon-i-za'-shun*). Poisoning and paralysis of the sensory nerve-centers from ingestion of guaco, *Aristolochia cymbifera,* Mart.

Guæthol (*gu-eth'-ol*). $C_6H_4OC_2H_5OH$. Guaiacol-ethyl, an oily homolog of guaiacol, soluble in alcohol, ether, or chloroform, insoluble in water or glycerin. It resembles guaiacol in therapeutic action. Dose, 0.1–0.25 gm. Application, 15% ointment. Syn., *Ajacol; Thanatol; Pyrocatechinmonoethyl ether.*

Guaiacamphol (*gwi-ah-kam'-fol*). The camphoric acid ester of guaiacol; employed in treatment of night-sweats of tuberculosis. Dose, 3–8 gr. (0.2–0.5 gm.).

Guaiacene (*gwi'-as-ēn*). C_5H_8O. An oily crystallizable liquid boiling at 118° C., with odor of bitter almonds, obtained by Deville (1843) from guaiac resin by dry distillation. Syn., *Tiglic aldehyd; Guajacen; Guajol.*

Guaiacetin (*gwi-as'-et-in*). $C_6H_4.OH.OCH_2COOH$. Pyrocatechin monoacetate; a white, odorless powder or crystals soluble in water, melting at 131° C.; obtained from pyrocatechin by action of chloracetic acid. It is used like guaiacol in tuberculosis. Dose, 7½ gr. (0.5 gm.) 3 times daily and reduced in 3 weeks to 0.5 gm. daily.

Guaiacocain (*gwi-ah-ko-ka'-in*). An anesthetic mixture of cocain and guaiacol used in dentistry.

Guaiacol. (See Illus. Dict.) Syn., *Methylcatechol.* **G. Benzoate.** See *Benzosol* (Illus. Dict.). **G.-benzylester,** $C_6H_4(OCH_3).OCH_2.C_6H_5$, occurring in colorless crystals soluble in alcohol and ether; it is used as a local anesthetic. Syn., *Brenzcain; Pyrocatechin methyl benzyl ether.* **G. Biniodid,** $C_7H_5I_2O_2$, reddish-brown powder with odor of iodin, soluble in alcohol and oils; it is alterative and antituberculous. Dose, 2 ♏ (0.12 c.c.) 3 times daily. **G. Cacodylate,** a stable preparation occurring in white granules recommended in tuberculosis. Dose, ½–2 gr. (0.032–0.13 gm.). Syn., *Cacodiacol; Cacodyliacol.* **G., Camphoric Acid Ester of.** See *Guaiacamphol.* **G. Carbonate,** $C_{15}O_5H_{14}$, odorless, tasteless crystals, used in tuberculosis. Dose, 3–8 gr. (0.2–0.52 gm.) 3 times daily and gradually increased to 90 gr. (6 gm.) daily. Syn., *Duotal.* **G. Cinnamate.** See *Styracol* (Illus. Dict.). **G. Ethylenate,** $CH_3O.C_6H_4O-C_2H_4-O.-C_6H_4OCH_3$, a guaiacol ethylene ester, forming yellow needles slowly soluble in water. It is used in tuberculosis. Dose, 8–15 gr. (0.5–1 gm.) twice daily. Syn., *Ethylene-guaiacol.* **G.-methylene, Acetylized.** See *Eugoform.* **G. Oleate,** a reaction-product of oleic acid, guaiacol, and phosphorus trichlorid, miscible with fatty oils, ether, benzene, or chloroform; soluble in alcohol. It is antiseptic and antituberculous. Dose, 5–10 ♏ (0.3–0.6 c.c.) 3 times daily in capsules. Syn., *Oleoguaiacol.* **G.-phosphal, G. Phosphite,** P. $(C_6-C_4.OCH_3-O)_3$, occurring in white needles melting at 77.5° C. It is used in tuberculosis. Dose, 15–30 gr. (1.0–2.0 gm.) daily. **G. Phosphate,** $(C_6H_4OCH_3)_3PO_5$, obtained from guaiacol dissolved in soda solution with addition of phosphorus oxychlorid, occurring in colorless, hard tablets, soluble in toluene and acetone, melting at 98° C. Used in fever of tuberculosis. Dose, 4 gr. (0.25 gm.) every 3 or 4 hours. **G. Salicylate, G.-salol,** $C_{14}H_{12}O_4$, white insipid crystals with odor of salol, soluble in alcohol, and melting at about 65° C. It is an intestinal antiseptic and is employed in phthisis, dysentery, rheumatism, etc. Dose, 15 gr. several times daily. Max. dose, 150 gr. per day. **G. Succinate,** $(C_6H_4OCH_3)_2C_4H_4O_4$, obtained from a mixture of guaiacol and succinic acid with phosphorus oxychlorid; fine needles soluble in acetone and toluene, melting at 136° C. Dose, 2 ♏ (0.12 c.c.) 3 times daily in tuberculosis. **G. Valerate, G. Valerianate,**

an oily yellowish liquid of specific gravity 1.037, boiling-point 245°–265° C.; used in pulmonary affections and for hypodermic injection in tuberculous joints. Dose, 0.2–0.6 gm. 3 times daily. Syn., *Geosote.*

Guaiacolate (*gwi-ak'-ol-āt*). A combination of guaiacol with a base.

Guaiacyl (*gwi'-ak-il*). $C_7H_7O_2SO_3$. The calcium salt of a sulfo-compound of guaiacol; a grayish-purple powder soluble in alcohol and in water. It is used as a local anesthetic injected in quantities of 0.5–1.5 gm. of a 5% solution or 1 gm. of a 10% solution.

Guaiamar (*gwi'-am-ar*). $C_6H_4.(OCH_3)(O.CH_2)C\text{-}HOH.CH_2OH$. A white powder soluble in alcohol, glycerin, ether, or water. It is employed in tuberculosis and as an intestinal antiseptic. Dose, 5–20 gr. (0.33–1.33 gm.) before meals. It is also applied in arthritis.

Guaiaperol (*gwi-ap'-er-ol*). See *Piperidin guaiacolate.*

Guaiaquin (*gwi'-ah-kwin*). $(C_6H_4O_2CH_3HSO_3)_2C_{20}H_{24}N_2O_2$, the guaiacol bisulfonate of quinin; a yellow, odorless powder, with an acid, bitter taste, soluble in water, alcohol, or acids. It is used in malaria, typhoid fever, anemia, etc. Dose, 5–10 gr. (0.333-0.65 gm.) 3 times daily. Syn., *Quinin guaiacol bisulfonate.*

Guaiaquinol (*gwi-ah'-kwin-ol*). Quinin dibromoguaiacolate.

Guaiasanol (*gwi-as'-an-ol*). See *Diethyl-glycocoll-guaiacol Hydrochlorate.*

Guaiol, Guajol (*gwi'-ol, gwa'-jol*). See *Guaiacene.*

Guanidin (*gwan'-id-in*). CN_3H_5. Carbondiamidimid; a monacid base forming colorless crystals.

Guarea (*gwah-re'-ah*) [*guara*, the Cuban name]. A genus of tropic American trees and shrubs of the order *Meliaceæ.* **G. trichilioides,** L., a West Indian species; the bark has drastic and abortifacient properties. **G. tuberculata,** Vell, a species indigenous to Brazil; the bark is anthelmintic, abortifacient, and antiarthritic.

Guarinan. (See Illus. Dict.) **G. Triiodid,** dull black crystals; diuretic and alterative. Dose, 2–4 gr. (0.13–0.26 gm.).

Guarnieri's Vaccine-bodies. See *Cytoryctes.*

Guavacin (*gwah'-vas-in*). $C_6H_9NO_2$. An alkaloid forming colorless crystals soluble in water, obtained from areca nut, *Areca catechu,* L. It is used as an anthelmintic.

Gubernaculum (*gu-ber-nak'-u-lum*) [L., a rudder]. A guiding structure. **G. dentis,** a bundle of fibrous tissue connecting the tooth-sac of a permanent tooth with the gum. **G., Hunter's, G. Hunteri.** See *G. testis* (Illus. Dict.).

Gujasanol (*gu-jas'-an-ol*). See *Diethyl-glycocoll-guaiacol-hydrochlorate.*

Gum. (See Illus. Dict.) 2. See *Gingiva.* **G.-acacia,** gum arabic. See under *Acacia* (Illus. Dict.). **G.-acajou, G.-accajou,** gum from the stems of *Anacardium humile,* St. Hil., *A. nanum,* St. Hil., and *A. occidentale,* L. **G.-acaroides, G.-acroides.** See *Acaroid Gum* (Illus. Dict.). **G.-adragant,** tragacanth. **G., African,** varieties of gum arabic brought from Africa. **G.-alk,** a gum-resin from *Pistacia terebinthus.* **G., Alsace,** dextrin. **G.-ambra, G.-amra,** that from *Spondias mangifera,* Willd. **G., Amrad, G., Babool.** See *Babul G.* (Illus. Dict.). **G. angico,** dark-amber or dark-brown glossy tears from *Piptadenia rigida,* a Brazilian tree. **G., Artificial,** dextrin. **G., Australian,** a variety of gum arabic obtained from *Acacia decurrens,* Willd., *A. homatophylla,* A. Cunn., *A. pycnantha,* Benth. **G., Balato.** See *Balata* (Illus. Dict.). **G., Bauhinia,** that yielded by *Bauhinia lingua,* D. C., *B. retusa,* Roxb., *B. vahlii,* W. et A., and *B. variegata,* L. **G., Blackboy.** See *Acaroid Resin* (Illus. Dict.). **G., Botany-Bay.** 1. See under *Acaroid* (Illus. Dict.). 2. Australian kino. **G., British,** dextrin. **G., Brittle,** a variety of gum arabic furnished by *Acacia albida,* Del., of Senegambia, irregular or vermicular pieces of various colors forming a hygroscopic paste. Syn., *Salabreda.* **G., Bully-tree.** See *Balata* (Illus. Dict.). **G., Caji,** a gum from Mexico very rich in bassorin, produced by *Acacia micrantha,* Benth. **G., Cape,** a glassy hard exudate from *Acacia horrida,* Willd., and a soft variety said to be obtained from *A. giraffæ,* Willd., imported from the Cape of Good Hope. **G., Caramania,** a gum similar to or identical with Bassora gum, used to adulterate tragacanth. **G., Cattimandoo.** See *Cattimandu* (Illus. Dict.). **G., Chagual,** that furnished by *Puya lanata,* Schult., and *Puya chilensis,* Mol. **G., Cistus.** See *Ladanum* (Illus. Dict.). **G., Cowri.** See *Cowdie G.* (Illus. Dict.). **G., Cuteera,** Bassora gum. **G., Doctor, G., Doctor's,** a drastic and emetic resin from a West Indian plant, *Rhus metopium,* L., recommended in jaundice, syphilis, etc. Syn., *Hog-resin.* **G., Dragon.** 1. See *Dragon's-blood* (3) (Illus. Dict.). 2. Tragacanth. **G., East Indian, G., Elephantine, G., Feronia,** that yielded by *Feronia elephantum,* Carr. **G.s, Ester,** a class of derivatives of colophony; the glyceryl, methyl, and ethyl esters of abietic acid, prepared by saponifying under pressure the resin acid and alcohol and distilling. **G., Floated, G., Flooded, G., Flooted,** names applied in Australia to different species of *Eucalyptus.* **G., Galam,** a variety of Senegal gum gathered from Galam and other towns of that region. **G., Gedda,** an inferior variety of gum arabic yielded by *Acacia gummifera,* Willd., and obtained from Jidda, Arabia. **G., Ghatti,** a gum occurring abundantly in *Anogeissus latifolia,* Wall. It furnishes a very adhesive mucilage. **G. Gluten,** gluten of wheat prepared as a dietetic. **G., Grasstree.** See *Acaroid Resin* (Illus. Dict.). **G., Hog-.** 1. See *G., Doctor's.* 2. The resin from *Moronobea grandiflora,* Choisy, which is used as Burgundy pitch for plasters. **G.-hogg,** a variety of Bassora gum. Syn., *Hog-gum.* **G., Indigenous,** the exudate from cherry trees. **G., Ivy,** a gum-resin exuding from old trunks of *Hedera helix,* formerly used as a stimulant and emmenagog and to relieve toothache. **G., Jidda, G., Jiddah.** See *G., Gedda.* **G., Kauri.** See *Dammar, Australian.* **G., Kordofan,** the finest variety of gum arabic. It is collected west of the White Nile in Africa. **G., Kuteera, G., Kutera, G., Kutika.** 1. See *Bassora G.* (Illus. Dict.). 2. A gum produced by *Cochlospermum gossypium,* D. C. 3. A gum similar to tragacanth from *Sterculia urens,* Roxb. **G., Lecca, G., Lucca,** the resin from the olive tree. **G., Maguey,** an exudate from the leaves of *Agave americana,* L. **G., Mineral,** a solution of aluminium phosphate in sulfuric or phosphoric acid. **G., Mogador, G., Morocco.** See *Barbary G.* (Illus. Dict.). **G., Orenburg,** a true reddish gum which exudes from the green stems of the larch, *Larix europæa,* D. C., when burned. **G., Para.** See *G. angico.* **G., Pinnary,** a tacamahac from *Calophyllum inophyllum,* L. **G., Red.** See under *Red* and *Strophulus* (Illus. Dict.). **G.-resin.** See under *Resin* (Illus. Dict.). **G., Salabreda.** See *G., Brittle.* **G., Senegal, G., Sennaar, G., Sennari,** the gum produced by *Acacia senegal,* Willd., and other species growing in the region of the Senegal River. **G., Seraphic.** See *Sagapenum* (Illus. Dict.). **G., Sonora,** an exudate from *Larrea mexicana* (*q. v.*). **G., Spongy,** interstitial infiltration and thickening of the gums with dilation of the capillaries due to scurvy or analogous conditions. **G.,**

Suakim, that yielded by *Acacia stenocarpa*, Hochst. **G., Succory**, the milky juice of *Chondrilla juncea*, L. It is used in menstrual disorders. **G., Talba, G., Talca, G., Talea, G., Talha, G., Talka.** See *G., Suakim.* **G.-tuno.** See *Balata* (Illus. Dict.). **G., Universal**, a patented product derived from potato starch. **G., Wasting of.** See *Ulatrophia* (Illus. Dict.). **G.s, Wattle**, in Australia the name for all true gums obtained from the different species of *Acacia*. **G.-zaharbad**, in India a vernacular name for trypanosomiasis.

Gumma. (See Illus. Dict.) **G. gallicum, G., Syphilitic, G. syphiliticum**, syphiloma.

Gummate (*gum'-āt*). A salt of gummic acid.

Gummide (*gum'-id*). Any compound which yields glucose on decomposition with acids or alkalis.

Gummosis. (See Illus. Dict.) 2. A contagious disease of fruit trees marked by cracks in the barks, in which gummy exudates form. It is also applied to a disease of sugar beets described by Sorauer, thought to be due to *Bacillus betæ*.

Gummy (*gum'-e*). 1. Gummatous. 2. Resembling gum.

Gunjah (*gun'-jah*). The officinal part of the Indian hemp consisting of the dried flowering-tops of the female plant, from which the resin has not been removed.

Gunther's Method. See under *Stains*.

Gut. (See Illus. Dict.) **G., Blind**, the cecum. **G., Bum**, the rectum. **G., Fore-**, the prosogaster. See *Foregut* (Illus. Dict.). **G., Hind-, G., Hinder.** See *Hindgut* (Illus. Dict.). **G.-larva**, gastrula. **G., Mid-.** See *Mesogaster* (Illus. Dict.). **G., Postanal, G., Subcaudal, G., Tail**, the prolongation of the embryonic alimentary canal into the tail for some distance beyond the anus; it atrophies early and is more pronounced in the lower vertebrates. **G.-tie**, volvulus.

Gutta. (See Illus. Dict.) 3. $C_{20}H_{32}$ or C_5H_8 (Oudemans). The essential element of gutta-percha; it melts at 130° C. Cf. *Alban, Fluavil.* **G. cadens**, Laënnec's term for the cause of metallic tinkling; he believed the sound to be produced by the dropping of liquid from the upper into the lower part of the pleural space when it contains air as well as pus.

Guttan (*gut'-an*). One of the constituents of gutta-percha.

Guttiferous (*gut-if'-ur-us*) [*gutta*, a drop; *ferre*, to bear]. Gummiferous; yielding gum.

Guttiform (*gut'-e-form*) [*gutta*, a drop; *forma*, form]. Drop-shaped.

Gymnasiarch (*jim-na'-si-ark*) [γυμνάσιαρχης]. The chief physician or director of the gymnasium of ancient Greece; a high degree of skill was a requisite; one of the most celebrated was Herodicus.

Gymnast (*jim'-nast*) [γυμναστής]. A subordinate physician or subdirector of the gymnasium of ancient Greece. He directed the pharmaceutic treatment of the sick. Cf. *Iatroliptes; Gymnasiarch.*

Gymnastics. (See Illus. Dict.) **G., Antagonistic, G., Resistance-**, physical exercise engaged in by two persons, the one resisting the other, as that adopted in the Schott treatment for cardiac affections.

Gymnobacteria (*jim-no-bak-te'-re-ah*) [γυμνός, naked; *Bacterium*]. Nonflagellate bacteria.

Gymnoblast (*jim'-no-blast*). See *Gymocyta* (Illus. Dict.).

Gymnoplast (*jim'-no-plast*) [γυμνός, naked; πλάσσειν, to form]. A protoplasmic body without a limiting membrane.

Gynanthropus (*jin-an'-thro-pus*) [γυνή, a woman; ἄνθρωπος, a man]. A hermaphrodite with predominant male characteristics.

Gynecophonus, Gynæcophonus (*jin-e-kof'-on-us*) [γυνή, a woman; φόνος, murder]. 1. Destructive to women. 2. [γυνή, woman; φωνή, the voice.] Having a voice like a woman. 3. A man with an effeminate voice.

Gynocardate (*jin-o-kar'-dāt*). A salt of gynocardic acid.

Gynocardia (*jin-o-kar'-de-ah*) [γυνή, a woman; καρδία, heart]. A genus of trees of the order *Bixineæ*. **G. odorata**, R. Br., a species indigenous to India, yields chaulmoogra oil.

Gynocyanauridzarin (*jin-o-si-an-ah-rid'-za-rin*). $(C_9H_{21}O_7)_2KCNOAu_3$. Unstable, greenish-yellow needles, soluble in cinnamic acid and slightly in oils. It is used in leprosy, tertiary syphilis, tuberculosis, psoriasis, etc. Dose, $\frac{1}{3200}$–$\frac{1}{325}$ gr. (0.03–0.2 mg.) 3 times daily.

Gyroma (*ji-ro'-mah*) [*gyrus*, a circle; pl., *gyromas, gyromata*]. A variety of myoma of the ovary in which the fibrous tissue presents a wavy appearance; it is ascribed to degenerative changes in the fibrous tissue surrounding old contracting corpora lutea.

Gyromele (*ji'-rom-el*) [γῦρος, a circle; μέλη, a kind of cup]. Of Türck, a stomach-tube or probe with a rotating center, which can be fitted with various attachments and used in estimating the size of the stomach, cleansing, massage of the walls, securing cultures, etc.

Gyrus. (See Illus. Dict.) **G., Cerebellar.** See *Folium* (2) (Illus. Dict.). **G. cinguli**, the fornicate gyrus. **G., Ecker's.** See *Convolution, Descending* (Illus. Dict.). **G. limbicus**, a tract of fibers which arises from that part of the marginal gyrus that is not inrolled to form the horn of Ammon. **G., Presylvian**, the transverse occipital gyrus ventrad of the fissure of Sylvius. **Gyri, Primary**, embryonic cerebral areas bounded by primary fissures. **Gyri, Primitive**, a succession of cerebral convolutions distinctly defined in the *Carnivora*, arranged concentrically around the fissure of Sylvius. Vestiges of these may be seen in the callosal, frontal, and temporal gyri of the human brain. **G. profundus.** See *Vadum* (Illus. Dict.). **G., Transitive.** See *Gyral Isthmus* (Illus. Dict.).

H

Habenula. (See Illus. Dict.) **H. denticulata.** See *Huschke, Auditory Teeth of* (Illus. Dict.). **H., Haller's,** the slender cord formed by the obliteration of the canal which during early life connects the cavity of the peritoneum with that of the tunica vaginalis. Syn., *Cloquet's ligament.*

Hæmaphysalis (*he-ma-fiz'-al-is*) [αἷμα, blood; φυσαλίς, a bladder]. A genus of ticks. **H. Leachi,** the common dog tick of South Africa, transmits blood-parasites causing malignant jaundice.

Haffkine's Method. See under *Immunization.* **H.'s Prophylactic, H.'s Serum** or **Virus.** See under *Serum.*

Haffkinin (*haf'-kin-in*). Haffkine's plague serum. See *Serum.*

Hagey-cure. See under *Cure.*

Hair. (See Illus. Dict.) **H.-ball.** See *Ægagropilus* (Illus. Dict.). **H.-cup,** the depression at the exit of the hairs of the body. **H., Unna's Papillary,** a complete hair and hair-follicle.

Halichthyotoxin (*hal-ik-thi-o-toks'-in*) [ἅλς, sea; ἰχθύς, fish; τοξικόν, poison]. A poisonous alkaloid isolated from stale sturgeon.

Halichthyotoxism (*hal-ik-thi-o-toks'-izm*). Husemann's name for *Ichthyotoxism.*

Halimetry (*hal-im'-et-re*) [ἅλς, salt; μέτρον, a measure]. The process of determining the quantity of salts in a mixture.

Haliplankton (*hal-e-plank'-ton*) [ἁλς, the sea; πλαγκτός, wandering]. In biology the totality of the swimming and floating population of the ocean as opposed to the fresh-water limnoplankton. See *Plankton.*

Hallucal. (See Illus. Dict.) **H. Pattern,** the conspicuous pattern of markings upon the thenar region of the great toe.

Hallucination. (See Illus. Dict.) 2. Any supposed sensory impression which has no objective counterpart within the field of vision, hearing, etc. [Myers.] **H., Delusive, H., Falsidical,** one for which there is no corresponding real event. **H.s, Maury's,** the illusions of the intermediate state between sleeping and waking or in that analogous condition of half-consciousness, as in hysteria, mental confusion, etc. **H., Veridical,** one that corresponds to a real event happening elsewhere.

Hallucinatory (*hal-u'-sin-a-tor-e*). Affected with or having the character of a hallucination.

Halobios (*hal-o-bi'-os*) [ἅλς, the sea; βίος, life]. The totality of the marine flora and fauna in opposition to limnobios, the organic world of fresh water, and geobios, the totality of the terrestrial plant and animal world.

Halology (*hal-ol'-o-je*) [ἅλς, salt; λόγος, science]. The chemistry of salts.

Haloscope (*hal'-o-skōp*) [ἅλς, salt; σκοπεῖν, to examine]. An apparatus for determining the amount of salt in a solution.

Halteridium (*hal-tur-id'-e-um*) [ἁλτῆρες, weights held in the hand when leaping]. A genus of parasitic coccidia which infest the blood-discs of birds. See *Parasites, Table of Animal* (Illus. Dict.).

Hamiform (*ham'-e-form*). See *Hamose.*

Hamilton's Test. See under *Signs.*

Hammarsten's Theory of Blood-coagulation. See under *Blood.*

Hammer. (See Illus. Dict.) 2. An instrument for striking. **H., Mayor's,** one with rounded faces to produce counterirritation on the skin by application when heated. **H., Neef** or **Wagner,** an interrupter or circuit breaker employed with many induction coils. **H.-palsy, H.-spasm.** See under *Palsy.* **H., Percussion,** a plessor. **H.-percussion.** See under *Percussion.*

Hamose (*ham'-oz*) [*hamus*, a hook]. Hooked at the apex.

Handicraft-spasms. See *Fatigue Diseases* (Illus. Dict.).

Hapalonychia (*hap-al-o-nik'-e-ah*) [ἁπαλός, soft to the touch; ὄνυξ, nail]. A soft, uncornified condition of the nails.

Haptic (*hap'-tik*) [ἁπτός, subject to the sense of touch]. Pertaining to touch; tactile.

Haptine (*hap'-tēn*) [ἅπτειν, to bind]. In Ehrlich's lateral-chain theory, any thrown-off receptor.

Haptogen (*hap'-to-jen*) [ἅπτειν, to bind; γεννᾶν, to produce]. A pellicle forming around fatty matter when brought into contact with albumin. Syn., *Haptogenic membrane.*

Haptophil (*hap'-to-fil*) [ἅπτειν, to bind; φιλεῖν, to love]. In Ehrlich's side-chain theory applied to a receptor having an affinity for the haptophore of a toxin.

Haptophore (*hap'-to-fōr*) [ἅπτειν, to bind; φέρειν, to bear]. That complex of atoms of a toxic unit which unites it to the cell receptor.

Haptophoric, Haptophorous (*hap-tof'-or-ic, -us*). Combining; pertaining to haptophores. **H. Group.** See *Haptophore.*

Harderian (*har-de'-re-an*). Described by John Jacob Harder, a Swiss anatomist (1656–1711).

Harmattan (*har-mat'-an*). A local hot wind on the coast of Guinea which blows during December, January, and February, from the interior out to sea. It is said to cause cessation of endemic fevers. Cf. *Mistral, Sirocco, Simoon, Solano, Khamsin, Norther, Foehn.*

Harmel (*har'-mel*). Wild rue. See *Peganum harmala.*

Harmin (*har'-min*). $C_{13}H_{12}N_2O$. An alkaloid found by Fritsche (1847) in *Peganum harmala*, L., occurring in colorless prisms.

Harrowing (*har'-o-ing*). The action of teasing the fibers of a nerve or tearing them apart with any blunt instrument. It has been used in the treatment of sciatica. Fr. *Hersage.*

Hatching-cradle, Tarnier's. See *Incubator, Tarnier's* (Illus. Dict.).

Haversian (*hav-ur'-se-an*). Described by or named for Clopton Havers, an English anatomist who lived in 1691.

Hazelin (*ha'-zel-in*). A proprietary liquid said to be distilled from leaves and twigs of witch hazel, *Hamamelis virginica.* Dose, 1–5 gr. (0.06–0.32 gm.).

Head. (See Illus. Dict.) **H., Scald, H., Scalled,** any scabby disease of the scalp. **H., Swell,** actinomycosis.

Headache. (See Illus. Dict.) **H., Gunshot,** that arising from the concussion of gun-firing. It is said that a piece of India rubber held between the teeth prevents it. **H., Ocular,** pain in and about the head that results from organic disease in, or from impaired function of, any part of the visual apparatus.

Healer (*hēl'-er*) [ME., *helen*, to heal]. One who effects cures. **H., Natural,** one supposed to possess personal magnetism capable of overcoming disease.

Health. (See Illus. Dict.) **H., Bill of,** the official document issued by quarantine or other public health officers, which grants freedom from sanitary restraint.

French, *Pratique*. **H., Board of,** a public body having charge of the sanitation of a stated district.

Hearing. (See Illus. Dict.) **H., Abnormal.** See *Diplacusis*, *Hyperacusis*, *Paracusis* (Illus. Dict.). **H., Color, H., Colored.** See *Audition colorée* (Illus. Dict.). **H., Double,** diplacusis. **H., Exalted,** hyperacusis. **H., Eitelberg's Test.** If a large tuning-fork be held at intervals before the ear during 15 or 20 minutes, the duration of the perception of the vibration, during these periods, increases in case the ear is normal, but decreases when a lesion of the sound-conducting apparatus exists. See also *Gardiner-Brown's Test*, *Gruber's Test*, and also *Gellé's Experiment*, *Weber's Experiment* (Illus. Dict.). **H., False.** See *Pseudacusma* (Illus. Dict.).

Heart. (See Illus. Dict.) **H.s, Accessory** (of Hancock), organs in brachiopods described by Hancock as hearts, but regarded by Morse as in some way connected with the genitalia. **H., Bicycle,** cardiac disease due to excessive use of the bicycle. **H., Blocked,** a condition due to stoppage of some of the auricular contractions at the auriculoventricular boundary. **H., Body.** See *H., Left.* **H., Dicelious.** See *Cor biloculare* (Illus. Dict.). **H., Fibroid.** See under *Fibroid* (Illus. Dict.). **H., Hairy.** See *Cor villosum* (Illus. Dict.). **H., Hepatic,** cardiac disturbance secondary to some hepatic affection. **H., Icing,** Eichhorst's name for a heart the whole surface of which is covered with a dense, thick, marble-white tissue. **H., Irritable,** a peculiar cardiac excitability found to exist among soldiers in the field, marked by pain, palpitation, dyspnea, and rapid pulse; it has been ascribed to muscular exhaustion. **H., Left,** the left chambers of the heart. **H., Liftman's.** See *Disease*, *Elevator*. **H., Low,** Janeway's term signifying a low position of the heart due to anatomic conditions, not to disease. Syn., *Bathycardia*. **H., Luxus,** applied by the Germans to a condition in which a primary dilation of the heart is followed by hypertrophy of the left ventricle; often found in gourmands. **H., Peripheral,** a term applied to the muscular coat of the bloodvessels other than the heart. **H., Skin.** See *H., Peripheral*. **H., Systemic,** the left chambers of the heart which propel aerated blood. **H., Tobacco.** See under *Tobacco* (Illus. Dict.). **H., Tricelious, H., Trilocular, H., Tripartite, H., Univentricular,** a heart with only three cavities, two auricles and one ventricle; it is normal in the *Batrachia*. **H., Typhoid,** overdistention and laceration of the bloodvessels of the heart with atrophy of the muscle-fibers, due to typhoid fever. **H., Villous.** See *Cor villosum* (Illus. Dict.). **H.-water,** a disease of sheep and goats characterized by the appearance of large quantities of clear yellow fluid in the pericardial sac and also in the pleural and peritoneal cavities. It has not been thoroughly investigated, but it has all the characteristics of a specific disease. Its transmission and perpetuation are due to the bont-tick (*Amblyomma hebræum*).

Heautophonics (*he-ah-to-fon'-iks*). See *Autophony* (Illus. Dict.).

Hebephrenia. (See Illus. Dict.) **H. gravis** (Christison). Synonym of *Dement a præcox*.

Hebotomy (*heb-ot'-o-me*) [ἥβη, pubes; τέμνειν, to cut]. Van de Velde's operation of sawing the pelvis in cases of obstructed delivery.

Hecatomeral, Hecatomeric (*hek-at-om'-er-al, -ik*) [ἑκάτερον, each singly; μέρος, part]. Applied by v. Gehuchten to a neuron the processes of which divide into two parts, one going to each side of the spinal cord.

Heckel's Prasoide Tincture. A remedy for gout, consisting of globularin and globularetin in proportion of 15–17 cgm. per teaspoonful. Dose, 1–4 teaspoonfuls daily.

Hedonal (*hed'-on-al*). The ester of methyl propylcarbinol-carbamic acid; a colorless crystalline substance with taste of mint. Soluble in 50% alcohol. It is recommended as a safe hypnotic in the milder forms of insomnia. Dose, 20–45 gr. (1.33–2.9 gm.).

Hegar's Method of Diagnosing Fibroma. This consists in drawing downward the uterus with a volsellum while the finger is passed into the rectum and pressed against the tumor; if it is ovarian, it will be immovable; if uterine, there will be great resistance to drawing down the cervix.

Hegemony (*he-jem'-on-e*) [ἡγεμών, a leader]. The supremacy of one function over a number of others.

Hegovia (*he-go'-ve-ah*). A proprietary remedy for enuresis said to consist of salol, powdered snails, and lithium salicylate.

Heidenhain's Theory of the Origin of Lymph. See under *Lymph*.

Helcodermatosis (*hel-ko-dur-mat-o'-sis*) [ἕλκος, ulcer; δέρμα, skin]. Skin-disease with the formation of ulcers.

Helcosol (*hel'-ko-sol*). See *Bismuth Pyrogallate*.

Helenin. (See Illus. Dict.) Dose, $\frac{1}{6}$–$\frac{1}{3}$ gr. (0.011–0.022 gm.).

Heleophobia (*hel-e-o-fo'-be-ah*). See *Helophobia* (Illus. Dict.).

Helexin (*hel-eks'-in*). A glucosid, $C_{32}H_{54}O_{11}$, from *Hedera helix*.

Heliciform (*hel-is'-e-form*) [ἕλιξ, a spiral; *forma*, form]. Spiral; shaped like a snail's shell.

Helicina (*hel-is'-in-ah*). A mixture of snail mucus and sugar; a white powder soluble in water and used as a pectoral remedy. Syn., *Saccharated snail juice*.

Helicoidin (*hel-ik-oid'-in*). A substance, $C_{26}H_{34}O_{14}$, obtained with helicin from salicin by action of nitric acid.

Helicomonas (*hel-ik-o-mo'-nas*). See *Bacteria, Table of* (Illus. Dict.).

Helicoproteid (*hel-ik-o-pro'-te-id*). A phosphoglycoproteid obtained from the glands of the snail, *Helix pomatia*. It is converted by action of alkalis into a gummy, levorotatory carbohydrate called animal sinistrin.

Heliophilia (*he-le-of-il'-e-ah*) [ἥλιος, sun; φιλεῖν, to love]. Morbid affinity for the sunlight resulting in ecstacy and muscular contraction. Ger., *Sonnensucht*.

Heliophobe (*he'-le-o-fōb*) [ἥλιος, sun; φόβος, fear]. One who is morbidly sensitive to the effects of the sun's rays.

Heliosin (*he-le-o'-sin*). An antisyphilitic mixture of various inorganic salts with keratin.

Heliostat (*he'-le-o-stat*) [ἥλιος, sun; στατός, fixed]. A mirror moved by clockwork in such a manner as to reflect continuously the sun's rays in a fixed direction.

Heliotrope. (See Illus. Dict.) 2. A variety of quartz, of a dark-green color with dark-red spots, like drops of blood. Considered by the Aztecs to have the virtue of stopping nose-bleed.

Heliotropic (*he-le-ot'-rop-ik*) [ἥλιος, sun; τρέπειν, to turn]. Relating to the movements of protoplasm under the influence of light.

Helium (*he'-le-um*) [ἥλιος, sun]. A supposed element inferred by a bright line in the solar spectrum, but identified as a terrestrial body by Ramsay in 1895. It is a gaseous body, boiling below 264° C., which has resisted all attempts to liquefy it. It forms compounds with hydrogen, carburetted hydrogen, and nitrogen.

Helixin (*hel-iks'-in*). $C_{32}H_{54}O_{11}$ (Vernet). A crystalline substance obtained from *Hedera helix*, soluble in hot acetone, hot benzene, or in alcohol; melts at 233° C.

Hellebore, American or **Swamp.** *Veratrum viride*.

Helmholtz's Theory of Accommodation. See under *Accommodation.*

Helminthiasis. (See Illus. Dict.) **H. elastica,** elastic tumors of the axillæ and groins due to filaria.

Helminthism (*hel-minth'-izm*) [ἕλμινς, worm]. The existence of intestinal worms in the body.

Helminthogenesis (*hel-min-tho-jen'-e-sis*). See *Helminthiasis* (Illus. Dict.).

Helmitol (*hel'-mit-ol*). Hexamethylenetetramin anhydromethylene citrate. It is an analgesic and urinary antiseptic. Dose, 10–15 gr. (0.64–0.97 gm.) 3 times daily in a wineglass of water.

Helophilous (*hel-of'-il-us*) [ἕλος, a marsh; φυλεῖν, to love]. Inhabiting marshes.

Helotic (*hel-ot'-ik*) [ἧλος, a nail]. 1. Relating to corns. 2. A vesicant.

Helthin (*hel'-thin*). An acidulated solution of sodium parasulfanilate and of sodium or potassium amidonaphtol disulfonate. It is used as a test for nitrites in potable waters.

Hemachromatosis (*hem-ah-kro-mat-o'-sis*) [αἷμα, blood; χρῶμα, color]. General hematogenous pigmentation.

Hemacyte (*hem'-as-īt*). Synonym of *Blood-corpuscle.*

Hemafacient (*hem-ah-fa'-she-ent*) [αἷμα, blood; *facere,* to make]. An agent that increases the quantity and quality of the blood.

Hemagastric (*hem-ah-gas'-trik*) [αἷμα, blood; γαστήρ, stomach]. Relating to an accumulation of blood in the stomach. **H. Pestilence,** yellow fever.

Hemagglutinins (*hem-ag-glut'-tin-inz*) [αἷμα, blood; *agglutinin*]. Agglutinins which have the power to clump red blood-corpuscles. Syn., *Erythroagglutinins.*

Hemaglobic. See *Hemoglobic.*

Hemalaum (*hem-al-a'-um*). A stain for bone-tissue consisting of hematoxylin and alum.

Hemalbumin (*hem-al'-bu-min*) [αἷμα, blood; *albumin*]. 1. A predigested iron albuminate used in anemic conditions. Dose, 1 gm. several times daily. 2. A preparation of the salts and albuminoid constituents of the blood. 3. A preparation of iron containing hematin, hemaglobulin, serum albumin, paraglobulin, and inorganic constituents of the blood.

Hemameba, Hæmamœba. (See Illus. Dict.) **H. leukemiæ magna;** and **parva** (Löwit, 1900), bodies supposed to be of protozoan nature and specific causes of leukemia, shown by Türck to be artefacts resulting from the action of a basic dye upon the mast-cell granules.

Hemanalysis (*hem-an-al'-is-is*) [αἷμα, blood; *analysis*]. Analysis of the blood.

Hemangioendothelioma (*hem-an-je-o-en-do-the-li-o'-mah*) [αἷμα, blood; ἀγγεῖον, vessel; *endothelioma*]. Epithelial hyperplasia of the capillaries.

Hemangiosarcoma (*hem-an-je-o-sar-ko'-mah*) [αἷμα, blood; *angiosarcoma*]. A vascular sarcoma.

Hemanutrid (*hem-an-u'-trid*). A liquid preparation of hemoglobin, 70%; glycerin, 20%; brandy, 10%.

Hemapheism, Hæmaphæism (*hem-af'-e-izm*) [αἷμα, blood; φαίος, dusky]. The passage of reddish-amber colored urine, combined with hepatic disorder.

Hematalloscopy (*hem-at-al-os'-ko-pe*) [αἷμα, blood; ἄλλος, other; σκοπεῖν, to examine]. In medical jurisprudence the examination of the blood to distinguish one kind from another.

Hematein. (See Illus. Dict.) **H.-ammonium,** $C_{10}H_9O_5.NH_4 + 4H_2O$ (Hesse), a violet-black granular powder, purple in aqueous solution, brown-red in alcohol solution, used as a stain.

Hematherapy (*hem-ah-ther'-ap-e*) [αἷμα, blood; θεραπεία, therapy]. 1. The therapeutic use of prepared arterial blood of bullocks. 2. Treatment applied to diseases of the blood.

Hemathydrosis (*hem-at-hi'-dro-sis.*) See *Hematidrosis* (Illus. Dict.). 2. The so-called blood-sweat or cutaneous hemorrhage of horses caused by *Filaria hæmorrhagica,* Raillet.

Hematin. (See Illus. Dict.) **H.-albumin,** a fine brown-red, tasteless, odorless powder obtained by drying blood-fibrin. Dose, in anemia, 1–2 teaspoonfuls 3 times daily. **H., Reduced,** hemochromogen. **H., Vegetable,** aspergillin.

Hematocatharsis (*hem-at-o-kath-ar'-sis*) [αἷμα, blood; κάθαρσις, a cleansing]. The process of expelling toxic substances from the blood.

Hematocathartic (*hem-at o-kath-ar'-tik*). 1. Purifying the blood. 2. Any remedy that purifies the blood.

Hematocele. (See Illus. Dict.) **H., Parametric, H., Retrouterine.** See *H., Pelvic* (Illus. Dict.).

Hematochlorin (*hem-at-o-klo'-rin*) [αἷμα, blood; χλόρος, green]. An amorphous green pigment contained in the marginal zone of the placenta.

Hematocytolysis. See *Hemocytolysis* (Illus. Dict.).

Hematocytotripsis. See *Hemocytotripsis* (Illus. Dict.).

Hematogaster (*hem-at-o-gas'-tur*) [αἷμα, blood; γαστήρ, stomach]. Extravasation of blood into the stomach.

Hematogen (*hem-at'-o-jen*) [αἷμα, blood; γεννᾶν, to produce]. 1. A nucleoalbuminoid preparation of iron 0.3%. 2. Defibrinated blood with minute percentage of creasote, containing 0.5% of iron and mixed with glycerin and wine; it is used in anemia. Dose, 1–2 tablespoonfuls. 3. A yellowish powder containing 7% of iron or a liquid formed by adding ferric citrate and acetic acid to an alkaline solution of albumin. Dose of liquid, 1–4 teaspoonfuls. 4. A decomposition-product of vitellin.

Hematohiston (*hem-at-o-his'-ton*). See *Globin* (1) (Illus. Dict.).

Hematol (*hem'-at-ol*). A sterilized hemoglobin mixed with glycerin and brandy.

Hematologist (*hem-at-ol'-o-jist*) [αἷμα, blood; λόγος, science]. One who makes a special study of the blood and is skilled in the technic of blood-examinations.

Hematolymphangioma (*hem-at-o-limf-an-je-o'-mah*) [αἷμα, blood; *lympha,* lymph; ἀγγεῖον, a vessel]. A tumor involving bloodvessels and lymph-vessels.

Hematoma. (See Illus. Dict.) **H. neonatorum,** cephalhematoma. **H. pancreatitis et bursæ omentalis,** extravasation of blood and pancreatic juice in the bursa omentalis. **H. of the Uterus,** hematometra. **H.s, Valve-, of the Newborn,** those due to imperfect development leading to the formation of clefts; they are not produced by hemorrhage and have no relation whatever to the minute hemorrhages found beneath the pericardium and endocardium, in cases of death from suffocation. [Gaylord and Aschoff.]

Hematomyelopore (*hem-at-o-mi-e'-lo-por*) [αἷμα, blood; μυελός, marrow; πορός, pore]. A cavity in the substance of the myelon resulting from hemorrhage.

Hematopexin. See *Hemopexin.*

Hematopneumothorax (*hem-at-o-nu-mo-thor'-aks*). See *Pneumothorax* (Illus. Dict.).

Hematopostema (*hem-at-o-pos'-tem-ah*) [αἷμα, blood; ἀπόστημα, abscess]. An abscess containing an effusion of blood.

Hematospectroscopy (*hem-at-o-spek-tros'-ko-pe*) [αἷμα, blood; *spectrum,* an image; σκοπεῖν, to view]. The use of the hematospectroscope for determining the proportion of hemoglobin in the blood.

Hematostatic (*hem-at-o-stat'-ik*). See *Hemostatic* (Illus. Dict.).

Hematothermal (*hem-at-o-thur'-mal*) [αἷμα, blood; θέρμη, heat]. Warm-blooded.

Hematothoracic (*hem-at-o-thor-as'-ik*). Relating to hematothorax.

Hematotic (*hem-at-ot'-ik*). Relating to hematosis.

Hematotympanum (*hem-at-o-tim'-pan-um*) [*αἷμα*, blood; *τύμπανον*, drum]. Bloody exudation in the drum-cavity.

Hematozemia (*hem-at-o-ze'-me-ah*) [*αἷμα*, blood; *ζημία*, a loss]. A gradual or periodic discharge of blood.

Hematozymosis (*hem-at-o-zi-mo'-sis*) [*αἷμα*, blood; *ζύμωσις*, fermentation]. Fermentation of the blood.

Hematropin (*hem-at'-ro-pin*). Phenylglycolyltropein; a fluid preparation of hemoglobin.

Hematuria. (See Illus. Dict.) Syn., *Mictio cruenta; Mictus cruentus.* **H. ægyptica.** See *H., Endemic.* **H., Chylous,** hematochyluria. **H., Endemic,** a form occurring in tropic countries due to parasites peculiar to the particular locality. **H., False,** the discharge of red urine due to the ingestion of food or drugs containing red pigments. **H., Hysteric, H., Nervous,** that due to nervous excitement.

Hemelytrometra (*hem-el-it-ro-me'-trah*) [*αἷμα*, blood; *ἔλυτρον*, a sheath; *μήτρα*, womb]. An accumulation of blood in the uterus and vagina. **H. lateralis,** a collection of menstrual blood in the rudimentary half of a double vagina.

Hemeropathia (*hem-ur-o-path'-e-ah*) [*ἡμέρα*, day; *πάθος*, disease]. 1. Any disease lasting but one day. 2. A disease that is more severe during the day.

Hemiacephalia (*hem-e-ah-sef-al'-e-ah*) [*ἡμι*, half; *a*, priv.; *κεφαλή*, head]. A monstrosity having a shapeless tumor representing the head, in which portions of the encephalon are contained. Syn., *Acephalia spuria; Hypacephalia.*

Hemiageusia (*hem-e-ah-gu'-se-ah*) [*ἡμι*, half; *a*, priv.; *γεῦσις*, taste]. One-sided loss or diminution of the sense of taste.

Hemiamaurosis (*hem-e-am-aw-ro'-sis*) [*ἡμι*, half; *ἀμαύρωσις, amaurosis*]. A form of transitory blindness in which hemiopia is combined with amblyopia in the other half of the visual field.

Hemiamblyopia (*hem-e-am-ble-o'-pe-ah*). See *Hemianopsia* (Illus. Dict.).

Hemianesthesia. (See Illus. Dict.) **H., Alternate,** that affecting one side of the head and the opposite side of the body. **H., Bulbar,** that due to disease of the oblongata. **H., Cerebral,** due to lesion in one of the cerebral hemispheres in the part of the capsula between the thalamus and dorsal part of the lenticula. **H., Crossed.** 1. That associated with motor paralysis of the opposite half of the body. 2. See *H., Alternate.* **H., Functional,** that due to functional causes rather than to cerebral or spinal lesion. **H., Hysteric,** tactile and thermal hemianesthesia coming on gradually or suddenly and of variable duration in hysteric subjects. **H., Organic,** due to lesion in the central nervous system. **H., Saturnine,** that due to lead-poisoning. **H., Türck's,** anesthesia affecting the functions of the posterior spinal roots of one side, at times also those of the nerves of special sense. It is caused by lesions of the posterior portion of the capsula and the contiguous region of the corona radiata.

Hemianopsia. (See Illus. Dict.) See *Sign, Wernicke's* (Illus. Dict.). **H., Equilateral.** See *H., Homonymous* (Illus. Dict.). **H., Lateral, H. lateralis,** a form in which the temporal half of one visual field and the nasal half of the other visual field are wanting; a vertical line through the center of vision sharply defining the defect. **H. temporaria, H., Temporary.** See *Teichopsia* (Illus. Dict.). **H., Vertical.** See *H., Lateral.*

Hemiarthrosis (*hem-e-ar-thro'-sis*) [*ἡμι*, half; *ἄρθρωσις*, a joining]. A false synchondrosis.

Hemiatonia (*hem-e-at-o'-ne-ah*) [*ἡμι*, half; *ἀτονία*, want of tone]. Diminution or loss of muscular or vital energy in one-half of the body. **H. apoplectica,** v. Bechterew's name for hemihypertonia postapoplectica.

Hemicellulose (*hem-e-sel'-u-lōs*) [*ἡμι*, half; *cellula*, a little cell]. A collective term for all the carbohydrates present in the cell-wall which are not colored blue by chlor-zinc-iodid.

Hemichromanopsia (*hem-e-kro-man-op'-se-ah*). See *Hemiachromatopsia* (Illus. Dict.).

Hemichromosome (*hem-e-kro'-mo-sōm*) [*ἡμι*, half; *chromosome*]. The body formed by the longitudinal splitting of the chromosome.

Hemicraniectomy (*hem-e-kra-ne-ek'-to-me*) [*ἡμι*, half; *craniectomy*]. Doyen's operation of sectioning the cranial vault near the mesial line, from before backward, and pressing the entire side outward to expose one-half of the brain.

Hemicranin (*hem-e-kra'-nin*). A proprietary remedy for neuralgia said to consist of phenacetin, 5 parts; caffein, 1 part; citric acid, 1 part. Dose, 5–15 gr.

Hemihypalgesia (*hem-e-hi-pal-je'-se-ah*) [*ἡμι*, half; *hypalgesia*]. Hypalgesia limited to one side of the body.

Hemihypertonia (*hem-e-hi-pur-to'-ne-ah*) [*ἡμι*, half; *hypertonia*]. Increased muscular tonicity confined to one-half of the body. **H. postapoplectica,** a name given by Spiller (1900) to an intermittent tonic spasm distributed over one-half of the body, affecting at times different groups of muscles without loss of power in the muscles affected. It follows an apoplectic attack. Cf. *Hypertonia postapoplectica.*

Hemihypogeusia (*hem-e-hi-po-gu'-se-ah*). See *Hemiageusia.*

Hemihypothermia (*hem-e-hi-po-thur'-me-ah*) [*ἡμι*, half; *ὑπό*, under; *θέρμη*, heat]. Diminution of the temperature limited to one side of the body.

Hemilytic (*hem-e-lit'-ik*) [*ἡμι*, half; *λύσις*, a loosing]. Relating to a condition of retarded change.

Hemiparanesthesia (*hem-e-par-an-es-the'-ze-ah*) [*ἡμι*, half; *paranesthesia*]. Paranesthesia limited to one side of the body and due to destructive lesion of the lateral half of the spinal cord.

Hemiplectic (*hem-e-plek'-tik*). Same as *Hemiplegic.*

Hemiplegia, Hemiplegy. (See Illus. Dict.) See *Sign, Prévost's.* **H., Choreic,** that followed by chorea, especially in young adults. **H., Gubler's,** hemiplegia of the extremities with crossed paralysis of the cranial motor nerves, especially the facial. **H., Homolateral,** uncrossed hemiplegia.

Hemiplegiac (*hem-e-ple'-je-ak*). An individual affected with hemiplegia.

Hemiplegic (*hem-e-plej'-ik*). Relating to or affected with hemiplegia; hemiplectic; hemiplexicus.

Hemithermoanesthesia (*hem-e-thur-mo-an-es-the'-ze-ah*) [*ἡμι*, half; *θέρμη*, heat; *anesthesia*]. Insensibility to heat and cold limited to one side of the body.

Hemitonia (*hem-e-to'-ne-ah*) [*ἡμι*, half; *τόνος*, tension]. One-sided, tonic muscle-contraction in brain-disease.

Hemitoxin (*hem-e-toks'-in*) [*ἡμι*, half; *toxin*]. A toxin deprived of half of its original toxicity.

Hemoagglutination (*hem-o-ag-glu-tin-a'-shun*). The clumping of red blood-corpuscles. Cf. *Hematoagglutinin.*

Hemobilinuria (*hem-o-bil-in-u'-re-ah*) [*αἷμα*, blood; *bilis*, bile; *οὖρον*, urine]. The presence of urobilin in the blood.

Hemoblast (*hem'-o-blast*). See *Hematoblast* (Illus. Dict.).

Hemocatatonistic (*hem-o-kat-at-on-is'-tik*) [*αἷμα*, blood; *κατά*, down; *τόνος*, tension]. Tending to

diminish the cohesion between the hemoglobin and the red blood-corpuscles.

Hemochromatosis (*hem-o-kro-mat-o′-sis*) [*αἷμα*, blood; *χρῶμα*, color]. A condition described in 1889 by Recklinghausen of coloration of the tissues, particularly the skin, by deposition of a pigment from the blood.

Hemoconia. See *Hemokonia.*

Hemocryoscopy (*hem-o-kri-os′-ko-pe*). Cryoscopy applied to blood. See *Cryoscopy.*

Hemocytozoön (*hem-o-si-to-zo′-on*) [*αἷμα*, blood; *κύτος*, a cell; *ζῷον*, an animal]. Danilewsky's name for the plasmodium of malaria.

Hemodiagnosis (*hem-o-di-ag-no′-sis*) [*αἷμα*, blood; *diagnosis*]. Diagnosis by examination of the blood.

Hemodiarrhea (*hem-o-di-ar-e′-ah*). Dysentery.

Hemodiastase (*hem-o-di′-as-tāz*) [*αἷμα*, blood; *διάστασις*, separation]. The amylolytic enzyme of the blood.

Hemodynamics (*hem-o-di-nam′-iks*). See *Hemadynamics* (Illus. Dict.).

Hemoferrogen (*hem-o-fer′-o-jen*). A dry preparation of blood proposed as a remedy in anemic conditions.

Hemoferrum (*hem-o-fer′-um*). See *Oxyhemoglobin* (Illus. Dict.).

Hemofuscin (*hem-o-fus′-in*) [*αἷμα*, blood; *fuscus*, dark]. Recklinghausen's name for the yellowish-brown iron-free pigment found in hemochromatosis.

Hemoglobic (*hem-o-glo′-bik*). Applied to cells containing or generating hemoglobin.

Hemoglobin. (See Illus. Dict.) It is used in treatment of anemia in daily doses of 75–150 gr. (5–10 gm.). Syn., *Reduced hemoglobin; Purple cruorin.* **Talliqvist's Method** of approximately determining hemoglobin percentages consists in allowing a drop of blood to soak into a bit of filter-paper and comparing with the naked eye the color strength of the stain with a series of printed standard tints of known value. [DaCosta.]

Hemoglobinorrhea (*hem-o-glo-bin-or-e′-ah*) [*hemoglobin; ῥεῖν*, to flow]. The escape of hemoglobin from the bloodvessels. **H. cutis**, an effusion of hemoglobin into the skin due to venous engorgement.

Hemoglobinuria. (See Illus. Dict.) **H., Epidemic** (of the newborn). See *Winckel's Disease* (Illus. Dict.).

Hemogregarina (*hem-o-greg-ar-e′-nah*) [*αἷμα*, blood; *Gregarina*, a genus of *Protozoa*]. Danilewsky's name for the gregarine-like bodies found in the blood of persons affected with malaria.

Hemohydronephrosis (*hem-o-hi-dro-nef-ro′-sis*) [*αἷμα*, blood; *ὕδωρ*, water; *νεφρός*, kidney]. A cystic tumor of the kidney with blood and urine in the contents.

Hemokelidosis (*hem-o-kel-id-o′-sis*) [*αἷμα*, blood; *κηλιδοῦν*, to stain]. Contamination of the blood; purpura.

Hemokonia (*hem-o-ko′-ne-ah*) [*αἷμα*, blood; *κονία*, dust]. Müller's (1896) term for the minute, colorless, highly refractive, spheroid or dumb-bell shaped bodies constantly present in normal and pathologic blood. They are not more than 1 μ in diameter and possess active, limited molecular motility, but not true ameboid motion. Syn., *Blood-dust; Blood motes.*

Hemol (*hem′-ol*) [*αἷμα*, blood]. A dark-brown powder obtained by the action of zinc upon defibrinated blood, and said to contain 1% of soluble iron. Dose in anemia, 1½–6 gr. (0.1–0.5 gm.). **H., Arsenic.** See *Arsenhemol.* **H., Brom-.** See *Bromhemol.* **H., Copper.** See *Cuprohemol.* **H., Ferro-.** See *Ferrohemol.* **H., Iodo-**, hemol containing 16% of iodin. It is used whenever iodin is indicated. Dose, 3 gr. (0.2 gm.). **H., Mercuroiodo-**, a hemol containing mercury 13% and iodin 28%; a brownish-red powder used chiefly in syphilis. Dose, 2–5 gr. (0.13–0.32 gm.) 3 times daily. **H., Zinc**, contains 1% of zinc; used in anemia, gastric erosions, etc. Dose, 8 gr. (0.5 gm.) 3 times daily.

Hemolysin (*hem-ol′-is-in*) [*αἷμα*, blood; *λύσις*, solution]. A substance produced in the body of one species of animal by the introduction of red blood-corpuscles derived from the body of another species. It is capable of dissolving the red blood-corpuscles of the animal species from which the blood was obtained. Syn., *Erythrolysin.* **H., Bacterial**, that formed by action of bacteria; first discovered by Ehrlich (1898) in cultures of tetanus bacilli. The strongest yet observed was found by Todd in cultures of *Bacillus megatherium.* Cf. *Antihemolysin.*

Hemomanometer (*hem-o-man-om′-et-ur*) [*αἷμα*, blood; *μάνος*, thin; *μέτρον*, a measure]. A manometer used in estimating blood-pressure.

Hemomediastinum (*hem-o-me-de-as′-tin-um*). See *Hematomediastinum* (Illus. Dict.).

Hemomere (*hem′-o-mēr*) [*αἷμα*, blood; *μέρος*, a part]. A portion of a metamere derived from the vascular system or taking part in its formation.

Hemometrectasia (*hem-o-met-rek-ta′-ze-ah*) [*αἷμα*, blood; *μήτρα*, uterus; *ἔκτασις*, a stretching]. Dilation of the uterus from effusion of blood into its cavity.

Hemometry (*hem-om′-et-re*) [*αἷμα*, blood; *μέτρον*, measure]. Estimation of the amount of hemoglobin or of the number of corpuscles in the blood. NORMAL COUNT: Erythrocytes (red corpuscles), 5,000,000; leukocytes (white corpuscles), 6000 to 8000; hemoglobin, 100%. DIFFERENTIAL COUNT OF THE LEUKOCYTES: Polymorphonuclears, 62% to 70%; small lymphocytes, 20% to 30%; large lymphocytes, 4% to 8%; transitionals, 1% to 2%; eosinophils, 0.5% to 4%; mast-cells, 0.25% to 0.5%. [Cabot.]

Hemonein (*hem-o′-ne-in*). A proprietary nutritive and tonic prepared from beef.

Hemonephrorrhagia (*hem-o-nef-ro-ra′-je-ah*). See *Nephremorrhagia* (Illus. Dict.).

Hemonervine (*hem-o-nur′-vēn*). A proprietary tonic said to consist of calcium phosphoglycerate, hemoglobin, iron, and strychnin.

Hemopathia (*hem-o-path′-e-ah*). See *Hematopathy* (Illus. Dict.).

Hemopathology (*hem-o-path-ol′-o-je*) [*αἷμα*, blood; *pathology*]. The pathology of the blood.

Hemoperitoneum (*hem-o-per-it-on-e′-um*). A bloody effusion into the peritoneal cavity.

Hemopexia (*hem-o-peks′-e-ah*) [*αἷμα*, blood; *πῆξις*, a fixing]. A general name for diseases characterized by a tendency of the blood to coagulate.

Hemopexin (*hem-o-peks′-in*). A ferment capable of coagulating blood.

Hemophiliac (*hem-o-fil′-e-ak*) [*αἷμα*, blood; *φιλεῖν*, to love]. One who is affected with hemophilia.

Hemophobia. See *Hematophobia* (Illus. Dict.).

Hemophotograph (*hem-o-fo′-to-graf*) [*αἷμα*, blood; *photograph*]. A photograph of blood-corpuscles as employed in Gärtner's method for determining the hemoglobin content. Syn., *Hemaphotograph.*

Hemophysallis (*hem-o-fis′-al-is*) [*αἷμα*, blood; *φυσαλλίς*, a bladder]. A pustule or vesicle filled with blood.

Hemoplanesis, Hemoplania (*hem-o-plan-e′-sis, hem-o-pla′-ne-ah*). See *Hematoplania* (Illus. Dict.).

Hemoprecipitins (*hem-o-pre-sip′-it-ins*). See *Precipitins.*

Hemoproctia (*hem-o-prok′-te-ah*) [*αἷμα*, blood; *πρωκτός*, the anus]. Rectal hemorrhage. Bloody discharge from hemorrhoids.

Hemoptic, Hemoptoic (*hem-op′-tik, hem-op-to′-ik*). Relating to or attended by hemoptysis.

Hemoptyic, Hemoptysic (*hem-op'-te-ik, hem-op'-tis-ik*). See *Hemoptic.*

Hemoptysis. (See Illus. Dict.) **H., Parasitic,** a disease due to the fluke *Paragonimus Westermanii,* which lodges in the lungs, and exceptionally in other organs. Source of the infection unknown, but analogy with other trematode diseases indicates that the larval stage of the parasite lives in snails and gains access to mammals through the drinking-water. The disease has been observed in man, cats, dogs, and swine in Asia (China, Japan), and in the cat, dog, and hog in the United States. It is more likely to occur in rural districts than in large cities, and has frequently been mistaken for tuberculosis. The diagnosis is made by finding the characteristic ova in the sputum. No specific treatment known. [C. W. Stiles.]

Hemorrhagiferous (*hem-or-aj-if'-ur-us*) [*hæmorrhagia,* hemorrhage; *ferre,* to bear]. Attended by hemorrhage; giving rise to hemorrhage.

Hemorrhagin, Hæmorrhagin (*hem-or-aj'-in*). Flexner's name for endotheliolysin, since it causes extravasations of blood through its direct solvent action upon capillary endothelium.

Hemorrhagiparous (*hem-or-aj-ip'-ar-us*). See *Hemorrhagiferous.*

Hemorrhagophilia (*hem-or-aj-o-fil'-e-ah*). See *Hemophilia* (Illus. Dict.).

Hemorrhoid, Hæmorrhois. (See Illus. Dict.) **H., Blind,** one that does not cause bleeding. Syn., *Hæmorrhois cæca.* **H.s, Vesical,** dilated veins around the neck of the bladder. **H.s, White,** those formed by hypertrophy of the papillas of the anal mucosa and discharging a seromucous fluid. Syn., *Hæmorrhois alba: Leukorrhœa analis.*

Hemorrhoidal. (See Illus. Dict.) **2.** Applied to bloodvessels, nerves, etc., belonging to the fundament.

Hemosiderosis (*hem-o-sid-ur-o'-sis*) [*αἷμα,* blood; *σίδηρος,* iron]. A form of hemochromatosis characterized by the deposit of pigments containing iron, in the tissues, especially those of the liver and spleen.

Hemospasic (*hem-o-spas'-ik*). See *Hemospastic* (Illus. Dict.).

Hemospast (*hem'-o-spast*) [*αἷμα,* blood; *σπᾶν,* to draw]. A device for drawing blood to a part.

Hemospermatism (*hem-o-spur'-mat-izm*). See *Hematospermia* (Illus. Dict.).

Hemostat (*hem'-o-stat*). A proprietary external remedy for nose-bleed said to consist of tannin, quinin sulfate, and benzoated fat.

Hemostatic. (See Illus. Dict.) **H., Martin's.** See under *Martin* (Illus. Dict.). **H., Pavesi's,** a mixture of collodion, 100 parts; carbolic acid, 10 parts; pure tannin, 5 parts; benzoic acid, 3 parts. Syn., *Pavesi's styptic collodion.*

Hemostatin (*hem-o-stat'-in*). An extract from the thymus of calves, containing sodium hydrate and calcium chlorid.

Hemosterol (*hem-os'-ter-ol*). A therapeutic compound from blood of animals.

Hemotachometry (*hem-o-tak-om'-et-re*) [*αἷμα,* blood; *τάχος,* swiftness; *μέτρον,* measure]. The estimation of the rapidity of blood-circulation.

Hemotelangiosis, Hæmotelangeiosis (*hem-o-tel-an-ji-o'-sis*) [*αἷμα,* blood; *tela,* a web; *ἀγγεῖον,* a vessel]. **1.** Disease of the finest capillaries. **2.** Telangeiectasis.

Hemotoxic. See *Hematoxic* (Illus. Dict.). **H. sensitizer,** Metchnikoff's (1900) name for the intermediary body.

Hemotoxin (*hem-o-toks'-in*) [*αἷμα,* blood; *τοξικόν,* a poison]. A cytotoxin obtained by E. Metchnikoff from defibrinated blood. Cf. *Hepatotoxin, Leukotoxin, Nephrotoxin, Neurotoxin, Spermatoxin, Trichotoxin.*

Hemotoxis (*hem-o-toks'-is*). Blood-poisoning.

Hemotropic (*hem-ot'-ro-pik*) [*αἷμα,* blood; *τρέπειν,* to turn]. Applied to the haptophore by which the intermediary body combines with the corpuscle.

Henpuye [West African]. See *Goundou.*

Henry (*hen'-re*) [*Joseph Henry,* 1797–1878]. The unit of electric induction.

Hepaptosis (*hep-a-to'-sis*). See *Hepatoptosis* (Illus. Dict.).

Hepar. (See Illus. Dict.) **H. induratum,** an affection differing from cirrhosis occurring after long-continued fevers frequently characterized by melanemic pigmentary deposits in or near the capillaries and hyperplasia of the interacinous connective tissue. Syn., *Induratio hepatis.* **H. migrans, H. mobile,** floating liver. **H. moschatiforme,** nutmeg liver. **H. sanguinis,** a blood-clot. **H. siccatum,** the dried and powdered liver of swine freed from blood. Dose, in atrophic cirrhosis of liver, 300 gr. (20 gm.) daily. **H. sinistrum,** the spleen. **H. succenturiatum.** See *Liver, Accessory.* **H. variegatum,** nutmeg liver.

Heparaden (*hep-ar'-ad-en*) [*ἧπαρ,* liver; *ἀδήν,* gland]. A therapeutic preparation of liver substance, 2 parts; lactose, 1 part. It is used in icterus. Dose, 6–10 gm. daily.

Hepatatrophia (*hep-at-at-ro'-fe-ah*) [*ἧπαρ,* liver; *ἀτροφία,* atrophy]. Atrophy of the liver.

Hepatauxe (*hep-at-awk'-se*) [*ἧπαρ,* liver; *αὔξη,* increase]. Enlargement of the liver.

Hepatectomize (*hep-at-ek'-to-mīz*) [*ἧπαρ,* liver; *ἐκτομή,* an excision]. To excise a part of the liver.

Hepathemia, Hepathæmia (*hep-ath-e'-me-ah*) [*ἧπαρ,* liver; *αἷμα,* blood]. Sanguinous hepatic congestion. Syn., *Hepatohemia.*

Hepaticocholecystostcholecystenterostomy (*hep-at-ik-o-ko-le-sist-ost-ko-le-sist-en-tur-os'-to-me*). Halsted's term for an anastomosis between the gallbladder and hepatic duct on one hand and between the intestine and gallbladder on the other in cases in which both the gallbladder and hepatic duct are distended and the common and cystic ducts have become obliterated or reduced to fibrous cords.

Hepaticocolic, Hepaticogastric. See *Hepatocolic, Hepatogastric* (Illus. Dict.).

Hepaticopulmonary (*hep-at-ik-o-pul'-mon-a-re*) [*hepar,* liver; *pulmo,* lung]. Relating to the liver and the lungs.

Hepaticorenal. See *Hepatorenal.*

Hepaticostomy (*hep-at-ik-os'-to-me*) [*ἧπαρ,* liver; *στόμα,* mouth]. The formation of a fistula into the hepatic duct.

Hepaticotomy (*hep-at-ik-ot'-o-me*) [*ἧπαρ,* liver; *τέμνειν,* to cut]. Incision of the hepatic duct for extraction of calculi.

Hepatin. (See Illus. Dict.) **H., Zaleski's.** Synonym of *Schmiedeberg's Ferratin.*

Hepatiscent (*hep-at-is'-ent*) [*ἡπατίζειν,* to be like the liver]. Becoming like liver; applied to the appearance of certain salts under the blowpipe.

Hepatitis. (See Illus. Dict.) **H. cytophthora,** acute atrophy of the liver. **H. externa,** perihepatitis. **H. fibrosa,** indurative hepatitis. **H., Indurative,** a form marked by formation of fibrous tissue causing the liver-cells to atrophy from compression. **H., Interstitial,** inflammation of the connective tissue composing the framework of the liver leading in some cases to the formation of abscesses or to softening and atrophy of the glandular structure, and in others to induration and cirrhosis. **H. longa,** chronic hepatitis. **H., Specific Diffuse,** yellow fever. **H. velamentosa,** perihepatitis.

Hepatizon (*hep-at-i'-zon*) [*ἡπατίζειν,* to be like the liver]. Chloasma.

Hepatoduodenostomy (*hep-at-o-du-o-den-os′-to-me*) [ἧπαρ, liver; *duodenum;* στόμα, mouth]. The formation of an opening from the liver into the duodenum.

Hepatodysentery (*hep-at-o-dis′-en-ter-e*). Inflammation of the liver attended with dysentery; hepatic dysentery.

Hepatohemia. See *Hepathemia.*

Hepatomelanosis (*hep-at-o-mel-an-o′-sis*). Melanosis affecting the liver.

Hepatomphalocele (*hep-at-om-fal′-o-sēl*) [ἧπαρ, liver; ὀμφαλός, the navel; κήλη, a tumor]. A navel hernia with part of the liver contained in the sac.

Hepatophlebitis (*hep-at-o-fleb-i′-tis*) [ἧπαρ, liver; φλέψ, a vein]. Inflammation of the veins of the liver.

Hepatophlebotomy (*hep-at-o-fleb-ot′-o-me*) [ἧπαρ, liver; φλέψ, a vein; τέμνειν, to cut]. The aspiration of blood from the liver.

Hepatopulmonary (*hep-at-o-pul′-mon-a-re*). See *Hepaticopulmonary.*

Hepatorenal (*hep-at-o-re′-nal*) [*hepar*, liver; *ren*, the kidney]. Relating to the liver and the kidney.

Hepatostomy (*hep-at-os′-to-me*) [ἧπαρ, liver; στόμα, a mouth]. The establishment in the liver substance of communication between parts of the liver obstructed by concretions.

Hepatotherapy (*hep-at-o-ther′-ap-e*) [ἧπαρ, liver; *therapy*]. The therapeutic use of liver.

Hepatotoxemia (*hep-at-o-toks-e′-me-ah*) [ἧπαρ, liver; *toxemia*]. Toxemia due to disturbance of the hepatic functions.

Hepatotoxin (*hep-at-o-toks′-in*) [ἧπαρ, liver; τοξικόν, poison]. A cytotoxin found by E. Metchnikoff in the liver. Cf. *Hemotoxin, Leukotoxin, Nephrotoxin, Neurotoxin, Spermatoxin, Trichotoxin.*

Hephestiorrhaphy (*he-fes-te-or′-af-e*) [Ἥφαιστος, Vulcan; ῥαφή, a seam]. The application of the actual cautery to the lips of a wound to bring about adhesion.

Heptadicity (*hep-tad-is′-it-e*) [ἑπτα, seven]. Septivalence.

Heracleum. (See Illus. Dict.) **H. sphondylium,** L., a European species, contains an ethereal oil and heraclin. The root is used in epilepsy, the herb as a resolvent, the fruit as an antispasmodic.

Heraclin (*her-ak′-lin*). $C_{32}H_{22}O_{10}$. A crystalline substance isolated from the unripe fruit of *Heracleum sphondylium,* L.

Hereditation (*her-ed-it-a′-shun*) [*hereditas*, heredity]. The effect or influence of heredity.

Heredity. (See Illus. Dict.) **H., Collateral,** the transmission of characteristics of an uncle, grand-uncle, aunt, or grand-aunt to a nephew or niece. **H., Cumulative,** the inheritance of characteristics from many generations of ancestors. **H., Direct,** the transmission of characteristics from parents to offspring. **H., Double,** the transmission of characteristics from both parents. **H., Homonymous, H., Immediate,** direct heredity. **H., Indirect,** the transmission of the characteristics of a woman's first husband to her offspring by a second husband. Syn., *Indirect atavism* (Sedgwick). **H., Mediate,** that traced to grandparents. **H., Oblique,** indirect heredity. **H., Simple,** that from one parent. **H., Social,** in the evolution of civilization, the transmission of acquired tastes and aptitudes that tend away from barbarism.

Heredo- (*her-e′-do*). In composition, hereditary. **H.-ataxia,** Friedreich's ataxia. **H.-syphilis,** inherited syphilis.

Hering's Drop Test. An instrument to test the sense of perspective in correction of convergent strabismus.

Hermitine (*hur′-mit-ēn*). The proprietary name for a surgical antiseptic and disinfectant, said to be electrolyzed sea-water. Cf. *Electozone.*

Hermophenol, Hermophenyl (*her-mo-fe′-nol, -nil*). A mercuriosodic phenol disulfonate containing 40% of metallic mercury, occurring as a white powder soluble in water and used as an antiseptic and antisyphilitic. On wounds, in a solution of 1:100; injection in syphilis, 4 c.c. of a solution of 0.5 cg. to the cubic centimeter every 2 or 3 days. Syn., *Sodium mercurophenyl disulfonate.*

Hermophilia (*her-mo-fil′-e-ah*) ['Ερμῆς, Hermes; φιλεῖν, to love]. A predilection for the therapeutic use of mercury.

Hernia. (See Illus. Dict.) Syn., *Rupture.* See *Sign, Romberg's* (2). **H. adiposa,** a liparocele. **H. adnata,** a congenital hernia. **H., Aneurysmal.** See *Medusæ caput* (Illus. Dict.). **H. annularis,** umbilical hernia. **H. aquosa,** a hydrocele. **H. arteriæ, H. arteriarum,** hernial aneurysm. **H. bronchialis,** bronchocele. **H. capitis,** encephalocele. **H. carnosa.** (See Illus. Dict.) 2. See *Sarcocele* (Illus. Dict.). **H., Concealed,** one not perceptible on palpation. **H. cordis,** hernia of the heart. **H., Displaced,** one that has been forced from the scrotum into the subperitoneal connective tissue of the abdomen. **H., Diverticular,** hernia of a congenital diverticulum of the intestine; hernia of Meckel's diverticulum. Syn., *Littre's hernia.* **H. dolorosa,** a painful incarcerated hernia. **H., Duodenojejunal.** See *H., Retroperitoneal* (Illus. Dict.). **H., Enteroperineal,** a perineal enterocele. **H., Enterovaginal,** a vaginal enterocele. **H., Epiploic, H. epiploica.** See *Epiplocele* (Illus. Dict.). **H., Fatty.** See *Liparocele* and *Steatocele* (Illus. Dict.). **H., Femoroinguinal,** a femoral hernia coexistent with an inguinal hernia. **H. flatulenta,** pneumatocele. **H., Free,** a reducible hernia. **H., Gastrodiaphragmatic,** one of the stomach through the diaphragm. **H., Haller's Congenital.** See *H., Congenital* (Illus. Dict.). **H. of the Heart.** See *Cardiocele* (Illus. Dict.). **H. hepatica,** nephrocele. **H., Hourglass,** a form of oblique inguinal hernia having a constriction in the middle of the sac. French, *Hernie en bissac.* **H., Hypogastric,** an infraumbilical hernia. **H. immobilis,** an irreducible hernia. **H., Infraumbilical,** one in the linea alba below the umbilicus. **H. ingenita,** congenital hernia. **H., Inguinoovarian,** an inguinal hernia containing the ovary. **H., Intercostal,** a protrusion through the last costal interspaces due to an intercostal wound. **H. interna, H. interna vera,** a protrusion of viscera through the wall of a cavity in the interior of the body. **H., Intersigmoid,** one occurring in the sigmoid mesocolon at the intersigmoid fossa. **H., Interstitial,** a displaced hernia in which the sac has found a way between two layers of aponeurosis. **H., Intestinal.** See *Enterocele* (Illus. Dict.). **H., Intrailiac,** a hernia by the iliac fascia in the internal iliac fossa. **H., Intrainguinal.** See *H., Inguinointestinal* (Illus. Dict.). **H., Intraparietal,** an interstitial hernia. **H. of the Kidney.** See *Nephrocele* (Illus. Dict.). **H., Lacrimal, H. of the Lacrimal Sac, H. lacrimalis,** protrusion of the mucosa of the lacrimal sac through an opening in its anterior wall. **H., Lateral, H. lateralis,** diverticular hernia. **H., Lavater's.** See *Enterocele, Partial.* **H. lienalis,** a hernia of the spleen; a splenocele. **H. littreana, H. littriana, H. littrica.** See *H., Littre's* (Illus. Dict.). **H., Mesocolic,** a protrusion of the bowels between two layers of the mesocolon. **H. mobilis,** a reducible hernia. **H., Nuckian,** a hernia into the canal of Nuck. **H. œsophagi,** a pharyngocele. **H. oschealis,** a scrotal hernia. **H. parorchidoenterica.** See *Parorchidoenterocele* (Illus. Dict.). **H., Pectineal,** one that, having made its way internal to and behind the femoral

vessels, rests upon the pectineus muscle. **H. pharyngis.** See *Pharyngocele* (Illus. Dict.). **H., Purulent, H. purulenta,** an empyocele. **H. purulenta scroti,** suppurative orchitis. **H., Rectal.** 1. See *Proctocele* (Illus. Dict.). 2. A protrusion of part of the pelvic or abdominal contents through the anus, held in a sac formed by eversion of the rectum; the interior covering of the hernia being the peritoneal coat of the rectum. Syn., *Archocele.* **H. rectiproctocele, H. of Rectum., H., Rectovaginal.** See *Proctocele, Vaginal* (Illus. Dict.). **H. renalis,** nephrocele. **H., Retrocecal,** a protrusion of the bowel occupying an inconstant pouch dorsad of the cecum. Syn., *Rieux's hernia.* **H., Retroperitoneal, Anterior, H. retroperitoneoparietal.** See *H., Properitoneal* (Illus. Dict.). **H., Retrovascular,** a pectineal hernia. **H., Richter's.** See *Enterocele, Partial.* **H., Rieux's,** retrocecal hernia. **H., Sacrorectal,** posterior proctocele from defective ossification of the sacrum. **H. sacrosciatica.** See *H., Ischiatic* (Illus. Dict.). **H. spinæ.** See *Hydrorrhachis* (Illus. Dict.). **H., Subpubic,** obturator hernia. **H., Suprapubic,** inguinal hernia. **H., Treitz's,** retroperitoneal hernia. **H., Umbilicovesical,** hernia of the bladder through the umbilicus. **H. varicosa.** See *Cirsocele* (Illus. Dict.). **H. venarum,** varix. **H. veneris,** orchitis. **H. ventosa.** See *Physocele* (Illus. Dict.). **H. ventriculi.** See *Gastrocele* (Illus. Dict.). **H. zirbalis.** See *Epiplocele* (Illus. Dict.).

Herniaria (*hur-ne-a'-re-ah*) [*hernia*, a rupture, in allusion to its former use]. Rupture wort; a genus of plants of the order *Illecebraceæ.* **H. glabra,** L., a European species, is recommended in catarrh of the bladder. It contains a glucosid similar to saponin, herniarin, and the alkaloid paronychin.

Herniarin (*hur-ne-a'-rin*). $C_{10}H_8O_3$. Methyl umbelliferone obtained from *Herniaria glabra,* L.

Herniary (*hur'-ne-a-re*). Relating to hernia.

Herniate (*hur'-ne-āt*). To form a hernia.

Herniation (*hur-ne-a'-shun*). The formation of a hernia.

Hernioplasty (*hur-ne-o-plas'-te*). An abbreviation of the expression "operation for the radical cure of hernia."

Heroin (*her'-o-in*). $C_{17}H_{17}NO(C_2H_3O_2)_2$. The diacetic acid ester of morphin, a white, bitter, crystalline powder melting at about 173° C., slightly soluble in water, freely soluble in dilute acids. It is anodyne and sedative and is used in coughs, dyspnea, and pectoral pains. Dose, $\frac{1}{12}$–$\frac{1}{2}$ gr. (0.005–0.032 gm.).

Heromal (*her'-om-al*). A proprietary remedy for respiratory disorders said to contain malt extract, hypophosphites, and heroin.

Herophilist (*her-of'-il-ist*). A follower of the medical doctrines of Herophilus, a native of Chalcedon, born about the end of the fourth century B. C. Cf. *Torcular Herophili.* Cf. *Galenist; Hippocra'ist; Mesmerist.*

Heroterpine (*her-o-tur'-pēn*). A combination of heroin and terpin hydrate, indicated in bronchitis, asthma, etc.

Herpes. (See Illus. Dict.) **H. exedens,** a general term for the varieties of herpes and lupus characterized by hard vesicles, in thronged clusters and containing dense reddish or yellow fluid. **H. menstrualis,** a form recurrent at the menstrual period. **H. vorax,** lupus.

Herpetism (*her'-pet-izm*) [*herpes*]. A constitutional tendency to eruptions of herpes.

Hersage. See *Harrowing.*

Hesperetin, Hesperitin (*hes-per'-et-in, hes-per'-it-in*). $C_{16}H_{14}O_6$. A yellow crystalline substance obtained by heating hesperidin to 120° C. with 5 or 6 parts of 50% alcohol with 2% sulfuric acid; melts at 226° C.

Hesperidene (*hes-per'-id-ēn*). See *Citrene* (Illus. Dict.).

Heteradenoid (*het-er-ad'-en-oid*). See *Heteradenic* (Illus. Dict.).

Heterecism, Heterœcism (*het'-er-e-sizm*) [ἕτερος, other; οἶκος, a house]. Parasitism upon one host during one stage of growth or generation, and upon another host for the development of another stage or generation. Syn., *Metœcism; Metœcism.*

Heteroalbumosuria (*het-er-o-al-bu-mo-su'-re-ah*). The presence of heteroalbumose in the urine.

Heterobaphia (*het-er-o-ba'-fe-ah*) [ἕτερος, other; βαφή, a dyeing]. The exhibition of more than one color on the surface of a body.

Heterocelous, Heterocœlous (*het-er-o-se'-lus*) [ἕτερος, other; κοῖλος, hollow]. Convexoconcave.

Heterocentric (*het-er-o-sen'-trik*) [ἕτερος, other; κέντρον, a point]. Applied to rays that do not meet in a common center. Cf. *Homocentric.*

Heterochromatosis (*het-er-o-kro-mat-o'-sis*) [ἕτερος, other; χρῶμα, color]. 1. Pigmentation of the skin due to substances foreign to the body. 2. See *Heterochromia* (Illus. Dict.).

Heterochronism (*het-er-ok'-ron-izm*). See *Heterochronia* and *Heterochrony* (Illus. Dict.).

Heterochylia (*het-er-o-ki'-le-ah*) [ἕτερος, other; χυλός, chyle]. A variable condition of the gastric contents, changing suddenly from normal acidity to hyperacidity or anacidity.

Heterochymeusis (*het-er-o-ki'-mu-sis*) [ἕτερος, other; χύμευσις, a mixture]. The presence in the blood of substances not normally present.

Heterocolica, Hetærocolica (*het-er-o-kol'-ik-ah*) [ἑταίρα, a courtesan; κωλικός, suffering in the colon]. See *Colica scortorum* (Illus. Dict.).

Heterocrisis (*het-er-o-kri'-sis* [ἕτερος, other; κρίσις, a crisis]. An abnormal crisis in disease.

Heterodesmotic (*het-er-o-des-mot'-ik*) [ἕτερος, other; δεσμός, a bond]. Connecting other parts; applied to nerve-fibers connecting centers of unequal value or associating nervous centers with other parts.

Heterœcism (*het'-er-e-sizm*). See *Heterecism.*

Heteroepidermic (*het-er-o-ep-e-dur'-mik*) [ἕτερος, other; *epidermis*]. Pertaining to or taken from the skin of some other person; a form of skin-grafting (*q. v.*).

Heteroganglionic (*het-er-o-gang-le-on' ik*). Relating to different ganglia; applied to the connecting nerve-fibers between ganglia.

Heteroglaucous (*het-er-o-glah'-kus*) [ἕτερος, other; γλαύκος, bluish-green]. 1. Having one eye blue and the other black or gray. 2. Relating to the anomalous production of glaucous spots.

Heterognathous (*het-er-o-nath'-us*) [ἕτερος, other; γνάθος, jaw]. Having dissimilar jaws.

Heteroid, Heteroideous (*het'-er-oid, -oid'-e-us*) [ἕτερος, other]. Formed diversely; applied to enclosed structures which differ from their investment.

Heterolecithal (*het-er-o-les'-ith-al*) [ἕτερος, different; λέκιθος, yolk of egg]. Having unequally distributed deutoplasm. Cf. *Telolecithal; Centrolecithal; Alecithal: Homolecithal.*

Heterolysin (*het-er-ol'-is-in*) [ἕτερος, other; λύσις, solution]. A lysin produced in the body of one species of animal by the introduction of blood from a different species. Cf. *Isolysin.*

Heterolysis (*het-er-ol'-is-is*). The hemolytic action of the blood-serum of one animal upon the corpuscles of another species. Cf. *Isolysis.*

Heteromeral, Heteromeric (*het-er-om'-er-al, -ik*) [ἕτερος, other; μέρος, part]. Applied to neurons originating in one lateral side of the spinal cord and sending processes to the other side. Cf. *Hecatomeral.*

Heteromerous. (See Illus. Dict.) 2. Unlike in chemic composition.

Heterometry (*het-er-om'-et-re*) [ἕτερος, other; μέτρον, measure]. Deviation from the normal state in a part, in regard to the amount of its contents.

Heterophasia (*het-er-o-fa'-ze-ah*). See *Heterophemy* (Illus. Dict.).

Heterophthalmus (*het-er-of-thal'-mus*). See *Heterochromia* (Illus. Dict.).

Heteroproteose (*het-er-o-pro'-te-ōz*). A product of the digestion of syntonin in the stomach.

Heteroptics (*het-er-op'-tiks*) [ἕτερος, other; ὀπτικός, belonging to sight]. 1. Deuteroscopy. 2. Perverted vision.

Heterorrhythm (*het'-er-or-rithm*) [ἕτερος, other; ῥυθμός, rhythm]. See *Arrhythmic* (Illus. Dict.).

Heterosarcoses (*het-er-o-sar'-ko-sēz*) [ἕτερος, other; σάρξ, flesh]. A general term for diseases characterized by the formation of heterologous tissue.

Heteroscelous (*het-er-os'-kel-us*) [ἕτερος, other; σκέλος, a leg]. Having dissimilar or unsymmetric legs.

Heteroscope (*het'-er-o-skōp*) [ἕτερος, other; σκοπεῖν, to examine]. An apparatus consisting of fusion-tubes placed in a frame which supplies fixed points of rotation, with scales showing their angular movement. It is used for the accurate measurement of the various angles at which a deviating eye in strabismus can see.

Heterosexuality (*het-er-o-seks-u-al'-it-e*). Perverted sexual feeling toward one of the opposite sex.

Heterostomy (*het-er-os'-to-me*) [ἕτερος, other; στόμα, mouth]. Lack of symmetry in the two sides of the mouth.

Heterotelic (*het-er-ot'-el-ik*) [ἕτερος, other; τέλος, end]. Existing for or serving a foreign or external end. Cf. *Autotelic.*

Heterotonia (*het-er-o-to'-ne-ah*) [ἕτερος, other; τόνος, tension]. Variable tension.

Heterotrichous (*het-er-ot'-rik-us*) [ἕτερος, other; θρίξ, hair]. Furnished with two kinds of cilia.

Heterovalvate (*het-er-o-val'-vāt*) [ἕτερος, other; *valva*, valve]. Having two kinds of valves.

Heteroxeny (*het-er-oks'-en-e*) [ἕτερος, other; ξένος, a guest]. The quality of living upon different hosts. Cf. *Heterecism.*

Hetocresol, Hetokresol (*het-o-kre'-sol*). See *Cinnamyl metacresol.*

Hetoform (*het'-o-form*). Bismuth cinnamate.

Hetol (*het'-ol*). See *Sodium Cinnamate.*

Hettocyrtosis (*het-o-sir-to'-sis*) [ἧττων, less; κύρτωσις, a curvature]. A slight curvature of the spine.

Heuristic (*hu-ris'-tik*) [εὑρίσκειν, to discover]. Relating to experiments, inventions, or discoveries.

Heveene (*he'-ve-ēn*) [*hhévé*, South American name for caoutchouc]. $C_{15}H_{24}$. An amber-colored oil obtained by fractional distillation of caoutchousin, isomeric with ethylene. It has an acrid taste, boils at 315° C. Sp. gr. 0.921; soluble in alcohol, ether, and oils.

Hexahydrohematoporphyrin (*heks-ah-hi-dro-hem-at-o-por'-fi-rin*). A reduction-product of hematin.

Hexamethylene (*heks-ah-meth'-il-ēn*). C_6H_{12}. A naphthene present in Caucasian petroleum; boils at 69° C. **H.-diamin**, $C_6H_{16}N_2$, a compound found by Garcia in decomposing meat and pancreas mixture. **H.-rosanilin**, it is used in Causse's test for contamination of drinking-water. Syn., *Violet crystals; Hexamethyltriamidotriphenylcarbinol.* **H.-tetramin.** See *Formin.* **H.-tetramin-bromethylate.** See *Bromalin.* **H.-tetramin-iodoform.** See *Iodoformin.* **H.-tetramin-salicylate.** See *Saliformin.* **H.-tetramin-tannin.** See *Tannopin.*

Hey's Internal Derangement. See under *Derangement.*

Hiant (*hi'-ant*) [*hiare*, to open]. Yawning, gaping; opening by a fissure.

Hiatus. (See Illus. Dict.) **H. Magendii**, the foramen of Magendie. **H. maxillaris**, one on the inner aspect of the nasal part of the superior maxilla establishing communication between the nose and the antrum of Highmore. Syn., *H. supramaxillaris.* **H. obturatorius**, the obturator canal. **H. œsophageus**, the opening for the esophagus in the diaphragm. **H., Scarpa's.** 1. See under *Scarpa* (Illus. Dict.). 2. Winslow's foramen. **H. spinalis congenitus**, spina bifida. **H. subarcuatus**, a depression in the petrosa lodging the flocculus.

Hidradenitis, Hidroadenitis (*hi-drad-en-i'-tis, hi-dro-ad-en-i'-tis*). See *Hidrosadenitis* (Illus. Dict.). **H. suppurativa**, that marked by the formation of tumors the size of a pea which tend to develop into abscesses.

Hidradenoma (*hi-drad-en-o'-mah*) [ἱδρώς, perspiration; *adenoma*]. Hyperplasia of an existing inflammatory tumor of a sweat-gland.

Hidrodermia (*hi-dro-dur'-me-ah*) [ἱδρώς, sweat; δέρμα, skin]. Anomalies of sweat-secretion.

Hidrosadenitis. (See Illus. Dict.) **H., Ulcerative**, a variety described by Bazin occurring as superficial ulceration in circular or horseshoe-shaped areas attacking the palmar or plantar surfaces; it is prone to relapse.

Hidrose (*hi'-drōs*) [ἱδρώς, sweat]. Relating to sweat.

Hieromania (*hi-er-o-ma'-ne-ah*) [ἱερός, sacred; μανία, madness]. Religious frenzy.

Highmoritis (*hi-mor-i'-tis*). Inflammation of the antrum of Highmore.

Hiliferous (*hi-lif'-ur-us*) [*hilum*, a little thing; *ferre*, to bear]. Furnished with a hilum.

Himantion, Himantoma, Himantosis (*hi-man'-te-on, hi-man-to'-mah, hi-man-to'-sis*) [ἱμάς, a leathern thong]. See *Staphyledema* (Illus. Dict.).

Himantoid (*hi-man'-toid*) [ἱμάς, a leathern thong; εἶδος, likeness]. Strap-shaped; shaped like a thong.

Hind. (See Illus. Dict.) **H.-kidney.** See *Metanephros* (Illus. Dict.).

Hip. (See Illus. Dict.) **H., Pestilence.** See *Quebrabunda.* **H.-shot**, having the hip dislocated; it is applied to a gait like that of a duck.

Hippasia (*hip-a'-ze-ah*) [ἱππασία, riding]. Horseback exercise.

Hippocratist (*hip-ok'-rat-ist*). A follower of the medical doctrines of Hippocrates. Cf. *Galenist; Herophilist; Mesmerist.*

Hippomyxoma (*hip-o-miks-o'-mah*) [ἵππος, a horse; μύξα, mucus]. The swelling attending farcy and glanders. Syn., *Hippocoryzoma.*

Hircate (*hur'-kāt*) [*hircus*, a he-goat]. A salt of hircic acid.

Hirschberg's Test. See under *Strabismus.*

Hirudin (*hir-u'-din*) [*hirudo*, leech]. An albumose with properties approaching those of a peptone contained in leeches which prevents coagulation of blood.

Hispiditas (*his-pid'-it-as*). See *Distichiasis* and *Phalangosis* (Illus. Dict.).

Histic (*his'-tik*) [ἱστός, a web]. Relating to tissue.

Histidin (*his'-tid-in*). $C_6H_9N_3O_2$. A base present among the hydrolytic products of casein, albumin, blood-serum, and horn, and a constant cleavage-product of the more complex plant and animal proteids.

Histin (*his'-tin*) [ἱστός, a web]. Fibrin.

Histiogenesis. See *Histogenesis* (Illus. Dict.).

Histioma (*his-ti-o'-mah*) [ἱστίον, a web]. A tissue tumor, in which distinct tissues may be recognized, but which do not arrange themselves to form organs. [White.]

Histoblast (*his'-to-blast*) [ἱστός, tissue; βλαστός, a germ]. A cell engaged in the formation of tissue.

Histofluorescence (*his-to-flu-or-es'-ens*). The admin-

istration of fluorescing drugs during Rōntgen-ray treatment.

Histogenesis. (See Illus. Dict.) **H. of the Blood,** hematogenesis. **H. of Bone,** osteogenesis. **H. of Cartilage,** chondrogenesis.

Histogenetic. (See Illus. Dict.) 2. Forming tissue; applied to foods. **H. Wandering Cell.** See under *Cell.*

Histogenol (*his-toj'-en-ol*). A compound of phosphorus and arsenic, each dessert-spoonful containing ½ gr. (0.032 gm.) of disodic methyl arsenate and 1½ gr. (0.1 gm.) of nucleinic acid.

Histology. (See Illus. Dict.) **H., Normal,** the study of sound tissues. **H., Pathologic,** the study of diseased tissues. **H., Topographic,** the study of the minute structure of the organs and especially of their formation from the tissues.

Histonuria (*his-ton-u'-re-ah*). The presence of histon in the urine.

Histopsyche (*his-to-si'-ke*) [ἱστός, a web; ψυχή, soul]. The tissue soul; according to Haeckel, the higher psychologic function which gives psychologic individuality to the compound multicellular organism as a true cell commonwealth.

Histotherapeutics, Histotherapy (*his-to-ther-ap-u'-tiks, his-to-ther'-ap-e*) [ἱστός, a web; θεραπεία, therapy]. The remedial use of animal tissues.

Histricism (*his'-tris-izm*). See *Hystriciasis* (Illus. Dict.).

Hodograph (*hod'-o-graf*) [ὁδός, a path; γράφειν, to write]. 1. An instrument for recording locomotor movements. 2. Of Sir Wm. Hamilton, a curve demonstrating the velocity of a moving particle; it is employed in the study of central forces.

Hog-cholera. (See Illus. Dict.) **H.-c. Bacillus,** *B. salmoni,* Trevisan. Syn., *B. suipestifer,* Kruse.

Holarthritis (*hol-ar-thri'-tis*). See *Polyarthritis* (Illus. Dict.).

Hole (*hōl*) [AS., *hol*]. An opening. **H., Botal's,** the foramen of Botal. **H.s, Burnt.** See *Noma* (Illus. Dict.).

Holencephalia (*hol-en-sef-a'-le-ah*). See *Pantanencephalia* (Illus. Dict.).

Holeraceous (*hol-er-a'-shus*) [*holus,* garden herbs]. See *Oleraceous* (Illus. Dict.).

Hollow (*hol'-o*) [AS., *hol*]. 1. Empty within; not solid. 2. A depression; a vacuity. **H.-back,** lordosis. **H.-horn, H.-tail.** Synonym of *Texas fever.*

Holmitol (*hol'-mit-ol*). A combination of anhydromethyl-citronic acid and urotropin. A urinary disinfectant. Dose, 15–25 gr. (0.97–1.62 gm.) 3 or 4 times daily.

Holocain (*hol-o-ka'-in*). A crystalline combination of paraphenetidin and phenacetin. The hydrochlorate is employed as an anesthetic in ophthalmic practice in 1% solution.

Holocrine (*hol'-o-krēn*) [ὅλος, whole; κρινειν, to separate]. Applied to a gland the cell of which, after having elaborated the material of secretion, falls into disuse and disappears. Cf. *Merocrine.*

Holodiastolic (*hol-o-di-as-tol'-ik*) [ὅλος, whole; *diastole*]. Relating to the entire diastole.

Holorrhachischisis (*hol-or-rak-is'-kis-is*) [ὅλος, whole; ῥάχις, spinal column; σκιχειν, to cleave]. A congenital total absence of the vertebral canal.

Holosteosclerosis (*hol-os-te-o-skler-o'-sis*) [ὅλος, whole; ὀστέον, bone; σκλήρος, hard]. General osteosclerosis.

Holosteric (*hol-os'-ter-ik*) [ὅλος, whole; στερεός, solid]. Not liquid; composed entirely of solids.

Holosymphysis (*hol-o-sim'-fis-is*) [ὅλος, whole; σύμφυσις, a growing together]. Complete union.

Holotopic (*hol-ot'-op-ik*) [ὅλος, whole; τόπος, place]. Pertaining to the relation of a part to the entire organism.

Holotopy (*hol-ot'-o-pe*). Waldeyer's term for the relation of a part or organ to the whole organism. Cf. *Idiotopy; Skeletotopy; Syntopy.*

Ho-louan [Chinese]. Cholera.

Holzin (*holt'-zin*). Formic aldehyd in a 60% solution in methyl alcohol. An antiseptic and disinfectant.

Holzinol (*holt'-zin-ol*). A solution of formic aldehyd in methyl alcohol containing a small proportion of menthol. Antiseptic and disinfectant.

Hom-, Homo-. A prefix in chemistry signifying homologous; *i. e.,* the compound is a derivative differing by CH_2 from the mother-substance.

Homagra (*hom-a'-grah*). See *Omagra* (Illus. Dict.).

Homalodermatous, Homalodermous (*ho-mal-o-dur'-mat-us, -dur'-mus*) [ὁμαλός, smooth; δέρμα, skin]. Having a smooth skin.

Homatropin. (See Illus. Dict.) **H. Hydrobromate,** $C_{16}H_{21}NO_3 . HBr$, white crystals used as mydriatic and in night-sweats of tuberculosis. Dose, $\frac{1}{12}$–$\frac{1}{60}$ gr. (0.005–0.0011 gm.). Max. dose, single, $\frac{1}{60}$ gr. Application, 1% solution.

Homaxonial, Homaxonic (*hom-aks-on'-e-al, hom-aks-on'-ik*) [ὁμός, similar; ἄξων, axis]. Having equal axes.

Homedric (*hom-ed'-rik*) [ὁμός, the same; ἕδρα, a base]. Having equal facets.

Homedrous (*hom-ed'-rus*). 1. See *Homedric.* 2. Pertaining to different diseases affecting the same part of the organism.

Homeobioethny, Homœobioethny (*hom-e-o-bi-o-eth'-ne*) [ὁμοιος, like; βίος, life; ἔθνος, a people]. The condition of being of the same race. Syn., *Homeoethny.*

Homeobiotic, Homœobiotic (*hom-e-o-bi-ot'-ik*) [ὁμοιος, like; βιος, life]. 1. Similar in habits of life. 2. Suited to a certain position in life; applied to diets. 3. Homologous.

Homeoethny, Homœoethny (*hom-e-o-eth'-ne*). See *Homeobioethny.*

Homeoosteoplasty (*ho-me-o-os-te-o-plas'-te*) [ὁμοιος, like; ὀστέον, bone; πλάσσειν, to mould]. The grafting of a piece of bone similar to that upon which it is grafted.

Homeosemous (*hom-e-o-se'-mus*) [ὁμοιος, like; σημεῖον, a sign]. Similar in import; applied to symptoms.

Homeothermy (*ho-me-o-thur'-me*) [ὁμοιος, like; θέρμη, heat]. The condition of having a temperature which is not affected by environment.

Homo (*ho'-mo*) [L., pl. *homines*]. Man. **H. alatus,** one who has projecting scapulas. **H. diluvii testis** (Scheuzer), the fossil bones of a large salamander supposed to be human. **H. fatuus,** an idiot. **H. hirsutus, H. pilosus,** one who is affected with general hypertrichosis. **H. sapiens,** the species man.

Homoarecolin (*ho-mo-ar-e'-kol-in*). $C_7H_{10}(C_2H_5)NO_2$. The ethyl ether of arecaidin (*q. v.*). A yellowish liquid soluble in water or alcohol. The hydrobromid forming colorless soluble crystals melting at 119° C. is recommended as a substitute for arecolin.

Homochelidonin (*ho-mo-kel-id'-ōn-in*). $C_{22}H_{21}NO_4$. A constituent of *Cheildonium majus,* L.

Homochinin. See *Homoquinon.*

Homochronous. See *Homeochronous* (Illus. Dict.).

Homococain (*ho-mo-ko'-kah-in*). See *Cocaethylin.*

Homocresol (*ho-mo-kre'-sol*). See *Guaiacol Ethyl.*

Homocricious (*ho-mo-kre'-shus*) [ὁμός, similar; κρικος, a ring]. Having the rings and articulations alike.

Homocuminate (*ho-mo-ku'-min-āt*). A salt of homocuminic acid.

Homodermatous, Homodermous (*ho-mo-dur'-mat-*

us, -dur'-mus) [ὁμός, similar; δέρμα, skin]. Having similar skin on all parts of the body.

Homogangliate (*ho-mo-gang'-gle-āt*) [ὁμός, similar; γάγγλιον, ganglion]. Having symmetrically arranged ganglia.

Homogeneal (*ho-mo-je'-ne-al*). Homogeneous.

Homogeneous. (See Illus. Dict.) 2. Coming from the same ancestral origin.

Homoguaiacol (*ho-mo-gwi'-ak-ol*). See *Creosol* (Illus. Dict.).

Homolecithal (*ho-mo-les'-ith-al*) [ὁμός, similar; λέκιθος, yolk of an egg]. See *Alecithal* (Illus. Dict.). Cf. *Centrolecithal; Heterolecithal; Telolecithal.*

Homomerous (*ho-mom'-ur-us*) [ὁμός, similar; μέρος, a part]. Having the parts alike.

Homophagous (*ho-mof'-ag-us*). See *Omophagous* (Illus. Dict.).

Homophonous (*ho-mof'-on-us*) [ὁμός, similar; φωνή, a sound]. Relating to words spelled differently but indistinguishable in sound; it is applied to different conceptions.

Homoplastic. (See Illus. Dict.) 1. Applied to new-growths in which there has been no cytomorphosis, the cells resembling those of the parent tissue, as in angioma and glioma. Cf. *Heteroplastic.*

Homoplastid (*ho-mo-plas'-tid*) [ὁμός, similar; πλάσσειν, to form]. An organism each cell of which is endowed with the power of reproducing the species.

Homoquinin (*ho-mo-kwi'-nin*). $C_{19}H_{22}N_2O_2$. A crystalline alkaloid soluble in alcohol or chloroform, found in the bark of *Cinchona pedunculata*, Karst, and of *Remijia purdieana*, Wedd (cuprea bark). Syn., *Cuprein quinin.*

Honor capitis (*ho'-nor kap'-it-is*). The hair of the head.

Honthin, Hontin (*hon'-thin, -tin*) [named from the town of the discoverer]. A proprietary, odorless, tasteless preparation, said to consist of tannin, albumin, and keratin; an intestinal astringent. Dose, 8–20 gr. (0.5–1.2 gm.) 2 or 3 times daily; infants, 4–5 gr. (0.25–0.32 gm.) 4 times daily.

Hookworm Disease. Uncinariasis.

Hopea. (See Illus. Dict.) **H. micrantha**, Hook, a species indigenous to Malaya, and **H. splendida**, de Vriese, a species of Borneo, yield in part the Indian or East Indian dammar of commerce.

Hoplocephalus (*hop-lo-sef'-al-us*) [ὅπλον, a shield; κέφαλή, head]. A genus of serpents of the family *Elapidæ*. **H. curtus**, the Australian black snake, furnishes a very toxic venom.

Hopogan (*hop'-o-gan*). The commercial name for a peroxid of magnesium.

Hora (*ho'-rah*) [L., hour]. The age of puberty; manhood.

Horæa (*ho-re'-ah*) [ὡραῖα, the season of ripening]. The menses.

Horismascope (*hor-is'-mah-skōp*) [ὅρισμα, a determination; σκοπεῖν, to examine]. An instrument designed for the detection of albumin peptones, biliary constituents, etc , in urine.

Hormoid (*hor'-moid*) [ὅρμος, a necklace; εἶδος, likeness]. Necklace-shaped.

Horse-sickness. (See Illus. Dict.) **H., African**, an infectious disease of horses due to the facultative parasite *Œdemamyces*, which is believed to be taken into the body by eating dew-laden grass. See *Edemamycosis.*

Hot-foot. See *Ignipedites.*

Houttuynia (*ho-ut-tin'-e-ah*) [*Mart. Houttuyn*, Dutch physician]. A genus of plants of the order *Piperaceæ*. **H. californica**, Benth., yerba de mansa, indigenous to California, Mexico, and South America, is stomachic; the rhizome is used in malaria and gonorrhea. Dose of fld. ext., 15–60 ♏ (0.92–3.69 c.c.).

Huckleberries (*huk-el-ber'-ēz*) [corruption of *whortleberry*]. The fruit of various species of *Gaylussacia* and of *Vaccinium*. **H., Dried**, recommended by Winternitz in the dietetic management of diarrhea in enteritis (250 gm. to 1 liter of water, boiled down to 750 c.c. and strained). **H., Red**, *Vaccinium vitis-idæa.*

Humanized (*hu'-man-īzd*). Applied to viruses which have passed through a human being.

Humate (*hu'-māt*). A salt of humic acid.

Humboldtin (*hum-bolt'-in*). See *Iron Oxalate.*

Humin (*hu'-min*). $C_{69}H_{54}O_{27}$. An amorphous substance with acid reaction contained in humus. Syn., *Humic acid; Ulmic acid.*

Huminal (*hu'-min-al*). An extract of peat.

Humorism (*hu'-mor-izm*). See *Humoral Pathology* (Illus. Dict.)

Humorist (*hu'-mor-ist*). See *Humoralist* (Illus. Dict.).

Hunger. (See Illus. Dict.) **H., Air.** See under *Diabetes mellitus* (Illus. Dict.).

Hurin (*hu'-rin*). A poisonous crystallizable substance contained in the sap of *Hura crepitans*, L.; it melts at 100° C. and decomposes at a higher temperature.

Hurmal, Hurmaro (*hur'-mal, hur-mah'-ro*). The Indian name for *Peganum harmala*, L. (*q. v.*).

Husk. See *Hoose* (Illus. Dict.).

Hya-Hya. In British Guiana, the milk-tree, *Tabernæmontana utilis*, W. et Arn.

Hyal (*hi'-al*). See *Hyoid* (Illus. Dict.).

Hyalitis. (See Illus. Dict.) **H. punctata**, a form characterized by punctate opacities on or near the ventral part of the hyaloid membrane. **H. purulenta, H. suppurativa**, inflammation of the vitreous body with infiltration of large numbers of wandering lymphoid cells wholly or partly changing into an abscess.

Hyaloma (*hi-al-o'-mah*) [ὑαλος, glass]. The conversion of the eye into a hyaline mass.

Hyalomitome, Hyalotome (*hi-al-o-mi'-tōm, hi-al'-o-tōm*). See *Paramitome* (Illus. Dict.).

Hyalomucoid (*hi-al-o-mu'-koid*) [ὑαλος, glass; *mucus*; εἶδος, likeness]. A mucoid found by Mörner in the fluid of the vitreous humor.

Hyaloserositis (*hi-al-o-se-ro-si'-tis*) [ὑαλος, glass; *serum*]. Chronic inflammation of the serous membranes with formation of a dense fibrohyaline investment in certain regions; it is supposed to be due to microorganisms of low virulence.

Hyalosome (*hi-al'-o-sōm*) [ὑαλος, glass; σῶμα, body]. A body that resembles a nucleolus, but stains slightly by either nuclear or plasmatic dyes.

Hyboma (*hi-bo'-mah*) [ὑβός, humpbacked]. Humpback, gibbosity.

Hybometer (*hi-bom'-et-ur*) [ὑβός, humpbacked; μέτρον, measure]. An apparatus for measuring pathologic gibbosities.

Hydaleous (*hi-da'-le-us*) [ὑδαλέος, watery]. Dropsical.

Hydarthros, Hydarthrus (*hi-dar'-thros, -thrus*). See *Hydrarthrosis* (Illus. Dict.).

Hydatic (*hi-dat'-ik*). Containing hydatids.

Hydatism (*hi'-dat-ism*) [ὑδωρ, water]. The sound caused by the moving of pathologic fluid in a body-cavity.

Hydatoid (*hi'-dat-oid*) [ὑδωρ, water; εἶδος, likeness]. 1. Hydatiform. 2. Watery. 3. The aqueous humor.

Hydradenomes (*hi-drad'-en-ōmz*) [ὑδωρ, water; ἀδήν, gland]. Jacquet and Darier's name for nævi cysteptheliomatosi disseminati, a skin disease marked by the formation of papules, varying in size from that of a pin-head to that of a pea, without subjective symp-

toms. It is attributed to adenoid epithelioma of the sweat-glands.

Hydraeroperitoneum, Hydraeroperitonia (*hi-drah-er-o-per-it-o-ne'-um, -o'-ne-ah*) [ὑδωρ, water; ἀηρ, air; *peritoneum*]. A collection of gas and fluid in the peritoneal cavity.

Hydragogin (*hi-drag'-oj-in*). A diuretic and cardiac tonic containing tincture of digitalis, tincture of strophanthus, scillipicrin, scillitoxin, and oxysaponin. Dose, 10–15 drops.

Hydramyl (*hi'-dram-il*). See *Amyl Hydria.*

Hydrangin (*hi-dran'-jin*). A crystalline glucosid from the root of *Hydrangea arborescens*, L. It melts at 235° C. and by action of dilute acids decomposes into glucose and a resin-like mass.

Hydrangiography, Hydrangeiography (*hi-dran-ji-og'-raf-e*) [ὑδωρ, water; ἀγγεῖον, vessel; γράφειν, to write]. A description of the lymphatic vessels, their anatomy, nature, functions, diseases, etc. Syn., *Angiohydrography.*

Hydrangiotomy, Hydrangeiotomy (*hi-dran-ji-ot'-o-me*) [ὑδωρ, water; ἀγγεῖον, vessel; τέμνειν, to cut]. The dissection of the lymphatics.

Hydrargotin (*hi-drar'-jo-tin*). Mercury tannate. See under *Hydrargyrum* (Illus. Dict.).

Hydrargyrate (*hi-drar'-ji-rāt*). Relating to mercury; containing mercury.

Hydrargyric (*hi-drar'-ji-rik*). Relating to mercury; mercuric.

Hydrargyrol (*hi-drar'-ji-rol*). Same as *Mercury Paraphenylthionate.*

Hydrargyrolseptol (*hi-drar-ji-rol-sep'-tol*). Same as *Mercury Quinoseptolate.*

Hydrargyrosis (*hi-drar-ji-ro'-sis*). 1. See *Hydrargyriasis* (Illus. Dict.). 2. Mercurial friction or fumigation.

Hydrargyrum. (See Illus. Dict.) **H. Hermophenylicum.** See *Hermophenyl.* **H. Sulfoichthyolicum,** Unna's mixture of sodium sulfoichthyolate, 10 parts; corrosive sublimate, 3 parts.

Hydrastin. (See Illus. Dict.) **H. Hydrochlorate,** an amorphous white powder soluble in water; it is astringent, alterative, and hemostatic. Dose, ½–1 gr. (0.032–0.065 gm.) every 2 hours if needed. Application as astringent, 0.1% to 0.5% solution; in skin-diseases, 1% ointment. It is recommended highly in chronic bronchitis. Dose, 10–20 drops of a solution of 15 gr. in 5 drams of water 4 times daily.

Hydrastinin. (See Illus. Dict.) **H. Hydrochlorid,** $C_{11}H_{11}NO_2$. $HCl + H_2O$, dull lemon-yellow crystalline powder soluble in water; used as uterine hemostatic, emmenagog, and vasoconstrictor. Dose, ¼–½ gr. (0.015–0.032 gm.) 3 or 4 times daily. Max. daily dose, 2 gr. (0.13 gm.). Injection, 8–16 ♏ (0.5–1 c.c.) of 10% solution.

Hydrastis. (See Illus. Dict.) **H., Glycerite of,** hydrastis, 1000 gm.; glycerin, 500 c.c.; alcohol and water, each of sufficient quantity to make 1000 c.c.

Hydrastol (*hi-dras'-tol*). A proprietary remedy said to consist of liquid albolene and the active ingredients of hydrastis and cinnamon oil.

Hydrate. (See Illus. Dict.) **H., Cryo-,** those salts which combine with water and are solid only at temperatures below 0° C.

Hydratic (*hi-drat'-ik*). Partaking of the nature of a hydrate.

Hydraulics (*hi-draw'-liks*) [ὑδραυλις, a hydraulic organ]. The science of liquids in motion.

Hydrazin. (See Illus. Dict.) **H.-benzol.** See *Phenylhydrazin* (Illus. Dict.). **H. Sulfate,** $NH_2 . NH_2H_2SO_4$, a crystalline substance obtained from triazoacetic acid and sulfuric acid with heat; soluble in hot water. It is antiseptic, bactericidal, and a powerful reducing agent. Syn., *Diamin sulfate; Diamidogen sulfate.*

Hydrazobenzene, Hydrazobenzol (*hi-draz-o-ben'-zēn, -zol*). $C_{12}H_{12}N_2$. Colorless tablets with odor of camphor; soluble in alcohol; melt at 131° C.; obtained by reducing azobenzene with ammonium sulfid.

Hydrepigastrium (*hi-drep-e-gas'-tre-um*) [ὑδωρ, water; *epigastrium*]. A collection of fluid between the abdominal muscles and the peritoneum.

Hydriatics (*hi-dri-at'-iks*). See *Hydrotherapeutics* (Illus. Dict.).

Hydriodate (*hi-dri'-o-dāt*). A compound of hydriodic acid with an element or radicle.

Hydriodid (*hi-dri'-o-did*). A compound of hydriodic acid with a base.

Hydro (*hi'-dro*) [ὑδωρ, water]. A hydropathic establishment.

Hydroabdomen (*hi-dro-ab-do'-men*). See *Ascites* (Illus. Dict.).

Hydroadenitis (*hi-dro-ad-en-i'-tis*). See *Hydradenitis* (Illus. Dict.).

Hydroaeric (*hi-dro-a'-er-ik*) [ὑδωρ, water; ἀήρ, air]. Applied in auscultation to the sound given by cavities filled with air and water.

Hydroappendix (*hi-dro-ap-en'-diks*). The dilation of the vermiform appendix with water.

Hydroargentic (*hi-dro-ar-jen'-tik*) [*hydrogen; argentum*]. Containing hydrogen and silver.

Hydroaric (*hi-dro-ar'-ik*) [ὑδωρ, water; ὠάριον, a small egg]. Relating to ovarian dropsy.

Hydrocarbonism (*hi-dro-kar'-bon-izm*). Poisoning with hydrocarbons, principally observed among miners and workers in petroleum refineries or in those who have made internal use of petroleum. It is marked by dizziness, cyanosis, loss of consciousness, anesthesia, convulsions, loss of reflexes, weakness of the pulse and of the breathing.

Hydrocele. (See Illus. Dict.) **H. colli,** a cystic tumor occurring in the neck between the angle of the inferior maxilla and the mastoid process. Syn., *H., Maunoir's.* **H. communicans,** one communicating with the peritoneal cavity. **H. complicata,** one complicated with a hernia in juxtaposition. **H., Dupuytren's,** hydrocèle en bissac; a bilocular hydrocele of the tunica vaginalis testis. **H., External,** a collection of fluid in the areolar tissue of the scrotum. **H. fœminæ, H. fœminea,** hydrocele of the labium pudendi majus. **H., Gibbon's,** one coexistent with a voluminous hernia. **H. hernialis,** a collection of fluid in a hernial sac due to obstruction of its neck. **H., Internal,** that in the coverings of the testicle or spermatic cord.

Hydrocephalus. (See Illus. Dict.) **H., Active, H., Acute, H., Internal,** tuberculous meningitis.

Hydrochemistry (*hi-dro-kem'-is-tre*) [ὑδωρ, water; χημεία, chemistry]. The chemistry of liquids.

Hydrochezia (*hi-dro-ke'-ze-ah*) [ὑδωρ, water; χέζειν, to defecate]. Watery or serous diarrhea.

Hydrochinonuria (*hi-dro-kin-on-u'-re-ah*) [*hydroquinon; οὖρον*, urine]. The presence in the urine of hydroquinon due to ingestion of salol, resorcin, etc.

Hydrochloric Acid in Gastric Juice, Maly's Theory of. See under *Gastric Juice.*

Hydrocolpos (*hi-dro-kol'-pos*) [ὑδωρ, water; κόλπος, vagina]. A vaginal retention-cyst containing a watery fluid.

Hydroconion, Hydrokonion (*hi-dro-ko'-ne-on*) [ὑδωρ, water; κονιεν, to fill with dust]. An atomizer; a spraying apparatus.

Hydrocoridin (*hi-dro-kor'-id-in*). See *Ptomains, Table of* (Illus. Dict.).

Hydrocyanism (*hi-dro-si'-an-izm*). Poisoning with

hydrocyanic acid; in acute cases marked by loss of consciousness and a sudden fall, generally by cramp, cyanosis, and paralysis.

Hydrocystoma (*hi-dro-sis-to′-mah*). See *Hidrocystoma* (Illus. Dict.).

Hydrodiarrhea (*hi-dro-di-ar-e′-ah*) [ὑδωρ, water; *diarrhea*]. Serous diarrhea.

Hydrodiascope (*hi-dro-di′-as-kōp*) [ὑδωρ, water; διά, through; σκοπεῖν, to view]. A device shaped like a pair of spectacles, consisting of two chambers filled with physiologic salt solution, worn to correct keratoconus and astigmia.

Hydrodiffusion (*hi-dro-dif-u′-shun*). The physical admixture of two fluids of different densities.

Hydrodynamics (*hi-dro-di-nam′-iks*) [ὑδωρ, water; δύναμις, power]. The branch of mechanics treating of fluids in motion.

Hydroelectrization (*hi-dro-e-lek-tri-za′-shun*). Electrization in which water is used as an electrode.

Hydroencephalocele (*hi-dro-en-sef-al′-o-sēl*). See *Hydrencephalocele* (Illus. Dict.).

Hydroenterocele (*hi-dro-en-ter′-o-sēl*). See *Hydrenterocele* (Illus. Dict.).

Hydroepigastrium. See *Hydrepigastrium.*

Hydroepiplocele (*hi-dro-ep-ip′-lo-sēl*). An epiplocele with water in the sac.

Hydroexostosis (*hi-dro-eks-os-to′-sis*). An exostosis accompanied by an accumulation of water.

Hydroferrocyanate, Hydroferrocyanid (*hi-dro-fer-o-si′-an-āt, -id*). A compound of hydroferrocyanic acid with a base.

Hydrofluate (*hi-dro-flu′-āt*). A salt of hydrofluoric acid.

Hydrofluosilicate (*hi-dro-flu-o-sil′-ik-āt*). A salt of hydrofluosilicic acid.

Hydrogalvanic (*hi-dro-gal-van′-ik*). Relating to galvanism developed by action of fluids.

Hydrogaster (*hi-dro-gas′-tur*) [ὑδωρ, water; γαστήρ, stomach]. Ascites.

Hydrogastria (*hi-dro-gas′-tre-ah*). A gastric disorder from fluid due to the esophageal and pyloric orifices being constricted.

Hydrogel (*hi′-dro-jel*). An inorganic colloid.

Hydrogen. (See Illus. Dict.) **H. Arsenid,** a combination of hydrogen and arsenic forming a solid, As_2H, also a highly toxic gas, AsH_3, with odor of garlic and burning with a green flame. Syn., *Arsenamin; Arsin.* **H. Diammonium Phosphate.** See *Ammonium Phosphate, Dibasic.* **H. Persulfid,** H_2S_2, a heavy, yellow oil with foul, pungent odor and acrid taste, giving off irritating vapors. It bleaches organic coloring-matters and is a powerful antiseptic. **H. Selenid,** a foul-smelling gas, H_2Se, the inhalation of a small quantity of which destroys the sense of smell for hours, attacks the eyes, and causes severe coryza and coughing which endures for days.

Hydrogenation (*hi-dro-jen-a′-shun*). The process of causing a combination with hydrogen.

Hydrogenoid (*hi-droj′-en-oid*) [ὑδωρ, water; γεννᾶν, to produce; εἶδος, likeness]. Applied to a constitution or temperament intolerant of moisture.

Hydrogenous (*hi-droj′-en-us*). Relating to hydrogen.

Hydrogerous (*hi-droj′-ur-us*) [ὑδωρ, water; *gerere,* to bear]. Containing or bearing water.

Hydrogol (*hi′-dro-gol*). A proprietary preparation said to be an aqueous solution of colloidal silver. It is used in gonorrhea.

Hydrokinetics (*hi-dro-kin-et′-iks*) [ὑδωρ, water; κινεῖν, to set in motion]. The science of the motions of fluids and the causative forces.

Hydrokonion. See *Hydroconion.*

Hydroleate (*hi-dro′-le-āt*). A salt of hydroleic acid.

Hydrolysis (*hi-drol′-is-is*) [ὑδωρ, water; λύειν, to loose]. The decomposition of water.

Hydromediastinum (*hi-dro-med-e-as′-tin-um*) [ὑδωρ, water; *mediastinum*]. A serous effusion into the mediastinum.

Hydromeninx (*hi-dro-men′-inks*) [ὑδωρ, water; μῆνιγξ, membrane]. Dropsy of the membranes of the brain.

Hydromyelocele (*hi-dro-mi-el′-o-sēl*) [ὑδωρ, water; μυελός, marrow; κοιλία, cavity]. 1. Excessive accumulation of fluid in the central canal of the spinal cord. 2. A variety of spina bifida in which remains of the spinal cord cover the tumor.

Hydromyoma (*hi-dro-mi-o′-mah*) [ὑδωρ, water; *myoma*]. A cystic myoma containing serous fluid.

Hydronephrectasia (*hi-dro-nef-rek-ta′-ze-ah*) [ὑδωρ, water; νεφρός, a kidney; ἔκτασις, distention]. Dropsical enlargement of the kidney.

Hydronephros (*hi-dro-nef′-ros*) [ὑδωρ, water; νεφρός, kidney]. 1. A dropsical kidney. 2. Hydronephrectasia.

Hydrooligocythemia (*hi-dro-ol-ig-o-si-the′-me-ah*) [ὑδωρ, water; ὀλίγος, few; κύτος, cell; αἷμα, blood]. A form of secondary anemia in which there is an increase in the proportion of the serum to the corpuscles of the blood.

Hydroparasalpinx (*hi-dro-par-ah-sal′-pingks*) [ὑδωρ, water; παρά, beside; σάλπινξ, tube]. An accumulation of water in the accessory tubes of the oviduct.

Hydroperione (*hi-dro-per′-e-ōn*) [ὑδωρ, water; περί, around; ὠόν, ovum]. A seroalbuminous liquid described by Breschet existing between the decidua vera and the decidua reflexa and believed to nourish the embryo at an early period.

Hydroperipneumonia (*hi-dro-per-e-nu-mo′-ne-ah*) [ὑδωρ, water; περί, around; πνεύμων, a lung]. Pneumonia with pleural effusion.

Hydroperitonitis (*hi-dro-per-it-on-i′-tis*). Peritonitis attended with watery effusion.

Hydroperoxid (*hi-dro-pur-oks′-id*). Hydrogen peroxid.

Hydrophlogosis (*hi-dro-flo-go′-sis*) [ὑδωρ, water; φλόγωσις, a burning]. Inflammation attended with serous effusion.

Hydrophore (*hi′-dro-fōr*) [ὑδωρ, water; φορεῖν, to bear]. An apparatus consisting of a short grooved catheter used as an irrigating dilator of the urethra.

Hydrophorous (*hi-drof′-or-us*). Hygroscopic.

Hydropleuria (*hi-dro-plu′-re-ah*). See *Hydrothorax* (Illus. Dict.).

Hydropleuritis (*hi-dro-plu-ri′-tis*). Pleurisy attended with effusion.

Hydropneumatic (*hi-dro-nu-mat′-ik*) [ὑδωρ, water; πνεῦμα, air]. Relating to water and air.

Hydropoid (*hi′-dro-poid*) [ὕδρωψ, dropsy; εἶδος, likeness]. Dropsical.

Hydropotherapy (*hi-dro-po-ther′-ap-e*) [ὕδρωψ, dropsy; θεραπεία, therapy]. The therapeutic use of ascitic fluid.

Hydrops. (See Illus. Dict.) **H. ex vacuo,** a condition arising from past inflammation leaving the lung unable to expand and the space between the contracted lung and the chest-wall filled with fluid. **H. ovarii profluens,** an evacuation of a true ovarian cyst through the tube into the uterus. **H. tubæ profluens,** hydrosalpinx in which the watery discharges are said to occur from the uterus and vagina, in gushes, the uterine end of the tube from time to time allowing the passage of the fluid. [Roberts.]

Hydropyonephrosis (*hi-dro-pi-o-nef-ro′-sis*) [ὑδωρ, water; πύον, pus; νεφρός, kidney]. Distention of the pelvis of the kidney with urine and pus.

Hydrorenal (*hi-dro-re′-nal*) [ὑδωρ, water; *ren,* kidney]. Relating to dropsy of the kidney.

Hydrorheostat (*hi-dro-re'-o-stat*). A rheostat in which the resistance is furnished by water.

Hydrorrhachis. (See Illus. Dict.) **H., External.** See *Meningocele* (Illus. Dict.).

Hydroscopy (*hi-dros'-ko-pe*) [ὑδωρ, water; σκοπεῖν, to examine]. The investigation of water or watery fluids.

Hydrospirometer (*hi-dro-spi-rom'-et-ur*). A spirometer in which a column of water acts as an index.

Hydrostatic. (See Illus. Dict.) **H. Exploration,** M. Sée's method of diagnosing pelvic disease by palpation of the abdomen while the patient is extended in a bath covering its surface.

Hydrosyringomyelia (*hi-dro-sir-ing-go-mi-e'-le-ah*) [ὑδωρ, water; σῦριγξ, tube; μυελός, marrow]. Dilation of the central canal of the spinal cord by watery effusion attended with degeneration and the formation of cavities.

Hydrotaxis (*hi-dro-taks'-is*) [ὑδωρ, water; τάξις, arrangement]. The determination of the direction of movement by moisture. Cf. *Hydrotropism.*

Hydrothermal (*hi-dro-thur'-mal*) [ὑδωρ, water; θέρμη, heat]. Pertaining to warm water; said of springs.

Hydrothermostat (*hi-dro-thur'-mo-stat*) [ὑδωρ, water; θέρμη, heat; στατός, standing]. An apparatus for providing a continuous degree of heat for therapeutic purposes.

Hydrotimeter (*hi-dro-tim'-et-ur*) [ὑδωρ, water; μέτρον, measure]. An apparatus to determine the amount of calcareous salts in water by means of soap.

Hydroureter (*hi-dro-u'-re-tur*). Dropsy of the ureter.

Hydroxycamphor (*hi-droks-e-kam'-for*). $C_{10}H_{16}O_2$. A faint yellow liquid, with odor of turpentine and possessing weak acid properties; it boils at 250° C.

Hydrozone (*hi'-dro-zōn*) [ὑδωρ, water; *ozone*]. An aqueous solution of chemically pure hydrogen dioxid; it is used as a bactericide and healing agent.

Hydruret (*hi'-dru-ret*). See *Hydrid* (Illus. Dict.).

Hyenanchin, Hyænanchin (*hi-e-nan'-kin*) [ὑαινα, hyena; ἀγχειν, to strangle]. An amorphous, neutral, bitter, highly toxic substance contained in the outer envelopes of the fruit of *Toxicodendron capense,* Thbg., a euphorbiaceous plant of South Africa the fruit of which is used to poison hyenas. The poison is like strychnin in action, except that it affects the cerebrum and does not act on the nerve-trunks or muscles.

Hygiama (*hi-ge-am'-ah*). A dietetic said to consist of milk, cereals, and cacao.

Hygieinism (*hi'-je-in-izm*) [ὑγίεια, health]. Sanitation.

Hygieinization (*hi-je-in-i-za'-shun*). The establishment of sanitary conditions.

Hygiology (*hi-ge-ol'-o-je*). See *Hygieology* (Illus. Dict.).

Hygrol (*hi'-grol*). Colloidal mercury.

Hygrostomia (*hi-gro-sto'-me-ah*) [ὑγρὸς, moist; στόμα, mouth]. Chronic salivation.

Hyla (*hi'-lah*). See *Paragueduct* (Illus. Dict.).

Hyle (*hi'-le*) [ὕλη, matter]. The primitive undifferentiated matter, mass, or body in nature. Cf. *Protyle.*

Hylephobia (*hi-le-fo'-be-ah*) [ὕλη, matter; φόβος, fear]. Insane dread of materialistic doctrines.

Hylic (*hi'-lik*). 1. Relating to primitive matter. 2. Adami's name for primal pulp-tissue.

Hylology (*hi-lol'-o-je*) [ὕλη, matter; λόγος, science]. The science of elementary or crude material.

Hyloma (*hi-lo'-mah*) [ὕλη, matter]. Adami's term for a tumor originating in one of the primal pulp-tissues; subdivided into epihyloma, hypohyloma, and mesohyloma.

Hylozoism (*hi-lo-zo'-izm*) [ὕλη, matter; ζωή, life]. The theory that all matter is endowed with life.

Hymenogeny (*hi-men-oj'-en-e*) [ὑμήν, a membrane; γεννᾶν, to produce]. The formation of a pellicle on the globules of one liquid by simple contact with another liquid, as when liquid albumin falls into liquid fat. Cf. *Haptogen.*

Hymenolepis (*hi-men-o-lep'-is*). See *Parasites, Table of* (Illus. Dict.).

Hymenopterism (*hi-men-op'-tur-izm*) [*Hymenoptera,* an order of insects]. Poisoning from the stings of wasps, bees, hornets, or other hymenopterous insects.

Hyocholalic (*hi-o-ko-la'-lik*) [ὗς, a pig; χολή, bile]. Derived from pig's bile, as hyocholalic acid.

Hyolaryngeal (*hi-o-lar-in'-je-al*). Related to or connected with the hyoid bone and the larynx.

Hyomandibular (*hi-o-man-dib'-u-lar*). Relating to the hyoid bone and the inferior maxilla.

Hyomental (*hi-o-ment'-al*). Relating to the hyoid bone and the chin.

Hyoscyamin. (See Illus. Dict.) **H. Hydrobromate,** yellowish-white amorphous masses, with nauseous taste and odor of tobacco. It is mydriatic, hypnotic, and sedative. Dose, $\frac{1}{130}$–$\frac{1}{65}$ gr. (0.0005–0.001 gm.) several times daily. As hypnotic for insane, dose, $\frac{1}{8}$–$\frac{1}{4}$ gr. (0.008–0.016 gm.). **H., Pseudo-,** $C_{17}H_{23}NO_3$, that obtained from *Duboisia myoporoides,* R. Br., forming yellow needles with acrid, bitter taste, soluble in alcohol and chloroform, melting at 134° C. It is sedative and antispasmodic. Dose for the sane, $\frac{1}{120}$–$\frac{1}{60}$ gr. (0.0005–0.001 gm.). Inj. for insane, $\frac{1}{32}$–$\frac{1}{16}$ gr. (0.002–0.006 gm.).

Hyoscypicrin (*hi-os-e-pik'-rin*). A bitter glucosid from *Hyoscyamus niger,* L., forming a yellow amorphous mass soluble in water and alcohol; it splits into grape-sugar and hyoscyretin by action of hydrochloric acid.

Hyospondylotomy (*hi-o-spon-dil-ot'-o-me*) [ὑοειδής, hyoid; σπόνδυλος, a vertebra; τέμνειν, to cut]. In veterinary practice, puncture of the laryngeal pouch.

Hyovertebrotomy (*hi-o-vur-te-brot'-o-me*). See *Hyospondylotomy.*

Hypacidemia (*hi-pas-id-e'-me-ah*) [ὑπό, under; *acid;* αἷμα, blood]. Deficiency of acid in the blood.

Hypacidity (*hi-pas-id'-it-e*) [ὑπό, under; *acidity*]. Subacidity; deficiency in acid constituents.

Hypactic (*hi-pak'-tik*) [ὑπάγειν, to carry down]. Slightly purgative. Syn., *Hypagog.* Cf. *Lapactic.*

Hypæmia. See *Hyphemia* (Illus. Dict.).

Hypagog (*hi'-pah-gog*). See *Hypactic.*

Hypantrum (*hi-pan'-trum*) [ὑπό, under; ἄντρον, a cavern]. A recess in the vertebral neural arch which lodges a hyposphene. Cf. *Hyposphene; Zygantrum.*

Hypaphorin (*hi-paf'-or-in*). A crystalline alkaloid derived from the seeds of *Erythrina lithosperma,* Blume., forming colorless crystals, dextrogyre and soluble in water, decomposing at 220° C. without melting.

Hyparterial (*hi-par-te'-re-al*) [ὑπό, under; *artery*]. Situated beneath an artery.

Hypasthenia (*hi-pas-the'-ne-ah*) [ὑπό, under; ἀσθένεια, weakness]. Loss of strength in a slight degree.

Hypatmism (*hi'-pat-mizm*) [ὑπό, under; ἀτμός, vapor]. Fumigation.

Hypaxial (*hi-paks'-e-al*) [ὑπό, under; *axis*]. Situated beneath or ventrad of the body-axis. Cf. *Epaxial.*

Hypectasia, Hypectasis (*hi-pek-ta'-ze-ah, hi-pek'-ta-sis*) [ὑπό, under; ἔκτασις, a stretching]. Slight or moderate distention.

Hypeosinophil (*hi-pe-o-sin'-o-fil*) [ὑπό, under; *eosinophil*]. 1. A histologic element which does not stain completely with eosin. 2. Staining imperfectly with eosin.

Hyperabduction (*hi-pur-ab-duk'-shun*). See *Superabduction* (Illus. Dict.).

Hyperacanthosis (*hi-pur-ak-an-tho′-sis*) [*ὑπέρ*, over; *ἀκανθα*, thorn]. Abnormal growth of the prickle-cell layer of the epidermis, as in warts and condylomas. Syn., *Acanthoma simplex*.

Hyperacuity (*hi-per-a-ku′-e-te*) [*ὑπέρ*, over; *acuitas*, sharpness of vision]. Abnormal or morbid acuity.

Hyperadenoma (*hi-pur-ad-en-o′-mah*) [*ὑπέρ*, over; *ἀδήν*, gland]. An enlarged lymph-gland.

Hyperaeration (*hi-pur-a-er-a′-shun*) [*ὑπέρ*, over; *ἀήρ*, air]. The condition of being furnished with excess of ozone.

Hyperalbuminemia (*hi-pur-al-bu-min-e′-me-ah*) (rubra). Von Jaksch's term for pernicious anemia characterized by the presence of more than the normal percentage of nitrogen in the blood.

Hyperalgesia. (See Illus. Dict.) **H., Acoustic, H., Auditory,** a painful sensation in the ear caused by noises. Syn., *Hyperesthesia acustica*. **H., Muscular,** muscular fatigue and exhaustion attending certain diseases. **H., Olfactory,** painful sensitiveness of the olfactory apparatus to certain odors.

Hyperalimentation (*hi-pur-al-e-men-ta′-shun*). See *Superalimentation* (Illus. Dict.).

Hyperalimentosis (*hi-pur-al-e-men-to′-sis*). A morbid condition due to superalimentation.

Hyperalkalescence (*hi-pur-al-kal-es′-ens*). Excessive alkalinity.

Hyperanakinesis (*hi-pur-an-ak-kin-e′-sis*) [*ὑπέρ*, over; *ἀνακίνησις*, a moving upward, excitement]. Excessive activity of a part. **H. ventriculi,** exaggerated activity of the gastric functions.

Hyperanarthric (*hi-pur-an-ar′-thrik*) [*ὑπέρ*, over; *a*, priv.; *ἄρθρον*, a joint]. Excessively defective in the joints.

Hyperaphic (*hi-pur-af′-ik*) [*ὑπέρ*, over; *ἅπτειν*, to touch]. Having morbid sensitiveness to touch.

Hyperaphy. See *Hyperaphia* (Illus. Dict.).

Hyperarithmous (*hi-pur-ar-ith′-mus*) [*ὑπέρ*, over; *ἀριθμός*, a number]. Supernumerary.

Hyperarthric (*hi-pur-ar′-thrik*) [*ὑπέρ*, over; *ἄρθρόν*, joint]. Having supernumerary joints.

Hyperarthritic (*hi-pur-ar-thrit′-ik*). Relating to hyperarthritis.

Hyperazoturia (*hi-pur-az-ot-u′-re-ah*) [*ὑπέρ*, over; *a*, priv.; *ζωή*, life; *οὖρον*, urine]. Excess of nitrogenous matter in the urine.

Hypercardiotrophy (*hi-pur-kar-di-ot′-ro-fe*) [*ὑπέρ*, over; *καρδία*, heart; *τροφή*, nourishment]. Hypertrophy of the heart.

Hypercementosis (*hi-pur-sem-en-to′-sis*). See *Exostosis, Dental*.

Hyperchondroma (*hi-pur-kon-dro′-mah*) [*ὑπέρ*, over; *χόνδρος*, cartilage]. A cartilaginous tumor.

Hyperchromasia (*hi-pur-kro-ma′-se-ah*) [*ὑπέρ*, over; *χρῶμα*, color]. A condition characterized by excess of pigment.

Hyperchylia (*hi-pur-ki′-le-ah*) [*ὑπέρ*, over; *χυλός*, juice]. Excess of secretion.

Hypercinesis (*hi-pur-sin-e′-sis*). See *Hyperkinesis* (Illus. Dict.).

Hypercompensation (*hi-pur-kom-pen-sa′-shun*). The formation of more plastic material than is necessary to compensate for loss.

Hypercritical (*hi-pur-crit′-ik-al*). Relating to a crisis of excessive severity.

Hypercryalgesia (*hi-pur-kri-al-je′-ze-ah*) [*ὑπέρ*, over; *κρύος*, cold; *ἄλγησις*, pain]. Abnormal sensitiveness to cold.

Hypercusia (*hi-pur-ku′-ze-ah*). See *Hyperacusia* (Illus. Dict.).

Hypercyesis. (See Illus. Dict.) 2. The condition of conceptions following each other rapidly.

Hypercythemia (*hi-pur-si-the′-me-ah*) [*ὑπέρ*, over; *κύτος*, cell; *αἷμα*, blood]. Increase in the blood-corpuscles compared with the serum.

Hyperdacryosis (*hi-pur-dak-re-o′-sis*) [*ὑπέρ*, over; *δάκρυ*, a tear]. An excessive secretion of tears.

Hyperdermosis (*hi-pur-dur-mo′-sis*). See *Hyperdermatosis* (Illus. Dict.).

Hyperdesmosis (*hi-per-dez-mo′-sis*) [*ὑπέρ*, over; *δεσμός*, a bond]. Hypertrophy of the connective tissue.

Hyperdiacrisis (*hi-pur-di-ak′-ris-is*) [*ὑπέρ*, over; *διάκρισις*, a separating]. An abnormally severe crisis.

Hyperdiemorrhysis (*hi-per-di-e-mor′-e-sis*) [*ὑπέρ*, over; *διά*, through; *αἷμα*, blood; *ῥυσις*, flowing]. Excessive circulation of the blood through the veins.

Hyperdontogeny (*hi-pur-don-toj′-en-e*) [*ὑπέρ*, over; *ὀδούς*, tooth; *γεννᾶν*, to produce]. The occurrence of a third dentition in mature life.

Hypereccritic, Hyperecritic (*hi-pur-ek-rit′-ik*). Relating to hyperecrisis.

Hyperecrisis. See *Hypereccrisis* (Illus. Dict.).

Hyperemesis. (See Illus. Dict.) **H. lactantium,** intractable vomiting of nurslings.

Hyperemia. (See Illus. Dict.) **H., Arterial,** that due to increase of the blood-current from dilation of the arterioles. **H., Collateral, H., Compensatory,** congestion, either arterial or venous, in one part compensatory to inability in another part to fulfil its functions adequately. **H. of Fluxion.** See *H., Active* (Illus. Dict.). **H., Latent,** the condition following continued light treatment marked by distinct redness appearing after very slight stimulation and consisting in dilation of the cutaneous vessels, exudation, and local leukocytosis. **H. of Stasis.** See *H., Passive* (Illus. Dict.). **H. venosa, H., Venous,** that due to diminishment of the velocity of the current, from obstruction of the outflow through the veins.

Hyperenergy (*hi-pur-en′-ur-je*). Excessive energy or action.

Hyperenteritis (*hi-pur-en-ter-i′-tis*) [*ὑπέρ*, over; *ἔντερον*, intestine]. Acute intestinal inflammation; severe enteritis.

Hyperergia (*hi-pur-ur′-je-ah*) [*ὑπέρ*, over; *ἔργον*, work]. See *Hyperenergy*.

Hyperesthesia, Hyperesthesis. (See Illus. Dict.) **H., Vesical.** See *Bladder, Irritable*.

Hyperextension (*hi-pur-eks-ten′-shun*). In orthopedic procedure, excessive extension for the correction of deformities.

Hyperfibrination (*hi-pur-fi-brin-a′-shun*). See *Hyperinosis* (Illus. Dict.).

Hypergastritis (*hi-pur-gas-tri′-tis*). Very severe gastritis.

Hypergeusesthesia (*hi-pur-gu-zes-the′-ze-ah*). See *Hypergeusia* (Illus. Dict.).

Hypergeusis, Hypergeustia (*hi-pur-gu′-sis, hi-pur-gūs′-te-ah*). See *Hypergeusia* (Illus. Dict.).

Hypergigantosoma (*hi-pur-ji-gant-o-so′-mah*) [*ὑπέρ*, over; *γίγας*, a giant; *σῶμα*, body]. Extraordinary gigantism.

Hyperhedonia (*hi-pur-hed-o′-ne-ah*) [*ὑπέρ*, over; *ἡδονή*, pleasure]. Extreme delight in the gratification of a desire.

Hyperhematosia, Hyperhematosis (*hi-pur-hem-at-o′-ze-ah, hi-pur-hem-at-o′-sis*). 1. Extraordinary activity or pressure of the blood. 2. Excess of blood. Syn., *Hyperemosis; Hyperematosis*.

Hyperhemia, Hyperhæmia (*hi-pur-he′-me-ah*). See *Hyperemia* (Illus. Dict.).

Hyperiodate, Hyperiodid (*hi-pur-i′-o-dāt, -did*). A salt of periodic acid (hyperiodic).

Hyperisotonic (*hi-pur-is-o-ton′-ik*) [*ὑπέρ*, over; *ἴσος*, equal; *τόνος*, tone]. Applied to a solution of greater

density than the blood or some other fluid taken as a standard. Cf. *Hypoisotonic.*

Hyperisotonicity (*hi-pur-is-o-ton-is′-it-e*). The condition of infusions having too great a saline percentage.

Hyperkeratinization (*hi-pur-ker-at-in-i-za′-shun*). A hypertrophy of the epithelium seen in the palms and soles in chronic arsenical poisoning.

Hyperkeratomycosis (*hi-pur-ker-at-o-mi-ko′-sis*) [*ὑπέρ*, over; *κέρας*, horn; *μύκης*, fungus]. Hyperkeratosis caused by a parasitic fungus.

Hyperkeratosis. (See Illus. Dict.) 2. Abnormal development of the corneous layer of the epidermis. **H. diffusa congenita.** Synonym of *Seborrhœa squamosa neonatorum.* **H. lacunaris pharyngis,** a condition characterized by numerous hard white masses sometimes developing into long horny spines, projecting from the follicles of the lymphoid ring about the pharynx. It has been proved that it is not due to the leptothrix. Syn., *Pharyngomycosis leptothricia; Mycosis pharyngitis leptothricia* (*q. v.*).

Hyperleukocytosis (*hi-pur-lu-ko-si-to′-sis*). See *Hyperleukocythemia* (Illus. Dict.).

Hyperliposis (*hi-pur-lip-o′-sis*) [*ὑπέρ*, over; *λίπος*, fat]. An excess of fat-splitting ferment (lipase) in the blood.

Hypermanganate (*hi-pur-man′-gan-āt*). See *Permanganate* (Illus. Dict.).

Hypermanganic (*hi-pur-man-gan′-ik*). See *Permanganic* (Illus. Dict.).

Hypermature (*hi-pur-ma-chur′*). Overmature, as a cataract.

Hypermedication (*hi-pur-med-e-ka′-shun*). Excessive employment of drugs.

Hypermegalia, Hypermegaly (*hi-pur-meg-a′-le-ah, -meg′-al-e*) [*ὑπέρ*, over; *μέγας*, large]. Excessive enlargement.

Hypermegasoma (*hi-pur-meg-as-o′-mah*). See *Hypergigantosoma.*

Hypermegasthenic (*hi-pur-meg-as-then′-ik*) [*ὑπέρ*, over; *μέγας*, great; *σθένος*, strength]. Abnormally or excessively strong.

Hypermesosoma (*hi-pur-mes-o-so′-mah*) [*ὑπέρ*, over; *μέσος*, middle; *σῶμά*, body]. A stature measurably in excess of the ordinary.

Hypermetamorphic (*hi-pur-met-ah-morf′-ik*). Marked by hypermetamorphism; undergoing frequent transformations.

Hypermetrope (*hi′-pur-met-rōp*). See *Hyperope* (Illus. Dict.).

Hypermetrotrophy (*hi-pur-met-rot′-ro-fe*). See *Metrauxe* (Illus. Dict.).

Hypermicrosoma (*hi-pur-mik-ro-so′-mah*) [*ὑπέρ*, over; *μικρός*, small; *σῶμα*, body]. Extreme dwarfishness.

Hypermnesia. (See Illus. Dict.) 2. Retrocognition.

Hypermyelohemia (*hi-pur-mi-e-lo-he′-me-ah*) [*ὑπέρ*, over; *μυελός*, marrow; *αἷμα*, blood]. Hyperemia of the spinal marrow. Syn., *Myelyperentia.*

Hypermyotonia (*hi-pur-mi-o-to′-ne-ah*) [*ὑπέρ*, over; *μῦς*, muscle; *τόνος*, tone]. Excessive tonicity of the muscles.

Hypermyotrophia, Hypermyotrophy (*hi-pur-mi-ot-ro′-fe-ah, hi-pur-mi-ot′-ro-fe*) [*ὑπερ*, over; *μῦς*, muscle; *τροφή*, nourishment]. Hypertrophy of the muscular tissue.

Hypernanosoma (*hi-pur-nan-o-so′-ma*) [*ὑπέρ*, over; *νάνος*, a dwarf; *σῶμα*, body]. A stature low but exceeding dwarfishness.

Hypernephroid (*hi-pur-nef′-roid*) [*ὑπέρ*, over; *νεφρός*, kidney; *εἶδος*, likeness]. Suprarenal. **H. Tumors,** such as are derived from aberrant suprarenal tissue. See *Hypernephroma.*

Hypernephroma (*hi-pur-nef-ro′-mah*). A tumor derived from misplaced suprarenal rests; a suprarenal epithelioma. [Grawitz.] "Recent investigation indicates that some of these glandular structures are remains of the Wolffian body." [Gaylord and Aschoff.]

Hypernephrotrophy (*hi-pur-nef-rot′-ro-fe*) [*ὑπέρ*, over; *νεφρός*, kidney; *τροφή*, nourishment]. Hypertrophy of the kidney. Syn., *Nephrypertrophia.*

Hyperneuroma (*hi-pur-nu-ro′-mah*) [*ὑπέρ*, over; *νεῦρον*, nerve]. An exuberant growth of nervous tissue.

Hyperneurosis (*hi-pur-nu-ro′-sis*). Excessive development of nervous tissue.

Hypernormal (*hi-pur-nor′-mal*). Exceeding the normal state.

Hypernutrition. See *Supernutrition* (Illus. Dict.).

Hyperoic (*hi-pur-o′-ik*) [*ὑπερῶα*, the palate]. Relating to the palate.

Hyperoncosis (*hi-pur-on-ko′-sis*) [*ὑπέρ*, over; *ὄγκος*, a tumor]. Excessive swelling.

Hyperonychosis (*hi-pur-on-ik′-o-sis*). See *Hyperonychia* (Illus. Dict.).

Hyperopia. (See Illus. Dict.) Syn., *Long-sightedness.* **H., Curvature,** a form often combined with astigmia due to changes in curvature of the cornea or lens. **H., Index,** that developing in old age from sclerosis of the lens.

Hyperopsia (*hi-pur-op′-se-ah*). See *Oxyopia* (Illus. Dict.).

Hyperorexia (*hi-pur-or-ek′-se-ah*) [*ὑπέρ*, over; *ὄρεξις*, appetite]. Bulimia.

Hyperosteogeny (*hi-pur-os-te-oj′-en-e*) [*ὑπέρ*, over; *ὀστέον*, bone; *γεννᾶν*, to produce]. Excessive development of bone.

Hyperosteopathy (*hi-pur-os-te-op′-ath-e*) [*ὑπέρ*, over; *ὀστέον*, bone; *πάθος*, disease]. An excessively diseased condition of the bones.

Hyperoxemia (*hi-pur-oks-e′-me-ah*) [*ὑπέρ*, over; *ὀξύς*, sharp; *αἷμα*, blood]. Extreme acidity of the blood.

Hyperoxidized (*hi-pur-oks′-id-īzd*). See *Superoxidized* (Illus. Dict.).

Hyperoxygenated (*hi-pur-oks′-e-jen-a-ted*). See *Superoxidized* (Illus. Dict.).

Hyperpathia (*hi-pur-pa′-the-ah*) [*ὑπέρ*, over; *πάθος*, disease, sensibility]. 1. Extreme illness. 2. Extreme sensibility.

Hyperpelvic (*hi-pur-pel′-vik*). Located above the pelvis.

Hyperperistalsis (*hi-pur-per-is-tal′-sis*). Peristaltic unrest; a condition characterized by persistent rapid contractions of the stomach in close succession appearing after meals. Syn., *Tormina ventriculi nervosa.*

Hyperperitonitis (*hi-pur-per-it-on-i′-tis*). Very severe or acute peritonitis.

Hyperphalangia (*hi-pur-fa-lan′-je-ah*) [*ὑπέρ*, over; *φάλαγξ*, phalanx]. Abnormal length of one or several of the phalanges.

Hyperpharyngeal (*hi-pur-far-in′-je-al*). See *Supraphayngeal* (Illus. Dict.).

Hyperphenomenal (*hi-pur-fe-nom′-en-al*). Extremely phenomenal.

Hyperphleboectasy (*hi-pur-fleb-o-ek′-ta-se*) [*ὑπέρ*, over; *φλέψ*, vein; *ἔκτασις*, a stretching]. Excessive dilation of the veins.

Hyperphlebosis (*hi-pur-fleb′-o-sis*). See *Hypervenosity.*

Hyperphlogosis (*hi-pur-flo′-go-sis*) [*ὑπέρ*, over; *φλόγωσις*, a burning]. Violent inflammation.

Hyperphoric (*hi-pur-fo′-rik*). 1. Relating to hyperphoria. 2. One who is affected with hyperphoria.

Hyperphosphine (*hi-pur-fos′-fēn*). See *Calcium Glycerophosphate.*

Hyperpicrous (*hi-pur-pik′-rus*) [*ὑπέρ*, over; *πικρός*, bitter]. Excessively bitter.

Hyperpiesis (*hi-pur-pi-e'-sis*) [ὑπέρ, over; πίεσις, a pressing]. An abnormally high pressure, as of the blood.

Hyperpigmentation (*hi-pur-pig-men-ta'-shun*). Excessive pigmentation.

Hyperpimelic (*hi-pur-pim'-el-ik*) [ὑπέρ, over; πιμελής, fat]. Relating to obesity.

Hyperplasty (*hi-pur-plast'-e*). Same as *Hyperplasia.*

Hyperprochoresis (*hi-pur-pro-ko-re'-sis*) [ὑπέρ, over; προχωρεῖν, to advance]. Excessive motor action of the stomach. Cf. *Hyperperistalsis.*

Hyperpromethia (*hi-pur-prom-e'-the-ah*) [ὑπέρ, over; προμήθεια, foresight]. Supernormal power of foresight. [Myers.]

Hyperprosexia (*hi-pur-pro-seks'-e-ah*) [ὑπέρ, over; πρόσεξις, attention]. Entire absorption of the attention by a single process.

Hyperresonance (*hi-pur-res'-on-ans*). An exaggerated resonance.

Hyperrhinencephalia (*hi-pur-rin-en-sef-al'-e-ah*) [ὑπέρ, over; ῥίς, the nose; ἐγκέφαλος, the brain]. A congenital deformity characterized by undue frontal predominance and excessive development of the olfactory bulbs.

Hypersensitive (*hi-pur-sen'-sit-iv*). Abnormally sensitive.

Hypersplenotrophy (*hi-pur-splen-ot'-ro-fe*). See *Splenomegalia* (Illus. Dict.).

Hypersteatosis (*hi-pur-ste-at-o'-sis*) [ὑπέρ, over; στέαρ, tallow]. Excessive secretion of fat. Syn., *Aleipsis acuta.*

Hypersynergia (*hi-pur-sin-ur'-je-ah*) [ὑπέρ, over; συνεργία, a working together]. Excessive coordination; excessive energy in the organs in spreading disease throughout the system.

Hypertension (*hi-pur-ten'-shun*). Excessive tension; supertension.

Hyperthelia (*hi-pur-the'-le-ah*) [ὑπέρ, over; θηλή, a nipple]. Congenital increase of the mammary glands.

Hyperthelic (*hi-pur-the'-lik*). 1. Located above the nipple. 2. Located upon a mucosa.

Hyperthermalgesia (*hi'-pur-thurm-al-je'-se-ah*) [ὑπέρ, over; θέρμη, heat; ἄλγησις, pain]. Abnormal sensitiveness to heat.

Hyperthermoesthesia (*hi-pur-thurm-o-es-the'-ze-ah*). See *Hyperthermalgesia.*

Hyperthymization (*hi-pur-thi-miz-a'-shun*). Exaggerated activity of the thymus gland and the pathologic condition resulting from it.

Hyperthyrea (*hi-pur-thi'-re-ah*). The condition arising from excessive functional activity of the thyroid gland.

Hyperthyreosis (*hi-pur-thi-re-o'-sis*). The condition in which there is excess of thyroid substance in the body.

Hyperthyroidation (*hi-pur-thi-roid-a'-shun*). Abnormal action or overaction of the thyroid gland.

Hyperthyroidism (*hi-pur-thi'-roid-izm*). See *Hyperthyrea.*

Hypertonia. (See Illus. Dict.) See *Sign, Kernig's.* **H. postapoplectica,** name given by Bechterew (1900) to a condition described under *Hemihypertonia.*

Hypertonic (*hi-per-ton'-ik*). Exceeding in strength or tension. **H. Salt Solution,** one that exceeds the osmotic tension of the blood-serum. Cf. *Isotonic, Hypotonic.*

Hypertonicity (*hi-pur-ton-is'-et-e*). See *Hypertonia* (Illus. Dict.).

Hypertonus (*hi-pur-to'-nus*). See *Hypertonia* (2) (Illus. Dict.).

Hypertoxicity (*hi-pur-toks-is'-it-e*). The quality of being excessively toxic.

Hypertrophous (*hi-pur'-trof-us*). Marked by or exhibiting hypertrophy.

Hypertrophy. (See Illus. Dict.) **H., Moriform,** a mulberry-like enlargement, as of the posterior ends of the lower turbinals.

Hypertypic (*hi-pur-tip'-ik*). Exceeding the type; excessively atypic.

Hypervenosity (*hi-pur-ve-nos'-it-e*). 1. Excessive development of the venous system. 2. See *Supervenosity* (Illus. Dict.).

Hyperviscosity (*hi-pur-vis-kos'-it-e*). Exaggeration of adhesive properties. Observed in the erythrocytes in inflammatory diseases, in anemias, or when they are subjected to the action of poisons, notably snake-poison. [DaCosta.]

Hyphedonia (*hip-hed-o'-ne-ah*) [ὑπό, under; ἡδονή, pleasure]. Morbidly diminished pleasure in the gratification of desires. Cf. *Hyperhedoma.*

Hyphogenous (*hi-foj'-en-us*) [ὑφή, a web; γεννᾶν, to produce]. Due to the hyphæ of some parasitic fungus.

Hypisotonic (*hip-is-o-ton'-ik*). See *Hypoisotonic.*

Hypisotonicity (*hip-is-o-ton-is-it'-e*). The quality of having a diminished saline percentage.

Hypnacetin (*hip-nas'-et-in*). $C_6H_5OCH_3$-CO-NH-C_6H_4-O-CO-CH_3. Acetophenonacetylparaamidophenol ether; transparent crystals soluble in alcohol and ether, melting at 160° C. It is hypnotic and antiseptic. Dose, 3–4 gr. (0.2–0.25 gm.). Syn., *Hypnoacetin.*

Hypnalgia (*hip-nal'-je-ah*) [ὕπνος, sleep; ἄλγος, pain]. Pain recurring during sleep.

Hypnopompic (*hip-no-pomp'-ik*) [ὕπνος, sleep; πομπή, a procession]. Applied to visions seen at the moment of awakening from sleep or prior to complete awakening, as when a dream figure persists into waking life.

Hypnopyrin (*hip-no-pi'-rin*). A proprietary hypnotic and antipyretic preparation said to be a chlorin derivative of quinin. Dose, 4 gr. (0.25 gm.) 3 or 4 times daily.

Hypnoscope (*hip'-no-skōp*) [ὕπνος, sleep; σκοπεῖν, to examine]. An apparatus to determine if a patient is hypnotized.

Hypnosia (*hip-no'-ze-ah*) [ὕπνος, sleep]. A condition of morbid drowsiness.

Hypnotism. (See Illus. Dict.) **H., Bennett's Physiologic Theory,** assumes alterations in the functional activity of the white matter of the cerebral lobes; a proportion of which become paralyzed through continuous monotonous stimulations, while the action of others is exalted, bringing interruption between the ganglion cells. **H., Bennett's Psychic Theory,** the phenomenon due to unchecked ideas which gain prominence because other ideas which ordinarily would control their development do not arise, owing to temporary suspension of the action of that part of the brain with which they are associated; *i. e.,* the connection between the ganglion cells is broken owing to interrupted connection between the association fibers. **H., Bernheim's Theory,** regards the entire nervous force of the subject as concentrated upon a single idea, the focus of which concentration may be shifted from one point to another by the suggestion of the operator. **H., Braid's Physical Theory** (1843), held the phenomena were due neither to the volition nor force of the operator but to physical changes in the subject, the exhaustion of certain nerve-centers resulting in diminished functional activity of the central nervous system, from continued monotonous stimulation of other nerves; *e. g.,* those of the eye by gazing, those of the skin by contact. **H., Braid's Later** or **Psychic Theory,** regards the hypnotic state as one of monoideism, the mind so engrossed with one idea as to be dead to other influences and only one function active at any one time and thus intensely so. **H.,**

Charcot's Theory, or that of the **Salpêtrière School,** according to which the hypnotic state is a morbid condition produced artificially and marked by certain chemical changes in the secretions; a neurosis confined to the hysterical; women being the best subjects and children and old people scarcely susceptible. **H., Ernest Hart's Theory,** the hypnotized person is, as it were, a living automaton, the upper brain more or less completely and regularly bloodless, its functions in abeyance, the will suspended, enfeebled, or abolished. **A., Esdaile's Theory,** supposes mesmeric phenomena due to a peculiar physical force or vital curative fluid transmissible from one animal to another and possessed also by certain metals, crystals, and magnets. **H., Gurney's Theory,** in the normal state successive vivid points of consciousness are controlled by a swarm of subordinate perceptions and ideas which keep conduct rational. In the hypnotic state connection is broken between the predominant idea and the attendant swarm and conduct follows the predominant idea alone. **H., Heidenhain's Theory** (1880), regards the subject as an automaton, unconsciously imitating movements made before him; that the phenomena are due to arrested activity of the cortex; that these higher centers are inhibited by monotonous stimulation of other nerves, *e.g.*, by fixing, gazing, passing, etc. **H., Subliminal Consciousness Theory** (*Double Consciousness, das Doppel Ich*), assumes that the stream of consciousness in which we live habitually is only a part of the total possible consciousness; that the subliminal or hypnotic self can exercise over the nervous, vasomotor, and circulatory systems a degree of control unparalleled in waking life; that this subliminal consciousness flowing within us at a level beneath the threshold of ordinary waking life embraces powers of which hypnotic phenomena are but a first evidence.

Hypnotoxin (*hip-no-toks'-in*) [ὕπνος, sleep; τοξικόν, poison]. The name given by Portier and Richet to the active principle of the poison secreted by *Physalia* and other *Cœlenterata*.

Hypo (*hi'-po*). 1. A common abbreviation of hypochondriasis. 2. Sodium thiosulfite.

Hypoacidity. See *Hypacidity*.

Hypoazoturia (*hi-po-az-ot-u'-re-ah*) [ὑπό, under; *azoturia*]. A diminished amount of urea present in the urine.

Hypoblast. (See Illus. Dict.) Syn., *Inner germ layer; Intestinal layer; Trophic layer; Lamina myxogastralis.* **H., Digestive, H., Gut, H., Intestinal,** the hypoblastic cells giving origin to the lining of the embryonic alimentary canal.

Hypocelom, Hypocœlom (*hi-po-se'-lōm*) [ὑπό, under; κοίλωμα, a cavity]. The ventral part of the celom.

Hypochlorization (*hi-po-klor'-iz-a-shun*). A method of treating epilepsy consisting in the reduction of the amount of sodium chlorid consumed by the patient to one-half the amount.

Hypochromatism (*hi-po-kro'-mat-izm*) [ὑπό, under; *chromatin*]. Deficiency of chromatin in the nucleus of a cell.

Hypochromatosis (*hi-po-kro-mat-o'-sis*). The pathologic diminution of the chromatin in a cell-nucleus.

Hypochylia (*hi-po-ki'-le-ah*) [ὑπό, under; χυλός, juice]. Deficiency of secretion; deficiency of chyle. Cf. *Achylia; Oligochylia* (Illus. Dict.).

Hypocinesia, Hypocinesis (*hi-po-sin-e'-ze-ah, -e'-sis*). See *Hypokinesis* (Illus. Dict.).

Hypoconulid (*hi-po-kon'-u-lid*) [ὑπό, under; κῶνος, cone]. The distal cusp, the fifth tubercle of the lower molar.

Hypocratous (*hip-ok'-rat-us*) [ὑπό, under; κράτος, strength]. Lacking in strength.

Hypocrinia (*hip-o-krin'-e-ah*) [ὑπό, under; κρίνειν, to separate]. Deficiency of secretion.

Hypocytosis (*hi-po-si-to'-sis*) [ὑπό, under; κυτός, cell]. Diminution of the number of blood-corpuscles.

Hypodermotherapy (*hi-po-dur-mo-ther'-ap-e*) [ὑπό, under; δέρμα, skin; θέραπεια, therapy]. Subcutaneous medication.

Hypodynamic (*hi-po-di-nam'-ik*). See *Adynamic* (Illus. Dict.).

Hypoectasia (*hi-po-ek-ta'-ze-ah*). See *Hypectasia*.

Hypoesophoria (*hi-po-es-o-fo'-re-ah*) [ὑπό, under; *esophoria*]. A tendency of the visual axis of one eye to deviate downward and inward.

Hypoeticokinetic (*hi-po-et-ik-o-kin-et'-ik*) [ὑπό, under; ἐνητικός, understanding; κινεῖν, to move]. Relating to the functional activity of nerve-centers under the control of the will.

Hypoexophoria (*hi-po-eks-o-fo'-re-ah*) [ὑπό, under; *exophoria*]. A tendency of the visual axis of one eye to deviate downward and outward.

Hypofunction (*hi-po-funk'-shun*). Insufficiency of function.

Hypogaster (*hi-po-gas'-ter*). See *Hypogastrium* (Illus. Dict.).

Hypogastrectasia, Hypogastrectasis (*hi-po-gas-trek-ta'-ze-ah, -sis*) [*hypogastrium*; ἔκτασις, stretching]. Dilation of the hypogastrium.

Hypogastropagus (*hi-po-gas-trop'-ag-us*) [ὑπό, under; γαστήρ, stomach; πάγος, anything solid]. A genus of twin monsters characterized by having the union in the region of the hypogastrium.

Hypogigantosoma (*hi-po-ji-gant-o-so'-ma*) [ὑπό, under; γίγας, large; σῶμα, body]. A condition of great physical development not amounting to true gigantism.

Hypoglobulia (*hi-po-glob-u'-le-ah*). See *Oligocythemia* (Illus. Dict.).

Hypohemoglobinemia (*hi-po-hem-o-glob-in-e'-me-ah*). See *Oligochromemia* (Illus. Dict.).

Hypohepatic (*hi-po-hep-at'-ik*). Relating to hepatic insufficiency.

Hypohyal (*hi-po-hi'-al*). See *Subhyoid* (Illus. Dict.).

Hypohyloma (*hi-po-hi-lo'-mah*). See under *Hyloma*.

Hypoisotonic (*hi-po-is-o-ton'-ik*) [ὑπό, under; *isotonic*]. Applied to a solution the osmotic pressure of which is lower than blood plasma or some other solution taken as a standard. Cf. *Hyperisotonic*.

Hypolemmal (*hi-po-lem'-al*) [ὑπό, under; λέμμα, a husk]. Located entad of a sheath; applied to the part of a nerve in a motorial end-plate which lies within the sarcolemma.

Hypolepidoma (*hi-po-lep-id-o'-mah*). See under *Lepidoma*.

Hypoleukocytosis (*hi-po-lu-ko-si-to'-sis*). See *Oligocythemia* (Illus. Dict.).

Hypoliposis (*hi-po-lip-o'-sis*). A deficiency of fat-splitting ferment (lipase) in the blood-serum. Cf. *Hyperliposis*.

Hypolympha (*hi-po-lim'-fah*) [ὑπό, under; *lympha*, water]. An extravasation of plastic lymph into the anterior chamber of the eye.

Hypolymphia (*hi-po-lim'-fe-ah*). Insufficiency of lymph.

Hypomastia, Hypomazia (*hi-po-mas'-te-ah, hi-po-mas'-e-ah*) [ὑπό, under; μαστός, the breast]. Abnormal smallness of the mammary gland.

Hypomegasoma (*hi-po-meg-as-o'-mah*) [ὑπό, under; μέγας, great; σῶμα, body]. A tall stature, but quite below gigantism. Cf. *Megasoma*.

Hypomesosoma (*hi-po-mes-o-so'-ma*) [ὑπό, under; μέσος, middle; σῶμα, body]. A stature slightly below the medium.

Hypomicrosoma (*hi-po-mik-ro-so'-mah*) [ὑπό, under;

μικρός, small; *σῶμα*, body]. The lowest stature which is not dwarfism.

Hypomnestic (*hi-pom-nest′-ik*) [*ὑπομνεία*, memory]. Aiding the memory.

Hypomucous (*hi-po-mu′-kus*). See *Submucous* (Illus. Dict.).

Hypomyotonia (*hi-po-mi-o-to′-ne-ah*) [*ὑπό*, under; *μῦς*, muscle; *τόνος*, tone]. Deficiency in muscular tonicity.

Hypomyotrophia (*hi-po-mi-o-tro′-fe-ah*) [*ὑπό*, under; *μυς*, muscle; *τροφή*, nourishment]. Atrophy of the muscles.

Hypomyxous (*hi-po-miks′-us*). See *Submucous* (Illus. Dict.).

Hyponanosoma (*hi-po-nan-o-so′-mah*) [*ὑπό*, under; *νᾶνος*, dwarf; *σῶμα*, body]. Extreme dwarfishness.

Hyponychium (*hi-pon-ik′-e-um*). See *Nail-bed* (Illus. Dict.).

Hypophoria (*hi-po-fo′-re-ah*) [*ὑπό*, under; *φορός*, tending]. A tendency of the visual axis of one eye to deviate below that of the other.

Hypophosphite. (See Illus Dict.) **H.s, Robinson's,** a mixture of the phosphites of sodium, 2 gr.; calcium, 1½ gr.; iron, 1½ gr.; quinin, ¾ gr.; manganese, 1½ gr.; and strychnin, $\frac{1}{16}$ gr., to each fluid ounce. It is nutritive, tonic, and alterative. Dose, 1–4 teaspoonfuls.

Hypophrenic (*hi-po-fren′-ik*). See *Subdiaphragmatic* (Illus. Dict.).

Hypophysin (*hi-pof′-is-in*). An organotherapeutic remedy extracted from the hypophysis of the ox. It is used as an adjuvant to iodothyrin in the treatment of akromegaly. Dose, 0.1–0.3 gm. several times daily.

Hypoplasty (*hi′-po-plas-te*) [*ὑπό*, under; *πλάσσειν*, to form]. Diminished formative power.

Hypoquinidol (*hi-po-kwin′-id-ol*). A proprietary preparation of quinin and phosphorus.

Hyposarca (*hi-po-sark′-ah*). See *Anasarca* (Illus. Dict.).

Hyposcheotomy (*hi-po-ske-ot′-o-me*) [*ὑσό*, under; *ὀσχεον*, scrotum; *τέμνειν*, to cut]. The surgical puncturing of a hydrocele at the lower part of the tunica vaginalis.

Hyposialadenitis (*hi-po-si-al-ad-en-i′-tis*) [*ὑπό*, under; *σιαλον*, saliva; *ἀδήν*, a gland]. Inflammation of the submaxillary salivary gland.

Hypospadias. (See Illus. Dict.) **H. perineoscrotalis,** the rare condition of the urethra opening behind the scrotum.

Hyposphene (*hi-po-sfēn′*) [*ὑπό*, under; *σφήν*, a wedge]. In comparative anatomy a wedge-shaped process on the posterior face of the vertebral neural arch projecting into a fossa (hypantrum) on the anterior face of the preceding vertebra. Cf. *Zygosphene; Zygantrum* (Illus. Dict.); *Hypantrum.*

Hyposternal (*hi-po-stur′-nal*). See *Substernal* (Illus. Dict.).

Hyposthenuria (*hi-po-sthen-u′-re-ah*) [*ὑπό*, under; *σθένος*, strength; *οὖρον*, urine]. 1. Suppression of the urine from inability of the kidney to eliminate. 2. Diminution of solids in the urine.

Hypostoma (*hi-pos′-to-mah*) [*ὑπό*, under; *ὀστέον*, bone]. A bony tumor on the lower side of a bone.

Hypothalamus (*hi-po-thal′-am-us*) [*ὑπό*, under; *θάλαμος*, thalamus]. A group of several prominences and aggregations of ganglia lying on the ventral side beneath the thalamus. Syn., *Subthalamus; Pars subthalamica; Regio subthalamica.*

Hypotheria (*hi-po-the′-re-ah*) [*ὑπό*, under; *θηρίον*, a beast]. Creatures below the beasts [Huxley]. The root-stock of the *Prototheria.*

Hypothyroidism (*hi-po-thī′-roid-izm*). A morbid condition attributed to deficient activity of the thyroid gland.

Hypothyrosis (*hi-po-thi-ro′-sis*). Reduced functional activity of the thyroid gland.

Hypotonic (*hi-po-ton′-ik*). Below the normal strength or tension.

Hypotoxicity (*hi-po-toks-is′-it-e*) [*ὑπό*, under; *τοξικόν*, poison]. A reduced toxicity.

Hypotrichosis (*hi-po-trik-o′-sis*) [*ὑπό*, under; *θρίξ*, hair]. A rare congenital anomaly, of entire absence of hair or growth delayed beyond the normal time.

Hypotympanic (*hi-po-tim′-pan-ik*). Located beneath the tympanum.

Hypovenosity (*hi-po-ven-os′-it-e*) [*ὑπό*, under; *venosus*, venous]. A condition in which there is incomplete development of the venous system in a given area resulting in atrophy and degeneration in the muscles.

Hypoxemia (*hi-poks-e′-me-ah*) [*ὑπό*, under; *oxygen; αἷμα*, blood]. Insufficient oxygenation of the blood.

Hypserysipelas (*hips-er-e-sip′-e-las*) [*ὕψι*, high; *erysipelas*]. Very acute erysipelas.

Hypsicephalic (*hip-sis-ef-al′-ik*) [*ὕψι*, high; *κεφαλή*, head]. Having a skull with a cranial index over 75.1°.

Hypsiloid (*hip′-sil-oid*) [*ὑψιλον*, the letter u; *εἶδος*, resemblance]. Hyoid.

Hypsistenocephalic (*hip-sist-en-o-sef-al′-ik*). See *Hypsicephalic.*

Hypsocephalic, Hypsocephalous (*hip-so-sef-al′-ik, -us*). See *Hypsicephalic.*

Hypsocephaly (*hip-so-sef′-al-e*). See *Hypsicephaly* (Illus. Dict.).

Hypsometer (*hip-som′-et-ur*) [*ὑψος*, height; *μέτρον*, measure]. See *Barometer, Boiling-point.*

Hypsothermometer (*hip-so-thur-mom′-et-ur*). See *Barometer, Boiling-point.*

Hypurgia, Hypurgesis (*hi-pur′-je-ah, hi-pur-je′-sis*) [*ὑπουργία, ὑπουργησις*]. Medical attendance.

Hypurgic, Hypurgous (*hi-pur′-jik, hi-pur′-jus*). Helping, aiding, administering.

Hypusacetin (*hip-u-sas′-et-in*). See *Ether, Acetophenonacetyl-paramidophenol.*

Hyrgol, Hyrgolum (*hur′-gol, hur′-gol-um*). Colloidal mercury, an allotropic form of solid mercury.

Hysterectomy. (See Illus. Dict.) **H., Cesarean.** See *Operation, Porro's* (Illus. Dict.). **H., Cuneiform.** See *Cuneihysterectomy* (Illus. Dict.).

Hysteredema, Hysterœdema (*his-ter-e-de′-mah*) [*ὑστέρα*, womb; *οἴδημα*, edema]. Edema of the womb-substance; not to be confounded with dropsy of the uterus.

Hysteremphysema (*his-ter-em-fiz-e′-mah*). See *Physometra* (Illus. Dict.).

Hysterergia (*his-ter-ur′-je-ah*) [*ὑστερος*, later; *ἔργον*, work]. The after-results of a remedy or method of treatment.

Hystericoneuralgic (*his-ter-ik-o-nu-ral′-jik*). Like neuralgia but of hysteric origin.

Hysteronica (*his-ter-ō-on′-ik-ah*) [*ὑστέρα*, womb; *νίκη*, victory]. A genus of composite plants. **H. baylahuen,** Baill., a South American species recommended in sporadic dysentery. Dose of fl. ext., 20 ♏ (1 c.c.).

Hysterobubonocele (*his-ter-o-bu-bon′-o-sēl*) [*ὑστέρα*, womb; *βουβωνοκήλη*, an inguinal hernia]. An inguinal hysterocele.

Hysterocystic (*his-ter-o-sist′-ik*) [*ὑστέρα*, womb; *κύστις*, the bladder]. Relating to the uterus and bladder.

Hysterocystocleisis (*his-ter-o-sist-o-klī′-sis*) [*ὑστέρα*, womb; *κύστις*, bladder; *κλεισις*, a closure]. Bozeman's operation for relief of vesicouterovaginal fistula or for uterouterine fistula, consisting in turning the cervix uteri into the bladder and suturing it.

Hysterocystopexy (*his-ter-o-sist′-o-peks-e*). See *Ventrovesicofixation.*

Hysterodynamometer (*his-ter-o-din-am-om'-et-ur*) [ὑστέρα, womb; δύναμις, power; μέτρον, measure]. An apparatus to record the number, intensity, and variations of uterine contractions.

Hysterogastrorrhaphy (*his-ter-o-gas-tror'-af-e*). See *Hysteropexy* (Illus. Dict.).

Hysterokataphraxis (*his-ter-o-kat-ah-fraks'-is*) [ὑστέρα, womb; καταφράκτης, a coat of mail]. A. Catterino's operation for including the uterus or any viscus within supporting metal structures as a medium of replacement.

Hysterolaparotomy (*his-ter-o-lap-ar-ot'-o-me*) [ὑστέρα, womb; λαπάρα, the abdominal wall; τέμνειν, to cut]. Abdominal hysterectomy.

Hysterolysis (*his-ter-ol'-is-is*) [ὑστέρα, womb; λύειν, to loose]. Severing the attachments of the uterus. **H., Vaginal**, the operation of detachment of the uterus first from its posterior adhesions and then from its anterior adhesions by posterior and anterior colpotomy and concluding with vaginofixation.

Hysteroma (*his-ter-o'-mah*). Broca's name for a fibroid tumor of the uterus.

Hysteromyotomy (*his-ter-o-mi-ot'-o-me*) [ὑστέρα, womb; μῦς, muscle; τέμνειν, to cut]. Incision into the uterus for removal or enucleation of a solid tumor.

Hysteroneurasthenia. (See Illus. Dict.) 2. The stage where neurasthenia ceases and hysteria begins.

Hysteroovariotomy (*his-ter-o-o-va-re-ot'-o-me*). See *Hysterooöphorectomy* (Illus. Dict.).

Hysteropexy. (See Illus. Dict.) **H. vaginalis.** See *Colpohysteropexy.*

Hysterorrhagia (*his-ter-or-aj'-e-ah*). See *Metrorrhagia* (Illus. Dict.).

Hysterosalpingooöphorectomy (*his-ter-o-sal-ping-go-o-o-for-ek'-to-me*). Excision of the uterus, oviducts, and ovaries.

Hysteroscopy (*his-ter-os'-ko-pe*) [ὑστέρα, womb; σκοπεῖν, to examine]. Inspection of the uterus.

Hysterosyphilis (*his-ter-o-sif'-il-is*). Hysteric manifestation due to syphilis.

Hysterotabetism (*his-ter-o-ta'-bet-izm*). A combined tabes and hysteria.

I

Iatrochemistry (*i-at-ro-kem'-is-tre*) [ἰατρός, physician; χημεία, chemistry]. 1. See *Spagirism* (Illus. Dict.). 2. The application of chemistry to therapeutics.

Iatroleptica (*i-at-ro-lep'-tik-ah*) [ἰατρός, a physician; ἀλείφειν, to oil the skin]. The treatment of disease by anointing, friction, and exercise.

Iatrolipter (*i-at-ro-lip'-tur*) [ἰατρός, physician; ἀλείφειν, to anoint]. A subordinate physician of the gymnasium of ancient Greece, who put up prescriptions, anointed, bled, gave massage, dressed wounds and ulcers, reduced dislocations, treated abscesses, etc. [Park.] Cf. *Gymnasiarch, Gymnast.*

Iatrosophist (*i-at-ro-sof'-ist*) [ἰατρός, physician; σοφός, skilful]. A physician skilled in the theory of medicine.

Ibit (*ib'-it*). See *Bismuth Oxyiodotannate.*

Ibogaïn (*ib-o'-ga-in*). An alkaloid isolated by Dybowski and Landrin (1901) from *Tabernæmontana iboga* (?), an African plant called by the natives of the Congo region *Iboga*. It augments the blood-pressure, favors diuresis, and excites the secretions. Large doses produce intoxication.

Icaja, Icaya (*ik'-aj-ah*). An ordeal poison with action similar to nux vomica obtained from the stem of *Strychnos icaja*, Baill.

Ichnogram (*ik'-no-gram*) [ἴχνος, a track, footstep; γράφειν, to write]. In forensic connection, the record of a footprint.

Ichorization (*i-kor-iz-a'-shun*) [ἰχώρ, ichor]. The conversion of tissue into ichor.

Ichthalbin (*ik-thal'-bin*). Ichthyol albuminate; a grayish, odorless, almost tasteless powder used in gastrointestinal diseases. Dose, 15–30 gr. (1–2 gm.) 3 times daily.

Ichthargan (*ik-thar'-gan*). A combination of silver and ichthyol-sulfonic acid containing 30% of the former. It is used in acute gonorrhea in injections containing 1–1½ gr. in 8 ounces; irrigation with solutions of 1:4000–1:750.

Ichthoform (*ik'-tho-form*). Ichthyol formaldehyd; it is used as an intestinal disinfectant and antiphlogistic and as a vulnerary. Dose, 15 to 20 gr. daily.

Ichthosin (*ik'-tho-sin*). A compound of ichthyol and eosin used in skin-diseases.

Ichthyism (*ik'-thi-izm*). See *Ichthysmus* (Illus. Dict.).

Ichthyol. (See Illus. Dict.) The preparation now used under this name is ammonium ichthyol sulfonate, $(NH_4)_2C_{28}H_{36}S_3O_6$, soluble in water, glycerin, and a mixture of alcohol and ether; freely miscible in oils. Dose as alterative, 3–10 ♏ (0.2–0.65 gm.) 3 times daily. Application, 5%–50% ointment; 2% solution in gonorrhea. **I., Lithium,** $Li_2C_{28}H_{36}S_3O_6$, a dark-brown mass used in 50% ointment. Syn., *Lithium ichthyol sulfonate.* **I., Sodium.** See *Ichthyol* (Illus. Dict.). **I., Zinc,** zinc ichthyol-sulfonate, a black, tarry mass, used in injections.

Ichthyosis. (See Illus. Dict.) **I., False** (Erasmus Wilson). See *Seborrhœa sicca* (Illus. Dict.).

Ichthyotoxicon (*ik-thi-o-toks'-ik-on*) [ἰχθύς, fish; τοξικόν, poison]. 1. The toxin present in the serum of certain fishes, as in that of the eel. 2. A general term for the active agent in poisoning by eating fish.

Ichthyotoxin (*ik-thi-o-toks'-in*). A basic poison generated in fish by growth of bacteria or fungi.

Ichthyotoxism (*ik-thi-o-toks'-izm*). See *Ichthysmus* (Illus. Dict.). Cf. *Siguatera.* **I., Gastric.** See *Barbel Cholera.*

Ichtol (*ik'-tol*). A proprietary mixture said to consist of lanolin, iodoform, glycerin, carbolic acid, oil of lavender, and oil of eucalyptus, used in skin-diseases.

Icing-heart (Zuckergussherz). See under *Heart.*

Icing-liver (Zuckergussleber of Curschmann). Chronic perihepatitis resulting in the formation of an exudate resembling the icing on a cake.

Icterencephalotyphus (*ik-ter-en-sef-al-o-ti'-fus*) [ἴκτερος, jaundice; ἐγκέφαλος, the brain; τῦφος, typhus]. Typhoid fever with marked cerebral symptoms combined with jaundice.

Icteric. (See Illus. Dict.) 2. Affected with jaundice. 3. Efficient against jaundice. 4. A remedy for jaundice.

Icteritious, Icteritous. (See Illus. Dict.) 2. Yellow, as the skin in jaundice.

Icterohematuria, Icterohæmaturia (*ik-ter-o-hem-at-u'-re-ah*) [ἴκτερος, jaundice; *hematuria*]. Jaundice combined with hematuria.

Icterohemoglobinuria (*ik-ter-o-hem-o-glo-bin-u'-re-ah*). Combined icterus and hemoglobinuria.

Icterus. (See Illus. Dict.) **I., Acholuric,** a condition characterized by more or less pigmentation of the skin in certain areas or over the whole surface, absence of bile-pigments in the urine and their presence in the blood-serum. **I., Black.** 1. Severe jaundice with deep pigmentation of the skin. Syn., *Melanicterus, Melanchlorosis.* 2. See *Melena* (Illus. Dict.). 3. See *Melanemia* (Illus. Dict.). **I., Diffusion,** that due to the hepatic cells having lost their power of holding back the bile, which consequently diffuses into the fluids of the body. **I. febrilis.** See *Weil's Disease* (Illus. Dict.). **I. gravis** with parenchymatous hepatitis. Synonym of *Yellow fever.* **I., Liouville's.** See *Icterus neonatorum* (Illus. Dict.). **I. melas,** that in which the liver tissue is green-black in color. **I., Pancreatic.** 1. A condition arising from stenosis of the pancreatic duct, when the system becomes deluged with pancreatic secretions. [Hemmeter.] 2. That which results from the removal of the pancreas. **I., Stagnation,** that due to obstruction of the bile-ducts. **I. viridis,** that in which the liver tissue is yellowish-green.

Ictus. (See Illus. Dict.) **I., Laryngeal,** an apoplectiform attack occurring during a severe paroxysm of coughing and passing off in a few seconds.

Ideation. (See Illus. Dict.) 2. An impression which conveys some distinct notion, but not of a sensory nature.

Identification (*i-den-tif-ik-a'-shun*) [*idem*, the same]. A method of so describing and registering a person by certain physical peculiarities that he or his body may be identified. Syn., *Signalment; Signalization.* **I., Anthropometric.** See *Bertillon System.* **I., A. L. W. System,** Galton's name for his system, owing to the individual patterns having three types—the arch, the loop, and the whorl. **I., Bertillon** (Alphonse) **System,** consists in the use of those measurements which depend on skeletal parts remaining practically unchanged after adult life is reached. Syn., *Identification, Anthropometric.* Cf. *Bertillonage* (Illus. Dict.). **I., Galton System,** first devised and officially used by Sir Wm. Herschel, but improved by Francis Galton, is based upon imprints of the epidermic patterns found upon the balls of the thumbs and fingers. The records used are the printed impressions of the ten digits placed in definite order upon a card. **I., Palm and Sole System,** an extension of the Galton system to the palmar and plantar surfaces. **I., Primary Classification,** the *A. L. W.* system with occasional subdivisions of the loop which may turn to the ulnar or radial side.

Ideoglandular (*i-de-o-glan'-du-lar*). Relating to glandular activity as evoked by a mental concept.

Ideography (*i-de-og'-raf-e*) [ἰδέα, an idea; γράφειν, to write]. 1. A description of ideas. 2. An expression of ideas by writing, printing, or hieroglyphics.

Ideology (*i-de-ol'-o-je*) [ἰδέα, idea; λόγος, science]. The science of thought.

Ideometabolic (*i-de-o-met-ab-ol'-ik*). Relating to metabolic action induced by some idea.

Ideomuscular (*i-de-o-mus'-ku-lar*). Relating to influence exerted upon the muscular system by a mental concept.

Ideovascular (*i-de-o-vas'-ku-lar*). Relating to a vascular change resulting from a dominant idea.

Idioblast. (See Illus. Dict.) 2. See *Biophore* (Illus. Dict.).

Idiocrasia, Idiocrasis (*id-e-o-kra'-se-ah, -kra'-sis*) [ἰδιος, own; κρᾶσις, a mixing]. Idiosyncrasy.

Idiocratic (*id-e-o-krat'-ik*). Relating to an idiosyncrasy.

Idiocy. (See Illus. Dict.) **I., Amaurotic Family,** a disease, probably hereditary, occurring most frequently in Jewish infants, marked by psychic defect that amounts at times to complete idiocy, weakness of the extremities, paralysis, and loss of vision. The fundus of the eye shows in the macula lutea a cherry-red spot surrounded by a white halo. **I., Mongolian, I., Mongol-like.** See *I., Ethnic* (Illus. Dict.). **I., Myxedematous,** sporadic cretinism of adults.

Idiogenesis (*id-e-o-jen'-e-sis*) [ἰδιος, own; γεννᾶν, to produce]. The origin of idiopathic diseases.

Idioheteroagglutinin (*id-e-o-het-ur-o-ag-glu'-tin-in*) [ἰδιος, own; ἕτερος, other; *agglutinin*]. According to Halban, an agglutinin in normal blood having the property of agglutinating foreign cells and the blood-corpuscles of other species of animals.

Idioheterolysin (*id-e-o-het-ur-ol'-is-in*) [ἰδιος, own; ἕτερος, other; λύειν, to loose]. According to Halban, a lysin existing in normal blood capable of dissolving foreign cells and the blood-corpuscles of another species of animal. Cf. *Idioisolysin.*

Idiohypnotism (*id-e-o-hip'-no-tizm*). Self-induced hypnotism.

Idioisoagglutinin [Halban] (*id-e-o-is-o-ag-glu'-tin-in*) [ἰδιος, own; ἴσος, equal; *agglutinin*]. An inborn nonhereditary substance present in normal blood due to interchangeable immunization between mother and fetus.

Idioisolysin (*id-e-o-is-ol'-is-in*) [ἰδιος, own; *isolysin*]. Of Halban, an inborn, nonhereditary isolysin due to an interchangeable immunization between mother and fetus. Cf. *Idioheterolysin.*

Idiometallic (*id-e-o-met-al'-ik*). Applied to electric phenomena evoked by simple contact of two metals.

Idiophore (*id'-e-o-fōr*). See *Idioblast* (Illus. Dict.).

Idiosome (*id'-e-o-sōm*). See *Idioblast* (Illus. Dict.).

Idiotopy (*id-e-ot'-op-e*) [ἰδιος, own; τόπος, place]. Waldeyer's term for that topographic description which pertains to the relation existing between different parts of the same organ. Cf. *Holotopy; Syntopy; Skelotopy.*

Idorgan (*id-or'-gan*) [ἰδιος, own; ὄργανον, an organ]. Haeckel's name for a morphologic unit made up of two or more plastids and not possessing the positive characteristics of the stock.

Idrialin (*id-ri'-al-in*). $C_{40}H_{28}O$. A white crystalline hydrocarbon obtained by distillation of a bituminous schist from Idria. It fuses with decomposition at 300° C.

Igasurate (*ig-as-u'-rāt*). A salt of igosuric acid.

Igazol (*ig'-az-ol*). A proprietary gaseous antiseptic said to contain iodoform and formic aldehyd. It is used in tuberculosis.

Igniextirpation (*ig-ne-ex-tur-pa'-shun*) [*ignis*, fire; *extirpare*, to root out]. Mackenrodt's term for a method of hysterectomy by cauterization.

Ignipedites (*ig-ne-ped'-il-ēz*) [*ignis*, fire; *pes*, foot]. Hot-foot; a disorder marked by an intense burning sensation in the soles of the feet.

Ikota (*ik-o'-tah*). A kind of religious mania occurring among women in Siberia.

Ikshugandha (*ik-shu-gand'-ah*). See *Tribulus terrestris*, L.

Ileectomy (*il-e-ek'-to-me*) [*ileum*; ἐκτομή, a cutting out]. Excision of the ileum.

Ileocecum, Ileocæcum (*il-e-o-se'-kum*). The ileum and cecum regarded as one.

Ileocolonic (*il-e-o-kol-on'-ik*). See *Ileocolic* (Illus. Dict.).

Ileoparietal (*il-e-o-par-i'-et-al*). Relating to the walls of the ileum.

Ileopectineal (*il-e-o-pek-tin-e'-al*). See *Iliopectineal* (Illus. Dict.).

Ileosigmoidostomy (*il-e-o-sig-moid-os'-to-me*). The surgical formation of a fistula between the ileum and sigmoid flexure.

Ileotomy (*il-e-ot'-o-me*) [εἰλεῖν, to roll; τέμνειν, to cut]. Incision of the ileum through the abdominal wall.

Ileus. (See Illus. Dict.) **I. stercoralis,** that due to fecal obstruction.

Ilial (*il'-e-al*). See *Iliac* (Illus. Dict.).

Iliocolotomy (*il-e-o-ko-lot'-o-me*) [*ilium; colon;* τομή, a cutting]. Incision of the colon in the iliac region.

Iliodorsal (*il-e-o-dor'-sal*) [*ilium; dorsum,* the back]. Relating to the dorsal surface of the ilium.

Ilioinguinal. (See Illus. Dict.) 2. Lying partly within the iliac and partly within the inguinal region.

Iliolumbocostoabdominal (*il-e-o-lum-bo-kos-to-ab-dom'-in-al*). Pertaining to the iliac, lumbar, costal, and abdominal regions.

Ilioperoneal (*il-e-o-per-o-ne'-al*). Relating to the ilium and the peroneal region.

Iliosacral (*il-e-o-sa'-kral*). Relating to the ilium and the sacrum.

Iliosciatic (*il-e-o-si-at'-ik*). Relating to the ilium and the ischium.

Ilioscrotal (*il-e-o-skro'-tal*). Relating to the ilium and the scrotum.

Illicium. (See Illus. Dict.) **I. floridanum,** Ell., Florida anise tree, stinkbush. The bark is used as a substitute for cascarilla.

Illinition (*il-in-ish'-un*) [*illinere,* to smear]. Inunction.

Illumination. (See Illus. Dict.) 2. The lighting up of a body-cavity for examination. **I., Central,** in microscopy, an illumination produced by the rays of light reflected from the mirror passing perpendicularly through the object on the stage. **I., Lateral.** See *I., Oblique* (Illus. Dict.).

Image. (See Illus. Dict.) **I., Acoustic, I., Auditory,** an image formed on the mind by an impression conveyed by the sense of hearing. **I., Catoptric,** one reflected from a polished surface. **I., Mental.** See *I., Acoustic, I., Sensory, I., Tactile.* **I., Sanson's.** See *Purkinje-Sanson's Images* (Illus. Dict.). **I., Sensory,** an image conveyed to the mind's eye by one of the organs of sense. **I., Tactile,** a mental image evoked by the sense of touch.

Imaginal. (See Illus. Dict.) 2. Opposed to larval; in psychic research applied to transcendental faculties shown in rudimentary stage in ordinary life.

Imapunga (*im-ap-ung'-ah*) [South African]. A disease occurring to a limited extent among South African cattle closely related in pathology to South African horse-sickness.

Imbecility. (See Illus. Dict.) Syn., *Insipientia ingenita.* **I., Acquired.** Synonym of *Dementia præcox.*

Imbedding. See *Embedding* (Illus. Dict.).

Imesatin (*im-es'-at-in*). $C_8H_6N_2O$. A dark-yellow crystalline substance obtained from isatin by action of ammonia.

Imid, Imide (*im'-id*). Any compound of the radicle NH united to a divalent acid radicle.

Imidiod (*im-id'-e-od*). Glossy crystals melting at 175° C. obtained by interaction of para-ethoxyphenyl succinimid, iodin, and potassium iodid in the presence of acetic acid; it is used as a wound antiseptic.

Imidoxanthin (*im-id-o-zan'-thin*). See *Guanin* (Illus. Dict.).

Imlach's Fat-plug. A mass of yellowish fat frequently found at the mesial angle of the external inguinal ring, for which it constitutes a landmark during operations.

Imminence (*im'-in-enz*) [*imminere,* to overhang]. An impending or menacing. **I., Morbid,** the period immediately preceding the incubation stage of a disease.

Immiscible (*im-is'-ibl*) [*in,* not, *miscere,* to mix]. Not capable of being mixed.

Immune. (See Illus. Dict.) **I. Body.** See under *Body.* **I. Proteids,** substances resulting from combination in the living body of the enzymes of pathogenic bacteria with certain albuminous bodies, probably those derived from the leukocytes.

Immunity. (See Illus. Dict.) See *Law, Behring's.* **I., Active,** that induced by direct treatment with filtered or unfiltered cultures resulting in the production in the body of antibacterial or antitoxic substance. **I., Antitoxic,** immunity against toxins. **I., Passive,** that form of antitoxic immunity obtained by the conveyance into the body of the blood-serum of an animal gradually adapted to a toxic or infective agent and containing the protective substances ready formed. **Buchner's Humoral Theory** supposes that a reactive change has been brought about in the integral cells of the body by the primary affection from which there has been recovery, and this change is protective against similar invasions of the same organism. **Chauveau's Retention Theory** proposed that bacteria, instead of removing certain essential food-principles from the body, left within the body certain excretory products, and that the accumulation of these products tended to prevent the subsequent invasion of the same species of bacteria. **Ehrlich's Side-chain Theory** considers the individual cells of the body to be analogous in a certain sense to complex organic substances, and that they consist essentially of a central nucleus to which secondary atom-groups having distinct physiologic functions are attached by side-chains such as chemists represent in their attempts to illustrate the reactions which occur in the building up or pulling down of complex organic substances. The cell-equilibrium is supposed to be disturbed by injury to any of the physiologic atom-groups, as by a toxin, and this disturbance results in an effort at compensatory repair during which plastic material in excess of the amount required is generated and finds its way into the blood. This Ehrlich regards as the antitoxin which is capable of neutralizing the particular toxin to which it owes its origin, if this is subsequently introduced into the blood. In this theory a specific combining relation is assumed to exist between various toxic substances and the secondary atom-groups of certain cellular elements of the body. The atom-groups which, in accordance with this theory, combine with the toxin of any particular disease-germ, Ehrlich calls the toxiphoric side-chain [G. M. Sternberg]. **Emmerich and Löw's Theory** is based upon the conclusion that many bacteria generate enzymes capable of digesting the organism by which they were generated and sometimes other organisms as well. **Exhaustion Hypothesis,** Pasteur's (1880) theory that immunity often afforded to the tissues by an attack of infection or following vaccination against infection is due to an abstraction from the tissues by the organism concerned in the primary attack, of something necessary to the growth of the infecting organism. It is opposed to the retention theory of Chauveau. **Lateral Bond Theory.** See *Ehrlich's Side-chain Theory.* **Metchnikoff's Phagocytic Theory** (1884). See *Phagocytosis* (Illus. Dict.).

Immunization. (See Illus. Dict.) **Haffkine's Method** of, against cholera. It consists in the injection of a definite quantity of sterilized culture; five days later a

small dose, and in five days more a larger dose of the living virulent culture.

Immunotoxin (*im-mu-no-toks′-in*). Any antitoxin.

Impetigo. (See Illus. Dict.) Syn., *Darta*. **I. adenosa,** Aronstam's (N. E.) name for an acute contagious, febrile, cutaneous disease characterized by glistening pustules containing a yellow fluid and surrounded by a bright yellow zone. It is attended by pain in the joints, protracted vomiting, chills, and enlarged lymph-glands. **I., Bockhart's,** epidermic abscesses caused by pyogenic micrococci. **I. variolosa,** that occurring among the pustules of smallpox when they are drying up.

Implacental (*im-pla-sen′-tal*) [*in*, not; *placenta*]. Without a placenta.

Impression. (See Illus. Dict.) 2. An effect produced upon the mind. 3. An impress; a stamp. **I.s, Digital,** small roundish pits on the inner surface of the bones of the skull; they are separated by the juga cerebralia. Syn., *Impressiones digitalæ*. **I., Maternal,** a mental process of the mother, effecting some peculiarity or teratologic development of the fetus. **I.s, Palm and Sole.** See under *Identification*.

Improcreance (*im-pro′-kre-ans*) [*in*, priv.; *procreare*, to beget]. The natural or acquired condition of being unable to procreate, *e. g.*, as a woman after the menopause or one whose ovaries have been removed, or a man without spermatozoa.

Improcreant (*im-pro′-kre-ant*). Incapable of procreating.

Impunctate (*im-punk′-tāt*) [*in*, not; *pungere*, to prick]. Not pricked with dots; not punctate.

Impurity. (See Illus. Dict.) 3. The substance which causes uncleanness or adulteration by its presence. **I., Respiratory,** the excess of carbon dioxid in the air of a room over that in the outside air.

Inacidity (*in-as-id′-it-e*) [*in*, priv.; *acidity*]. Want of acidity; applied to failure of hydrochloric acid in the gastric juice; a constant symptom of gastric cancer; it is an inconstant sign in catarrh, rumination, pernicious anemia, etc.

Inalimental (*in-al-im-en′-tal*) [*in*, priv.; *alimentum*, food]. Not nourishing.

Inangulate (*in-ang′-gu-lāt*). Having no angles.

In articulo mortis (*in ar-tik′-u-lo mor′-tis*) [L.]. At the point of death.

Inaxon, Inaxone (*in-aks′-ōn*) [*iς*, nerve; *ἄξων*, axis]. A neuron with a long axon; its axis-cylinder processes for the most part are inclosed within a sheath.

Inca Bone. See *Incarial Bone* (Illus. Dict.).

Incallosal (*in-cal-o′-sal*) [*in*, priv.; *callosum*]. Without a callosum.

Incanate, Incanous (*in′-kan-āt, in′-kan-us*) [*incanus*, hoary]. Hoary white.

Incapsuled (*in-kap′-sūld*) [*in-*, in; *capsula*, a small box]. Inclosed in a capsule; capsulated.

Incarceration, Incarceratio. (See Illus. Dict.) **I., Elastic,** the loop of intestine which has been pressed through a very narrow aperture and afterward withdrawn from the hernial sac remains empty and collapsed owing to the thickening of the portion which was constricted. **I. of a Hernia,** when the hernial loop is held so firmly as to stop the movement of intestinal contents and circulation. **I., Stercoral,** hernia of the large intestine containing an impacted fecal mass; first described by Goursand (seventeenth century). Fr., *Engouement*; Ger., *Koteinklemmung*.

Incarnant (*in-karn′-ant*) [*incarnare*, to make flesh]. 1. Flesh-forming; promoting granulation. 2. A remedy or agent which produces flesh or promotes granulation.

Incarnate (*in-kar′-nāt*). Flesh-colored.

Inceal (*in′-se-al*) [*incus*, an anvil]. See *Incudal* (Illus. Dict.).

Incisal (*in-si′-zal*) [*incidere*, to cut]. Applied to the cutting edge of incisors. **I. Angles.** See under *Angles*.

Incision. (See Illus. Dict.) **I., Crucial,** a cross-shaped incision, consisting of two incisions crossing each other at right angles. **I., Diagnostic, I., Exploratory,** one into a cavity for ascertaining the nature of the contents. **I., Fergusson's** (for removal of upper jaw). See *Operations, Table of* (Illus. Dict.). **I., Gensoul's** (for removal of upper jaw). See *Operations, Table of* (Illus. Dict.). **I., Kuestner's,** a method of entering the abdominal cavity to avoid scar and hernia by a long horizontal cut, convex downward, in the region just above the mons veneris where pubic hair is normally present. **I., Langenbach** (for nephrectomy). See under *Operations* (Illus. Dict.). **I.s, Lantermann's.** See *Lantermann's Notches* (Illus. Dict.). **I., Liston's, I., Lizar's.** See under *Liston's*, in *Table of Operations* (Illus. Dict.). **I., Pfannenstiel's,** one made in the same manner and in the same region as that of Kuestner. **I., Relief,** one to relieve tension, as in an abscess. **I.s, Schmidt's.** See *Lantermann's Notches* (Illus. Dict.). **I., Wilde's** (for mastoid disease). See *Operations, Table of* (Illus. Dict.).

Inclination (*in-klin-a′-shun*) [*inclinare*, to incline]. 1. A propensity, a leading. 2. The deviation of the long axis of a tooth from the vertical. **I. of Uterus,** obliquity of the uterus.

Inclinometer (*in-klin-om′-et-ur*) [*inclinare*, to incline; *μέτρον*, a measure]. A device for determining the diameter of the eye from the horizontal and vertical lines.

Inclusion Theory of Cancer. See under *Cancer*.

Income. (See Illus. Dict.) 2. The Scotch vernacular for white swelling.

Inconscient (*in-kon′-she-ent*) [*in*, priv.; *conscius*, aware of]. Done without consciousness; applied to impulsive muscular action.

Inconstant (*in-kon′-stant*) [*in*, priv.; *constare*, to stand together]. Changeable; not constant.

Incubation. (See Illus. Dict.) 2. The process of development of a fecundated ovum. Syn., *Ornithotrophy*. See *Table of*, under *Pregnancy* (Illus. Dict.).

Incudectomy (*in-ku-dek′-to-me*) [*incus; ἐκτομή*, a cutting out]. The surgical removal of the incus.

Incurvorecurved (*in-kur-vo-re-kurved′*). Curved inward and then backward.

Incustapedic (*in-ku-stap-e′-dik*). See *Incudostapedeal* (Illus. Dict.).

Incutympanic (*in-ku-tim′-pan-ik*). See *Incudotympanic* (Illus. Dict.).

Indagation (*in-da-ga′-shun*) [*indagare*, to trace out]. Close investigation.

Index. (See Illus. Dict.) **I., Breadth-height,** the height of a skull multiplied by 100 and divided by the breadth. **I., Dental,** the length of the upper molars and premolars multiplied by 100 and divided by the basinasal length. **I., Goniozygomatic** (of lower jaw), the bigonial breadth multiplied by 100 and divided by the bizygomatic breadth. **I., Length-breadth.** See *I., Cephalic* (Illus. Dict.). **I., Length-height,** the length of a skull multiplied by 100 and divided by its height. **I.-movement.** See under *Movement* (Illus. Dict.). **I., Obturator** (of pelvis), the transverse diameter multiplied by 100 and divided by the vertical diameter. **I., Palatine,** the ratio of the maximum breadth of the palatine arch to its maximum length. **I., Pelvic.** See under *Pelvic*

(Illus. Dict.). **I. of Refraction,** the ratio of the sine of the angle of incidence to the sine of the angle of refraction when a ray of light passing from one medium to another is refracted. **I., Staphylinic** (of cranium), the posterior breadth multiplied by 100 and divided by the palatal length. **I., Stephanozygomatic** (of cranium), the bistephanic breadth multiplied by 100 and divided by the bizygomatic breadth. **I., Tibiofemoral,** the length of the tibia multiplied by 100 and divided by the length of the femur. **I., Total Facial,** the distance from the nasion to the gnathion multiplied by 100 and divided by the bizygomatic breadth. **I., Upper Facial** (of Kollman), the distance from the nasion to the prosthyon multiplied by 100 and divided by the bizygomatic breadth. **I., Uranic** (of the cranium), the bialveolar breadth multiplied by 100 and divided by the maxillary length.

Indexometer (*in-deks-om'-et-ur*) [*index; μέτρον*, measure]. An instrument to determine the index of refraction of liquids.

Indican. (See Illus. Dict.) **I., Animal, I. of Urine.** See *Acid, Indoxyl-sulfuric.*

Indicator. (See Illus. Dict.) 3. A substance that indicates chemic reaction by a color-change. 4. A mechanism like the hand of a dial to register movements or processes. **I.-ocular,** an ocular for the microscope in which a fine indicator, like a cilium, is cemented to the ocular diaphragm and made to extend about half across the opening. As the opening is at the level of the real image, the indicator may be used to point out anything in the image which the teacher wishes to demonstrate. Syn., *Pointer-ocular, Demonstration-ocular.*

Indigo. (See Illus. Dict.) **I. Blue, Soluble.** See *Acid, Indigosulfuric.*

Indoxyluria (*in-doks-il-u'-re-ah*) [*indoxyl; οὖρον*, urine]. Excess of indoxyl in the urine.

Inductogram (*in-duk'-to-gram*). See *Skiagram.*

Inductometer (*in-duk-tom'-et-ur*) [*inducere*, to lead in; *μέτρον*, measure]. An apparatus for estimating the degree of electric induction.

Inductorium. (See Illus. Dict.) **I., DuBois-Reymond's,** an induction apparatus with a primary and secondary coil in which the primary current is never opened, it being short-circuited. It is used in physiologic laboratories.

Indulinophil (*in-du-lin'-o-fil*) [*indulin*; *φιλεῖν*, to love]. Staining with indulin.

Indumentum. (See Illus. Dict.) 2. The investing membrane of an internal organ. **I. cordis,** pericardium. **I. nervi,** neurilemma. **I. nervorum,** perineurium. **I. vitreum,** enamel.

Induration. (See Illus. Dict.) **I., Foliaceous,** a syphilitic chancre, of such delicate, leaf-like structure as to be scarcely perceptible to the touch. Syn., *I., Parchment; I., Papyraceous.* **I., Froriep's,** myositis fibrosa. **I. of Lung,** interstitial pneumonia.

Indurescent (*in-du-res'-ent*) [*indurescere*, to become hard]. Gradually becoming hardened.

Inenulin (*in-en'-u-lin*). $C_{120}H_{104}O_{104}$. A crystalline substance forming fine needles soluble in baryta-water, obtained from *Inula helenium*, L.

Infantilism. (See Illus. Dict.) **I., Myxedematous,** a type characterized by chubby face, prominent lips and abdomen, rudimentary genitals, high-pitched voice, second dentition retarded or absent, and infantile mental state; due to thyroid insufficiency. **I., Lorain's Type,** is represented by an individual small in stature but of the adult type, with pubic and axillary hair wanting, and with fair intelligence; due to defective nutrition.

Infarctus. (See Illus. Dict.) 2. Employed by Kaempf to designate mucous colitis. **I., Doctrine of, Kampf's,** that which held disease to be due to impacted feces, thought to originate in the humors of the body, portal vessels, and intestines; two kinds were recognized, the black bilious and the mucous. "From this theory a widespread clyster fashion developed, and lords and ladies vied with each other in belaboring their infarcti and in administering enemas." [Park.]

Infection. (See Illus. Dict.) 2. A term used by breeders of domestic animals as a synonym of telegony (*q. v.*). Cf. *Reversion, Throwback.* **I., Auto-, I., Self-.** See *Autoinfection.*

Inferocostal (*in-fer-o-kos'-tal*) [*inferus*, low; *costa*, a rib]. Relating to the lower border of a rib or the region beneath it.

Inferofrontal (*in-fer-o-frunt'-al*) [*inferus*, lower; *frons*, the forehead]. Relating to the inferior part of the frontal lobe.

Infiltration. (See Illus. Dict.) 2. An infiltrate. **I., Albuminous, I., Albuminoid, I., Amyloid.** See under *Degeneration, Amyloid* (Illus. Dict.). **I.-anesthesia.** See under *Anesthesia.* **I., Bacon-like.** See *Degeneration, Amyloid* (Illus. Dict.). **I., Circumferential,** in surgery cutting off the area of operation from all nerve communication with surrounding parts by a wall of anesthetizing edema. **I., Glycogenic,** a deposit of glycogen in cells. **I., Inflammatory,** the deposition of inflammatory products in the tissues. **I., Lardaceous.** See *Degeneration, Amyloid* (Illus. Dict.). **I., Purulent,** the presence of scattered pus-cells in a tissue. Syn., *Diffuse abscess.* **I., Regional.** See *Anesthesia, Regional.* **I., Saline,** calcareous degeneration. **I., Serous,** edema. **I., Uratic.** See *Degeneration, Uratic.* **I., Urinary, I., Urinous,** infiltration with effusion of urine into a tissue. **I., Waxy,** amyloid degeneration.

Inflammation. (See Illus. Dict.) **I., Boerhaave's Mechanical Theory of,** that inflammation was due to obstruction of the capillaries. **I., Fabre's Theory of,** that it proceeds not from the obstruction of the capillaries as held by Boerhaave, but from an exaltation of their irritability.

Influenzin (*in-flu-en'-zin*). A proprietary remedy said to be a mixture of phenacetin, caffein, quinin salicylate, and sodium chlorid, used in influenza.

Infraconscious (*in-fra-kon'-shus*) [*infra*, below; *conscius*, aware of]. Subconscious.

Infragenual (*in-fra-jen'-u-al*) [*infra*, below; *genu*, the knee]. Subpatellar.

Infraglenoid (*in-fra-glen'-oid*) [*infra*, below; *γλήνη*, cavity; *εἶδος*, likeness]. Located below the glenoid cavity.

Infraglottic (*in-fra-glot'-ik*) [*infra*, below; *γλώττις*, glottis]. Below the glottis.

Infrainguinal (*in-fra-in'-gwin-al*) [*infra*, below; *inguen*, groin]. Below the inguinal region.

Infralemniscal (*in-fra-lem'-nisk*) [*infra*, below; *lemniscus*, a pendent ribbon]. Wilder's term for the lower lamina of the lemniscus.

Inframarginal (*in-fra-mar'-jin-al*) [*infra*, below; *margo*, a margin]. See *Submarginal* (Illus. Dict.).

Infraoccipital (*in-fra-ok-sip'-et-al*). See *Suboccipital* (Illus. Dict.).

Infrastapedial (*in-fra-sta-pe'-de-al*) [*infra*, below; *stapes*, a stirrup]. Below the stapes.

Infratonsillar (*in-fra-ton'-sil-ar*) [*infra*, below; *tonsilla*, the tonsil]. Below the tonsil.

Infratrochlear (*in-fra-trok'-le-ar*). See *Subtrochlear* (Illus. Dict.).

Infundibuloovarian (*in-fun-dib-u-lo-o-va'-re-an*) [*infundibulum*, a funnel; *ovarium*, ovary]. Relating to the oviduct and to the ovary.

Infundibulopelvic (*in-fun-dib-u-lo-pel'-vik*). Relating to the oviduct and the pelvis.

Infusion. (See Illus. Dict.) **I., Dural,** the use of the lumbar puncture for immediate applications in cerebrospinal diseases.

Infusodecoction, Infusodecoctum (*in-fu-so-de-kok'-shun, -tum*). A combination of a decoction of a substance with an infusion of it.

Ingestol (*in-jes'-tol*). A proprietary yellow liquid for use in gastric diseases, said to consist of magnesium sulfate, 15 parts; sodium sulfate, 0.8 part; potassium sulfate, 0.1 part; calcium sulfate, 0.1 part; magnesium chlorate, 0.5 part; sodium chlorate, 0.75 part; sodium carbonate, 0.05 part; magnesium bromid, 0.001 part; calcium carbonate, 0.025 part; silicic acid, 0.001 part; ferric oxid, 0.001 part; ferric citrate, 0.001 part; spirit of ether, 0.5 part; glycerin, 1.3 parts; aqua aromat., q. s. ad 100 parts. Syn., *Amarol.*

Ingrassial (*in-gras'-e-al*). Named after John Philip Ingrassias, a physician of Palermo, 1510–1580.

Inguen. (See Illus. Dict.) 2. The same as *Bubo.* **I. gonorrhœum, I. gonorrhoicum.** Same as *Bubo, Gonorrheal.* **I. induratum.** See *Bubo, Syphilitic.*

Inguinodynia (*in-gwin-o-din'-e-ah*) [*inguen,* groin; ὀδύνη, pain]. Pain in the groin.

Inguinointerstitial (*in-gwin-o-in-tur-stish'-al*) [*inguen,* the groin; *interstes,* that stands between]. Within the tissues of the inguinal region.

Ingulation (*in-gu-la'-shun*) [*in,* into; *gula,* the throat]. The introduction of anything into the throat.

Inhalant, Inhalent (*in-ha'-lant, -lent*). 1. See *Inhalation* (2). 2. Useful for inhalation.

Inhalation. (See Illus. Dict.) 2. A medical substance to be used by inhalation. **I.-therapy,** treatment of a disease by inspiration of medicated vapors.

Inhalator, Inhalatorium (*in-ha'-la-tor, in-ha-lat-o'-re-um*). See *Inhaler* (Illus. Dict.).

Inheritance. (See Illus. Dict.) 2. Transmitted characteristics. **I., Amphigonous,** of Haeckel, characteristics transmitted from both parents. **I., Homochronous,** Haeckel's name for a characteristic in an offspring, shown at an age identical with that in which it was manifest in the parent. **I., Homotopic,** of Haeckel, the inheritance of acquired characteristics.

Inhibitrope (*in-hib'-it-rōp*) [*inhibere,* to check]. An individual in whom certain stimuli cause a partial arrest of function.

Iniac (*in'-e-ak*). Pertaining to the inion.

Iniofacial (*in-e-o-fa'-shal*). Relating to the inion and the face.

Iniomesial (*in-e-o-me'-se-al*). Relating to the inion and to the meson.

Inion. (See Illus. Dict.) 2. The back part of the neck. 3. The occiput.

Initis. (See Illus. Dict.) 2. Inflammation of a tendon; tenontitis.

Inlay (*in'-la*) [*in,* in; M. E. *lyen,* to lay]. In dentistry applied to fillings first made and then inserted into a cavity with cement; also applied to any filling occupying but one surface of a tooth.

Innocuous, Innoxious (*in-ok'-u-us, in-ok'-shus*) [*innocuus,* harmless]. Not injurious.

Inolith (*in'-o-lith*) [ἰς, a sinew; λίθος, a stone]. A fibrous concretion.

Inoperable (*in-op'-ur-a-bl*). That which should not be operated upon.

Inosate (*in'-o-sāt*). A salt of inosic acid.

Inoscleroma (*in-o-skle-ro'-mah*) [ἰς, sinew; σκλήρωμα, induration]. Hardened fibrous tissue.

Inoscopy (*in-os'-ko-pe*) [ἰσ, fiber; σκοπεῖν, to examine]. A method of bacterial investigation designed to set free microorganisms which have become entangled in the fibrin of organic fluids, by first dissolving the fibrin with a pepsin digestive mixture, when they may be centrifuged for examination.

Inotropic (*in-ot'-ro-pik*) [*in,* in; τρέπειν, to turn]. Applied by Engelmann to a supposed set of fibers in the cardiac nerves, which influences the amount of mechanical work performed by the heart. Cf. *Bathmotropic; Dromotropic.*

Insane. (See Illus. Dict.) **I., General Paralysis of the.** See under *Paralysis* (Illus. Dict.). **I.-root,** mandrake.

Insanity. (See Illus. Dict.) **I., Acute Confusional.** See *I., Primary Confusional.* **I., Acute Methepileptic,** acute insanity following a paroxysm of epilepsy; it may be simple stupor or mania with great excitement. **I. of Acts,** moral insanity. **I. of Adolescence.** See *I. of Puberty.* **I., Affective,** a form affecting only the emotions, as melancholia. **I., Ambitious.** See *Delirium ambitiosum* (Illus. Dict.). **I., Amenorrheal,** due to menstrual disorders. **I., Anemic,** that in which anemia is the essential cause. **I., Anomalous,** that in which there is such intimate association of the symptoms of several forms it cannot be classified. **I., Anticipatory,** hereditary insanity appearing in the offspring at an earlier age than it did in the parent. **I., Arthritic,** that ascribed to rheumatism or gout. **I., Asthenic,** idiopathic insanity in which the manifestations of derangement are slight. **I., Cataleptoid,** that associated with catalepsy, though rarely due to it. **I., Catatonic.** See *Catatonia* (Illus. Dict.). **I. of Childbirth.** See *I., Puerperal* (Illus. Dict.). **I. of Childhood,** insanity occurring in children not due to heredity or any congenital defect. **I., Choreic.** See *Chorea insaniens* (Illus. Dict.). **I., Compound,** that marked by involvement of more than one group of mental faculties. **I., Compulsion,** a psychosis characterized by a feeling of compulsion and restraint, so that erroneous impressions of things force themselves upon the patient in spite of his better knowledge; here belong mysophobia, claustrophobia, pyrophobia, aichmophobia, etc. **I., Concurrent,** that associated with some physical disease. **I., Congenital,** a division of insanity including idiocy, imbecility, and cretinism (Ball). **I., Congestive,** due to cerebral congestion. **I., Consecutive,** that following some disease or injury not of the brain **I., Constitutional,** insanity due to some pathologic or physiologic condition affecting the general system. **I., Cretinic,** cretinism. **I., Cyclic, I., Cyclical.** See *I., Circular* (Illus. Dict.). **I. of Delivery.** See *I., Puerperal* (Illus. Dict.). **I., Delusional,** that attended with delusions. **I., Demonomaniacal.** See *Demonomania* (Illus. Dict.). **I., Depressive,** melancholia. **I., Deuteropathic,** that caused by disorders of or developmental changes in other organs than the brain. **I., Diabetic,** a melancholic type attributed to diabetes. **I., Diathetic,** hereditary insanity. **I., Dissimilar,** hereditary insanity modified in passing from one generation to another. Syn., *I., Transformed.* **I., Egressing,** that growing out of a former disease of which it is an exaggeration. **I., Emaciation,** hysterical anorexia. **I., Emotional,** that marked by emotional depression or exaltation. **I., Epileptic.** Synonym of *Paroxysmal mania.* **I., Erotic.** Synonym of *Satyriasis* or *Nymphomania.* **I., Exophthalmic,** that associated with exophthalmic goiter and due to the same disorders of the sympathetic nervous system as the goiter. **I., Furious,** homicidal mania. **I., Gastroenteric,** that due to disease of the alimentary tract. **I., General,** a general term for mania and melancholy. **I. of Gestation.** See *I. of Pregnancy* (Illus. Dict.). **I., Gouty,** that attributed to gout. **I. of Grandeur.** See *Delirium ambitiosum*

(Illus. Dict.). **I., Hepatic,** that attributed to hepatic disease and usually melancholic in type. **I., Homicidal.** See *Mania, Homicidal* (Illus. Dict.). **I., Homochronous,** hereditary insanity appearing in the child at the same period in which it appeared in a parent. **I., Homologous,** hereditary insanity marked by the same characteristics as that of the parent. **I., Hypochondriacal,** hypochondriasis. **I., Hysterical,** chronic insanity secondary to hysteria and preserving the simulative tendencies of the former. **I., Ideal,** a general term embracing all the forms in which ideas dependent upon the senses are perverted. **I., Ideophrenic.** See *I., Ideational,* and *Ideophrenia* (Illus. Dict.). **I., Imitative,** a form of communicated insanity marked by mimicry of the insane characteristics of another. **I., Imposed,** delirious ideas imposed by one maniac upon another individual weaker than himself. **I., Impulsive,** an uncontrollable insane impulse actuating the commission of crime in an individual sane before and afterward; the existence of this condition is denied. **I., Induced.** See *I., Communicated* (Illus. Dict.). **I., Infantile,** of infant life whether hereditary or acquired. **I., Inhibitory,** that in which the loss of the power of inhibition is the chief symptom. **I., Instinctive,** hereditary insanity. **I., Intellectual.** See *I., Ideational* and *Monomania* (Illus. Dict.). **I., Intermittent.** See *I., Recurrent.* **I., Intervallary Epileptic,** that occurring between paroxysms of epilepsy. **I., Irascible,** a form of mental disturbance in which the prevailing symptom is anger. [Hollander.] **I., Ischemic,** that attributed to persistent cerebral anemia. **I., Katatonic.** See *Catatonia* (Illus. Dict.). **I. of Lactation,** a form of puerperal insanity occurring during nursing or weaning. **I., Limophoitosic,** that due to starvation. **I., Lucid,** moral insanity. **I., Malarial,** that due to malarial poisoning. **I., Maniacal.** See *Mania* (Illus. Dict.). **I., Melancholic,** melancholia. **I., Menstrual,** that connected with the appearance of the menses or with the menopause; also a form recurring at each menstrual period. **I., Metastatic,** that due to the metastasis of a disease. **I., Monomaniacal,** monomania. **I. of the Muscles,** a name for the play of the muscles in chorea. **I. of Negation,** a type in which the patient denies the reality of all his surroundings and his own existence. Fr., *Délire des négations.* **I., Neuropathic, I., Neurotic,** hereditary insanity originating in neuroses and giving rise to neuroses. **I., Notional,** a form in which the patient sees objects as they exist but conceives grossly erroneous ideas concerning them. **I., Onanistic,** insanity of puberty attributed to masturbation. **I., Opium,** due to misuse of opium. **I., Ovarian,** that due to disease of the ovary; generally melancholy in type. **I. of Oxaluria,** a form of melancholia associated with excess of oxalates in the urine. **I., Paralytic,** general paralysis of the insane. **I., Paranoiac.** See *Paranoia* (Illus. Dict.). **I., Paroxysmal.** Synonym of *Paroxysmal Mania.* **I., Partial,** monomania. **I., Pathetic.** See *I., Affective.* **I., Pellagrous,** a form dependent upon pellagra. **I., Perceptional,** a form characterized by illusions. **I. of Persecution.** See *Delirium persecutionis* (Illus. Dict.). **I. of Phosphaturia,** that attended by excess of phosphates in the urine. **I., Post-connubial,** an acute form shortly following marriage in men of rigid continence. **I., Post-epileptic.** See *I., Acute Methepileptic.* **I., Post-febrile,** mental aberration occurring during convalescence from fevers due to abnormal metabolism. **I., Post-puerperal,** puerperal insanity occurring after delivery. **I., Preëpileptic,** mental disturbance preceding an epileptic convulsion and gaining in intensity until the onset of the paroxysm. **I., Preparturient, I., Prepuerperal,** puerperal insanity coming on before labor. **I., Primary Confusional,** mental disturbance marked by incoherence and confusion of ideas, but with no true dementia. **I., Primary Delusional,** hereditary insanity in an early stage with limited delusions and without great mental debility. **I., Primordial.** See *I., Primary* (Illus. Dict.). **I., Progressive,** hereditary insanity intensified by transmission from one generation to another. **I. of Puberty, I. of Pubescence** (Skae and Maudsley), a form occurring soon after puberty marked by silliness, mental enfeeblement and delusions following a period of depression and progressing to complete dementia; it is attributed to masturbation, overstudy, menstrual irregularities, etc., in those having an inherited predisposition. Syn., *Hebephrenia* (Hecker). **I., Reasoning.** See *I., Moral* (Illus. Dict.). **I., Recurrent,** a psychoneurosis in which there are alternating periods of mental aberration and mental health. **I., Regressive,** hereditary insanity alleviated by a series of fortunate crossings. **I., Religious.** See *Mania, Religious* (Illus. Dict.). **I., Saturnine,** that due to lead-poisoning. **I., Scythian.** See *Scythian Disease* (Illus. Dict.). **I., Secondary Delusional,** of Pepper, a chronic form progressing gradually from mental disorder and persistent delusion to marked dementia. **I., Secondary Partial,** active dementia. **I. of Self-abuse.** See *I., Onanistic.* **I., Senile,** insanity occurring in the aged; conformable to no particular type. **I., Simulated,** that feigned for some ulterior end. **I., Sthenic,** that in which there is forcible manifestation of the mental derangement. **I., Suicidal,** that characterized by a suicidal propensity. **I., Sympathetic,** a form due to reflex influences. **I., Symptomatic,** that which manifests itself as a symptom of some other disease. **I., Syphilitic,** that associated with syphilis. **I., Toxic,** that caused by toxemia from alcohol, drugs, etc. **I., Transformed.** See *I., Dissimilar.* **I., Transitory,** a form described by Kraft-Ebing and differing from other forms of mental disease only in the period of its duration, viz., two to six days. **I., Transmitted.** 1. Hereditary insanity. 2. Communicated insanity. **I., Traumatic,** insanity marked by perversity, violence, and brief spells of maniacal self-exaltation progressing slowly with remissions to dementia; it is attributed by Skae, Tuke, and Bucknill to injury. **I. of Uncertainty.** See *I., Doubting* (Illus. Dict.). **I., Uterine,** that attributed to uterine disease. **I., Visceral,** that attributed to visceral disease.

Insemination (*in-sem-in-a'-shun*) [*inseminare,* to plant in]. The act or process of animal fecundation.

Inspersion (*in-spur'-shun*). See *Inspergation* (Illus. Dict.).

Inspirator (*in'-spir-a-tor*) [*in,* in; *spirare,* to breathe]. An inhaler.

Instillator (*in'-stil-a-tor*) [*instillare,* to pour in by drops]. An instrument for pouring a liquid by drops.

Insulator (*in'-su-la-tor*) [*insulatus,* made into an island]. A nonconducting substance by means of which insulation is effected.

Insusceptibility (*in-sus-sep-ti-bil'-it-e*) [*in,* priv.; *suscipere,* to take] Immunity.

Intemperant (*in-tem'-pur-ant*). An intemperate person.

Intensification (*in-ten'-sif-ik-a-shun*) [*intensus,* stretched]. 1. The act of making anything intense. 2. The act of becoming intense.

Intentional-tremor. See *Intention-tremor* (Illus. Dict.).

Interacinous (*in-tur-as'-in-us*) [*inter,* between; *acinus,* a berry]. Situated between acini.

Interangular (*in-tur-ang'-gu-lar*). Occurring between angles.

Interannular (*in-tur-an'-u-lar*). Located between rings or constrictions.

Intercalar, Intercalated (*in-tur'-kal-ur, in-tur'-kal-a-ted*). See *Intercalary* (Illus. Dict.).

Intercartilaginous (*in-tur-car-til-aj'-in-us*). See *Interchondral* (Illus. Dict.).

Intercidence (*in-tur'-sid-enz*). See *Intercadence* (Illus. Dict.).

Intercident (*in-tur'-sid-ent*) [*inter*, between; *cadere*, to fall]. 1. See *Intercalary* (Illus. Dict.). 2. See *Intercadent* (Illus. Dict.).

Intercoccygeal, Intercoccygean (*in-tur-kok-sij'-e-al, -an*). Interposed between the coccygeal vertebras.

Intercoronoideal (*in-tur-kor-o-noid'-e-al*). Lying between the coronoid processes.

Intercostal. (See Illus. Dict.) 2. A nerve, artery, or muscle situated between the ribs.

Intercranial (*in-tur-kra'-ne-al*). Endocranial, relating to the interior of the skull or to the endocranium.

Intercristal (*in-tur-kris'-tal*) [*inter*, between; *crista*, crest]. Between the surmounting ridges of a bone, organ, or process.

Intercrural (*in-tur-kru'-ral*) [*inter*, between; *crus*, the leg]. Situated between the legs or the crura.

Intercuneal, Intercuneiform (*in-tur-ku-ne'-al, -e-form*) [*inter*, between; *cuneus*, a wedge]. Between the cuneiform bones.

Intercus (*in-tur'-kus*) [L. pl. *intercutes*]. 1. See *Anasarca* (Illus. Dict.). 2. Subcutaneous.

Intercutaneomucous (*in-tur-ku-ta-ne-o-mu'-kus*). Between the skin and mucosa.

Intercutaneous (*in-tur-ku-ta'-ne-us*). Subcutaneous.

Interdeferential (*in-tur-def-ur-en'-shal*). Between the vasa deferentia.

Intereruptive (*in-tur-e-rup'-tiv*). Between two outbreaks of eruption.

Interfollicular (*in-tur-fol-ik'-u-lar*). Between two follicles.

Intergonial (*in-tur-go'-ne-al*) [*inter*, between; γωνία, an angle]. Between the two gonia (angles of the lower jaws).

Intergranular (*in-tur-gran'-u-lar*) [*inter*, between; *granulum*, a small grain]. Between granules.

Interhemal (*in-tur-he'-mal*) [*inter*, between; αἷμα, the blood]. Between the hemal processes.

Interhuman (*in-tur-hu'-man*) [*inter*, between; *humanus*, human]. Applied to infection transmitted from one human being to another.

Interjected (*in-tur-ject'-ed*) [*interjicere*, to cast between]. Same as *Interposed*.

Interjugal (*in-tur-ju'-gal*) [*inter*, between; *jugum*, a yoke]. Between the jugal processes of the skull.

Interlamellar (*in-tur-lam-el'-ar*) [*inter*, between; *lamella*, a small plate]. Between lamellas.

Interligamentous (*in-tur-lig-a-ment'-us*) [*inter*, between: *ligamentum*, a ligament]. Between ligaments.

Intermarginal (*in-tur-mar'-jin-al*) [*inter*, between; *margo*, a margin]. Lying between two margins.

Intermediate. (See Illus. Dict.) **I. Body,** Wassermann's term for the complementary substance essential to the proper performance of a physiologic function—such as enabling the "*end-body*" or bactericidal substance to combine with the bacteria in typhoid, in the production of immunity. Cf. *Body, Immune*.

Intermediolateral (*in-tur-me-de-o-lat'-ur-al*) [*intermedius*, intermediate; *latus*, a side]. Intermediate and lateral; as the tract of the spinal cord lying between the anterior and posterior horns.

Intermedium (*in-tur-me'-de-um*) [*inter*, between; *medius*, the middle; pl., *intermedia*]. 1. Any intermediary substance. 2. In pharmacy, an emulsifying or suspending ingredient.

Intermembral (*in-tur-mem'-bral*) [*inter*, between; *membrum*, a limb]. Existing between the members or limbs of an organism.

Intermembranous (*in-tur-mem'-bran-us*). Lying between membranes.

Intermesenteric (*in-tur-mes-en-ter'-ik*). Between the mesenteries.

Intermesoblastic (*in-tur-mes-o-blast'-ik*). Between the layers or between the lateral plates of the mesoblast.

Intermittent. (See Illus. Dict.) 2. Intermittent fever. **I., Masked.** Same as *Ague, Masked*.

Intermural (*in-tur-mu'-ral*) [*inter*, between; *murus*, a wall]. Occurring or lying between the walls of an organ.

Internasal (*in-tur-na'-zal*) [*inter*, between; *nasus*, the nose]. Between the nasal bones.

Interneuronal (*in-tur-nu'-ron-al*). Between neurons.

Interolivary (*in-tur-ol-iv-a'-re*). Between the olives.

Interorganic (*in-tur-or-gan'-ik*) [*inter*, between; ὄργανον, an organ]. Lying between organs or their elements.

Interosculant (*in-tur-os'-ku-lant*) [*inter*, between; *osculare*, to kiss]. Connecting two or more objects; osculant.

Interparoxysmal (*in-tur-par-oks-iz'-mal*). Between paroxysms.

Interpellated, Interpellatus (*in-tur-pel-a'-ted, in-tur-pel-a'-tus*) [*interpellare*, to interrupt]. Applied by Paracelsus to diseases marked by irregular paroxysms.

Interpial (*in-tur-pi'-al*). Between the layers of the pia.

Interpileum (*in-tur-pi'-le-um*) [*inter*, between; *pileum*, a cap]. A slight elevation between the interpilear and the uvular sulci; it is seen in the embryo cat.

Interpleuricostal (*in-tur-plu-re-kos'-tal*). Between the pleura and ribs. **I.-muscles,** the internal pleuricostal muscles (Dumas).

Interpolar (*in-tur-po'-lar*). 1. See *Intrapolar* (Illus. Dict.). 2. Between the poles of an electric battery; applied to the effect of the current acting through the whole region of the body between the two poles as contrasted with the polar effect taking place at the point of application of the electrode.

Interpolated (*in-tur'-po-la-ted*). See *Intercalary* (Illus. Dict.).

Interposition (*in-tur-po-zish'-un*) [*interpositio*, a placing between]. The development of anatomic structures between existing ones.

Interprotometamere (*in-tur-pro-to-met'-a-mēr*) [*inter*, between; πρῶτος, first; μετά, among; μέρος, a part]. The part lying between the primary segments of the embryo.

Interproximal (*in-tur-prok'-sim-al*) [*inter*, between; *proximus*, next]. Between adjoining surfaces.

Interpterion (*in-tur-te'-re-on*) [*inter*, between; *pterion*, a craniometric point]. Between the pteria.

Interpterygoid (*in-tur-ter'-e-goid*) [*inter*, between; πτέρυξ, a wing; εἶδος, likeness]. Lying between the pterygoid processes.

Interpyramidal (*in-tur-pir-am'-id-al*). Between the pyramids.

Interramal (*in-tur-ra'-mal*) [*inter*, between; *ramus*, a branch]. Between the rami of the mandible.

Intersacral (*in-tur-sa'-kral*). Lying between different parts of the sacrum.

Interscapulium, Interscapulum. (See Illus. Dict.) 2. Bartholin's name for the spine of the scapula. 3. A fossa on the dorsal aspect of the scapula.

Intersternal (*in-tur-stur'-nal*). Lying between different parts of the sternum.

Intersuperciliary (*in-tur-su-pur-sil'-e-a-re*). Between the superciliary ridges.

Intersystole (*in-tur-sis'-to-le*) [*inter*, between; *systole*]. The interval between the end of the auricular systole and the beginning of the ventricular one of the warm-blooded heart. It is well marked in the horse.

Intertarsal (*in-tur-tar'-sal*). Located between adjacent tarsal bones.

Intertrabecula (*in-tur-tra-bek'-u-lah*) [*inter*, between; *trabecula*, a little beam]. A band of cartilage sometimes connecting the cranial trabecula in front.

Interuteroplacental (*in-tur-u-tur-o-plas-ent'-al*). Between the uterus and the placenta.

Interval. (See Illus. Dict.) **I., Cardioaortic,** the interval between the apex-beat and the arterial pulse.

Intervallary (*in-tur-val'-a-re*) [*inter*, between; *vallum*, a rampart]. Occurring between paroxysms of a disease.

Intervallum (*in-tur-val'-um*) [L., pl., *intervalla*]. See *Interval* (Illus. Dict.). **Intervalla intercostalia,** the intercostal spaces.

Intervascular (*in-tur-vas'-ku-lar*) [*inter*, between; *vasculum*, a small vessel]. Located between vessels.

Interversion (*in-tur-vur'-shun*) [*inter*, between; *vertere*, to turn]. Evolution.

Interzonal (*in-ter-zo'-nal*) [*inter*, between; *zona*, zone]. In dentistry, applied to the line between enamel and dentin, at the periphery of the latter.

Intestin (*in-tes'-tin*). See *Bismuthnaphthalin Benzoate*.

Intestinal Obstruction. (See Illus. Dict.) See *Signs, Bouvert's, Schlunge's, Wahl's,* and *Cling-symptom*.

Intestine. (See Illus. Dict.) **I., Melanosis of the.** See under *Melanosis*. **I., Primitive.** See *Protogaster* (Illus. Dict.).

Intolerance. (See Illus. Dict.) **I. of Light.** See *Photophobia* (Illus. Dict.).

Intorsion. (See Illus. Dict.) 2. See under *Torsion*.

Intort (*in'-tort*). To turn inward.

Intoxications (*in-toks-ik-a'-shuns*) [*in*, intensive; *toxicare*, to poison]. A general name for the group of diseases due to the administration of poisons generated entirely outside of the body.

Intraacinar, Intraacinous (*in-trah-as'-in-ar, -us*) [*intra*, within; *acinus*, a berry]. Situated or occurring within an acinus.

Intraarterial (*in-tra-ar-te'-re-al*) [*intra*, within; *artery*]. See *Endarterial*.

Intrabronchial (*in-trah-brong'-ke-al*). Within a bronchus.

Intracartilaginous (*in-trah-kar-til-aj'-in-us*). See *Endochondral* (Illus. Dict.).

Intracerebellar (*in-trah-ser-e-bel'-ar*). Within the cerebellum.

Intracisor (*in-trah-si'-sor*) [*intra*, within; *cadere*, to cut]. A hemostatic forceps which cuts or crushes the intima of an artery and removes the necessity of a ligature.

Intrad (*in'-trad*) [*intra*, within; *ad*, to]. See *Entad* (Illus. Dict.).

Intradilated (*in-trah-di-la'-ted*) [*intra*, within; *dilatare*, to dilate]. Expanded within.

Intraepidermal, Intraepidermic (*in-trah-ep-i-durm'-al, -ik*). Within the substance of the epidermis.

Intraepithelial (*in-tra-ep-e-the'-le-al*). Within the epithelium.

Intrafaradization (*in-tra-far-ad-i-za'-shun*). Faradization applied to the inner surface of a body-cavity.

Intrafascicular (*in-tra-fas-ik'-u-lar*). Within a fascicle.

Intrafilar (*in-tra-fi'-lar*). See *Interfilar* (Illus. Dict.).

Intrafistular (*in-tra-fis'-tu-lar*). Within a fistula.

Intrafusal (*in-tra-fu'-zal*) [*intra*, within; *fusus*, a spindle]. Pertaining to the striated muscular fibers contained in a muscle-spindle.

Intragalvanization (*in-trah-gal-van-i-za'-shun*). The application of galvanism to the inner surface of an organ.

Intragastric (*in-trah-gas'-trik*). Located or occurring within the stomach. **I. Bag.** See under *Bag*. **I. Resuscitator.** See under *Resuscitator*.

Intrajugular (*in-trah-ju'-gu-lar*). Within or internal to the jugular foramen, vein, or process.

Intramarginal (*in-trah-mar'-jin-al*). Located within a margin.

Intramastoiditis (*in-trah-mas-toid-i'-tis*). See *Endomastoiditis*.

Intramedullary (*in-trah-med'-ul-a-re*) [*intra*, within; *medulla*, marrow]. Within the oblongata.

Intraparenchymatous (*in-trah-par-en-ki'-mat-us*) [*intra*, within; *parenchyma*]. Within the parenchyma; between the elements of a tissue.

Intraprotoplasmic (*in-trah-pro-to-plaz'-mik*). See *Intracellular* (Illus. Dict.).

Intrarrhachidian (*in-trar-rak-id'-e-an*). Intraspinal.

Intrathoracic (*in-trah-tho-ras'-ik*). See *Endothoracic* (Illus. Dict.).

Intrauterine. (See Illus. Dict.) 2. Occurring before birth.

Intravaginal (*in-trah-vaj'-in-al*). Within the vagina; occurring within the vagina.

Intraventricular (*in-trah-ven-trik'-u-lar*). Located or occurring within a ventricle.

Intravillous (*in-trah-vil'-us*). Situated within a villus.

Intravital, Intravitam (*in-trah-vi'-tal, -tam*) [*intra*, during; *vita*, life]. Occurring during life. Cf. *Invital*. **I.-stain,** one that will act upon living material.

Introducer (*in-tro-du'-sur*) [*introducere*, to lead into]. An instrument used in inserting anything.

Intubation. (See Illus. Dict.) 2. Catheterism. **I., Nasal,** Goodwillie's [1887] method of introducing metallic and soft-rubber tubes into the nares in cases of fracture, hemorrhage, etc. **I., Peroral,** the method devised by Kuhn (1902) in which he employs an instrument extending from the teeth to the trachea and acting as a dilator and as a speculum for the air-passages.

Intubator (*in-tu-ba'-tor*). An instrument used in introducing a tube in intubation.

Intumescence, Intumescentia. (See Illus. Dict.) **I., Brachial, I. cervicalis,** the cervical enlargement. See *Bulb, Brachial*. **I., Lumbosacral,** the crural or lumbar enlargement. See *Bulb, Crural*.

Intussusception. (See Illus. Dict.) Syn., *Intestinal invagination*. See *Sign, Dance's*. **I., Ascending, I., Regressive, I., Retrograde,** that form in which the lower part of the intestine is invaginated in the upper. **I., Descending, I., Progressive,** that form in which the upper part of the intestine is invaginated in the lower.

Intussusceptum (*in-tus-sus-sep'-tum*) [*intus*, within; *suscipere*, to receive]. In intussusception, the invaginated portion of intestine.

Intussuscipiens (*in-tus-sus-sip'-e-enz*). In intussusception, the invaginating segment of the intestine.

Inula. (See Illus. Dict.) 2. A genus of composite plants.

Inulase (*in'-u-lāz*). An enzyme found in the fleshy roots of *Inula helenium*, L., and in the bulb of squill (*Urginea scilla*). It decomposes inulin but has no

action on starch and is destroyed by excessive alkalinity or acidity.

Inulin. (See Illus. Dict.) Syn., *Menyanthin; Dahlin; Alantin; Sinistrin; Synantherin.* **I., Pseudo-,** $C_{192}H_{162}O_{162}$, irregular globules soluble in hot water. **I., White,** horny starch-like masses from the bulb of *Dahlia variabilis*, Desf.

Invertebral (*in-vurt'-e-bral*) [*in*, not; *vertebra*, backbone]. Without a spinal column.

Invertebrate (*in-vurt'-e-brāt*) [*in*, not; *vertebra*, backbone]. 1. Without a spinal column; invertebral. 2. An animal without a vertebra.

Investiture, Investment (*in-vest'-i-chur, in-vest'-ment*) [*in*, in; *vestere*, to clothe]. A sheath, a covering. **I., Fibrous** (of the suprarenal capsule), a sheath of connective tissue composed of an outer loose portion and an inner part adhering closely to the capsule; its deeper layers contain unstriped muscle-fiber. Syn., *Involucrum renis succenturiati.* **I., Myeline,** the medullary sheath.

Invious (*in'-ve-us*) [*in*, not; *via*, a way]. Impenetrable; impervious.

Involution. (See Illus. Dict.) 2. The folding in of an embryonic membrane. 3. A retrograde change. **I., Buccal,** the folding in of the epiblast which forms the cavity of the mouth. **I., Pituitary,** the ingrowth of the epiblast of the mouth cavity which forms the hypophysis. **I., Senile,** senile atrophy.

Inyloma (*in-il-o'-mah*) [ἴς, fiber; ὑλή, matter]. A fibrous tumor; inhyloma.

Inymenitis (*in-im-en-i'-tis*). See *Inohymenitis* (Illus. Dict.).

Iodacetanilin (*i-o-das-et-an'-il-in*). See *Iodoacetanilid.*

Iodacetate (*i-o-das'-et-āt*). A salt of iodacetic acid.

Iodacetyl (*i-o-das'-et-il*). See *Acetyl Iodid.*

Iodalbacid (*i-o-dal-bas'-id*). Iodin (10%) combined with albumin. In treatment of syphilis, dose, 15 gr. (1 gm.) 3 to 6 times daily.

Iodamyl (*i-o-dam'-il*). 1. See *Amyl Iodid.* 2. See *Iodamylum.* **I.-formol,** a combination of formic aldehyd, starch, thymol, and iodin.

Iodamylum (*i-o-dam'-il-um*). Iodized starch; employed internally in the proportion of 5 parts of iodin to 95 parts of starch, dose, 3–10 gr. (2–6 gm.); externally in sluggish ulcers.

Iodanisol (*i-o-dan'-is-ol*). $C_6H_4(OCH_3)I$. A proposed antiseptic forming a yellow or red crystalline mass soluble in alcohol and ether, melting at 47° C.

Iodantifebrin. See *Iodoacetanilid.*

Iodanytin, Iodanytol (*i-o-dan'-it-in, -ol*). A combination of iodin and anytin; a bactericide.

Iodcaffein. See *Iodocaffein.*

Iodethane, Iodethyl (*i-o'-deth-ān, -il*). See *Ethyl Iodid* (Illus. Dict.).

Iodethylformin (*i-o-deth-il-form'-in*). $C_6H_{12}N_4(C_2H_5I)_2$. A proposed substitute for iodids for internal use.

Iodhydrate (*i-ōd-hi'-drāt*). Synonym of *Hydriodate.*

Iodic (*i-o'-dik*). Obtained from or containing iodin; also due to the use of iodin.

Iodin. (See Illus. Dict.) **I. Bromid.** See *Bromin Iodid.* **I. Pentoxid.** See *Acid, Iodic* (Illus. Dict.). **I.-phosphor,** a combination of phosphorus, $\frac{1}{50}$ gr. in 20 ♏ of iodopin of 25% strength. It is used hypodermically in neurasthenia, spinal sclerosis, gout, etc. Dose, 20 ♏. **I.-reaction,** iodophilia (*q. v.*) developed by exposing a dried blood-smear to the action of a solution containing 3 parts of potassic iodid and 1 part of iodin in 100 parts of water, brought to syrupy consistency by adding lumps of gum arabic. **I. Tribromid,** IBr_3, a combination of iodin and bromin; a dark-brown fluid recommended for spraying in diphtheric sore throat of children; 1 part in 300 of water.

Iodinophil (*i-o-din'-o-fil*) [*iodin; φιλεῖν*, to love]. Having an affinity for iodin stain. A histologic element staining readily with iodin.

Iodinophilia (*i-o-din-o-fil'-e-ah*). See *Iodophilia.*

Iodiodoformin (*i-o-di-o-do-form'-in*). $C_6H_{12}N_4 . CHI_3$. A light-brown insoluble powder melting at 178° C. obtained from hexamethylenetetramin by action of iodin; it is recommended as a substitute for iodin.

Iodipin (*i-o'-dip-in*). An addition-product of iodin, 10% to 25%, and sesame oil; a yellow liquid with fatty taste used in syphilis, sciatica, etc. Dose, by mouth, 1–4 drams of 10% solution; enema, 5–7 oz.; subcutaneous injection, 1–2 drams of 25% solution.

Iodite (*i-o'-dīt*). A salt of iodous acid.

Iodium (*i-o'-di-um*). Same as *Iodin.*

Iodoacetanilid (*i-o-do-as-et-an'-il-id*). C_8H_8INO. An inert substance forming white, tasteless, flaky crystals, insoluble in water, obtained from acetanilid in acetic acid by action of iodin chlorid. Syn., *Iodantefebrin; Iodoacetanilid.*

Iodoalbumin (*i-o-do-al'-bu-min*). A compound of iodin and albuminoids used in myxedema.

Iodoamylene (*i-o-do-am'-il-ēn*). C_5H_9I. A reaction-product of valerylene with fuming hydroiodic acid; a clear liquid soluble in alcohol, boils at 142° C. Syn., *Valerylene hydroiodid.*

Iodoamylum. See *Iodamylum.*

Iodantipyrin (*i-o-dan-te-pi'-rin*). See *Iodpyrin* (Illus. Dict.).

Iodoargentate (*i-o-do-ar'-jen-tāt*). A salt formed by combining silver iodid with another metallic iodid.

Iodocaffein (*i-o-do-kaf'-e-in*). Colorless crystals soluble in water, decomposing in hot water, obtained from a solution of potassium iodid and caffein by action of sulfuretted hydrogen.

Iodocarvacrol (*i-o-do-kar'-vak-rol*). See *Carvacrol Iodid.*

Iodocasein (*i-o-do-ka'-se-in*). An antiseptic yellow powder with odor of iodin prepared from iodin and casein; it is used as a vulnerary.

Iodochloroxyquinolin (*i-o-do-klor-oks-e-kwin'-ol-in*). A bactericide used in surgery as a substitute for iodoform. Syn., *Vioform.*

Iodocol, Iodokol (*i-o'-do-kol*). A compound of iodin and guaiacol, forming a dark-red powder; used in tuberculosis, croupous pneumonia, etc. Dose, 3–6 gr. (0.2–0.4 gm.) 4 to 5 times daily.

Iodocresol (*i-o-do-kre'-sol*). C_7H_7IO. A compound of iodin and cresol; an odorless yellow powder proposed as a substitute for iodoform. Syn., *Traumatol.*

Iodocrol (*i-o'-do-krol*). See *Carvacrol Iodid.*

Iodocyanid (*i-o-do-si'-an-id*). A double salt made up of a cyanid and an iodid of the same base.

Iododerma (*i-o-do-durm'-ah*) [*iodin; δέρμα*, skin]. Skin-diseases due to use of iodin and its preparations.

Iodoeugenol (*i-o-do-u'-jen-ol*). $C_{10}H_{11}IO_2$. A compound of iodin and eugenol-sodium; a yellow, inodorous, insoluble powder, melting at 150° C. It is used as an antiseptic.

Iodoform. (See Illus. Dict.) Syn., *Carbon sesquiiodid; Formoiodid; Formyltriiodid; Formylum iodatum; Methenyl triiodid.* **I., Aromatized,** iodoform aromatized by cumarin. **I.-calomel,** equal parts of iodoform and calomel. **I., Creolinated,** that deodorized with 2% of creolin. **I., Deodorous,** a combination of iodoform and thymol. Syn., *Anozol.* **I., Oleate,** a mixture of 2% of iodoform in oleic acid. It is used as an external antiseptic on ulcers and abrasions. **I.-plomb.** See under *Plomb.* **I.-salol,** a mixture of iodoform and salol; used as an antiseptic in old wounds and in cavities.

Iodoformal (*i-o-do-form'-al*). $C_6H_{12}N_4 . C_2H_5I . CHI_3$.

A yellow powder produced by the combination of ethyl-hexamethylentetramin hydriodid and iodoform. It is used as a substitute for iodoform.

Iodoformin (*i-o-do-form'-in*). $(CH_2)_6N_4 . CHI_3$. An inodorous compound of iodoform, 75%, with hexamethylenetetramin. **I.-mercury**, a yellowish insoluble powder recommended as an antiseptic.

Iodoformogen (*i-o-do-form'-o-jen*). A compound of iodoform, 10%, and albumin, forming a bright yellow, very light powder, insoluble in water and sterilizable at 100°.

Iodoformum (*i-o-do-form'-um*). Iodoform.

Iodogallicin (*i-o-do-gal'-is-in*). See *Bismuth-oxyiodid-methyl gallol.*

Iodogene, Iodogenin (*i-o'-do-jēn, i-o-do'-je-nin*). A proposed disinfectant, said to be a mixture of charcoal and potassium iodate molded into cones. Iodin is liberated on combustion.

Iodogenol (*i-o-do'-jen-ol*). A compound of iodin and peptonized albumin proposed as a succedaneum for the iodin preparations ordinarily employed internally.

Iodoglandin (*i-o-do-gland'-in*). A preparation of thyroid gland said to contain no thyroidin.

Iodoglobulin (*i-o-do-glob'-u-lin*). A substance derived from the thyroid gland said to be more soluble than thyroidin.

Iodohemol (*i-o-do-he'-mol*). See under *Hemol.*

Iodohydrargyrate (*i-o-do-hi-drar'-ji-rāt*). A combination of mercuric iodid with the iodid of another metallic element.

Iodol. (See Illus. Dict.) Syn., *Tetraiodopyrrol; Pyrrol tetraiodate.* **I., Caffeinated, I.-caffein,** $C_8H_{10}N_4O_2 . C_4I_4NH$, a light-gray, crystalline powder without odor or taste, insoluble in water, containing 74.6% of iodol and 25.4% of caffein. It is a surgical antiseptic. **I.-menthol,** a mixture of 1 part of menthol with 99 parts of iodol.

Iodolen, Iodolene, Iodolins (*i-o'-do-len, -lēn*). An iodol-albumin compound said to contain 36% of iodin. It is a yellowish, granular powder, without odor or taste, soluble in hot alkaline solutions. It is a succedaneum for iodids internally and a nonirritant external antiseptic. In tertiary syphilis, dose, 30 gr. (2 gm.) 6 to 10 times daily.

Iodomethane (*i-o-do-meth'-ān*). Methyl iodid.

Iodomethe (*i-o'-do-meth-e*). See *Iodism* (Illus. Dict.).

Iodometric (*i-o-do-met'-rik*). 1. Relating to iodometry. 2. In chemical analysis, relating to the process or act of determining the quantity of a substance by its reaction with a standard solution of iodin.

Iodometry (*i-o-dom'-et-re*) [*iodin; μέτρον*, measure]. The estimation of the iodin-content in a compound.

Iodomuth (*i-o'-do-muth*). $Bi_4C_7H_7I_2O_5$. A reddish-brown powder containing bismuth and 25% of iodin. It is siccative, antiseptic, and alterative. Dose, 1–10 gr. (0.06–0.6 gm.).

Iodonaftan (*i-ōd-naf'-tan*). An ointment base containing 3% of iodin.

Iodonaphthol (*i-o-do-naf'-thol*). See *Naphthol-aristol.*

Iodophen (*i-o'-do-fen*). See *Nosophen.*

Iodophenacetin (*i-o-do-fe-nas'-et-in*). See *Iodophenin* (Illus. Dict.).

Iodophenochloral (*i-o-do-fe-no-klo'-ral*). A brown fluid used in skin-diseases due to parasites; it is said to consist of equal parts of carbolic acid, tincture of iodin, and chloral hydrate.

Iodophenol (*i-o-do-fe'-nol*). A solution of 20 parts of iodin in 76 parts of fused carbolic acid with 4 parts of glycerin.

Iodophile (*i-o'-do-fil*). See *Iodinophil.*

Iodophilia (*i-o-do-fil'-e-ah*) [*ἰώδης*, like a violet; *φιλεῖν*, to love]. T. Dunham's name for a pronounced affinity for iodin; the term is applied to the protoplasm of leukocytes in purulent conditions.

Iodophosphid (*i-o-do-fos'-fid*). A combination of an iodid with a phosphid.

Iodoplatinate (*i-o-do-plat'-in-āt*). A salt of iodoplatinic acid.

Iodoplumbate (*i-o-do-plum'-bāt*). A combination of lead iodid with the iodid of some other metallic element.

Iodoserum (*i-o-do-se'-rum*). A solution of sodium chlorid, 6 parts, and potassium iodid, 2 parts, in 1000 c.c. of water; it is used as a sedative and in syphilis.

Iodosine, Iodosinum (*i-o'-do-sin, i-o-do-si'-num*). A compound of iodin, 15%, and albumin; it is proposed as a succedaneum for iodothyrin.

Iodosulfate (*i-o-do-sul'-fāt*). A salt of iodosulfuric acid.

Iodoterpin (*i-o-do-tur'-pin*). $C_{10}H_{16}I$. A combination of iodin, 50%, and terpin; a dark-brown liquid with the odor of turpentine. It is freely soluble in ether, benzol, petroleum-benzin, and chloroform. It is used as a substitute for iodoform.

Iodothein (*i-o-do-the'-in*). Colorless crystals or white powder obtained from sodium iodid with thein by action of sulfuretted hydrogen; it is soluble in water, decomposes in hot water. It is used to increase systolic action and arterial pressure of the heart. Dose, 2–8 gr. (0.13–0.52 gm.) 2 to 6 times daily in cachets.

Iodotheobromin (*i-o-do-the-o-bro'-min*). A reaction-product of theobromin, a solution of potassium iodid and sulfuretted hydrogen, forming white crystals. It is diuretic, stimulant, and alterative, and is used in cardiac affections. Dose, 5–8 gr. (0.32–0.52 gm.).

Iodothymoform (*i-o-do-thi'-mo-form*). Iodothymol formic aldehyd, a condensation-product of thymol and formic aldehyd; it is used as a wound antiseptic.

Iodothymol (*i-o-do-thi'-mol*). See *Aristol* (Illus. Dict.).

Iodothyrin (*i-o-do-thi'-rin*). A lactose trituration of the active constituents of thyroid glands of sheep. One grain contains 0.3 mgm. of iodin. It is alterative and discutient. Dose, 15–30 gr. (1–2 gm.) daily. Syn., *Thyreoiodin; Thyroiodin; Thyrein.*

Iodovasogen (*i-o-do-vaz'-o-jen*). A solution of iodin in vasogen; it is recommended in infiltrated and spreading ulcers of the cornea.

Iodovasol (*i-o-do-vaz'-ol*). A combination of vasol and 7% of iodin.

Iodozen (*i-o'-do-zen*). $C_6H_2I_2(COOCH_3 . ONa)$. An iodin derivative of methyl salicylate used as an external antiseptic and discutient.

Iodozone (*i-o'-do-zōn*). A combination of iodin and ozone; it is used as a mouth-wash and as inhalation in tuberculosis.

Iodphenochloral (*i-od-fe-no-klo'-ral*). See *Iodophenochloral.*

Ionization (*i-on-i-za'-shun*) [*ἰόν*, going]. Electrolytic dissociation; the production of ions.

Ionize (*i'-on-īz*). To dissociate into ions; said of an electrolyte.

Ionone (*i'-on-ōn*) [*ἰώδος*, like a violet; *one*, a chemical suffix signifying a keton]. A hydroaromatic keton prepared synthetically from citral, the odorous principle of lemon oil. It has the odor of violets.

Iophobia (*i-o-fo'-be-ah*) [*ἰός*, poison; *φόβια*, fear]. A morbid dread of poisons.

Ipecacuanha. (See Illus. Dict.) **I. sine emetina,** a preparation of ipecac (made by Harris, of the Indian Medical Service) from which the emetin is extracted.

Ipo. A Malay name for the upas tree, *Antiaris toxicaria,* Leschen.

Ipoh. See *Upas antiar* and *Antiarin* (Illus. Dict.).

Ipomein (*ip-o-me'-in*). A glucosid, $C_{78}H_{132}O_{36}$, from the root of *Ipomœa fastigiata*, Sweet.

Ipomœa. (See Illus. Dict.) **I. fastigiata**, Sweet, wild jalap, manroot, an American species; it is used as a purgative. It contains ipomein. **I. stans**, Cav., a species indigenous to Mexico, has an emetic and purgative root which has been used for a long time in treatment of epilepsy.

Ipsilene (*ip'-sil-ēn*). A gas used as a disinfectant obtained from iodoform by action of ethyl chlorid with heat and pressure.

Iquinin (*ik-win'-in*). A proprietary remedy for malaria. Dose, 2–10 gr. every 2 or 3 hours.

Iretol (*i'-ret-ol*) [*Iris*, a genus of plants]. $C_7H_8O_4$. A phenol obtained by fusing irigenin with potash; it melts at 186° C. Syn., *Methoxyphloroglucin.*

Irian (*i'-re-an*) [ἰρις, iris]. Relating to the iris.

Iridadenosis (*i-rid-ad-en-o'-sis*) [ἰρις, iris; ἀδήν, gland]. A glandular affection of the iris. Ger., *Irisdrüsen krankheit.*

Iridectomize (*i-rid-ek'-tom-īz*) [ἰρις, iris; ἐκτομή, a cutting out]. To excise a part of the iris; to perform iridectomy.

Iridin, Iridinum. (See Illus. Dict.) **2.** A glucosid from the rhizome of *Iris florentina*, L. Cf. *Irone.*

Iridium (*i-rid'-e-um*) [ἰρις, a rainbow]. A platinoid metal; alloyed in small percentage with platinum it confers rigidity upon the latter. The alloy is used as plate in mechanical dentistry.

Iridocapsulitis (*i-rid-o-kap-su-lī'-tis*). Inflammation involving the iris and the capsule of the lens.

Iridocoloboma (*i-rid-o-kol-o-bō'-mah*) [ἰρις, iris; κολόβωμα, a mutilation]. **1.** The portion of iris removed in iridectomy. **2.** See *Coloboma* (Illus. Dict.).

Iridocyclectomy (*i-rid-o-si-klek'-to-me*) [ἰρις, iris; κύκλος, circle; ἐκτομή, excision]. Excision of the iris and of the ciliary body.

Iridocystectomy (*i-rid-o-sist-ek'-to-me*) [ἰρις, iris; κύστις, bladder; ἐκτομή, excision]. Knapp's operation for making a new pupil when iridocyclitis or iridocapsulitis following cataract operations or trauma has closed the old.

Iridodialysis. (See Illus. Dict.) **2.** The separation of the iris from its attachments.

Iridoiridic (*i-rid-o-i-rid'-ik*). Containing iridium as a quadrivalent radicle (apparently a trivalent radicle).

Iridol (*i'-rid-ol*) [*Iris*, a genus of plants]. $C_7H_3(OCH_3)_2OH$. A phenol obtained from distillation of iridic acid ($C_{10}H_{12}O_6$, from orris-root). It melts at 57° C., boils at 249° C.

Iridoleptynsis (*i-rid-o-lep-tin'-sis*) [ἰρις, iris; λέπτυνσις, attenuation]. Attenuation or atrophy of the iris.

Iridolin (*i-rid'-o-lin*). $C_{10}H_9N$. A base from coal-tar isomeric with lepidin.

Iridoparelkysis (*i-rid-o-par-el'-kis-is*) [ἰρις, iris; παρέλκειν, to draw aside]. An induced prolapse of the iris to effect displacement of the pupil.

Iridoplatinum (*i-rid-o-plat'-in-um*). An alloy of iridium and platinum; used in making electrodes, etc.

Iridosclerotomy (*i-rid-o-skler-ot'-o-me*) [ἰρις, iris; σκληρός, hard; τέμνειν, to cut]. Puncture of the sclera with division of the iris.

Iridosis (*i-rid-o'-sis*). See *Iridodesis* (Illus. Dict.).

Iridosteresis (*i-rid-o-ster-e'-sis*) [ἰρις, iris; στέρησις, loss]. See *Aniridia* and *Iridiremia* (Illus. Dict.).

Irigenin (*i-rij'-en-in*). $C_{10}H_{16}O_8$. A resolution-product of the glucosid iridin by action of dilute sulfuric acid. It has the properties of a phenol, forms crystals melting at 186° C., and gives an intense violet color with ferric chlorid.

Irine (*i'-rēn*). See *Iris Camphor.*

Iris. (See Illus. Dict.) **3.** A genus of plants of the order *Irideæ*. **I.-camphor**, $C_8H_{16}O_2$, a camphor-like substance with strong odor of orris-root distilled by Vogel from rhizome of *Iris florentina*, L. It forms white pearly scales soluble in alcohol. Syn., *Irine.* **I. florentina**, L., **I. germanica**, L., and **I. pallida**, Lam., are indigenous to Europe. Their rhizomes constitute the orris-root of commerce and contain starch, fat, the glucosid iridin iridic acid, myristinic acid, and oleic acid. **I.-pigment**, the chemically pure pigment of the bovine eye triturated with water is used for tattooing corneal opacities.

Irisation (*i-ri-sa'-shun*) [ἰρις, the rainbow]. See *Iridescence* (Illus. Dict.).

Irish. (See Illus. Dict.) **I. Button**, syphilis (Wallace and Corrigan, 1823).

Irisia (*i-ris'-e-ah*). The unpeeled rhizomes of *Iris germanica*, L.

Irisol (*i'-ris-ol*). A proprietary disinfectant, said to contain iodoform, 50%, and boric acid, 45%.

Iritis. (See Illus. Dict.) **I., Podophyllin**, that caused among the handlers of podophyllin by getting the dust of the drug in the eyes.

Iritoectomy (*i-rit-o-ek'-to-me*) [ἰρις, iris; ἐκτομή, a cutting out]. The removal of a portion of the iris and iritic membrane for occlusion of the pupil.

Iron. (See Illus. Dict.) **2.** See *Irone.* **I. Albuminate, Peptonized**, light-brown powder, soluble in water. Dose, 3–10 gr. (0.2–0.65 gm.). Syn., *Peptonized ferric albuminate.* **I. Albuminate, Saccharated**, reddish-brown powder, soluble in water. Dose, 5–20 gr. (0.3–1.3 gm.). **I. Alcoholized**, pulverized iron. **I. Alginate**, a tasteless brown powder containing 11% of iron, valuable for its nonirritating qualities. Dose, 10–15 gr. (0.66–1 gm.). **I., Ammoniated, I., Ammoniochlorid, I. and Ammonium Chlorid**, a reddish-yellow, hygroscopic powder containing 2.5% of ferric chlorid and 97.5% chlorid; it is used as an aperient and chalybeate. Dose, 4–12 gr. (0.26–0.78 gm.). Syn., *Ammonium chlorid, ferrated.* **I. and Ammonium Arsenocitrate**, used as an antiperiodic for children. Dose, hypodermically ½ gr. every second or third day. **I. Benzoate**, $Fe_2(C_7H_5O_2)_6$, a buff powder containing 25% of ferric oxid, soluble in cod-liver oil. Dose, 1–5 gr. (0.06–0.32 gm.). **I., Bromoiodid**, a compound of ferric bromid and ferric iodid forming a brown powder used as alterative and tonic. Dose, ½–2 gr. (0.03–0.13 gm.). **I. Cacodylate**, it is used in chlorosis, etc. Dose, 2–4 gr. daily; hypodermically ½–1½ gr. Syn., *Atarsyle.* **I.-casein, I. Caseinate**, a flesh-colored precipitate without taste or odor obtained from casein of milk with iron lactate, containing 5.2% of ferric oxid; it is used as a nutritive. Dose, 2–10 gr. (0.13–0.65 gm.) 3 times daily. Syn., *Iron nucleoalbuminate, Ferrum caseinatum.* **I. Citropyrophosphate.** See *Ammonium Citrate* with *Iron pyrophosphate.* **I. Ferrocyanid**, dark blue powder or lumps obtained from ferric salts with potassium ferrocyanid; it is used as a tonic, antiperiodic, and cholagog. Dose, 2–5 gr. (0.13–0.32 gm.). Syn., *Insoluble iron cyanid; Prussian blue; Berlin blue; Ferric ferrocyanid.* **I. Glycerinophosphate**, $FePO_4 \cdot C_3H_5(OH)_3 + 2H_2O$, yellow scales soluble in water. It is used in neurasthenia, phosphaturia, Addison's disease, etc. Dose, 2 gr. (0.13 gm.) 3 times daily. **I. Hydroxid.** See *Ferrum oxid. hydratum* (Illus. Dict.). **I. Lactoalbuminate**, light brown powder partly soluble in water. Dose, 1–5 gr. (0.065–0.32 gm.). **I. Lactophosphate**, a compound of ferric phosphate, 56%, and ferrous lactate, 44%; a greenish-white powder used in chlorosis. Dose, 1–5 gr. (0.065–0.32 gm.). **I. and Magnesium Citrate**, brown scales soluble in water. Dose, 5–10 gr. (0.32–

0.65 gm.). **I. and Magnesium Sulfate,** $FeSO_4MgSO_4 + 6H_2O$, greenish-white powder used as mild chalybeate in chlorosis and anemia. Dose, 5–10 gr. (0.32–0.65 gm.). **I. and Manganese Sulfate,** a light yellow crystalline powder used as a tonic and antiseptic in erysipelas, gonorrhea, etc. Dose, 1–2 gr. (0.065–0.13 gm.). **I. Nucleoalbuminate.** See *I.-casein.* **I. Oleate,** a brownish-green sticky substance containing $Fe(C_{18}H_{33}O_2)_3$. It is soluble in ether and is used as a tonic inunction. **I. Oxid, Black,** $Fe_3O_4Fe_2O_3$, brownish-black powder, hematinic. Dose, 2–4 gr. (0.13–0.26 gm.). Syn., *Ferrosoferric oxid; Magnetic oxid of iron; Iron ethiops.* **I. Oxid, Brown, I., Hydrated Oxid of, I., Hydrous Peroxid of, I., Hydrated Sesquioxid of.** See *Ferrum oxid. hydratum* (Illus. Dict.). **I. Oxid, Red,** Fe_2O_3, dense red powder soluble in acids. Syn., *Anhydrous ferric oxid; Ferric trioxid; Sesquioxid of iron.* **I. Oxid, Red, Saccharated,** contains 2.8% of metallic iron: brown powder used as antidote for arsenic and in chlorosis, anemia, etc. Dose, 8–30 gr. (0.52–1.9 gm.). Syn., *Soluble iron; I. Saccharate; I.-sugar.* **I. Paranucleinate,** a nutritive preparation of casein of cows' milk containing 22% of iron and 2½% of phosphorus. Dose, 5 gr. (0.3 gm.) 3 times daily. Syn., *Triferrin.* **I. Peptonate,** contains 5% of red iron oxid with peptone; a fine yellow-brown powder. Dose, 2–8 gr. (0.13–0.52 gm.). **I. Perchloric.** See *Ferrum chloridum* (Illus. Dict.). **I. Persulfate.** See *I. Sulfate, Ferric.* **I. Phosphate, Albuminated Effervescent,** iron phosphate with sugar, sodium bicarbonate, and tartaric acid; fine white powder, tonic and emmenagog. Dose, 60–120 gr. (4–8 gm.). **I. Phosphate, Ferric,** $Fe_2(PO_4)_2$, white powder soluble in acids; used externally in solution with dilute phosphoric acid for carious teeth. Ointment 10% to 20% in carcinoma. **I. Phosphate, Soluble,** iron phosphate with sodium citrate; bright green scales; it is astringent, chalybeate, and emmenagog. Dose, 5–10 gr. (0.32–0.65 gm.). **I. Phosphosarcolactate.** See *Carniferrin.* **I. Picrate, I. Picronitrate,** greenish-yellow or red-brown crystals; antiperiodic and tonic. Dose, ¼–1 gr. (0.016–0.65 gm.). **I., Pulverized,** iron filings ground with honey until reduced to an extremely fine powder. Dose, 1–5 gr. (0.06–0.3 gm.). **I. Pyrophosphate,** $Fe_4(P_2O_7)_3$, a white powder used as a mild chalybeate. Dose, 2–5 gr. (0.13–0.32 gm.). **I., Pyrophosphoric,** iron so finely divided that it takes fire spontaneously when exposed to the air. **I. and Quinin Arsenate,** brownish-yellow powder used in malaria with anemia. Dose, $\frac{1}{15}$–$\frac{1}{8}$ gr. (0.004–0.008 gm.) several times daily. Syn., *Quinin ferroarsenate.* **I. and Quinin Arsenite,** a compound of quinin arsenite, 60%, and ferrous arsenite, 40%. A brown powder; dose, $\frac{1}{15}$–$\frac{1}{8}$ gr. (0.004–0.008 gm.) several times daily. Syn., *Quinin ferroarsenite.* **I. and Quinin Chlorid, Ferrous,** greenish-brown powder used as a hemostatic. Dose, 10 drops of 10% solution every hour or two. **I. and Quinin Chlorid, Ferric,** dark brown scales used as internal and external hemostatic. Dose, 1½–3 gr. (0.097–0.119 gm.) several times daily in pills. **I. and Quinin Hypophosphate,** a yellow powder used as tonic and antipyretic. Dose, 2–10 gr. (0.13–0.65 gm.). Syn., *Quinin ferrohypophosphite.* **I. and Quinin Peptonate,** brown powder used as general tonic in anemia. Dose, 1–5 gr. (0.065–0.33 gm.) 3 times daily. **I. and Quinin Valerianate,** brown masses used as a tonic in hysteria. Dose, 5–10 gr. (0.32–0.65 gm.). **I. Saccharate.** See *I. Oxid, Red, Saccharated.* **I. Sesquichlorid.** See *Ferrum chloridum* (Illus. Dict.). **I. Sesquioxid.** See *Ferrum oxid. hydratum* (Illus. Dict.). **I. Sesquisulfate.** See *I. Sulfate, Ferric.* **I. and Sodium Disaccharate.** See *Ferrosol.* **I. and Sodium Oxalate,** $Na_3Fe(C_2O_4) + 4½H_2O$, emerald-green crystals used as an emmenagog. Dose, 3–15 gr. (0.2–0.97 gm.). **I. and Sodium Pyrophosphate,** $Fe_4(P_2O_7)_32Na_4P_2O_7 + 14H_2O$, whitish granules or powder used as an emmenagog. Dose, 3–15 gr. (0.2–0.97 gm.). **I. and Sodium Tartrate,** brownish-black scales, tonic, astringent. Dose, 10–30 gr. (0.6–1.95 gm.). **I.-somatose.** See *Ferrosomatose.* **I. Succinate,** $Fe(OH)C_4H_4O_4$, amorphous reddish-brown powder, tonic and alterative, used as solvent in biliary calculi. Dose, 1 teaspoonful of the salt with 10 drops of chloroform 4 to 6 times daily. Syn., *Ferric succinate.* **I. Sugar.** See *Iron Oxid, Red, Saccharated.* **I. Sulfate, Basic.** See *Ferrum subsulph.* (Illus. Dict.). **I. Sulfate, Ferric,** $Fe_2(SO_4)_3$, a grayish-white powder used as a disinfectant and bactericide. Syn., *Normal ferric sulfate; Iron tersulfate; I. persulfate; I. sesquisulfate.* **I.-tropon,** a mixture of tropon, 50%, and iron, 25%. Dose, 1 small teaspoonful 3 times daily. **I. Vitellinate,** a preparation of iron and yolk of egg.

Ironal, Ironol (*i'-ron-al, -ol*). A preparation said to contain 80% of absorbable iron.

Ironcosis (*i-ron-ko'-sis*). See *Iridoncosis* (Illus. Dict.).

Irone (*i'-rōn*) [*Iris*, a genus of plants; *one*, suffix signifying keton]. $C_{13}H_{20}O$. A substance isolated from *Iris florentina*, L., believed to be the mother-substance of the odorous constituents of orris root.

Irradiation. (See Illus. Dict.) 2. Diffusion in all directions from a common center; applied to nerve impulses, stellate fractures, pains felt in some position in undemonstrable anatomic connection with an affected organ, etc.

Irreinoculability (*ir-e-in-ok-u-la-bil'-it-e*) [*in*, not; *re*, again; *inoculatis*, an engrafting]. Insusceptibility to contagion due to previous inoculation.

Irrhythmia (*ir-ith'-me-ah*). See *Arrhythmia* (Illus. Dict.).

Irritability. (See Illus. Dict.) **I., Contact,** a phenomenon shown by Loeb in muscular movement by action of various salts, viz., a frog's muscle previously treated with a Na salt the anion of which precipitates Ca is excited by contact with such substances as oil, water, air, etc., unlike a normal muscle. **I., Doctrine of,** that proposed by Francis Glisson (1597–1677) and maintained by Albert von Haller (1708–1777), which held that irritability is a property pertaining to all living tissue and a sufficient cause for all the phenomena of life. It was applied to pathology by Fabre, of Paris, in refuting Boerhaave's mechanical theory of inflammation. [Park.]

Irvingia (*ur-vin'-je-ah*) [*Dr. Irving*, of the English Navy]. A genus of tropical trees of the order *Simarubeæ.* **I. barteri,** Hook, a species of the Gaboon region, has edible fruit—the seeds of which contain 60% of fat, dika or udika fat, introduced in 1859—from which the udika bread or Gaboon chocolate is made. **I. malayana,** Oliv., a species indigenous to Cochin China, yields from the seeds caycay fat.

Isadelphia (*is-a-del'-fe-ah*) [ἴσος, equal; ἀδελφός, a brother]. A twin monstrosity in which each body is normal in the development of all essential organs but united by unimportant tissues.

Isapiol (*is-ap'-e-ol*) [ἴσος, equal; *apiol*]. $C_{12}H_{14}O_4$. An isomer of apiol obtained from it by action of alcoholic solution of potassa with heat. It melts at 56° C. and boils at 304° C. and in physiologic properties differs but slightly from apiol.

Isarol (*is'-ar-ol*). Ammonium sulfoichthyolate. See *Ichthyol, ammonium.*

Isatate (*is'-at-āt*). A salt of isatic acid.

Isavol. See *Isavol.*

Ischeocele (*is'-ke-o-sēl*). See *Ischiocele* (Illus. Dict.).

Ischialgia. (See Illus. Dict.) Syn., *Ischias; Ischiasis.* **I., Landouzy's,** neuralgia of the sciatic nerve, with atrophy of the muscles of all or part of the affected leg.

Ischias, Ischiasis (*is'-ke-as, is-ke-a'-sis*). See *Ischialgia* (Illus. Dict.).

Ischiofemoral (*is-ke-o-fem'-or-al*). 1. Relating to the ischium and the femur. 2. The adductor magnus muscle.

Ischiomenia (*is-ke-o-me'-ne-ah*). See *Ischomenia* (Illus. Dict.).

Ischiopagus. (See Illus. Dict.) **I. tetrapus,** one with four legs. **I. tripus,** one with three legs.

Ischiopagy (*is-ke-op'-aj-e*) [ἰσχίον, the hip-joint; πάγος, anything which has become solid]. The condition of monstrosity in which two bodies are united by the coccyges and sacra

Ischioperineal (*is-ke-o-per-in-e'-al*). 1. Relating to the ischium and the perineum. 2. See *Transversus perinæi,* in *Table of Muscles* (Illus. Dict.).

Ischioprostatic (*is-ke-o-pros-tat'-ik*) 1. Relating to the ischium and the prostate. 2. The transversus perinæi muscle.

Ischiopubic (*is-ke-o-pu'-bik*). Relating to the ischium and the pubes.

Ischochymia (*is-ko-ki'-me-ah*) [ἰσχειν, to suppress; χύμος, juice]. Einhorn's term for dilation of the stomach because stagnation of food is the first essential symptom of the disease and may be present without any sign of dilation.

Ischogyria (*is-ko-ji'-re-ah*) [ἰσχειν, to suppress; γύρος, a curve]. The small convolutions produced by senile atrophy. Cf. *Ischnogyria* (Illus. Dict.).

Isinglass. (See Illus. Dict.) **I., Bengal,** agar-agar. **I., China, I., Chinese, I., East Indian, I., Indian,** the sounds of two species of *Polynemus* and other fish of the Indian Ocean. **I., Japanese.** See under *Gelidium, Encheuma, Gloiopeltis, Gracilaria, Sphaerocæsus.* **I., Russian,** ichthyocalla from *Acipenser husa* and other species. **I., Samovey,** inferior Russian isinglass. **I., Staple,** Russian isinglass marketed in twisted forms called staples; the different sizes of this are designated as long staple and short staple.

Island. (See Illus. Dict.) **I.s, Langerhans',** little cellular masses in the interstitial connective tissue of the pancreas subject to various interpretations. Syn., *Follicular points* of J. Renaut. **I.s, Olfactory,** masses of pyramidal cells crowded together and distorted in form, discovered by Calleja in the cinerea of the trigonum olfactorium. **I.s, Pander's.** See under *Pander* (Illus. Dict.).

Isoagglutinin (*is-o-ag-glu'-tin-in*) [ἰσος, equal; *agglutinin*]. An agglutinin in the blood of an individual capable of agglutinating the blood-corpuscles of another individual of the same species.

Isoamylacetate (*is-o-am-il-as'-et-āt*). See *Amyl Acetate.*

Isoamylene (*is-o-am'-il-ēn*). See *Pental* (Illus. Dict.).

Isobodies (*is-o-bod'-ēz*) [ἰσος, equal; *body*]. See *Isoagglutinin, Isohemolysin, Isocytolysin,* etc.

Isococain (*is-o-ko'-ka-in*). See *Dextracocain.*

Isocreatinin (*is-o-kre-at'-in-in*). $C_4H_7N_3O$. An isomer of creatinin isolated from decomposing flesh, forming a fine yellow crystalline powder.

Isocytolysin (*is-o-si-tol'-is-in*) [ἰσος, equal; κύτος, cell; λύειν, to loose]. A cytolysin from the blood of an animal, capable of acting against the cells of other animals of the same species. Cf. *Isohemolysin.*

Isodulcite (*is-o-dul'-sīt*). See *Rhamnose* (Illus. Dict.).

Isoerythroagglutinin (*is-o-er-ith-ro-ag-glu'-tin-in*). See *Isoagglutinin.*

Isogamy (*is-og'-am-e*) [ἰσος, equal; γάμος, marriage]. The production of gametes of uniform size and incapable of being distinguished as macrogametes or microgametes.

Isohemoagglutinin (*is-o-hem-o-ag-glu'-tin-in*). See *Isoagglutinin.*

Isohemolysin (*is-o-hem-ol'-is-in*) [ἰσος, equal; αἷμα, blood; λύειν, to loose]. In Ehrlich's lateral-chain theory, a hemolysin capable of acting against the blood of other animals of the same species as the one producing it, but capable of hemolizing the red blood-corpuscles only of such as have red blood-corpuscle receptors very similar to or identical with the receptors of the blood giving rise to the hemolysin (Gay). Cf. *Isocytolysin.*

Isohydrobenzamid (*is-o-hi-dro-ben'-zam-id*). See *Amarin* (Illus. Dict.).

Isoidiolysin (*is-o-id-e-ol'-is-in*). See *Idioisolysin.*

Isolactose (*is-o-lak'-tōz*). A disaccharid or true sugar formed by the action of an enzyme on lactose or milk-sugar.

Isolysin (*is-ol'-is-in*) [ἰσος, equal; λύειν, to loose]. A lysin produced in the blood of an animal by the blood-cells of another animal of the same species.

Isolysis (*is-ol'-is-is*). The hemolytic action of the blood-serum of an animal of one species upon the corpuscles of another individual of the same species.

Isomaltose (*is-o-mahl'-tōz*). $C_{12}H_{22}O_{11}$. A saccharobiose formed by the action on starch of an enzyme capable of producing maltose. It is not directly fermentable by yeast; is very soluble in water, is sweet, and occurs in small quantity in the urine.

Isonitrosoantipyrin (*is-o-ni-tro-so-an-te-pi'-rin*). See *Nitrosophenyl dimethylpyrazol.*

Isopilocarpin (*is-o-pil-o-kar'-pin*). An alkaloid from jaborandi isomeric with pilocarpin and similar to it in physiologic effect but weaker.

Isopral (*is'-o-pral*). Trichlorisopropyl alcohol. A hypnotic substance with odor of camphor.

Isoprene (*is'-o-prēn*). C_5H_8. A product of the fractional distillation of caoutchoucin or eupion discovered by Greville Williams; with strong acids it is converted into caoutchouc. It is found as a constituent of oil of turpentine.

Isoterebentene (*is-o-ter-e-ben'-tēn*). See *Dipentene* (Illus. Dict.).

Isotonic (*is-o-ton'-ik*) [ἰσος, equal; τόνος, tension]. 1. Having uniform tension or tonicity. 2. Applied to a solution of equal density, as the blood or some other fluid taken as a standard. Cf. *Hypertonic, Hypotonic.* **I. Salt Solution,** one having the same osmotic tension as the blood-serum; a 0.9% or "normal salt solution."

Isotonicity (*is-o-ton-is'-it-e*). 1. Same as *Isotonia* (Illus. Dict.). 2. Equality of osmotic pressure in different fluids.

Isotoxin (*is-o-toks'-in*) [ἰσος, equal; τοξικόν, poison]. A toxin elaborated in the blood of an animal and toxic for animals of the same species.

Isotropy (*is-ot'-ro-pe*) [ἰσος, equal; τροπή, turning]. 1. The condition of having equal or uniform properties throughout. 2. In embryology, Pflüger's term for absence of predetermined axes.

Issaeff's Period of Resistance. See under *Resistance.*

Isthmocholosis (*is-mo-kol-o'-sis*) [ἰσθμός, neck; χολή, bile]. Angina accompanied with bilious disorder.

Isthmopyra (*is-mo-pi'-rah*) [ἰσθμός, neck; πῦρ, fire]. Inflammation of the mucosa of the fauces. Syn., *Pyronchone; Pyrongone.*

Isthmus. (See Illus. Dict.) **I., Guyon's,** narrowing

and prolongation of the internal os uteri, which thus forms a small canal; it is not pathologic. **I., Haller's.** See *Fretum of Haller* (Illus. Dict.). **I. hepatis.** See *Pons hepatis* (Illus. Dict.). **I., Müller's,** the os uteri internum. **I. prosencephali.** See *Neck, Cephalic.* **I. rhombencephali,** His' name for a neck-like region caudad of the mesencephal in the early fetal brain of man, the cat, and perhaps other mammals. **I. tubæ Eustachii,** the narrowest portion of the cartilaginous part of the eustachian tube. **I., Vieussens'.** See *Annulus ovalis* (Illus. Dict.).

Isutan (*is'-u-tan*). A proprietary compound said to consist of bismuth, resorcin, and tannic acid; used in diarrhea of children. Dose, 1–3 gr. (0.065–0.2 gm.) every 2 hours. Syn., *Bismutan.*

Itch. (See Illus. Dict.) **I., Animal, I., Cat., I., Cattle,** mange. **I., Bedouin.** See under *Bedouin* (Illus. Dict.). **I., Coolie,** a superficial vesicular dermatitis confined entirely to the lower extremities, caused by the larvæ of *Uncinaria duodenalis.* It is endemic in Assam and other tropical regions among the laborers in tea-gardens and in damp soil. Syn., *Ground-itch; Water-itch; Water-pox; Water-sores; Sore-feet of coolies; Panighao* (Assam). **I., Cuban,** a disease supposed to be a mild form of smallpox introduced by soldiers returning from the Cuban war. **I., Dhobie,** a form of ringworm locating itself under the arms and between the legs when the skin is moist; very troublesome to soldiers in the tropics. Syn., *Manila itch.* **I., Frost,** pruritus hiemalis. **I., Ground.** See *I., Coolie.* **I., Lumbermen's, I., Prairie, I., Swamp.** See *Army Itch* (Illus. Dict.). **I., Manila.** See *I., Dhobie.* **I., Rank,** scabies papuliformis. **I., Rocky,** scabies purulenta. **I., Sheep,** scabies pecorina. **I., Sugar-bakers',** impetiginous eczema of the hands due to action of sugar on the skin. **I., Washerwoman's,** eczema lotricum. See under *Washerwoman* (Illus Dict.). **I., Water.** See *I., Coolie.* **I., Watery,** scabies lymphatica.

Itchol (*itch'-ol*). An ointment said to consist of lanolin and vaselin, each 420 gm., iodoform 45 gm., glycerin 32 gm., phenol 24 gm., oils of eucalyptus and lavender, each 12 gm.

Iter. (See Illus. Dict.) **I. ad quartum ventriculum,** the aqueduct of Sylvius. **I. femineum,** the perineum. **I. seminarium,** the vas deferens. **I. urinæ, I. urinarium,** the urinary passages.

Iteral (*it'-tur-al*) [*iter*, a way]. Relating to a passage particularly the sylvian aqueduct.

Ithycyphes, Ithycyphos (*ith-e-si'-fēz, -fos*) [ἰθυκυφής, curved directly outward]. Having a backward angular projection of the spinal column.

Itinerarium (*i-tin-er-a'-ri-um*) [*iter*, a way]. A lithotomy staff.

Itrol (*it'-rol*). Citrate of silver. See under *Silver.*

Itrosyl (*it'-ro-sil*). Concentrated nitrous ether.

Ittrium (*it'-ri um*). See *Yttrium* (Illus. Dict.)

Iulophorous (*i-u-lof'-or-us*) [ἰούλος, an ament; φορεῖν, to bear]. Amentaceous; bearing catkins.

Ivain (*i'-va-in*) [*iva*. Latin name of *Achillea moschata*]. $C_{24}H_{42}O_5$. A bitter substance obtained from *Achillea moschata*, Jacq., forming a yellow mass insoluble in water, soluble in alcohol.

Iva-oil (*i'-vah-oil*). A blue-green, volatile oil, of strong penetrating smell and taste of peppermint, obtained from iva, *Achillea moschata*, Jacq., by v. Planta; sp. gr. 0.934 at 15° C., boils at 170° C. Its principal constituent is ivaol.

Ivaol (*i'-vah-ol*). $C_{12}H_{20}O$. A pale yellow oily liquid of bitter taste and pleasant smell, the principal constituent of iva-oil (*q. v.*).

Ivory. (See Illus. Dict.) **I., Decalcified,** ivory treated with acid and deprived of inorganic constituents. **I., Vegetable,** the ripe seeds of *Phytelephas macrocarpa*, R. et P.

Ixodic (*iks-od'-ik*) [*Ixodes*, a genus of ticks]. Due to or derived from ticks.

Ixodin (*iks'-od-in*) [*Ixodes*, a genus of ticks]. A species of ferment found in an extract of wood-ticks obtained by Sabbatini by means of a physiologic salt solution. This substance injected intravenously in large quantities reduces blood-pressure and arrests cardiac action.

J

Jaborandi. (See Illus. Dict.) **J. mano,** in Brazil, *Piper mollicomum*, Kunth.

Jaborandin (*jab-o-ran'-din*). Synonym of *Pilocarpin.*

Jaboridin (*jab-or'-id-in*). $C_{10}H_{12}N_2O_3$. An oxidation-product of pilocarpin.

Jacaranda. (See Illus. Dict.) **J. procera,** Spr., a species indigenous to South America, furnishes Caraiba bark, used in diarrhea and dysentery. The leaves are tonic, diaphoretic, and diuretic, and used in gonorrhea, gout, etc. It contains the alkaloid carobin, carobic acid, steacarobic acid, carobon, resin, and tannin.

Jacksonian (*jak-so'-ne-an*). Described by John Hughlings Jackson; *e. g.*, Jacksonian epilepsy.

Jaculiferous (*jak-u-lif'-ur-us*) [*jaculum*, a dart; *ferre*, to bear]. Prickly, bearing spines.

Jadari [Arabic]. Smallpox.

Jagulaway Balsam. See under *Balsam.*

Jalap. (See Illus. Dict.) **J., Fusiform, J., Indian, J., Light, J., Male, J., Woody, J.-stalks, J. Tops,** the roots of *Ipomœa turpethum*, R. Br.

Jalapinol (*jal-ap'-in-ol*). $C_{16}H_{30}O_3(+\frac{1}{2}H_2O)$. A crystalline decomposition-product of jalapin; melts at 62.5° C., soluble in alcohol and ether.

Jalapinolate (*jal-ap'-in-o-lāt*). A salt of jalapinolic acid ($C_{16}H_{30}O_3$).

Jambosin (*jam'-boz-in*) [*Schambu*, East Indian name]. $C_{10}H_{15}NO_3$. A crystalline substance from jambosa, the root of *Eugenia jambos*, L.

Jamieson's Salve. Lanolin, 3 parts; oil of sweet almond, ½ part; distilled water, ½ part. A base for eye ointments.

Janitor (*jan'-it-or*) [L., doorkeeper]. The pylorus. **Janitores marsupii,** the marsupial bones.

Japaconin (*jap-ak'-on-in*). $C_{28}H_{41}NO_{10}$. A decomposition-product of japaconitin.

Japaconitin (*jap-ak-on'-it-in*). $C_{66}H_{89}N_2O_{21}$. A base; the most poisonous of the known aconite alkaloids. It is obtained from *Aconitum japonicum*, Decne. On saponification it splits up into benzoic acid and japaconin.

Jasminum. (See Illus. Dict.) **J. sambac,** Ait., bela, zambac, Arabian jasmine, a twining shrub of Asia and Africa; the flowers, mogra flowers, are used as a lactifuge and to give fragrance to tea; they yield oil of jasmine; the poisonous root is stomachic.

Jasper (*jas'-pur*) [ἰασπις]. A compact variety of quartz once held in high repute as a cardiac and stomachic stimulant and remedy in epilepsy.

Jaswa [Siberian]. Local name of anthrax.

Jatamansi Root. See *Nardostachys jatamansi.*

Jatropha. (See Illus. Dict.) **J. curcas,** L., tungshû, indigenous to the American tropics, cultivated in Africa and India, contains an acrid sap; the leaves are purgative and alterative, the seeds are known as Barbadoes nuts (*q. v.*). **J. gossypifolia,** L., the tua-tua plant indigenous to South America, West Indies, and Africa, has purgative leaves used in colic and bilious affections. It is highly extolled in Venezuela as a cure for leprosy and has been transplanted to Honolulu under the auspices of the United States government for experimentation there.

Jaundice. (See Illus. Dict.) Syn., *Icterus flavus; I. verus; Overflow of the bile; Leseoli morbus; Yellows; Cholosis; Choloplania; Cholemia; Dermatocholosis; Icteritia; I. flava; Ileus flavus; Suffusio auriginosa; Ileus icteroides; Morbus arquatus.* **J., Acathectic, J., Akathektic,** a name given by Liebermeister to the majority of cases usually classified as hematogenous icterus, but which he holds to be due to a disturbed activity of the liver-cells which in consequence of injury lose their ability to secrete bile in the direction of the bile-ducts; a consequence of which is the diffusion of the bile into the blood-vessels and lymph-vessels of the liver. Syn., *Diffusion icterus; Functional jaundice* [Kehr]. **J., Black, of the Tyrol,** an endemic disease, due, according to Melnikow-Raswedenkow, to *Echinococcus alveolaris.* He proposes the name *Alveolar echinococcus disease.* **J., Budd's.** See *Disease, Rokitansky's* (Illus. Dict.). **J., Catarrhal,** that due to catarrhal inflammation of the gall-bladder and bile-ducts. **J., Functional.** See *J., Acathectic.* **J., Green,** that in which the discoloration of the skin is green or olive-colored. Syn., *Icterus viridis.* **J., Hemapheic.** See *Icterus, Urobilin* (Illus. Dict.). **J., Hematohepatogenous,** combined hematogenous and hepatogenous jaundice. Syn., *Toxemic jaundice.* **J., Lead,** the earthy yellow hue of the skin in saturnine cachexia. **J., Malignant.** 1. Icterus gravis. 2. A common disease of dogs in South Africa due to a hematozoan parasite transmitted by the dog tick, *Hæmaphysalis Leachi.* **J., Murphy's Law of,** jaundice due to gall-stone is always preceded by colic; jaundice due to malignant disease, or catarrh of the ducts accompanied by infection, is never preceded by colic. **J. of the Newborn.** See *Icterus neonatorum* (Illus. Dict.). **J., Obstructive,** that due to permanent obstruction of the common bile-duct. It is persistent and deep, and accompanied by irritability, depression, and later coma, delirium or convulsions, a slow pulse, and subcutaneous hemorrhages. **J., Paradoxic,** Addison's disease. **J., Red,** a nonfebrile diffused redness of the skin. **J., Retention.** See *J., Obstructive.* **J., Saturnine,** lead jaundice. **J., Simple,** catarrhal jaundice. **J., Urobilin.** See under *Icterus* (Illus. Dict.). **J., Vernal,** mild catarrhal jaundice occurring oftenest in spring and fall because of the atmospheric changes.

Javanin, Javanina (*jav'-an-in, jav-an-e'-nah*). An alkaloid obtained by Hesse from Java calisaya bark.

Jaw. (See Illus. Dict.) **J., Big,** actinomycosis of cattle. **J., Phossy,** necrosis of the jaw produced in those who work in phosphorus, as in match factories. Syn., *Phossy mouth.* **J.-pier,** the os quadratum or hinge segment of the reptilian mandible; it becomes the incus or anvil bone of mammals. **J., Pig,** abnormal prominence of the upper jaw and enlargement of the teeth in the horse. **J., Wolf,** cleft palate.

Jecorin. (See Illus. Dict.) 2. A proprietary substitute for cod-liver oil, said to contain calcium chlorhydrophosphate 0.1 gm., lactic acid 0.05 gm., phosphoric acid 0.6 gm., bromin 0.01 gm., iodin 0.01 gm., ferrous iodid 0.075 gm., to each tablespoonful of the preparation.

Jecorol (*jek'-or-ol*). A proprietary preparation said to consist of the active constituents of cod-liver oil, and offered as a substitute for it.

Jejunity (*je-ju'-ni-te*) [*jejunus,* empty]. Fasting, hunger.

Jejunoileum (*je-ju-no-il'-e-um*) [*jejenus,* dry; εἰλεῖν, to roll]. That part of the small intestine extending from the jejunum to the duodenum.

Jejunotomy (*je-ju-not'-o-me*) [*jejunus,* dry, empty; τέμνειν, to cut]. Partial excision of the jejunum.

Jell (*jel*) [*gelare,* to freeze]. The precipitation of colloidal solutions.

Jelloid (*jel'-oid*). A form of pill coated with jujube mass.

Jelly. (See Illus. Dict.) **J., Bacterial,** the gelatinous matrix which causes certain bacteria to adhere to one another in masses or pellicles. See *Zooglea* (Illus. Dict.). **J.-leaf,** the mucilaginous leaf of *Sida rhombifolia,* L., used in making poultices. **J., Oat,** a dietetic preparation used in infant-feeding. It is prepared by soaking 4 ounces of coarse oatmeal in a quart of cold water for 12 hours. The mixture is then boiled down to 1 pint and allowed to cool. **J. of the Umbilical Cord.** See *Wharton's Jelly* (Illus. Dict.).

Jendrássik's Maneuver. [Ernst, b. in Hungary, 1858.] Interlocking of the fingers and forcible drawing apart of the hands, to facilitate the production of the knee-jerk.

Jequiritic (*jek'-ir-it-ik*). Relating to or due to jequirity.

Jequiritol (*jek'-ir-it-ol*). A sterile solution of abrin (see Illus. Dict.) used in corneal affections.

Jerk. (See Illus. Dict.) **J., Achilles-, J., Heel-tendon,** extension of the toes elicited on irritating the sole of the foot. See *Reflex, Babinski's.*

Jervate (*jur'-vāt*). A salt of jervic acid.

Jervia (*jur'-ve-ah*). See *Jervin* (Illus. Dict.).

Jez's Antityphoid Extract. An extract obtained from thymus gland, spleen, bone-marrow, brain, and spinal cord of rabbits immunized by frequent inoculations with cultures of typhoid bacilli; this is triturated in a solution of sodium chlorid, alcohol, glycerin, and a minute quantity of carbolic acid; a more recent formula contains peptone.

Jinked (*jinkd*). In veterinary practice, sprained in the back.

Joannesia (*jo-an-e'-se-ah*) [*John the Baptist*]. A euphorbiaceous genus of plants of one species, **J. princeps,** Vell., of Brazil; the fruit-hulls are astringent and used to stupefy fish; the purgative seeds (see *Anda*) are rich in fat, yielding oil of anda.

Johimbin (*yo-him'-bin*). See *Yohimbin.*

Joint. (See Illus. Dict.) 2. See *Articulation.* **J., Ball-and-Socket.** See *Enarthrosis* and *Diarthrosis* (Illus. Dict.). **J.-bodies, J.-mice.** See *Arthrolith.* **J., Brodie's,** hysteric arthroneuralgia. **J., Chopart's,** the mediotarsal articulation; the line of articulation which separates the astragalus and os calcis from the remaining tarsal bones. **J., Coxofemoral,** the hip-joint. **J.s, Doubling of the.** Synonym of *Rickets.* **J., False.** See *Articulation, False.* **J., Flail.** See under *Flail* (Illus. Dict.). **J., Ginglymoid,** ginglymus. See under *Diarthrosis* (Illus. Dict.). **J., Glid-**

ing, arthrodia. See under *Diarthrosis* (Illus. Dict.). **J., Hinge,** ginglymus. **J., Hysteric,** pseudarthritis. **J., Immovable,** synarthrosis. **J., Irritable,** sudden giving way of a joint, usually the knee, with pain, tenderness, and effusion due to some previous injury (occurring perhaps months before). **J., Lisfranc's,** the tarsometatarsal articulations; so named because the line of incision in his amputation of the foot passes through them. **J.s, Nodosity of.** Synonym of *Osteoarthritis*. **J., Pivot.** See *Cyclarthrosis* (Illus. Dict.). **J., Planiform,** arthrodia. See under *Diarthrosis* (Illus. Dict.). **J., Screw-hinged, J., Spiral,** a form of ginglymus in which the motion is slightly spiral, as at the elbow. **J., Stiff,** ankylosis. **J., Synovial,** a movable joint lubricated with synovia. **J., Talocrural,** the ankle-joint. **J., Wheel-and-Axle,** cyclarthrosis.

Jones' (Robert, of Liverpool) **Method** of treating fractures of the elbow-joint. It consists in placing the arm in a position of acute flexion and retaining it in this position without passive motion until complete consolidation results.

Jovialis (*jo-ve-a'-lis*) [L., belonging to Jupiter]. Containing tin.

Judam (Ar.). Leprosy.

Jugale (*ju'-gal-e*) [*jugum*, a yoke; pl., *jugalia*]. Same as *Jugal point*.

Jugate (*ju'-gāt*) [*jugum*, a height, a yoke]. 1. Having ridges. 2. Coupled together; yoked.

Jugulate (*ju'-gu-lāt*) [*jugulare*, to cut the throat]. To check or stop any process promptly.

Jugum. (See Illus. Dict.) 2. A ridge. **Juga cerebralia,** the elevations on the inner surface of the cranial bones between the impressiones digitatæ. **J. petrosum.** See *Eminence, Arcuate*.

Juice. (See Illus. Dict.) **J., Enteric,** intestinal juice. **J., Lapidific,** the name given by writers of the seventeenth century to a supposed fluid believed to give rise to fossils.

Juliferous, Juliflorous (*ju-lif'-ur-us, -lo-rus*) [L., *juliferus*]. Bearing catkins; amentaceous.

Julus (*ju'-lus*) [*ἰουλος*, a catkin; pl., *juli*]. A catkin, an ament.

Jumbul. See *Jambul* (Illus. Dict.).

Jumentous (*ju-men'-tus*) [*jumentum*, a beast of burden]. Like a beast of burden; horse-like, applied to the odor of urine.

Jumping. (See Illus. Dict.) **J. Frenchmen.** See *Jumpers* (Illus. Dict.). **J.-sickness,** a form of choromania. See *Jumpers*.

Junciform (*jun'-si-form*) [*juncus*, a rush]. Rushlike.

Jurubebin (*ju-ru-be'-bin*). An alkaloid found by Peckolt in fruit of *Solanum insidiosum*, Mart.

Justo (*jus'-to*) [ablative of *justum*, that which is right]. **J. major,** more than is right; larger in all dimensions than normal, applied to a pelvis. **J. minor,** abnormally small.

Justus' Blood Test. See under *Syphilis*.

Juxtaarticular (*juks-tah-ar-tik'-u-lar*) [*juxta*, near; *articulus*, joint]. Near a joint.

Juxtangina (*jukst-an-ji'-nah*) [*juxta*, near; *angina*]. Laryngitis with angina.

K

Kafta, Kat (*kaf'-tah, kaht*) [African]. The leaves of *Catha edulis*, which are used largely in Africa as a stimulant.

Kainogenesis (*ka-in-o-jen'-e-sis*) [*καινός*, new, fresh; *γένεσις*, generation]. A renewal or improvement by infusion of fresh material.

Kairin. (See Illus. Dict.) Syn., *K. methyl; Kairin M.; Oxyhydromethylchinolin*. **K. Ethyl, Kairin A,** $C_9H_{10}(C_2H_5)NO$. HCl, recommended as antipyretic in doses of 8–25 gr. (0.5–1 gm.). Syn., *Oxychinolinethylhydrid*.

Kakatrophy. See *Cacotrophy* (Illus. Dict.).

Kakerlak (*kak'-ur-lak*) [Polynesian]. An albino.

Kakerlakism (*kak-ur-lak'-izm*). Albinism.

Kaki (*kak'-e*). The fruit of *Diospyros kaki*, L. fil. Japanese persimmon; used in vomiting of pregnancy and in diarrhea.

Kakidrosis (*kak-id-ro'-sis*) [*κακός*, bad; *ἱδρώς*, sweat]. Fetid perspiration.

Kakodyl (*kak'-o-dil*). See *Cacodyl* (Illus. Dict.). **K.-therapy,** the remedial use of kakodyl preparations.

Kakous (*kak'-us*). See *Cagot* (Illus. Dict.).

Kala-azar (*kah'-la-az-ar*). An obscure fatal disease prevalent in Assam, the first stage of which is irregularly intermittent, remittent, or continued fever, which is followed by continuous fever of a low type. It is believed by Giles to be due to the effects of uncinariasis upon a population poisoned by malaria.

Kalaf (*kal'-af*). A medicinal fluid obtained from leaves of *Salix capensis*, Thunb.

Kaligenous (*kal-ij'-en-us*) [*kali*, potash; *generare*, to produce]. Yielding potash.

Kalmia. (See Illus. Dict.) 2. A genus of ericacious shrubs; the leaves of *K. angustifolia*, L., and *K. latifolia*, L., contain andromedotoxin, and when eaten by partridges are said to render the flesh of these birds poisonous.

Kamalin (*kam'-al-in*). See *Rottlerin*.

Kameela, Kamela, Kamila. See *Kamala* (Illus. Dict.).

Kampf's Doctrine of Infarctus. See under *Infarctus*.

Kangri-burn (*kan'-gri*). A squamous epithelioma frequent on the skin of the abdomen and thighs of the natives of Kashmir and attributed to the irritation caused by charcoal heaters worn beneath the clothing in cold weather.

Kaolinosis (*ka-ol-in-o'-sis*). A pneumoconiosis occurring in workers in kaolin.

Kara-kurt. The Tartar name for the poisonous spider, *Latrodectus tredecemguttatus*, var. *erebus*.

Kariolysis. See *Karyolysis*.

Kariorrhexis. See *Karyorrhexis*.

Karnoid (*kar'-noid*) [*cara*, flesh; *εἰδος*, likeness]. Applied to powdered preparations of meat and the patented process by which raw comminuted meat is dried in sterilized air not exceeding 100° F.

Karnosin (*kar-no′-sin*). See *Carnosin.*

Karyaster (*kar-e-as′-tur*) [κάρυον, nucleus; ἀστήρ, a star]. The radiate arrangement of the chromosome during karyokinesis. Syn., *Aster.*

Karyenchyma (*kar-e-en′-ke-mah*) [κάρυον, nucleus; ἐγχεῖν, to pour in]. The clear ground-substance occupying the meshes of the nuclear reticulum. Syn., *Karyolymph; Nuclear sap.*

Karyochromatophil (*kar-e-o-kro-mat′-o-fil*) [κάρυον, nucleus; χρῶμα, color; φιλεῖν, to love]. 1. Having a stainable nucleus. 2. A stainable nucleus.

Karyochrome. See *Caryochrome.*

Karyogamy (*kar-e-og′-am-e*) [κάρυον, nucleus; γάμος, marriage]. A conjugation of cells characterized by a fusion of the nuclei. Cf. *Plastogamy.*

Karyoklasis (*kar-e-ok′-las-is*) [κάρυον, nucleus; κλάσις, a breaking]. See *Karyorrhexis.*

Karyolymph (*kar′-e-o-limf*). See *Karyenchyma.*

Karyomicrosoma (*kar-e-o-mik-ro-so′-mah*). See *Nucleo-microsomata*, under *Nucleoplasm* (Illus. Dict.).

Karyomite (*kar′-e-o-mīt*). See *Chromosome* (Illus. Dict.).

Karyon (*kar′-e-on*) [κάρυον, nut]. The cell-nucleus.

Karyophage (*kar′-e-of-āj*). See *Karyophagus.*

Karyophagus (*kar-re-of′-ag-us*) [κάρυον, nucleus; φαγεῖν, to eat; pl., *karyophagi*]. A cytozoon which destroys the nucleus of the infected cell.

Karyoplasm. (See Illus. Dict.) 2. The more fluid material in the meshes of the chromoplasm.

Karyorrhexis (*kar-e-or-ek′-sis*) [κάρυον, nucleus; ῥῆξις, rupture]. Fragmentation or splitting up of the nucleus into a number of chromatin particles which become scattered in the cytoplasm; it occurs in the cells of the disappearing follicles of the ovary.

Karyota (*kar-e-o′-tah*) [κάρυον, nucleus]. Nucleated cells.

Karyotheca (*kar-e-o-the′-ka*) [κάρυον, nut; θήκη, case]. Nuclear membrane.

Kasagra (*kas-ag′-ra*). A proprietary preparation of cascara sagrada.

Kasena (*kas′-e-nah*). An aromatic preparation of cascara and senna. Dose, 5–10 c.c.

Kassuende. The East African name for syphilis.

Kasyl (*kas′-il*). A germicide said to consist of creosol and green soap.

Kat. See *Kafta.*

Katabolin (*kat-ab′-o-lin*). See *Catabolin.*

Katalase (*kat′-a-lāz*). See *Milk-catalase.*

Katalysation (*kat-al-i-za′-shun*). The act or process of catalysis (Illus. Dict.).

Katalyzator (*kat-al-i-za′-tor*). See *Catalyzer.*

Kataphasia. See *Cataphasia* (Illus. Dict.).

Kataphoria (*kat-ah-fo′-re-ah*) [κατά, down; φορός, tending]. A tendency of both eyes to assume too low a plane.

Katatropia (*kat-ah-tro′-pe-ah*) [κατά, down; τρόπος, a turn]. An actual turning of both eyes downward.

Katchenko's Cell-nodules. See under *Nodules.*

Katelectrotonus (*kat-el-ek-trot′-on-us*). 1. See *Catelectrotonus* (Illus. Dict.). 2. The blocking of cations.

Katex (*kat′-eks*). An abbreviation of kathode excitation.

Katharmon (*kath-ar′-mon*). A colorless antiseptic for internal and external use, said to contain *Hydrastis canadensis*, L., root of *Phytolacca decandra*, L., *Thymus vulgaris*, L., *Mentha arvensis*, L., concentrated extract of *Hamamelis virginiana*, L., and chemically pure salicylous and boric acids.

Katharol (*kath′-ar-ol*). A solution of hydrogen peroxid.

Kathetometer (*kath-et-om′-et-ur*) [κάθετος, a plumb-line; μέτρον, a measure]. (See Illus. Dict.) 2. An apparatus for use in craniometry.

Kathin (*kath′-in*). Same as *Celastrin* (1).

Kathrein (*kath′-re-in*). The proprietary name for carbon tetrachlorid as placed on the market by certain German chemists as a nonexplosive substitute for benzene and naphtha.

Katipo (*kat′-ip-o*). The Australian name for two poisonous spiders, *Latrodectus scelio* and *L. hasseltii.*

Katochus (*kat-o′-kus*) [κάτοχος, catalepsy]. An unconscious condition, resembling sleep with open eyes, observed in intermittent fever, etc.

Kawa (*kah′-wah*). See *Kava* (Illus. Dict.).

Kawain, Kawin (*kah′-wa-in, kah′-win*). See *Methysticin* (Illus. Dict.).

Kédani-disease. A disease common in Japan due to inoculation with *Proteus hauseri* by the bite of a mite called kédani. The symptoms resemble those of abdominal typhus.

Keel. (See Illus. Dict.) 2. The prominent sloping bone in the sternum of carinate birds, resembling the clavicle of reptiles, but not a separate bone. Syn., *Carina.* **K.-breast.** See *Breast, Chicken* (Illus. Dict.).

Keeley Cure. See under *Cure.*

Kefir (*ka′-fir*). See *Kefyr* and *Koumiss* (Illus. Dict.). **K., Arsenical,** a combination of kefir with Fowler's solution. **K., Iodo-,** a combination of kefir with sodium iodid.

Kelene (*kel′-ēn*). Purified ethyl chlorid.

Keloid. (See Illus. Dict.) Syn., *Chelis; Cheloma; Kelos; Kelodes; Cancrois.* **K., Cicatricial, K. of Cicatrices, K., Consecutive, K., False, K. of Scars, K., Spurious, K., Traumatic,** a keloid forming around a preexisting cicatrix.

Keloplasty (*kel-o-plas′-te*). See *Chiloplasty* (Illus. Dict.).

Kelosomia (*kel-o-so′-me-ah*). See *Celosomia* (Illus. Dict.).

Kelpion (*kelp′-e-on*) [*kelp*, seaweed yielding iodin]. An ointment containing iodin which is volatilized when the ointment is warmed.

Kenesthesia, Kenæsthesia (*ken-es-the′-ze-ah*). See *Cenesthesia.*

Kenyah Dart Poison. See *Antiarin* (Illus. Dict.).

Keratitis. (See Illus. Dict.) Syn., *Leontiasis corniculata; Keratodeitis.* **K. arborescens, K., Dendritic, K., Furrow, K., Mycotic,** a superficial form attributed to a specific organism and characterized by a line of infiltration of the corneal tissue near the surface and developing later into an arborescent formation. **K., Aspergillus.** See *Aspergilluskeratitis.* **K., Band-shaped, K., Bandolet, K., Trophic.** See *K., Ribbon-like* (Illus. Dict.). **K., Bullous,** a condition marked by the formation of one or more large vesicles on the cornea. **K., Desiccative.** See *K. e lagophthalmo.* **K. e lagophthalmo,** a form occurring in lagophthalmus due to drying of the cornea from exposure without lubrication. Syn., *K., Desiccative; K. xerotica.* **K., Oyster-shucker's,** a form due to corneal traumatism from pieces of embedded oyster-shell. **K., Pneumococcous,** that due to invasion of pneumococci. **K., Sclerosing,** an interstitial form associated with scleritis. **K. xerotica.** See *K. e lagophthalmo.*

Keratoangioma (*ker-at-o-an-ji-o′-mah*). See *Angiokeratoma* (Illus. Dict.).

Keratocentesis (*ker-at-o-sen-te′-sis*) [κέρας, cornea; κέντησις, a pricking]. Corneal puncture.

Keratocone, Keratoconus (*ker-at-o-kōn, ker-at-o-kō′-nus*). See under *Keratoglobus* (Illus. Dict.).

Keratocricoid (*ker-at-o-kri′-koid*) [κέρας, horn; κρικοειδής, ring-shaped]. The posterior cricothyroid muscle.

Keratogenesis (*ker-at-o-jen′-e-sis*) [κέρας, horn; γενναν,

to produce]. The formation of horny material or growths.

Keratohelcosis (*ker-at-o-hel-ko'-sis*) [κερας, cornea; ἑλκωσις, ulceration]. Ulceration of the cornea.

Keratohyal (*ker-at-o-hi'-al*) [κέρας, horn; ὑαλος, glass]. Relating to a cornu of the hyoid bone.

Keratohyaline (*ker-at-o-hi'-al-ēn*). Both horny and hyaline in structure.

Keratoid. (See Illus. Dict.) In the plural, **Keratoides.** See *Canals, Recklinghausen's* (Illus. Dict.).

Keratolysis. (See Illus. Dict.) **K. neonatorum.** See *Dermatitis exfoliativa neonatorum*, and *Disease, Ritter's* (Illus. Dict.).

Keratoma. (See Illus. Dict.) **K. hereditarium palmare et plantare,** congenital ichthyosis confined to the palmar and plantar surfaces.

Keratometry (*ker-at-om'-et-re*) [κέρας, cornea; μέτρον, measure]. The measurement of curves of the cornea.

Keratophagia (*ker-at-of-a-je'-ah*) [κέρας, horn; φαγεῖν, to eat]. See *Onychomycosis* (Illus. Dict.).

Keratosis. (See Illus. Dict.) **K. circumscripta.** See *Cornu cutaneum* (Illus. Dict.). **K. diffusa epidermica intrauterina.** Same as *Ichthyosis congenita* or *Seborrhœa squamosa neonatorum* (Illus. Dict.). **K. linguæ.** See *Ichthyosis linguæ* (Illus. Dict.). **K. pharyngis.** See *Hyperkeratosis lacunaris pharyngis.* **K. palmaris,** that affecting the palmar surfaces. **K. pigmentosa.** See *Verruca senilis* (Illus. Dict.). **K. of the Tonsils.** See *Hyperkeratosis lacunaris pharyngis.* **K. universalis multiformis,** Lewin's name for pityriasis rubra pilaris.

Keraunics (*ker-awn'-iks*) [κεραίνος, thunder]. The branch of physics treating of heat and electricity.

Kestin (*kes'-tin*). A proprietary antiseptic and deodorant said to contain trinitrophenol, ammonium chlorid, orthoboric acid, and formic aldehyd.

Key. (See Illus. Dict.) 2. A device for making and breaking an electric circuit. 3. In a system of classification a table containing the principal divisions and their distinguishing characteristics. 4. See *Samara* (Illus. Dict.). **K., Du Bois-Reymond's,** an electric switch by means of which the circuit may be either closed or the current short-circuited. **K., Tetanizing.** See *K., DuBois-Reymond's.*

Khamsin (*kam'-sin*) [*khamsin* (Egyptian), fifty; referring to the fifty days between the Coptic Easter and Pentecost]. A local dry south-southwest wind of Egypt which occurs between the end of February and the end of April. It lasts from two to four days and brings clouds of fine sand with it from the desert. This sand not only obscures the sun like a dense fog, but irritates the eyes and nasal mucous membrane, gets into the clothes, and penetrates into closed rooms. During spring the khamsin is a dry hot wind, the thermometer rising, according to Canney, to 100° or even 108° F., but when the south or southwest winds occur at Cairo in autumn and winter, they are colder (cold khamsin). [Weber.] Cf. *Harmattan, Mistral, Simoon, Sirocco, Solano, Fœhn, Norther.*

Khanhog [refusing food]. Vernacular name in India for trypanosomiasis.

Khusk-zahurbad [dry blood-poisoning]. A vernacular name in India for trypanosomiasis.

Khuther (*ku'-thur*) [South African]. The leguminous plant, *Lotus arabicus*, L., reported during the South African war as very poisonous for cattle, sheep, and goats when young, but a good fodder plant when the seeds are ripe. Cf. *Lotusin.*

Kibisitome (*ki-bis-it-ōm*) [κίβισις, a pouch; τέμνειν, to cut]. A cystitome.

Kidney. (See Illus. Dict.) **K., Butter.** See *K., Fatty* (Illus. Dict.). **K., Chronically Contracted, K., Cirrhotic, K., Coarse.** See *K., Arteriosclerotic* (Illus. Dict.). See *Sign, Konig's.* **K., Confluent,** a single kidney formed by fusion of twin kidneys or other congenital malformation. **K. Extracts.** See *Oporenin, Renaden, Renes,* etc. **K., Formad's,** the elongated and enlarged kidney of chronic alcoholism. **K., Massage,** a state of uremia and renal incompetence due to improper massage of the kidney. **K., Movable, Frank's Rule Regarding:** "With the patient lying on the back, the surgeon, standing on the right side, places the four fingers of his left hand beneath the hollow of the loin below the twelfth rib. The thumb in front encircles the abdomen just below the costal arch, but without exercising any pressure. The patient is then directed to draw a full breath. Immediately before expiration the surgeon begins to grasp the loin, and follows the liver as it recedes up below the ribs. If with the right hand a kidney can be felt lying below the grasp of the left hand, this organ is pathologically movable. If the right hand presses on this tumor, while the left hand relaxes its grasp gradually, the tumor can be felt to slip suddenly between the fingers and thumb, and to disappear upward. On the other hand, a kidney which descends so that only its lower half can be felt, but which moves back to its place on expiration, is physiologically movable." [J. Scott-Riddell.] **K.-pad,** an elastic bandage fitted with a pad and used in the mechanical treatment of movable kidney. **K., Sacculated,** a condition due to nephrydrosis and absorption of the chief part of the kidney, leaving the irregularly expanded capsule.

Kiesselbach's Place. See under *Place.*

Kikekunemalo (*ki-ke-ku-ne-mah'-lo*). A gum-resin similar to copal, believed to be a form of chibou (*q. v.*) (Illus. Dict.).

Kikis (*ki'-kis*) [Malay]. Ichthyosis.

Kil. A Russian product similar to emol containing silica, aluminium, ferric oxid, and carbonates of lime and magnesium. The white sticky mass formed when it is mixed with water is used by the natives for soap. It is used as an ointment base.

Kilocalory (*kil-o-kal'-or-e*). See *Calory, Great.*

Kilos (*ki'-los*) [χεῖλος, a lip, a rim]. Stroud's name for the thin zone of nervous substance which forms the transition between the substantial parietes and the metatela in the brain of the cat. Syn., *Valvula semilunaris; Postvelum.*

Kinematograph (*kin-e-mat'-o-graf*) [κίνημα, a motion; γραφειν, to write]. 1. See *Biograph.* 2. A machine which passes under the fingers of the blind a series of reliefs representing the same object in different positions, which gives the illusion of moving scenes to the blind just as photographs passing over a luminous screen lend the illusion to those with sight.

Kinescope (*kin'-es-kōp*) [κινεῖν, to move; σκοπεῖν, to examine]. A device used by Holth to regulate with accuracy the width of an aperture through which rays of light are allowed to pass in measuring ametropia.

Kinescopy (*kin-es'-ko-pe*). A form of retinoscopy requiring cooperation on the part of the patient; subjective retinoscopy.

Kinesia. (See Illus. Dict.) 2. See *Kinetia* (Illus. Dict.).

Kinesialgia (*kin-e-si-al'-je-ah*) [κινεῖν, to move; ἄλγος, pain]. The condition of a muscle giving rise to pain on contraction. Cf. *Kinesalgia.*

Kinesimeter (*kin-es-im'-et-ur*). See *Kinesiometer* (Illus. Dict.).

Kinesiometric (*kines-e-o-met'-rik*) [κίνησις, movement; μέτρον, measure]. Relating to the measurement of motion.

Kinesioneurosis. (See Illus. Dict.) **K., External,**

that affecting the external muscles. **K., Internal, K., Visceral,** that affecting the muscles of the viscera. **K., Vascular.** Same as *Angioneurosis.*

Kinesitherapy (*kin-es-e-ther'-ap-e*). See *Kinesiotherapy; Swedish Movements* and *Ling System* (Illus. Dict.).

Kinesthesia. (See Illus. Dict.) 2. The morbid impulse that impels one looking from a height to throw himself down.

Kinesthesic (*kin-es-thet'-sik*). Relating to kinesthesia. **K. Center.** See *Center, Kinesthetic.*

Kinethmics (*kin-eth'-miks*) [κινηθμός, motion]. The science of motion.

Kinetographic (*kin-et-o-graf'-ik*) [κίνησις, movement; γράφειν, to write]. Relating to the recording of movements.

Kinetoplasm (*kin-et'-o-plazm*) [κινεῖν, to move; πλάσμα, something formed]. See *Hyaloplasm* (Illus. Dict.).

Kinetoscope (*kin-et'-o-skōp*) [κίνησις, movement; σκοπεῖν, to view]. An apparatus for producing stereoptic pictures of objects or beings in motion; a *vitascope.* Cf. *Stroboscope; Phenakistoscope; Zoetrope.*

Kinetotherapeutic (*kin-et-o-ther-ap-u'-tik*) [κινεῖν, to move; θεραπεία, therapy]. Relating to the therapeutic use of systematic movements and exercises.

Kineurin (*kin-u'-rin*). See *Quinin Glycerophosphate.*

Kinkelibah. The African name for *Combretum altum,* Guill., and *C. raimbaultii,* Heck., the leaves of which are used as a febrifuge. Dose, ½ oz. in decoction.

Kino. (See Illus. Dict.) Syn., *Adstringens fothergilii.* 2. A general term for the astringent inspissated juice of a tree, as furnished by many species of Eucalyptus. **K., African, K. africanum, K., Amboyna, K., Malabar.** See *Kino* (Illus. Dict.). **K., American, K. americanum, K. occidentale, K., West Indian.** See *K., Jamaica* (Illus. Dict.). **K., Asiatic, K., Bengal, K., Indian, K., Palas.** See *K., Butea* (Illus. Dict.). **K., Botany Bay,** the most brilliant of all kinos; obtained from bloodwood, *Eucalyptus corymbosa,* Sm., and from *E. siderophloia,* Benth. **K., Burmese,** obtained from *Pterocarpus indicus,* Willd.

Kinoplasm (*kin'-o-plazm*) [κινεῖν, to move; πλάσμα, a thing molded]. Strasburger's term for the protoplasm peculiar to the centrosome. The archoplasm of Boveri.

Kiotomy (*ki-ot'-o-me*) [κίων, the uvula; τέμνειν, to cut]. Excision of the uvula.

Kirrhonosis (*kir-on-o'-sis*). See *Cirrhonosus* (Illus. Dict.).

Klemmolin (*klem'-ol-in*). A proprietary remedy for rheumatism said to be prepared from pine tops and poplar buds.

Klikuschi [Russian]. An affection resembling acute dementia observed among the women of Kursk and Orel.

Klinocephalus. See *Clinocephalus.*

Knee. (See Illus. Dict.) **K., Back,** a deformity consisting of a sharp backward bend near the upper end of the tibia, due to incomplete development at the forepart of the epiphyseal line. **K., Chambermaid's.** See *Abscess, Bursal* (Illus. Dict.). **K., Foot-ball,** periostitis from overuse of the extensors of the thigh. **K.-jointed,** bent like a knee, geniculate. **K.-pan-shaped,** patelliform. **K.-truss,** a truss for supporting dislocated semilunar cartilages.

Kneippism (*ni'-pizm*) [*Sebastian Kneipp,* a German empiric, 1821–1897]. Hydrotherapy applied in a great variety of ways, baths, lotions, wet compresses, packs, cold affusions, and walking barefooted in the morning dew. A special system of clothing was an adjunct of the cure as carried out at Wörishofen.

Knot. (See Illus. Dict.) **K.s, False, of the Umbilical Cord,** nodular enlargements of the cord due to accumulation of Wharton's jelly.

Kodozonol (*kod-o-zo'-nol*). Ozonized cod-liver oil. An antiseptic dressing for wounds, burns, etc.

Koilrrhachic (*koil-rak'-ik*) [κοίλος, hollow; ῥάχις, spine]. Having a hollow back. Cf. *Orthorrhachic; Kurtorrhachic; Ensellure.*

Kolabon (*ko'-lah-bon*) [*kola; bon-bon*]. A confection prepared from undried kola, containing kolanin, caffein, and theobromin. It is recommended in treatment of sea-sickness.

Kola-cardinette (*ko-lah-kar'-di-net*). A proprietary cordial containing from 30 to 60 grs. of kola to each fluid ounce. A nerve tonic and stimulant. Dose, 1–4 tablespoonfuls (16–60 c.c.) 5 to 6 times daily.

Kolanin (*ko'-lan-in*). The physiologically active glucosid from kola-nut; a thick extract containing 80%–90% of the pure glucosid, is used in the treatment of neurasthenia and neurasthenic weakness of the heart.

Kolatannin (*ko-lah-tan'-in*). A compound of caffein and tannin obtained from kola-nuts.

Kolla. (See Illus. Dict.) 2. An African name for the cramps of the legs occurring in the final stages of malaria.

Kollacin. See *Collacin.*

Kollerization (*kol-ur-i-za'-shun*). See *Cocainisation* (Illus. Dict.).

Kolopexy. See *Colopexy.*

Kolto, Kolton, Koltum (*kol'-to, -ton, -tum*). Plica polonica.

Kolypeptic (*ko-le-pep'-tik*) [κωλῦον, a hindrance; πεπτικός, conducive to digestion]. Hindering or checking digestive processes.

Kolyseptic (*ko-le-sep'-tik*) [κωλῦν, to hinder; σήπειν, to putrify]. 1. Preventing putrefaction. 2. An agent that hinders a septic process.

Koniosis (*ko-ne-o'-sis*) [κόνις, dust]. A morbid condition due to inhalation of dust.

Koniscope (*kon'-is-kōp*) [κόνις, dust; σκοπεῖν, to examine]. An instrument for determining the quantity of dust in the atmosphere. Cf. *Aeroconiscope* (Illus. Dict.).

Konseal (*kon'-sēl*). A form of cachet.

Kophemia (*ko-fe'-me-ah*) [κωφᾶν, to deafen]. See *Deafness, Word* (Illus. Dict.).

Kopremia, Kopræmia. See *Copremia* (Illus. Dict.).

Kopyopia (*kop-e-o'-pe-ah*). See *Copiopia* (Illus. Dict.).

Korpulin. See *Corpulin.*

Korsakow's Psychosis. See *Psychosis.*

Ko-Sam (*ko'-sam*). Chinese name for the seeds of *Brucea sumatrana,* Roxb., used in metrorrhagia and dysentery. Dose, 5–10 gr. (0.33–0.66 gm.).

Kosher (*ko'-shur*) [Heb., lawful]. Pure, lawful. **K.-meat,** the flesh of animals that have been slaughtered and inspected according to the laws of the Jewish rabbis.

Kosotoxin (*ko-so-toks'-in*) [*koso,* the fertile flowers of *Brayera anthelmintica;* τοξικόν, poison]. $C_{26}H_{34}O_{10}$. An active principle obtained from the ethereal extract of kousso flowers; a yellowish-white powder insoluble in water, soluble in alcohol, ether, chloroform, benzol, carbon disulfid, or acetone; and in aqueous solutions of alkaline carbonates. It melts at 80° C. A strong muscle poison, but exerts little influence on the central nervous system.

Kramerate (*kra'-mer-āt*). A salt of krameric acid.

Krasospoma (*kras-os'-pom-ah*). A poultice made of bread boiled in strong red wine and combined with aromatic herbs.

Kraurosis. (See Illus. Dict.) **K. pudendi, K. vulvæ,** an atrophic shriveling of the mucosa of the vestibule of the vulva; first described by Breisky of Prague in 1885.

Kreisel (*krī'-zel*) [Ger., a whirligig]. The staggers in sheep. See *Gid* (Illus. Dict.).

Kreochyle (*kre'-o-kīl*) [κρέας, meat; χυλός, juice]. A liquid preparation of meat.

Kreosal. See *Creosal.*

Kreosolid (*kre-o-sol'-id*). See *Creasote-magnesia.*

Kreotoxicon (*kre-o-toks'-ik-on*) [κρέας, meat; τοξικόν, poison]. A general term for the active agent in poisonous meat.

Kreotoxin (*kre-o-toks'-in*). Any basic poison generated in meat by bacteria.

Kreotoxism (*kre-o-toks'-ism*) [κρέας, meat; τοξικόν, poison]. Poisoning by infected meat.

Kreozonal (*kre-o-zō'-nal*). Ozonized oil of tar for external use in skin-disease.

Kreplinum (*krep'-li-num*). A proprietary cosmetic said to be quillaya bark in dilute (25%) alcohol to which is added oil of rosemary, lavender, or other perfuming oils.

Kresamin (*kres'-am-in*). See *Ethylenediamin Tricresol.*

Kresaprol (*kres'-ap-rol*). See *Cresin.*

Kresin (*kre'-sin*). See *Cresin.*

Kresochin (*kres'-o-kin*). See *Quinosol.*

Kresoform (*kres'-o-form*). A condensation product of formic aldehyd and creasote.

Kresofuchsin (*kres-o'-fūk'-sin*). An amorphous powder of gray-blue color. It is soluble in acetic acid or acetone, less readily but quite soluble in alcohol, only very slightly so in water. The alcoholic solution appears blue, the aqueous red. It is used as a histologic stain.

Kristallin. See *Cristallin.*

Krogius' Method of Anesthesia. See *Anesthesia, Paraneural Method of.*

Kromskop (*krom'-skōp*) [χρῶμα, color; σκοπεῖν, to view]. A name given by Ives to a lantern photochromoscope (*q. v.*) designed by him.

Kronethyl (*kron-eth'-il*). An ethereal extract of Chinese cantharides. Applied in gout and neuralgia, 6-10 drops on a wet bandage.

Krymotherapy. See *Crymotherapy.*

Kryofin (*krī'-o-fin*). Phenetidin methyl glycolate, a condensation-product of paraphenetidin and methylglycolic acid forming colorless needles, soluble in 600 parts of cold or 52 parts of hot water and melting at 98°–99° C. It is antipyretic and antineuralgic. Dose, 5–8 gr. (0.3–0.5 gm.).

Kryolite. See *Cryolite.*

Kryoscopy. See *Cryoscopy.*

Kryptidin (*kript'-id-in*) [κρυπτόν, concealed]. $C_{11}H_{12}N$. A base from coal-tar. Syn., *Cryptidin.*

Krypton (*krip'-ton*) [κρυπτόν, hidden]. A gaseous element discovered in liquid air by Ramsay and Travers (1898). Its relative density is 40.88 and it melts at 169° C. and boils at about 152° C.

Krystallose (*kris'-tal-ōs*). Sodium saccharinate.

Kubisagari, Kubisgari. An endemic paralytic vertigo which prevails in the north of Japan from May to October among laborers of both sexes and of all ages. It comes on in paroxysms, with ptosis, disordered vision, motor disturbance of the tongue, lips, and muscles of mastication, and paresis of the muscles of the neck, body, and extremities. In the intervals the patients are comparatively free from the symptoms.

Külz's Casts. See under *Cast.*

Kumbecephalic (*kum-be-sef-al'-ik*). See *Cymbocephalic* (Illus. Dict.).

Kummer's Method of Anesthesia. See *Anesthesia, Paraneural Method of.*

Kurchisin (*kurch'-is-in*). See *Wrightin.*

Kurtorrhachic (*kurt-o-rak'-ik*) [*curtus*, short; ῥάχις, a spine]. Having a short backbone. Cf. *Orthorrhachic, Koilrrhachic, Ensellure.*

Kuttarasome (*kut-ar'-as-ōm*) [κύτταρος, any hollow cavity; σῶμα, body]. A body found by Ira Van Gieson at the neck of the cone of the retina, composed of a series of parallel bars presenting a gridiron appearance. The bars had lateral anastomoses and at the top joined in a semicircular manner.

Kynocephalous (*kin-o-sef'-a-lus*). See *Cynocephalous* (Illus. Dict.).

Kynophobia (*ki-no-fo'-be-ah*). See *Cynophobia* (Illus. Dict.).

Kyphosis. (See Illus. Dict.) **K., Senile,** the stooping of the aged.

Kyphotone (*kī'-fo-tōn*) [κῦφος, a crookedness; τόνος, a brace]. An apparatus for the forcible reduction of deformity in Pott's disease.

Kyrtometric (*kir-to-met'-rik*) [κυρτός, curved; μέτρον, measure]. Relating to the measurement of the body-curves. Syn., *Cyrtometric.*

Kysthitis (*kis-thī'-tis*) [κύσθος, a hollow]. Vaginitis.

Kysthoptosis (*kis-thop'-to-sis*). Preferred term for *Kysthoproptosis* (Illus. Dict.).

L

Labially (*lā' be-al-e*) [*labium*, lip]. Toward the lips.

Labile. (See Illus. Dict.) 2. In chemistry, unstable.

Lability (*la-bil'-e-te*) [*labilis*, apt to slip]. 1. In electrotherapeutics, the quality of being labile. Cf. *Labile.* 2. Instability.

Labiograph (*la'-be-o-graf*) [*labium*, lip; γράφειν, to write]. An instrument for recording the labial movements in speaking.

Labiomycosis (*la-be-o-mi-ko'-sis*) [*labium*, lip; μύκης, fungus]. Any affection of the lips due to fungal origin.

Labioplasty (*la-be-o-plas'-te*) [*labium*, lip; πλάσσειν, to form]. Plastic surgery of the lips.

Labium. (See Illus. Dict.) **Labia uteri,** the lips of the cervix uteri. **Labia, Urethral,** enlargement of the anterior portion of the hymen. This hypertrophy is believed to be due to traction. Syn., *Urethral hymen.* **L. vocale,** a name for the vocal cords and their adnexa.

Lablab (*lab'-lab*). The genus *Dolichos.* **L. Seeds,** the seeds of *Dolichos lablab*, L., cultivated in all parts of the world for its starchy beans which are used as food and also as a stomachic and antiperiodic.

Labor. (See Illus. Dict.) Cf. *Accouchement, Confinement.* **L., Breech,** labor with breech presentation. **L., Footling,** labor with foot-presentation. **L., Forced.** See *Accouchement forcé* (Illus. Dict.). **L., Inert, L., Powerless.** See *L., Atonic* (Illus. Dict.). **L., Morbid,** that attended by any abnormality. Cf. *Dystocia, Fetal* (Illus. Dict.). **L., Multiparous, L.,**

Multiple, labor with two or more fetuses. **L., Premature, Methods of Inducing, Braun's, Brünninghausen's,** or **Kluge's,** the dilation of the cervix uteri by expanding tents. **Kiwisch's Method,** by hot douches against or within the cervix. **Krause's Method,** the insertion of a flexible catheter or piece of catgut into the uterus outside of the fetal envelopes and allowing it to remain there. **Lehmann's Method** differs from Krause's method in that the inserted catheter or other foreign body is withdrawn again. **Pigeolet's Method.** See *Kluge's Method.* **Scheele's Method** consists in puncturation of the membranes. **Scholler's Method,** distention of the vagina by a tampon. **v. Siebold's, Simpson's,** or **Van Leynseele's Method.** See *Kluge's Method.* **Tarnier's Method,** distention by Tarnier's dilator. **L., Preternatural,** that attended with any other than head presentation.

Labordin (*lab-or'-din*). See *Analgene* (Illus. Dict.).

Labrum. (See Illus. Dict.) **L. cartilagineum, L. glenoideum,** the cartilaginous edge or border of a cavity forming part of an articulation; as the fibrous ring bordering the glenoid cavity of the scapula.

Labyrinth. (See Illus. Dict.) **L., Ethmoidal, L., Olfactory,** the lateral portions of the ethmoid bone. **L. of Ludwig.** See *L., Cortical* (Illus. Dict.).

Labyrinthiform (*lab-e-rinth'-e-form*). Marked on the surface by a complex of furrows.

Labyrinthitis (*lab-e-rin-thi'-tis*) [λαβύρινθος, a maze]. Inflammation of the labyrinth, otitis interna. **L., Primary.** See *Voltolini's Disease,* also under *Disease* (Illus. Dict.).

Labyrinthus (*lab-e-rinth'-us*) [L.]. Same as *Labyrinth.* **L. auris intimæ,** the labyrinth of the ear. **L. durus.** See *Labyrinth, Osseous* (Illus. Dict.). **L. mollis.** See *Labyrinth, Membranous* (Illus. Dict.). **L. pubicus impar, L. pudendalis, L. pudendovesicalis.** See *Plexus, Pudendal* (Illus. Dict.).

Lac (*lak*) [L., gen. *lactis; γάλα, γάλακτος*]. Milk; a milk-like liquid. **L. asininum,** asses' milk. **L. bovinum, L. bubalinum, L. bubulum,** cow's milk. **L. caninum,** dog's milk. **L. caprinum,** goat's milk. **L. concretum,** condensed milk. **L. equinum,** mare's milk. **L. fermentum,** koumiss. **L. hircinum,** goat's milk.

Laccase [*laccol;* suffix *ase*]. An oxidizing ferment or diastase described by Bertrand as present in many plants, and capable of oxidizing laccol and other aromatic substances. It changes the colorless sap of the Japanese lac-tree by oxidation to black Japanese lacquer.

Lacciferous (*lak-sif'-ur-us*) [*lacca,* lac; *ferre,* to bear]. Yielding lac.

Laccol (*lak'-ol*) [*lacca,* lac]. An aromatic compound found in plants.

Lacerable (*las'-ur-a-bl*) [*lacerare,* to tear]. Liable to become torn; capable of being torn.

Lacertous (*las-ur'-tus*) [*lacertus*]. Muscular.

Lacertus (*las-ur'-tus*) [L.]. 1. The muscular part of the arm from the shoulder to the elbow. 2. A muscle, or fibrous fascicle. **Lacerti adsciti, Lacerti adscititii, Lacerti Weitbrechtii,** fibrous bands forming part of the anterior ligament, lying anterior to the radiocarpal articulation. **Lacerti cordis,** the columnæ carneæ. **L. fibrosus,** the semilunar fascia.

Lachnanthes Cure. See under *Cure.*

Lacmellia (*lak-mel'-e-ah*) [*lac,* milk; *melleus,* honey-sweet]. A genus of apocynaceous trees of tropical America. **L. edulis,** Karst., the sweet milk-tree, *Leche miel.* The bark yields a milk-like fluid used by the natives as an article of food in Colombia and Venezuela. Cf. *Mimusops elata.*

Lacrimatome, Lacrimotomy. See *Lacrymatome, Lacrymotomy* (Illus. Dict.).

Lactaciduria (*lak-tas-id-u'-re-ah*) [*lactic acid; ὄυρον,* urine]. The presence of lactic acid in the urine.

Lactanalyt (*lak-tan'-al-it*) [*lac,* milk; *analysis*]. An apparatus for testing milk; a modified butyrometer.

Lactanin (*lak-tan'-in*). See *Bismuth Bilactomonotannate.*

Lactase (*lak'-tāz*). A soluble enzyme found in the animal body which hydrolyzes lactose.

Lacterin (*lak'-tur-in*). Same as *Casein.*

Lacteroserum (*lak-tur-o-se'-rum*). See *Lactoserum.*

Lactic. (See Illus. Dict.) **L. Anhydrid.** See *Acid, Lactylolactic.*

Lactigerous (*lak-tij'-ur-us*) [*lac,* milk; *gerere,* to bear]. Yielding or conveying milk; lactiferous; galactophorous.

Lactocholin (*lak-to-kol'-in*) [*lac,* milk; *χολή,* bile]. A substance obtained from an aqueous solution of cholin by prolonged heating.

Lactochrome (*lak'-to-krōm*) [*lac,* milk; *χρῶμα,* color]. $C_6H_{18}NO_6$. An alkaloidal substance which Blyth claims to have isolated from milk.

Lactocin (*lak'-to-sin*). A sedative and hypnotic said to be obtained from the juice of *Lactuca virosa,* L. It forms white scales soluble in 60% of water. Dose, 1–5 gr.

Lactoglycose (*lak-to-gli'-kōs*) [*lac,* milk; *γλυκύς,* sweet]. A dry powder prepared from Mellin's food and milk, free from starch, and with the casein mechanically broken up.

Lactol (*lak'-tol*) [*lac,* milk]. $C_{10}H_7O.OC.CH(OH)-CH_3$, β-naphthol lactate, an intestinal antiseptic used as a substitute for benzonaphthol. It is decomposed in the intestines into lactic acid and naphthol. Dose, 3½–8 gr. (0.25–0.5 gm.). Syn., *Lactonaphtol.*

Lactola (*lak-to'-la*) [*lac,* milk]. "Improved milk." A factitious milk made from skimmed milk by boiling down 100 gallons of the latter, with 50 to 200 pounds of sugar in a vacuum pan, to one-third or one-fourth of its bulk, when 1½ to 2 ounces of cottonseed oil is stirred in until thoroughly blended.

Lactolin (*lak'-to-lin*). Acid potassium lactate.

Lactonaphtol (*lak-to-naf'-tol*). See *Lactol.*

Lactophenin (*lak-to-fe'-nin*) [*lac,* milk; *phenol*]. Lactyl-phenetidin, $C_6H_4(OC_2H_5)NH.CO.CH(OH)-CH_3$. A derivative of phenetidin with lactic acid in place of the acetic acid constituent of phenacetin; a white crystalline powder with slightly bitter taste. Melts at 117.5°–118° C., is soluble in 500 parts of cold water and 55 parts of boiling water. It is used as an analgesic and antipyretic. Dose, 8–15 gr. (0.5–1 gm.).

Lactoprotein. (See Illus. Dict.) 2. **L.** (of Millon and Comaille), an elaboration product from proteids of milk, consisting of a little casein charged with albumin and albumose.

Lactoserum. (See Illus. Dict.) 2. The blood-serum of an animal which has been inoculated with the milk of another animal, whereby the serum is rendered capable of precipitating casein in the milk of the variety used in the inoculation. Cf. *Ovaserum.*

Lactosin (*lak'-to-sin*). $C_{36}H_{62}O_{31}$. A crystallizable polysaccharid.

Lactosomatose (*lak-to-so'-mat-ōs*). An odorless and tasteless powder, soluble in water, consisting of the albuminous principles of milk combined with 5% of tannic acid; it is used in gastrointestinal disorders. Dose, for children, 1–3 teaspoonfuls; for adults, 2–3 teaspoonfuls.

Lactovariolic, Lactovariolous (*lak-to-va-re-o'-lik, -lus*) [*lac,* milk; *variola,* smallpox]. Relating to smallpox virus mixed with milk.

Lactovegetarian (*lak-to-vej-e-ta'-re-an*). Consisting of milk and vegetables.

Lactucin. (See Illus. Dict.) Fine white scales soluble in alcohol or 80 parts of water; a sedative and hypnotic. Dose, 1–5 gr. (0.065–0.32 gm.).

Lactucism (*lak'-tu-sizm*). Poisoning from over-dosage of hypnotic preparations from species of *Lactuca*. It is characterized by headache, dizziness, dilation of the pupils, ataxic gait, and dyspnea.

Lactyl (*lak'-til*). C_3H_4O. A radicle found in lactic acid. **L. Anhydrid.** See *Acid, Lactylolactic.* **L. Guanidin.** See *Alacreatinin.* **L. Lactate.** See *Acid, Lactylolactic.* **L.-imid.** See *Lactimid* (Illus. Dict.). **L.-phenetidin.** See *Lactophenin.* **L.-tropein,** $C_8H_{14}NO.CO.CH(OH).CH_3$, obtained from tropin by action of lactic acid or ethyl lactate. It occurs in white needles, soluble in water, alcohol, ether, or chloroform; melts at 75° C. A cardiac tonic. **L. Urea,** a compound formed from a mixture of equal molecules of aldehyd ammonia, potassium cyanid, and potassium cyanate evaporated with hydrochloric acid. It forms warty concretions or transparent crystals.

Lacuna [pl. also *Lacunas*]. (See Illus. Dict.) **L.s, Cartilage.** See *Cavity, Cartilage.*

Lacunar. (See Illus. Dict.) 2. [L., a vault or roof; pl., *Lacunares*]. See *Valve of Vieussens* (Illus. Dict.). **L. orbitæ,** the roof of the orbit. **L. ventriculi quarti, L. Vieussenii,** the valve of Vieussens.

Lacunosity (*lak-u-nos'-it-e*) [*lacuna,* a pit]. The condition of having pits, depressions, or spaces.

Lacunosoreticulate (*lak-u-no-so-re-tik'-u-lāt*) [*lacuna,* a pit; *reticulum,* a network]. Both reticulate and lacunose.

Lacunule (*lak-u'-nūl*). See *Lacunula* (Illus. Dict.).

Ladaniferous (*lad-an-if'-ur-us*) [*ladanum; ferre,* to bear]. Yielding ladanum.

Ladrerie. (See Illus. Dict.) 2. Leprosy. 3. A leprosarium.

Ladres (*lā'-drz*). Lepers.

Lagmi (*lag'-me*). A fermented wine or liquor made from the juice of the date palm by the Arabs.

Lagneuma (*lag-nu'-mah*). See *Lagnea* (Illus. Dict.).

Lagocephalous (*lag-o-sef'-al-us*) [λαγώς, hare; κεφαλή, head]. Having a head like a hare.

Laiose (*li'-ōz*). A body found by Leo in diabetic urine in certain cases and regarded by him as a sugar. It is levorotary, amorphous, unfermentable, and sharp and saline to the taste; it has a reducing action on metallic oxids and with phenylhydrazin forms a yellowish oil. Syn., *Leo's sugar.*

Lake. (See Illus. Dict.) 2. To cause to become laky; to produce a rapid separation of the hemoglobin from the red blood-corpuscles.

Lalangola (*lal-an-gō'-lah*). Synonym for *Nelavan* or *African lethargy* (*q. v.*).

Lamella. (See Illus. Dict.) **L. urogenitalis.** See *L. renalis* (Illus. Dict.). **L., Vitreous.** See *Membrane of Bruch* (Illus. Dict.).

Lameness. (See Illus. Dict.) **L., Intermittent.** See *Claudication, Intermittent.*

Lamin. (See Illus. Dict.) The sulfate is used hypodermically as a powerful hemostatic in uterine and other internal hemorrhages.

Lamina [pl. also *laminas*]. (See Illus. Dict.) 2. See *Laminæ* (Illus. Dict.). **L. cribrosa bulbi, L. cribrosa oculi.** See *L. cribrosa* (of the sclerotic) (Illus. Dict.). **L., Dental,** an epithelial sheet formed by a flattening of the base of the dental band, from which the buds forming the enamel organs of the teeth are given off. **L.s, Dorsal,** the embryonic dorsal ridges. **L. elastica externa, L., External Elastic,** the innermost layer of the adventitia, consisting of fibers of elastic tissue blending externally with the adventitia proper. Syn., *Henle's external elastic tunic; External elastic coat.* **L. elastica interna.** See *Henle's Fenestrated Membrane* (Illus. Dict.). **L., Mesenteric.** See *Plate, Lateral Mesenteric* (Illus. Dict.). **L.s, Muscle.** See *Myocomma* (Illus. Dict.). **L. mycogastralis, L. myxogastralis,** Haeckel's term for the hypoblast. **L., Obturator** (of the third ventricle). See *Terma* or *L. cinerea* (Illus. Dict.). **L. parietalis,** the parietal layer of a serous membrane. **L.s, Protovertebral.** See *Plates, Vertebral* (Illus. Dict.). **L. pterygoidea.** See *Plate, Pterygoid* (Illus. Dict.). **L. rostralis.** See *Copula* (Illus. Dict.). **L. Ruyschii.** See *Choriocapillaris* and *Ruysch, Membrane of* (Illus. Dict.). **L. septi lucidi, L. septi pellucidi.** See *Hemiseptum* (Illus. Dict.). **L. velamentosa,** the organ of Corti.

Laminiform (*lam-in'-e-form*) [*lamina,* a layer; *forma,* shape]. See *Laminal* (Illus. Dict.).

Laminoid (*lam'-in-oid*). Of Blaud, tablets of two layers—one of ferrous sulfate and one of sodium bicarbonate—united by pressure.

Lamp. (See Illus. Dict.) **L., Antrum,** an electric lamp used for transillumination of the maxillary sinus. **L., Arc,** a lamp producing light by means of a bow of intensely hot flame between two opposed rods of carbon connected with a powerful generator of electricity. **L., Dobereiner's,** one based upon the action of spongy platinum upon a stream of hydrogen gas. **L., Exploring,** a miniature electric incandescent lamp which may be introduced into the body cavities. **L., Finsen,** an apparatus for applying phototherapy. **L.** (Lortet-Genoud), **Lupus,** an apparatus for the application of the Finsen method of phototherapy. **L., Mignon,** a very small lamp used in cystoscopy.

Lampate (*lam'-pāt*). A salt of lampic acid.

Lamprotometer (*lam-pro-tom'-et-ur*) [λαμπρότης, brilliancy; μέτρον, measure]. An apparatus for estimating the degree of brightness of an illumination.

Lamziekte (*lam-ze-ek'-te*). A lameness or nervous affection of cattle, thought to be due to congestion of the liver; common in South Africa.

Lanain (*lan'-a-in*) [*lana,* wool]. Purified wool-fat.

Lanichol (*lan'-ik-ol*). A proprietary preparation of wool-fat.

Laniferous (*lan-if'-ur-us*) [*lana,* wool; *ferre,* to bear]. See *Lanigerous* (Illus. Dict.).

Lanigallol (*lan-i-gal'-ol*). A triacetate of pyrogallic acid.

Laniol (*lan'-e-ol*). A proprietary wool-fat.

Lannaiol (*lan-a-i'-ol*). An iodocresol proposed as a substitute for iodoform.

Lanoform (*lan'-o-form*). An antiseptic preparation of lanolin and 1 % of formic aldehyd.

Lanolin. (See Illus. Dict.) **L.-milk,** a mixture of lanolin, 10 parts; borax, 1 part; rose-water, 100 parts; and medicated soap, 2.5 parts. **L. Powder,** lanolin combined with zinc oxid, carbonate of magnesia, and starch. **L., Sulfurated,** thilanin.

Lantanurate (*lan-tan'-u-rāt*). A salt of lantanuric acid.

Lantermann's Incisions. See *Incisions.*

Lanthanin (*lan'-than-in*) [λανθάνειν, to conceal]. Heidenhain's name for linin (2) (Illus. Dict.).

Lanthanum. (See Illus. Dict.) **L. Nitrate,** $La_2(NO_3)_6 + 12H_2O$, large rose-colored prisms, soluble in water and alcohol; it is a bactericide.

Lanulous (*lan'-u-lus*) [*lana,* wool]. Covered with short hair.

Lanum (*la'-num*). See *Lanolin* (Illus. Dict.).

Laparocolostomy (*lap-ar-o-ko-los'-to-me*) [λαπάρα, loin; κόλον, colon; στόμα, mouth]. Abdominal colos-

tomy, the formation of a permanent opening into the colon by incision through the abdominal wall.

Laparocystidotomy (*lap-ar-o-sist-id-ot'-o-me*). See *Laparocystotomy* (Illus. Dict.).

Laparocystovariohysterotomy (*la-par-o-sist-o-va-re-o-his-tur-ot'-o-me*). Combined ovariotomy and hysterotomy both through an abdominal incision.

Laparoenterostomy (*lap-ar-o-en-tur-os'-to-me*) [λαπάρα, loin; ἔντερον, intestine; στόμα, mouth]. The formation of an artificial opening into the intestine through the abdominal wall.

Laparogastrostomy (*lap-ar-o-gas-tros'-to-me*) [λαπάρα, loin; γαστήρ, stomach; στόμα, mouth]. The formation of a permanent gastric fistula through the abdominal wall.

Laparohepatomy (*lap-ar-o-hep-at'-o-me*) [λαπάρα, loin; ἧπαρ, liver; τέμνειν, to cut]. Incision of the liver through the abdominal wall.

Laparohysteropexy (*lap-ar-o-his-ter-o-peks'-e*) [λαπάρα, loin; ὑστέρα, uterus; πῆξις, a fixing in]. Ventrofixation.

Laparohysterosalpingooophorectomy (*lap-ar-o-his-ter-o-sal-pin-go-o-of-or-ek'-to-me*) [λαπάρα, loin; ὑστέρα, womb; σάλπιγξ, tube; ὠοφόρος, ovary; ἐκτομή, a cutting out]. Excision of the uterus, oviducts, and ovaries by the abdominal route.

Laparorrhaphy (*lap-ar-or'-af-e*) [λαπάρα, loin; ῥαφή, suture]. Suture of the abdominal wall.

Laparosalpingooophorectomy. (*lap-ar-o-sal-ping-o-o-of-o-rek'-to-me*). The removal of the ovaries and oviducts by an incision through the abdomen.

Laparotomize (*lap-ar-ot'-om-īz*). To make an incision in the abdominal wall, to perform laparotomy.

Laparouterotomy (*lap-ar-o-u-tur-ot'-o-me*). Incision of the uterus through the abdomen; laparohysterotomy; gastroenterotomy.

Laparozoster (*lap-ar-o-zos'-tur*). Zoster affecting the abdomen.

Lapathin (*lap'-ath-in*) [*Lapathum*, the genus *Rumex*]. Chrysophanic acid.

Lapidific (*lap-id'-if-ik*) [*lapis*, a stone; *fieri*, to become]. Giving rise to crystals or to fossils. Cf. *Juice*, *Lapidific*.

Lapilliform (*lap-il'-e-form*) [*lapillus*, a little stone; *forma*, form]. Presenting the appearance of little stones.

Lapis. (See Illus. Dict.) **L. albus,** native calcium silicofluorid; also a preparation of it used in homeopathy. **L. calaminaris.** See *Calamin* (Illus. Dict.). **Lapides cancrorum.** See *Astacolith* (Illus. Dict.). **L. infernalis,** silver nitrate. **L. judaicus,** a calcareous fossil found in Palestine. **L. medicamentosus,** sulphas aluminæ acetatus, a combination of aluminium oxid, litharge, and Armenian bole, each 2 parts, red oxid of iron, 1 part, potassium nitrate, 4 parts, and ammonium chlorid, 1 part, with vinegar; it is evaporated and calcined.

Laquear (*lak'-we-ar*) [L., a fretted ceiling; pl., *laquearia*]. **L. vaginæ,** the vaginal vault.

Laqueus (*lak'-we-us*) [L., a noose]. 1. A noose-shaped bandage. 2. See *Lemniscus* (Illus. Dict.).

Lard. (See Illus. Dict.) **L., Balsamic, L., Benzoated, L., Benzoinated,** lard, 1000 gm., containing 20 gm. of benzoin. Syn., *Adeps benzoinatus*. **L., Populinated,** lard, 1000 parts, mixed with 60 parts of tincture of poplar buds (1 part powdered buds to 4 of alcohol).

Lardeous, Lardiform [*lardum*, lard; *forma*, form]. Having a fatty appearance.

Lardum, Laridum (*lard'-um, lar'-id-um*) [L.]. Lard.

Largin (*lar'-jin*). Silver-protalbin, a compound containing 11% of silver. It is a grayish-white powder readily soluble in water and glycerin. It is a bactericide used in gastric ulcers and gonorrhea. Dose, 5–8 gr. (0.333–0.5 gm.) in pill; in gonorrhea a ¼%–1½% solution is employed.

Laricin (*lar'-is-in*) [*larix*, larch]. Agaricin obtained from the larch agaric, *Polyporus officinalis*, Fries.

Larixin (*lar-iks'-in*) [*Larix*, a genus of conifers]. $C_{10}H_{20}O_5$. An acid found by Stenhouse in the bark of *Larix europæa*, D. C. Syn., *Larixinic acid*.

Larrea (*lar'-e-ah*) [*J. Anton. H. de Larrea*, a Spanish patron of arts and sciences]. A genus of evergreen, balsamic shrubs of the order *Zygophylleæ*, found in southwestern United States and Mexico. **L. mexicana,** Moric., creasote bush, tah-sun-up, a shrub of Texas and Mexico, contains abundance of strong-smelling resinous matter and the bark exudes a red coloring-matter. A gum-resin exudate, called Sonora gum, is said to constitute the American or Arizona lac. The leaves are used in baths for rheumatism and by the Indians as a dressing for sores.

Larva. (See Illus. Dict.) **L., Metchnikoff's,** the parenchymula; the embryonic stage immediately succeeding that of the closed blastula.

Larvicide (*lar'-vis-īd*) [*larva; cædere*, to kill]. Any agent destroying insect larva.

Laryngitis. (See Illus. Dict.) **L., Exanthematous,** catarrhal laryngitis secondary to an acute exanthem, especially measles. **L., Hemorrhagic, L. hæmorrhagica,** a form of catarrhal laryngitis characterized in part by bloody effusion from the free surface of the mucosa and in part by hemorrhagic infiltration of the mucosa. **L., Hypoglottic, L., Subglottic,** a condition marked by inflammation and swelling even to the point of edema in the subglottic space.

Laryngocatarrh (*lar-in-go-kat-ar'*). Catarrh of the larynx.

Laryngocele (*lar-in'-go-sēl*) [λάρυγξ, larynx; κήλη, a tumor]. A saccular dilation of the mucosa of the larynx between the hyoid bone and the cricoid cartilage.

Laryngocrisis (*lar-in-go-kri'-sis*). The paroxysmal laryngeal cramp occurring in tabes dorsalis.

Laryngofissure. (See Illus. Dict.) Syn., *Laryngofission*. 2. The aperture made in laryngofissure.

Laryngograph (*lar-in'-go-graf*) [λάρυγξ, larynx; γράφειν, to write]. An instrument for recording laryngeal movements.

Laryngorhinology (*lar-in-go-ri-nol'-o-je*). Combined laryngology and rhinology.

Laryngoscleroma (*lar-in-go-skle-ro'-mah*) [λάρυγξ, larynx; σκλήρωμα, an induration]. Scleroma affecting the larynx.

Laryngoscope. (See Illus. Dict.) **L., Electric,** a laryngoscopic mirror to which is attached a small incandescent lamp; used in dentistry.

Laryngostroboscope (*lar-in-go-strō'-bo-skōp*) [λάρυγξ, larynx; στρόβος, a twisting; σκοπεῖν, to examine]. A laryngoscope combined with an adjustable intermittent source of illumination used in the observation of the vocal chords.

Laryngostroboscopy (*lar-in-go-stro-bos'-ko-pe*). The inspection of the vibration of the vocal chords by means of a laryngostroboscope.

Laryngoxerosis (*lar-in-go-zer-o'-sis*) [λάρυγξ, larynx; ξήρωσις, a dry state]. Dryness of the larynx.

Laryngydrops (*lar-in'-jid-rops*) [λάρυγξ, larynx; ὕδρωψ, dropsy]. Laryngeal edema.

Laserol (*las'-ur-ol*). $C_{14}H_{22}O_4$. An amorphous, brown, resinous substance obtained with angelic acid from laserpitin by action of alkalis. It has a peppery taste and is readily soluble in alcohol and ether.

Laserpitin (*las-ur'-pit-in*). $C_{24}H_{36}O_7$. A body isolated by Feldmann (1865) from the root of *Laserpitium lati-*

folium, L. It forms colorless rhombic crystals, melting at 114° C., soluble in benzene, chloroform, and ethereal oils.

Lasion (*la'-se-on*) [λάσιον, hairy, shaggy]. Anything rough, hairy, or shaggy.

Lasios (*la'-si-os*) [λασιος, rough]. Shaggy, rough, hairy.

Lateral. (See Illus. Dict.) **L.-chain.** See *Receptor*. **L.-chain Theory of Ehrlich,** this theory presupposes that the stimulating substances introduced into the circulation have the power of combining with certain groups of molecules in the protoplasm of certain cells; which combination is succeeded by a regeneration of the lateral chains. When more of the combining substance is injected and the combining lateral chains again consumed, another still more copious regeneration occurs, and so on until the particular lateral chains are present in great excess and pass out of the cells into the blood, where they are known as antitoxin. See *Ehrlich's Side-chain* under *Immunity*.

Laterodeviation (*lat-ur-o-de-ve-a'-shun*) [*latus*, side; *deviare*, to deviate]. Slight displacement or deviation to one side.

Lateroduction (*lat-ur-o-duk'-shun*) [*latus*, side; *ducere*, to lead]. Lateral movement of the eye.

Lateroposition (*lat-ur-o-po-zish'-un*) [*latus*, side; *ponere*, to place]. Displacement to one side.

Laterotorsion (*lat-ur-o-tor'-shun*) [*latus*, side; *torquere*, to turn]. A twisting to one side.

Laticapitate (*lat-e-kap'-it-āt*) [*latus*, broad; *caput*, head]. Having a broad head.

Latrodectus (*lat-ro-dek'-tus*) [λάτρις, a hired servant, a robber; δήκτης, a biter]. A genus of spiders of the family *Theridiidæ*, containing many widely distributed poisonous species. The dreaded menavody spider of Madagascar perhaps belongs to this genus. **L. conglobatus,** a poisonous species of Greece, the Grecian marmagnatto, the asterion of Nikander and probably identical with *L. tredecimguttatus*. **L. curassavicus,** Husemann, a poisonous species greatly feared in Curacoa. **L. formidabilis,** Frederico Puga Borne, a poisonous species greatly feared in Chili. **L. haseltii** and **L. scelio,** two poisonous species of Australia and New Zealand known as katipo. **L. lugubris,** Motschulsky, a species greatly feared in southeastern Russia and southern Asia, where it bears the Tartar name of kara-kurt, and among German colonists that of schwartzer Wolf or schwartze Witwe. It is probably identical with *L. tredecimguttatus*, var. *erebus*, Doufour. **L. mactans,** Walckenaer, a poisonous species of the south and southwestern United States. It secretes a powerful hemolytic enzyme which is said to be used as a homeopathic remedy in angina. **L. malmignatus,** Walckenaer, a poisonous species of southern Europe, probably identical with *L. tredecimguttatus*. **L. quinque punctatus,** Krynicki, a poisonous Russian species probably identical with *L. tredecimguttatus*. **L. tredecimguttatus** (Rossi), Fabricius, a species secreting a powerful hemolytic enzyme; the malmignatto of Italy and southern Europe; the rhoa of Nikander, the rhagion of Jacob Grevini, the karakurt of southern Asia, the tendaraman of Morocco.

Latruncularious (*lat-runk-u-la'-re-us*) [*latruncularius*, a chess-board]. In biology, presenting the appearance of a chess-board.

Laurene (*law'-rēn*). A dimethyl propylbenzene formed by distillation of camphor with zinc chlorid; it boils at 188° C.

Laureol (*law'-re-ol*). The proprietary name for a mixture of cocoanut oil and palm oil.

Lauric (*law'-rik*) [Celtic *lauer*, green]. Relating to the genus *Laurus*, the laurels.

Laurocerasin (*law-ro-ser'-as-in*). See *Amygdalin, Amorphous*.

Laurostearin (*law-ro-ste'-ar-in*). $C_3H_5(C_{12}H_{23}O_2)_3$. A constituent of the fruit of *Laurus nobilus*. It forms fine, white, stellate or dendritic groups of crystals melting at 46° C. and readily soluble in ether.

Laurostearone (*law-ro-ste'-ar-ōn*). $C_{23}H_{46}O$. White crystals obtained by dry distillation of calcium laurate; fuses at 66° C. Syn., *Laurone*.

Laurotetanin (*law-ro-tet'-an-in*). $C_{19}H_{23}NO_5$. An alkaloid obtained by Greshoff from the bark of *Litsea citrata*, Blume., and a number of other plants of the order *Laurineæ*. It is said to be a powerful poison, acting like strychnin on the spinal cord.

Lautissimus (*law-tis'-im-us*) [*lautus*, washed]. Most thoroughly purified or rectified.

Lavage. (See Illus. Dict.) **L. of the Blood, L. du Sang,** washing toxic products from the blood-stream by intravenous injection of artificial serum in large doses.

Laveran's Crescents. See *Crescent*.

Law. (See Illus. Dict.) **L., Aran's,** fractures of the base of the skull are the result of injury to the vault, the extension taking place by irradiation along the line of the shortest circle. The fractures of the base which occur by contrecoup are exceptions to this law. **L., Bastian's, L., v. Brun's,** when there exists a complete transverse lesion of the spinal cord above the lumbar enlargement, the tendon reflexes of the lower extremities are abolished. **L., Beaumès-Colles'.** See *Law, Colles'* (Illus. Dict.). **L., Behring's,** the blood and blood-serum of an individual who has been artificially rendered immune against a certain infectious disease may be transferred into another individual with the effect of rendering the other also immune. **L., Bell-Magendie's.** See *L., Bell's* (Illus. Dict.). **L., Biogenetic,** a certain tendency directs the drift or trend of development of a being along a line parallel with that of the series of forms ancestral to it. The being in the course of its development briefly recapitulates that of the ancestral series to which it belongs. Syn., *Müller's law*. **L., Buhl-Dittrich's,** in every case of acute general miliary tuberculosis an old focus of caseation is to be found somewhere in the body. This law, being based upon the belief in the etiologic nonidentity of diffuse caseous and miliary tuberculosis, is not strictly in conformity with modern views. **L., Bunge's,** the epithelial cells of the mammary gland (of the rabbit, cat, and dog) select from the mineral salts of the blood-plasma all the inorganic substances exactly in the proportion in which they are necessary for the development of the offspring and for the building up of the latter's organism. **L., Cohn's,** the specific form of bacteria has a fixed immutable basis. **L., Courvoisier's** (**R. C.**), **Concerning Gall-stones.** See under *Gall-stones*. **L., Courvoisier's,** tumors of the head of the pancreas almost invariably cause dilation of the gall-bladder. **L., Cushing's,** an increase of intercranial tension occasions a rise of blood-pressure which tends to find a level slightly above that of the pressure exerted against the medulla. It is thus seen that there exists a regulatory mechanism on the part of the vasomotor center which, with great accuracy, enables the blood-pressure to remain at a point just sufficient to prevent the persistence of an anemic condition of the bulb, demonstrating that the rise is a conservative act and not one such as is consequent upon a mere reflex sensory irritation. **L., Descartes'.** See *L., Snell's*. **L., Du Bois-Reymond's,** it is not the absolute value of current density at a given moment that acts as a stimulus to a muscle or motor nerve, but the variation of density. **L., Edinger's.** See under

Neuron. **L., Flatau's,** "law of the eccentric situation of long tracts." The greater the length of the fibers of the spinal cord, the nearer to the periphery are they situated. **L., Freund's.** See under *Tumor.* **L., Gerhardt-Semon's,** certain central or peripheral lesions of the recurrent laryngeal nerve cause the vocal cord to assume a position midway between adduction and abduction, the lesion of the nerve being insufficient to destroy it and to provoke a complete paralysis of the vocal cord (cadaveric position). **L., Giraud-Teulon's,** binocular retinal images are localized at the point of intersection of the primary and secondary axes of projection. **L., Goldscheider-Marinesco's.** See under *Neuron.* **L., v. Gudden's,** the proximal end of a divided nerve undergoes cellulipetal degeneration. **L., Gullstrand's,** when the corneal reflex from either of the eyes of the patient, who is made to turn the head while fixing some distant object, moves in the direction in which the head is turning, it moves toward the weaker muscle. **L., Gull-Toynbee's.** See under *Otitis.* **L., Hering's,** the distinctness or purity of any sensation or conception depends upon the proportion existing between their intensity and the sum total of the intensities of all simultaneous sensations and conceptions. **L., Jackson's** (Hughlings), that neural functions latest developed are earliest overthrown. **L., Kahler's, L., Kahler-Singer's,** the ascending branches of the posterior spinal nerve-roots, after entering the cord pass successively from the root-zone toward the mesial plane. **L., Koch's,** or **Postulates,** the specificity of a microorganism is conclusively demonstrated when the following conditions are fulfilled: (1) The microorganism must be present in all cases of the disease; (2) it must be cultivated in pure culture; (3) its inoculation must produce the disease in susceptible animals; (4) from such animals it must be obtained and again cultivated in pure culture. **L., Kolk's** (**Schroeder van der**), a spinal nerve endows the muscles with motion through its motor branches and the parts moved with sensation through its sensory branches. **L., Kuester's.** See under *Tumor.* **L., Lancereaux's.** See under *Thrombosis.* **L., Lasègue's,** superficial lesions or simple functional troubles of an organ increase the reflexes, while more or less pronounced organic lesions suppress them. **L., Leopold's,** insertion of the placenta into the posterior uterine wall pushes the fallopian tubes forward, so that they assume a convergent direction on the anterior wall; insertion into the anterior wall causes them to turn backward and parallel to the longitudinal axis of the recumbent woman. **L., Magendie's.** See *L., Bell's* (Illus. Dict.). **L., Marey's,** a high-tension pulse is a slow pulse. **L., Mendel's** [a German monk, 1865], that a first cross will result in offspring resembling one or the other parent, and possessing in an undeveloped form, termed "recessive," the attributes of the other. The second cross will result in fixed types possessing respectively the character of one parent, "dominant," and of both parents in varying degrees. **L., Meyer's,** mature and normal bone possesses a definite internal structure, which in every part represents the lines of greatest pressure or traction, and is so arranged as to afford the greatest resistance with the smallest amount of material. **L., Müller's,** (1) the tissue of which a tumor is composed has its type in the tissues of the animal body, either in the adult or the embryonic condition; (2) "law of isolated conduction." The nervous impulse, or "wave of change," passing through a neuron is not communicated to other neurons, even when these lie close alongside of it, except at the terminals. **L., Neumann's,** in bodies of analogous composition the specific heats are inversely as the stoichiometric quantities, or, what is the same, stoichiometric quantities of bodies of analogous chemical composition have the same capacity for heat. **L., Nysten's,** rigor mortis begins in the muscles of mastication, extends to the facial and neck muscles, then to the trunk and arms, and finally to the lower extremities. **L., Ollier's,** when two bones are parallel and joined at their extremities by ligaments, arrest of growth in one of them entails developmental troubles in the other. **L., Pajot's.** See *Pajot's Law* (Illus. Dict.). **L., Parallel.** See *L., Fechner's* (Illus. Dict.). **L., Periodic,** the properties of the elements are periodic functions of their atomic weights. **L., Peter's,** atheromatous changes in blood-vessels are most apt to occur where there are angles and projections. **L., Pflüger's, of Contraction,** galvanic stimulation of a nerve causes muscular contraction, which varies uniformly according as the kathode or the anode is applied, or as the current is closed or opened. Certain deviations from this law constitute the reaction of degeneration. The law may be briefly stated as follows:

Current Strength.	K C	K O	A C	A O
Weak, ...	C	. .	. .	. .
Medium, ...	C	. .	C	C
Strong, ...	Te	C	C	C

C, contraction; Te, tetanic contraction.

L., Pflüger's, of Reflex Action, (1) if stimulation of a sensory nerve be followed by a unilateral reflex movement, the latter always occurs on the side to which the sensory nerve belongs. (2) If the stimulus received by a sensory nerve extend to motor nerves of the opposite side, contraction occurs only in the corresponding muscles. (3) If the contraction be unequal on the two sides, the stronger contraction always takes place on the side which is stimulated. (4) If the reflex excitement extend to other motor nerves, the direction of the impulse from the sensory to the motor nerve is from before backward in the brain and from below upward in the spinal cord—*i. e.*, always in the direction of the oblongata. **L., Poiseuille's,** the rapidity of the current in capillary tubes is proportional to the square of their diameter. **L., Profeta's,** healthy offspring from syphilitic parents are immune to syphilis. **L., Ritter's, of Contraction,** stimulation of a nerve occurs both at the moment of closing and of opening of the electric current. **L., Rommelaere's,** constant diminution of the nitrogen in the urine in cases of carcinoma. **L., Rosenbach-Semon's.** See *L., Semon's.* **L., Schroeder van der Kolk's.** See *L., Kolk's.* **L., Semon's,** in progressive organic lesions of the motor laryngeal nerves the cricoarytenoidei postici—the abductors of the vocal cords—are the first, and sometimes the only, muscles affected. **L., Sherrington's,** the peripheral branches of the spinal nerve-roots—anterior and posterior—form anastomoses in such a manner as to supply any given region of the integument with the branches of three roots—a middle one and the ones next above and below. **L.s, Snell's, L.s of Sines,** the two laws which govern single refraction: (1) The sine of the incident angle bears a fixed ratio to the sine of the angle of refraction for the same two media, the ratio varying with different media. (2) The incident and the refracted ray are in the same plane, which is perpendicular to the surface separating the two media. **L., Talbot's, L., Talbot-Plateau's,** when the visual stimuli proceeding from a revolving disc are completely fused, and the sensation is uniform, the intensity is the same as that

which would occur if the same amount of light were spread uniformly over the disc. **T., Teevan's,** fracture of a bone occurs in the line of extension, not in that of compression. **L., Virchow's.** See under *Tumor.* **L., Von Baer's.** See *L., Baer's* (Illus. Dict.). **L., Vulpian-Prévost's.** See *Sign, Prévost's.* **L., Wolff's,** every change in the static relations of a bone leads not only to a corresponding change of internal structure, but also to a change of external form and physiologic function. **L., Zeune's,** that the proportion of cases of blindness is greater in the frigid zone than in the temperate zone and increases in the torrid zone as the equator is approached.

Laxiquinin (*laks-e-kwin'-in*). A proprietary remedy said to be quinin combined with laxatives.

Laxol (*laks'-ol*). Castor oil combined with saccharin and oil of peppermint.

Layer. (See Illus. Dict.) **L., Animal, L., Animal Germ,** the epiblast. **L., Baillarger's.** See *Line, Outer* (of Baillarger) (Illus. Dict.). **L., Bechterew's,** the layer of fibers between, and parallel to, the tangential fibers and Baillarger's layer in the cerebral cortex. **L., Bernard's Granular.** See under *Bernard* (Illus. Dict.). **L., Bruch's,** the lamina basalis which forms the inner boundary of the choroid. **L., Brunn's,** the deep layer of the nasal mucosa which is formed of more or less pyramidal epithelial cells. **L., Cellular,** the endothelial layer of the blood-vessels and lymph-vessels, composed of flattened nucleated cells. Syn., *Cellular coat; Epithelial layer; Endothelial tube* [His]; *Perithelial tube* [Auerbach]. **L., Claustral.** See *Formation, Claustral.* **L., Corneal, L., Corneous,** the epidermis. **L., Corneous** (of the blastoderm), the epiblast. **L., Cortical,** the cerebral cortex. **L., Cuticular,** a striated, hyaline, refractive layer at the free end of a columnar cell. Syn., *Hyaline band; Striated band; Striated border; Cuticular border; Cuticula; Basal border; Basal lid; Cuticular membrane; Cuticular structure; Limitans externa.* Cf. *Operculum.* **L., Dermic,** the epiblast. **L., Dobie's.** See *Line, Dobie's,* or *Krause's Membrane* (Illus. Dict.). **L., Elastic Longitudinal Fiber** (of Remak). See *Henle's Fenestrated Membrane* (Illus. Dict.). **L., Embryonic.** See *Germ Layer* (Illus. Dict.). **L., Epithelial.** See *L., Cellular.* **L., Epithelial Glandular, L., Epithelioglandular** (of the blastoderm), the hypoblast. **L., Epitrichial.** See *Stratum epitrichiale.* **L., Fifth** (of the cortex cerebri). See *Formation, Claustral.* **L., Floegel's,** the layer of granules in the transparent lateral disc of a muscular fibril. **L., Fourth** (of the cortex cerebri). See *Formation, Granular.* **L., Fusiform.** See *Formation, Claustral,* and Cf. *L., Molecular; L., Small pyramid-cell; L., Large pyramid-cell; L., Polymorphous-cell.* **L., Ganglion-cell, L., Gelatinous.** See *Stratum gelatinosum.* **L., Ganglionic.** See under *Retina* (Illus. Dict.). **L., Gennari's.** See *L., Baillarger's.* **L., Henle's Outer Fibrous,** the zone of cone-fibers at the margin of the fovea centralis. **L., Inert.** See *L., Poiseuille's.* **L., Inner Nuclear.** See *Internal Granular Layer,* under *Retina* (Illus. Dict.). **L., Intermediary.** See *Coat, Subepithelial.* **L., Intermediate.** See *Stratum gelatinosum.* **L., Involuted Medullary.** See *Lamina, Medullary* (Illus. Dict.). **L., Kaes-Bechterew's.** See *L., Bechterew's.* **L., v. Köilliker's Fibrous.** See *Mesiris* (Illus. Dict.). **L., Langhans',** the inner of the two layers of cells covering the chorion; it is derived from the ectoderm. **L., Langerhans'.** See under *Langerhans* (Illus. Dict.). **L., Large-pyramid-cell,** the third layer of the cerebral cortex, composed of pyramidal cells larger than those of the second layer, increasing in size from above downward and attaining a diameter of 40 μ. Cf. *L., Molecular; L., Small-pyramid-cell; L., Polymorphous-cell; L., Fusiform.* **L., Lemniscus** (of the tegmentum), the inferior lemniscus. **L., Molecular,** the outermost layer of the cerebral cortex, made up of neuroglia, a few small ganglion-cells, and a reticulum of medullated and non-medullated nerve-fibers. Cf. *L., Large pyramid-cell; L., Small pyramid-cell; L., Polymorphous-cell; L., Fusiform.* **L., Mucous.** See *Rete mucosum* (Illus. Dict.). **L., Nerve-fiber.** See under *Retina* (Illus. Dict.). **L., Nervous** (of the blastoderm) [Reichert], **L., Neuroepidermal** (of the blastoderm) [Remak], the epiblast. **L., Oehl's.** See *Stratum, Oehl's* (Illus. Dict.). **L., Oophorous** (of the ovary), the outer portion of the ovary in which the ovules are formed. **L., Osteoblastic.** See *L., Osteogenetic* (Illus. Dict.). **L., Outer Germ,** the epiblast. **L., Outer Molecular.** See under *Retina* (Illus. Dict.). **L., Outer Nuclear.** See *External Granular Layer,* under *Retina* (Illus. Dict.). **L., Pander's,** the splanchnopleural layer of the mesoderm in which the blood-vessels are first formed. The reddish-yellow patches in this layer, which consist of corpuscles containing hemoglobin, are known as *Pander's islands.* **L., Perforated, of Henle.** See *Henle's Fenestrated Membrane* (Illus. Dict.). **L.s, Plexiform,** the molecular layers of the retina. **L., Poiseuille's.** See *P.'s Space* (Illus. Dict.), called inert or still layer because in it the leukocytes roll along slowly while the red corpuscles move more rapidly in the axial stream. **L., Polymorphous-cell,** the fourth layer of the cerebral cortex. See *Formation, Granular.* **L., Proligerous.** See *Discus proligerus* (Illus. Dict.). **L., Purkinje's Granular.** See *Spaces, Interglobular* (Illus. Dict.). **L., Rauber's.** See under *Rauber* (Illus. Dict.). **L., Remak's,** the inner longitudinal fibrous layer of the tunica intima of large arteries. **S., Reticular.** See *L., Inner Molecular* (Illus. Dict.). **L., Sattler's Vascular,** the layer of blood-vessels of the choroid lying internally to Haller's tunica vasculosa. **L., Sensory,** the epiblast. **L., Serous** (of the pericardium), the inner layer of the pericardium. **L., Skin, L., Skin Sensory,** the epiblast. **L., Skin Fibrous,** the parietal mesoblast. **L., Sluggish.** See *L., Poiseuille's.* **L., Small Pyramid-cell,** the second layer of the cerebral cortex, made up of small pyramidal cells, with a diameter of about 10 μ. Cf. *L., Molecular; L., Large pyramid-cell; L., Polymorphous-cell; L., Fusiform.* **L., Still-.** See *L., Poiseuille's.* **L., Striated** (of the internal coat), **L., Subendothelial.** See *Coat, Subepithelial.* **L., Superpapillary.** See *Rete mucosum* (Illus. Dict.). **L., Tegmental** (of the lemniscus), the inferior lemniscus. **L., Trophic,** the hypoblast. **L., Unna's,** Langerhans' layer. **L., Vascular.** See *L., Pander's.* **L., Vesicular.** See *L., Ganglionic.* **L., Waldeyer's,** the internal or vascular layer of the ovary.

Layership (*la'-ur-ship*). The relation of tissues to the primitive germ-layers.

Lead. (See Illus. Dict.) **L. Bitannate.** See *L. Tannate.* **L. Oxid, Brown,** PbO_2, a dark-brown or blackish powder. Syn., *L. dioxid; Peroxid of lead; Anhydrous plumbic acid.* **L. Oxid, Red, L., Red,** Pb_3O_4, a bright red powder soluble in glacial acetic acid; used in plasters and salves. Syn., *Minium; Plumboplumbic oxid.* **L. Oxid, Yellow,** PbO, a yellow or yellow-red powder soluble in acetic or nitric acid; used in ointments and plasters. Syn., *Plumbous oxid; Lead protoxid; Litharge massicot; Monoxid of lead.* **L. Sulfocarbolate,** $Pb(C_6H_5SO_4)_2 + 5H_2O$, white, shining crystals turning red with time, soluble in

alcohol and water. It is astringent and antiseptic and used in skin diseases, ulcers, etc. **L. Tannate,** a brownish-yellow, odorless, tasteless powder used as an external astringent and antiseptic on ulcers, sore nipples, etc., applied in substance or in ointment. **L., Test for, in System,** paint a small area of the skin with a 6% solution of sulfite. If lead is present, the painted area will darken after a few days. [Ciccone-ardi.] **L., Test for, in the Urine,** administer potassium iodid for 4 days, collecting the urine. Evaporate to a pint (500 c.c.) and filter. Pass hydrogen sulfid gas through the urine thus concentrated, when a black precipitate will form if lead be present. [White.]

Leading (*led'-ing*). Among smelters a popular term for chronic lead-poisoning.

Lecane (*lek'-an-e*) [λεκάνη, a little pan]. 1. A basin. 2. The pelvis.

Lecanic (*lek-an'-ik*). Pelvic.

Lecanorin (*lek-an-or'-in*) [λεκάνη, a little dish]. $C_{16}H_{14}O_7$ (Hesse). An acid isolated by Schunk (1842) from different species of *Roccella, Lecanora,* and other lichens, forming fine, white, stellate, tasteless crystals, soluble in boiling alcohol or ether, melting at 153° C. Syn., *Lecanoric acid.*

Lecithalbumins (*les-ith-al'-bu-mins*). More or less stable compounds of albumin and lecithin, found in the mucosa of the stomach, in the lungs, liver, kidney, and spleen, differing from nucleoproteids and nucleoalbumins in that there is no metaphosphoric acid split off and they yield no xanthin bases.

Lecithin. (See Illus. Dict.) It is used as a nutritive in tuberculosis. Dose, 1–5 gr. (0.1–0.3 gm.).

Lecithoblast (*les-ith'-o-blast*) [λέκιθος, yolk of egg; βλαστός, a germ]. One of the cells of the yolk-cavity in the mammalian ovum. Syn., *Lecithophore.*

Lecithophore (*les-ith'-o-for*) [λέκιθος, yolk of egg; φορεῖν, to bear]. See *Lecithoblast.*

Leeches (*lèch'-ez*). A mycotic disease of mules and cattle.

Leg. (See Illus. Dict.) 2. A pedicle, a supporting structure. **L., Anglesey.** See under *Anglesey* (Illus. Dict.). **L., Badger,** inequality in the size of the legs. **L., Bayonet,** uncorrected backward displacement of the knee-bones. **L.-center,** the "organ of firmness" of Gall.

Legroux's Remissions. See *Remission.*

Legumelin (*leg-u'-mel-in*) [*legumen,* pulse]. An albumin found in most leguminous seeds.

Leiomyofibroma (*li-o-mi-o-fi-bro'-mah*) [λεῖος smooth; μῦς, muscle; *fibra,* fiber]. A tumor presenting the characteristics of a leioma, a myoma, and a fibroma.

Leipoxenous. See *Lipoxenous* (Illus. Dict.).

Lemniscus. (See Illus. Dict.) Syn., *Lacques; Lacques cerebri; L. pedunculi; Riel's band; Fillet.* **L., Inferior, L., Lower,** a layer of fasciculi of nerve-fibers in the tegmentum derived from the inferior quadrigeminate bodies. Syn., *Lamina tectoria; Layer, Tegmental (of the lemniscus); Lemniscus layer of the tegmentum; Stratum lemnisci inferius.* **L., Lateral, L. lateralis,** the lateral portion of the inferior lemniscus. **L., Median, L. medialis, L. mesalis, L. superior, L., Upper,** that part of the fillet terminating in the upper pair of quadrigeminate bodies.

Lemosity (*le-mos'-it-e*) [λῆμη, rheum]. See *Lippitudo* (Illus. Dict.).

Lenigallol (*len-e-gal'-ol*). Pyrogallol triacetate; a white nontoxic powder soluble in aqueous alkaline solutions. It is used in psoriasis and eczema in 0.5%–5% ointment; it does not affect the healthy skin.

Lenirobin (*len-ir-o'-bin*). Chrysarobin tetracetate. It is used in treatment of skin-diseases.

Lennesin (*len'-is-in*). A cholagog, said to be a glucosid, from a species of *Conyza.*

Lenticular. (See Illus. Dict.) 3. Having the shape of a lentil; lentiform.

Lenticulate (*len-tik'-u-lāt*) [*lens,* a lentil]. Lens-shaped, lentil-shaped.

Lenticulooptic (*len-tik-u-lo-op'-tik*). Relating to the lenticula and the thalamus.

Lenticulostriate (*len-tik-u-lo-stri'-āt*). Relating to the lenticula and the striatum.

Lenticulothalamic (*len-tik-u-lo-thal'-am-ik*). See *Lenticulooptic.*

Lenticulus (*len-tik'-u-lus*). See *Bone, Orbicular.*

Leo (*le'-o*) [L., a lion]. See *Leontiasis* (Illus. Dict.). **L. ruber,** antimony trisulfid.

Leo's Sugar. See *Laiose.*

Leonotis (*le-on-o'-tis*) [λέων, a lion; οὖς; ear]. A genus of labiate plants. **L. leonurus,** R. Br., wild dagga, lion's tail, the minaret flower, a species of South Africa, is emmenagog and purgative and is also used in snake-bites. **L. nepetæfolia,** R. Br., the leaves are used in the West Indies and South America in intermittent and typhus fever, and in India the ashes of the flowers are applied to ring-worm.

Lepargylate (*le-par'-jil-āt*). A salt of lepargylic acid.

Lepidic (*lep-id'-ik*) [λεπίς, a scale, a husk]. Applied by Adami to the tissues of lining membranes characterized by absence of definite stroma between the individual cells.

Lepidin. (See Illus. Dict.) 3. $C_{28}H_{40}O$. A crystalline base obtained from coal-oil by action of hydrochloric acid.

Lepidoid. (See Illus. Dict.) 2. Squamous.

Lepidoma (*lep-id-o'-mah*) [λεπίς, a husk]. A term proposed by Adami for a tumor springing from the tissue of a lining membrane and distinguished as epilepidoma, hypolepidoma, mesolepidoma, and endolepidoma, according to the origin of the neoplasm from the epiblastic, hypoblastic, mesothelial, or endothelial structures.

Lepidosis. (See Illus. Dict.) **L. ichthyiasis,** ichthyosis. **L. ichthyiasis cornigera,** ichthyosis hystrix. **L. lepra,** psoriasis. **L. lepriasis,** lepriasis. **L. psoriasis.** 1. Eczema squamosum. 2. Willan's term for psoriasis.

Lepine (*le'-pēn*). An antiseptic fluid said to consist of mercuric chlorid, 0.001 gm.; carbolic and salicylic acids, each 0.1 gm.; benzoic acid and calcium chlorid, each 0.05 gm.; bromin, 0.01 gm.; quinin hydrobromid, 0.2 gm.; chloroform, 0.2 gm.; distilled water, 100 parts.

Lepra. (See Illus. Dict.) **L. anaisthetos,** anesthetic leprosy. **L. Arabum,** elephantiasis. **L. asturiensis,** pellagra. **L. borealis,** radesyge and spedalskhed.

Lepraphobia. See *Leprophobia* (Illus. Dict.).

Leprid (*lep'-rid*). A skin-lesion of leprosy.

Leproma (*lep-ro'-mah*) [λέπρα, leprosy]. The specific lesion of tubercular leprosy.

Leprosis (*lep-ro'-sis*). Leprosy.

Lepthymenia (*lep-to-hi-me'-ne-ah*). See *Lepthymenia* (Illus. Dict.).

Leptomeningitis. (See Illus. Dict.) **L. externa.** See *Arachnitis* (Illus. Dict.). **L. infantum.** Synonym of *Meningitis, Basal, without Tubercles.*

Leptomitus (*lep tom'-it-us*) [λεπτός, thin; μίτος, thread]. A genus of fungi of the family *Saprolegniaceæ.* Several species are considered pathogenic.

Leptostaphylic, Leptostaphyline (*lep-to-staf'-il-ik, -ēn*) [λεπτος, thin; σταφυλή, uvula]. Having a slender alveolar arch. Cf. *Brachystaphylic, Mesostaphylic.*

Leptostaphylin (*lep-to-staf'-il-in*). An individual or type characterized by a narrow alveolar arch.

Leptothrix. (See Illus. Dict.) **L.-mycosis of the pharynx.** See *Hyperkeratosis lacunaris pharyngis.*

Leptuntic (*lep-tun'-tik*). See *Leptynticos*. Cf. *Leptystic*.

Leptynticos, Leptynticus (*lep-tin'-tik-os, -us*) [λεπτυντικός, making thin]. Attenuating, leptuntic.

Leptystic (*lep-tis'-tik*) [λεπτύνειν, to make thin]. Relating to or affected with emaciation.

Lesion. (See Illus. Dict.) **L., Coarse, L., Gross, L., Molar, L., Macroscopic,** a lesion apparent to the naked eye. **L., Discharging,** a brain lesion that causes sudden discharge of nervous motor impulses. **L., Ebstein's,** hyaline degeneration and insular necrosis of the epithelial cells of the renal tubules in diabetes. **L., Functional, L., Molecular,** a very fine lesion, not discernible by the microscope or discoverable by chemistry, but causing loss or excess of functional activity and attributed to alteration of the molecular equilibrium of that part. **L., Indiscriminate, L., Mixed,** one affecting two distinct systems. **L., Negro,** African lethargy, **L., Structural,** one working a manifest change in tissue. **L., Toxic,** a change in the tissues due to sepsis. **L., Vascular,** a lesion of a bloodvessel.

Lethin (*le'-thin*). The proprietary name for an alcoholic solution of camphor, acetic acid, ethereal oils, and chloroform.

Leucadendron (*lu-ka-den'-dron*) [λευκός, white; δένδρον, tree]. A genus of trees of the order *Proteaceæ*. **L. argenteum,** R. Br., and **L. coccinum,** R. Br., of South Africa, are used in treatment of malaria; the last contains a bitter principle, leucodrin, and a glucosid, leucoglycodrin.

Leucæna (*lu-se'-nah*) [λευκαίνειν, to make white]. A genus of leguminous plants. **L. glauca,** Benth., a species of the West Indies and Africa, cultivated in India and southern Europe. The leaves and unripe fruit (wild tamarind) are edible; the seeds yield amylon. In certain animals it has been observed that the hair falls out after eating the leaves and seeds.

Leucic (*lu'-sic*). Relating to or derived from leucin, as leucic acid.

Leucinuria (*lu-sin-u'-re-ah*) [λευκός, white; οὖρον, urine]. The occurrence of leucin in the urine.

Leucoalizarin (*lu-ko-al-iz'-ar-in*). See *Anthrarobin* (Illus. Dict.).

Leucodrin (*lu'-ko-drin*). See under *Leucadendron*.

Leucogen (*lu'-ko-jen*). Sodium bisulfite.

Leucoglycodrin (*lu-ko-gli'-ko-drin*). See under *Leucadendron*.

Leucohæmia. See *Leukemia*.

Leucojin, Leucojitin (*lu'-ko-jin, lu-ko'-jit-in*). See under *Leucojum*.

Leucojum (*lu-ko'-yum*) [λευκός, white; ἴον, a violet]. A genus of plants of the order *Amyrillideæ*. **L. æstivum,** snowflake, indigenous to Europe and the Orient, contains the alkaloids leucojin and leucojitin. The bulb is emetic and poisonous.

Leucol, Leucolin (*lu'-kol, lu'-kol-in*). Quinolin.

Leucomma. See *Leukoma* (Illus. Dict.).

Leuconostoc (*lu-kon-os'-tok*) [λευκός, white; *Nostoc*, a genus of *Algæ*]. A genus of fungi belonging to the *Schizomyce'tes*. See *Bacteria, Table of* (Illus. Dict.).

Leucosine (*lu'-ko-sēn*). A yellow pigment abundant in certain flagellate infusoria, as *Dinobryon synura*.

Leukemia, Leucæmia. (See Illus. Dict.) Syn., *White blood-disease; Leukocythemia splenemia*. See *Sign, Jaccoud's*. **L., Acute,** a generally fatal form characterized by rapid development, high temperature, great enlargement of the spleen and lymphatics, and softening of the bone-marrow. **L., Adenoid.** See *L., Lymphatic*. **L., Amygdaline,** that associated with disease of the tonsils. **L., Chronic, L., Essential.** See *Leukemia* (Illus. Dict.). **L. cutis, L. of the Skin,** a state of the skin characterized by formation of lymphatic enlargements in its deeper layers. **L., Fraenkel's,** acute leukemia with large mononuclear lymphocytes. **L., Hepatic,** a form attributed to liver-disease. **L., Intestinal,** due to intestinal disease. **L. lienalis,** splenic leukemia. **L., Lienomedullary, L., Lienomyelogenous.** See *L., Splenomedullary*. **L., Lymphatic,** the most common form, characterized by enlargement of the lymphatic glands, with perhaps slight changes in the spleen. **L., Medullary, L., Myelogenous, L., Osseous, L., Polymorphocyte,** a form in which the tissue of the bone-marrow is principally affected and obliteration of many of the small blood-vessels takes place. Syn., *Myelemia*. **L., Pseudo-, L., Pseudosplenic.** See *Hodgkin's Disease* and *Lymphadenoma*. **L., Splenic,** that in which the blood-changes are principally due to disorders of the spleen. **L., Splenomedullary,** the form characterized by excessive enlargement of the spleen and proliferation of the marrow of the bones without manifest change in the lymphatic glands. **L., Symptomatic, L., Temporary,** leucocytosis.

Leukæthiopia (*lu-ke-the-o'-pe-ah*) [λευκός, white; Αἰθίοψ, Ethiopian]. Albinism in an African.

Leukoblast. (See Illus. Dict.) 3. Löwit's name for lymphogonia (*q. v.*).

Leukocidin (*lu-ko'-sid-in*) [λευκός, white; *cædere*, to kill]. A poison destroying leukocytes, discovered by Van der Velde in exudates caused by infection with *Staphylococcus aureus*.

Leukocyte. (See Illus. Dict.) Syn., *Hematogenetic wandering cell; Phagocyte*. Cf. *Color analysis; Germ-centers* of Flemming. **L.s, Ehrlich's Theory** of the origin and development of, according to which all varieties of leukocytes may be classed into two distinct groups which have separate origins, functions, and relations. The first group consists of the lymphocytes, large and small, which are produced solely by the lymphatic tissues; and the second group includes the mononuclear leukocytes and transitional forms, the polynuclear neutrophiles, the eosinophiles, and the basophiles, all of which cells are produced exclusively by the marrow. [Da Costa.] **L., Polymorphous, L., Polynuclear,** cells in which the nucleus is either lobed or made up of several portions united by such delicate nuclear filaments as to give the impression of a multinucleated cell in distinction to mononuclear, eosinophil, and neutrophil leukocytes and lymphocytes. **L., Polymorphonucleic, L., Polynuclearneutrophilic,** one derived primarily from lymphocytes and secondarily from a myelocyte; originating in red bone-marrow, in the lymph-glands or spleen. **L., Uskow's Theory** of the origin and development of, according to which all varieties of the leukocyte, except the basophilic cells, of which no account apparently is taken, are but different developmental stages of one and the same cell. The youngest form of leukocyte, the small lymphocyte, originates in the lymph-glands, the lymphocytic bone-marrow, and the spleen. [Da Costa.]

Leukocytolysin (*lu-ko-si-tol'-is-in*) [*leukocyte*; λύειν, to loose]. Metchnikoff's term for a cytolysin produced by inoculation with leukocytes.

Leukocytolytic (*lu-ko-si-to-lit'-ik*). Relating to the destruction of leukocytes.

Leukocytometer (*lu-ko-si-tom'-e-ter*) [λευκός, white; κύτος, cell; μέτρον, measure]. A graduated capillary tube used for counting leukocytes. Cf. *Erythrocytometer*.

Leukocytopenia. See *Leukopenia*.

Leukocytoplania. See *Leukoplania*.

Leukocytosis. (See Illus. Dict.) **L., Agonal,** that occurring just before death; also called *terminal* or *moribund leukocytosis.* **L., Cachectic, L., Hydremic,** that attended by hydremia. **L., Digestion,** a physiologic form; there being an appreciable increase in the number of leukocytes in most healthy individuals within an hour after taking food. [Da Costa.] **L. due to Thermal and Mechanical Influences,** a transient increase of leukocytes in the peripheral blood produced by active local or general muscular exercise; by brief exposure to atmospheric cold; by cold baths, or by the application of electricity or massage. [Da Costa.] **L., Ether.** See *L., Toxic.* **L., Inflammatory,** that in which the lymph is concentrated in the cells while the blood is normal. **L. of the Newborn,** a physiologic form; the blood of the infant at birth containing two or three times the number of leukocytes found in the blood of normal adults. [Da Costa.] **L. of Pregnancy and Parturition,** a moderate physiologic increase in the number of leukocytes which occurs in the blood of a majority of primiparas. **L., Pathologic,** that increase in the number of leukocytes, involving chiefly the polynuclear neutrophil cells, which is associated with a variety of pathologic conditions, mainly inflammatory, infectious, and toxic in character. [Da Costa.] **L., Physiologic,** a temporary and moderate increase in leukocytes associated with purely physiologic conditions. **L., Posthemorrhagic,** a pathologic form commonly observed as the result of hemorrhage due to traumatism or other causes. **L., Preagonal.** See *L., Terminal.* **L., Spathologic,** a form produced by the administration of drugs, chemicals, organic principles, bacteria, bacterial proteins, and by the application of intense irritants and revulsives to the surface of the body. [Da Costa.] **L., Terminal,** the increase in the number of leukocytes to be observed in the peripheral circulation just before death. **L., Toxic,** a pathologic form found in poisoning by ptomains, by coal-gas, as the result of ether narcosis, and in convulsions and acute delirium. [Da Costa.]

Leukocytotaxis. See *Leukotaxis.*

Leukocytozoa (*lu-ko-si-to-zo'-ah*) [λευκός, white; κύτος, cell; ζῶον, animal]. Infusorian parasites of the white blood-corpuscles.

Leukoencephalitis (*lu-ko-en-sef-al-i'-tis*) [λευκός, white; ἐγκέφαλος, brain]. An epizootic disease of horses characterized by drowsiness, imperfect vision, partial paralysis of the throat, twitching of the muscles of the shoulder, unsteady gait, and softening of the white substance of the frontal lobes; also called forage poisoning.

Leukokeratosis (*lu-ko-ker-at-o'-sis*). See *Leukoplakia* (Illus. Dict.).

Leukolytic. See *Leukocytolytic.*

Leukomelous (*lu-kom'-el-us*). See *Leukomelanic* (Illus. Dict.).

Leukonuclein (*lu-ko-nu'-kle-in*). A decomposition-product of nucleohiston by action of hydrochloric acid.

Leukonychia (*lu-kon-ik'-e-ah*) [λευκός, white; ὄνυξ, nail]. A whitish discoloration of the nails owing to the presence of air beneath them.

Leukopenia (*lu-ko-pe'-ne-ah*) [λευκός, white; πενία, poverty]. A decrease below the normal standard in the number of leukocytes in the peripheral blood. Also called *Hypoleukocytosis; Hypoleukocythemia; Oligocythemia.*

Leukopenic (*lu-ko-pe'-nik*). Relating to or marked by leukopenia. **L. phase,** Löwit's term for the initial stage of hypoleukocytosis.

Leukopheous, Leucophæous (*lu-ko-fe'-us*) [λευκός, white; φαιός, dusky]. Dusky-white, ash-colored.

Leukoplakia. (See Illus. Dict.) **L., Lingual.** See *L. buccalis* (Illus. Dict.).

Leukoplania (*lu-ko-pla'-ne-ah*) [λευκός, white; πλάνη, a wandering]. The wandering of leukocytes or their passage through a membrane. Syn., *Leukocytoplania.*

Leukopsin (*lu'-kop-sin*) [λευκός, white; ὄψ, eye]. Visual white, produced from rhodopsin by the action of light.

Leukorrhea, Leucorrhœa. (See Illus. Dict.) **L., Anal, L. analis.** See *Hemorrhoids, White.*

Leukotactic (*lu-ko-tak'-tik*) [λευκός, white; τάξις, arrangement]. Relating to leukotaxis.

Leukotaxis (*lu-ko-taks'-is*). The arranging and ordering function of leukocytes. Syn., *Leukocytotaxis.*

Leucotoxic (*lu-ko-toks'-ik*). Destructive to leukocytes.

Leucotoxin (*lu-ko-toks'-in*) [λευκός, white; τοξικόν, poison]. A cytotoxin obtained by E. Metchnikoff from lymphatic ganglia. Cf. *Hemotoxin, Hepatotoxin, Nephrotoxin, Neurotoxin, Spermatoxin, Trichotoxin.*

Leukotrichia (*lu-ko-trik'-e-ah*) [λευκός, white; θρίξ, hair]. Whiteness of the hair, canities. **L. annularis.** See *Ringed Hair* (Illus. Dict.).

Leukourobilin (Nencki) (*lu-ko-u-ro-bi'-lin*) [λευκός, white; οὖρον, urine; *bilis*, bile]. A colorless decomposition-product of bilirubin.

Levicoochre (*lev-ik-o-o'-ker*). A mud containing iron and arsenic, obtained from the springs at Levico in the Tyrol. It is applied in the form of a hot poultice in chronic inflammation.

Levigate. (See Illus. Dict.) 2. Smooth. 3. Uniform; applied to the reddening in skin-diseases.

Levisticum (*lev-is'-tik-um*) [*Liguria*, a country of Cisalpine Gaul]. A genus of umbelliferous plants containing but one species. **L. officinale,** Koch, lovage, indigenous to middle Europe; the root, plant, and fruit are diuretic and used in dropsy and amenorrhea. Dose of fld. ext., 15–60 ♏ (0.9–3.7 c.c.).

Levity (*lev'-it-e*) [*levitas*, lightness]. The antithesis of gravity.

Levoduction (*lev-o-duk'-shun*) [*lævus*, left; *ducere*, to lead]. The movement of the eye to the left.

Levoglucosan (*lev-o-glu'-ko-san*) [*lævus*, left; γλυκύς, sweet]. A derivative of picein obtained by heating the latter with baryta.

Levotorsion (*lev-o-tor'-shun*) [*lævus*, light; *torquere*, to twist]. A turning or twisting toward the left.

Levoversion (*lev-o-vur'-shun*) [*lævus*, left; *vertere*, to turn]. See *Levotorsion.*

Levulosemia (*lev-u-lo-se'-me-ah*) [*lævus*, left; αἷμα, blood]. The presence of levulose in the blood.

Levuretin (*lev-u'-re-tin*) [Fr., *levure*, yeast]. A preparation of dried brewer's yeast used in skin-diseases. Dose, 1 teaspoonful (5 c.c.) in milk, 3 times daily.

Levurin (*lev'-u-rin*) [Fr., *levure*, yeast]. A dried extract of beer yeast; used in cases of sepsis. Dose, 1 teaspoonful (5 c.c.) 3 times daily.

Lewa, Lewah. The Indian name for a thick viscid fluid, consisting of pure and impure opium, passewah, and the washings of vessels used in the manufacture of opium. It is employed to glue together the petals of the poppies covering opium balls.

Lewisia (*lu-is'-e-ah*) [*Meriwether Lewis*, explorer, 1774–1809]. A genus of plants of the order *Portulaceæ*, indigenous to the western United States. **L. rediviva,** Pursh., the chita, bitter-root, spathum, racine amère; the mucilaginous, starchy root is used largely by the Indians as a food.

Ley (*li*) [ME.]. Lye.

Leydenia gemmipara, Schaudinn. A name given to the large round or polymorphous cells with lively ameboid movement discovered by v. Leyden (1876) in the ascitic fluid in cancer patients. Their relationship

to protozoa was pointed out by Schaudinn. Cf. *Cells, Leyden's.*

Lianthral (*li-an'-thral*). A proprietary preparation said to be an extract of coal-tar and casein.

Libby's Method. See under *Treatment.*

Libradol (*lib'-rad-ol*). The proprietary name for a soft, greenish ointment recommended for relief of pain by direct application. It contains selected constituents of *Melaleuca leucadendron*, L., *Cinnamomum camphora*, Fr. Nees, *Lobelia inflata*, L., *Nicotiana tabacum*, L., *Sanguinaria canadensis*, L., *Psychotria ipecacuanha*, Stock., *Capsicum annuum*, L., and *Symplocarpus fœtidus*, Nutt.

Lichen. (See Illus. Dict.) **2.** A group of cryptogamous plants, symbiotic of algæ and fungi.

Lichenification (*li-ken-i-fi-ka'-shun*). The change of an eruption into a form resembling lichen.

Lichenization (*li-ken-i-za'-shun*). The development of lesions of lichen.

Lienaden (*li-en'-a-den*) [*lien*, the spleen; *ἀδήν*, gland]. The proprietary name of a preparation made from the spleen of animals.

Lienointestinal (*li-en-o-in-tes'-tin-al*) [*lien*, the spleen; *intestina*, the intestines]. Relating to the spleen and the intestines.

Lienomedullary (*li-en-o-med'-ul-ar-e*). See *Lienomyelogenous.*

Lienomyelogenous (*li-en-o-mi-el-oj'-en-us*) [*lien*, spleen; *μυελός*, marrow; *γεννᾶν*, to produce]. Derived from both spleen and marrow.

Lienomyelomalacia (*li-en-o-mi-el-o-mal-a'-she-ah*) [*lien*, spleen; *μυελός*, marrow; *μαλακία*, softening]. Softening of the spleen and bone-marrow.

Lienopancreatic (*li-en-o-pan-kre-at'-ik*). Relating to the spleen and pancreas.

Lienorenal (*li-en-o-re'-nal*) [*lien*, spleen; *ren*, kidney]. Relating to the spleen and the kidney.

Life. (See Illus. Dict.) **L., Antenatal,** life of the fetus before birth. **L., Composite, Bordeu's Doctrine of.** See under *Vitalism.* **L., Embryonic,** the period beginning with the differentiation of the blastoderm and ending about the end of the second month; the period during which the lines of future growth are laid down. **L., Excitement Theory of,** "that of Roeschlaub (1768–1835), which endeavored to mold into one the Brunonian errors and the fancies of Schelling. According to it, life depends upon irritability, but is inherent in the organism as an independent feature; so it recognizes both irritability and solidism." [Park.] **L., Germinal,** the period which ends in the phenomena of germ and sperm maturations, of the expulsion of the polar globules from the ovum, of the atrophy of the female element of the sperm-cell, and of the impregnation of the ovum by the spermatozoon, with the resulting formation of the morula mass. **L., Latent,** a condition of suspension of life—as in organisms exposed to freezing, desiccation, etc.

Ligament, Ligamentum. (See Illus. Dict.) Also any strong compact tissue serving to hold an organ in position. **L., Accessory,** one which strengthens or supplements another. **L., Acromioclavicular, Superior,** a broad band connecting the upper part of the scapular end of the clavicle with the acromion. **L., Adipose,** the mucous ligament of the knee-joint. **L.s, Alar, Lesser,** layers of connective tissue extending on each side of the synovial pouch of the axoatloid articulation and joining the lateral odontoid ligaments. Syn., *Ligamenta alaria minora.* **L., Alar Odontoid.** See *L., Odontoid Lateral* (Illus. Dict.). **L. alare externum,** the external alar ligament. **L. alare internum,** the internal alar ligament. **Ligamenta alaria, L.a alaria dentis epistrophei, L.a lateralia dentis, L.a lateralia majora, L.a lateralia superiora, L.a Maucharti,** the lateral odontoid ligaments. **Ligamenta alaria minora.** See *L.s, Alar, Lesser.* **L., Annular,** a ring-shaped ligament. **L.s, Anterior** (of the bladder), an offshoot of the superior pelvic fascia attached to the front of the neck of the bladder. **L., Anterior** (of the colon), a band of thickened muscular fibers extending along the anterior surface of the colon. Syn., *Anterior band* (of the colon). **L.s, Anterior, True** (of the urinary bladder), branches of the rectovesical fascia running backward one from each side of the symphysis pubis over the lateral aspects of the prostate gland to the lateral surfaces of the urinary bladder. **L. apicum,** the supraspinal ligament. **L., Arantius',** the obliterated ductus venosus of Arantius. **L., Arched** (of the diaphragm). See *L., Arcuata* (Illus. Dict.). **Ligamenta arcuum.** See *L.s, Elastic.* **L. armillare,** the posterior annular ligament of the carpus. **L.s, Articular.** See *L.s, Capsular,* and *L.s, Interspinous* (Illus. Dict.). **L., Astragalo-calcaneal Interosseous.** See *L., Calcaneoastragaloid,* and *L., Astragalocalcaneal External* (Illus. Dict.). **L., Bardinet's,** the posterior fasciculus of the internal lateral ligament of the elbow-joint; it is attached above to the posteroinferior portion of the internal condyle and below, by its expanded border, to the inner side of the olecranon process. **L., Béraud's,** the suspensory ligament of the pericardium that is attached to the third and fourth dorsal vertebras. **L., Bifid,** the coracoclavicular ligament. **L., Botal's,** the remains of the ductus arteriosus. **L.s, Calcaneonavicular.** See *L., Calcaneoscaphoid, Inferior,* and *L., C., External* (Illus. Dict.). **L., Calcaneotibial.** See *L., Lateral, Internal* (of ankle-joint) (Illus. Dict.). **L., Caldani's,** a fibrous band extending from the inner border of the coracoid process to the lower border of the clavicle and upper border of the first rib, where it unites with the tendon of the subclavius muscle. **L.s, Canthal.** See *L., Palpebral, External and Internal* (Illus. Dict.). **L., Central.** See *Filum terminale* (Illus. Dict.). **L., Cloquet's.** See *Habenula, Haller's.* **L., Coccygeal.** See *Filum terminale* (Illus. Dict.). **Ligamenta coli,** three longitudinal bands on the surface of the large intestine, due to thickening of the longitudinal muscle-fibers. See *L., Anterior,* and *L., Posterior* (of the colon), and *Band of the colon, Inner.* **L., Cooper's. 1.** The lower, thickened portion of the fascia transversalis, which is attached to the spine of the pubis and the iliopectineal eminence. **2.** Arciform, ligamentous fibers extending from the base of the olecranon to the coronoid process on the inner aspect of the elbow-joint. **L., Costovertebral, Anterior.** See *L., Costocentral, Anterior* (Illus. Dict.). **L., Crural,** Poupart's ligament. **L., Deep Suspensory** (of the penis), a part of the suspensory ligament of the penis originating in the tendinous part of the rectus abdominis muscle near the symphysis pubis. **L., Denucé's,** a short and broad fibrous band in the wrist-joint, connecting the radius with the ulna. **L.s, Elastic,** yellow, highly elastic ligaments lying at the back of the spinal canal, appearing in pairs between the laminas of contiguous vertebras from the axis to the interval between the last lumbar vertebra and the sacrum. Syn., *L.s, Yellow; L.s, Intercrural; Ligamenta flava; Ligamenta subflava; Ligamenta arcuum.* **L., Fallopian.** (See Illus. Dict.) **2.** The round ligament of the uterus. **L.s, False, Lateral** (of the urinary bladder), peritoneal folds extending from each iliac fossa to each side of the urinary bladder. **L.s, False, Posterior** (of the urinary bladder). See *Rectovesical Folds*

(Illus. Dict.). **Ligamenta flava.** See *L.s, Elastic.* **L., Fundiform.** See *L., Retzius'* (Illus. Dict.). **L.s, Funicular,** band-like ligaments accessory to capsular ligaments surrounding movable joints; they are made up of parallel bundles of flexible fibrous tissue, but without elasticity. **L., Glenoideobrachial,** the thickened part of the capsular ligament of the shoulder which is inserted into the lesser tuberosity of the humerus. **L., Glenoideobrachial, Inferior,** a thickened part of the capsular ligament of the shoulder lying between the insertions of the subscapularis and that of the teres minor. Syn., *Ligamentum glenoideobrachiale inferius internum.* **L., Guenz's,** the ligamentous fibers of the obturator membrane which form the upper and inner wall of the canal transmitting the obturator vessels and nerves. **L., Henle's,** the inner portion of the conjoined tendon which is chiefly attached to the sheath of the rectus muscle. **L., Hesselbach's.** See *L., Interfoveolar.* **L., Hueck's,** the pectinate ligament. **L., Iliolumbar, Superior,** the part of the iliolumbar ligament which is inserted into the crest of the ilium. **L., Interfoveolar,** a thin, fibrous band extending from the posterior surface of the fascia transversalis, near the plica semilunaris, to the pubic bone and Gimbernat's ligament; it forms part of the conjoined tendon. Syn., *L., Hesselbach's.* **L.s, Intervertebral.** See *Intervertebral Discs* (Illus. Dict.). **L., Ischioprostatic.** See *Fascia, Perineal* (Illus. Dict.). **L., Jugal** (of the cornicula). See *L., Cricosantorinian* (Illus. Dict.). **L.s, Lateral** (of the liver), peritoneal folds running from the lower aspect of the diaphragm to the adjacent borders of the right and left lobes of the liver. **L., Lockwood's,** the suspensory ligament of the eyeball, a curved fibrous band connected with Ténon's capsule, and supporting the eyeball on each side of the orbit. **L. lunatopyramidale,** one between the semilunar and cuneiform bones. **L. lunatoscaphoideum,** one between the scaphoid and semilunar bones. **L., Meckel's.** See *L., Anterior* (of the malleus) (Illus. Dict.). **L., Nonarticular,** those not connected with articulations. **L., Nuchal,** one at the nape of the neck connecting the two trapezius muscles. Syn., *L., Supraspinal Cervical.* **Ligamenta obliqua,** the crucial ligaments of the knee-joint. **L., Occipitoatlantal, Anterior,** one running from the anterior margin of the foramen magnum between the occipital condyles to the anterior arch of the atlas. **L., Petit's,** the concave fold formed back of the vagina by the union of Douglas' ligaments. **L., Posterior** (of the colon), a thick band formed by the muscular coat of the colon extending along its attached border. **L., Pterygospinous,** a ligamentous band extending from the external pterygoid plate to the spine of the sphenoid. **L., Pylorocholic,** Glénard's name for the attachment of the transverse colon to the pylorus. **L., Radiate.** See *L., Costocentral, Anterior* (Illus. Dict.). **L.s, Rectouterine,** the rectouterine folds. **L., Reticular,** one holding a muscle to a bone. **L., Rivinian,** Shrapell's membrane. **L., Salpingopterygoid,** a band extending from the spine of the sphenoid to the hamular process. **L., Schlemm's,** the glenoideobrachial ligament. **L., Sömmerring's,** the suspensory ligament of the lacrimal gland. **L., Spinoglenoid,** one extending between the spine of the scapula and the glenoid cavity. **L., Splenophrenic,** the suspensory ligament of the spleen. **L., Spring,** the inferior calcaneoscaphoid ligament. **L., Stapedial,** the annular ligament of the stapes. **L., Stellate.** See *L., Costocentral, Anterior* (Illus. Dict.). **L., Sternoclavicular,** the capsular ligament of the articulation between the sternum and clavicle. **L.s, Sternopericardiac,** connecting bands between the sternum and the pericardium. **L.s, Subflavic.** See *L.s, Elastic.* **L., Superior** (of the cecum). See *Fold, Hensing's.* **L., Supraspinal Cervical.** See *L., Nuchal.* **L., Sutural.** 1. A thin lamina of fiber occurring in the cranial sutures. 2. A thin lamina of fibrous tissue between the surface of an immovable joint. **L.s, Synovial,** synovial folds resembling ligaments. **L.s, Talocalcanean,** the calcaneoastragaloid ligaments. **L.s, Talofibular,** the external lateral ligaments of the ankle-joint. **L.s, T.-navicular,** the calcaneoscaphoid ligaments. **L.s, Talotibial,** the anteroposterior and deltoid ligaments of the ankle-joint. **L., Tensor, L., Toynbee's,** the fibrous sheath of the tendon of the tensor tympani. **L., Transverse** (of the pelvis). See *Fascia, Perineal* (Illus. Dict.). **L.s, True** (of the bladder). See *L., Anterior, True* (of the bladder). **L., Tuffier's Inferior,** that portion of the enteric mesentery which is inserted into the iliac fossa. Syn., *Mesentericoparietal Fold.* **L.s, Uterine, Posterior.** See *Rectouterine Folds* (Illus. Dict.). **L.s, Valsalva,** the extrinsic ligaments of the pinna of the ear. **L., Vertebroiliac.** See *L., Iliolumbar* (Illus. Dict.). **L., Vesalius',** Poupart's ligament. **L.s, Vesicoumbilical,** the urachus and the obliterated hypogastric arteries on each side. **L., Walther's Oblique,** the ligamentous band extending from the external malleolus inward to the posterior surface of the astragalus. Syn., *L., Astragalofibular, Posterior.* **L., Zaglas',** the portion of the posterior sacroiliac ligament that extends from the posterior superior spinous process of the ilium downward to the side of the sacrum.

Ligamentopexis (*lig-am-en-to-peks'-is*) [*ligamentum; πῆξις,* fixation]. Beck's operation of suspension of the uterus on the round ligaments.

Ligate (*lig'-āt*) [*ligare,* to bind]. To apply a ligature.

Ligatura, Ligature. (See Illus. Dict.) **L. candens.** See *Ansa, Galvanocaustic.* **L., Chain.** See *L., Interlocking.* **L. glandis.** Same as *Phimosis.* **L., Interlacing, L., Interlocking,** one for securing a pedicle in which several loops interlace. **L., Woodridge's,** the isolation of the ventricles by drawing a silk ligature tightly about the auricles at their junction with the ventricles.

Light. (See Illus. Dict.) **L.-difference,** the difference between the two eyes in respect to their sensitiveness to light. **L., Finsen.** See *L., Refrigerated.* **L.-minimum,** the slightest degree of light appreciable to the eye. **L., Polarization of.** See *Polarization* (Illus. Dict.). **L., Refrigerated,** light from which the heat rays are excluded and only the blue and violet rays remain; it is used in phototherapy. **L.-sense,** sensibility of the retina to luminous impressions. **L.-treatment.** See *Actinotherapy, Phototherapy,* and *Radiotherapy.*

Lignorosin (*lig-no-roz'-in*). Sodium-lignin-sulfonic acid; a reducing agent obtained by action of calcium sulfite on lignin, consisting chiefly of calcium lignate. It is a dark brown, semi-liquid substance used as a substitute for tartaric and lactic acids in mordanting wool.

Lignosulfin (*lig-no-sul'-fin*). A product occurring in the manufacture of sulficellulose, containing free sulfurous acid combined with the volatile products of wood. It is used in the disinfection of dwellings.

Lignosulfite (*lig-no-sul'-fit*). A liquid by-product obtained in the manufacture of cellulose from pine wood; used in laryngeal tuberculosis in inhalations of 10% to 30% solution.

Ligustrin (*lig-us'-trin*). See *Syringin* (Illus. Dict.).

Lilacin (*lil'-as-in*). 1. See *Syringin* (Illus. Dict.). 2. See *Terpineol* (Illus. Dict.).

Lilienfeld's Theory of Blood-coagulation. See under *Blood*.

Limacin (*li'-mas-in*) [*Limax*, a genus of slugs]. A substance similar to mucosin obtained from the slug *Limax agrestis*.

Liman (*li'-man*) [λιμήν, a marshy lake]. A sheet of water isolated from the sea and converted into a salt lake. **L. Cure**, the treatment of diseases by bathing in limans at Odessa. The waters contain chlorids of sodium, potassium, and magnesium; calcium sulfate and sodium bromid. The bottoms of the lakes are covered with slimy substance containing iodin, bromin, sulfur, sulfuretted hydrogen, and oleic and valerianic acids.

Limanol (*li'-man-ol*). An extract obtained from boiling the mud of the limans at Odessa. It is used as an application in gout.

Limatura (*lim-at-u'-rah*). Filings. **L. chalybis, L. ferri**, iron filings.

Limb. (See Illus. Dict.) **L., Anacrotic**, the upward stroke of a sphygmogram. **L., Thoracic.** See *L., Pectoral* (Illus. Dict.).

Limbus. (See Illus. Dict.) **L. angulosus**, the oblique line of the thyroid cartilage. **L. conjunctivæ.** 1. The rim of conjunctiva that overlaps the corneal epithelium. Syn., *Annulus conjunctivæ.* 2. See *Arcus senilis* (Illus. Dict.). **L. fimbriatus.** See *Fimbria* (Illus. Dict.). **L. sphenoidalis**, the sharp anterior edge of the groove on the sphenoid bone for the optic commissure. **L. sylvii**, the fissure of Sylvius.

Lime. (See Illus. Dict.) 3. The genus *Tilia*, particularly *T. europæa*.

Limen. (See Illus. Dict.) 2. The crest of the insula. Syn., *L. insulæ*. **L. nasi**, the boundary between the osseous and cartilaginous parts of the nasal cavity.

Limicoline, Limicolous (*lim-ik'-ol-ēn, -us*) [*limus*, mud; *colere*, to inhabit]. Inhabiting or growing in mud.

Limitans. (See Illus. Dict.) **L. externa.** See *Layer, Cuticular*.

Limitrophes (*lim-it'-ro-fēz*) [*limes*, a boundary; τροφή, nourishment]. The sympathetic ganglia and their connections.

Limnobios (*lim-no'-bi-os*) [λίμνη, a lake; βιος, life]. The organic world of fresh water. Cf. *Geobios, Halobios*.

Limonin (*lim'-o-nin*) [*limo*, a lemon]. $C_{26}H_{30}O_8$ (?). A glucosid from seeds of apples and lemons, occurring as bitter, gleaming leaflets, soluble in alcohol and acetic acid, and with sulfuric acid giving a blood-red color.

Limping (*limp'-ing*) [AS. *lemp*, awkward]. Walking with a halting gait. **L., Intermittent.** See *Claudication, Intermittent*.

Linaceous (*lin-a'-she-us*) [*linum*, flax]. Relating to the genus *Linum*.

Linadin (*lin'-ad-in*). An insoluble dark brown powder containing 1% of iron and 0.023% of iodin, with taste of cod-liver oil, prepared from the spleen of animals. Dose in malarial cachexia, 10–25 gm.

Linalool (*lin-al-o'-ol*). $C_{19}H_{18}O$. A fragrant liquid occurring in oils of linaloe, lavender, and bergamot.

Linamarin (*lin-am-ar'-in*) [*linum*, flax; *amara*, bitter]. The toxic glucosid of common flax, *Linum usitatissimum*.

Linden (*lin'-den*). See *Tilia*.

Line, Linea. (See Illus. Dict.) **L. apophyseozygomatico-protuberantialis**, a line described by Lannelongue and Mauclaire passing horizontally backward from the processus marginalis of the zygoma to the median line somewhat above the external occipital protuberances. **L. arcuata (externa) inferior ossis occipitalis**, the inferior curved line of the occipital bone. **Lineæ arcuatæ externæ ossis ilii**, three curved lines on the external surface of the ilium limiting the areas of attachment of the gluteal muscles. **L. arcuata interna ossis ilii**, the iliopectineal line. **L. arcuata (externa) superior ossis occipitalis.** See *Line, Curved, Superior* (of the occipital bone) (Illus. Dict.). **Lineæ atrophicæ**, linear atrophy of the skin. See *Striæ atrophicæ* (Illus. Dict.). **L. auriculoorbitalis**, a line constructed by Krönlein, corresponding to the horizontal line of the Germans. See *L., Frankfort*. **L., Base-apex**, a line perpendicular to the edge of a prism and contained within the plane that bisects the refracting angle. **L.s, Beau's**, the transverse ridges seen on the finger-nails after convalescence from exhausting diseases. **L., Borsieri's.** See under *Signs*. **L., Broedel's White**, the name given by Howard A. Kelly to a longitudinal white line on the anterior surface of the kidney, in which unite the whitish lines which represent the columns of Bertin. **L.s, Brücke's**, the broad bands which alternate with Krause's membranes in the fibrils of striated muscles. **L. candidula abdominis.** See *L. alba* (Illus. Dict.). **L.s, Chiene's**, imaginary lines designed to aid in localizing the cerebral centers in operations upon the brain. **L., Conradi's**, a line drawn from the base of the xiphoid process to the point of the apex-beat, marking, under normal conditions, the upper limit of percussion-dulness of the left lobe of the liver. **L. directionis pelvis**, the axis of the pelvic canal. **L., Epiphyseal**, the thin layer of cartilage at first separating the borders of the diaphysis and epiphysis. **L. externa superior**, the superior curved line of the occipital bone. **L., Farre's White, L., Farre-Waldeyer's**, the boundary-line at the hilum of the ovary between the germ epithelium and the squamous epithelium of the broad ligament; it marks the insertion of the mesovarium. **L., Frankfort**, the horizontal or base line of the skull as defined at a meeting of German anthropologists. It passes from the lowest point of the infraorbital border through the highest point of the upper border of the porus acusticus externus. Ger., *Linie der Frankfurter Vereinigung; Frankfurter Linie.* **L.s, Frommann's**, transverse strias appearing in the axis-cylinder of a nerve near the Ranvier's nodes on treatment with silver nitrate. **L., Gubler's**, an imaginary line connecting the points of origin of the fifth cranial nerves on the lower surface of the pons. **L. horizontalis auriculoorbitalis.** See *Linea auriculoorbitalis* (Krönlein). **L. horizontalis supraorbitalis**, a line constructed by Krönlein, parallel with the linea horizontalis, beginning at the middle of the supraorbital border. **L. ilia**, the portion of the iliopectineal line confined to the ilium. **L. iliopectinata, L. iliopectinea, L. innominata**, the iliopectineal line. **L., Inioauricular**, that passing from the inion to the middle of the porus acusticus externus. **L.s, Intersegmental**, embryonic lines separating the primitive segments or metameres from one another. **L.s, Interstellate**, threads of achromatin forming lines which pass from pole to pole in a dividing nucleus. Syn., *Achromatic fibrils; Achromatin-threads; Cell-threads.* See *Karyomita* (Illus. Dict.). **L.s, Isothermal.** See under *Isothermal* (Illus. Dict.). **L., Krause's.** See *Membrane, Krause's* (Illus. Dict.). **L.s, Lantermann's.** See *Incisure of Schmidt* (Illus. Dict.). **L., Luschka's**, an imaginary line extending from the middle of the internal palpebral ligament to the space between the first and second molars, and indicating the course of the lacrimal sac and nasal duct. **L., Mammary**, a line between the two nipples. **L., Merkel's**, an imaginary line extending from the middle of the internal palpebral ligament to the space between the

last bicuspid and first molar teeth, and indicating the course of the lacrimal sac and nasal duct. **L., Monro's,** a line drawn from the umbilicus to the anterior superior spine of the ilium. **L., Ophryoninion, L., O., Equatorial,** a line passing a little above the insertion of the ear-muscle and intersecting the ophryon and inion. **L., O., Median,** one passing over the vertex of the skull and connecting the ophryon and inion. **L., Parasternal.** See under *Parasternal* (Illus. Dict.). **L., Perpendicular** (of ulna), on the dorsal aspect of the ulna a longitudinal line of demarcation between the smooth inner surface covered by the extensor carpi ulnaris and the outer irregular surface covered by the extensor muscles of the thumb and the extensor indicis. **L., Planobasilar,** the line drawn in the median plane, from the anterior border of the sphenoidal plane to the basion. **L., Planospinal,** a straight line drawn in the median plane from the anterior margin of the sphenoidal plane to the subnasal or spinal point. **L., Profile** (Frankfort), one drawn from the intersuperciliary point to the alveolar point. **L. of Regard,** in optics, the line connecting the center of rotation of the eye with the point of fixation or of regard. **L.s, Reid's,** three imaginary lines serving for measurements in craniocerebral topography; one of them, the base-line, is drawn from the lower margin of the orbit through the center of the external auditory meatus to just below the external occipital protuberance. The two others are perpendicular to it, one corresponding to the small depression in front of the external auditory meatus, the other to the posterior border of the mastoid process. The fissure of Rolando extends from the upper limit of the posterior vertical line to the point of intersection of the anterior line and the fissure of Sylvius. **L., Richter-Monro's,** Monro's line. **L. rolandica,** a line constructed by Krönlein passing from the point of junction of the linea verticalis retromastoidea with the iniomedionasal line to the point of juncture of the linea verticalis zygomatica with the linea horizontalis supraorbitalis. **L., Rolando's,** begins on the equatorial ophryon-inion line $\frac{42}{100}$ from the ophryon and on the median ophryon-inion line $\frac{53}{100}$ and connects the points. **L., Roser-Nélaton's.** Same as *Nélaton's Line*. **L.s, Scalariform,** dark lines visible between the muscular cells of the heart after staining with silver nitrate. **L. semicircularis inferior ossis occipitis,** the inferior curved line of the occipital bone. **L. semicircularis inferior ossis parietalis,** the temporal line. **L. semicircularis ossis frontalis,** the temporal crest. **Lineæ semicirculares ossis ilii,** the curved lines on the dorsum of the ilium. **L. semicircularis superior ossis occipitis,** the superior curved line of the occipital bone. **L. semicircularis temporum,** the temporal crest. **L., Spiral** (of femur), one on the ventral aspect separating the neck and shaft and passing between the tubercle and a point close in front of the lesser trochanter. Syn., *L., Anterior trochanteric.* **L. Sylvii.** 1. A line constructed by Krönlein from the point of juncture of the linea verticalis zygomatica with the linea horizontalis supraorbitalis and intersecting the linea verticalis retromastoidea at a point midway between the point of its crossing the linea horizontalis supraorbitalis and the median inionasal line. 2. Sylvian line (Thane). It corresponds to the ramus posterior horizontalis fissuræ Sylvii. It passes from the nasion to the lambda and measures on the median ophryon-inion line $\frac{32}{100}$ above the inion, and connects this with the point of Sylvius. **L. temporalis inferior ossis parietalis,** the inferior curved line of the parietal bone. **L. temporalis ossis frontis,** the temporal ridge. **L. temporalis superior parietalis,** the superior curved line of the parietal bone. **L. terminalis (pelvica),** the iliopectineal line. **L. verticalis auricularis,** a line constructed by Krönlein perpendicular to the linea horizontalis auriculoorbitalis at the middle of the articulation of the lower jaw. **L. verticalis retromastoidea,** a line constructed by Krönlein perpendicular to the linea horizontalis auriculo-orbitalis at the posterior border of the base of the processus mastoideus. **L. verticalis zygomatica,** a line constructed by Krönlein perpendicular to the linea horizontalis auriculoorbitalis at the middle of the zygoma. **L.s, Voigt's Boundary,** the lines which divide the regions of distribution of two peripheral nerve-tunks. **L., Waldeyer's.** See *L., Farre's White.* **L., White** (of the pelvic fascia). See under *White* (Illus. Dict.).

Lingence (*lin'-jenz*). See *Lincture* (Illus. Dict.).

Lingua. (See Illus. Dict.) **L. dissecta** (Grünwald). See *Glossitis, Dissecting* (Illus. Dict.). **L. exertoria,** prolapse and hypertrophy of the tongue. **L. exigua,** the epiglottis. **L. nigra.** See *Glossophytia* (Illus. Dict.). **L. vituli, L. vitulina,** macroglossia.

Lingula. (See Illus. Dict.) **L. auriculæ,** the cartilaginous projection toward or into the upper portion of the lobe of the ear. **L. of the sphenoid, L. sphenoidalis,** a small ligulate process extending backward in the angle formed by the body of the sphenoid and the ala magna.

Lingular (*lin'-gu-lar*) [*lingula,* a little tongue]. Of or pertaining to a little tongue.

Linition (*lin-ish'-un*) [*linere,* to besmear]. The process of applying a liniment.

Linoxyn (*lin-oks'-in*) [*λίνον,* flax; *oxygen*]. $C_{32}H_{54}O_{11}$. A neutral elastic amorphous mass resulting from the oxidization of linoleic acid; soluble in a mixture of alcohol and chloroform.

Lint. (See Illus. Dict.) **L., Marine,** oakum. **L.-paper,** an absorbent material made from wood-pulp. **L., Picked,** charpie.

Lintin (*lin'-tin*). Absorbent cotton rolled or compressed into sheets.

Lip. (See Illus. Dict.) 2. The border of a wound. **L., Double,** a hypertrophied lip with formation of a longitudinal cleft-like depression, giving the appearance of being double. **L., Hare-.** See *Hare-lip* (Illus. Dict.).

Lipase (*lip'-āz*) [*λίπος,* fat]. A ferment of the glycerids, a fat-splitting enzyme contained in the pancreatic juice, in blood-plasma, and in many plants, as hemp, poppy, maize, colza, *Penicillium glaucum,* etc. Its action is reversible; it may separate fats by hydrolysis into fatty acid and glycerin, the reaction ceasing when the products of the hydrolysis reach a definite concentration in consequence of equilibrium being established, or it may effect synthesis, as is shown by its action on ethyl butyrate. Syn., *Pialyn; Steapsin.*

Liphemia, Liphæmia (*li-fe'-me-ah*). See *Oligemia* (Illus. Dict.).

Lipiodol (*lip-i'-o-dol*). An oil containing 40% of iodin in each cubic centimeter.

Lipobromol (*lip-o-bro'-mol*). Oil of poppy seed combined with 33.3% of bromin; a bland, almost tasteless preparation.

Lipocardiac (*lip-o-kar'-de-ak*) [*λίπος,* fat; *καρδία,* the heart]. Pertaining to a fatty heart.

Lipogenin (*lip-oj'-en-in*). An ointment base occurring in solid and liquid form, said to consist of a mixture of fatty acids.

Lipolysis (*lip-ol'-is-is*) [*λίπος,* fat; *λύειν,* to loose]. The decomposition of fat.

Lipolytic (*lip-ol-it'-ik*). Fat-splitting.

Lipoma. (See Illus. Dict.) **L. capsulare,** Virchow's

term for a fatty tumor investing the capsule of the mammary gland. **L. capsulare cordis,** Virchow's term for an excessive growth of fatty tissue in the heart. **L., Diffuse,** a tumor consisting of an irregular mass of fatty tissue without a capsule. **L. durum** (mixtum), J. Müller's name for a lipoma with excess of fibrous stroma. **L., Erectile.** See *L., Telangiectatic* (Illus. Dict.). **L., Hernial,** a lipocele. **L., Heteroplastic Form of,** Virchow's lipomatoid new-growths. **L. intrapèrinèphrètique partiel** (Robin). See *Rests, Adrenal,* and *Strumæ lipomatodes aberratæ renis* (Grawitz) (Illus. Dict.). **L. luxurians musculorum progressivum, L. musculorum luxurians.** See *Paralysis, Pseudohypertrophic* (Illus. Dict.). **L. mixtum,** Müller's term for a fatty tumor, the thick capsule of which causes it to resemble fibrous growths. **L.s, Multiple.** See *Adenolipomatosis.* **L. myxomatodes,** a lipomyxoma. **L., Nasal,** lobulated masses due to hypertrophy of the cellular tissue and the sebaceous follicles of the nose. **L., Nevoid.** See *L., Telangiectatic.* **L., Osseous,** a fatty tumor the fibrous septa of which have become ossified. **L., Simple,** a characteristic fatty tumor. **L.s, Symmetric,** of nervous origin. See *Adenolipomatosis.* **L. tuberosum,** Virchow's term for a lobulated fatty tumor.

Lipomatosis. (See Illus. Dict.) **L., Diffuse Muscular.** See *Paralysis, Pseudohypertrophic* (Illus. Dict.). **L. hepatis,** fatty liver. **L., Interstitial,** fatty degeneration in progressive muscular atrophy. **L. pancreatica,** fatty pancreatic degeneration. **L. universalis asexualis.** See *Lobengulism.*

Lipomphalus (*lip-om'-fa-lus*) [λίπος, fat; ὀμφαλός, the navel]. A fatty umbilical hernia.

Lipomyoma (*lip-o-mi-o'-mah*) [λίπος, fat; μῦς, muscle]. A myoma with fatty elements.

Lipophrenia (*lip-o-fre'-ne-ah*) [λείπειν, to fail; φρήν, mind]. Failure of mental capacity.

Liporhodin (*lip-o-ro'-din*) [λίπος, fat; ῥόδον, a rose]. A red-colored lipochrome.

Liposarcoma (*lip-o-sar'-ko-mah*) [λίπος, fat; *sarcoma*]. Sarcoma with fatty elements.

Liposic (*lip'-o-sik*). See *Lipolytic.*

Lipoxanthin (*lip-o-zan'-thin*) [λίπος, fat; ξανθός, yellow]. A yellow lipochrome.

Lipoxeny (*lip-oks'-en-e*) [λείπειν, to leave; ξένος, a host]. Desertion of a host by a parasite.

Lipoxysm (*lip-oks'-izm*) [λίπος, fat; ὀξύς, sharp]. Poisoning by means of oleic acid producing a burning pain in the throat and stomach, vomiting, diarrhea, and meteorism, with intense collapse and later chronic digestive disturbance.

Lippia. (See Illus. Dict.) **L. citriodora,** Kth., the lemon verbena, a native of South America cultivated in Europe and in the United States, has fragrant leaves which are used as a stomachic and antispasmodic.

Lipsotrychia (*lip-so-trik'-e-ah*) [λείπειν, to leave; θρίξ, hair]. Falling out of the hair.

Liquarium (*lik-wa'-ri-um*) [*liquarius,* pertaining to liquids]. Simple syrup of sugar.

Liquate (*lik'-wāt*) [*liquare,* to make liquid]. To liquefy.

Liqueur. (See Illus. Dict.) **L. d'Iva,** an aromatic cordial of musk-like odor distilled in the Engadine from *Achillea atrata,* Linn., and *A. moschata,* Jacq.; also called *Esprit d'Iva.* Its peculiar qualities are due to the presence of ivaol and moschatin.

Liquor. (See Illus. Dict.) **L. amnii spurius,** the oxidation products formed by the Wolffian bodies contained as a fluid in the sac of the allantois. Syn., *Allantoic fluid.* **L. aromaticus Hageri,** a combination said to consist of the oils of thyme, lemon, mace-cinnamon, cloves, and lavender, each 1 gram; oil of bergamot, 3 grams; alcohol, 260 grams. It is used externally in rheumatism, and diluted 2 or 3 c.c. in a liter of distilled water as an eye lotion. **L. of Batavia,** a preparation used in cholera and said to consist of laudanum, 6 gm.; ether, 2.5 gm.; orange-flower water, 6 gm. **L. of Cadet,** alkarsin. **L. calcii iodoferrati,** a preparation of iron and calcium. It is used in the treatment of rachitic children. Syn., *Sangostol.* **L. carbonis detergens,** a mixture of 4 oz. of coal-tar with 8 or 9 oz. of tincture of soap bark. Mixed with 50 parts of water it is applied in chronic eczema. Syn., *Coal-tar saponin.* **L. carnis compositus,** virol. **L. carnis ferropeptonatus,** carniferrol. **L. chorii.** See *L. amnii spurius.* **L. ferri estellini,** a tonic preparation said to consist of egg-yolk with 4% of iron. **L. ferri-iodosini,** a solution of 5% of iodin and 4% of iron. **L. ferri mangani iodopeptonati,** a solution containing 0.5% of iron, 0.1% of manganese, 0.05% of iron iodid. It is used in chlorosis. Dose, 1 tablespoonful (15 c.c.). **L. ferri oxydati natronati saccharatus.** See *Ferrosol.* **L. of the Hollanders,** ethylene chlorid. **L. iodisini,** a solution of iodosin containing 0.25% of iodin. **L. mindereri.** See *Ammonii acetatis liq.* (Illus. Dict.). **L., Mother.** See under *Mother* (Illus. Dict.). **L., Nervous,** a term used by Richard Mead for the luminiferous ether, a universal elastic matter. **L. potassii arsenicalis, L. potassii arsenitis,** Fowler's solution. **L. subarachnoidealis,** the cerebrospinal fluid. **L. thiophosphini,** a solution containing potassium guaiacol sulfonate with calcium compounds. It is used as a substitute for syrup of guaiacol. Dose, 5–10 gm. 3 times daily. **L., Valsalva's,** the endolymph.

Lirellate (*lir'-el-āt*) [*lira,* a ridge]. Marked with linear ridges or furrows; ridge-like, furrow-like.

Lirelliform, Lirelline, Lirellous (*lir'-el-e-form, lir'-el-ēn, -us*). See *Lirellate.*

Lissencephalous (*lis-en-sef-al'-us*) [λισσός, smooth; ἐγκέφαλος, the brain]. Having a brain with few or no convolutions.

Lister's Ointment. See under *Ointment.*

Listerian (*lis-tē'-re-an*). Named after Lord Joseph Lister, an English surgeon, b. 1827.

Listol (*lis'-tol*). An antiseptic said to consist of thymol and iodin.

Lithangiuria (*lith-an-je-u'-re-ah*) [λίθος, stone; ἀγγεῖον, vessel; οὖρον, urine]. A diseased condition of the urinary tract due to the presence of calculi.

Lithanthrakokali (*lith-an-thra-kok'-al-e*). See *Anthrakokali* (Illus. Dict.).

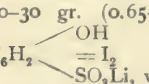
Lithargyrium (*lith-ar-ji'-re-um*). Litharge.

Lithargyrius (*lith-ar-ji'-re-us*) [L.]. A litharge of a yellowish hue; gold litharge.

Lithargyrum (*lith-ar'-ji-rum*) [L.]. Same as *Lead monoxid.*

Lithargyrus (*lith-ar'-ji-rus*) [L.]. Litharge, particularly silver litharge.

Lithecboly (*lith-ek'-bo-le*) [λίθος, stone; ἐκβολή, a throwing out]. Expulsion of a calculus by contraction of the bladder and dilation of its neck.



Lithepsy (*lith-ep'-se*) [λίθος, a stone; ἑψειν, to boil]. See *Lithodialysis* (Illus. Dict.).

Lithiasis. (See Illus. Dict.) **L., Appendicular,** obstruction of the lumen of the vermiform appendix by calculi.

Lithiopiperazin (*lith-e-o-pip'-er-az-in*). A combination of lithium and piperazin which forms a granular powder readily soluble in water. It is antiarthritic. Dose, 15–45 gr. (1–3 gm.) daily.

Lithium. (See Illus. Dict.) **L. Acetate,** $LiC_2H_3O_2 + 2H_2O$, colorless crystals soluble in water; diuretic. Dose, 8–24 gr. (0.52–1.6 gm.). **L. Arsenate,** $2Li_3$-

$AsO_4 + H_2O$, white powder used as an alterative. Dose, $\frac{1}{60}$–$\frac{1}{16}$ gr. (0.001–0.004 gm.). **L. Bitartrate,** $LiC_4H_5O_6 \cdot H_2O$, a white powder soluble in water. It is diuretic and laxative, and is used in gout. Dose, 5 gr. (0.3 gm.). Syn., *Tartarlithin.* **L. and Caffein Sulfonate,** $Li \cdot C_8H_9N_4O_2 \cdot SO_3$, a bitter, white crystalline powder, soluble in water; diuretic used in gout and rheumatism. Dose, 15 gr. (1 gm.) 4–6 times daily. **L. Citrate, Effervescent, L. citricum effervescens,** a mixture of lithium carbonate, sodium bicarbonate, citric acid, and sugar, forming white granules soluble in water with effervescence. Dose, 30–60 gr. (1.95–3.9 gm.). **L. Dithiosalicylate,** $Li_2C_{14}H_8S_2O_6$, a gray powder soluble in water and alcohol; used in gout and rheumatism. Dose, 3–10 gr. (0.2–0.65 gm.). **L.-diuretin.** Same as *Uropherin.* **L. Formate,** $LiCHO_2 + H_2O$, colorless needles soluble in water, used in rheumatism and gout. Dose, ½ oz. (15 c.c.) 1% aqueous solution. **L. Glycerinophosphate, L. Glycerophosphate,** $Li_2PO_4C_3H_5(OH)_2$, a white powder soluble in water; used as a nerve tonic. Dose, 8–15 gr. (0.5–1 gm.). **L. Iodate,** $LiIO_3$, used in gout. Dose, 1½–3 gr. (0.1–0.2 gm.). **L. Iodid,** LiI, white deliquescent prisms turning yellow on exposure; used in chronic sciatica and gout. Dose, 1–5 gr. (0.06–0.32 gm.). **L. and Potassium Tartrate,** a white crystalline powder soluble in water; laxative and diuretic. Dose, 30–60 gr. (1.95–3.9 gm.). **L. Rhodanate, L. Rhodanid.** See *L. Sulfocyanate.* **L. Salolophosphate,** easily soluble in water. A diuretic and antiarthritic. Dose, 4 gr. (0.25 gm.) 3–4 times daily. **L. Silicofluorid,** $Li_2SiF_6 + 2H_2O$, large deliquescent crystals soluble in water. **L. and Sodium Benzoate,** a white powder soluble in water; used in gout and rheumatism. Dose, 10–30 gr. (0.65–1.95 gm.). **L. and Sodium Salicylate,** white powder soluble in water; used in gout, etc. Dose, 10–30 gr. (0.65–1.95 gm.). **L. Sozoiodolate,**

C_6H_2 (OH, $=I_2$, SO_3Li), white plates; used as an antiseptic. **L. Sulfocyanate,** LiSCN, white hygroscopic crystals easily soluble in alcohol, sparingly so in water. Dose, 3–5 gr. (0.2–0.3 gm.) 2 or 3 times daily. **L. Sulfoichthyolate,** a black, tarry mass, soluble in water, obtained by neutralizing ichthyolsulfonic acid with lithium carbonate; used in rheumatism. Dose, 8 gr. (0.5 gm.). **L. Theobromin Salicylate,** a white soluble powder; used as a diuretic. Dose, 15 gr. (1.0 gm.). **L. Valerate, L. Valerianate,** $LiC_5H_9O_2$, white crystals with odor of valerian, soluble in water; antispasmodic, antilithic. Dose, 5–15 gr. (0.32–0.97 gm.).

Lithobiotic (*lith-o-bi-ot'-ik*) [λίθος, a stone; βιοῦν, to live]. See *Cryptobiotic.*

Lithofellic (*lith-o-fel'-ik*) [λίθος, a stone; *fel*, the gallbladder]. Relating to biliary lithiasis.

Lithofractor (*lith-o-frak'-tor*). Same as *Lithotrite.*

Lithomarge (*lith'-o-marj*) [λίθος, stone; *marga*, marl]. Stone-marrow, a literal translation of *Shik-chi*, the Chinese name of a mixture of hydrous aluminium silicates, perhaps identical with kaolin, and used by them as a detergent, absorbent, and astringent, and so called because unctuous to the touch.

Lithonephrosis (*lith-o-nef-ro'-sis*). See *Nephrolithiasis* (Illus. Dict.).

Lithoplaxy (*lith-o-plaks'-e*). See *Lithotrity* (Illus. Dict.).

Lithos (*lith'-os*). A proprietary combination of lithium bitartrate and sodium salicylate.

Lithosis (*lith-o'-sis*) [λίθος, stone]. See *Pneumoconiosis* (Illus. Dict.).

Lithotomy. (See Illus. Dict.) **L., Direct Vaginal,** that through the vesicovaginal septum. Syn., *Vaginal cystotomy.* **L., Extravesical,** the removal of a calculus from a fistula external to the bladder. **L., Italian,** median lithotomy. **L., Lateral Rectoprostatic,** rectal lithotomy with incision of the prostate. **L., Lithontriptic,** a perineal incision following lithotrity for removal of debris of calculi. **L., Pyelo-.** See *Pyelolithotomy* (Illus. Dict.). **L., Quadrilateral,** a modification of bilateral lithotomy with four incisions of the prostate. **L., Rectal, L., Rectoperineal.** See *L., Rectovesical* (Illus. Dict.). **L., Rectourethral,** that by the rectum with dilation of the prostate and removal of the calculus through the urethral incision. **L., Spontaneous,** expulsion of a calculus by ulceration through the bladder and perineum. **L., Vesicovaginal,** vaginal lithotomy.

Lithotriptic. (See Illus. Dict.) 2. Capable of dissolving vesical calculi.

Lithotritor (*lith'-o-tri-tor*). Same as *Lithotrite.*

Lithurreteria (*lith-u-re-te'-re-ah*) [λίθος, a stone; οὐρητήρ, a ureter]. A diseased condition of the ureter due to the presence of calculi.

Litra (*lit'-rah*) [λίτρα]. A pound.

Litsea (*lit'-se-ah*) [Japanese name]. A genus of plants of the order *Laurineæ.* **L. cubeba,** Pers., a species indigenous to and cultivated in China and Cochin China. Its black berries resemble cubebs in taste and appearance and are used as a condiment and stomachic. **L. sebifera,** Pers., a species of Malaya, called Maidalakri and muskaip-pe-yetti; the bark is used in diarrhea and dysentery, and an oil is expressed from the seeds. **L. trinervia,** Juss., a species of Cochin China resembling myrrh in taste and smell. The entire plant has stimulant and diuretic properties. The root is used as a vermifuge and emmenagog. The berries yield an oil used as a remedy in skin-diseases and on old wounds.

Litten's Diaphragm Phenomena. See under *Signs.*

Lituate (*lit'-u-at*) [*lituus*, an augur's staff]. Forked, with the points bent slightly outward.

Liver. (See Illus. Dict.) **L., Accessory,** a supernumerary lobe of the liver distinct from it and occasionally found on its surface. Syn., *Hepar accessorium; Hepar succenturiatum.* **L., Atrophic Nutmeg,** atrophy of the liver accompanying chronic interstitial hepatitis. **L., Brimstone-,** excessive icterus not uncommonly noticed in syphilis of the liver in the newborn. **L., Cachectic Fatty,** one in which there is accumulation of fat in a cachectic patient. **L., Cardiac,** hepatic congestion with pulsation accompanied by cardiac disease on the right side. **L., Cirrhotic Fatty,** fatty liver attended by proliferation of the interstitial connective tissue, observed in chronic inebriates. **L., Colloid,** amyloid liver. **L., Fatty Atrophic,** atrophy of the liver with fatty degeneration of its cells. **L., Fatty Hypertrophic,** one in which there is fatty infiltration. **L., Fatty Nutmeg.** See *L., Fatty Atrophic.* **L., Fibrofatty,** cirrhotic fatty liver. **L., Foam-,** a liver containing many gas-filled cavities which give it a spongy or foamy texture. The condition is due to *Bacillus aerogenes capsulatus,* Welch. Ger., *Schaumleber.* **L., Heart,** any affection of the liver secondary to heart disease. **L., Iced, L., Icing.** See *Icing-liver.* **L., Lardaceous.** See *L., Albuminoid* (Illus. Dict.). **L., Left,** the spleen. **L., Melanemic,** one with deposition of black pigment in the interior of the bloodvessels and in the interstitial connective tissue. **L., Pigment, L., Pigmentary Degeneration of,** a steel-gray, chocolate, or blackish condition of the liver sometimes occurring in those who have died of malaria; it consists of granular matter in the blood of the liver either free or in the cells. **L.,**

Rhachitic, L., Rickety, the liver of rhachitic subjects, marked by increased portal cellular tissue. **L., Rusty-brown Atrophic.** See *L., Bronze* (Illus. Dict.). **L., Scrofulous,** an albuminoid liver. **L., Tuberculated.** See *L., Granulated* (Illus. Dict.). **L., Wax-like,** an albuminoid liver. **L., Whisky,** interstitial hepatitis.

Lizard's-beak (*liz'-ardz-bēk*). See *Rostrum lacerti.*

Llareta (*lar-ā'-tah*). A remedy recommended in the treatment of blenorrhagia, said to be the fluid extract of *Haplopappus slareta* (*?*), a composite plant of Chili.

Loa (*lō'-ah*). The larva of *Filaria oculi.*

Loaked (*lokd*). Applied to gland-cells filled with substance to produce the secretion proper to them.

Lobe, Lobus. (See Illus. Dict.) **L.s, Amygdaloid.** See *Tonsilla* (Illus. Dict.). Cf. *Tubercle, Amygdaloid* (Illus. Dict.). **L., Annular** (of the cerebrum), the operculum. **L., Anonymous** (of the liver), the quadrate lobe. **L., Anterior, L., Anterior Superior, L., Anterosuperior, L., Superior** (of the cerebellum), the anterior part of the upper surface of a cerebellar hemisphere; it is divided into the anterior and posterior crescentic or semilunar lobes. Syn., *L., Quadrate; L., Square; Lobus quadrangularis.* **L. anterior** (of hypophysis). See *Prehypophysis* (Illus. Dict.). **L., Anterior** (of the cerebrum), the frontal lobe. **L., Anterior** (of the liver), the quadrate lobe. **L., Anterior Inferior** (of the cerebellum), the biventral lobe. **L., Appendicular,** Reidel's lobe. **L. auris,** the lobe of the ear. **L., Biventral,** a cuneiform lobe on the inferior surface of each cerebellar hemisphere behind the amygdala and in front of the slender lobe and outwardly embraced by it. It consists of the lower largest primary division of the hemisphere separated into two secondary ones. Syn., *L., Digastric; L., Inferior; Lobus cuneiformis; L. inferior anterior.* **L., Cacuminal. L. cacuminis.** See *Lobe, Presemilunar.* **L., Caudate.** See *Lobulus caudatus* (Illus. Dict.). **L. caudicis,** Burdach's name for the insula. **L. caudicis nervi vagi,** the flocculus. **L., Centerosuperior** (of the cerbellum). See *L., Anterosuperior.* **L., Central.** See *Lobulus centralis* (Illus. Dict.). **L. cerebelli cuneiformis superior,** Aeby's term for the postsemilunar lobe. **L. cerebelli inferior.** See *Lobe, Biventral.* **L. cerebelli inferior medius,** the slender lobe. **L. cerebelli intermedius, L. cerebelli intertonsillaris,** the uvula of the cerebellum. **L. cerebelli major,** the superior vermiform process. **L. cerebelli minor,** the flocculus. **L. cerebelli subtilis.** See *Lobe, Slender* (Illus. Dict.). **L. cerebri inferior.** See *Lobe, Temporosphenoidal.* **L. cerebri intermedius,** the insula. **L. cerebri medius,** the parietal lobe. **L. cerebri quadratus.** See *Precuneus* (Illus. Dict.). **L., Clival, L. clivis,** the posterior crescentic lobe. **L.s, Crescentic,** divisions anterior and posterior of the anterosuperior lobe of the cerebellum. The anterior crescentic lobe comprises all of the anterosuperior lobe except a narrow posterior part which constitutes the posterior crescentic lobe. Syn. (of anterior crescentic lobe), *L. culminal; L., Semilunar anterior.* Syn. (of posterior crescentic lobe), *L. Clival; L., Presemilunar; L., Semilunar posterior.* **L., Culminal, L. culminis,** the anterior crescentic lobe. **L., Cuneiform** (of the cerebellum), the biventral lobe. **L., Cuneiform** (of the cerebrum). See *Cuneus* (Illus. Dict.). **L. descendens,** the parietal lobe. **L., Digastric.** See *L., Biventral.* **L., Duodenal,** the caudate lobe of the liver. **L. of the Ear.** See under *Lobulus* (Illus. Dict.). **Lobi epididymidis,** the divisions of the epididymis formed by transverse septa from its tunica albuginea. **L., Falciform,** Schwalbe's name for a lobe of the cerebrum embracing the fornix, gyrus dentatus, lamina septi lucidi, and limbic lobe. **L. fornicatus,** the fornicate convolution. **L., Frontal,** that portion of the cerebral hemisphere lying anterior to the central and sylvian fissures. **L., Frontal Internal** (of the cerebrum), the marginal convolution. **L., Fusiform,** the subcollateral convolution. **L. gracilis.** See *Lobe, Slender* (Illus. Dict.). **L., Grand.** 1. The limbic lobe. 2. The falciform lobe. **L., Hidden,** the insula. **L., Home's,** a small glandular structure sometimes seen between the caput gallinaginis and the sphincter vesicæ. It represents the third lobe of the prostate and may become considerably enlarged in old people. **L., Inferior** (of the cerebellum), the biventral lobe. **L., Intermediate,** the insula. **L., Interoptic,** Spitzka's name for an area of cinerea in the sylvian aqueduct and believed to represent a distinct pair of lobes found in the iguana anterior to the origin of the trochlear nerve. **L. of the Kidney,** one of the malpighian pyramids. **L.s, Lateral** (of the prostate), the parts of the prostate gland lying on each side of the urethra; not very definitely demarcated from the rest of the organ. **L.s, Lateral** (of the thyroid gland), the two chief parts of the gland, one on each side of the trachea. **L., Limbic,** Broca's name for a lobe of the brain made up of the fornicate gyrus and the ventral portions of the uncinate gyrus. **L., Lingual,** the subcalcarine convolution. **L. lunatus anterior,** the anterior crescentic lobe. **L. lunatus posterior,** the posterior crescentic lobe. **L.s of the Lungs,** divisions of the lungs (three in the right lung—superior, middle, and inferior lobes; and two in the left—superior and inferior) made by deep oblique fissures. Syn., *Lobi pulmonales.* **L. major.** See *Lobe, Temporooccipital.* **L., Mantle.** See *Pallium* (Illus. Dict.). **L., Median** (of the brain). 1. The parietal lobe. 2. The insula. **L., Median** (of the cerebellum), the superior vermiform process. **Lobi medullæ oblongatæ.** See *Tonsilla* (Illus. Dict.). **Lobi medullares renum,** the malpighian pyramids. **L., Middle** (of the prostate), the part of the prostate gland anterior to the urethra. **L., Middle** (of the thyroid body). See *Pyramid* (of the thyroid gland). **L. minor,** the frontal lobe. **L.s of the Oblongata.** See *Tubercles, Amygdaloid* (Illus. Dict.). **L., Occipital,** the posterior part of the cerebrum separated from the parietal lobe of the parietooccipital fissure and occupying the upper fossa of the occipital bone. **L., Olfactory.** See under *Olfactory* (Illus. Dict.). **L.s, Orbital,** the gyri situated above the orbit. **L.s of the Pancreas,** the aggregations of the glandular tissue of the pancreas divided from each other by connective tissue. **L., Pancreatic** (of the liver), the caudate lobe. **L., Parietal** (of the cerebrum), that part of the outer surface of the cerebral hemisphere separated from the frontal lobe by the central fissure and from the occipital lobe by the parietooccipital fissure; the intraparietal fissure divides it into a superior and an inferior parietal lobe. **L., Parietotemporal,** the temporosphenoidal lobe. **L., Placental.** See *Folds, Placental.* **L. of the Pneumogastric Nerve, L., Pneumogastric,** the flocculus. **L., Posterior** (of the cerebrum), the part of the cerebrum dorsad of the fissure of Sylvius. **L., Posterior** (of the cerebellum), the thick rounded border of the hemisphere dorsad of the superior lobe and separated from it by a deep fissure. Syn., *L., Semilunar; L., Sphenooccipital.* **L. posterior** (of the hypophysis). See *Posthypophysis* (Illus. Dict.). **L., Posterior Inferior** (of the cerebellum). See *L., Postsemilunar.* **L.s, Postoptic.** See *Postgeminum* (Illus. Dict.). **L., Postsemilunar,** the hindmost lobe on the inferior surface of the cerebellar

hemisphere. Syn., *L., Tuberal; Lobus semilunaris inferior; Posterior inferior lobe of the cerebellum.* **L., Prefrontal,** the part of the frontal lobe lying anterior to the ascending gyrus. **L., Presemilunar,** the posterior lobe of the upper surface of the cerebellum. Syn., *L., Posterosuperior; L., Posterior superior of the cerebellum; Lobus semilunaris superior.* **L., Pyramidal,** the biventral lobe. **L. pyriformis.** 1. The cuneus. 2. The pyramid of the cerebellum. **L. quadrangularis.** 1. See *L., Anteroposterior* (of the cerebellum). 2. The precuneus. **L., Quadrate** (of the cerebellum). See *L., Anterosuperior.* **L., Quadrate** (of the cerebrum). See *Precuneus* (Illus. Dict.). **Lobi reniculi, Lobi renis,** in the fetal kidney, the separate lobes which later become the malpighian pyramids. **L. retractus,** the insula. **L., Riedel's,** a linguiform proliferation of the right lobe of the liver, attached by a broad base or by a neck; it may project below the costal margin for several inches. It is generally due to gallstones. **L., Semilunar, Anterior,** the anterior crescentic lobe of the cerebellum. **L., Semilunar, Inferior,** the posterior inferior lobe of the cerebellum. See *L., Postsemilunar.* **L., Semilunar, Posterior,** the posterior crescentic lobe of the cerebellum. **L., Semilunar, Superior,** the posterior superior lobe of the cerebellum. See *L., Presemilunar.* **L., Small.** See *L., Slender* (Illus. Dict.). **L., Sphenoidal,** the temporosphenoidal lobe. **L., Sphenooccipital,** the posterior lobe of the cerebrum. **L., Sphenotemporal.** See *L., Temporosphenoidal.* **L., Spinal,** the flocculus. **L., Square,** the anterosuperior lobe of the cerebellum. **L., Subpeduncular,** the flocculus. **L., Superior** (of the brain), the temporosphenoidal lobe. **L., Superior** (of the cerebellum). See *L., Anterosuperior.* **L., Tailed,** the caudate lobe of the liver. **L., Temporal.** See *L., Temporosphenoidal.* **L., Temporooccipital,** the posteroinferior part of the middle surface of the cerebral hemisphere including the fusiform lobule and the inferior occipitotemporal gyrus. Syn., *Lobus major.* **L., Temporosphenoidal,** it occupies the middle cranial fossa and is separated from the frontal lobe and partially from the parietal lobe by the sylvian fissure. Syn., *Superior lobe; Temporal lobe; Sphenoidal lobe.* **Lobi testiculi, Lobi testis,** pyramidal or conoid lobules varying in size and number (250–400) and converging to the mediastinum, which make up the glandular substance of the testis. Each lobule consists of from one to six seminiferous tubules. **L., Thin.** See *L., Slender* (Illus. Dict.). **L., Third** (of the thyroid gland). See *Pyramid of the thyroid gland.* **L. trapezoides,** the anteroposterior lobe of the cerebellum. **L.s, True Optic,** Spitzka's name for the pregeminum. **L., Tuberal,** the postsemilunar lobe. **L., Uncinate,** the uncinate gyrus. **L., Uvular.** See *Tonsilla* (Illus. Dict.).

Lobelin. (See Illus. Dict.) **L. Hydrobromate,** used in pseudoangina pectoris and asthma. Dose, adults ¾–6 gr. (0.05–0.4 gm.) daily; children, ⅙–¾ gr. (0.01–0.05 gm.) daily. **L. Sulfate,** a yellowish-white powder, soluble in alcohol and water, from the leaves of *Lobelia inflata,* or yellow friable pieces from its seeds; used in asthma, epilepsy, etc. Dose, 1 gr. (0.6 gm.) daily, gradually increasing to 3–8 gr. (0.2–0.52 gm.) daily. Antidote, stomach siphon, emesis, tannin; later, brandy, spirits of ammonia, morphin.

Lobelism (*lo-be'-lizm*). Poisoning by lobelia, characterized by excitation of the emetic and respiratory centers; in severe cases death is caused by paralysis of the latter.

Lobengulism (*lo-ben'-gu-lizm*). A condition marked by a general increase of subcutaneous fat, associated with partial or complete abeyance of sex function. In men there is an enlargement of the mammary glands and failure of sexual appetite, and in women a cessation of menstruation. Syn., *Lipomatosis universalis asexualis.*

Lobulation. (See Illus. Dict.) **L. of the Kidney,** a division of the kidney into lobules, as in the fetus.

Lobule. (See Illus. Dict.) **L., Fusiform,** the subcollateral gyrus. **L.s, Hepatic.** See under *Liver* (Illus. Dict.). **L. of the Hippocampus,** the uncinate gyrus. **L. of the Kidney,** a malpighian pyramid. **L., Lingual** (of the cerebrum), the subcalcarine gyrus. **L.s of the Lung.** See *Lobes of the Lung.* **L., Occipital,** the cuneus. **L.s, Orbital,** the corpora quadrigemina. **L., Parietal,** one of the two parts (inferior and superior) into which the parietal lobe is divided by the horizontal portion of the intraparietal fissure. **L., Parietal, Inferior,** the portion of the parietal lobe lying below the horizontal part of the intraparietal fissure; it is made up of the supramarginal and angular gyri and several others connecting it with the occipital lobe. **L., Parietal, Internal** (of the brain). See *L., Parietal, Inferior.* **L., Parietal, Superior,** the superior parietal gyrus; it is the posterior parietal lobule of Huxley and Turner. **L., Parietooccipital, L., Parietooccipital, Internal,** the cuneus. **L., Posteroparietal** the ascending parietal gyrus. **L.s, Pulmonary,** the lobes of the lungs. **L.s, Spermatic,** the lobules of the testes. **L., Temporal,** the temporosphenoidal lobe. **L., Temporal, Inferior,** the inferior temporal gyrus. **L., Triangular** (of the cerebrum), the cuneus. **L., Upper Parietal,** the superior parietal gyrus.

Lobulus. (See Illus. Dict.) **L. auriculæ,** the lobe of the ear. **L. biventer,** the biventral lobe. **Lobuli cerebelli spinales,** Gordon's name for amygdalæ cerebelli. **L. cerebelli tener, L. gracilis,** the slender lobe. **L. parietalis exterior** or **superior,** the superior parietal gyrus. **L. parietalis inferior,** the subparietal gyrus. **L. posteroparietalis,** the ascending parietal gyrus. **Lobuli renalis,** the malpighian pyramids. **L. rolandicus anterior,** the ascending frontal gyrus. **L. rolandicus posterior,** the ascending parietal gyrus. **L. semilunaris inferior.** Same as *Lobe, Postsemilunar.* **L. semilunaris superior.** See *Lobe, Presemilunar.*

Localist (*lo'-kal-ist*) [*locus,* place]. One who advocates the origin of a disease in a local morbid process.

Localization. (See Illus. Dict.) **L., Experimental,** the localization of brain-centers through experiments on animals.

Locative (*lok'-at-iv*) [*locare,* to place]. Indicating relative position in a series. **L. Name,** one that indicates the location of an organ or part; *e. g.,* post cava.

Locellate (*lo-sel'-āt*) [*locellus,* a little place]. Divided into locelli or little compartments.

Locoed (*lo'-kōd*). Affected with locoism.

Locoism (*lo'-ko-izm*). See *Loco-disease* (Illus. Dict.).

Locus. (See Illus. Dict.) **L. Kiesselbachii.** See *Place, Kiesselbach's.*

Loess (*les, lō'-es*). A geologic formation consisting of fine loam resembling that of the Rhine valley, to which the name was first applied. In vast unshaded areas of northern China and Thibet, it is considered to be a source of eye disease from the reflection from its yellow surface.

Löffleria (*lef-le'-re-ah*). A disease marked by the presence of *Bacillus diphtheriæ,* Klebs and Löffler, without diphtheric symptoms.

Logagnosia, Logagnosis (*log-ag-no'-ze-ah, -sis*) [λόγος, word; *a,* priv.; γνῶσις, a recognizing]. Aphasia, word-blindness.

Logamnesia (*log-am-ne'-ze-ah*) [λόγος, a word; ἀμνησία, forgetfulness]. Word-deafness; word-blindness.

Loganetin (*log-an'-et-in*). A dissociation product of loganin by action of dilute sulfuric acid.

Logograph (*log'-o-graf*) [λόγος, a word; γράφειν, to write]. 1. A written word. 2. Barlow's name for a device for recording spoken words.

Logokophosis (*log-o-kof-o'-sis*) [λόγος, word; κώφωσις, deafness]. Word-deafness; incapacity to understand spoken language.

Logoplegia. (See Illus. Dict.) 2. Paralysis of the organs of speech.

Logospasm (*log'-o-spazm*) [λόγος, word; σπάσμος, spasm]. Spasmodic enunciation of words.

Loimikè (*loi'-mik-a*) [λοιμική, the pestilential eruption]. Smallpox.

Loimography (*loi-mog'-ra-fe*) [λοιμός, plague; γράφειν, to write]. A description of the plague.

Lokaetin (*lok-ah-et'-in*). See *Acid, Lokanic.*

Lokain (*lok'-ah-in*). See *Acid, Lokainic.*

Loké. An arrow-poison, probably of the nux vomica group.

Loliaceous (*lo-le-a'-shus*). Belonging to the genus *Lolium.*

Lolism (*lol'-izm*). Poisoning by seeds of *Lolium temulentum*, L., which have found their way among grain and which contain a poisonous glucosid, loliin. It is marked by narcotic symptoms, vomiting, and diarrhea.

Lomacin (*lom'-as-in*). An alkaloid contained in *Lomatia obliqua*, R. Br.

Lomadera (*lom-ah-da'-rah*). A form of Texas fever prevalent among cattle in Venezuela due to the hematazoon *Pirosoma bigeminum*, which is transmitted by the tick *Ixodes australis.*

Lomatia (*lom-a'-she-ah*) [λῶμα, a seam, a fringe]. A genus of *Proteaceæ.* **L. obliqua**, R. Br., a tree of South America, radal, radan, has astringent bark and contains lomacin and a variety of tannin.

Loop. (See Illus. Dict.) **L., Lenticular.** See *Ansa lenticularis.* **L. of Vieussens.** See *Ansa subclavialis.*

Looseness. (See Illus. Dict.) **L., Tubular** (Mason Good, 1825). Synonym of *Mucous colitis.*

Lophius (*lo'-fe-us*) [λόφος, a ridge]. The ridge between two furrows or sulci of the ventricular surface of the brain.

Lophocome (*lo-fok'-o-me*) [λόφος, a tuft; κόμη, the hair of the head]. Haeckel's term for a race having hair which tends to form little tufts (pepper-corn hair) common among Hottentots, Bushmen, and in most negroes in infancy or in adults on the temples or forehead. Cf. *Eriocome.*

Lophocomous (*lo-fok'-om-us*). Having the hair in tufts (Haeckel).

Lophophorin (*lo-fof'-or-in*) [λόφος, a crest; φόρος, bearing]. An alkaloid contained with anhalonin, mescalin, and anhalonidin in *Anhalonium lewinii*, Henning.

Lophotrichia (*lo-fo-trik'-e-ah*). Bacteria with lophotrichous ciliation.

Lophotrichous (*lo-fot'-rik-us*) [λόφος, tuft; θρίξ, hair]. Applied to that type of ciliation in microorganisms characterized by a tuft of flagella at each pole.

Lopped (*lopt*). See *Truncate* (Illus. Dict.).

Loremit, Lorenit (*lor'-em-it, -en-it*). $C_9H_4I(SO_3H)$-OHN. An isomer of loretin, forming yellow needles soluble in water and used like loretin. Syn., *Para-iodoanaoxyquinolin orthosulfonate.*

Lorenz Bloodless Operation. See *Operation.* **L. Hip-redresseur**, an apparatus to correct faulty position and contraction of joints and hold the limb while fixation bandages are applied.

Loretin (*lor'-et-in*). $C_9H_6IO_4SN$. Meta-iodo-ortho-oxy-quinolin-ana-sulfonic acid; occurring as a crystalline, yellow, odorless powder, slightly soluble in water and alcohol and concentrated sulfuric acid; melts at 280° C. It is a nontoxic antiseptic used as a dusting-powder or in 5%–10% ointment or in 0.1%–0.2% aqueous solutions. **L. Bismuth.** See *Bismuth Loretinate.* **L. Methyl.** See under *Methyl.*

Loripes (*lor'-ip-ēz*) [*lorum*, a thong; *pes*, the foot]. 1. Limber-footed. 2. Crook-footed, bandy-legged. 3. Talipes varus.

Lotoflavin (*lo-to-fla'-vin*). A yellow pigment produced by the lysis of lotusin.

Lotouridin, Loturidin (*lo-tu'-rid-in*). An alkaloid from lotur-bark, forming yellowish-brown amorphous masses.

Lotourin, Loturin (*lot'-ur-in*). An alkaloid found by O. Hesse in lotur-bark occurring in long crystals soluble in alcohol, ether, chloroform, and weak acids, almost insoluble in water and alkalis.

Lotur-bark (*lo'-tur*). The bark of *Symplocos racemosa*, Roxb.

Lotus (*lo'-tus*) [λωτός, the lotus]. A genus of leguminous plants. **L. arabicus**, L., yields a toxic glucosid, lotusin, and a pigment, lotoflavin.

Lotusin (*lo'-tus-in*). A cyanogenetic, toxic glucosid, discovered by Dunstan and Henry in *Lotus arabicus*, L.; it is derived from maltose and gives rise to prussic acid when acted upon by a hydrolytic enzyme. Cf. *Lotoflavin; Khuther.*

Louse (*lows*). See *Pediculus* in *Table of Parasites* (Illus. Dict.).

Loutrotherapy (*lu-tro-ther'-ap-e*) [λουτρόν, a bath; θεραπεία, therapy]. The therapeutic use of artificial carbonated and Nauheim baths.

Löwenthal's Blood-test for diagnosing relapsing fever. See under *Test.*

Löwitt's Bodies. See *Lymphogonia.*

Low-toned (*lo-tōnd'*). As applied to fevers, asthenic or adynamic.

Lubrichondrin (*lu-brik-on'-drin*). A lubricant said to consist of *Chondrus crispus*, oil of eucalyptus, and formic aldehyd. It is for use in surgery.

Lucas-Championnière's Antiseptic Powder. See under *Powder.*

Lucidification (*lu-sid-if-i-ka'-shun*) [*lucidus*, clear; *facere*, to make]. The clearing up of a turbid substance.

Lucotherapy (*lu-ko-ther'-ap-e*) [*lux*, light; *therapy*]. Therapeutic use of light-rays. Cf. *Phototherapy.*

Luctic (*luk'-tik*) [*luctus*, sorrow]. Sorrowful, giving evidence of suffering.

Luctuous (*luk'-tu-us*). See *Luctic.*

Lucubration (*lu-ku-bra'-shun*) [*lucubrare*, to work at night]. 1. Work done at night. 2. Loss of sleep.

Lucuma caimito. (See Illus. Dict.) Dose, 0.1 to 0.15 gm.; as antiperiodic, 0.2 to 0.5 gm.

Lucumorian (*lu-ku-mo'-re-an*) [*lux*, light; *morari*, to delay]. Lasting for several days or from day to day.

Ludwig's Magnesia Mixture. Magnesium chlorid, 100 gm., is dissolved in water; ammonia is added in excess and then ammonium hydrate until the precipitate is dissolved; the mixture is then made up to 1000 c.c. with water. **L.'s Theory of the Origin of Lymph.** See under *Lymph.*

Lukewarm (*lūk'-wahrm*). Tepid; about the temperature of the body.

Lumbocolostomy (*lum-bo-ko-los'-to-me*). Colostomy after lumbar incision.

Lumbrical (*lum'-brik-al*). Relating to or resembling a worm of the genus *Lumbricus.*

Lumbus (*lum'-bus*) [L.]. The loin.

Lunatic. (See Illus. Dict.) 2. An insane person.

Lunatum (*lu-na'-tum*) [*lunatus*, crescent-shaped]. The cuneiform bone. See *Bones, Table of* (Illus. Dict.).

Lung. (See Illus. Dict.) **L.-capacity**, breathing capacity. **L., Cardiac**, proliferation of the connective tissue of a lung producing thickening of the alveolar walls and finally obliteration of their cavity, due to organic lesions in certain heart-diseases. **L., Carnified**, a lung from which the blood as well as the air has been driven out by effusion, causing it to present a slaty gray color. **L., Coal.** See *L., Coal-miner's* (Illus. Dict.). **L., Gruyère-cheese.** See *Lung, Saccular*. **L., Heart**, brown induration of the lung. **L., Mason's**, pneumoconiosis. **L.-proof, L.-test.** See *Docimasia pulmonum;* also *Ploucquet's Test* and other tests under *Birth* (Illus. Dict.). **L., Saccular**, a condition of the lung marked by globular pouches at the periphery or through the whole or greater part of the lobe. **L.-stone**, a pulmonary calculus. **L., Stonecutter's**, chalicosis. **L., Turtle-.** See *Lung, Saccular*.

Luniferous, Luniform (*lu-nif'-er-us, lu'-ne-form*) [*luna*, moon; *ferre*, to bear; *forma*, form]. Crescent-shaped.

Lunula. (See Illus. Dict.) **L. scapulæ.** See *Notch, Suprascapular* (Illus. Dict.).

Lupanin (*lu'-pan-in*). $C_{15}H_{24}N_2O$. A bitter, liquid, honey-like, monacid alkaloid found by Hagen (1885) in seeds of *Lupinus reticulatus*, Desv. It is soluble in ether, chloroform, or ligroin; slightly in water. It causes paralysis of the brain-centers.

Lupeol (*lu'-pe-ol*). A constituent of the pods of *Lupinus luteus*, L.

Lupeose (*lu'-pe-ōz*). $C_{12}H_{22}O_{11}$. A saccharobiose contained in seeds of *Lupinus luteus*, L.

Luperine (*lu'-per-in*). A remedy for dipsomania said to be a mixture of powdered gentian, columbo, and quassia.

Lupetazin (*lu-pet-az'-in*). $HN(CH_2CH.CH_3)_2NH$. A white crystalline powder similar to piperazin in action, application, and dosage. Syn., *Dimethylpiperazin; Dipropylendiamin.* **L. Tartrate**, lycetol.

Lupiform. (See Illus. Dict.) 2. Resembling a wen.

Lupinus (*lu-pi'-nus*) [*lupus*, a wolf]. A genus of leguminous plants. **L. albus**, L., wolf's bean, an oriental plant cultivated in Europe. The seeds are used as an anthelmintic, diuretic, and abortive, the meal in cataplasms. It contains lupinotoxin, lupanin, dextrolupanin, levolupanin, lupinidin, conglutin, legumin, lecithin, galactin, citric acid, and vanillin. **L. luteus**, L., a species of southern Europe, where the seeds are used as food, contains galactit, arginin, lupinin, lupinidin, lupeol, and lupeose.

Lupoma (*lu-po'-mah*). The primary nodule of lupus.

Lupus. (See Illus. Dict.) Syn., *Darta maligna.* **L., Acute Disseminated Nodular Tuberculous, L., Disseminated Follicular, Simulating Acne, L. follicularis acneiformis, L. miliaris.** See *Acne teleangeiectodes.* **L. nodosus.** See *L. tuberosus* (Illus. Dict.). **L., Willan's**, lupus vulgaris.

Lupuscarcinoma (*lu-pus-kar-sin-o'-mah*). A carcinoma developing from lupus.

Lura (*lu'-rah*) [L., the mouth of a bag]. The contracted orifice of the infundibulum after removal of the hypophysis.

Lural (*lu'-ral*). Relating to the lura.

Lurid (*lu'-rid*) [*luror*, yellow color]. Of a pale, wan color.

Lutarious (*lu-ta'-re-us*) [*lutum*, mud]. Relating to, like, or living in mud.

Lutaud's Lotion for pruritus of the vulva. Eucalyptus oil, 10 parts; cocain hydrochlorate, 1 part; chloral hydrate, 10 parts; distilled water, 500 parts.

Lute (*lūt*) [*lutum*, mud]. A composition used for sealing vessels hermetically or for closing joints in apparatus. It may be made of lime and white of egg, linseed meal, and starch, or of clay and drying oil.

Lutidin (*lu'-tid-in*). C_7H_9N. A clear, toxic, colorless liquid distilled from bituminous shale; soluble in water, boils at 156° C. Syn., *Dimethylpyridin.* **β-L.**, C_7H_9N, a toxic, colorless liquid obtained from distillation of cinchonin with potassium hydrate. Sp. gr. 0.959 at 0° C., soluble in alcohol and ether, slightly in water; boils at 166° C. It is narcotic and antispasmodic, and recommended as an antidote to strychnin.

Lutrexanthema (*lu-treks-an'-the-mah*) [λουτρόν, a bath; ἐξάνθημα, an exanthema]. An eruption due to bathing.

Lycaconin (*lik-ak'-on-in*). An alkaloid derived from *Aconitum lycoctonum;* it is soluble in ether. Cf. *Lycaconitin; Myoctonin; Acolytin.*

Lycetal, Lycetol (*lis'-et-al, -ol*). $NH(CH_2.CH\text{-}CH_3)_2NH + H_2T$. A derivative of dimethyl pyrazin combined with tartaric acid. It occurs as a fine powder, soluble in water, boils at 118° C.; used in gout. Dose, 15–45 gr. (0.97–2.9 gm.) in aqueous solution. Syn., *Dimethylpiperazin tartrate; Lupetazan tartrate; Dipropylene diamin.*

Lychnis (*lik'-nis*) [λυχνίς, the lamp-flower]. A genus of plants of the order *Caryophyllaceæ.* **L. githago**, Scop., corn cockle, a species of Europe and naturalized here. The seeds are used as a diuretic, expectorant, and anthelmintic. It contains saponin (sapotoxin), githagin, and agrostemmin. Cf. *Githagism.*

Lyciform (*lis'-e-form*). See *Lycoform.*

Lycoctonin (*lik-ok'-ton-in*). Hübschmann's name for an alkaloid extracted from *Aconitum lycoctonum*, L. It is crystallizable, very soluble in alcohol, and but slightly so in ether or water. It is, according to Dragendorff and Spohn, a decomposition product of lycaconitin.

Lycoform (*li'-ko-form*). A combination of alcoholic potash soap solution and formic aldehyd.

Lycopersicum (*li-ko-pur'-sik-um*) [λύκος, a wolf; περσικός, a peach]. A genus of plants of the order *Solanaceæ.* **L. esculentum**, Mill, the common garden tomato. **L. pimpinellifolium**, Duval, the currant tomato.

Lycosa (*li-ko'-sah*) [λύκος, a wolf]. A genus of spiders of the family *Lycosidæ*, many species of which are poisonous. **L. tarantula**, Linnæus, a species common in Apuleia (hence named by Rossi *Tarantula apuleia*) and about Tarentum. Formerly its bite was supposed to cause the nervous excitation known as tarantism.

Lycosidæ (*li-kos'-id-e*) [λύκος, a wolf]. A family of arachnids known as wolf-spiders. It contains the poisonous tarantulas. Cf. *Lycosa; Trochosa.*

Lycresol (*li'-kre-sol*). A soap solution containing crude cresol.

Lymanterian, Lymantic (*li-man-te'-re-an, li-man'-tik*) [λύμη, maltreatment, destruction]. Injurious, destructive; also, produced by destruction.

Lymph. (See Illus. Dict.) **L., Heidenhain's Theory of Origin of:** that filtration and diffusion cannot explain all the facts, but that it may be attributed to a selective power of the endothelial cells of the capillary walls, and that lymphagogs act by stimulating these cells. [Raymond.] **L., Ludwig's Theory of Origin of:** "that the blood which is contained in the vessels must always tend to equalize its pressure and its chemical constitution with those of the extravas-

cular fluids, which are only separated from it by the porous bloodvessel walls." The lymph thus arises by filtration and diffusion of the blood-plasma. [Raymond.] **L. Nodule.** See under *Nodule*. **L. Reservoir,** the receptaculum chyli. **L.-sinus.** See *L. Space* (Illus. Dict.).

Lymphadenitis. (See Illus. Dict.) Syn., *Lymphatic adenitis; Adenolymphitis.* **L., Acute Cervical.** See *Fever, Pfeiffer's Glandular.* **L. calculosa,** that combined with calcareous degeneration. **L., Caseous,** a disease of sheep in which the prescapular, external inguinal, mediastinal, and tracheal glands are enlarged and caseous. **L. parenchymatosa hyperplastica macrocellularia,** great-celled, indurative hyperplasia of the lymph-glands. **L., Scrofulous,** the small-celled caseous or suppurative hyperplasia of the lymph-glands. **L. trabecularis et reticularis indurativa hyperplastica,** fibrous lymphatic hyperplasia. **L., Tuberculous,** the formation of tubercles in the lymph-glands.

Lymphadenhypertrophy (*lim-fad-en-hi-pur'-tro-fe*) [*lympha*, lymph; *ἀδήν*, gland; *ὑπέρ*, over; *τροφή*, nourishment]. Hypertrophy of the lymphatic glands.

Lymphangioendothelioma (*lim-fan-je-o-en-do-the-le-o'-mah*). An endothelioma originating in lymph-vessels.

Lymphangiofibroma (*lim-fan-je-o-fi-bro'-mah*). Lymphangioma combined with fibroma.

Lymphangiophlebitis (*lim-fan-je-o-fleb-i'-tis*) [*lympha*, lymph; *ἀγγεῖον*, vessel; *φλέψ*, a vein]. Inflammation of the lymphatic vessels and veins.

Lymphangiosarcoma (*lim-fan-ge-o-sar-ko'-mah*). Lymphangioma attended with sarcoma.

Lymphangitis. (See Illus. Dict.) Syn., *Lymphatitis.* **L., Benign Uterine,** a mild form confined to the uterus, said by Championnière to be answerable for milk fever, false peritonitis, and other febrile disorders. **L. epizootica,** a blastomycosis of horses due to *Cryptococcus farcinimorus*, Rivolta, occurring in various parts of the world. The skin and upper respiratory passages are specially affected. In the skin, nodules and ulcers form; glandular metastases occur, which suppurate, and sinuses form in the subcutaneous and deeper muscular tissue. Recovery usually follows in a few months. Syn., *Lymphangitis saccharomycotica equorum; African glanders; Trembling lymphangitis; Epizootic lymphangitis; Curable farcy. Lymfangite epizootica* (Ital.); *Lymfangite farcinoïde* (Ital.); *Farcin de rivière* (Fr.); *Farcin d'Afrique* (Fr.); *Afrikanische Rotz der Pferde* (Ger.). **L. periuterina,** inflammation of the lymph-vessels of the dorsal and lateral surfaces of the uterus in puerperas; they are generally septic processes. **L. saccharomycotica equorum, L., Trembling.** See *L. epizootica.*

Lymphaticosplenic (*lim-fat-ik-o-splen'-ik*). Relating to the lymphatics and the spleen.

Lymphatism (*lim'-fat-izm*). See *Status lymphaticus.*

Lymphectasia (*lim-fek-ta'-ze-ah*) [*lympha*, lymph; *ἔκτασις*, widening]. Dilation with lymph.

Lymphendothelioma (*lim-fen-do-the-li-o'-mah*). [MacCallum, 1900.] A new-growth characterized by a soft myxomatous tissue containing cysts and tubules lined with flat, scale-like cells, resembling the endothelium of the lymphatics. **L. testis,** a malignant tumor of the testicle described by MacCallum.

Lymphivorous (*lim-fiv'-or-us*) [*lympha*, lymph; *vorare*, to devour]. Subsisting upon lymphatic secretions.

Lymphization (*lim-fiz-a'-shun*). The formation of lymph.

Lymphoadenoma (*lim-fo-ad-en-o'-mah*). A uterine neoplasm involving the interstitial lymph-tissue and the glands.

Lymphocytosis (*lim-fo-si-to'-sis*) [*lympha*, lymph; *κύτος*, cell]. See *Lymphocythemia* (Illus. Dict.).

Lymphocytotoxin (*lim-fo-si-to-toks'-in*) [*lympha*, lymph; *κύτος*, cell; *τοξικόν*, poison]. A bacterial product having specific action on the lymphocytes.

Lymphofluxion (*lim-fo-fluks'-yun*) [*lympha*, lymph; *fluere*, to flow]. Weiss's term for the increased flow of lymph induced by certain stomachics.

Lymphogonia [Benda] (*lim-fo-go'-ne-ah*) [*lympha*, lymph; *γόνος*, offspring]. Large lymphocytes having a relatively large nucleus deficient in chromatin, and a faintly basic nongranular protoplasm, observed in lymphatic leukemia. They are regarded as the mother-cells of the typical small lymphocytes, and are identical with the leukoblasts of Löwit. [Da Costa.]

Lymphography (*lim-fog'-ra-fe*) [*lympha*, lymph; *γράφειν*, to write]. A description of the lymphatics.

Lymphomatosis (*lim-fo-mat-o'-sis*). A condition characterized by general lymphatic engorgement. **L. diffusa,** pseudoleukemia.

Lymphomyeloma (*lim-fo-mi-el-o'-mah*). 1. A myeloma involving the lymphatic system. 2. A sarcoma containing small round cells.

Lymphomyxoma (*lim-fo-miks-o'-mah*) [*lympha*, lymph; *myxoma*]. A new-growth, usually benign, consisting of adenoid tissue.

Lymphorrhagia. (See Illus. Dict.) **L. vulvæ,** Klebs' term for the lymphangiomatous form of elephantiasis of the vulva.

Lymphosarcoma. (See Illus. Dict.) 2. Virchow's term for lymphadenoma. **L. malignum multiplex.** Same as *Lymphadenoma.*

Lymphotome (*lim'-fo-tōm*) [*lympha*, lymph; *τέμνειν*, to cut]. An instrument on the principle of the tonsillotome, with a flexible cutting blade for removing adenoids.

Lymphotoxemia (*lim-fo-toks-e'-me-ah*). See *Status lymphaticus.*

Lymphotoxic (*lim-fo-toks'-ik*). Pertaining to or characteristic of a substance having toxic action on the lymphatic tissue.

Lymphotoxin (*lim-fo-toks'-in*) [*lympha*, lymph; *τοξικόν*, poison]. A cytotoxin having specific action on lymphatic tissue.

Lymphotrophy (*lim-fot'-ro-fe*) [*lympha*, lymph; *τροφή*, nourishment]. Kahane's term for a peculiar attractive energy by which the cells receive their nourishment from the lymph in regions of imperfect vascularization.

Lymphous (*lim'-fus*). Relating to, containing, or consisting of lymph.

Lypotymia (*lip-o-ti'-me-ah*). Same as *Lypothymia* (Illus. Dict.).

Lyptol (*lip'-tol*). An ointment said to consist of mercury bichlorid, eucalyptus oil, formic aldehyd, and benzoboric acid. It is used as a dressing for ulcers, cutaneous diseases, etc.

Lyra. (See Illus. Dict.) Syn., *Lamina medullaris triangularis.* 2. Same as *L. of Fornix* (Illus. Dict.).

Lysatin (*lis'-at-in*). See *Lysatinin.*

Lysatinin (*lis-at'-in-in*). $C_6H_{11}N_3O$ or $C_6H_{13}N_3O_2$. A base obtained by Drechsel (1890) from casein, but shown by Hedin (1895) to be a mixture of equal molecules of arginin and lysin.

Lysidin (*lis'-id-in*). $C_4H_8N_2$. A base obtained from dry distillation of sodium acetate with ethylene diamin hydrochlorid; pinkish or bright-red crystals with mousy odor, soluble in water, melting at 105° C., and very hygroscopic. A 50% solution is the common commercial form. It is recommended in all cases of uric acid diathesis. Dose, 15–75 gr. (1–5 gm.) of the crystals daily in a pint of cold water. Syn., *Methylglyoxalidin; Ethylene-ethenyldiamin.* **L. Bitartrate,**

a white crystalline powder 10 gm. of which equal 3.6 gm. of lysidin.

Lysin (*li′-sin*) [*λύειν*, to loose]. 1. $C_6H_{14}N_2O_2$. A histon base homologous with orthonin discovered by Drechsel (1900) among the cleavage products of casein and produced by the tryptic digestion of fibrin. 2. A cell-dissolving substance found in the blood-serum. Cf. *Autolysin; Isolysin; Heterolysin; Homolysin*, etc.

Lysis. (See Illus. Dict.) 2. The action of a lysin.

Lysocytosis (*lis-o-si-to′-sis*) [*λύσις*, a loosing; *κύτος*, a cell]. A term given by Auglas to the process of chemical degeneration and dissolution of larval organs or larval food reserve material in *Hymenoptera*, produced by the extracellular digestive action of leukocytes and of other cells.

Lysoform (*lis′-o-form*). A combination of lysol and formic aldehyd soluble in water and alcohol. It is used as an antiseptic in 1%–3% solutions.

Lysogenic (*lis′-o-jen-ik*) [*λύσις*, a loosing; *γεννᾶν*, to produce]. Giving rise to lysins or producing lysis.

Lysosolveol (*lis-o-sol′-ve-ol*). A disinfectant said to be a mixture of potassium linoleate, 38%: cresols, 44.5%; and water, 22.5%.

Lysulfol (*lis-ul′-fol*). A compound of sulfur (10%) and lysol forming a black mass. It is used in skin-diseases.

Lytic. (See Illus. Dict.) 2. Relating to a lysin.

Lytta. (See Illus. Dict.) 2. A genus of vesicant coleoptera established by Fabricius. **L. vesicatoria**, the same as *Cantharis vesicatoria*.

M

Mabee Bark (*mab′-e*). The bark of *Ceanothus reclinatus*.

Macahuba, Macajuba. See *Macaja Butter*.

Macaja or **Macaya Butter.** The solid oil obtained from the fruit of the macaw-palm, *Acrocomia sclerocarpa*, Mart.

Macallin (*mak-al′-in*). An amorphous alkaloid without taste, from macallo-bark, sparingly soluble in amyl alcohol and in chloroform, insoluble in alcohol, ether, or water.

Macay Bean (*mak′-a*). See *Entada scandens*, Benth.

Mace. (See Illus. Dict.) **M., Camphor of.** See *Macene* (Illus. Dict.).

Maceration. (See Illus. Dict.) 3. The disintegration of tissues by immersion in a liquid.

Macerator (*mas′-er-a-tor*) [*macerare*, to make soft]. A vessel used for macerating a substance.

Machaonian, Machaonic (*mak-a-on′-e-an, -on′-ik*) [*Μαχάων*, a famous physician of antiquity and the son of Æsculapius]. Relating to medicine; skilled in medicine.

Machromin (*mak-ro′-min*). $C_{14}H_{10}O_5$ (Hlasiwetz and Pfaundler). A crystalline substance, undergoing many changes of color with reagents, contained in the fluid resulting from the action of zinc and sulfuric acid on a solution of moritannic acid.

Mackenzie's Eye Lotion. Corrosive sublimate, 1 gr.; ammonium chlorid, 6 gr.; cochineal, ½ gr.; alcohol, 1 dr.; water, 8 oz.

Maclayin (*mak-la′-in*). $C_{17}H_{32}O_{11}$. A powerful local irritant said to be a glucosid from *Bassia* (*Illipe*) *maclayana* (?).

Macleyin (*mak-la′-in*). An alkaloid identical with protopin (*q. v.*) (Illus. Dict.) obtained from *Bocconia* (*Macleya*) *cordata*, Willd.

McClintock's Rule. See under *Parturition*.

Macroblast (*mak′-ro-blast*) [*μακρός*, large; *βλαστός*, germ]. See *Megaloblast* (Illus. Dict.).

Macrocephalus (*mak-ro-sef′-al-us*) [*μακρός*, large; *κεφαλή*, the head]. A fetus with excessive development of the head.

Macrocoly (*mak-ro-ko′-le*) [*μακρός*, long; *κῶλον*, colon]. Simple excessive length of the colon. Cf. *Megalocoly*.

Macrocomous (*mak-ro-ko′-mus*) [*μακρός*, long; *κόμη*, the hair]. With long hairs or filaments.

Macrocornea (*mak-ro-kor′-ne-ah*) [*μακρός*, long; *corneus*, horny]. Keratoglobus.

Macrocyst (*mak′-ro-sist*) [*μακρός*, large; *κίστις*, a pouch]. An abnormally large cyst.

Macrodirective (*mak-ro-di-rek′-tiv*) [*μακρός*, long; *dirigere*, to direct]. Applied to mesenteries that are both large or perfect and directive.

Macrodontia (*mak-ro-don′-she-ah*) [*μακρός*, large; *ὀδούς*, tooth]. Abnormally large size of the teeth.

Macroesthesia (*mak-ro-es-the′-ze-ah*) [*μακρός*, large; *αἴσθησις*, sensation]. A disturbance of the tactile and stereognostic sense in consequence of which objects touched or handled appear much larger than they really are.

Macrogamete (*mak-ro-gam′-ēt*) [*μακρός*, large; *γαμέτη*, a wife]. A female sexual cell among sporozoa; a female gametocyte. Syn., *Gynospore*. Cf. *Microgamete*, *Microgametocyte*, *Gamete*, *Pseudovermicule*.

Macrogametocyte (*mak-ro-gam-ēt′-o-sīt*) [*μακρός*, large; *γαμέτη*, a wife; *κύτος*, cell]. See *Macrogamete*.

Macroglossia. (See Illus. Dict.) **M. neurofibromatosa**, neurofibromatosis of the lingual nerves.

Macrolepidotous (*mak-ro-lep-id′-ot-us*) [*μακρός*, long; *λεπίς*, a scale]. Large-scaled.

Macromastia (*mak-ro-mas′-te-ah*) [*μακρός*, large; *μαστός*, breast]. Abnormal enlargement of the breast.

Macromazia (*mak-ro-ma′-ze-ah*). See *Macromastia*.

Macronychia (*mak-ro-nik′-e-ah*) [*μακρός*, large; *ὄνυξ*, nail]. Excessive size of the nails.

Macropathology (*mak-ro-path-ol′-o-ge*) [*μακρός*, large; *πάθος*, disease; *λόγος*, science]. Pathology which includes no microscopic investigation.

Macrophotograph (*mak-ro-fo′-to-graf*) [*μακρός*, large; *φῶς*, light; *γράφειν*, to write]. A large photograph, *i. e.*, a macroscopic photograph of an object, whether the object be small or large.

Macropodia. (See Illus. Dict.) 2. The condition of having abnormal development of the feet.

Macropomous (*mak-rop′-o-mus*) [*μακρός*, long; *πῶμα*, a lid]. Possessing a large operculum.

Macroporous (*mak-rop'-or-us*) [μακρός, long; πόρος, a passage]. Having large pores.

Macroprosopus (*mak-ro-pro-so'-pus*) [μακρός, large; πρόσωπον, face]. A monster with abnormal development of the face.

Macrosporozoite (*mak-ro-spo-ro-zo'-it*) [μακρός, large; σπορά, seed; ζῶον, animal]. Labbé's term (1894) for the macrogamete of sporozoa. Syn., *Gynospore* (E. R. Lankester). Cf. *Microsporozoite.*

Macrotia (*mak-ro'-she-ah*) [μακρός, large; οὖς, the ear]. Excessive size of the ear-muscle.

Macula. (See Illus. Dict.) **Maculæ ante oculos volitantes.** See *Metamorphopsia* and *Muscæ volitantes* (Illus. Dict.). **M. arcuata,** arcus senilis. **Maculæ atrophicæ cutis,** linear atrophy of the skin. **M. corneæ,** a permanent corneal opacity from an ulcer or keratitis. **M., Sänger's.** See *Macule, Gonorrheal* (Illus. Dict.).

Maculopapular (*mak-u-lo-pap'-u-lar*). Having the characteristics of a macule and a papule.

Madema (*mad-e'-mah*). See *Madarosis* (Illus. Dict.).

Madreporic, Madreporiform (*mad-re-por'-ik, -e-form*) [*Madrepora,* a genus of corals]. Pierced with minute openings.

Madurin (*mad'-ur-in*). Moritannic acid.

Mageiric (*maj-i'-rik*) [μαγειρικός, fit for cookery]. Relating to dietetics or the culinary art.

Magnalium (*mag-na'-le-um*). An alloy of magnesium and aluminium; specific gravity 2 to 3, melting-point 600° to 700° C. It is similar in quality to brass and bronze when the quantity of magnesium varies from 5% to 30%.

Magnesia. (See Illus. Dict.) **M., Aerated, M. alba,** magnesium carbonate. **M., Black,** black oxid of manganese.

Magnesite (*mag'-nez-it*). Native magnesium carbonate.

Magnesium. (See Illus. Dict.) **M. Acetate,** $Mg(C_2H_3O_2)_2 + 4H_2O$, deliquescent white granules soluble in water and alcohol; cathartic. Dose, 5–60 gr. (0.32–4 gm.). **M. and Ammonium Arsenate,** $MgNH_4AsO_4 + 6H_2O$, slightly soluble in a solution of ammonium chlorid. **M. and Ammonium Chlorid,** $MgCl_2NH_4Cl + 6H_2O$, small rhombic crystals or bulky powder; sp. gr. 1.456; soluble in water. **M. Benzoate,** $Mg(C_7H_5O_2)_2$, a white powder soluble in water; used in gout. Dose, 3–20 gr. (0.2–1.3 gm.). **M. Bisulfate,** $MgH_2(SO_4)_2$, white prisms, soluble in water; cathartic. Dose, 5–20 gr. (0.32–1.3 gm.). Syn., *Magnesium hydrogen sulfate; Acid magnesium sulfate.* **M. Borate,** $Mg(BO_2)_2 . 2Mg(OH)_2 + 7H_2O$, minute colorless crystals; antiseptic. Dose, 5–20 gr. (0.32–1.3 gm.). Syn., *Antifungin.* **M. Borocitrate,** a compound of citric acid, magnesium carbonate, and borax; a white powder soluble in water; used in lithiasis, gout, etc. Dose, 15–30 gr. (1–2 gm.). **M. Bromid,** $MgBr_2 + 6H_2O$, bitter colorless deliquescent crystals soluble in water and slightly soluble in alcohol; sedative. Dose, 10–20 gr. (0.65–1.3 gm.). **M. Carbonate, Light,** $(MgCO_3)_4 . Mg(OH)_2 + 5H_2O$, white friable substance, soluble in carbonic acid water and in 3000 parts of water. It is antacid, cathartic, and antilithic. Dose, 30–120 gr. (2–8 gm.). **M. Chlorid,** $MgCl_2 + 6H_2O$, white deliquescent, bitter crystals, soluble in water, partly soluble in alcohol; aperient and cathartic. Dose, 240–480 gr. (16–30 gm.). **M. Copaivate,** a yellowish powder; antiseptic, diuretic, laxative, and stimulant. Dose, 10–20 gr. (0.65–1.3 gm.). **M. Creasotate.** See *Creasote-magnesia.* **M. Dioxid,** MgO_2, an oxidizing substance used in anemia. Syn., *Biogen.* **M. Ergotate,** a brown powder used in amenorrhea and epilepsy. Dose, ⅔–1 gr. (0.04–0.065 gm.). Syn., *Magnesium sclerotinate.* **M. Ethylsulfate,** $Mg(C_2H_5SO_4)_2 + 4H_2O$, deliquescent colorless crystals, soluble in water and alcohol. **M. Fluorid,** MgF_2, a white powder; it is used as an antiseptic. **M. Formate,** $MgCHO_2 + 2H_2O$, colorless prisms, soluble in water. **M. Glycerinophosphate,** $MgPO_4C_3H_5(OH)_2$, a white crystalline powder soluble in water; a nerve tonic. Dose, 2–5 gr. (0.13–0.32 gm.) 3 times daily in syrup or solution. **M. Gynocardate,** a compound of magnesia and gynocardic acid; a white powder insoluble in water; it is used in leprosy. Dose, 15–60 gr. (1–4 gm.). **M. Hydrate, M. Hydroxid,** $Mg(OH)_2$, white pasty substance soluble in dilute acids. It is antacid, antilithic, and cathartic. Dose, 60–120 gr. (4–8 gm.). **M. Hypophosphite,** $Mg(H_2PO_2)_2 + 6H_2O$, white crystals soluble in water; a nerve stimulant. Dose, 10–20 gr. (0.65–1.3 gm.). **M. Hyposulfite.** See *M. Thiosulfate.* **M. Ichthyolate,** a combination of freshly calcined magnesia, 100 parts; ichthyol, 775 parts. Mixed with talc it is used as an antiseptic dusting-powder. **M. Iodid,** MgI_2, deliquescent, brown crystalline powder which decomposes in water; alterative and sialagog. Dose, 2–10 gr. (0.13–0.65 gm.). **M. Lactate,** $Mg(C_3H_5O_3)_2 + 3H_2O$, a white crystalline, bitter substance soluble in water; laxative. Dose, 15–45 gr. (1–3 gm.). **M. Lactophosphate,** a white powder containing 45% of magnesium lactate; soluble in water; laxative. Dose, 3–15 gr. (0.2–1 gm.). **M. Loretinate, Basic,** $MgI . O . C_9H_4N . SO_3 . 5H_2O$, bright yellow crystals, sparingly soluble in water; an antiseptic dusting-powder. **M. Loretinate, Neutral,** $Mg(I . OH . C_9H_4N . SO_3)_2 . 7H_2O$, salmon-colored prisms, easily soluble in water. **M. Malate,** $MgC_4H_4O_5$, white crystalline substance soluble in water; laxative. Dose, 30–120 gr. (2–8 gm.). **M. Nitrate,** $Mg(NO_3)_2 + 6H_2O$, yellowish, deliquescent crystals soluble in water and alcohol. **M. Nitrite,** $Mg(NO_2)_2 + 2H_2O$, soluble in alcohol. **M. Palmitate,** a reaction-product of soluble magnesium salt with potassium or sodium palmitate; a crystalline powder or soapy mass, soluble in 100 parts of alcohol; melts at 120° C. **M. Permanganate,** $Mg(MnO_4)_2 . 6H_2O$, blue-black crystals, soluble in water. **M. Phenolsulfonate,** bitter, white, nearly odorless needles, soluble in water and alcohol; an antiseptic purgative. Dose, 15–30 gr. Syn., *Magnesium sulfonate.* **M. Phosphate, Dibasic,** $Mg_2H_2(PO_4)_2$, or $MgHPO_4$, a white powder soluble in acids. Syn., *Hydrogen magnesium orthophosphate.* **M. Phosphate, Monobasic,** $MgH_4(PO_4)_2$, a grayish crystalline powder; it is recommended as a laxative. Dose, 10–30 gr. (0.65–1.9 gm.). Syn., *Acid phosphate of magnesium; Magnesium tetrahydrogen phosphate; Magnesium biphosphoricum.* **M. Phosphite,** $MgHPO_3$, white crystalline powder soluble in water. Dose, 5–20 gr. (0.32–1.3 gm.). **M. Phospholactate.** See *M. Lactophosphate.* **M. Proprionate,** $Mg(C_3H_5O_2)_2$, white powder soluble in water. **M. and Potassium Chlorid.** See under *Potassium.* **M. Pyrophosphate,** $Mg_2P_2O_7 + 3H_2O$, a white powder produced by ignition of magnesium and ammonium phosphate. **M. Rhodanid.** See *M. Sulfocyanate.* **M. Ricinate,** $Mg(C_{18}H_{33}O_3)_2$, a white powder. **M. Salicylate,** $Mg(C_7H_5O_3)_2 + H_2O$, colorless crystals, soluble in water; an intestinal antiseptic and antirheumatic. Dose. 15–120 gr. (1–8 gm.). **M. Sclerotinate.** See *M. Ergotate.* **M. Silicate,** $Mg_2Si_3O_8 + 2H_2O$, fine white powder; absorbent, astringent, and antiseptic. Dose, 60–240 gr. (4–10 gm.). Syn., *Hydrated magnesium silicate; Meerschaum.* **M. Sozoiodolate,** $(C_6H_2I_2(OH)SO_3)_2Mg + 8H_2O$, colorless needles;

used as an antiseptic. **M. Sulfate, Acid.** See *M. Bisulfate*. **M. Sulfocarbolate,** $Mg(C_6H_5SO_4)_2 + 7H_2O$, colorless, microscopic crystals, soluble in water. **M. Sulfocyanate,** $Mg(CNS)_2 + 4H_2O$, clear, colorless, deliquescent crystals, soluble in water. **M. Sulfophenate.** See *M. phenolsulfonate*. **M. Tartrate,** $MgC_4H_4O_6$, a white powder soluble in 122 parts of water. It is cathartic and used in diseases of the spleen with neuralgic symptoms. Dose, 8–15 gr. (0.52–1 gm.). **M. Tetrahydrogen Phosphate.** See *M. Phosphate, Monobasic*. **M. Thiosulfate,** $MgS_2O_3 + 6H_2O$, colorless crystals soluble in water; antiseptic and cathartic. Dose, 10–30 gr. (0.65–2 gm.). Syn., *Magnesium hyposulfite*. **M. Urate,** $MgC_5H_2N_4O_3$, a white amorphous powder. **M. Valerianate, M. Valerate,** $Mg(C_5H_9O_2)_2$, a white powder.

Magnet. (See Illus. Dict.) Syn., *Lapis nauticus; L. sideritis; Lodestone*. **M., Giant or Haab,** a large powerful stationary magnet intended to draw particles of steel from the eye.

Magnetite (*mag'-net-īt*) [μαγνής, magnet]. Native magnetic iron oxid.

Magnetooptic (*mag-net-o-op'-tik*). Relating to magnetism and light.

Maguey (*mah'-gwa*) [Mex. *maguei*]. The aloe, *Agave americana*, L.

Maidalakri (*mi-dal-ak'-re*). See *Litsea sebifera*, Pers.

Maintenance (*mān'-te-nans*) [*manus*, hand; *tenere*, to hold]. The relationship which exists between increment and excrement, after a body has reached maturity.

Maisine (*ma'-zēn*). A narcotic substance taken from a tincture of diseased Indian corn. (Lombroso.)

Maizaine (*ma'-za-in*). A proteid described by Donard and Labbé as existing in maize seed to the extent of 4%–4.5%.

Maizenate (*ma'-zen-āt*). A salt of maizenic acid.

Maizolithium (*ma-zo-lith'-e-um*). A diuretic and sedative said to consist of a combination of maizenic acid from corn-silk and lithium. Dose, 1–2 dr.

Mal. (See Illus. Dict.) **M. de la Baie de Saint-Paul, M. anglais, M. de Chicot,** Canadian syphiloid. **M. des bassines,** a dermatitis affecting those engaged in winding silkworm cocoons, due to a toxic substance in the urinary product of the silkworm moths. **M. de cadera** (disease of the haunches), a fatal disease of horses in South America, caused by *Trypanosoma equinum*, Voges, or *T. elmassiani*, Lignières. It is transmitted by the fly, *Musca brava*. Cf. *Surra; Trypanosomiasis*. **M. de gorge gangrèneux** [Chomel], diphtheria. **M. de nerfs, M. de vers.** See *M. des bassines*. **M. perforant,** perforating ulcer of the foot; a trophic lesion of tabes. **M. del pinto.** See *Carate* (Illus. Dict.). **M. du rognon,** a disease of horses due to straining of the spines of the last dorsal vertebras and the lumbar vertebras. **M. de rose, M. del sole, M. rosso,** pellagra.

Malacia. (See Illus. Dict.) **M., Vascular,** Volkmann's name for a form of malacia marked by excessive new formation of vessels.

Malacopeous, Malacopœous (*mal-ak-o-pe'-us*) [μαλακοποιειν, to make soft]. Softening; enervating; emollient.

Malacosteosis (*mal-ak-os-te-o'-sis*). See *Osteomalacia* (Illus. Dict.).

Malambo Bark (*mal-am'-bo*). See *Wintera* (Illus. Dict.).

Malammin (*mal-am'-in*). Aspartic acid.

Malanders (*mal-and'-urz*). See *Mallenders* (Illus. Dict.).

Malar. (See Illus. Dict.) **2.** The malar bone.

Malaria. (See Illus. Dict.) **M., Bovine,** Texas fever. **M., Equine,** an affection due to *Plasmodium malariæ equorum*, Theiler (1901). Syn., *Anthrax fever*.

Malarilabialis (*mal-a-re-la-be-a'-lis*) [*mala*, the cheekbone; *labium*, lip]. See *Zygomaticus major* in *Muscles, Table of* (Illus. Dict.).

Malarin (*mal'-ar-in*). See *Acetophenone-phenetidin Citrate*.

Malcious (*mal'-shus*) [μάλκιος, freezing]. Benumbing; causing to freeze; becoming congealed.

Male (*mal'-e*) (pl. *males*) [μάλη]. The axilla.

Maleic (*mal-e'-ik*) [*malum*, an apple]. Relating to or derived from malic acid.

Malicorium (*mal-e-ko'-re-um*) [*malum*, an apple; *corium*, bark]. The rind of pomegranate. Fr. *Malicore*.

Maliform (*mal'-e-form*) [*malum*, an apple; *forma*, form]. Shaped like an apple.

Mali-mali. A convulsive tic prevalent in the Philippines.

Malleiform (*mal'-e-if-orm*) [*malleus*, hammer; *forma*, form]. Hammer-shaped.

Mallein Test. See *Test*.

Malleinization (*mal-e-in-i-za'-shun*). Inoculation with mallein.

Malleolus. (See Illus. Dict.) **M. lateralis** (fibulæ). See *M., External* (Illus. Dict.). **M. medialis.** See *M., Internal*. **M. radialis,** the styloid process of the radius. **M. ulnaris,** the styloid process of the ulna.

Mallotoxin (*mal-o-toks'-in*). See *Rottlerin*.

Mallotus (*mal-o'-tus*) [μαλλός, wool]. A genus of euphorbiaceous trees and shrubs. **M. philippinensis,** Müll., kamal, a species of India. The red glands of the fruit capsules constitute kamala; the leaves and fruit are used in treatment of snake-bites, the root in contusions.

Malmignatte, Malmignatto (*mal-me-nyat'*, *-o*). A poisonous spider of southern Europe, *Latrodectus guttatus*.

Malocclusion (*mal-ok-lu'-shun*) [*malus*, bad; *occludere*, to shut up]. The occlusion of the teeth in positions not conformable to anatomic rule.

Malonate (*mal'-on-āt*). A salt of malonic acid.

Malonyl (*mal'-on-il*). $CH_2<\begin{matrix}CO\\CO\end{matrix}$. The bivalent radicle of malonic acid. **M. Urea,** barbituric acid.

Malouetia (*mah-loo-e'-she-ah*) [*Malouet*, an official French reporter]. A genus of apocynaceous trees or shrubs. **M. nitida,** Spruce., a tree of Central America; the bark is similar to curare in action; it contains guachamacin.

Malperforant (*mal-pur'-for-ant*) [*malus*, bad; *perforare*, to perforate]. Perforating ulcer of the foot.

Malpighian (*mal-pig'-e-an*). Described by or named from the Italian anatomist, Marcello Malpighi [1628–1694].

Maltase (*mawl'-tāz*). Glutase.

Maltin (*mawl'-tin*). See *Diastase* (Illus. Dict.).

Maltobiose (*mawl-to-bi'-oz*). Maltose.

Maltogen (*mawl'-to-jen*). An extract of malt prepared by Roeder.

Maltoglucase (*mahl-to-glu'-kāz*). An enzyme isolated by Went (1902) from *Monilia sitophila*, an economic fungus of Japan, which gives peculiar qualities to the cakes called "ont jom."

Maltol (*mawl'-tol*). $C_6H_6O_3$. A constituent of malt-caramel, an odorless substance soluble in hot water.

Maltosuria (*mawl-to-su'-re-ah*) [*maltose*; οὖρον, urine]. The presence of malt-sugar in the urine.

Maltova (*mahl-to'-vah*). A concentrated food said to be a combination of the proteids of egg.

Maltoyerbin (*mawl-to-yer'-bin*). An expectorant said to consist of malt and yerba santa.

Maltzey (*mahlt'-se*). Leprosy.

Maltzyme (*mawlt'-zim*). A concentrated diastasic extract of malt; indicated in starchy indigestion. Dose, 1–2 tablespoonfuls (15–30 c.c.) during or after meals.

Malval (*mal'-val*). Relating or belonging to the genus *Malva*.

Maly's Theory of HCl in Gastric Juice. See under *Gastric Juice*.

Mamanpian (*mah-mahn-pe-ahn*) [Fr.]. The initial ulcer of frambesia. Syn., *Mother-yaw*.

Mamesin (*mam'-es-in*). An extract of beef.

Mamillose (*mam'-il-ōs*). Having many nipples or nipple-shaped processes.

Mammotomy (*mam-ot'-o-me*). See *Mastotomy*.

Mandioca (*man-de-o'-kah*) [Sp.]. 1. Tapioca. 2. The cassava plant, *Manihot utilissima*.

Manganate (*man'-gan-āt*). A salt of manganic acid.

Manganese. (See Illus. Dict.) **M. Acetate,** $Mn(C_2H_3O_2)_2 + 4H_2O$, pale red crystals, soluble in water and alcohol. Syn., *Manganous acetate*. **M. Albuminate,** brown scales, soluble in water; tonic and alterative; used in chlorosis and anemia. **M. and Ammonium Sulfate,** $Mn_2(NH_4)_2(SO_4)_4 + 24H_2O$, red crystals soluble in moderately strong sulfuric acid; it is decomposed by water. Syn., *Manganic ammonium alum*. **M. Arsenate,** $MnHAsO_4$, a reddish powder, slightly soluble in water; alterative and tonic. Dose, $\frac{1}{10} - \frac{1}{5}$ gr. (0.002–0.013 gm.). *Antidote:* vomiting; stomach-pump; hot milk and water with zinc sulfate or mustard. After vomiting give milk or eggs, and magnesia in milk. **M. Benzoate,** $Mn(C_7H_5O_2)_2$, yellowish crystals, soluble in water, slightly soluble in alcohol. **M. Binoxid.** See *M. oxid. nig.* (Illus. Dict.). **M. Bromid,** $MnBr_2$, a light brown, deliquescent powder, soluble in water with decomposition. Dose, 1–8 gr. (0.065–0.52 gm.). Syn., *Manganous bromid*. **M. Carbonate,** $MnCO_3$, a fine, light-brown, amorphous powder, used as a tonic in anemia and chlorosis. Dose, 8–40 gr. (0.52–2.6 gm.). Syn., *Manganous carbonate*. **M. Chlorid,** $MnCl_2 + 4H_2O$, rosy, deliquescent crystals, soluble in water 2.5 parts or alcohol. Syn., *Manganous chlorid*. **M. Chromate,** $MnCrO_4MnO + 4H_2O$, a brown powder. **M. Citrate,** $MnHC_6H_5O_7$, a white powder used as a tonic and astringent instead of iron citrate. Dose, 1–3 gr. (0.065–0.2 gm.). **M. Dioxid.** See *M. oxid. nig.* (Illus. Dict.). **M. Dithionate.** See *M. Hyposulfate*. **M. Ferrocyanid,** $Mn_2Fe(CN)_6 + 7H_2O$, a greenish powder. **M. Glycerinphosphate,** $MnPO_4 \cdot C_3H_5(OH)_3 + H_2O$, used in neurasthenia. Dose, 2 gr. (0.13 gm.) 3 times daily. **M. Hydrate, M. Hydroxid,** $Mn_2O_2(OH)_2$, a dark-brown powder, soluble in hot nitric acid. Syn., *Manganic hydroxid* or *hydrate*. **M. Hypophosphite,** $Mn(H_2PO_2)_2 + H_2O$, permanent rosy crystals. Dose, 10–20 gr. (0.65–1.3 gm.). **M. and Iron Lactate,** a combination of manganous lactate and ferrous lactate; it is used as a tonic, alterative, and emmenagog. Dose, 1–5 gr. (0.065–0.32 gm.). **M. Lactate,** $Mn(C_3H_5O_3) + 3H_2O$, reddish crusts soluble in alcohol and in 12 parts of water; tonic. Dose, 1–5 gr. (0.065–0.32 gm.). **M. Lactophosphate,** a combination of manganous phosphate with 62% of manganous lactate; a white, deliquescent powder, soluble in water; it is used as a tonic. Dose, 1–5 gr. (0.065–0.32 gm.). Syn., *Manganous phosphotactate*. **M. Oleate,** $Mn(C_{18}H_{33}O_2)_2$, a brown mass soluble in ether and oleic acid, slightly soluble in alcohol; it is used in chlorosis and anemia. **M. Oxalate,** $MnC_2O_4 + 2H_2O$, white crystalline powder nearly insoluble in water; it is used as a desiccant. **M. Oxid, Black.** See *M. oxid. nig.* (Illus. Dict.). **M. Oxid, Manganic,** Mn_2O_3, a black powder soluble in concentrated acids. Syn., *Sesquioxid of Manganese*. **M. Oxid, Manganous,** MnO, a green powder soluble in acids; used as a tonic in chlorosis and anemia. Dose, 2–10 gr. (0.13–0.65 gm.). Syn., *Manganese monoxid* or *protoxid*. **M. Oxid, Red,** $Mn_3O_4 = MnO \cdot Mn_2O_3$. It occurs native in a crystalline form. Syn., *Manganomanganic oxid*. **M. Peptonate,** a brown powder containing 4% of manganese oxid, soluble in water; it is used as a tonic in anemia and chlorosis. Dose, 20–60 gr. (1.3–4 gm.). **M. Saccharate,** a brown powder soluble in water; it is used as a tonic in anemia. **M. Salicylate,** $Mn(C_7H_5O_3)_2$, a white crystalline powder soluble in water and alcohol; tonic, alterative, and antirheumatic. Dose, 2–10 gr. (0.13–0.65 gm.). **M. Sulfid,** MnS, a brown powder. Syn., *Manganese monosulfid*. **M. Sulfite,** $MnSO_3$, a tonic, cholagog, and antiseptic. Dose, 5–20 gr. (0.32–1.3 gm.). **M. Sulfocarbolate,** $Mn(C_6H_5SO_4)_2 + 7H_2O$, reddish crystals soluble in alcohol and water; tonic and antiseptic. Dose, 3–15 gr. (0.2–1 gm.). **M. Tannate,** a brown powder obtained by mixing manganese carbonate, 4 parts; tannin, 7 parts; water, 5 parts, and evaporating to dryness.

Manganeutes (*man-gan-u'-tēz*) [μαγγανευτής]. A quack; an impostor.

Manganicopotassic (*man-gan-ik-o-po-tas'-ik*). Containing manganese as a bivalent radicle and potassium.

Mangrove (*man'-grov*). 1. The genus *Rhizophora*, and especially *R. mangle*, L. 2. The bark of *Melia azadirachta*, L.

Mangrovin (*man gro'-vin*). A bitter substance contained in the bark of *Melia azadirachta*, L.

Mania. (See Illus. Dict.) **M., Ambitious,** delirium grandiosum. **M., Epileptiform.** Synonym of *Paroxysmal Mania*. **M., Metaphysical,** dementia in which the patient distresses himself over abstruse or ridiculous questions; Ger., *Grübelsucht*. **M., Paroxysmal,** a paroxysmal neurosis in which the attacks take the form of transitory mania [Fagge and Pye-Smith]. Syn., *Furor epilepticus; Epileptiform mania; Paroxysmal insanity; Epileptic insanity*. **M. of Persecution.** See *Delirium persecutionis* (Illus. Dict.). **M. of Persecution, Falret's Type of,** "idées de persécution et de persécuteur"; a form of paranoia occurring in degenerates. **M. of Persecution, Lasègue's Type of,** typical paranoia. **M., Ray's,** moral insanity, regarded by Ray as a distinct form of mental disorder.

Manihotin (*man-e-ho'-tin*). See *Mannite* (Illus. Dict.).

Manila Itch. See *Itch*.

Manna. (See Illus. Dict.) Syn., *Mel roscidum, Aeromel*. **M., Alhagi, M., Alhajini, M. alhagina,** an exudate furnished by *Alhagi camelorum*, Fisch., and *A. maurorum*, Tournef., leguminous, oriental shrubs. It contains melezitose, dextrin, and gum. **M., Australian,** a manna-like, white, opaque exudate on *Eucalyptus viminalis*, Lab., and *E. gunnii*, Hook.; it contains melitose and eucalin. **M., Briançon, M. brigantiaca, M. brigantina,** an exudation from the leaves of the larch, *Larix europæa*, containing melezitose but no mannite. **M. canulata,** flake manna deposited on sticks or straws inserted in the trees. **M., Capace, M., Capacy, M., Capaci,** fat manna from Capace, Italy, and from Sicily. **M., Cedar, M. cedrina,** small granules of a sweet substance found on the leaves of the cedars of Lebanon. **M., Celestial.** See *M., Alhagi*. **M., Chirkhist, M., Chirkhest,** a sweet exudate, eaten as a confection, from the branches of *Cotoneaster nummularia*, Fisch. et Meyer,

a shrub of India, Persia, and north Africa; it contains 50% of chirkistite, ($C_6H_{14}O_6$). **M., Cistus, M. cistina,** a sweet substance found rarely on the leaves and branches of various species of *Cistus*. **M., Common, M. communis,** a grade of true manna inferior to flake manna. **M. crassa,** true manna collected in the late autumn, when the juice is less disposed to concrete, occurring as a soft, viscous, yellow mass with few crystalline fragments and containing many impurities. Syn., *Fat manna; M. pinguis; M. sordida; M. spissa.* **M., Diarbekir,** a saccharine substance found on the leaves of dwarf oaks in Turkey. **M. electa,** the whiter fragments selected from common manna. **M., Eucalyptus, M. eucalyptina.** 1. Australian manna. 2. Lerp manna. **M.s, False,** exudates resembling manna but containing no mannite; a name also applied to certain substances which have no connection with exudates. Cf. *M., Lichen; M., Poland.* **M., False African.** See *Trehala* (Illus. Dict.). **M., False American,** a sweet manna-like substance, with terebinthinate taste and actively purgative properties, exuding from incisions in *Pinus lambertiana,* Dougl. It contains pinite. **M., False European.** See *M., Briançon.* **M., Fat.** See *M. crassa.* **M., Flake,** the purest variety of true manna; it is collected during the hot summer weather. **M. foliata.** See *M., Leaf.* **M. forsata, M. forsatella,** true manna exuding from an incision in the tree. **M., Gerace, M., Geracy, M. geracina, M. Gieraci,** a superior variety of true manna collected near Gerace. **M. granulosa, M. in Grains,** common manna. **M. hispanica, M., Spanish,** cistus manna. **M. incrassata, M. inferior,** fat manna. **M. ladanifera,** cistus manna. **M. laricea, M. laricina, M., Larch.** See *M., Briançon.* **M., Leaf,** thin sheets of true manna exuding from the leaf punctured by cicadas as distinguished from that flowing from incisions in the stem. **M., Lerp.** See *Lerp* (Illus. Dict.). **M.s, Lichen,** the edible crustaceous lichen, *Lecanora esculenta,* which is often carried by the wind to a great distance and deposited over vast tracts like a shower of rain in small grayish lumps. **M., Liquid,** alhagi manna. **M. longa,** flake manna. **M., Magafir.** See *M., Schukr-al-askar.* **M. metallorum,** calomel. **M., Schukr-al-askar, M., Sukkar-al-uscher,** a manna-like substance exuding from *Calotropis procera,* R. Br., and used in asthma. **M. of Mt. Sinai, M. of Sinai.** 1. See *M., Tamarisk.* 2. The edible rhizomes of the sedge, *Cyperus esculentus,* L. **M., Oak,** a sweet exudate due to an insect, occurring on *Quercus lusitanica,* Lam., *Q. cerris,* L., *Q. ægilops,* L., *Q. coccifera,* L., and *Q. robur,* L. **M. optima,** flake manna. **M., Persian,** alhagi manna. **M., Picked.** See *M. electa.* **M. pinguis.** See *M. crassa.* **M., Poland, M., Prussian,** the hulled fruit of the grass, *Glyceria fluitans,* R. Br.; used as food. **M. purissima,** flake manna. **M. quercea, M. quercina.** See *M., Oak.* **M., Shirkhist, M., Shir-koit.** See *M., Chirkhest.* **M. siciliana, M., Sicilian,** impure manna of a dirty brown color mixed with fragments of flake manna. **M. sordida, M. spissa.** See *M. crassa.* **M., Spanish,** cistus manna. **M.-sugar,** mannit. **M., Tamarisk, M., Tamarix, M. tamariscina,** a white honey-like substance used as food and produced by the puncture of the insect *Coccus manniparus,* Ehrbg., on *Tamarix gallica,* L. It contains cane-sugar, dextrin, levulose, glucose, and allied substances. It is also called *Gaz-shakar; Gaz-anjabar;* **M., Taranjabin.** See *M., Alhagi.* **M., Tigala, M., Trehala, M., Turkish.** See *Trehala* (Illus. Dict.). **M. thuris,** transparent grains of olibanum.

Mannan (*man'-an*). A brown amorphous hemicellulose body obtained from ergot, identical with scleromucin (Dragendorff's).

Mannit. (See Illus. Dict.) A mild laxative. Dose, 6–8 dr. (20–30 gm.); children, 1–3 dr. (4–12 gm.) in water.

Mannitan. (See Illus. Dict.) **M. Diacetate,** a compound of mannitan and acetic acid. Syn., *Acetite.*

Mannitol. (See Illus. Dict.) **M. Hexanitrate,** a vasodilator. **M. Pentanitrate,** a body resulting from action of pyridin on mannitol hexanitrate. It reduces blood-pressure.

Mannosocellulose (*man-o-so-sel'-u-lōz*). E. Schulze's name for a substance occurring in the coffee-bean, in the cocoanut, and in sesame cake which yields mannose when heated with strong sulfuric acid and boiled for some time after diluting.

Manol (*man'-ol*). A remedy for whooping-cough said to consist of cane-sugar, carbolic acid, oil of anise, alcohol, and water. Syn., *Succus anisi ozonatus.*

Manolymph (*man'-o-limf*) [μανός, rare, single or separate; *lympha,* lymph]. Warthin's term for certain hemolymph glands. See *Gland, Hemolymph.*

Mansa (*man'-sah*). See *Houttuynia californica.*

Mansi (*man'-se*). See *Nardostachys jatamansi.*

Manubriate (*man-u'-bri-āt*) [*manubrium,* a handle]. Furnished with a handle or handle-shaped process.

Manus. (See Illus. Dict.) **M. curta, M. vara,** talipomanus. **M. hepatis, M. jecoris,** the transverse fissure of the liver.

Marcasite (*mar'-kas-īt*). 1. An old name for bismuth. 2. Crystallized iron pyrites. 3. Iron disulfid.

Marennin (*mar-en'-in*). See *Pigments* (*Vegetable*), *Conspectus of* (Illus. Dict.).

Margarate (*mar'-gar-āt*). A salt of margaric acid.

Margarin. (See Illus. Dict.) **M.-needles,** fatty crystals found in putrid bronchitis and pulmonary gangrene.

Markasol (*mar'-ka-sol*). Bismuth borophenate.

Marking [ME. *mark,* a mark]. A mark. **M.s, Arrow, M.s, Oblique.** See *Incisures of Schmidt* (Illus. Dict.). **M.s, Fontana's,** minute transverse lines seen on divided nerves.

Marmagnatto. See *Malmignatte.*

Marmaryga, Marmaryge, Marmarygæ (*mar-mar'-ij-ah, -ē*). See *Photopsia* (Illus. Dict.).

Marmorekin (*mar-mor'-e-kin*). 1. Antistreptococcin. 2. Marmorek's serum.

Marrol (*mar'-ol*). A dietetic said to contain ox-marrow and extracts of hops and of malt.

Marsitriol (*mar-sit'-re-ol*). A proprietary preparation of iron (ferrum glyceroarsenate) forming an amorphous yellow mass, insoluble in water. Dose, $\frac{1}{8}$ gr. (0.01 gm.).

Marsupialization (*mar-su-pe-al-i-za'-shun*) [μάρσυπος, a pouch]. The operation recommended in certain cases of ovarian tumor, by Clay, Spencer Wells, and Péan, of raising the borders of the evacuated tumor sac to the edges of the abdominal wound and stitching them there so as to form a pouch.

Marsyle (*mar'-sil-e*). A commercial name for iron cacodylate.

Martol (*mar'-tol*). A semifluid extract obtained from the shells of cacao bean, consisting of carbohydrates, phosphates, iron tannate, etc.

Mascagnin (*mas-kan'-yin*). A native ammonium sulfate found by Mascagni in Tuscany.

Maschi (*mash-e'*). An arrow-poison of the Serekongs of British Guiana said to be obtained from the rhizomes of *Arum venenatum.*

Mask. (See Illus. Dict.) **M., Uterine,** chloasma uterinum.

Masopexy (*mas-o-peks'-e*). See *Mastopexy*.

Masopin (*mas'-o-pin*). $C_{22}H_{36}O$. A crystalline resinous constituent of Mexican chicle, the sap of *Achras sapota*, L.; it melts at 155° C., giving off a pleasant fragrance; soluble in alcohol or ether, insoluble in water.

Mass. (See Illus. Dict.) **M., Copaiba,** copaiba, 6 parts, mixed with magnesia, 94 parts, and water; diuretic and stimulant. Dose, 10–30 gr. (0.65–2 gm.). **M., Interfilar.** See *Enchylema* (Illus. Dict.). **M. of Interruption,** Meynert's name for the striatum and thalamus. **M., Mulberry.** See *Morula* (Illus. Dict.). **M., Priestley's,** a green or greenish-brown deposit sometimes seen, especially in young individuals, on the upper and lower incisor and canine teeth; it is due to a growth of chromogenic fungi in Nasmyth's cuticle. **M., Pronatoflexor,** Humphry's term for the mass of pronator and flexor muscles of the forearm having a common origin in the inner condyle and separating below. **M., Semilunar.** See *Demilune Cells of Heidenhain* (Illus. Dict.).

Massa. (See Illus. Dict.) **M. carnea Jacobi Sylvii,** the flexor longus digitorum pedis muscle. **M. intermedia.** See *Medicommissura*. **Massæ laterales,** the most massive portions of the atlas.

Massage. (See Illus. Dict.) Syn., *Allopiestomyokinetics*. Cf. *Attachement; Effleurage; Petrissage; Tapotement*. **M., Cannon-ball,** the rolling (recommended by Sahli) of a 3- to 5-pound cannon-ball covered smoothly with chamois skin or flannel, over the course of the colon. **M., Electrovibratory,** that performed by means of an electric vibrator. **M., Thermic,** stroking or pressing an affected part with a heated object. **M., Vapor,** treatment of a cavity by intermittent forcing of a medicated vapor into it. **M., Vibratory,** light, rapid percussion either by hand or by an electric apparatus.

Massalis (*mas-a'-lis*) [*massa*, a mass]. Mercury.

Massoia (*mas-o'-e-ah*). A genus of the *Laurineæ* containing one species, **M. aromatica,** Becc., indigenous to the East Indies; it furnishes massoi or massoy bark (*q. v.*), which contains an ethereal oil, pinene, dipentene, limonene, eugenol, and safrol.

Mastic. (See Illus. Dict.) **M., American,** the gum from the pepper-tree, *Schinus molle*, L. **M., Barbary,** the mastic-like resin afforded by *Pistacia atlantica*, Desf. **M., Bombay, M., East Indian, M., Roman,** is afforded by *Pistacia khinjuk*, Stocks, and *P. mutica*, Fisch., trees of Persia and Afghanistan. **M., Common, M., Herb,** inferior mastic occurring in irregular masses and mixed with impurities. **M., Picked,** pure mastic occurring in tears. **M., Pseudo-.** See *Acanthomastic* (Illus. Dict.). **M., Resin of.** 1. $C_{20}H_{32}O_3$. The portion of mastic (about 90%) soluble in alcohol. Syn., *Mastichic acid; α-Resin of mastic*. 2. See *Masticin*. **M., Syrian Herb,** the herb *Teucrium marum*, L. **M., West Indian,** the chibou or cachibou yielded by *Bursera gummifera*, L.

Masticin (*mas'-tis-in*). β-resin of mastic; the part of mastic insoluble in alcohol. Cf. *Mastic, Resin of*.

Mastitis. (See Illus. Dict.) Syn., *Mastadenitis, Mal de pis*. **M. adolescentium,** that occurring at puberty; it may exist in either sex.

Mastochondroma (*mas-to-kon-dro'-mah*). See *Mastochondrosis* (Illus. Dict.).

Mastoid. (See Illus. Dict.) 2. Resembling a nipple. 3. The mastoid process of the temporal bone. 4. Relating to the mastoid.

Mastoiditis. (See Illus. Dict.) See *Sign, Bezold's*. **M., Bezold's,** destruction of the apex of the mastoid process with a tendency to the formation of an abscess in the neck.

Mastoidotomy (*mas-toid-ot'-o-me*) [*mastoid; τέμνειν*, to cut]. Incision of the mastoid cells to relieve suppurative mastoiditis.

Mastologist (*mas-tol'-o-jist*). A specialist in diseases of the mammary apparatus.

Mastopexy (*mas'-to-peks-e*) [μαστός, breast; πῆξις, a fixing in]. Surgical fixation of a pendulous breast.

Mastosis (*mas-to'-sis*) [μαστός, breast]. Enlargement of the breast.

Mastotomy (*mas-tot'-o-me*) [μαστός, breast; *τέμνειν*, to cut]. Incision of a breast.

Matezite (*mat'-ez-it*). $C_{10}H_{20}O_9$. A glucosid contained in Madagascar caoutchouc identical with pinite.

Matezodambose (*mat-ez-o-dam'-bōz*). $C_9 . H_{18}O_9$. A kind of sugar similar to dambose contained in matezite.

Matias Bark (*mah-te'-as*). See *Wintera* (Illus. Dict.).

Matobiose (*mat-o-bi'-ōz*). Same as *Maltose*.

Matta (*mat'-ah*). The commercial name for the powdered hulls of the millet, *Setaria italica*, Beaur., which is used in the sophistication of pepper.

Matula (*mat'-u-lah*) [L.]. A urinal.

Maturate (*mat'-u-rāt*) [*maturare*, to come to maturity]. To suppurate.

Maturitas (*mat-u'-ri-tas*). See *Maturity* (Illus. Dict.). **M. præcox,** precocious development of the body or of a single organ, especially of the genitals.

Matzol (*mat'-zol*). A mixture of cod-liver oil, 50 parts; matzoon, 45 parts; emulsifying ingredients, 5 parts.

Mauriceau's Lance. An instrument for perforating the fetal head in craniotomy.

Mauthner's Test for color vision: Thirty-three small bottles filled with different pigments, some with one, others with two (pseudoisochromatic and anisochromatic) pigments, are employed in the manner of Holmgren's worsteds.

Maxillate (*maks'-il-āt*). Furnished with jaws.

Maxilliferous (*maks-il-if'-ur-us*) [*maxilla*, the jawbone; *ferre*, to bear]. See *Maxillate*.

Maxillomuscular (*maks-il-o-mus'-ku-lar*). Relating to the maxillary muscles.

Maxillosuprafacial (*maks-il-o-su-pra-fa'-shal*). Relating to the maxilla and the upper portion of the face.

Maydl's Method. See under *Operation*.

Maynaresin (*ma-nah-rez'-in*) [*Maynas*, a South American province]. $C_{14}H_{18}O$. A resin obtained from incisions in the trunk of the tree *Calophyllum longifolium*, Willd., of Colombia. It crystallizes from boiling alcohol in beautiful yellow rhombic prisms melting at 105° C. Ger., *Maynasresin*.

Mayol (*ma'-ol*). A meat preservative introduced by May of Budapest, and said to be a mixture of boric acid, ammonium fluorid, glycerin, and alcohol (methyl and ethyl).

Maytenus (*ma'-ten-us*) [*Mayten*, Chilian name]. A genus of shrubs of the order *Celastrineæ*. **M. boaria,** Mol., indigenous to Chili; the leaves are used on inflammatory swellings, especially in poisoning by species of *Rhus*. **M. vitis-idæa,** Griseb., indigenous to Peru; used in tinnitus aurum and gingivitis.

Mazoitis (*ma-zo-i'-tis*) [μαζός, breast]. Mastitis.

Mazologist (*ma-zol'-o-jist*) [μαζός, breast; λόγος, science]. See *Mastologist*.

M'boundou, M'bundu. See *Akazga* (Illus. Dict.).

Measles. (See Illus. Dict.) Syn., *Morbilli; Rubeola* (obs.); Fr. *Rougeole;* Ger. *Masern;* It. *Rosolia fersa;* Ar. *Hasbah*. See *Signs, Grisolle's; Bolognini's, Meunier's*. **M., Asthenic Typhous, M., Ataxodynamic.** See *M., Malignant* (Illus. Dict.). **M., Confluent.** 1. Scarlatina. 2. Measles with confluent exanthemata. Syn., *Morbilli confertim*. **M., Inflam-**

matory, malignant measles marked by very high fever and catarrhal symptoms. **M., Purpuric,** hemorrhagic measles. **M., Septic,** malignant measles. **M. of Swine.** See *Measles* (2) (Illus. Dict.). **M., Synochal,** inflammatory measles.

Meat. (See Illus. Dict.) **M.-flour,** beef dried and pulverized. **M.-sugar,** inosite.

Meatal (*me-at'-al*). Pertaining to a meatus.

Meatus. (See Illus. Dict.) **M. acusticus.** See *M. auditorius* (Illus. Dict.). **M., Fishmouth,** a red, inflamed state of the urinary meatus occurring early in acute gonorrhea. **M. nasi communis,** the part of the nasal cavity into which the three meati open. **M. nasopharyngeus,** that part of the nasal cavity communicating with the pharynx beneath the body of the sphenoid. **M. of Sylvius,** Gratiolet's name for the space between the precornua.

Mechanicochemical (*me-kan-ik-o-kem'-ik-al*). Related to mechanics and chemistry.

Mechanoneural (*me-kan-o-nu'-ral*). A word coined by certain irregular practitioners.

Mechoacan, Mechoacana, Mechoacanna (*ma-ko'-ah-kahn, ma-ko-ah-kahn'-ah*). The Spanish name for the roots of *Asclepias contrajerva, Ipomœa elongata,* Choisy, and other plants. **M. alba,** *Ipomœa macrorrhiza,* Michx. **M. canadensis,** poke-root, *Phytolacca decandra,* L. **M. grisea.** See *M. alba.* **M. nigra,** *Ipomœa purga,* Heyne. They are used as jalap.

Mecism (*me'-sizm*) [μῆκος, length]. A condition marked by abnormal prolongation of one or more parts of the body.

Meckelian (*mek-el'-e-an*). Described by or named after I. F. Meckel, a German anatomist (1714–1774).

Mecon (*me'-kon*) [μήκων]. 1. The poppy. 2. Opium.

Meconarcein. (See Illus. Dict.) Recommended in bronchial affections, and neuralgia. Dose, ⅙–½ gr. (0.01–0.03 gm.).

Medallion (*me-dal'-yun*) [Fr. *médaillon,* a large medal]. A mass of sun-warmed mud upon which the patient is placed in the "natural mud-baths" of Saki, in the Crimea.

Medea (*me'-de-ah*) [μήδεα]. 1. The genital organs. 2. Aphrodisiacs.

Mediastinopericarditis. (See Illus. Dict.) Syn., *Indurative mediastinitis.* **M., Callous,** that attended with fibrous thickening of the pericardium.

Medicago (*med-e-kah'-go*) [*medicus,* healing; *agere,* to carry]. A genus of leguminous plants. **M. maculata,** Willd., spotted medick, heart clover, St. Mawe's clover of Europe, a forage species. **M. sativa,** alfalfa, lucerne, holy hay, a forage plant of Europe and America. The root is used to adulterate belladonna root.

Medication. (See Illus. Dict.) **M., Cataphoric, M., Endermic.** See *Cataphoresis* (Illus. Dict.).

Medicine. (See Illus. Dict.) **M., Anatomic,** that system which deals with the anatomic changes in diseased organs and their connection with symptoms manifested during life. **M., Botanic,** a system of healing in which herbal preparations alone are administered. **M., Cephalic,** a drug for the cure of headache. **M., Cutaneous,** that branch of medicine dealing with the prevention and treatment of skin-diseases. **M., Dogmatic, School or System of,** that attributed to Hippocrates; it regarded diseases as indivisible units from beginning to termination; *i. e.,* that they consisted of a regular program of characteristic systems, successive periods, and of long course either for better or worse. It was the precursor of modern vitalism. [Park.] Cf. *Methodism, Empiric, Eclectic, Pyrrhonian.* **M., Experimental,** that based upon experiments on animals and the observation of pathologic changes in diseases induced in them and the effect of drugs administered. **M., Folk.** See *M., Domestic* (Illus. Dict.). **M., Galenic.** See under *Galenic* (Illus. Dict.). **M., Hermetic,** the therapeutic application of chemicals. **M., Indian,** a form of quackery said to be founded on knowledge derived from the Amerinds. **M., Mental,** psychiatry. **M., Methodic.** See *Methodism* (Illus. Dict.). **M., Pharmaceutic,** an officinal preparation. See *Officinal* (Illus. Dict.). Cf. *Formula, Officinal.* **M., Pharmacopeal,** an official preparation. See *Official* (Illus. Dict.). Cf. *Formula, Official.* **M., Proprietary,** a drug the manufacture of which is limited or controlled by an owner, because of a patent, a copyright, or secrecy as regards its constitution or method of manufacture. **M., Psychic, M., Psychologic.** See *Psychiatry* (Illus. Dict.). **M., Secret.** See *M., Proprietary.* **M., Spagyric,** that of the school of Paracelsus, spagirism. **M., Vibratory,** a method, devised by Vigouroux, Charcot, and Gilles de la Tourette, of treating nervous diseases, paralysis agitans, etc., by mechanical shaking or percussion, by means of journeys on railroad or wagon or specially devised apparatus for methodic shaking of the body.

Medicisterna (*med-e-sis-tur'-nah*) [*medius,* middle; *cisterna,* a vessel]. The preferred term for cisterna venæ magnæ cerebri.

Medicomechanic (*med-ik-o-me-kan'-ik*). Medical and mechanic.

Medicon (*med'-ik-on*) [μηδικόν]. A harmful or noxious drug.

Medicostatistic (*med-ik-o-stat-is'-tik*). Relating to medicine as connected with statistics.

Medicus. (See Illus. Dict.) **Medici puri,** the physicians proper of the seventeenth century, as distinguished from surgeons and veterinary physicians, or from the numerous impostors and quacks (old women, priests, hermits, uroscopists, Paracelsists, Jews, calf-doctors, exorcists, mountebanks, vagrants, magicians, monsters, rat-catchers, jugglers, gypsies, etc.). "They were persons of the profoundest gravity, with fur-trained robes, perukes, canes, and swords when matters were prosperous, who for their lives would do nothing more than write prescriptions in formal style, everything else being considered beneath their dignity." [Park.]

Medifixed (*me'-de-fikst*) [*medius,* middle; *fingere,* to fix]. Attached by the middle.

Mediflocculus (*me-de-flok'-u-lus*) [*medius,* middle; *flocculus*]. The ventral lobe of the paraflocculus in lower mammals.

Medifrontal (*me-de-frun'-tal*) [*medius,* middle; *frons,* front]. Relating to the middle of the forehead.

Mediglycin (*me-de-glis'-in*). A liquid glycerin-soap used as a vehicle.

Mediodigital (*me-de-o-dij'-it-al*). Relating to the median nerve and a finger.

Mediopalatine (*me-de-o-pal'-at-ēn*). Relating to the center of the palate.

Medium. (See Illus. Dict.) **M., Clearing,** a medium used in histology for rendering the tissues transparent. **M., Elsner's,** that made by the addition of sterilized solution of potassium iodid (10% strength) to each 10 c.c. of Holz's potato-gelatin. **M., Experimental,** a temporary mounting medium used in histologic examination. **M., Holz's,** a potato-gelatin used as a culture-medium. **M., Piorkowski's,** one composed of 100 parts of urine which has undergone ammoniacal fermentation and to which 0.5 part of peptone and 3.3 parts of gelatin have been added.

Medulla. (See Illus. Dict.) 3. The preferred term for centrum ovale (of Vieussens). 4. The pith or parenchyma of a plant.

Medulladen (*med-ul-ad'-en*). A preparation of bone-marrow of beef; it is used in anemia, gout, etc. Dose, 30–45 gr. (2–3 gm.).

Medullic (*med-ul'-ik*). Relating to or derived from marrow or the pith of a plant.

Medullose, Medullous (*med-ul'-ōs, -us*). Containing much pith or marrow.

Megacaryocyte, Megakaryocyte (*meg-ah-kar'-e-o-sīt*) [*μέγας*, large; *κάρυον*, a kernel; *κύτος*, cell]. See *Myeloplax* (Illus. Dict.).

Megacoly (*meg-ak'-ol-e*). See *Megalocoly*.

Megalanthropogenesia, Megalanthropogenesis (*meg-al-an-thro-po-jen-e'-ze-ah, -jen'-e-sis*) [*μέγας*, large; *ἄνθρωπος*, man; *γένεσις*, generation]. Robert's term for the production of men of fine physical and mental endowment by means of suitable marriages.

Megalgia (*meg-al'-je-ah*) [*μέγας*, large; *ἄλγος*, pain]. Excessively severe pain.

Megallantoid (*meg-al-an'-toid*) [*μέγας*, large; *allantois*]. 1. Having a large allantois. One of the *Megallantoids* (Milne-Edwards), animals distinguished by the persistence and large size of the allantoic sac.

Megaloblast. (See Illus. Dict.) The term is restricted to embryonic or germinal cells as distinguished from megalocyte, which pertains to adult life.

Megalocoly (*meg-al-ok'-ol-e*) [*μέγας*, large; *κόλον*, colon]. A uniform increase in the internal diameter of the colon with thickening of the walls. Syn., *Megacoly*. Cf. *Macrocoly*.

Megalocytosis (*meg-al-o-si-to'-sis*) [*μέγας*, large; *κύτος*, cell]. The presence of large numbers of greatly enlarged erythrocytes in the blood. Syn., *Macrocytosis*.

Megalogamete (*meg-al-o-gam'-ēt*). See *Macrogamete*.

Megalogastria (*meg-al-o-gas'-tre-ah*). Same as *Megagastria* or *Macrogastria* (Illus. Dict.).

Megalonychosis (*meg-al-on-ik-o'-sis*) [*μέγας*, large; *ὄνυξ*, nail]. Universal noninflammatory enlargement of the nails.

Megalopenis (*meg-al-o-pe'-nis*). Excessive size of the penis.

Megaloporous (*meg-al-op'-or-us*). Characterized by large pores.

Megalosyndactyly (*meg-al-o-sin-dak'-til-e*). Syndactylism attended by hypertrophy.

Megarrhin (*meg-ar'-in*) [*μέγας*, large; *ῥίζα*, root]. A body obtained by Young from *Echinocystis fabacea*, Torr., resembling saponin and causing dilation of the pupil.

Megarrhizarrhetin (*meg-ar-iz-i-ar-et'-in*). A resinoid substance obtained by boiling megarrizin in dilute acids.

Megarrhizin (*meg-ar-iz'-in*). A bitter glucosid isolated by J. P. Heany from root of *Echinocystis fabacea*, Torr., manroot, a cucurbitaceous plant of North America. It is said to be an active cathartic.

Megarrhizitin (*meg-ar-iz'-it-in*). A resinous body found in *Echinocystis fabacea*, Torr.

Megascope (*meg'-ah-skōp*). See *Episcope*.

Megasoma (*meg-ah-so'-mah*) [*μέγας*, large; *σῶμα*, body]. Abnormal size and stature not reaching gigantism.

Megastria (*meg-as'-tre-ah*). See *Megagastria* (Illus. Dict.).

Megophthalmus (*meg-of-thal'-mus*). See *Keratoglobus* (Illus. Dict.).

Megoxycyte (*meg-ok'-se-sīt*) [*μέγας*, large; *ὀξύς*, sharp; *κύτος*, cell]. A megoxyphil cell, one of the coarsely granular eosinophil cells or *a*-granulation cells of Ehrlich. See under *Color Analysis*.

Mel. (See Illus. Dict.) **M. acetatum**, oxymel. **M. aere, M. aereum**, Alhagi manna. **M. roscidum**, manna.

Melachol (*mel'-ak-ol*). Sodium citrophosphate consisting of sodium phosphate, 100 parts; sodium nitrate, 2 parts; citric acid, 13 parts, rubbed together and mixed with 100 parts of water; used in liver complaints.

Melagra. (See Illus. Dict.) **M. parturientium.** See *Lochiomelagra* (Illus. Dict.).

Melalomic, Melalomous (*mel-al-o'-mik, -us*) [*μέλας*, black; *λῶμα*, a fringe]. In biology, furnished with black fringes.

Melambo (*me-lam'-bo*). See *Wintera* (Illus. Dict.).

Melampyrin, Melampyrit (*mel-am'-pi-rin, -rit*) [*Melampyra*, a genus of plants]. See *Dulcit* (Illus. Dict.).

Melan. See *Melon*.

Melancholia. (See Illus. Dict.) Syn., *Melancholic madness; Hypochondriasis; Vapors; Affectus melancholicus; A præcordalis*. See *Sign, Schüle's*. **M., Active, M., Acute, M. activa, M. acutissima**, that form marked by restless wandering influenced by delusions, hallucinations, and anxiety. **M., Affective**, that in which the emotional nature is at fault. **M., Demonophobia.** See *Demonomania* (Illus. Dict.). **M., Diabetic**, that attributed to diabetes. **M., Organic**, that associated with gross organic lesion of the brain. **M., Panphobic**, that associated with the dread of everything. **M. passiva, M., Passive**, a chronic form of slow development and gradual failure of the physical powers. **M., Recurrent**, that characterized by alternating recovery and relapses. **M., Sympathetic**, that dependent upon organic disease other than that of the brain. **M. transitoria simplex**, extreme mental depression with suicidal impulses of sudden onset and limited duration.

Melanidrosis (*mel-an-id-ro'-sis*) [*μέλας*, black; *ἱδρώς*, sweat]. See *Melanephidrosis* (Illus. Dict.).

Melanoplakia (*mel-an-o-pla'-ke-ah*) [*μέλας*, black; *πλάξ*, anything flat or broad]. Pigmentation of the mucous membrane of the mouth.

Melanosarcomatosis (*mel-an-o-sar-ko-mat-o'-sis*). The condition favoring the formation of melanosarcomas or the formation of them.

Melanosis. (See Illus. Dict.) **M. of the Intestine**, a black discoloration about the periphery of the lymph-nodes, or more rarely involving the entire villi, encountered in chronic intestinal catarrh. Ger. *Zottenmelanose*.

Melanthera (*mel-an'-ther-ah*) [*μέλας*, black; *ἀνθηρός*, blossoming]. A genus of composite plants. **M. brownei**, Sch., a species of tropical Africa; the leaves in infusion are recommended as a substitute for quinin.

Melanthin (*mel-an'-thin*). $C_{20}H_{32}O_7$ (?). A toxic glucosid from the seeds of *Nigella sativa*, L. It crystallizes from alcohol in needles almost insoluble in water or ether.

Melassate (*mel-as'-āt*). A salt of melassic acid.

Melezitase (*mel-e-zi'-tāz*). A ferment which hydrolyzes melezitose.

Melia (*me'-le-ah*) [*μελία*, the ash-tree, on account of the similarity of its leaves]. A genus of the order *Meliaceæ*. **M. azadirachta**, L., Indian elder, lilac of China, indigenous to Asia but naturalized in southern Europe and America. The entire plant is bitter and narcotic, in small doses purgative and anthelmintic; the leaves and blossoms are vulnerary and stomachic; the bark, called mangrove, is tonic and emmenagog; the root bark, known in India as bewinamara, margosa, isa-bevu, nim, gori, is used in lepra and scrofula and as an emetic; the oil of the seeds (mar-

gosa oil, neem oil) is antiseptic. The bark contains a bitter substance mangrovin, gum, and a kind of catechu. **M. azedarach,** L., bakayan, gora-nim, pride of India, bead tree, pride of China, indigenous to Asia and naturalized in the United States. The root bark is anthelmintic. Dose of fld. ext., 10–30 ♏ (0.6–1.8 c.c.). The oil from the seeds is used in skin-diseases and as a vulnerary.

Melial (*mel'-le-al*). Resembling or belonging to the genus *Melia*.

Melilotate (*mel-il'-o-tāt*). A salt of melilotic acid.

Melilotin (*mel-il'-o-tin*). Hydrocumarin.

Melilotol (*mel-il'-o-tol*). $C_9H_8O_2$. An oily liquid obtained by Phipson by distillation of *Melilotus officinalis*, Lam.

Melin (*mel'-in*). See *Rutin* (2).

Melinous (*mel'-in-us*) [μήλινος]. Quince-colored.

Melissic (*mel-is'-ik*) [*mel*, honey]. Obtained from honey or from beeswax.

Mellate (*mel'-āt*). See *Mellitate*.

Mellitate (*mel'-it-āt*). A salt of mellitic acid.

Mellonid (*mel'-on-id*). A salt of hydromellonic acid.

Melmaroba (*mel-mar-o'-bah*). A liquid preparation said to consist of extract of manaca, caroba, stillingia, and potassium iodid; it is used in syphilis, chronic skin-diseases, and rheumatism. Dose, 2 fluidrams (3.75–7.50 c.c.).

Meloe (*mel'-o-e*). A genus of *Coleoptera* established by Linnæus. Several species indigenous to Europe secrete a yellow, vesicatory, oily juice.

Melol (*mel'-ol*) [*mel*, honey]. Disguised castor oil.

Melolonthin (*mel-ol-on'-thin*) [*Melolontha*, a genus of coleopterous insects]. $C_5H_{12}N_2SO_3$. A colorless crystalline substance, soluble in acids and alkalis, extracted from *Melolontha vulgaris*.

Melon (*mel'-on*) [μῆλον, an apple]. 1. See *Citrullus* and *Cucumis*. 2. A proprietary cicatrizant and vulnerary said to be obtained from the tops of *Trigonella cœrulea*, Ser. It is a thick greenish-black liquid with aromatic odor. **M.-root,** the root of muskmelon, *Cucumis melo*, L. Dose of cultivated root, 6 dr. (25 gm.); of wild root, 8–11 gr. (0.51–0.71 gm.). **M.-tree,** the *Carica papaya*, L.

Melonemetin (*mel-on-em'-et-in*). See *Melonenemetin*.

Melonenemetin (*mel-on-en-em'-et-in*). A bitter, brown substance extracted by Jorosiewicz from the root of muskmelon, *Cucumis melo*, L. It is used as an emetic and purgative. Dose, ¾–1⅛ gr. (0.05–0.07 gm.).

Melulose (*mel'-u-lōz*). A concentrated extract of malt.

Membrane. (See Illus. Dict.) **M., Accidental,** a false membrane. **M., Albumin** [Ascherson]. See *M. Haptogenous* (Illus. Dict.). **M., Anhistous,** the decidua. **M., Bichat's.** See *Henle's Fenestrated Membrane* (Illus. Dict.). **M., Blastodermic,** the blastoderm. **M., Cargile.** See *Cargile Membrane*. **M.s, Cerebral,** the arachnoid, dura, and pia. **M., Choriocapillary.** See *Membrana ruyschiana* (Illus. Dict.). **M., Chorioid.** 1. See *Chorioid*. 2. See *Chorioid Plexus* (Illus. Dict.). **M., Compound,** one made up of two distinct lamina, as seromucous and serofibrous membranes. **M., Cuticular.** See *Layer, Cuticular*. **M., Démours', M. demoursiana, M., Duddell's, M. duddelliana.** See *Descemet's Membrane* (Illus. Dict.). **M., Enamel** (of the teeth), the cuticula dentis. **M., External** (of the heart), the pericardium. **M., Hannover's Intermediate,** the enamel membrane; the inner, cellular layer of the enamel organ of the dental germ of the fetus. **M., Hovius'.** See *Membrana ruyschiana* (Illus. Dict.). **M., Hyaline.** See *M., Basement* (Illus. Dict.). **M., Investing,** the layer or layers investing the cellular layer of vessels. Syn., *External vascular coat*. **M., Keratogenous,** the matrix of the nail. **M., Kölliker's.** See *M., Reticular* (Illus. Dict.). **M. of Neumann.** See *Sheath, Dentinal* (Illus. Dict.). **M., Palatine,** the membrane covering the roof of the mouth. **M., Pseudoserous,** one presenting the outward characteristics, moist, glistening surface, etc., of a serous membrane, but differing from it in structure; *e. g.*, the endothelium of the bloodvessels. **M., Scarpa's, M., Secondary Tympanic,** the membrane which closes the fenestra rotunda of the tympanic cavity. Syn., *Membrana tympani secundaria*. **M., Structureless.** See *M., Basement* (Illus. Dict.). **M., Subepithelial.** See *M., Debove's* (Illus. Dict.). **M., Tarsal.** See *Cartilage, Palpebral*. **M., Testaceous.** See *Membrana putaminis* (Illus. Dict.). **M., Valentin's Limiting.** See *Schwann's Sheath* (Illus. Dict.). **M., Vibratile,** one capable of vibration, as the tympanic membrane. **M., Vocal.** See *M., Cricothyroid* (Illus. Dict.). **M., Volkmann's.** See *M., Pyogenic* (Illus. Dict.).

Membranella (*mem-bran-el'-ah*) [*membrana*, a membrane]. A little membrane. In the pl., *Membranellæ*. Thin adherent plates, each of which represents coalesced cilia, occurring in the frontal field of Stentor, and reproduced with remarkable exactness in the "corner cells" of *Cyclas*.

Membraniferous (*mem-bran-if'-ur-us*) [*membrana*, membrane; *ferre*, to bear]. Having a membranous expansion.

Membranins, Membranin Bodies (*mem'-bran-ins*). A special group of proteins, containing sulfur, which blackens lead; insoluble in water, salt solution, or dilute acids or alkalis, but soluble in the last two with warmth. Like mucins, they yield a reducing substance by action of dilute mineral acids with heat. They give a beautiful red coloration with Millon's reagent. Membranins constitute the substance of Descemet's membrane and of the capsule of the crystalline lens.

Membrocarneous (*mem-bro-kar'-ne-us*) [*membrana*, membrane; *carneus*, belonging to flesh]. Both membranous and fleshy.

Membrocartilaginous (*mem-bro-kar-til-aj'-in-us*). Both cartilaginous and fleshy.

Memory. (See Illus. Dict.) **M., Anterograde,** memory for events long past but amnesia in regard to recent occurrences.

Memphis Stone (*mem'-fis*) [λίθος Μεμφίτης]. A small stone, found near Memphis in Egypt, said to be a variety of opal; according to Dioscorides, it rendered parts upon which it was rubbed proof against cutting or burning and insensible to pain. Syn., *Lapis memphites*.

Menabea (*men-ab-e'-ah*). A genus of plants of the order *Asclepiadeæ*. **M. venenata,** Baillon. (1890), a plant indigenous to Madagascar, where it was first collected by M. Grandidier. The root is exceedingly poisonous, a small piece producing death within a half-hour. It is called poison de Sakalaves, tanghin de menabé, tanghin femelle, kissoumpa, ksopo.

Menarche (*men-ar'-ke*) [μῆνες, menses; ἀρχή, beginning]. The period at which the menses first appear, as a manifestation of the complete development of the female genital organs.

Menate (*men'-āt*). A salt of menic acid.

Mendel's Law. See under *Law*.

Mendeléeff's Periodic Law. See *Law, Periodic*.

Mendelism (*men'-del-izm*). The theory proposed by Mendel and comprised in his law of dichotomy in plant hybridization. See *Law, Mendel's*.

Meningematoma, Meningæmatoma (*men-in-je-mat-o'-ma*). Hematoma of the dura.

Meningeocortical (*men-in-je-o-kor'-tik-al*). Relating to the meninges and the cortex of the brain.

Meninghematoma. See *Meningematoma.*

Meningism (*men'-in-jizm*) [μῆνιγξ, membrane]. 1. Dupré's term for simple circulatory disturbances of the meninges of toxic or hysteric origin. 2. Pseudomeningitis accompanied by symptoms similar to those of tuberculous meningitis, but distinguished from it by a mostly favorable course. (Roth.)

Meningitic (*men-in-jit'-ik*). Relating to or characteristic of meningitis. **M. Streak.** See *Tache méningéale* (Illus. Dict.).

Meningitiform (*men-in-jit'-e-form*) [*meningitis; forma*, form]. Like meningitis.

Meningitis. (See Illus. Dict.) See *Signs, Skeer's, Simon's, Roger's, Kernig's, Parrot's.* **M., Abortive Cerebrospinal,** a light rudimentary form marked by stiffness and pain in the neck, headache, and prostration, although the patient may go about; it is frequently observed during an epidemic of a graver form. **M., Acute Cerebral,** acute inflammation of the cerebral pia and arachnoid but not of the dura. **M., Acute Spinal,** severe inflammation of one or all the spinal membranes. **M., Alcoholic,** that due to alcoholism. **M. arthritica,** cephalagra. **M., Basal, M. basalis, M. basilaris,** that affecting the membranes of the lower surface of the brain. Cf. *M., Tuberculous.* **M., Basal, without Tubercles,** a form of acute basal meningitis in which no tubercles are to be found in any part of the body; also called *Simple basal meningitis;* in infants, *Posterior basic meningitis; Leptomeningitis infantum* (Huguenin), *Nontuberculous basal meningitis.* **M., Cerebrospinal Intermittent,** that manifested by a recurring tertian or quotidian fever with exacerbation of all the other symptoms. **M., Epizootic Cerebrospinal,** of horses. See *Leukoencephalitis* and *Forage Poisoning.* **M., Focal,** that confined to a very limited area and usually due to traumatism or syphilis. **M., Hemorrhagic,** symptoms of meningitis accompanying meningeal hemorrhage. **M. hydrocephalica,** tuberculous meningitis. **M., Ichorous Ascending,** that in which the inferior part of the meninges and spinal cord are bathed in a puriform, fetid liquor. **M., Idiopathic Infantile Cerebral.** See *M., Tuberculous* (Illus. Dict.). **M. mechanica,** that due to traumatism. **M., Meningococcic,** that due to *Diplococcus intracellularis meningitidis,* Weichselbaum. **M. mesencephalica,** that limited to the mesencephalon. **M., Metastatic,** that occurring late in the course of some other acute disease. **M., Nontuberculous Basal.** Synonym of *M., Basal, without Tubercles.* **M., Occlusive,** leptomeningitis infantum leading to the occlusion of the foramen of Magendie. **M., Otitic, M. otitica,** that due to or attending suppurative otitis. **M., Phrenitic** [Rilliet], meningitis characterized chiefly by mental disturbance. **M., Posterior Basic.** See *M., Basal, without Tubercles.* **M., Simple Basal, in Infants.** Synonym of *M., Basal, without Tubercles.* **M. serosa,** meningitis with serous effusion. **M., Vertical,** that affecting the superior surface of the brain.

Meningium (*men-in'-je-um*) [μενίγγιον, a little membrane]. See *Arachnoid* (Illus. Dict.).

Meningocele. (See Illus. Dict.) **M., Cerebral,** a cephalic tumor resembling hydromeningocele. **M., Spurious,** this consists of a cavity in the bone, closed by a membrane that may include the skin, pericranium, and dura, or one or two of these. The cystic cavity may communicate with the subdural or subarachnoid space, or with the cavity of the ventricle. Pathologic changes are always found in the brain, principally areas of softening, atrophy, sclerosis, and cystic degeneration. The brain as well as the membranes may adhere to the edge of the space.

Meningocortical (*men-in-go-kor'-tik-al*). Relating to the meninges and the cortex.

Meningoencephalitis. (See Illus. Dict.) **M., Chronic.** Synonym of *General paralysis of the insane.* See under *Paralysis.*

Meningoencephalocele (*men-in-go-en-sef-al'-o-sēl*) [μῆνιγξ, membrane; ἐγκέφαλον, brain; κήλη, tumor]. Hernia of the brain and its meninges.

Meningoencephalomyelitis (*men-in-go-en-sef-al-o-mi-el-i'-tis*) [μῆνιγξ, membrane; ἐγκέφαλον, brain; μυελός, marrow]. Combined inflammation of the meninges, brain, and spinal cord.

Meningoosteophlebitis (*men-in-go-os-te-o-fleb-i'-tis*) [μῆνιγξ, membrane; ὀστέον, bone; φλέψ, vein]. Periostitis combined with phlebitis of the veins of the bone.

Meningotyphoid (*men-in-go-ti'-foid*). Typhoid with symptoms of meningitis.

Meninx (pl. *meninges*). (See Illus. Dict.) **M. arachnoidea, M. media, M. serosa,** the arachnoid. **M. auris,** the tympanic membrane. **M. crassa, M. dura, M., Exterior, M. fibrosa, M. pacheiia, M. sclera,** the dura. **M., Interior, M. vasculosa,** the pia. **Meninges, Spinal,** the membranes enveloping the spinal cord.

Menischesis (*men-is'-ke-sis*). See *Ischomenia* (Illus. Dict.).

Mensa (*men'-sah*) [L.]. A table; the upper surface of the molars.

Mensalis (*men-sa'-lis*). See *Trapezius* in *Muscles, Table of* (Illus. Dict.).

Menstrual. (See Illus. Dict.) 2. Enduring for a month.

Mentalization (*men-tal-i-za'-shun*). See *Mentality* and *Ideation* (Illus. Dict.).

Menthalcal (*men-thal'-kal*). A proprietary preparation said to consist of menthol with the mineral salts in the springs at Ems.

Menthiodol (*men-thi'-o-dol*). A local application for neuralgia made by triturating together four parts of menthol heated in a capsule with one part of iodin.

Menthoform (*men'-tho-form*). A combination of formic aldehyd, glycerin, and menthol.

Menthol. (See Illus. Dict.) Syn., *Methylpropylphenyl hexahydrid.* **M., Benzoate,** white crystalline masses, soluble in water. It is said to be superior to menthol as a counterirritant. **M. Carbonate,** $(C_{10}H_{19})_2CO_3$, a white tasteless, odorless powder, sparingly soluble in alcohol.

Mentholeate (*men-tho'-le-āt*). A solution used in skin-diseases consisting of menthol, 200 gr.; heated with oleic acid, 4 drams.

Mentholin (*men'-thol-in*). A proprietary remedy for coryza said to consist of menthol, 1 part; pulverized coffee and boric acid, each 10 parts.

Mentholiodol (*men-thol-i'-o-dol*). See *Tetraiodopyrol.*

Mentholyptine (*men-thol-ip'-tēn*). A proprietary external antiseptic said to consist of menthol and eucalyptol.

Menthophenol (*men-tho-fe'-nol*). An antiseptic fluid obtained by fusing together one part of phenol and three parts of menthol. It is used in the treatment of burns and wounds, and diluted (15 drops to a glass of water) as a mouth-wash; also as a local anesthetic (3%–5% in warm water).

Menthorol (*men'-thor-ol*). A mixture of parachlorphenol and menthol used in tuberculosis of upper air-passages.

Menthoxol (*men-thoks'-ol*). An antiseptic fluid mixture of 3 % solution of hydrogen peroxid, 32 %–38 % alcohol, and 1 % menthol. It is innocuous and deodorizing, and is used in suppurating wounds, ozena, etc.

Menthyl (*men'-thil*). $C_{10}H_{19}$. The hypothetic radicle of menthol. **M. Acetoacetate**, $CH_3C(OH):CH.COOC_{10}H_{19}$, a bactericide.

Mentism (*men'-tizm*) [*mens*, mind]. Disturbance of mental action due to emotion or excitement.

Mentoanterior (*men-to-an-te'-re-or*) [*mentum*, chin; *anterior*]. Having the chin presenting. See *Table of Presentations of the Fetus* (Illus. Dict.).

Mentophenol. See *Menthophenol.*

Mentoposterior (*men-to-pos-te'-re-or*). Having the chin directed backward. See *Table of Presentations of the Fetus* (Illus. Dict.).

Menyanthol (*men-yan'-thol*). C_8H_8O(?). A decomposition-product of menyanthin by action of dilute sulfuric acid, a colorless oil volatilizing with difficulty with odor of bitter almonds.

Meralgia, M. paresthetica (*me-ral'-je-ah*) [*μηρός*, thigh; *ἄλγος*, pain]. A condition observed by Roth in Moscow in 1894, characterized by pain, paresthesia, and also anesthesia on the outside of the upper part of the thigh and due to disease of the external cutaneous femoral nerve. It was described by Bernhardt (1865) as a paresthesia of the lateral femoral cutaneous nerve characterized by disorders of sensibility, in the antero-external surface of the thigh. Syn., *Bernhardt's paresthesia; Roth's disease.*

Meratrophy. (See Illus. Dict.) 2. Atrophy of a limb.

Mercauro (*mur-kaw'-ro*). An alterative compound of an equal amount of the bromids of gold, arsenic, and mercury; it is used in syphilis and scrofula. Dose, 5–15 ♏ (0.3–0.69 c.c.) 3 times daily after meals.

Mercolint (*mur'-ko-lint*). A proprietary article consisting of cotton flannel impregnated with metallic mercury very finely divided. It is used in Blaschko's treatment.

Mercuralgam (*mer-ku-ral'-gam*). An amalgam of mercury, aluminium, and magnesium. It is used as a substitute for mercurial ointment. Syn., *Mercuriol.*

Mercuramin (*mur-ku-ram'-in*). Mercury ethylenediamin citrate.

Mercuriate (*mer-ku'-re-āt*). A salt of mercury.

Mercuriol (*mur-ku'-re-ol*). See *Mercuralgam.*

Mercuroidohemol (*mur-ku-ro-i-o-do-he'-mol*). See under *Hemol.*

Mercurol (*mur'-ku-rol*). A compound of nucleinic acid and mercury (10 %) forming a brownish-white powder soluble in water. It is used in chronic ulcers in 2%–5% solution; in gonorrhea ½%–2% injection; in syphilis internally. Dose, ¾–1½ gr. (0.05–1 gm.) twice daily. Syn., *Mercury nucleid.*

Mercuroparaphenylthionate (*mur-ku-ro-par-ah-fen-il-thi'-on-āt*). See *Mercury paraphenylthionate.*

Mercuroseptol (*mur-ku-ro-sep'-tol*). See *Mercury quinoseptolate.*

Mercurthymolacetate (*mur-kur-thi-mol-as'-et-āt*). See *Mercury thymolacetate.*

Mercury. (See Illus. Dict.) Antidotes for mercury and its salts; zinc sulfate, emetics, stomach siphon, chalk mixture, white of egg, copious drafts of milk, castor oil, reduced iron, iron filings, table salt. **M. Acetamid**, injection, in syphilis 2–3 cg. daily. **M. Alanate.** See *M. Amidopropionate.* **M. Albuminate, Dry**, a compound of albumin with 4% of mercuric chlorid; a white powder soluble in water with turbidity. Triturated with milk-sugar it is used as an antiseptic dressing for wounds. **M. Albuminate, Liquid**, a slightly opalescent liquid containing 1% of mercuric chlorid; it is used as a hypodermic in syphilis. Injection 8–15 ♏ (0.5–1 c.c.). **M. Amido-chlorid, M.-ammonium Chlorid, Normal, Mercury and Ammonium Chlorid.** See *Hydrargyrum ammoniatum* (Illus. Dict.). **M. Amidopropionate**, $Hg(C_3H_6NO_2)_2$, white needles soluble in water; alterative and anti-syphilitic; it is used hypodermically or by mouth in syphilis. Dose, $\frac{1}{12}$–$\frac{1}{6}$ gr. (0.005–0.01 gm.). Syn., *Mercuric alanin.* **M.-ammonium Chlorid, Fusible**, $HgNH_2Cl.NH_4Cl$, white crystals soluble in water; antiseptic and alterant. It is used hypodermically in syphilis. Dose, $\frac{1}{6}$ gr. (0.011 gm.) in 0.5 water. Syn., *Mercuric diammonium chlorid; Fusible white precipitate; Alembroth salt.* **M. and Antimony Sulfid**, a mixture of black mercury sulfid and gray antimony sulfid used in scrofula. Dose, 2–4 gr. (0.13–0.26 gm.). **M. Arsenate**, $2Hg_3HAsO_4+H_2O$ (? Simon), a brownish-yellow or brick-red powder; it is used in syphilis. Syn., *Mercuric arsenate.* **M. Arsenite**, Hg_3AsO_3(?), a yellowish unstable powder. Syn., *Mercurous arsenite.* **M. Arsenoiodid, M. and Arsenic Iodid.** See under *Arsenic* (Illus. Dict.). **M. Asparaginate**, $Hg(C_4H_7N_2O_3)_2$, obtained from mercuric oxid and a hot aqueous solution of asparagin; it is alterative and antiseptic and is used hypodermically in syphilis. Dose, $\frac{1}{12}$–$\frac{1}{6}$ gr. (0.005–0.01 gm.) daily. Syn., *Asparagin-mercury; Mercuric oxid asparagin.* **M. Bichlorid.** See *Hydrargyrum chloridum corrosivum* (Illus. Dict.). **M. Bichlorid, Carbamidated**, $HgCO(NH)_2Cl_2$, colorless crystals soluble in hot alcohol; it is used externally in chronic rheumatism and syphilis and hypodermically in 1% aqueous solution. Dose, ½–1 syringeful of solution. Syn., *Mercuric urea chlorid.* **M. Bichlorid, Peptonized.** 1. A yellowish powder containing 10% mercuric chlorid, soluble in water. Dose, ½–1½ gr. (0.032–0.1 gm.). 2. A clear yellow liquid containing 1% mercuric chlorid. Hypodermically in syphilis. Dose, 15 ♏ (1 c.c.), properly diluted, daily. **M. Biiodosalicylate**, $Hg(C_7H_3I_2O_3)_2$, a compound of mercury 20.45% and iodin 52%; a fine yellow powder insoluble in alcohol, water, and ether. It is recommended in syphilis. **M. Biniodid, Red.** See *Hydrargyrum iodid. rubrum* (Illus. Dict.). **M. Bisulfate.** See *M. Sulfate, Mercuric, Normal.* **M. Borate**, $Hg_2B_4O_7$, a brown antiseptic powder used as a dusting-powder and ointment (1:50) for wounds. Syn., *Mercurous tetraborate; Mercurous pyroborate.* **M. Borotungstate**, $3Hg_2OB_2O_3.9WO_3+14H_2O$(?), a bright-yellow powder. Syn., *Mercurous borowolframate.* **M. Bromid, Mercuric**, $HgBr_2$, silvery, shining scales, soluble in water and ether. It is alterative. Dose, $\frac{1}{16}$–¼ gr. (0.004–0.016 gm.). **M. Bromid, Mercurous**, $HgBr_2$, a white powder; alterative and antiseptic. Dose, 1 gr. (0.065 gm.) in divided doses increasing gradually. **M. Cacodylate**, a very poisonous salt with little medicinal value. It is used in tuberculosis. Dose, ½ gr. (0.03 gm.) daily. **M., Children's, M., Boys', M., Girls', M., Herb.** See *Mercurialis annua* (Illus. Dict.). **M. Chlorid, Ammoniated.** See *Hydrargyrum ammoniatum* (Illus. Dict.). **M., Colloidal**, a granular mass of metallic luster and blackish-brown color, freely soluble in water, insoluble in alcohol or ether. Syn., *Hyrgol; Hyrgolum.* **M. Diammonium Chlorid.** See *M. and Ammonium Chlorid, Fusible.* **M. Diethid**, HgC_4H_{10}, a colorless very toxic liquid, a reaction-product of ethyl iodid and sodium amalgam with acetic ether; slightly soluble in alcohol and ether; boils at 159° C.; sp. gr. 2.46. Syn., *Mercuric diethid; Mercury ethyl.* **M. Diiodosalicylate.** See *M. Biiodosalicylate.* **M. Dimethid**, $Hg(CH_3)_2$, a poisonous

colorless oil obtained from the reaction of sodium amalgam and methyl iodid in the presence of acetic ether; it is soluble in alcohol and ether; boils at 95° C.; sp. gr. 3.069. Syn., *Mercuric dimethid; Mercury-methyl.* **M. Diphenyl,** $Hg(C_6H_5)_2$, a mercury substitution derivative of phenol; highly poisonous white crystals, soluble in benzene, chloroform, ether, hot alcohol and carbon bisulfid; melts at 120° C.; sp. gr. 2.318. **M., Dog's.** See *Mercurialis perennis* (Illus. Dict.). **M. Ethylchlorid,** $Hg(C_2H_5)Cl$, a compound of mercuric chlorid and mercury ethid; colorless, lustrous scales, slightly soluble in water and alcohol; it is recommended instead of mercuric chlorid in injection because of its indifference to albumin. Dose, 0.005 gm.; injection, 0.5–1 : 100. **M.-ethylenediamin Citrate,** a salt of mercury used in 3 : 1000 solution for disinfection of hands. Syn., *Mercuramin.* **M. Ethylsulfate,** $(C_2H_5Hg)_2SO_4$, silvery scales or crystals which are decomposed by water and form basic salt. **M., Extinguished,** a trituration of metallic mercury with some fatty substance until no globules of the mercury can be discovered with a magnifying glass of low power. **M. Formamidate,** $Hg(HCONH)_2$, a solution of formamid and mercuric oxid; each cubic centimeter corresponds to 0.01 gm. of mercuric chlorid. Injection in syphilis, 0.01 gm. daily. Syn., *Mercuric formamidate.* **M. Gallate,** $Hg(C_7H_5O_5)_2$, a greenish-black insoluble powder containing about 37% of mercury. It is alterative and antisyphilitic. Dose, 1½–3 gr. (0.010–0.020 gm.) daily in pills. **M. Glutinopeptonate, Sublimate,** a white, hydroscopic powder said to contain 25% of corrosive sublimate; it is used subcutaneously in syphilis. Dose, ⅙ gr. (0.01 gm.). **M. Gynocardate,** yellowish-white masses used as an antiseptic in diseases of the skin. **M., Hahnemann's Soluble,** black oxid of mercury. **M. Imidosuccinate.** See *M. Succinimid.* **M. Iodate,** $Hg(IO_3)_2$, used subcutaneously in syphilis. Dose, ⅙ gr. (0.01 gm.). Syn., *Mercuric iodate.* **M. Iodid, Green, M. Iodid, Yellow.** See *Hydrargyrum iodid. viride* (Illus. Dict.). **M. Iodid, Red.** See *Hydrargyrum iodid. rubrum* (Illus. Dict.). **M. Iodocacodylate,** indicated in depressed or neurasthenic cases of syphilis. Dose, 1 c.c. increased to 2 c.c., subcutaneously. **M. Iodochlorid,** a red crystalline powder. **M. Iodotannate,** a compound of mercury, 0.008 gm.; iodin, 0.03 gm.; kramerotannic acid, 0.04 gm.; and glycerin, 1 c.c. It is used subcutaneously in syphilis and scrofula. **M. Lactate,** the neutral lactate of mercury is recommended in syphilis by mouth or subcutaneously. Dose, ⅙ gr. (0.01 gm.) daily. **M. of Life,** powder of algaroth. **M.-lithium, Iodid,** $HgI_2 2LiI$, soluble in alcohol and ether; it is recommended in gravel complicated with syphilis; incompatible with water. Syn., *Mercuric lithium iodid.* **M. with Magnesia,** a trituration of two parts of white magnesia with one of mercury. **M. Mercaptid,** $Hg(C_2H_5S)_2$, small white crystalline scales soluble in alcohol; melts at 77° C. Syn., *M. ethylmercaptid.* **M. Metallic,** mercury as a metal in its pure state. **M.-methyl.** See *M. Dimethid.* **M., Milk of.** 1. Calomel prepared by precipitation. 2. See *M. and Ammonium Chlorid, Fusible.* **M. Monoxid,** black oxid of mercury. **M. and Morphin Oleate,** a mixture of 20% of yellow mercuric oxid and 5% of morphin in oleic acid, soluble in ether and oleic acid. It is alterative, antiseptic, and anodyne. **M. Naphtholacetate,** $HgC_{10}H_7O \cdot C_2H_3O_2$, white needles, soluble in ether, benzene, chloroform, alcohol, acetic acid, and carbon bisulfid; melts at 154° C. **M. Naphtholate,** $Hg(C_{10}H_7O)_2$, a lemon-colored antiseptic powder containing 30.8% of mercury. Dose, 1 gr. (0.065 gm.). Syn., *M. β-naphthol.* **M. Nitrate, Mercuric,** $Hg(NO_3)_2$, a white, deliquescent, poisonous powder, soluble in water; alterative and antiseptic. Dose, $\frac{1}{10}$–¼ gr. (0.001–0.008 gm.). **M. Nitrate, Mercurous, Normal,** $Hg_2(NO_3)_2 + 2H_2O$, colorless tablets, soluble in very dilute nitric acid and in a small quantity of water. It is antisyphilitic, antiseptic, and caustic. Dose, $\frac{1}{32}$–⅛ gr. (0.002–0.016 gm.). Max. dose. ¼ gr. (0.016 gm.), single; 1 grain (0.065 gm.) daily. **M. Nucleid.** See *Mercurol.* **M. Oxalate, Mercuric,** HgC_2O_4, a grayish-white explosive powder. **M. Oxalate, Mercurous,** $Hg_2C_2O_4$, a white or grayish powder. **M. Oxid, Black,** $Hg_6O \cdot NH_2NO_3 + NH_4NO_3$ (approximately), black or gray-black powder which decomposes on exposure to light. Dose, ¼–3 gr. (0.016–0.2 gm.). Syn., *Hahnemann's soluble mercury; Ammoniated nitrate of mercury; Black precipitate; Oxydimercurous ammonium nitrate.* **M. Oxid, Red, Mercuric Oxid.** See *Hydrargyrum oxid. rub.* (Illus. Dict.). **M. Oxid, Yellow.** See *Hydrargyrum oxid. flav.* (Illus. Dict.). **M. Oxycyanid,** $HgO \cdot HgCy_2$, a white, crystalline, antiseptic powder, soluble in water; application for wounds and surgical operations, 0.6% solution. **M. Paraphenylthionate,** $C_6H_4 \cdot OH \cdot SO_3Hg$, a stable crystalline noncaustic compound used as a substitute for corrosive sublimate. Syn., *Hydrargyrol.* **M. Peptonate,** a solution of mercuric chlorid, 1 part; peptone, 3 parts; water, 100 parts; subcutaneous dose, 1 c.c., which is equivalent to ⅙ gr. (0.01 gm.) of mercuric chlorid. Syn., *Mercuric chlorid.* **M.-phenol, M. Phenolate.** See *Hydrargyrum carbolas* (Illus. Dict.). **M.-phenoldisulfonate,** bactericide and antiseptic in 1–5 : 1000 solution. Syn., *Hermophenyl.* **M. Phenylacetate,** $HgC_6H_5 \cdot C_2H_3O_2$, colorless prisms, soluble in alcohol or benzene, slightly soluble in water; melts at 149° C. Syn., *Mercuric phenylacetate.* **M. Phosphate, Mercuric,** $Hg(PO_4)_2$, heavy white powder. **M. Phosphate, Mercurous,** $(Hg_2)_3P_2O_8$, a white powder. **M. and Potassium Cyanid,** $Hg(Cn)_2 2KCN$, colorless crystals soluble in water; it is antiseptic. Syn., *Mercuric potassium cyanid.* **M. and Potassium Hyposulfite,** a mixture of mercuric sulfite with potassium sulfite, $2Hg(S_2O_3)_2 + 5K_2S_2O_3$, containing 31.4% of mercury; it forms colorless crystals soluble in water and is used subcutaneously in syphilis. Dose, $\frac{1}{15}$–⅓ gr. (0.013–0.022 gm.). **M. Pyroborate.** See *M. Borate.* **M.-quinoseptolate,** $C_9H_5 \cdot N \cdot OH \cdot SO_3Hg + 2NaCl$, a compound of quinosol mercury with sodium chlorid. It is an odorless mass resembling the yolk of an egg, which in water swells into a slimy mass. It is used in syphilis. Syn., *Hydrargyrolseptol.* **M. Resorcinacetate,** a yellow crystalline powder containing 68.9% of mercury; it is antisyphilitic. Dose, for hypodermic use: 3 ♏ (0.2 c.c.) of a solution of 85 gr. (5.6 gm.) of the salt in 85 gr. of liquid paraffin and 30 gr. (2 gm) anhydrous lanolin, once a week. Syn., *Resorcin mercury acetate.* **M. Rhodanate** or **Rhodanid.** See *M. Sulfocyanate.* **M. Saccharate,** a trituration of 1 part of pure mercury and 1 or 2 parts of powdered sugar; it is used as a vermifuge. **M. Santoninate,** $Hg_2(C_{15}H_{19}O_4)_2$, a white powder. **M. Silicofluorid,** $Hg_2SiF_6 + 2H_2O$, prismatic crystals, soluble in water; it is used as a wound antiseptic in solution 1 : 1000 and as ointment 1 : 2000. **M., Soluble, Hahnemann's.** See *M. Oxid, Bla k.* **M.-sozoiodol, M. Sozoiodolate,** $HgC_6H_2I_2O \cdot SO_3$ (Fischer), a fine, yellow powder obtained as a precipitate from mixing aqueous solutions of sodium sozoiodol and mercuric nitrate; it is soluble in 500 parts of

water and in solution of sodium chlorid. It is alterative and antiseptic and is used locally (ointment 3%–5%) and subcutaneously in syphilis, injection 1¼ gr. (0.08 gm.) per dose in solution of potassium iodid. Syn., *Mercurous diiodoparaphenol sulfonate.* **M. Succinate,** $Hg(C_4H_4O_4)_2$, whitish powder soluble in a solution of sodium chlorid. Syn., *Mercuric succinate.* **M.-succinimid,** $Hg(C_4H_4NO_2)_2$, long, white, shining crystals soluble in 25 parts of water, slightly soluble in alcohol; it is recommended as a hypodermic antisyphilitic (1.3 : 100). Dose, ⅛ gr. (0.013 gm.). Syn., *M. imido-succinate; Mercuric imidosuccinimid; Mercuric succinimid.* **M. Sulfate, Mercuric Basic.** See *Hydrargyrum subsulph. flav.* (Illus. Dict.). **M. Sulfate, Mercuric Normal,** $HgSO_4$, a white powder. Syn., *M. persulfate; M. bisulfate; Neutral mercuric sulfate.* **M. Sulfid, Black,** a mixture of mercury and mercuric sulfid; it is alterative and anthelmintic. Dose, 3–8–15 gr. (0.2-0.52–1 gm.). Syn., *Black mercuric sulfid; Ethiops mineral.* **M. Sulfocyanate,** $Hg(CNS)_2$, a white or grayish powder, soluble in chlorids, potassium sulfocyanate, slightly soluble in water. Syn., *Mercuric sulfocyanid* or *rhodanid.* **M. Tetraborate.** See *M. Borate.* **M. Tetraiodophenolphthalein.** See *Apallagin.* **M.-thymol.** See *M. Thymolate.* **M. Thymolacetate,** $HgC_{10}H_{13}O.C_2H_3O_2 + Hg(C_2H_3O_2)_2$, colorless insoluble crystals containing 57% of mercury; it is used in tuberculosis, syphilis, etc., by intramuscular injection. Dose, 1½ gr. (0.1 gm.) every 3–5 days in liquid paraffin or glycerin. **M. Thymolate,** a basic salt variable in its composition; colorless crystals turning red on exposure; it is used in syphilis as mercury thymolacetate. Syn., *Thymol-mercury.* **M. Thymolnitrate,** $C_{10}H_{13}O.Hg_2NO_3$, a white amorphous powder insoluble in water; it is used hypodermically in syphilis. Dose, ½–⅛ gr. (0.005–0.01 gm.). **M. Thymolsalicylate,** a white or grayish powder which darkens on exposure. **M. Thymolsulfate,** $C_{10}H_{13}OHg_2SO_4$, a white insoluble powder. It is used hypodermically in syphilis. Dose, ½–⅛ gr. (0.004–0.01 gm.). **M. Tribromophenolacetate,** a yellow powder containing about 30% of mercury; employed subcutaneously in syphilis, tuberculosis, etc. Dose, 5 gr. (0.32 gm.) dissolved in liquid paraffin, once a week. **M. Urate,** $HgC_5H_2N_4O_3$, a yellowish powder. **M.-urea Chlorid.** See *M. Bichlorid, Carbamidated.* **M. Valerianate,** $Hg(C_5H_9O_2)_2$, white powder. **M. with Chalk.** See *Hydrargyrum cum creta* (Illus. Dict.). **M., Vegetable.** 1. See *Manaca* (Illus. Dict.). 2. The bark of *Bicheatia officinalis,* Heerm., of the order *Moraceæ.* See *Mururé* (Illus. Dict.). **M., Vitriol of,** mercury sulfate. **M. and Zinc Cyanid,** $Zn_4Hg(CN)_{10}$, a white powder insoluble in water, recommended as an antiseptic surgical dressing.

Merista (*mer-is'-tah*). See *Merismopedia* (Illus. Dict.).

Meristiform (*mer-is'-ti-form*). Having the shape of merismopedia; sarcinic.

Meristotropia (*mer-is-to-tro'-pe-ah*). See *Merotropia* (2) (Illus. Dict.).

Merocrania (*mer-o-kra'-ne-ah*) [*μέρος*, a part; *κρανίον*, the skull]. A condition of monstrosity marked by absence of part of the skull.

Merocrine (*mer'-o-krēn*) [*μέρος*, a part; *κρινεῖν*, to secrete]. Applied to glands the cells of which, having elaborated materials of secretion, evacuate them and continue alternately to secrete and evacuate new material. Cf. *Holocrine.*

Merodiastolic (*mer-o-di-as-tol'-ik*) [*μέρος*, a part; *diastole*]. Relating to a part of the diastole.

Merogonia (*mer-o-go'-ne-ah*) [*μέρος*, part; *γονή*, that which begets]. Delags' term for the production of perfect embryos without a female nucleus; it consists in the union of a spermatic nucleus with a given mass of ovular cytoplasm and the transference to this mass of a certain special plasm with energy, contained in the spermocenter.

Merorrhachischisis (*mer-or-rak-is'-kis-is*) [*μέρος*, a part; *ῥάχις*, the spine; *σχίσις*, fissure]. Partial rachischisis.

Merosystolic (*mer-o-sis-tol'-ik*) [*μερος*, a part; *συστολή*, systole]. Relating to a part of the systole.

Merotomy (*mer-ot'-o-me*) [*μέρος*, a part; *τομή*, a cutting]. The section of a living cell for the study of the ulterior transformation of the segments; by extension it is also applied to experimental division of amebas, etc.

Merotropy (*mer-ot'-ro-pe*). See *Tautomerism* (Illus. Dict.).

Merozoite (*mer-o-zo'-it*) [*μέρος*, a part; *ζῶον*, an animal]. Simond's term (1897) for one of the crescentic swarm spores which result from the multiple splitting of a schizont in the *Coccidia.* Syn., *Nomospore* (Lankester, 1900).

Merulius (*mer-u'-le-us*) [*merus*, bright, glistening]. A genus of fungi of the order *Basidiomycetes.* The mycelium of **M. lacrymans,** Schum., causes dry rot in timber, and diseases (sometimes fatal) of the respiratory passages are attributed to the inhaled spores.

Merycic (*mer-is'-ik*) [*μηρυκισμός*, rumination]. Relating to merycism; ruminating.

Merycole (*mer'-ik-ōl*). An individual who practises merycism.

Mesatikerkic (*mes-at-e-kur'-kik*) [*μεσότης*, a middle; *κερκίς*, the mathematical radius]. Neither brachykerkic nor dolichokerkic, but intermediate between the two.

Mescal. See *Mezcal* (Illus. Dict.). **M. Buttons,** the dried tubercles (the flattened, cushion-like, spine-bearing area of cactus plants—in this instance spineless) of *Anhalonium williamsii,* Lem., a cactus of Mexico and Texas, used by the Kiowa Indians in religious ceremonies and producing color-hallucination and other visual phenomena. Dose, 3 buttons in infusion. Syn., *Muscale buttons; Dry whisky.*

Mescalin (*mes'-kal-in*). An alkaloid from *Anhalonium lewinii,* Hennings. It forms a salt with hydrochloric acid more soluble in water and alcohol than the similar salt of anhalonin.

Mesembryanthemum (*mes-em-bre-an'-the-mum*) [*μεσημβρία*, midday; *ἄνθεμον*, a flower]. A genus of succulent plants of the order *Ficoideæ.* **M. crystallinum,** L., ice-plant, indigenous to Greece, Canary Islands, and South Africa, contains soda. The expressed juice is used in dropsy, kidney and liver complaints, and dysentery.

Mesenna (*mes-en'-ah*). See *Moussena* (Illus. Dict.).

Mesentericomesocolic (*mes-en-ter-ik-o-mez-o-kol'-ik*). Relating to the mesentery and the mesocolon.

Mesenteriolum. (See Illus. Dict.) **Mesenteriola tendinum.** See *Mesotendon.*

Mesentery. (See Illus. Dict.) **M., Cardiac,** the mesocardium. **M., Cecal,** the mesocecum. **M., Gastric,** the mesogastrium. **M., Rectal,** the mesorectum. **M., Uterine,** the mesometrium.

Mesiobuccal (*mes-e-o-buk'-al*) [*μέσος*, middle; *bucca*, cheek]. Pertaining to surfaces between the mesial and buccal aspects of the teeth.

Mesiolingual (*mes-e-o-lin'-gwal*) [*μέσος*, middle; *lingua*, tongue]. Relating to surfaces between the mesial and lingual aspects of the teeth.

Mesoappendix (*mes-o-ap-en'-diks*) [*μέσος*, middle; *appendix*]. The mesentery attached to the vermiform appendix.

Mesobrachycephalic (*mes-o-brak-e-sef-al′-ik*). See *Mesocephalic* (Illus. Dict.).

Mesobregmate (*mes-o-breg′- māt*). Relating to a mesobregmus skull.

Mesogamy (*mes-og′-am-e*) [μέσος, middle; γάμος, marriage]. A term applied by Longo (1901) to the process of pollination in *Cucurbita*, in which the pollen tube traverses the tissues of the funiculus and outer integuments before entering the micropyle. Cf. *Chalazogamy*, *Porogamy*.

Mesohyloma (*mes-o-hi-lo′-mah*). See under *Hyloma*.

Mesoileum (*mes-o-il′-e-um*). The mesentery of the ileum.

Mesojejunum (*mes-o-je-ju′-num*). The mesentery attached to the jejunum.

Mesolepidoma (*mes-o-lep-id-o′-mah*). See under *Lepidoma*.

Mesological (*mes-o-loj′-ik-al*) [μέσος, middle; λόγος, science]. Pertaining to environment in its relation to life.

Mesoneuritis (*mes-o-nu-ri′-tis*) [μέσος, middle; νεῦρόν, a nerve]. Inflammation of the structures contained between a nerve and its sheath. **M., Nodular,** a form in which there are nodular thickenings on the nerve.

Mesoomentum (*mes-o-o-men′-tum*). The mesentery of the omentum.

Mesophilic (*mes-o-fil′-ik*) [μέσος, middle; φιλεῖν, to love]. Applied to microorganisms which develop best at about body-temperature, 35°–38° C. Cf. *Psychrophilic; Thermophilic*.

Mesophloem (*mes-o-fle′-um*) [μέσος, middle; φλοιός, bark]. The middle layer of bark; in many plants it is rich in cinenchyma or lactiform vessels.

Mesopneumon (*mes-o-nu′-mon*) [μέσος, middle; πνεύμων, lung]. The fold of the pleura attached to the lung.

Mesostaphylic (*mes-o-staf-il′-ik*). See *Mesostaphyline* (Illus. Dict.).

Mesosystolic (*mes-o-sis-tol′-ik*) [μέσος, middle; συστολή, systole]. Relating to the middle of the systole.

Mesotan (*mes′-o-tan*). The methyloxymethyl ester of salicylic acid; a clear yellowish fluid used in treatment of rheumatism by dermal absorption. Application 1–2 dr. mixed with olive oil or castor oil.

Mesotendon (*mes-o-ten′-don*) [μέσος, middle; *tendo*, a tendon]. Folds of synovial membrane extending to tendons from their fibrous sheaths. Syn., *Mesenteriola tendinum*.

Mesotropic (*mes-o-trop′-ik*) [μέσος, middle; τρέπειν, to turn]. Turned or situated mesad.

Mesoxalate (*mes-oks′-al-āt*). A salt of mesoxalic acid.

Mespilodaphne (*mes-pil-o-daf′-ne*). See *Ocotea*.

Mesua (*mes′-u-ah*) [*J. Musuah*, Arabian physician]. A genus of guttiferous trees. **M. ferrea,** L., nāgakesara, nagchampa, nagecuram, nagasampagi, indigenous to India. The bark and root are sudorific; the seeds of the edible fruit furnish oil used as an application in rheumatism. The petals are used as a stimulant, astringent, and stomachic. The stamens are sold as Nag-Kassar.

Mesuranic (*mes-u-ran′-ik*) [μέσος, middle; οὐρανίσκος, the roof of the mouth]. See *Mesostaphyline* (Illus. Dict.).

Metaamidophenylparamethoxyquinolin (*met-ah-am-id-o-fen-il-par-ah-meth-oks-e-kwin′-ol-in*). An antiperiodic and antipyretic drug used instead of quinin. Dose, 4–8 gr. (0.26–0.52 gm.).

Metacetone (*met-as′-et-ōn*). See *Propione* (Illus. Dict.).

Metachromatic (*met-ah-kro-mat′-ik*) [μετά, beyond; χρῶμα, color]. Relating to a change of colors; staining with a different shade than that of the other tissues, as the mast-cell granules with basic anilin dyes.

Metacresol. See *Metakresol* (Illus. Dict.). Syn., *Metacresylic acid; Metaoxytoluene; Metamethylphenol*. It is stronger than carbolic acid and less toxic. Dose, 1–3 ♏ (0.06–0.2 c.c.). Applied in ½% solution. **M.-anytol,** a 40 % solution of metacresol in anytol; recommended as an application in erysipelas. **M. Bismuth,** $Bi(C_7H_7O)_3$, an antiseptic and astringent used in dysentery. **M.-cinnamic-ester,** an antituberculous compound of metacresol, 25 parts; cinnamic acid, 35 parts; dissolved in toluol and heated with phosphorus oxychlorid, 20 parts.

Metadiphtheric (*met-ah-dif-ther′-ik*) [μετά, in connection with, along with]. Accompanying diphtheria.

Metaelements (*met-ah-el′-e-ments*). A hypothetic group of elemental substances intermediate between the elements as now known to us and protyl.

Metaisocymophenol (*met-ah-is-o-si-mo-fe′-nol*). See *Carvacrol*.

Metal. (See Illus. Dict.) **M., Babbit's.** See *Babbit* (Illus. Dict.). **M., D'Arcet's,** an alloy employed for filling teeth and in the making of dental plates. It consists of bismuth, 8 parts; lead, 5 parts; and tin, 3 parts. It fuses at 212° F. **M., Dutch,** an alloy consisting of copper, 11 parts; zinc, 2 parts. **M., Fusible,** alloys having a base of bismuth and cadmium which melt at low temperatures, 130°–250° F.

Metalbumin (*met-al′-bu-min*). Sherer's name for what is now called pseudomucin.

Metaldehyd (*met-al′-de-hīd*). $C_8H_{16}O_4$. White needles, obtained from aldehyd by action of hydrochloric or sulfuric acid at a temperature below 0° C. It is soluble in chloroform or benzene, slightly in alcohol or ether; sublimes at 112°–115° C. It is sedative and hypnotic. Dose, 2–8 gr. (0.13–0.52 gm.).

Metallesthesia (*met-al-es-the′-ze-ah*) [μέταλλον, metal; αἰσθησις, perception by the senses]. An alleged form of sensibility enabling hysteric or hypnotized subjects to distinguish between the contacts of various metals.

Metallochrome (*met-al′-o-krōm*) [μέταλλον, metal; χρῶμα, color]. A tinting imparted to metal by a filmy deposit of lead oxid. **M. Powder,** flake white; china white, a powder containing 50%–60% of white lead used in making transfers for pottery. The workers frequently suffer from lead-poisoning.

Metamerism. (See Illus. Dict.) 2. The process of the transverse division of an embryo; the formation of metameres.

Metanucleus (*met-ah-nu′-kle-us*) [μετά, beyond; *nucleus*]. Häcker's (1892) term for the egg-nucleus after its extrusion from the germinal vesicle.

Metaphosphate (*met-ah-fos′-fāt*). A salt of metaphosphoric acid.

Metapneumonic (*met-ah-nu-mon′-ik*) [μετά, after; *pneumonia*]. Subsequent to pneumonia.

Metapyretic (*met-ah-pi-ret′-ik*) [μέτα, in company with; πυρετός, burning heat]. 1. Occurring during fever. 2. Occurring after the decline of fever.

Metarabin (*met-ar′-ab-in*). See *Cerasin* (Illus. Dict.).

Metargon (*met-ar′-gon*) [μετά, in company with; *argon*]. A gaseous element discovered by Ramsay and Travers, 1900, associated with liquid argon. Atomic weight, 40.

Metasitism (*met-as′-it-izm*) [μετά, beyond; σίτισμα, a feeding]. In biology a process of nutrition-change taking place in the evolution of animals from plants, in which certain plants begin to absorb and assimilate parts of other plants, thus changing from an inorganic, carbon-dioxid diet to an organic mode of nutrition.

Metasol (*met′-as-ol*). Soluble metacresol-anytol, containing 40% of metacresol. A surgical disinfectant.

Metastannate (*met-ah-stan′-āt*). A salt of metastannic acid.

Metasyphilis (*met-ah-sif'-il-is*) [μετά, beyond; *syphilis*]. Inherited syphilis without local lesions but with a general degeneration.

Metatarsometatarsal (*met-ah-tar-so-met-ah-tar'-sal*). Relating to the metatarsal bones in their position in regard to each other.

Metatartrate (*met-ah-tar'-trāt*). A salt of metatartaric acid.

Metathalamus (*met-ah-thal'-am-us*) [μετά, beyond; *thalamus*]. The boundary region between the mesencephalon and the thalamencephalon.

Metatroph (*met'-at-rōf*) [μετά, beyond; τροφή, nourishment]. See *Saphrophyte* (Illus. Dict.).

Metatrophic (*met-a-trof'-fik*). Applied by A. Fischer to saprophytic organisms which cannot exist in the presence of living tissues. Cf. *Paratrophic; Prototrophic.* **M. Method**, a therapeutic method of modifying the nutrition by changes in the food—with a view of administering some drug; *e. g.*, suppression of sodium chlorid in food of epileptics in order to reinforce the action of bromids.

Metatrophism (*met-at'-ro-fizm*) [μετά, beyond; τροφή, nourishment]. Osborn's term for that compensating readjustment, whereby the sum of nutrition to any region remains the same during redistribution of its parts, as exhibited in the simultaneous development and degeneration of organs which lie side by side, as the muscles of the foot or hand; in the hypertrophy of adaptive organs and atrophy of inadaptive or useless organs.

Metatungstate (*met-ah-tung'-stāt*). A salt of metatungstic acid.

Metaurate (*met'-aw-rāt*). A salt of metauric acid.

Metavanadate (*met-ah-van'-ad-āt*). A salt of metavanadic acid.

Metazonal (*met-ah-zo'-nal*) [μετά, beyond; *zona*, zone]. Applied by Fürbringer to a nerve-trunk lying below a sclerozone.

Metchnikoff's Larva. See *Larva.* **M.'s Theory of Phagocytosis.** See *Phagocytosis* (Illus. Dict.).

Metecism, Metœcism (*met'-es-izm*). See *Heterecism.*

Metempiric (*met-em-pir'-ik*) [μετά, beyond; ἐμπειρία, experience]. Opposed to empiric; not based on experience.

Meteorism. (See Illus. Dict.) **M., Myogenic,** that caused by atony of the abdominal wall. **M., Paralytic,** due to paralysis of the intestinal musculature. **M., Peritoneal.** See *Pneumoperitonitis* (Illus. Dict.).

Meteorograph (*me-te-or'-o-graf*) [μετέωρος, in air; γράφειν, to write]. An apparatus devised by Charles F. Marvin for securing a continuous record of the pressure, temperature, humidity, and velocity of the wind.

Metepiplexus (*met-ep-e-pleks'-us*) [μετά, beyond; ἐπί, upon; *plectere*, to knit]. Stroud's name for the middle portion of the extensive plexus developed from the metatela in the cerebellum of the ape.

Meter. (See Illus. Dict.) **M.-candle** (Weber), a standard measure of illumination, the luminosity of a piece of paper at one meter from a standard candle. **M.-lens.** See *Dioptry* (Illus. Dict.).

Metestrous (*met-es'-trus*). Pertaining to the period in which the activity of the generative organs is gradually subsiding in female animals.

Metestrum, Metœstrum [μετά, after; αἶστρος, a gadfly]. Heape's term for the period of subsidence of sexual activity in animals. Cf. *Anestrum, Estrum* (Illus. Dict.), *Diestrum, Monestrum, Proestrum.*

Methemerine (*meth-em'-er-ēn*) [μετά, among; ἡμέρα, a day]. Quotidian.

Methenyl (*meth'-en-il*). CH. A hypothetic trivalent radicle. **M.orthoanisidin,** a compound of orthoanisidin and orthoformic acid ester; it is a local anesthetic. **M. Tribromid,** bromoform. **M. Trichlorid,** chloroform. **M. Triiodid,** iodoform.

Methethyl (*meth-eth'-il*). A local anesthetic said to consist chiefly of ethyl chlorid with a small quantity of methyl chlorid and chloroform.

Methetic (*meth-et'-ik*) [μέθεξις, participation]. In psychology applied to communications between the different strata of a man's intelligence.

Methonal (*meth'-on-al*). $(CH_3)_2C(SO_2CH_3)_2$. A hypnotic differing from sulfonal in containing methyl mercaptan instead of ethyl mercaptan. Dose, 15–30 gr. (1–2 gm.). Syn., *Dimethyl sulfone-dimethylmethane.*

Methoxyantipyrin (*meth-oks-e-an-te-pi'-rin*). See *Antipyrin metaoxybenzoate.*

Methoxycaffein (*meth-oks-e-kaf'-e-in*). $C_9H_{12}N_4O_3$. A white powder melting at 117° C. It is used hypodermically as a local anesthetic and in neuralgia. Dose, 4 gr. (0.26 gm.).

Methoxysalicylate (*meth-oks-e-sal'-is-il-āt*). Sodium guaiacol carbonate.

Methozan, Methozin (*meth'-o-zan, -zin*). See *Antipyrin* (Illus. Dict.).

Methyl. (See Illus. Dict.) Syn., *Protyl.* **M.-acetanilid,** exalgin. **M. Acetate,** $C_3H_6O_2$, a fragrant liquid obtained from crude wood-vinegar, boils at 55° C. **M.-acetoacetate,** a salt of methylacetoacetic acid. **M.-acetyl,** acetone. **M.-acetylene,** allylene. **M.-allylphenol,** anethol. **M.amidophenol.** See *Anisidin.* **M.-aurin.** See *Eupitton* (Illus. Dict.). **M.benzol,** toluene. **M. Bichlorid** (so called). See *Methylene chlorid* of Richardson. **M. Blue.** (See Illus. Dict.) $NaC_{37}H_{26}N_3S_3O_9$; it is recommended as a topical application in diphtheria in a mixture of 2 parts methyl-blue and 98 parts of sugar. **M. Bromid,** CH_3Br, colorless liquid with burning taste; boils at 102° C. Syn., *Bromomethane.* **M.butyl,** pentane. **M.cacodyl.** See *Dicacodyl.* **M.catechol,** guaiacol. **M. Chloroform,** CH_3CCl_3, a volatile liquid, boiling at 74° C., obtained by chlorinating ethyl chlorid; sp. gr. 1.346 at 0° C. It is anesthetic. Syn., *Trichlorethane; Dichlorethyl chlorid; Monochlorethylidene dichlorid.* **M.-cocain,** $C_{18}H_{23}NO_4$, an alkaloid similar to cocain but with feebler action derived from coca. Syn., *Cocainidin.* **M. Cyanid.** See *Acetonitril.* **M. Furfurane,** $C_4H_3(CH_3)O$, boils at 63° C. and is probably identical with sylvan found in pine-tar oil. **M. Gallate.** See *Gallicin.* **M.-glycocin, M.-glycocoll, M.-glycosin,** sarcosin. **M.-glycolic-acid-phenetedin.** See *Kryofin.* **M.glycolylguanidin.** See *Creatinin* (Illus. Dict.). **M.glyoxal.** See *Aldehyd, Pyroracemic.* **M.glyoxalidin.** See *Lysidin.* **M.-hexane.** See *Heptane* (Illus. Dict.). **M.hexylketon.** See *Aldehyd, Caprylic.* **M. Hydrate,** methyl alcohol. **M. Iodid,** CH_3I, a reaction-product of methyl alcohol with iodin and phosphorus; a transparent liquid, soluble in alcohol, boils 42.8° C.; sp. gr. 2.325 at 0° C.; used as a vesicant instead of cantharides. Syn., *Iodomethane.* **M.ketol.** See *Acetylcarbinol.* **M.ketotrioxybenzol.** See *Gallacetophenone* (Illus. Dict.). **M.-loretin,** $CH_3I.OH.C_9H_3N.SO_3H.H_2O$, paramethylmetaiodo-ortho-oxyquinolinanasulfonic acid, intensely yellow needles or scales, slightly soluble in alcohol or water. An antiseptic used as loretin. **M.-normal-propylphenol,** thymol. **M.-oleosalicylate.** See *Betulol.* **M.-para-amidometaoxybenzoate.** See *Orthoform.* **M.-parapropenylphenol.** See *Anethol* (Illus. Dict.). **M.-pelletierin,** $C_9H_{17}NO$, an alkaloid found by Tanret in root-bark of pomegranate, *Punica granatum*, L.; a clear oily liquid soluble in chloroform, boils at

215° C. **M.-phenacetin**, $C_6H_4(OC_2H_5)N(CH_3)$-CH_2CO, obtained by action of methyl iodid on phenacetin-sodium dissolved in xylene; colorless crystals, melting at 40° C.; readily soluble in alcohol. Employed as a hypnotic. **M. Phenate.** See *Anisol* (Illus. Dict.). **M.phenidin.** See *Anisidin.* **M.-phenol,** cresol. **M.phenmorpholin,** a reaction-product of monochloracetone and orthonitrophenol-potassium treated with tin and hydrochloric acid; an oily liquid, boiling at 152° C. A narcotic. **M.-phenylacetamid.** See *Exalgin* (Illus. Dict.). **M.-phenylketone,** hypnone. **M.propylcarbinolcarbamic-acid-ester.** See *Hedonal.* **M.propylcarbinol-urethane,** a hypnotic. Dose, 8 to 15 gr. (0.5–0.9 gm.). **M.-propyloxybenzol,** thymol. **M.pyridin.** See *Picolin* (Illus. Dict.). **M.pyridin Sulfocyanate,** an energetic noncaustic, nontoxic antiseptic employed in 1% solution. **M.pyrocatechin,** guaiacol. **M.-quinolin.** See *Lepidin* (Illus. Dict.). **M. Rhodanid.** See *M. Sulfocyanate.* **M.salol,** $CH_3(OH)(CH_3)CO_2 . C_6H_5$, a crystalline substance insoluble in water, soluble in ether, chloroform, or hot alcohol; used in rheumatism. Syn., *Paracresotonicphenyl-ester.* **M.-strychnin,** $C_{22}H_{26}N_2O_3 + 4H_2O$, a yellow powder obtained from strychnin by action of methyl iodid and removal of iodin; soluble in water and alcohol. It is used as curare. **M.styrylketone.** See *Benzylidene-acetone.* **M. Sulfocyanate, M. Thiocyanate,** C_2H_3NS, colorless liquid, boils at 133° C., soluble in alcohol and ether; sp. gr. 1.088 at 0° C. **M. Tellurid,** $(CH_3)_2$-Te, a distillation-product of potassium tellurid and potassium methyl sulfate; a light-yellow liquid boiling at 82° C., giving off a yellow vapor with garlicky odor of such persistency that the breaths of workers with it become persistently tainted. **M.theobromin.** Same as *Caffein.* **M.thiophene,** $C_4H_3S . CH_3$, a homolog of thiophene. Syn., *Thiotolene.* **M.toluidin.** See *Xylidin* (Illus. Dict.). **M.tribromsalol.** See *Cordein.* **M.-tyrosin.** See *Rutanhin* (Illus. Dict.). **M. Urethane.** See *Urethylan.* **M.xanthin.** See *Heteroxanthin* (Illus. Dict.).

Methylene. (See Illus. Dict.) **M. Bichlorid, M. Chlorid.** See *M. Dichlorid* (Illus. Dict.). **M. Chlorid** (of Richardson), a colorless liquid consisting of 1 volume of methyl alcohol and 4 volumes of chloroform; it is used in inhalation-anesthesia. Syn., *Methyl bichlorid.* **M.-creasote,** a nontoxic, yellowish powder devoid of taste or odor. It is used in the treatment of tuberculosis. Dose, 8–30 gr. (0.5–2 gm.). Syn., *Pneumin.* **M.dicotoin.** See *Formaldehydcotoin.* **M.-diguaiacol,** $CH_2(C_6H_3(OCH_3)OH)_2$, a combination of formic aldehyd and guaiacol forming a tasteless, nontoxic, yellow powder; antituberculous. Dose, 8–30 gr. (0.5–2 gm.) daily. Syn., *Pulmoform.* **M.-diguaiacol, Acetylated.** See *Eugoform.* **M. Dimethylate, M.dimethyl Ether.** See *Methylal* (Illus. Dict.). **M. Oxid,** formic aldehyd. **M. Sulfid,** $(CH_2S)_2$, a compound of methylene and sulfur.

Methylenitan (*meth-il-en'-it-an*). A faintly sweetish syrup obtained by Butlerow on treating trioxymethylen, a polymer of formic aldehyd, with lime-water; it is almost the same as formose.

Methylenophil, Methylenophilous (*meth-il-en'-of-il, meth-il-en-of'-il-us*) [*methylene; φιλειν*, to love]. Having an affinity for methylene-blue.

Metopoplasty (*met-op-o-plas'-te*) [*μέτωπον*, the forehead; *πλασσειν*]. Plastic surgery of the forehead.

Metoxenous (*met-oks'-en-us*). See *Heterecious.*

Metrepidemia (*met-rep-id-e'-me-ah*) [*μήτρα*, womb; *ἐπιδημία*, epidemic]. Epidemic puerperalism.

Metreurynter (*met-ru-rin'-tur*) [*μήτρα*, uterus; *οὐρύνειν*, to widen]. A form of colpeurynter.

Metreurysis (*met-ru'-ris-is*). See *Colpeurysis* (Illus. Dict.).

Metriocephalic (*met-re-o-sef-al'-ik*) [*μέτριος*, moderate; *κεφαλή*, head]. Applied to a skull in which the arch of the vertex is moderate in height, neither akrocephalic (pointed) nor platycephalic (*q. v.*). Cf. *Scaphocephalic, Tapeinocephalic.*

Metritis. (See Illus. Dict.) **M. dissecans** [*dissecare*, to cut asunder], a term applied by Beckmann to an inflammatory affection of the uterus accompanied by the sloughing away of portions of it.

Metrocystosis (*met-ro-sis-to'-sis*) [*μήτρα*, uterus; *κύτος*, cell]. The formation of uterine cysts or the condition giving rise to them.

Metroendometritis (*met-ro-en-do-met-ri'-tis*). Combined inflammation of the uterus and endometrium.

Metroepidemia (*met-ro-ep-id-e'-me-ah*). See *Metrepidemia.*

Metrohemorrhage (*met-ro-hem'-or-aj*). See *Metrorrhagia* (Illus. Dict.).

Metrology. (See Illus. Dict.) **M., Uterine,** that applied to the capacity of the uterus.

Metroneuria (*met-ro-nu'-re-ah*) [*μήτρα*, uterus; *νεῦρον*, nerve]. A nervous affection of the uterus.

Metropelma (*met-ro-pel'-mah*) [*μετρεῖν*, to measure; *πέλμα*, sole of the foot]. A genus of spiders of the family *Theraphosidæ*, so-called trap-door, mining, or bird spiders. **M. breyeri,** Becker, a poisonous species found in Mexico.

Metrorthosis (*met-ror-tho'-sis*) [*μήτρα*, womb; *ὀρθοῦν*, to set straight]. The correction of a displaced uterus.

Meum (*me'-um*). A genus of umbelliferous plants. **M. athamanticum,** Jacq., meu, baldmoney, spignel, bearwort, a species indigenous to the mountains of middle Europe. The root (athamatica) is used in indigestion, flatulence, catarrh, and as an emmenagog. It contains an ethereal oil.

Mezcalin (*mez'-kal-in*). See *Mescalin.*

Mezels (*me'-zels*). Lepers.

Mezereon. (See Illus. Dict.) **M., Oleoresin,** ethereal extract of the bark of *Daphne mezereum*, L., and other species. It is alterative, stimulant, and rubefacient. Dose, ½–1 ♏ (0.03–0.06 c.c.).

Micajah's Wafers. A remedy for rectal ulcers said to consist of mercury bichlorid, $\frac{1}{16}$ gr.; zinc sulfate, 5 gr.; bismuth subnitrate, 15 gr.; acacia, 5 gr.; carbolic acid, 3 gr.; water, q.s.

Miconia (*mi-ko'-ne-ah*) [*D. Micon*, a Spanish physician]. A genus of shrubs and trees of the order *Melastomataceæ* indigenous to tropical America. **M. holosericea,** D. C., has edible fruit; the leaf-hairs are used as a hemostatic and called amadou de Panamá.

Micrallantoid (*mi-kral-an'-toid*) [*μικρός*, small; *allantois*]. Having a small allantois.

Microbemia (*mi-kro-be'-me-ah*). See *Microbiohemia* (Illus. Dict.).

Microbicidin (*mi-kro-bis'-id-in*). See *Microcidin* (Illus. Dict.).

Microbiologist (*mi-kro-bi-ol'-o-jist*) [*μικρός*, small; *βίος*, life; *λόγος*, science]. An expert in the study of microbes.

Microbiophobia (*mi-kro-bi-o-fo'-be-ah*) [*μικρός*, small; *βίος*, life; *φόβος*, fear]. Morbid fear of microbes.

Microbioscope (*mi-kro-bi'-o-skōp*) [*μικρός*, small; *βίος*, life; *σκοπεῖν*, to view]. A microscope for the study of the changes that take place in living tissues or for the study of microorganisms.

Microbiosis (*mi-kro-bi-o'-sis*). The morbid condition due to infection with pathogenic microorganisms.

Microbism (*mi'-kro-bizm*). The presence of active pathogenic microorganisms in the system. **M.,**

Latent, the presence in the system of inactive pathogenic organisms ready to become aggressive under favorable conditions.

Microblepharism, Microblephary (*mi-kro-blef'-arizm, mi-kro-blef'-ar-e*). See *Microblepharia* (Illus. Dict.).

Microbrachia (*mi-kro-bra'-ke-ah*) [μικρός, small; βραχίων, arm]. Abnormal congenital smallness of the arms.

Microbronchitis (*mi-kro-brong-ki'-tis*). Bronchopneumonia.

Microcautery (*mi-kro-kaw'-tur-e*). Cauterization by the application of a finely pointed instrument.

Microcentrum (*mi-kro-sen'-trum*). The dynamic center of the cell.

Microcephalum (*mi-kro-sef'-al-um*). See *Microcephalon* (Illus. Dict.).

Microcytase (*mi-kro-si'-tāz*). See *Alexin* (Illus. Dict.).

Microelectrometer (*mi-kro-e-lek-trom'-et-ur*) [μικρός, small; *electrometer*]. An apparatus for estimating minute amounts and intensities of electricity.

Microgalvanic (*mi-kro-gal-van'-ik*). Relating to very small galvanic currents.

Microgamete (*mi-kro-gam'-ēt*) [μικρός, small; γαμεῖν, to marry]. A male sexual cell among sporozoa. A male gametocyte. Syn., *Androspore* (E. Ray Lankester); *Chromatozoit* (Simond); *Microsporozoite* (Labbé); *Microgametocyte*.

Microgametocyte (*mi-kro-gam-et'-o-sīt*). See *Microgamete*.

Micromelia. (See Illus. Dict.) **M. chondromalacia,** a form of micromelia in which there is abundant growth of cartilage but no formation of cell-columns, and, partly through softening, partly through irregular calcification and ossification, the longitudinal growth of the bone is restricted. Syn., *Chondrodystrophia malacica* of Kaufmann.

Micromil (*mi'-kro-mil*). An abbreviation of micromillimeter.

Micromotoscope (*mi-kro-mo'-to-skōp*) [μικρός, small; *movere*, to move; σκοπεῖν, to view]. An apparatus of the nature of a vitascope adapted to photographing and exhibiting motile microorganisms.

Micronemous (*mi-kron'-em-us*) [μικρός, small; νῆμα, a thread]. Furnished with short filaments.

Microphobia (*mi-kro-fo'-be-ah*). See *Microbiophobia*.

Microphonograph (*mi-kro-fo'-no-graf*). A combination of the microphone and the phonograph invented by Dussand of Geneva.

Microphonoscope (*mi-kro-fo'-no-skōp*) [μικρός, small; φονή, sound; σκοπεῖν, to view]. A binaural stethoscope with a membrane in the chest-piece to accentuate the sound. Cf. *Phonendoscope; Phonoscope*.

Microphonous (*mi-krof'-on-us*) [μικρός, small; φονή, sound]. 1. See *Micracoustic* (Illus. Dict.). 2. Having a feeble or faint voice.

Microplanar (*mi-kro-pla'-nar*) [μικρός, small; *planus*, flat]. The name given by Zeiss to anastigmatic objectives of the most perfect correction, and designed especially for use in photographing small objects like embryos, and for microprojection.

Microprojection (*mi-kro-pro-jek'-shun*). The projection of the image of microscopic objects on a screen; a magic lantern for microscopic objects is necessary. See *Microscope, Projection*.

Microprotein (*mi-kro-pro'-te-in*). See *Mycoprotein* (Illus. Dict.).

Microscope. (See Illus. Dict.) **M., Projection,** an optical device on the principle of the magic lantern for projecting the image of microscopic objects on a screen. Such an apparatus must possess a powerful radiant like an arc light for illuminating the objects, and a microscopic objective to take the place of the ordinary objective of the magic lantern. Water cells must also be used to remove the heat rays so that the specimens will not be injured. **M., Solar,** a projection microscope in which the sun is used as the radiant.

Microsmatic (*mi-kros-mat'-ik*) [μικρός, small; ὀσμή, a smell]. Having ill-developed olfactory organs. Cf. *Anosmabic* (1).

Microspira (*mi-kros'-pir-ah*) [μικρός, small; σπεῖρα, a coil]. A genus of *Spirillaceæ* with rigid cells, one, rarely two or three polar flagella.

Microsporozoite (*mi-kro-spo-ro-zo'-īt*) [μικρός, small; σπορά, seed; ζῶον, animal]. Labbé's term (1894) for microgamete of sporozoa. Cf. *Macrosporozoite, Pseudovermicule*.

Microstomia (*mi-kro-sto'-me-ah*) [μικρός, small; στόμα, mouth]. Congenital smallness of the mouth to a degree that interferes with viability.

Microtherm (*mi'-kro-thurm*) [μικρός, small; θέρμη, heat]. An organism in which the life processes are carried on at a low temperature.

Microtrichia (*mi-kro-trik'-e-ah*) [μικρός, small; θρίξ, hair]. Shortness or fineness of the hair.

Microunit (*mi-kro-u'-nit*). A unit of minute measurements. See *Micron* (Illus. Dict.).

Microxycyte (*mi-kroks'-is-īt*) [μικρός, small; ὀξίς, sharp; κύτος, cell]. Durham's name for a cell containing fine oxyphil granules and a more or less pigmented nucleus, occurring in the peritoneal fluid of infected subjects.

Microxyphil (*mi-kroks'-e-fil*). See *Microxycyte*.

Mictocystis (*mik-to-sis'-tis*) [μικτός, mixed; κύστις, a bag]. An organic sac made up of different textures.

Mid. (See Illus. Dict.) 2. See *M.-parent.* **M.axilla,** the center of the axilla. **M.-body,** a mass of granules formed in the equator of the spindle during the anaphase of mitosis. Ger. *Zwischenkörper.* **M.-occipital,** mediooccipital. **M.-parent,** Galton's term for the sum of the visible features of the parent, plus the sum of its latent potencies. **M.section,** an incision through the middle of an organ. **M.sternum,** the mesosternum. **M.tegmentum,** the central part of the tegmentum.

Miescheria (*me-she'-re-ah*) [Johann Friedrich Miescher, German pathologist, b. 1811]. A genus of *Sporozoa* found by Miescher (1843) in the muscles of mice. See *Miescher's Tubes*, and *Parasites, Table of* (Illus. Dict.).

Migrainator (*mig'-ra-na-tor*). An apparatus for the relief of migraine consisting of two plates held by a spring for the compression of the temporal arteries and regulation of the circulation of the blood in the head.

Migrainin (*mig'-ra-nin*). A proprietary preparation said to consist of antipyrin, 85%; caffein, 9%; citric acid, 6%. It is recommended in the treatment of migraine. Dose, 15½ gr. (1 gm.).

Migrol (*mig'-rol*). A proprietary remedy for migraine, said to consist of caffein, sodium bicarbonate and guaiacetin.

Migrosine (*mig'-ro sīn*). A mixture of menthol and acetic ether used in migraine.

Mikulicz's Dictum. That it is highly dangerous to give a general anesthetic to a patient whose hemoglobin percentage is below 30.

Milammeter (*mil-am'-et ur*). Same as *Milliamperemeter* (Illus. Dict.).

Mildiol (*mil'-di-ol*). A disinfectant said to consist of a mixture of creosote and petroleum.

Miliaria. (See Illus. Dict.) Syn., *Psyaraciahidroa.* **M. arthritica,** a miliary eczema said to occur only in those affected with gouty or rheumatic cardiac disease. Syn., *Arthrophlysis cardiaca.*

Milieu (*me-le-u*) [Fr.]. Environment; medium.

Milk. (See Illus. Dict.) **M. of Almonds, M. of Ammonia, M. of Asafetida.** See *Mistura*, under *Amygdala*, *Ammoniacum*, *Asafetida* (Illus. Dict.). **M.-catalase,** an enzyme of cow's milk capable of decomposing hydrogen dioxid and similar compounds; it is rendered inactive by heating to 80° C. **M., Diabetic,** a prepared milk containing a small percentage of lactose. **M., Gärtner's.** See *Feltmilch of Gärtner*. **M., Guaranteed,** milk furnished with a guarantee that it is pure and obtained from cows that have been tested and failed to react to tuberculin. **M., Humanized.** See *M., Artificial Mother's* (Illus. Dict.). **M., Loose,** milk sold from large cans. **M., Pancreatized,** that to which pancreatic ferment has been added. **M.-peptone.** See *Casein-peptone*. **M.-somatose,** a food preparation similar to somatose made from meat but containing 5% of tannin. **M.-trypsin.** See *Galactase*. **M., Uterine.** See under *Uterine* (Illus. Dict.). **M., Vegetable,** the latex of plants, especially applicable to that of the cow-trees. See *Bromisimum galactodendron* (Illus. Dict.), *Lacmellia edulis*, *Mimusops elata*, and *Tabernæmontana utilis*. **M.vine.** See *Periploca*. **Milk, Witch's.** (See Illus. Dict.) 2. The secretion of the mammary glands of new-born children of either sex immediately after birth.

Milkine (*mil'-kēn*). A concentrated compound of cow's milk, 50%; malted cereals, 44%; beef, 5%; calcium hydroxid, 0.5%; and sodium chlorid, 0.5%. It is a light yellow powder with sweet taste and marked odor.

Millinormal (*mil-e-norm'-al*) [*mille*, thousand; *norma*, rule]. Containing a thousandth part of what is normal.

Milossin (*mīl-os'-in*). A nitrogenous crystalline principle obtained by Amato and Capparelli from leaves of yew, *Taxus baccata*, L.

Mimusops (*mim'-us-ops*) [μιμώ, an ape; ὤψ, face]. A genus of the *Sapotaceæ*, the star-apple family. **M. elata,** Allem., the cow-tree of Para, furnishes Massaranduba milk, introduced to notice in 1849. It tastes like rich cream and hardens to an adhesive glue. **M. elengi,** L., of Asia, the elengi of the Malays; the root and bark (wowli), containing 7% of tannin, are used as an astringent, tonic, and febrifuge; an aromatic oil and a water prepared from the blossoms are used in colic. The seeds yield oil and the milky sap a kind of gutta-percha. **M. globosa,** Gärt., yields balata. **M. kauki,** L., of China and the Philippines, yields an edible fruit, a kind of gutta-percha and a gum (bird wood).

Minalin (*min'-al-in*). An alkaloid found by Parodi in *Croton minal*, Parodi.

Mind. (See Illus. Dict.) **M.-pain.** Same as *Psychalgia*.

Minimum, Minimus (*min'-im-um*, *-us*) [superl. of *parvus*, little]. The least amount; the lowest limit. **M. perceptibile,** the smallest quantity of odorous matter which, being contained in a liter of air, is found capable of producing its characteristic sensation of smell (J. Passy).

Minoration. (See Illus. Dict.) 2. Abatement, a lessening, a diminishing.

Miodidymus, Miodymus (*mi-o-did'-im-us*, *mi-od'-im-us*) [μειων, less; δίδυμος, twin]. A double-headed monster joined by the occiputs.

Mio-mio. See *Baccharis coridifolia*.

Miopus (*mi-o'-pus*) [μειων, less; ὤψ, the face]. A double-headed monster with one face rudimentary.

Mirbane Essence. See *Nitrobenzene* (Illus. Dict.).

Miringitis. See *Myringitis* (Illus. Dict.).

Mirror. (See Illus. Dict.) **M., Ear,** an otoscope. **M., Eye,** an ophthalmoscope. **M.-speech,** defective speech from pronouncing the words or syllables backward.

Misce (*mis'-e*) [imperative, active pres. of *miscere*, to mix]. Mix.

Misoneist (*mis-on'-e-ist*) [μισεῖν, to hate; νέος, new]. One who has a morbid hatred of novelty.

Misplacement (*mis-plās'-ment*). See *Ectopia* (Illus. Dict.).

Mistral (*mis'-tral*). A local wind which descends from the high plateaus and plains of central and eastern France, and is felt as a cold air and sometimes tempestuous wind along the shores of the Mediterranean. It more frequently occurs in February and March and the beginning of April. It is a dry and violent wind, raising clouds of dust, and is very chilling, even when the sun is shining brightly. [Weber.] Cf. *Harmattan*, *Sirocco*, *Simoon*, *Solano*, *Foehn*, *Norther*, *Mumuku*.

Mitoplasm (*mī'-to-plazm*) [μίτος, a thread; πλάσσειν, to form]. The reticular part of the cell-nucleus, the chromatic substance or chromatin.

Mitoschisis (*mit-os'-kis-is*). See *Mitosis* or *Karyokinesis* (Illus. Dict.).

Mitosis. (See Illus. Dict.) Syn., *Mitoschisis*. **M., Differential.** See *Heterokinesis* (Illus. Dict.). **M., Heterotypic,** mitosis in which the chromosomes appear not as delicate rods and V's split lengthwise, but take the form of loops, rings, aggregations of four beads, etc., arranged longitudinally upon the spindle. It is observed in cells which give rise to sexual elements and is characteristic of all malignant growth. **M., Homeotypic,** a mode of mitosis similar to the normal type but characterized by the reduced number of the chromosomes. **M., Integral.** See *Homeokinesis* (Illus. Dict.). **M., Pathologic,** irregular, atypic, asymmetric mitosis, an indication of malignancy.

Mitosome (*mī'-to-sōm*) [μίτος, thread; σῶμα, body]. A body derived from the spindle-fibers of the secondary spermatocytes, which, according to Platner, gives rise to the middle-piece and the flagellum-envelope of the semen-cell.

Mixoscopic (*miks-o-skō'-pik*). 1. Relating to mixoscopia. 2. A sexual pervert exhibiting mixoscopia.

Mixture. (See Illus. Dict.) **M.s, Anesthetic, Bagot's, Bonain's, M.s, Schleich,** etc. See under *Anesthetic*. **M., Baccelli's,** a preparation used in malaria consisting of quinin sulfate, 3 gm.; tartaric acid, 3 gm.; sodium arsenate, 5 cgm.; water, 300 gm. **M., Chalk.** See *Hydrargyrum cum creta* (Illus. Dict.). **M., Dunlap's Diarrhea,** one containing 3 dr. of ginger and ½ fld. oz. each of tinctures of opium, camphor, peppermint, capsicum, and Hoffmann's anodyne. **M., Fulminating,** one which detonates with heat or friction. **M., Neutral.** See under *Neutral* (Illus Dict.). **M., Oleobalsamic,** a mixture of 4–12 parts of balsam of Peru with 3 or 4 times that amount of various spices dissolved in 1000 parts of alcohol. Dose, 10–30 ♏ (0.66–2 gm.). **M., Pagliari's.** See *Pagliari's Fluid* (Illus. Dict.).

Mnemonic (*ne-mon'-ik*). Relating to mnemonics. **M. Chain,** a continuous series of memories.

Mobilization (*mob-il-iz-a'-shun*) [*mobilis*, movable]. The act of rendering an ankylosed part movable.

Mocharas, Mochras, Mochurrus. See *Mucherus*.

Modioliform (*mod-e-o'-le-form*) [*modiolus*, the nave of a wheel; *forma*, form]. Having the shape of the nave of a wheel.

Moirapuama. See *Muira-puama*.

Mol, Mole (*mol*, *mōl*). See *Grammolecule*.

Molar. (See Illus. Dict.) 2. Relating to a solution standardized on a molecular basis.

Molecule. (See Illus. Dict.) **M., Saturated,** one in which the units of valency in each atom are satisfied by combination with units of valency of other atoms; the sum of the perissad atoms being always an even number.

Mollichthyolin (*mol-ik-thi'-ol-in*). A compound of ichthyol and mollin.

Mollosin (*mol'-os-in*). An ointment base consisting of yellow wax, 1 part, and liquid petrolatum, 4 parts.

Molybdate (*mol-ib'-dāt*). A salt of molybdic acid.

Molybdic (*mol-ib'-dik*). Containing molybdenum as a hexad or tetrad radicle. **M. Anhydrid,** MoO_3, a gray or bluish-white heavy powder which separates into thin scales in water. It is soluble in acids, alkalis, and solution of cream of tartar; slightly soluble in water. It is used as a reagent.

Molybdous (*mol-ib'-dus*). Containing molybdenum in its lower valency.

Monacid (*mon-as'-id*). Applied to a base capable of replacing one atom of hydrogen in an acid. In addition compounds uniting directly with a molecule of a monobasic acid, with half a molecule of a dibasic acid, etc.

Monargentic (*mon-ar-jen'-tik*) [μόνος, alone; *argentum*, silver]. Containing one atom of silver in a molecule.

Monarticular (*mon-ar-tik'-u-lar*) [μόνος, alone; *articulus*, a joint]. Pertaining to one joint.

Monascopic. See *Monoscopic.*

Monathetosis (*mon-ath-et-o'-sis*). See *Monoathetosis* (Illus. Dict.).

Monaxon (*mon-aks'-on*) [μόνος, alone; *axon*]. A neuron having only one axon.

Monembryonic (*mon-em-bre-on'-ik*). See *Monembryary* (Illus. Dict.).

Monesin. (See Illus. Dict.) Dose, $\frac{1}{10}$–½ gr. (0.0065–0.032 gm.).

Monestrous (*mon-es'-trus*) [μόνος, alone; οἶστρος, gadfly]. Applied by Heape to such animals as have one or more long periods of sexual rest (anestrous periods) during each year. Cf. *Estrus, Anestrous, Diestrous.*

Mongolism (*mon'-go-lizm*). See *Idiocy, Ethnic* (Illus. Dict.).

Mongumo Bark (*mon-gu'-mo*). The bark of *Ochrosia borbonica*, Juss., an apocynaceous tree of Madagascar; used as a tonic.

Moniliferous (*mon-il-if'-ur-us*). Having moniliform members or parts.

Monium (*mo'-ne-um*) [μόνος, alone]. An element discovered spectroscopically by Sir W. Crookes, 1898; now called victorium.

Monnina (*mon-in'-ah*) [*Monnino*, a Spanish count and patron of botany]. A genus of the *Polygaleæ.* **M. polystachya,** R. et P., and **M. salicifolia,** R. et P., shrubs of Peru; the root-bark is used as an astringent and as a hair-wash. These species contain a saponin-like constituent, monninin.

Monninin (*mon-in'-in*). See under *Monnina.*

Monoanesthesia (*mon-o-an-es-the'-ze-ah*). Anesthesia of a single part.

Monobacillary (*mon-o-bas'-il-a-re*). Due to, or characterized by the presence of a single species of bacillus.

Monobromobenzol (*mon-o-bro-mo-ben'-zol*). See *Benzene, Monobromated.*

Monobromoethane (*mon-o-brom-o-eth'-ān*). Ethyl bromid.

Monobromphenol (*mon-o-brom-fe'-nol*). See *Bromphenol* (2).

Monobromphenylacetamid (*mon-o-brom-fen-il-as-et-am'-id*). See *Antiseptin* (Illus. Dict.).

Monobutyric (*mon-o-bu-ti'-rik*). Having one atom of butyrin in a molecule.

Monobutyrinase (*mon-o-bu-ti'-rin-āz*). A ferment found by Arthus in blood-serum capable of decomposing monobutyrin into butyric acid and glycerin, but without action upon ordinary neutral fats.

Monocalcic (*mon-o-kal'-sik*). With one atom of calcium in a molecule.

Monocellular (*mon-o-sel'-u-lar*). Unicellular.

Monochlorobenzol (*mon-o-klo-ro-ben'-zol*). See *Benzene, Monochlorated.*

Monochloroethane (*mon-o-klor-o-eth'-ān*). Ethyl chlorid.

Monochlorphenol (*mon-o-klor-fe'-nol*). See *Chlorphenol* (Illus. Dict.).

Monochromasy (*mon-o-kro'-mas-e*) [μόνος, alone; χρῶμα, color]. The condition of a monochromat; the perception of one color only.

Monochromat (*mon-o-kro'-mat*). A person in whom all the variations of the world of color are reduced to a system of one color. [Scripture.] Cf. *Dichromat; Trichromat.*

Monochromatophil (*mon-o-kro-mat'-o-fil*) [μόνος, single; χρῶμα, color; φιλεῖν, to love]. 1. A cell possessing a strong affinity for a single acid stain. 2. Exhibiting a strong affinity for a single stain; monochromatophylic.

Monocrotism (*mon-ok'-ro-tizm*) [μόνος, single; κρότος, pulse]. The condition of being monocrotic (*q. v.*).

Monodactylism (*mon-o-dak'-til-izm*) [μόνος, single; δάκτυλος, finger]. A malformation characterized by the presence of only one dactyl on the foot or hand.

Monohydrated (*mon-o-hi'-dra-ted*). United with one molecule of water or of hydroxyl.

Monoiodbenzol (*mon-o-i-od-ben'-zol*). See *Benzene, Iodated.*

Monoiodid (*mon-o-i'-od-id*). Combined with one atom of iodin.

Monoiodiddibismuthmethylenedicresotinate (*mon-o-i-od-id-di-bis-muth-meth-il-en-di-kres-o'-tin-āt*). A fine, impalpable, odorless, tasteless, and insoluble powder, containing 45% of bismuth, 15% of iodin, and 3% of formic aldehyd in definite chemic combination. It is used as a dusting-powder in surgery, as antiseptic, astringent, desiccating and granulation forming.

Monoiodoethane (*mon-o-i-o-do-eth'-ān*). Ethyl iodid.

Monol (*mon'-ol*). An aqueous solution of calcium permanganate (2 : 1000) used to purify drinking-water.

Monoleate (*mon-o'-le-āt*). A combination of a base and one molecule of oleic acid.

Monoma (*mon-o'-mah*) [μόνος, single]. A painful uterine tumor, always solitary, steadily progressing to a fatal termination, accompanied by severe and continuous hemorrhage. It is also called Lawson Tait's soft edematous myoma.

Monomeric (*mon-o-mer'-ik*) [μόνος, single; μέρος, a part]. Consisting of a single piece.

Monometallic (*mon-o-met-al'-ik*) [μόνος, single; μέταλλον, metal]. 1. Containing one atom of a metal in a molecule. 2. Capable of replacing one atom of hydrogen in an acid. 3. Consisting of one metal.

Monomicrobic (*mon-o-mi-kro'-bik*). See *Monobacillary.*

Monomyary (*mon-o-mi'-ar-e*). See *Monomyous* (Illus. Dict.).

Monomyositis (*mon-o-mi-o-si'-tis*) [μόνος, single; μῦς, muscle]. Laquer's (1896) name for isolated periodic affections of the biceps muscle. Syn., *Myositis acuta interstitialis.*

Mononephrous (*mon-o-nef'-rus*) [μόνος, single; νεφρός, kidney]. Limited to one kidney.

Mononeuric (*mon-o-nu'-rik*) [*μόνος*, single; *νεῦρον*, nerve]. Applied to a nerve-cell having only one neuraxon.

Mononeuritis (*mon-o-nu-ri'-tis*) [*μόνος*, single; *νεῦρον*, nerve]. Neuritis affecting a single nerve. **M. Multiplex**, neuritis affecting simultaneously single nerves remote from each other.

Monoparesthesia (*mon-o-par-es-the'-ze-ah*) [*μόνος*, single; *paresthesia*]. Paresthesia confined to one limb or part.

Monophosphate (*mon-o-fos'-fāt*). A phosphate with only one atom of phosphorus in the molecule.

Monoradicular (*mon-o-rad-ik'-u-lar*) [*μόνος*, single; *radix*, root]. Applied to teeth with only one root.

Monoscopic (*mon-o-skop'-ik*) [*μόνος*, alone; *σκοπεῖν*, to view]. Seen with one eye; applied to one-eyed vision, as that of lower vertebrates, birds, reptiles, and fishes, as opposed to stereoscopic vision of man and some other of the higher vertebrates.

Monosodic (*mon-o-so'-dik*). Having one atom of sodium in the molecule.

Monostoma (*mon-o-sto'-mah*). See *Parasites, Table of* (Illus. Dict.).

Monostratal (*mon-o-stra'-tal*) [*μόνος*, single; *stratum*, a layer]. Arranged in a single layer or stratum.

Monosymptomatic (*mon-o-simp-tom-at'-ik*). Having but one dominant symptom.

Monotrichous (*mon-ot'-rik-us*) [*μόνος*, single; *θρίξ*, hair]. Applied to that type of ciliation in bacteria which is marked by a single flagellum at one pole.

Monoxenous (*mon-oks'-en-us*) [*μόνος*, single; *ξένος*, host]. Applied to parasitism confined to one host. Cf. *Heteroxeny*.

Monsonia (*mon-so'-ne-ah*) [*Lady Ann Monson*]. A genus of the *Geraniaceæ*. **M. ovata**, Cav., necta or geita, of the Hottentots, a species growing in South Africa. The root-stock is recommended in treatment of dysentery, diarrhea, anthrax, and snake-bite.

Montanin (*mon-tan'-in*). A peculiar base found by v. Mons in Santa Lucia bark (*Exostemma floribundum*, Roem. et Schult.

Monticle (*mon'-tik-el*) [*monticulus*, a little mountain]. See *Monticulus cerebelli* (Illus. Dict.).

Monticolous (*mon-tik'-ol-us*) [*mons*, mountain; *colere*, to inhabit]. Applied to organisms growing or living upon mountains.

Moradein (*mor-ad'-e-in*). An alkaloid obtained by Arata and Canzoneri from quina morada, the bark of the rubiaceous tree *Pogonopus febrifugus*, Benth., of South America. It forms colorless prisms soluble in alcohol, ether, or chloroform, melting at 195.5° C.

Moradin (*mor-ad'-in*). A fluorescent substance allied to scopoletin obtained from the bark of *Pogonobus febrifugus*.

Morbidize (*mor'-bid-iz*) [*morbus*, disease]. To render sickly or abnormal.

Morbulent (*mor'-bu-lent*). Sickly, diseased.

Morbus. (See Illus. Dict.) **M. anserinus**, pellagra. **M. arcuatus**, **M. aquatus** [*arquus*, a rainbow], icterus. **M. astralis**, epilepsy. **M. Bruno-gallicus** [*Brünn*, a town of Moravia], a local outbreak of syphilis in Brünn in 1578, attributed to an infected cupping instrument. Syn., *Maladie de Brünn*. **M. cæruleus**, cyanosis. **M. canadensis**, radesyge. **M. castensis**, typhus fever. **M. cerealis**, ergotism. **M. cereus**, amyloid degeneration; also catalepsy. **M. cirrorum**, plica. **M. cordis**, the phenomena of chronic cardiac disease. **M. coxæ**, coxalgia. **M. Deliorum**, macular leprosy. **M. dithmarsicus**, **M. ditmarsicus**, radesyge. **M. granulosus renum.** See *Kidney, Arteriosclerotic* (Illus. Dict.). **M. mirachialis** [*Mirach*, an Arabian physician of the eleventh century, who wrote much on this disorder], hypochondriasis. **Morbi polemici**, diseases incidental to war, gunshot wounds. **M. puerilis anglonum.** Synonym of *Rickets*. **M. pulicaris**, typhus fever. **M. spasmodicus malignus**, **M. spasmodicus popularis**, raphania. **M. strangulatorius.** [Cletus, 1636.] Synonym of *Diphtheria*, also of *Membranous croup*. **M. syriacus**, malignant angina. **M. tuberculosus pedis**, mycetoma. **M. vesicularis**, pemphigus.

Morcellation (*mor-sel-a'-shun*) [Fr. *morcellement*]. The act of dividing into pieces; the removal of a tumor or fetus piecemeal. Syn., *Morselling*.

Morelograph (*mor-el'-o-graf*) [*Morel*, the inventor; *γράφειν*, to write]. An apparatus for rapidly exposing bromid paper.

Morgagnian (*mor-gan'-e-an*). Investigated by or named after Giovanni Battista Morgagni, an Italian physician, 1682–1771.

Morgan's Spots. See *Sign, De Morgan's*.

Morphæa. See *Morphea*.

Morpheum (*mor'-fe-um*). Morphin.

Morphimetry (*mor-fim'-et-re*). See *Morphometry* (Illus. Dict.).

Morphin. (See Illus. Dict.) **M. Anisate**, $C_{17}H_{19}NO_3 . C_8H_8O_3$, a white crystalline powder, soluble in water. **M. Arsenate**, a white powder, 71% morphin, 29% arsenic acid. **M. Benzoate**, $C_{17}H_{19}NO_3 . C_7H_6O_2$, white crystalline powder or prisms used in treatment of asthma. Dose, ½–½ gr. (0.0054–0.0324 gm.). **M. Borate**, a white powder containing about 33% of morphin; milder than the other salts and recommended for hypodermic use and for eye lotion. **M. Caseinate**, a readily soluble compound of morphin and casein. **M.-monoethylether Hydrochlorate.** See *Dionin*. **M. Phthalate**, $(C_{17}H_{19}NO_3)_2 . C_8H_6O_4$, yellowish scales or white crystalline powder containing 77.2% of morphin; recommended for hypodermic use. **M. Saccharinate**, $C_{17}H_{19}NO_3 . C_6H_4(SO_2)(CO) : NH$, a true salt containing 60.9 parts of morphin and 39.1 parts of saccharin. **M. Salicylate**, $C_{17}H_{19}NO_3 . C_7H_6O_3$, a whitish crystalline powder soluble in water; used in treatment of rheumatism. **M. Stearate**, $C_{17}H_{19}NO_3 . C_{17}H_{35}COOH$, white scales, soluble in alcohol and benzene, melting at 86° C.; contains 25% of morphin and is used in applications (0.5 gm. to 50 gm. of fixed oil of almonds), ointments (0.5 gm. to 50 gm. of petrolatum), and suppositories (0.02 gm. to 2.5 gm. of cacao-butter). **M. Valerate**, **M. Valerianate**, $C_{17}H_{19}NO_3 . C_5H_{10}O_2$, a white crystalline powder, soluble in water, used as a sedative.

Morphinodipsia (*mor-fin-o-dip'-se-ah*) [*morphin*; *δίψα*, thirst]. Morphinomania.

Morphinum, Morphium (*mor-fi'-num, mor'-fe-um*). Morphin.

Morresin (*mor'-es-in*) [*G. Morreno*, Spanish physician]. An alkaloid isolated from *Morrenia brachystephana*, Griseb., an asclepiad of the Argentine Republic.

Morselling (*mor'-sel-ing*). See *Morcellation*.

Morta (*mor'-tah*) [Μορτή, one of the Fates]. Pemphigus.

Mortiferous (*mor-tif'-ur-us*) [*mors*, death; *ferre*, to bear]. Fatal.

Morulin (*mor'-u-lin*) [*morula*, dim. of *murum*, a mulberry]. The name given by Frenzel to the substance hitherto called nucleolus in *Gregarinæ*. Cf. *Alveolin, Paralveolin, Paraglycogen, Antienzym*.

Morulus (*mor'-u-lus*). The lesion characteristic of yaws. A frambesial sore.

Morum (*mo'-rum*) [*μῶρον, μόρον*, the mulberry]. 1. The fruit of the mulberry. 2. Condyloma. 3. Nevus.

Morvin (*mor'-vin*). See *Mallein* (Illus. Dict.).
Morxi [used by the Portuguese in India in the sixteenth century]. Cholera.
Mosquito. (See Illus. Dict.) **M., Dappled-wing,** *Anopheles maculipennis.*
Moss-fibers (*mos-fi'-bers*). Cajal's term for peculiar fibers derived from the white center of the cerebellum and characterized by having pencils of fine short branches at intervals like tufts of moss; they end partly in the granular layer, partly in the molecular layer [Raymond].
Moto. A Japanese ferment prepared from rice and used in the manufacture of saké.
Motor. (See Illus. Dict.) **M. Anomalies** of the eye. See *Deorsumduction, Sursumduction, Torsions, Vergences.* **M. Nerve-organs, M. Nerve-plates, M.-sprays.** See *Fields of Innervation.* **M.-root,** the nervus masticatorius.
Motorgraphic (*mo-tor-graf'-ik*). See *Kinetographic.*
Motormeter (*mo-tor-me'-tur*). A kinesometer used in recording gastric movements.
Motorpathy (*mo-tor'-path-e*) [*movere*, to move; *πάθος*, a disease]. Kinesitherapy.
Mouth. (See Illus. Dict.) **M., Ceylon Sore,** sprue. **M.-mirror.** See *Speculum oris.* **M., Phossy.** See *Jaw, Phossy.* **M., Primitive,** the blastopore. **M., Tapir.** See under *Tapir* (Illus. Dict.).
Movement. (See Illus. Dict.) **M., Angular,** that which increases or diminishes the angle between two bones. **M.-spasms.** Synonym of *Fatigue Spasms.* **M., Swedish.** See *Kinesitherapy* and *Swedish Movement* (Illus. Dict.). **M., Vermicular,** peristalsis.
Moxa. (See Illus. Dict.) **M., Electric,** a faradic brush used as an active electrode upon the dry skin.
Moyrapuama. See *Muira-puama.*
M. S. Mixture. See under *Anesthetic.*
Mshangu. An African arrow-poison obtained from *Acokanthera abyssinica.*
Muavin, Muawin (*mu-ah'-vin, -win*). An alkaloid from muawi bark. The hydrobromid, a toxic yellowish powder, soluble in water and alcohol, is used as a cardiac stimulant.
Muawa or **Muawi Bark** (*mu-ah'-wah, -we*). The bark of a leguminous tree closely related to *Erythrophlæum coumingo*, Baill., used as an arrow-poison in Madagascar—it contains the alkaloid muavin.
Mucherus (*mu'-ker-us*). The gum obtained from *Bombax malabaricum*, D. C.; it is used as an astringent and styptic. Dose, 30–45 gr. (2–3 gm.). Syn., *Mocharas, Mochras, Mochurrus.*
Mucic (*mu'-sik*) [*mucus*]. Obtained from mucus or mucilage. **M. Ether,** ethyl mucate.
Mucicarmin (*mu-se-kar'-min*). A stain for mucin made up of carmin, 1 gm.; aluminium chlorid, 0.5 gm.; distilled water, 2 c.c.
Mucinemia (*mu-sin-e'-me-ah*) [*mucus*, mucus; *αἷμα*, blood]. The presence of mucin in the blood.
Mucinoblast (*mu-sin'-o-blast*) [*mucus*; *βλαστός*, a germ]. Harris's (1900) term for the mast-cell, owing to the distinctive manner in which these cells react toward selective stains for mucin.
Mucinoids (*mu'-sin-oidz*). See *Mucoids.*
Mucin-sugar. See *Fructose* (Illus. Dict.).
Mucivorous (*mu-siv'-or-us*) [*mucus*, mucus; *vorare*, to devour]. Subsisting on mucus or gum.
Mucocolitis. (See Illus. Dict.) **M., Chronic** [Habershon]. Synonym of *Mucous colitis.*
Mucoids (*mu'-koidz*) [*mucus*, mucus; *εἶδος*, likeness]. A group of glycoproteids embracing colloid, chondromucoid and pseudo-mucin and differing from true mucins in their solubilities and precipitation properties. They are found in cartilage, in the cornea and crystalline lens, in white of egg, and in certain cysts and ascitic fluids.
Mucolite (*mu'-kol-īt*). A vegetable mucilage.
Mucomembranous (*mu-co-mem'-bran-us*). Relating to mucosas.
Mucoperiosteum (*mu-ko-per-e-os'-te-um*). Periosteum possessing a mucous surface.
Mucor. (See Illus. Dict.) **M. cambodju,** the Chinese yeast-plant.
Mucoriferous (*mu-kor-if'-ur-us*) [*mucor*, mold; *ferre*, to bear]. Mold-bearing or covered with a mold-like substance.
Mucorin (*mu'-kor-in*) [*Mucor*, a genus of fungi]. An albuminoid substance discovered by Van Tieghem in many species of the mucorinous molds.
Mucosal (*mu-ko'-sal*). See *Mucomembranous.*
Mucosamin (*mu-ko-sam'-in*). An isomer of glycosamin obtained from mucin by boiling with dilute mineral acids.
Mucosedative (*mu-ko-sed'-at-iv*). Soothing to mucosas.
Mucosity (*mu-kos'-it-e*). Sliminess.
Mucosozin. See *Mycosozin.*
Mucus. (See Illus. Dict.) **M., Vegetable,** tragacanthin.
Muira-Puama [Indian name for straight tree]. A shrub, *Liriosœma ovata*, Miers., of the order *Olacineæ*, indigenous to the region of the Amazon. It is recommended in the treatment of impotence and as a nerve tonic. Dose of fld. ext., 15–30 ♏ (0.9–1.8 c.c.).
Müller-Lyer Illusion. That of apparent greater length of a line having divergent pairs of oblique lines at its extremities like the featherings of an arrow, above an equal line with convergent oblique terminations.
Müller's Blood-motes, M.'s Dust-bodies. See *Hemokonia.*
Multangulum (*mul-tan'-gu-lum*) [*multus*, many; *angulus*, an angle]. A bone with many angles. **M. majus,** the trapezium. **M. minus,** the trapezoid bone.
Multarticulate, Multiarticulate (*mul-tar-tik'-u-lāt, mul-te-ar-tik'-u-lāt*) [*multus*, many; *articulus*, joint]. Furnished with many joints.
Multenebulizer (*mul-te-neb'-u-li-zer*). A spraying device used in treatment of disease of the nose, throat, and ear.
Mumuku (*mu'-mu-ku*). A violent down-rush of trade-winds which occurs at times across the northern portion of Hawaii, abolishing all the local currents for the time being. [Coan.] Cf. *Harmattan, Sirocco, Simoon, Solano, Foehn, Mistral, Norther.*
Muri-muri. See *Cold, St. Kilda's.*
Murium (*mu'-re-um*). An imaginary radicle supposed by Meissner to enter into the composition of hydrochloric acid along with oxygen, water, and aræon; from this it was called muriatic acid, and its derivatives muriates.
Murmur. (See Illus. Dict.) **M., Abdominal,** borborygmus. **M., Amphoric.** See *Respiration, Cavernous* (Illus. Dict.). **M., Apex,** one heard over the heart-apex. **M., Attrition,** a pericardial murmur. **M., Backward.** See *M., Indirect* (Illus. Dict.). **M., Fisher's Brain.** See under *Signs* (Illus. Dict.). **M., Muscular.** 1. The sound heard on auscultation of a contracting muscle. 2. The first sound of the heart. **M., New-leather.** See *Bruit de cuir neuf* (Illus. Dict.). **M., Paradox,** a systolic murmur prolonged so as to appear to be followed by a diastolic murmur. **M., Venous, M., Whiffling, M., Whistling.** See *Bruit de diable* (Illus. Dict.).
Murrain. (See Illus. Dict.) 2. Synonym of *Texas fever.* **M., Bloody, M., Dry, M., Yellow,** Texas fever. **M., Pulmonary.** See *Pleuropneumonia contagiosa* (Illus. Dict.).

Mus (*mus*) [L. pl. *mures*]. 1. A genus of rodents of the family *Muridæ;* it embraces rats and mice. 2. Any mouse-like formation; *e. g.*, *joint-mice.* **Mures articulares, Mures articulorum.** See *Arthrolith.*

Musana. See *Moussena* (Illus. Dict.).

Musarina (*mu-sar-ē'-nah*) [*Musa sapientum*, the banana]. The name in Venezuela for banana flour.

Musca. See *Parasites, Table of* (Illus. Dict.). **M. brava,** a species of fly capable of transmitting mal de caderas or American surra.

Muscale Buttons. See *Mescal.*

Muscarinism (*mus-kar'-in-izm*). Poisoning due to ingestion of the fly agaric, *Amanita muscaria*, L. See *Mycetism, Muscaric.*

Muscegenetic (*mus-se-jen-et'-ik*) [*musca*, a fly; *generare*, to produce]. Causing muscæ volitantes or photopsia.

Muscle, Musculus. (See Illus. Dict.) **M. abducens labiorum, M. abductor oris,** the levator anguli oris. **M. abducens oculi.** See *Rectus externus* in Table (Illus. Dict.). **M. abductor auricularis, M. a. auris,** the retrahens aurem. **M. abductor brevis brachii,** in solipeds the analog of the teres minor in man. It has its origin in the posterior margin of the scapula, the infraspinous fossa and the small tubercle at the outer margin of the glenoid cavity, and its insertion into the humerus occurs between the crest of the tuberosity and the deltoid impression. **M. abductor linguæ.** See *Styloglossus* in Table (Illus. Dict.). **M. abductor longus pollicis,** the extensor ossis metacarpi pollicis. **M., Abductor, Minimal, M. abductor digiti quinti.** See *A. minimi digiti manus* in Table (Illus. Dict.). **M. accessorius sacrolumbalis.** See *Musculus accessorius ad sacrolumbalem* in Table (Illus. Dict.). **M. additamentum ad sacrolumbalem,** the accessory iliocostalis or sacrolumbar muscle. **M., Adductor, Minimal, M. adductor minimi digiti, M. a. ossis metacarpi minimi digiti.** See *Opponens digiti minimi* in Table (Illus. Dict.). **M.s, Adenoid, M., Adenopharyngeal.** See *M. thyreoadenoideus.* **M., After-loaded,** a muscle made to work with a weight dependent on it, but with a recuperating interval, or the weight so supported that it does not pull on it until the muscle begins to shorten. Cf. *M., Loaded.* **Musculi alares,** the pterygoid muscles. **M. alaris externus,** the external pterygoid. **M. alaris internus,** the internal pterygoid. **Musculi amatorii oculi,** the oblique muscles of the eye. **M. amatorius** [Isenflamm], the obliquus oculi superior. **M. aniscalptor, M. anitersor,** the latissimus dorsi. **M., Antagonistic,** one acting in opposition to another. **M. articularis genu.** See *Subcrureus* in Table (Illus. Dict.). **M. arycorniculatus,** the arytænoideus rectus. **M. arysantorinianus,** the arytænoideus transversus. **M. arysyndesmicus,** a band of fibers extending from the cricoid cartilage to the arytenoid; it is a portion of the cricoarytænoideus lateralis. **M. arytænoideus rectus,** an anomalous bundle of fibers extending from the arytenoid cartilage to the supraarytenoid cartilage of the same side. **M. arytænoideus transversus,** the deep part of the arytenoid muscle. **M., Atlantal,** the superior oblique portion of the longus colli. **M. atlooccipitalis,** the small postrectus muscle. **M. attollens humeri,** the deltoid muscle. **M. auricularis,** the extensor minimi digiti. **M. a. abductor,** the abductor minimi digiti manus. **M. auricularis anterior,** the attrahens aurem. **M. auricularis anterior profundus,** a band of muscular fibers originating in the zygoma and attached to the ventral part of the auricle. **M. auricularis posterior,** the retrahens aurem. **M. auricularis superior,** the attollens aurem. **M. auxilaris,** the pyriform muscle. **M. axirectus, M. axoidooccipitalis,** the rectus capitis posticus major. **M. axoatloideus,** the obliquus capitis inferior. **M. basiodeltoideus,** an anomalous fascicle of the deltoid muscle having its origin in the spine of the scapula. **M. basiopharyngeus,** the fibers of the middle constrictor of the pharynx which originate from the hyoid. **M. basiosuprascapularis,** the levator scapulæ. **M., Bell's,** the short muscular ridge on the inner surface of the bladder, passing forward from the ureteral openings and ending in the uvula vesicæ. **M., Belly of,** the fleshy part of a muscle. **M., Bicaudate,** one that has two distinct insertions. **M. biceps flexor cruris,** the biceps femoris. **M., Bifemerocalcaneus.** 1. In veterinary anatomy a bicipital muscle extending the foot upon the tibia. The outer head originates from the femur ventrad of the supracondylar fossa, the inner head from the supracondylar crest. It is attached to the anterior part of the summit of the os calcis. It has no direct analog in man. 2. The gastrocnemius. **M., Biventer,** one with two bellies, a digastric muscle. **M. biventralis,** E. Coues' term for the biventer cervicis. **M., Bochdalek's.** See *Triticeoglossus* in Table (Illus. Dict.). **M. brachiofascialis,** a bundle given off by the brachialis which enters the fascia of the forearm. **M. brachioradialis,** the supinator longus. **M., Brücke's.** (See Illus. Dict.) 2. The muscularis mucosæ of the small and large intestine. **M.-buds** (v. Kölliker). See *Muscle-spindle* (Illus. Dict.). **M. capitosplenius.** See *Splenius capitis* in Table (Illus. Dict.). **M., Casser's.** 1. Ligamentous fibers attached to the malleus and formerly described as the laxator tympani minor muscle. 2. The coracobrachialis. **M., Cervical Transverse.** See *Transversalis cervicis* in Table (Illus. Dict.). **M. cervicosplenius.** See *Splenius colli* in Table (Illus. Dict.). **M., Chassaignac's Axillary,** an inconstant muscular bundle that extends across the axillary hollow from the lower border of the latissimus dorsi to the lower border of the pectoralis minor or to the brachial fascia. **M. chondrocostoepitrochlearis,** a name given by Testut to a supernumerary muscle, ordinarily regarded as a fascia, accessory to the pectoralis major on the anterolateral surface of the thorax. **M. chondrofascialis,** a part of the pectoralis major inserted into the fascia of the arm. **M. chondropharyngeus,** that part of the middle constrictor of the pharynx originating in the lesser cornu of the hyoid. **M. cleidomastoideus,** the clavicular part of the sternocleidomastoid muscle. **M., Cleidosternal.** See *Sternochondroscapular* in Table (Illus. Dict.). **M. coiteri,** the corrugator supercilii. **M., Common Intercostal.** See *M. trachelocostalis.* **M., Complex, M., Compound,** a muscle possessing more than one point of origin or of insertion or of both. **M. complexus parvus.** See *Trachelomastoid* in Table (Illus. Dict.). **M.s, Congenerous,** those with related action. **M. coracocervicalis,** an anomalous muscle originating from the coracoid process and ascending anteriorly, is blended with the cervical fascia. Syn., *Krause's muscle.* **M. coracoclavicularis,** an anomalous muscle originating in the clavicle and inserted into the coracoid process or the superior border of the scapula. **M. coracoglenoradialis,** the biceps muscle. **M., Coracohumeral, M. coracohumeralis.** See *Coracobrachialis* in Table (Illus. Dict.). **M., Coracohyoid,** the omohyoid muscle. **M. coracopectoralis,** the pectoralis minor. **M. coracoradialis.** 1. The short head of the biceps. 2. The biceps muscle. **M. coracoulnaris,** the part of the biceps which has its point of insertion in the fascia of the forearm near the ulna. **M., Costoab-**

dominal, the obliquus externus. **M., Costocoracoid,** the pectoralis minor. **M. costodeltoideus,** an inconstant head of the deltoid which originates from the border of the scapula between the infraspinatus and teres minor or between the teres major and the teres minor. **M. costohyoideus,** the omohyoid muscle. **M., Crotaphitic, M. crotaphites,** the temporal muscle. **M. cruralis.** See *Crureus* (Illus. Dict.). **M. cubitalis externus,** the extensor carpi ulnaris. **M. cubitalis internus,** the flexor carpi ulnaris. **M., Cubitoradial,** the pronator quadratus. **M. cucularis,** the trapezius muscle. **M., Curvilinear,** one of which the principal axis is curved. **M., Cutaneous.** 1. Having cutaneous origins and insertions. 2. Having cutaneous insertions. **M., Deltoid, Deep.** See *Coracocapsularis* in Table (Illus. Dict.). **M., Dorsal Extensor,** the erector spinæ. **M. dorsiscapularis,** the rhomboideus major and rhomboideus minor regarded as one. **M. dorsoacromialis,** in veterinary anatomy the dorsal part of the trapezius muscle. **M. dorsoatloideus.** See *Longus colli* in Table (Illus. Dict.). **M. dorsocostalis,** the serratus posticus superior. **M. dorsospinalis,** in veterinary anatomy the analog of the transversalis colli of man. Syn., *Spinalis colli.* **M. dorsosseus,** E. Coues' name for a dorsal interosseous muscle. **M. dorsosubscapularis,** in veterinary anatomy the part of the rhomboideus springing from the dorsal vertebras. Syn., *Rhomboideus inferior; R. major; R. brevis.* **M., Ectodermal,** one originating from the ectoderm. **M. ejaculator seminis, M. e. urinæ,** the accelerator urinæ. **M.s, Elevator,** the levator muscles. **M. elevator humeri,** the deltoid muscle. **M., Endodermal,** one originating from the endoderm. **M. entogastrocnemius,** E. Coues' name for the gastrocnemius internus. **M.s, Epaxial, M.s, Episkeletal,** the muscles of the head and trunk originating in the protovertebras and which lie dorsad of the endoskeleton and the ventral rami of the spinal nerves. **M., Epicondylocubitometacarpal,** the extensor carpi ulnaris. **M. epicondylopræphalangeus,** in veterinary anatomy the analog of the extensor communis digitorum of man. **M. epicondylosupracarpeus,** in comparative anatomy the analog of the extensor carpi ulnaris of man. **M. epicondylosuprametacarpianus.** Synonym of *Extensor carpi radialis brevior.* **M. epicondylosupraphalangettianus minimi digiti.** Synonym of the *Extensor proprius minimi digiti.* See *Muscles, Table of* (Illus. Dict.). **M. epitrochleocubitalis.** See *Flexor carpi ulnaris* in Table (Illus. Dict.). **M. epitrochleopalmaris.** See *Palmaris longus* in Table (Illus. Dict.). **M. epitrochleoradialis,** the pronator radii teres. **M., Eustachian,** the laxator tympani. **M. exsertor linguæ,** the geniohyoglossus. **M. extensor brevis pollicis, M. e. b. minor, M., Extensor, First Phalangeal** (of the thumb), **M., Extensor, Second Pollical, M., Extensor, Short** (of the thumb). See *Extensor primi internodii pollicis* in Table (Illus. Dict.). **M. extensor cruris externus,** the vastus externus. **M. extensor cruris internus,** the vastus internus. **M., Extensor Digital, M. extensor digitorum communis.** See *Extensor communis digitorum* (Illus. Dict.). **M. extensor dorsi communis, M. extensor trunci,** the erector spinæ. **M., Extensor, First Pollical, M., Extensor, Metacarpal** (of thumb), **M. metacarpi pollicis,** the extensor ossis metacarpi pollicis. See *Table of Muscles* (Illus. Dict.). **M., Extensor, Hallucal, M. extensor hallucis longus, M. e. proprius hallucis pedis.** See *Extensor proprius hallucis* in Table (Illus. Dict.). **M., Extensor Indicial,** the extensor indicis. **M., Extensor, Long** (of thumb), **M., E., Second Phalangeal, M., E., Third Pollical, M. e. pollicis longus, M. e. p. major.** See *Extensor secundi internodii pollicis* in Table (Illus. Dict.). **M. extensor pedis.** See *M., Triceps, Sural.* **M., Extensor Ulnocarpal,** the extensor carpi ulnaris. **M.s, External,** the striated muscles. **M., Extrarectus.** 1. The pyriform muscle. 2. The external rectus muscle of the eye. **M., Fallopian,** the pyramidalis. **M. fascialis.** See *Tensor vaginæ femoris* in Table (Illus. Dict.). **M. femoropræphalangeus,** in comparative anatomy the analog of the extensor longus digitorum pedis muscle in man. **Musculi fidicinales,** the lumbricales. **M. flexor cruris biceps, M. f. c. externus, M. f. c. fibularis.** See *Biceps femoris* in Table (Illus. Dict.). **M., Flexor, Deep Digital, M. flexor perforans.** See *Flexor profundus digitorum* (Illus. Dict.). **M. flexor radii,** the biceps. **M., Flexor, Superficial Digital, M. flexor perforatus.** See *Flexor sublimis digitorum* in Table (Illus. Dict.). **M., Folius's,** the laxator tympani. **M. gemellus suræ,** the gastrocnemius. **M. geminiformis,** Coues' name for the gemellus inferior. **M., Geminous, M. geminus, Musculi gemelli,** or **gemini,** the combined gemellus inferior and gemellus superior. **M. genioepiglotticus,** an anomalous band of fibers given off by the genioglossus and inserted into the epiglottis. Syn., *Retractor glottidis; Levator glottidis.* **M. genioglossus.** See *Geniohyoglossus* in Table (Illus. Dict.). **M. glossopalatinus,** a small muscle constricting the action of the fauces and composing the major part of the anterior pillar. **M. glossostaphylinus.** See *M. glossopalatinus.* **M., Gluteoperineal,** an anomalous branch of the superficial transverse perineal muscle which originates from the fascia covering the glutæus maximus. **M., Gluteus Deep, M. glutæus profundus, M. g. internus, M. g. externus.** See *M. iliotrochanterius parvus.* **M. glutæus primus,** the glutæus maximus. **M. g. secundus,** the glutæus medius. **M. g. superficialis.** See *M. iliotrochanterius medius.* **M. g. tertius,** the glutæus minimus. **M. gnathopharyngeus,** the superior constrictor of the pharynx. **M. gracilis anterior,** in comparative anatomy a small muscle not found in man, originating from the ilium and extending in front of the capsule of the hip-joint is attached to the ventral aspect of the femur. **M., Great Anterior Straight** (of the head). **M., Great Dorsal.** See *Latissimus dorsi* in Table (Illus. Dict.). **M., Hallucal Transverse.** See *Transversus pedis* in Table (Illus. Dict.). **M. hippicus,** the tibialis anticus. **M. humerocubitalis,** the brachialis. **M. humerometacarpeus,** in veterinary anatomy a muscle represented by the carpioradial extensor muscles (long and short) in man. **M. humerophalangeus,** in veterinary anatomy the analog of the flexor perforatus in man. **M. humeroradiophalangeus,** in veterinary anatomy the analog of the deep digital flexor in man. **M., Humeroradial,** in comparative anatomy the analog of the brachialis in man. **M. hyobasioglossus,** the basioglossus muscle. **M.s, Hypaxial, M.s, Hyposkeletal,** those which pass below the vertebral axis; in man in front of the bodies of the vertebras (Coues). **M. iliacus externus,** the pyriform muscle. **M., Ilioabdominal** in comparative anatomy the analog of the obliquus internus in man. **M. ilioabdominalis,** in comparative anatomy the analog of the obliquus internus abdominis in man. Syn., *Small oblique muscle.* **M., Iliocostal Accessory.** See *Musculus accessorius ad sacrolumbalem* in Table (Illus. Dict.). **M. iliolumbalis,** the quadratus lumborum. **M. ilioprætibialis.** See *Sartorius* in Table (Illus. Dict.). **M., Iliopsoas,**

iliacus and psoas muscles regarded as one. **M. iliosacrofemoralis,** the glutæus maximus. **M., Iliospinal,** in comparative anatomy a muscle representing the longissimus dorsi and transversus colli in man. **M. iliotrochanterius.** See *Iliacus* in Table (Illus. Dict.). **M. iliotrochanterius externus** or **medius,** in comparative anatomy the analog of the glutæus maximus in man. **M. iliotrochanterius magnus,** in comparative anatomy the analog of the glutæus medius muscle of man. **M. iliotrochanterius parvus,** in comparative anatomy the analog of the glutæus minimus. **M., Infraoblique.** See *Obliquus capitis inferior* in Table (Illus. Dict.). **M. infraserratus,** the serratus inferior posticus. **M.s, Interaccessory,** short lumbar muscles connecting the accessory processes of the vertebras. **M. interarticularis lumborum, M. interobliquus.** See *M.s, Interaccessory.* **M.s, Internal,** involuntary muscles. **M. internus auris, M. internus mallei,** the tensor tympani. **M. intrarectus,** Coues' name for the rectus oculi internus. **M. ischiopoplitibialis.** See *Semimembranosus* in Table (Illus. Dict.). **M. ischiopræ-tibialis.** See *Semitendinosus* in Table (Illus. Dict.). **M. ischiotibialis externus.** See *M. vastus longus.* **M. ischiotibialis internus,** in comparative anatomy the representative of the semimembranosus in man. **M. ischiotibialis medius, M. i. posticus,** in comparative anatomy the analog of the semitendinosus muscle in man. **M., Isotonic,** a muscle that contracts on stimulation, its tension remaining the same. **M. keratoglossus accessorius,** an inconstant bundle of fibers from the cornua of the hyoid and inserted into the lower part of the styloglossus muscle. **M. k. externus,** in veterinary anatomy the styloglossus muscle of Leyh. **M. keratoglossus internus, M. k. parvus,** in the horse, one having origin in the lower end of the styloid bone or from the greater horn of the hyoid and ending near the tip of the tongue. **M. keratohyoideus,** an anomalous muscle originating in the dorsal surface of the lesser cornu of the hyoid bone and inserted into the muscular process of the arytenoid cartilage. **M. keratopharyngeus,** Luschka's name for that part of the middle constrictor of the pharynx that originates from the greater cornu of the hyoid bone. **M. keratopharyngeus inferior,** in veterinary anatomy, an anomalous muscle which originates in the lower end of the large branch of the hyoid bone and terminates in the wall of the pharynx. **M. keratopharyngeus major, M. k. minor,** the middle constrictor of the pharynx. **M., Koyter's,** the corrugator supercilii. **M., Krause's.** See *M. coracocervicalis.* **M. levator humeri,** in veterinary anatomy a muscle corresponding to the clavicular parts of the sternocleidomastoid, the deltoid and trapezius of man taken collectively with the trachelo-acromialis occurring in quadruped mammals. Syn., *Mastoidohumeralis.* **M. levator scapulæ,** the levator anguli scapulæ. **M. lingualis longitudinalis superior, M. l. superficialis, M. l. superior,** a band of fibers extending from base to apex of the upper surface of the tongue. **M., Loaded,** a muscle made to work with a weight hanging upon it and with no interval of relaxation. Cf. *M., After-loaded.* **M., Longer Straight,** the rectus capitis posticus major. **M. longissimus femoris,** the sartorius. **M. longitudinalis inferior.** See *Lingualis* (Illus. Dict.). **M. longitudinalis linguæ inferior medius,** Bochdalek's name for an anomalous azygos muscle running backward from the mental spine and disappearing between the genioglossi in the root of the tongue. **M. lumbidorsalis.** See *Spinalis dorsi* in Table (Illus. Dict.). **M. lumboabdominalis,** in comparative anatomy, a muscle of the lower animals corresponding to the transversalis abdominis of man. Syn., *Costoabdominalis internus.* **M. lumbocostalis,** in veterinary anatomy, a muscle corresponding to the serratus posticus of man. Syn., *M. superficialis costarum.* **M. lumbofemoralis,** the psoas magnus. **M. lumboiliacus,** the psoas parvus. **M., Lumbosacral, Accessory.** See *M., Sacrolumbar, Accessory.* **M. malaris,** a part of the orbicularis palpebrarum originating in the inner inferior margin of the orbit and adjacent part of the dorsum of the nose and uniting partly with the zygomaticus major. **M. malledius,** the tensor tympani. **M. marsupialis,** the gemellus muscle. **M. mastoideus anterior, M. mastoideus colli,** the sternocleidomastoid. **M. mastoideus lateralis,** the trachelomastoid. **M. mastoidoconchalis,** the retrahens aurem. **M. mastoidohumeralis.** See *M. levator humeri.* **M. maxillolabialis,** the depressor anguli oris. **M. mentalis.** See *Levator labii inferioris* in Table (Illus. Dict.). **M., Metacarpophalangeus.** See *Adductor pollicis manus* in Table (Illus. Dict.). **M.s, Monomere, M.s, Monomeric,** muscles extending between contiguous monomeres. **M.s, Multicaudate,** those ending in more than two divisions. **M.s, Multicipital,** those having distinctly more than one origin. **M. multifidus,** the multifidus spinæ. **M. nasalis,** Douglas' name for the pyramidalis nasi, a part of the levator labii superioris and the outer portion of the depressor alæ nasi. **M. nasotransversalis,** the compressor narium. **M. nauticus,** the tibialis posticus. **M., Oblique, Small.** See *M. ilioabdominalis.* **M. obliquus capitis minor.** See *Obliquus capitis superioris* in Table (Illus. Dict.). **M. occipitalis teres.** See *O. minor* in Table (Illus. Dict.). **M. omocervicalis.** Same as *Levator anguli scapulæ.* **M. omoclavicularis.** See *Coracoclavicularis.* **M., Omohyoid, M. omohyoideus.** (See Illus. Dict.) 2. The analog of the omohyoid of man which occurs in most quadruped mammals, except the *Carnivora.* **M. omoplatohyoideus,** the omohyoid. **M. opifex circumductionis.** See *Obliquus superior* in Table (Illus. Dict.). **M. opisthenar,** the erector spinæ. **M., Palpebral,** the orbicularis palpebrarum. **M. papillæ opticæ,** a muscle consisting of circular longitudinal and radiary fibers observed by G. Nicolai at the head of the optic nerve in man and several animals. **M.s, Pectinate,** the serrated muscles. **M., Pedal.** 1. The extensor brevis digitorum pedis. 2. See *M. tarsopræphalangeus.* **M. pericardiothyroideus,** a band of fibers, supposed to be a separated fasciculus of the sternothyroid muscle, extending from the isthmus of the thyroid gland to the anterior surface of the fibrous layer of the pericardium. **M. pharyngopalatinus.** See *Palatopharyngeus* in Table (Illus. Dict.). **M.s, Pilar.** See *Arrectores pili* in Table (Illus. Dict.). **M.s, Polycaudate.** See *M.s, Multicaudate.* **M., Polycipital.** See *M., Multicipital.* **M.s, Polygastric,** long muscles separated into parts by transverse tendinous septæ. **M., Polymere,** one in which one or more monomeres occur between its origin and insertion. **M., Postauriculum.** See *Retrahens aurem* in Table (Illus. Dict.). **M.s, Postaxial,** muscles on the dorsal aspect of the limbs, which lie at right angles to the spine. **M., Postrectus, Greater.** See *Rectus capitis posticus major* in Table (Illus. Dict.). **M., Postrectus, Small.** See *Rectus capitis posticus minor* in Table (Illus. Dict.). **M., Preauricular,** the attrahens aurem. **M.s, Preaxial,** muscles on the ventral aspect of the limbs, which lie at right angles to the spine. **M., Prescapular, M. præscapularis.** See *Supraspinatus* in Table (Illus. Dict.). **M. prodigus,** the supinator longus. **M. pronator inferior, M. pronator minor, M. pronator transversus.**

See *Pronator quadratus* in Table (Illus. Dict.). **M. pronator obliquus, M. pronator rotundus.** See *P. radii teres* in Table (Illus. Dict.). **M. pronator teres,** the pronator radii teres. **M. proprius auris externæ.** See *Retrahens aurem* in Table (Illus. Dict.). **M. psoas internus,** the psoas magnus. **M. pterygoideus major,** the internal pterygoid muscle. **M. pterygoideus minor,** the external pterygoid muscle. **M. pterygoideus tertius,** an inconstant muscular fascicle having its origin with the external pterygoid and inserted into the interarticular fibrocartilage of the temporomaxillary joint. **M.s, Pterygomaxillary,** the pterygoid muscles. **M., Pterygopalatal** or **Pterygopalatine,** the portion of the levator palati passing from the hamular process of the sphenoid bone to the palate bone. **M. pterygostaphylinus externus.** Same as *Tensor palati.* **M. pterygostaphylinus internus,** the levator palati. **M.s, Pubovesical,** a bundle of muscular fibers taking origin in the back of the pubes and extending with the anterior true ligament of the bladder to lose itself in the superficial muscular layer of the bladder. **M., Pyloric.** See *Sphincter pyloricus.* **M. quadratus dorsi.** Same as *Q. lumborum.* **M. quadratus genæ.** See *Platysma myoides* in Table (Illus. Dict.). **M. quadratus labii inferioris.** See *Depressor labii inferioris* in Table (Illus. Dict.). **M. radialis anterior, M. r. internus,** the flexor carpi radialis. **M. radialis externus brevis.** See *Extensor carpi radialis brevior* in Table (Illus. Dict.). **M. rectus capitis posticus profundus.** See *Rectus c. p. minor* in Table (Illus. Dict.). **M. rectus capitis posticus superficialis** or **inferior,** the rectus capitis posticus major muscle. **M.s, Reisseisen's,** the muscular fibers of the bronchi. **M., Rouget's,** the circular bundles of muscular fibers which form part of the ciliary muscle and are situated nearest to the iris. Syn., *Müller's muscle.* **M., Ruysch's Uterine,** the muscular tissue of the fundus uteri, which was believed by Ruysch to act independently of that of the rest of the uterine muscle. **M. sacrococcygeus posticus,** the extensor coccygis. **M., Sacrolumbar Accessory.** See *Musculus accessorius ad sacrolumbalem* in Table (Illus. Dict.). **M. sacrospinalis,** the erector spinæ. **M., Santorini's Circular,** involuntary muscular fibers encircling the urethra beneath the constrictor urethræ. **M. scalenus lateralis,** an anomalous muscle originating in the dorsal tubercles of the transverse processes of the fourth, fifth, and sixth cervical vertebras, and having its point of insertion with the scalenus medius. **M. scalenus lumborum,** the quadrate lumbar muscle. **M., Scapulohumeral,** the teres major. **M., Scapuloradial,** the biceps. **M. semispinalis capitis.** See *Complexus* in Table (Illus. Dict.). **M.s, Serrated,** broad muscles with serrate edges by means of which they are inserted. **M. serratus anticus, M. s. a. major,** the serratus magnus. **M. serratus anticus minor,** the pectoralis minor. **M.s, Simple,** those having a single point of origin and one of insertion. **M., Skew,** an oblique muscle. **M., Smiling.** See *Risorius* in Table (Illus. Dict.). **M. sphincter antri pylorici,** a band of circular fibers distant from the pyloric orifice of the stomach about 10 cm.; also called the transverse band. **M. sphincter pupillæ,** involuntary fibers of the iris arranged circularly around the pupil and having a width of about 0.08 cm. **M. sphincter pyloricus,** the aggregation of the fibers of the circular coat at the pyloric orifice of the stomach. Syn., *Pyloric muscle.* **M. sphincter vesicæ,** the aggregation of the fibers of the circular layer of the muscular coat, about the neck of the bladder and the beginning of the urethra. **M. spinalis.** Same as *Spinalis dorsi.* **M., Square.** See *Quadratus lumborum* in Table (Illus. Dict.). **M., Sternocostal, M. sternocostalis.** See *Triangularis sterni* in Table (Illus. Dict.). **M., Sternohumeral.** See *Pectoralis major* in Table (Illus. Dict.). **M., Sternomastoid.** See *Sternocleidomastoid* in Table (Illus. Dict.). **M. subcutaneus colli, M. subcutaneus cervicis.** See *Platysma myoides* in Table (Illus. Dict.). **M. suboccipitalis.** See *Transversus nuchæ* in Table (Illus. Dict.). **M., Subvertebral.** See *M.s, Hyposkeletal.* **M. supraacromio humeralis,** the deltoid muscle. **M., Supraauricular,** the attollens aurem. **M., Supraoblique, M., Superior Oblique.** See *Obliquus capitis superioris* (Illus. Dict.). **M. suprascapularis.** See *Supraspinatus* in Table (Illus. Dict.). **M. suprasemiorbicularis.** See *Orbicularis oris* in Table (Illus. Dict.). **M. supraserratus,** the serratus posticus superioris. **M., Sural Triceps.** See *M., Triceps Sural.* **M. tarsopræphalangeus,** in veterinary anatomy a small muscle originating in the tendons of the extensors and attached to the lower end of the os calcis. **M., Tensor Fascial, M. tensor fasciæ latæ.** See *Tensor vaginæ femoris* in Table (Illus. Dict.). **M.s, Thenar,** the abductor and flexor muscles of the thumb. **M., Thiernesse's,** in veterinary anatomy a head of the epicondylopræphalangeus taking origin from the transverse ligament of the ulna and considered as a distinct muscle. **M. thyreoadenoideus,** Winslow's name for a fascicle of the inferior constrictor of the pharynx having its point of insertion on the side of the thyroid gland. Syn., *Adenoid muscle.* **M. thyreopalatinus.** See *Palatopharyngeus* in Table (Illus. Dict.). **M.-tonus,** the condition of slight but continued contraction in a muscle which causes the tension peculiar to waking hours. **M. trachelocostalis,** in the lower mammals the analog of the sacrolumbar muscle in man. **M. trachelooccipitalis,** in veterinary anatomy a muscle which flexes the head, corresponding to the rectus capitis anticus major of man. It takes origin from the transverse processes of the third, fourth, and fifth cervical vertebras, and is attached to the body of the sphenoid and the basilar process of the occipital bone. **M. transversus nasi.** See *Compressor narium* in Table (Illus. Dict.). **M., Treitz's** (Wenzel, 1819–1872), the suspensory muscle of the duodenum; a thin, triangular muscle that arises from the left crus of the diaphragm and the connective tissue surrounding the celiac axis, and is inserted into the duodenojejunal flexure. **M.s, Triangular,** the scalenus muscles. **M., Triceps Sural, M. triceps suræ,** the gastrocnemius and soleus considered as one muscle. **M.s, Tricipital,** muscles having three distinct origins. **M., Trochlear, M. trochlearis,** the superior oblique muscle of the eye. **M. ulnaris externus,** the extensor carpi ulnaris. **M.s of the Ureters, Musculi ureterum,** a bundle of thin fibers from the urinary bladder running between the openings of the ureters. **M., Urethrobulbar,** the accelerator urinæ. **M. Varolii.** See *Stapedius* in Table (Illus. Dict.). **M. vastus longus,** in comparative anatomy the analog of the biceps femoris and a portion of the glutæus maximus of man. **M., Vestigial,** one that is rudimentary in man but well developed in the lower animals. **M., Zaglas' Perpendicular External,** the vertical fibers of the tongue, which, decussating with the transverse fibers and the insertions of the geniohyoglossus, curve outward in each half of the tongue.

Muscology (*mus-kol'-o-je*) [*muscus,* moss; λόγος, science]. See *Bryology* (Illus. Dict.).

Musculamin (*mus-ku-la'-min*). A nitrogenous base obtained from muscular tissue by Etard and Vila, 1902.

Muscularity. (See Illus. Dict.) 2. The contractile power or tone of a muscle.

Musculin. (See Illus. Dict.) 2. See *Paramyosinogen* (Illus. Dict.).

Musculodermic (*mus-ku-lo-durm'-ik*) [*μῦς*, muscle; *δέρμα*, skin]. Relating to or supplying both muscles and skin, musculocutaneous.

Musculoelastic (*mus-ku-lo-e-las'-tik*). Muscular and elastic; made up of muscular and elastic tissue.

Musculointestinal (*mus-ku-lo-in-tes'-tin-al*). Relating to the muscles and the intestine.

Musculosa (*mus-ku-lo'-sah*). See *Muscularis* (Illus. Dict.).

Musculospinal (*mus-ku-lo-spi'-nal*). Relating to or distributed to the muscles and spine.

Musculotegumentary (*mus-ku-lo-teg-u-ment'-ar-e*). Affecting both muscles and integument.

Musculotonic (*mus-ku-lo-ton'-ik*) [*μῦς*, muscle; *τόνος*, tone]. Relating to the tone or contractility of a muscle. **M. Center.** See under *Center*.

Musculous (*mus'-ku-lus*). Composed of or containing muscular fibers.

Musena, Musenna. See *Moussena* (Illus. Dict.).

Musennin. See *Moussenin* (Illus. Dict.).

Mushroom. (See Illus. Dict.) 2. To flatten-out or "upset" upon striking; said of an expansive bullet.

Musin (*mu'-sin*). A proprietary cathartic said to be made from tamarinds.

Musk. (See Illus. Dict.) **M., Artificial,** trinitro-ψ-butyltoluene, $(NO_2)_3C_6H.CH_3.C(CH_3)_3$; melts at 96–97°, smells intensely like musk. Dose, 10 gr. (0.66 gm.). **M., Vegetable,** the seeds of *Hibiscus abelmoschus*, L.; used as a stimulant, stomachic, and antispasmodic.

Musol (*mu'-sol*). A nostrum recommended as a specific for diabetes; it consists entirely of salol.

Musquash Root (*mus'-kwash*). *Cicuta maculata.*

Mustard. (See Illus. Dict.) **M., Flour of,** black and white mustard seeds mixed and pulverized.

Mutase (*mu'-tāz*). A food preparation rich in proteids said to be made from leguminous plants. It is used in gastrointestinal diseases. Dose, 1 dessertspoonful (10 c.c.) several times daily with food.

Mutation. (See Illus. Dict.) 2. A sudden variation which oversteps the limits of species and produces new species or sports.

Mutism. (See Illus. Dict.) **M., Hysteric,** obstinate and voluntary silence although the vocal organs are uninjured and there is no visible lesion of the cerebral speech-centers.

Muto (*mu'-to*) [L. pl. *mutones*]. The penis.

Myasthenia. (See Illus. Dict.) Cf. *Hypotonia.* **M., Angiosclerotic Paroxysmal.** Synonym of *Claudication, Charcot's Intermittent.* **M. gastrica,** atony of the stomach. **M. gravis** [Wilks], **M. g. pseudoparalytica** [Buzzard], **Myasthenic reaction** [Jolly], a singular condition, found after death, clinically resembling bulbar paralysis but without any local lesion. Though there is extreme weakness, there is no muscular atrophy nor fibrillary tremor.

Mycethemia, Mycethæmia (*mi-se-the'-me-ah*). See *Mycohemia* (Illus. Dict.).

Mycetism (*mi'-set-izm*) [*μύκης*, fungus]. Mushroom poisoning. **M., Cerebral,** a form resembling atropin poisoning, with mydriasis, maniacal excitement, cramps in the muscles, and coma, due to ingestion of *Amanita muscaria* and *A. pantherina.* **M., Choleriform,** a form marked by cholera nostras and collapse, or by delirium, coma, icterus, and fatty degeneration, due to ingestion of *Amanita phalloides* or a poisonous species of *Helvella.* **M., Intestinal,** the mildest form, occurring as catarrhal enteritis or gastroenteritis, due to ingestion of poisonous species of *Clavaria, Lactarius,* or *Boletus.* **M., Muscaric, M. muscarinicus, Muscarinism,** that due to the alkaloid muscarin; it is marked by salivation, increased peristalsis, miosis, and collapse.

Mycetoma. (See Illus. Dict.) Syn., *Fungus foot; Madura foot; Ulcus grave; Perikal; Podelcoma; Fish-roe bodies.* **M., Black,** that form of mycetoma in which the fungoid granules are dark-brown or at times quite black. In morphology, color and cultural peculiarities distinguish it at once from the fungus isolated from the white form of the disease. It is not pathologic for animals. The two varieties of fungus do not appear together in the same case. **M., White,** a form of mycetoma in which the granules of the tumors are white or yellowish; they consist of fungoid masses. Vincent describes them as *Mycetiæ streptothrix.* It grows at body-temperature in nutrient media containing sugar and glycerin, also in vegetable infusions. It is not pathologic to animals.

Mycetophilous (*mi-set-of'-il-us*) [*μύκης*, fungus; *φιλεῖν*, to love]. Growing exclusively on fungi. Syn., *Mycophilous.*

Mycinulin. See *Mycoinulin.*

Mycoangioneurosis (Vanni) (*mi-ko-an-je-o-nu-ro'-sis*) [*μύκος*, mucus; *ἀγγεῖον*, vessel; *νεῦρον*, nerve]. A neurosis accompanied by a hypersecretion of mucus producing the affection known as mucous colitis.

Mycobacterium (*mi-ko-bak-te'-re-um*) [*μύκης*, fungus; *βακτήριον*, a rod]. A genus of bacteria of the family *Mycobacteriaceæ;* the cells are commonly short, cylindric, sometimes bent and irregularly swollen, clavate or cuneate; y-shaped forms may appear or longer filaments with true branching, or short coccoid elements which may be regarded as gonidia. It includes *Corynebacterium,* Lehmann and Neumann, and *Sclerothrix,* Metchnikoff. Cf. *Streptothrix.*

Mycocyte (*mi'-ko-sīt*). See *Mucocyte.*

Mycodextrin (*mi-ko-deks'-trin*). See *Mycoinulin.*

Mycodomatia (*mi-ko-do-ma'-she-ah*) [*μύκης*, fungus; *δόμος*, a chamber]. A name given by A. B. Frank, 1879, to the root-tubercles produced by bacteroids.

Mycofibroma (*mi-ko-fi-bro'-mah*). See *Mycodesmoid* (Illus. Dict.).

Mycoinulin (*mi-ko-in'-u-lin*). A dextrorotary carbohydrate obtained by Ludwig and Busse from the fungus *Elaphomyces officinalis,* Nees. Syn., *Mycinulin; Mycodextrin; Mykinulin.*

Mycomyringitis (*mi-ko-mi-rin-ji'-tis*) [*μύκης*, fungus; *μυριγξ*, membrane]. Myringitis of mycotic origin, otomycosis.

Mycophilous (*mi-kof'-il-us*). See *Mycetophilous.*

Mycopus. See *Mucopus* (Illus. Dict.).

Mycosin (*mi'-ko-sin*). See *Chitosan.*

Mycosis. (See Illus. Dict.) **M., Catalytic.** See *Microbiohemia* (Illus. Dict.). **M. cutis chronica.** Synonym of *Furunculus orientalis.* **M. favosa,** favus. **M. mucosina,** a form of mycosis described by Paltauf in man, in which the fungus invaded the body through the intestines and led to abscesses in the lungs, brain, and other organs. **M., Pharyngeal.** See *Pharyngomycosis* (Illus. Dict.). **M. pharyngis leptothricia.** See *Hyperkeratosis lacunaris pharyngis.* **M. trichophytina,** mycosis of the skin due to some species of *Trichophyton.* **M. vaginalis,** intense burning and pruritus of the vagina attended with an acid discharge and blood coloration attributed to the presence of a fungus.

Mycosozin (*mi-ko-so'-zin*). See under *Proteids, Defensive* (Illus. Dict.).

Mycoticopeptic (*mi-kot-ik-o-pep'-tik*) [*μυκρς*, fungus; *πέψις*, digestion]. Mycotic and peptic.

Mycteric (*mik-ter'-ik*) [*μυκτήρ*, the nose]. Relating to the nasal cavities.

Mycteroxerosis (*mik-ter-o-ze-ro'-sis*) [*μυκτήρ*, the nose; *ξηρός*, dry]. Dryness of the nostrils.

Mydriasis. (See Illus. Dict.) **M., Alternating, M., Leaping, M., Springing,** mydriasis which by normal light and convergence-reaction attacks first one eye and then the other. It is due to disorder of the central nervous system.

Mydrin (*mi'-drin*). A combination of the hydrochlorids of ephedrin and homatropin. It is used in 10% solution when evanescent mydriasis is required.

Mydrol (*mi'-drol*). Iodomethylpyrazolin, a colorless, bitter powder soluble in water and alcohol. It is used in 5%–10% solution as a mydriatic.

Myelen (*mi'-el-en*). An extract of ox-marrow.

Myelinic. (See Illus. Dict.) **2.** Medullated.

Myelinization (*mi-el-in-iz-a'-shun*). The medullation of nerve-fibers.

Myelitis. (See Illus. Dict.) **M., Annular, Chronic,** annular sclerosis. **M., Anterior Cornual** (Gowers). Synonym of *Paralysis, Acute Atrophic.* **M. of the Anterior Horns.** [Seguin.] Acute anterior poliomyelitis. **M. atactica,** that marked by motor incoordination and loss of muscle-sense. **M., Cavitary,** Joffroy's name for syringomyelitis. **M. circumscripta.** See *M., Focal* (Illus. Dict.). **M. convulsoria** [A. Hörtel], electric chorea. **M. generalis.** See *M., Diffuse* (Illus. Dict.). **M. hyperplastica granulosa.** See *Osteitis fungosa.* **M. segmentalis.** See *M., Transverse* (Illus. Dict.).

Myeloblasts (*mi-el'-o-blasts*) [*μυελός*, marrow; *βλαστός*, a germ]. Nägeli's term for cells from which myelocytes are formed. They are free from granules, contain no nucleoli, and the chromatin is always present in regular reticular form.

Myelocene (*mi-el'-o-sēn*). A preparation of bone-marrow, used as an application in psoriasis, etc.

Myelocyst (*mi-el'-o-sist*) [*μυελός*, marrow; *κύστις*, bladder]. A cyst springing from the medullary canal.

Myelocytes. (See Illus. Dict.) **3.** A group of leukocytes derived from bone-marrow, as distinguished from lymphocytes found in the lymphatic glands.

Myelocythemia (*mi-el-o-si-the'-me-ah*) [*μυελός*, marrow; *κύτος*, cell; *αἷμα*, blood]. An excess of myelocytes in the blood.

Myeloganglitis (*mi-el-o-gang-gli'-tis*). A very severe form of cholera believed to be due to ganglitis of the solar plexus and of the hepatic plexus. Syn., *Ganglitis medullaris.*

Myelolymphangioma (*mi-el-o-lim-fan-je-o'-mah*). Same as *Elephantiasis.*

Myelomenia (*mi-el-o-me'-ne-ah*) [*μυελός*, marrow; *μῆνες*, menses]. A supposed metastasis of the menstrual blood to the spinal cord.

Myelomeninx (*mi-el-o-me'-ninks*) [*μυελός*, marrow; *μῆνιγξ*, membrane]. A spinal membrane.

Myeloneuritis (*mi-el-o-nu-ri'-tis*). Multiple neuritis combined with myelitis.

Myelopathia, Myelopathy. (See Illus. Dict.) **M. tropica** [de Meijer], beriberi.

Myelopetal (*mi-el-op'-et-al*) [*μυελός*, marrow; *petere*, to seek]. Moving toward the myelon; said of nerve-fibers.

Myelopore (*mi'-el-o-pōr*) [*μυελός*, marrow; *πόρος*, pore]. An opening into the spinal cord.

Myelorrhaphy (*mi-el-or'-af-e*) [*μυελός*, marrow; *ῥαφή*, a seam]. The suturing of a severed spinal cord.

Myolospasm (*mi'-el-o-spazm*) [*μυελός*, marrow; *σπασμός*, spasm]. Spasm of the spinal cord.

Myelosyphilis (*mi-el-o-sif'-il-is*). Syphilis of the spine.

Myelosyphilosis (*mi-el-o-sif-il-o'-sis*). Syringomyelia.

Myelotherapy (*mi-el-o-ther'-ap-e*). The therapeutic use of bone-marrow extracts.

Myelotome (*mi-el'-o-tōm*) [*μυελός*, marrow; *τέμνειν*, to cut]. An apparatus for making sections of the spinal cord.

Myelotoxic (*mi-el-o-toks'-ik*) [*μυελός*, marrow; *τοξικόν*, poison]. Characteristic of or pertaining to the substance having toxic action on the cells of bone-marrow.

Myelotoxin (*mi-el-o-toks'-in*). A cytotoxin with specific action upon bone-marrow cells.

Myenteron (*mi-en'-tur-on*) [*μῦς*, muscle; *ἔντερον*, intestine]. The muscular coat of the intestine.

Mygale (*mig'-al-e*) [*μυγάλη*, the shrew-mouse]. A genus of giant spiders belonging to the *Theraphosidæ*, the so-called trap-door, mining, mason, or bird spiders. Cf. *Arana picacaballo.* **M. heutzii,** a poisonous species of the southern United States. **M. ictera,** Koch, a poisonous species greatly feared in Egypt, where it is called abu-schabat. **M. javanica,** a poisonous species of Java. **M. klugii,** Koch, a venomous species much dreaded in the dry country of the eastern Andes. **M. sumatrensis,** a poisonous species of Sumatra.

Mykinulin (*mi-kin'-u-lin*). See *Mycoinulin.*

Mylabris. (See Illus. Dict.) **M. cichorii,** a coleopterous, vesicant beetle indigenous to southern Europe, Egypt, China, and India (where it is called Telina fly). In China under the name of pan-neau it is the remedy for hydrophobia. It has all the properties of cantharis and has been used long in Anglo-Indian practice.

Myocardiograph (*mi-o-kar'-de-o-graf*) [*μῦς*, muscle; *καρδία*, heart; *γράφειν*, to write]. An apparatus for recording the movement of the heart muscles.

Myocarditis. (See Illus. Dict.) **M. chronica fibrosa,** atrophy and necrosis of heart muscle due to the obliteration of an artery, usually one of the finer branches of the coronary.

Myocardium. (See Illus. Dict.) **M., Fragmentation of,** breaking up of the heart muscle due to abnormal contraction during the death agony. It is usually found after sudden death. Syn., *Fragmentatio cordis; Myocardite segmentaire* (Renaut).

Myocellulitis (*mi-o-sel-u-li'-tis*). Simultaneous myositis and cellulitis.

Myocephalitis (*mi-o-sef-al-i'-tis*) [*μῦς*, muscle; *κεφαλή*, the head]. Myositis affecting the muscles of the head.

Myoclonus. (See Illus. Dict.) **M., Disseminated** [Vanlair]. Syn. of *Paramyoclonus multiplex.* **M. epilepticus,** a malady which, according to Gowers, is most nearly allied to senile chorea, being intermediate between chorea and facial spasm and torticollis. **M. fibrillaris multiplex,** Kny's name for myokymia. **M. spinalis multiplex** [Löwenfeld]. Syn. of *Paramyoclonus multiplex.*

Myocomma. (See Illus. Dict.) **2.** One of the mesodermal septa which separate the myotomes from one another. Syn., *Myoseptum.*

Myoctonin. (See Illus. Dict.) **2.** $C_{37}H_{30}N_2O_8 + 5H_2O$. An amorphous alkaloid derived from *Aconite lycoctonum,* Linn. Cf. *Lycaconitin; Lycaconin; Acolytin.*

Myocyte. (See Illus. Dict.) **2.** The layer of cytoplasm made up of the myonemes in a protozoon.

Myodegeneration (*mi-o-de-jen-ur-a'-shun*). Muscular degeneration.

Myoedema, Myœdema (*mi-o-e-de'-mah*). **1.** See *Myoidema* (Illus. Dict.). **2.** Edema of the muscles.

Myoepithelial (*mi-o-ep-e-the'-le-al*). **1.** Relating to or consisting of muscle and epithelium. **2.** Pertaining to myoepithelium.

Myoepithelium (*mi-o-ep-e-the'-le-um*) [*μῦς*, muscle;

epithelium]. Muscle-epithelium; epithelium, the cells of which possess contractile processes.

Myofibrosis (*mi-o-fi-bro'-sis*) [*μῦς*, muscle; *fibrosis*]. Intramuscular fibrosis; an increase of connective tissue not only between the muscle-fasciculi but also between the individual fibrillæ; it is most apt to occur in the ventricles of the heart.

Myogen (*mi'-o-jen*). 1. See *Myosinogen* (Illus. Dict.). 2. A dietetic prepared from blood-serum of cattle.

Myogenous (*mi-oj'-en-us*) [*μῦς*, muscle; *γεννᾶν*, to produce]. Originating in muscle.

Myogramma (*mi-o-gram'-ah*) [*μῦς*, a muscle; *γράμμα*, a writing]. A mark or tracing upon a muscle. In the pl., *Myogrammata*. See *Inscriptiones tendineæ* (Illus. Dict.).

Myohysterectomy (*mi-o-his-ter-ek'-to-me*) [*μῦς*, muscle; *ὑστέρα*, uterus; *τέμνειν*, to cut]. The incomplete removal of the uterus, more or less of the cervix uteri being left and the operation being completed without opening the vagina.

Myoideum (*mi-oid'-e-um*) [*μῦς*, muscle; *εἶδος*, resemblance]. Tissue resembling muscle.

Myoidism (*mi'-oid-izm*) [*μῦς*, muscle; *εἶδος*, likeness]. Idiomuscular contraction.

Myokymia (*mi-o-ki'-me-ah*) [*μῦς*, a muscle; *κῦμα*, a wave]. Persistent, widespread, muscular quivering without atrophy or loss of power.

Myoma. (See Illus. Dict.) **M. lævicellulare,** Ziegler's name for leiomyoma. **M. malignum, M. sarcomatodes,** one in which the muscle tissue has been transformed into round and spindle-shaped cells between which there is but a fine connective-tissue reticulum. **M. striocellulare,** rhabdomyoma. **M. teleangeiectodes,** angiomyoma.

Myometrium (*mi-o-me'-tre-um*) [*μῦς*, muscle; *μήτρα*, womb]. The uterine muscular structure.

Myomohysterectomy (*mi-o-mo-his-ter-ek'-to-me*) [*myoma; ὑστέρα*, uterus; *τέμνειν*, to cut]. The extirpation of a myomatous uterus.

Myoneme (*mi'-o-nēm*) [*μῦς*, muscle; *νῆμα*, a thread]. One of the long (1 *μ*), contractile fibrillæ which in the protozoa make up the layer of the cytoplasm called the myocyte. Cf. *Spasmoneme*.

Myoneurasthenia (*mi-o-nu-ras-the'-ne-ah*) [*μῦς*, muscle; *νεῦρον*, nerve; *a*, priv.; *σθενός*, strength]. Relaxation of the muscles attending neurasthenia.

Myoneure (*mi'-o-nūr*) [*μῦς*, muscle; *νεῦρον*, nerve]. A motor nerve-cell supplying a muscle.

Myoneuroma (*mi-o-nu-ro'-mah*). Combined myoma and neuroma.

Myopathia, Myopathy. (See Illus. Dict.) Syn., *Symptomatic myalgia*. 2. A group of disorders characterized by a slow progressive loss of power in muscles, associated with atrophy or hypertrophy of muscles, absence of fibrillar contraction or quantitative electric change (Batten). **M., Duchenne's Early, M., Progressive.** Synonym of *Primary muscular dystrophy*.

Myoperitonitis (*mi-o-per-it-on-i'-tis*). Inflammation of the abdominal muscles combined with peritonitis.

Myophagism (*mi-of'-aj-izm*) [*μῦς*, muscle; *φαγεῖν*, to eat]. The wasting away of muscular tissue observed in muscular atrophy.

Myoproteid (*mi-o-pro'-te-id*). A substance found by v. Fürth in muscle plasma and differing apparently from the recognized albumins.

Myopsychopathy, Myopsychy (*mi-o-si-kop'-ath-e, mi-o-si'-ke*) [*μῦς*, muscle; *ψυχή*, mind; *πάθος*, disease]. Joffroy's name for myopathies associated with feebleness or defect of mind.

Myopsychoses (*mi-o-si-ko'-sēz*) [*μῦς*, muscle; *ψυχή*, mind]. Myopathies and neuromuscular affections associated with mental troubles.

Myorrhaphy (*mi-or'-af-e*) [*μῦς*, muscle; *ῥαφή*, a seam]. The union of the abdominal recti muscles by suture when drawn apart.

Myosalpingitis (*mi-o-sal-pin-ji'-tis*). Hypertrophy of the muscular tissue of the salpinx.

Myosclerosis. (See Illus. Dict.) 2. Synonym of *Pseudohypertrophic paralysis*.

Myoserum (*mi-o-se'-rum*). Muscle-juice; juice derived from meat submitted to pressure.

Myosinuria (*mi-o-sin-u'-re-ah*). The occurrence of myosin in the urine.

Myositis. (See Illus. Dict.) Cf. *Dermatomyositis*. **M. acuta interstitialis.** See *Monomyositis*. **M., Gonorrheal,** inflammation of muscles due to the presence of gonococci; first described by Ware, 1901. **M., Ischemic,** myositis due to prolonged fixation of forearm fractures by any form of bandaging which intercepts circulation through the muscles and nerves of the part; it results in Volkmann's contracture. **M. ossificans progressiva,** a process of ossification attacking one muscle after another. **M. ossificans traumatica,** the formation of a mass of bone in a muscle after an injury. **M. rheumatica,** myalgia.

Myospasmia (*mi-o-spaz'-me-ah*) [*μῦς*, muscle; *σπασμός*, spasm]. Diseases in which spasmodic muscular contraction is a dominant symptom.

Myosuria (*mi-o-su'-re-ah*). See *Myosinuria*.

Myosynizesis (*mi-o-sin-iz-e'-sis*) [*μῦς*, muscle; *συνίζησις*, a falling together]. The adhesion of two or more muscles.

Myotactic (*mi-o-tak'-tik*) [*μῦς*, muscle; *tangere*, to touch]. Relating to the sense of touch in muscles.

Myotome. (See Illus. Dict.) 3. The muscular tissue of an embryonic metamere.

Myotone (*mi'-o-tōn*). See *Myotonia* (Illus. Dict.).

Myotonia. (See Illus. Dict.) **M. aquisita,** Talma's disease; myotonia developed after injury, overstrain, or as the sequel of disease in one in whom there is absence of heredity.

Myotonic (*mi-o-ton'-ik*). Relating to myotonia. **M. Reaction of Erb.** See under *Reaction*.

Myrcene (*mir'-s'n*). $C_{10}H_{16}$. An olefinic terpene occurring in bay oil, boiling at 67°; sp. gr. 1.4673.

Myricetin (*mi-ris'-et-in*). $C_{15}H_{10}O_8$. A yellow pigment found in the bark of *Myrica nagi*, Thunb.; it is probably oxyquercetin.

Myricin. (See Illus. Dict.) 2. $C_{16}H_{31}O_2 . C_{30}H_{61}$, myricyl palmitic ester, a constituent of beeswax. 3. Myristicol.

Myricylate (*mi-ris'-il-āt*). A salt of myricyl.

Myringectomy (*mi-rin-jek'-to-me*). See *Myringodectomy* (Illus. Dict.).

Myringitis. (See Illus. Dict.) **M. bullosa,** acute myringitis attended by small, pearly-gray blisters.

Myringodermatitis (*mi-rin-go-dur-mat-i'-tis*) [*myringa*, membrana tympani; *δέρμα*, the skin]. A form of inflammation in the external layer of the drum-membrane with the formation of blebs either below or behind the malleus.

Myringography (*mi-rin-gog'-raf-e*) [*myringa*, drum-membrane; *γράφειν*, to write]. Registration of the movement of the membrana tympani and of the ossicles.

Myriocarpin (*mi-re-o-kar'-pin*). A neutral resinous body obtained from the cucur, *Cucumis myriocarpus*, Naud., of South Africa.

Myrmeciasm (*mur-me'-se-azm*) [*μύρμηξ*, ant]. Formication, myrmeciasis.

Myrmecobious (*mir mek-ob'-e-us*) [*μύρμηξ*, an ant; *βίος*, life]. Living on or among ants.

Myrobalanen (*mi-rob-al'-an-en*). See *Myrobalan* (Illus. Dict.). Recommended in diarrhea. Dose, 15–120 gr. (1–8 gm.) daily.

Myron (*mi'-ron*) [*μύρον*, any sweet juice exuding from plants]. 1. An unguent. 2. A soft resin.

Myronin (*mi-ro'-nin*). An ointment base said to be a mixture of soap, carnauba wax, and doegling oil.

Myrrholin (*mur'-ol-in*). A solution of equal parts of fatty oil and myrrh used as a vehicle for administration of creasote.

Myrtaceous, Myrtal (*mur-ta'-shus, mir'-tal*). Belonging to or characteristic of the myrtle family.

Myrtiformis (*mur-te-form'-is*) [*myrtus*, myrtle; *forma*, form]. See *Depressor alæ nasi* and *Compressor narium* in Table of Muscles (Illus. Dict.).

Myrtillus. (See Illus. Dict.) **Extractum Myrtilli Winternitzi.** See under *Vaccinium myrtillus*, L.

Mytilotoxicon (*mit-il-o-toks'-ik-on*) [*μυτίλος*, mussel; *τοξικόν*, poison]. A general name for the active agent in mussel-poisoning.

Mytilotoxism (*mit-il-o-toks'-izm*). Mussel-poisoning.

Myxasthenia (*miks-as-the'-ne-ah*) [*μύξα*, mucus; *ἀσθένεια*, want of strength]. Overend's term for overdryness of the mucosa or impairment of the power to secrete mucus.

Myxochondrofibrosarcoma (*miks-o-kon-dro-fi-bro-sar-ko'-mah*). A myxochondroma containing fibrous and sarcomatous elements.

Myxococcidium stegomyiæ. The provisional name for the hematobious parasite of yellow fever.

Myxocystoma (*miks-o-sist-o'-mah*). A cystoma containing mucous elements.

Myxodermia (*miks-o-dur'-me-ah*) [*μύξα*, mucus; *δέρμα*, skin]. Softening of the skin.

Myxofibrosarcoma (*miks-o-fi-bro-sar-ko'-mah*). A tumor made up of myxomatous, sarcomatous, and fibromatous elements.

Myxoidedema (*miks-oid-e-de'-mah*). A severe form of influenza, grip.

Myxolipoma. (See Illus. Dict.) **M. teleangeiectodes in capsulatum renis utriüsque.** See *Strumæ lipomatodes aberratæ renis* (Illus. Dict.).

Myxoma. (See Illus. Dict.) Syn., *Colloncma.* **M., Cystic, M., Cystoid,** one containing parts so fluid as to resemble cysts. **M., Hyaline,** a translucent form consisting almost wholly of mucous tissue. **M. lipomatodes renis, M. renis.** See *Strumæ lipomatodes aberratæ renis* (Grawitz) (Illus. Dict.). **M., Medullary,** one containing many cells and presenting a white, opaque, pith-like appearance. **M. multiplex chorii,** a hydatid mole. **M. teleangeiectodes, M., Telangiectatic, M., Vascular,** a myxoma characterized by a highly vascular structure.

Myxomycetous (*miks-o-mi-se'-tus*). Relating to the *Myxomycetes* or slime molds.

Myxoneurosis (*miks-o-nu-ro'-sis*) [*μύξα*, mucus; *γευρον*, nerve]. A neurosis which as a functional disturbance causes an abnormal secretion of mucus. **M. intestinalis membranacea,** intestinal catarrh combined with secretion of mucus of nervous origin.

Myxopapilloma (*miks-o-pap-il-o'-mah*). Papilloma with mucous elements.

Myxopod (*miks'-o-pod*) [*μύξα*, mucus; *πούς*, a foot]. A protozoan furnished with confluent pseudopodia; *e. g.*, *Byomyxa; Gromia.*

N

Nabit (*na'-bit*). Pulverized white sugar.

Nabothian (*nah-bo'-the-an*). Described by or named from Martin Naboth, a Saxon anatomist (1675–1721).

Nacra (*na'-krah*). See *Nakra* (Illus. Dict.).

Naftalan (*naf'-tal-an*). An antiseptic, deodorant substance consisting chiefly (97%) of a peculiar naphtha from Russia purified and mixed with 3% of hard soap. It melts at 70° C., is soluble in ether, chloroform, or fats, insoluble in water, alcohol, or glycerin. It is used in treatment of skin-diseases, burns, ulcers, and rheumatism.

Nagana, N'gana, Nygana (*nag-ah'-nah*) [African]. Tsetse-fly disease, a form of trypanosomiasis transmitted by *Glossina morsitans*, the zimb or tsetse fly of Africa. See *Trypanosomiasis.*

Nag-kassar. The East Indian name for the aromatic flower-buds of *Ochrocarpus longifolius*, Benth. and Hook., which are used as an astringent. Syn., *Puniga; Tamra naghe-sur.*

Naja (*na'-jah*) [*noya*, the Ceylon name]. 1. A genus of serpents of the family *Elapidæ.* 2. A homeopathic preparation of cobra venom. **N. tripudians,** the cobra (*q. v.*).

Nandinin (*nan'-din-in*). $C_{19}H_{19}NO_4$. An alkaloid contained in the root-bark of nanten, *Nandina domestica*, Thunb., a berberaceous tree of Japan.

Nannari, Nannary (*nan'-ar-e*). The root of *Hemidesmus indicus*, R. Br., an East Indian asclepiad. It is stomachic and used as a substitute for sarsaparilla.

Nanocephalus (*nan-o-sef'-al-us*) [*νᾶνος*, dwarf; *κεφαλή*, head]. A fetus with a dwarfed head.

Nanous (*nan'-us*) [*νᾶνος*, dwarf]. Dwarfed, stunted.

Napha (*na'-fah*) [L.]. Orange blossoms.

Naphtha. (See Illus. Dict.) **N., Coal-tar,** benzene. **N., Petroleum,** benzin. **N.-salicyn,** a disinfecting solution said to contain salicylic acid, naphthol, and borax. **N., Shale,** ligroin. **N. vitrioli,** ethylic ether. **N., Wood,** methyl alcohol.

Naphthalin, Naphthalinum. (See Illus. Dict.) **N. Benzoate,** a mixture of naphthalin and benzoic acid. Syn., *Benzonaphthalin.*

Naphthalol, Naphthosalol (*naf'-thal-ol, naf-tho-sa'-lol*). See *Betol* (Illus. Dict.).

Naphthocresol (*naf-tho-kre'-sol*). A brown, tarry, antiseptic liquid, insoluble in water, soluble in alcohol; used as creolin.

Naphthoformin (*naf-tho-form'-in*). A condensation-product of α- or β-naphthol, formaldehyd, and ammonia. It is used as an application in skin diseases.

Naphthol. (See Illus. Dict.) **N. antipyrin.** See *Naphthopyrin.* **N.-aristol.** See *Diiodobetanaphthol.* **β-N. Benzoate.** See *Benzonaphthol* (Illus. Dict.). **N.-bismuth.** See *Bismuth β-naphtholate.* **β-N. Carbonate,** $CO(OC_{10}H_7)_2$, a dinaphthyl ester of carbonic acid obtained by the action of phosgene on β-naphthol sodium. It occurs as shining colorless scales insoluble in water, melting at 176° C. It is used as an intestinal antiseptic. **N. Diiodid.** Same as *Diiodobetanaphthol.* **N.-eucalyptol,** a compound of α- or β-naphthol and eucalyptol; it is used as a surgical antiseptic. **β-N. Lactate,** lactol. **N. monosulfonate of calcium.** See *Asaprol* (Illus. Dict.). **β-N.**

Salicylate. See *Betol* (Illus. Dict.). **N.sodium.** See *Microcidin* (Illus. Dict.).

Naphtholate (*naf'-thol-āt*). A naphthol compound in which a base replaces the hydrogen atom in the hydroxyl.

Naphtholism (*naf'-thol-izm*). Poisoning from continued external application of naphthol; it is marked by nephritis, hematuria, and eclampsia.

Naphtholum (*naf'-thol-um*). β-Naphthol.

Naphthopyrin (*naf-tho-pi'-rin*). A molecular compound obtained by the prolonged trituration of β-naphthol with twice its weight of antipyrin.

Naphthoresorcin (*naf-tho-res-or'-sin*). Transparent crystals, melting at 124° C., obtained by heating dioxynaphthalinsulfonic acid with dilute inorganic acids.

Naphthosalol (*naf-tho-sa'-lol*). See *Betol* (Illus. Dict.).

Naphthoxol (*naf-thoks'-ol*). An antiseptic fluid said to consist of a mixture of a 3% solution of hydrogen peroxid, 32%–38% alcohol, and 2% naphthol.

Naphthoyl (*naf'-tho-il*). $C_{11}H_7O$ or $C_{10}H_7CO$. The univalent radicle of naphthoic acid.

Naphthyl (*naf'-thil*). $C_{10}H_7$. The radicle of naphthalene.

Narcein. (See Illus. Dict.) **N. Hydrochlorid,** $C_{23}H_{29}NO_9 . HCl + 2H_2O$, an acid substance forming colorless needles freely soluble in water and alcohol. It is used as a hypnotic in doses of ⅙–3 gr. (0.01–0.2 gm.). **N. Meconate,** $C_{23}H_{29}NO_9 . C_7H_4O_7$, yellow crystals soluble in water. It is used as a sedative. Subcutaneous dose, $\frac{1}{10}$–$\frac{2}{3}$ gr. (0.006–0.025 gm.). **N. Sodium and Sodium Salicylate.** See *Antispasmin*. **N. Valerianate,** $C_{23}H_{29}NO_9 . C_5H_{10}O_2$, a greenish-white unstable powder soluble in alcohol or hot water; decomposes on exposure. It is used as a sedative in mania, hysteria, etc.

Narcomania. (See Illus. Dict.) 2. Insanity from use of narcotics. 3. A morbid craving for narcotics.

Narcomaniac (*nar-ko-ma'-ne-ak*). One affected with narcomania.

Narcosis. (See Illus. Dict.) **N., Medullary,** anesthesia by cocainization of the spinal cord. See *Anesthesia, Corning-Bier Method.*

Narcoticoacrid, Narcoticoirrirant (*nar-kot-ik-o-ak'-rid, nar-kot-ik-o-ir'-it-ant*). See *Acronarcotic.*

Narcotize (*nar'-kot-īz*). To bring under the influence of a narcotic.

Nardostachys (*nar-do-stak'-is*) [νάρδος, spikenard; στάχυς, an ear of corn]. A genus of plants of the order *Valerianeæ*, consisting of a single species. **N. jatamansi,** D. C., found in Nepal and Bengal and supposed to be the nard of the ancients. The rhizome and root, jatamansi root, are antispasmodic and antihysteric, and are also used in making fragrant salves.

Nargol (*nar'-gol*). Silver nucleate; S. nucleid, a compound of nucleinic acid and silver oxid containing 10% of the latter; it causes blanching of the conjunctiva.

Naringenin (*nar-in'-jen-in*). $C_{11}H_{14}O_6$. A dissociation product of naringin.

Narinjin (*na-rin'-jin*) [Sanscrit, *narinji*, the orange]. $C_{23}H_{26}O_{12} + 4H_2O$, or $C_{23}H_{28}O_{12} + 5H_2O$. A glucosid isolated by de Vrij in 1857 from the blossoms of *Citrus decumana*, L., the grape-fruit or pomelo tree. It occurs in bitter, rhombic, yellow prisms or crystalline masses, soluble in boiling water or hot alcohol, insoluble in ether, chloroform, or benzol.

Narry (*nar'-e*) [Mongolian]. Alcoholic gastritis.

Nasaroff's Phenomenon. The gradually decreasing differences between the rectal temperatures taken before and after cold baths, observed in animals, especially dogs.

Nasoantral (*na-zo-an'-tral*). Relating to the nose and the maxillary antrum.

Nasoantritis (*na-zo-an-tri'-tis*). Rhinitis combined with inflammation of the antrum of Highmore.

Nasoaural (*na-zo-aw'-ral*). Relating to the nose and ear.

Nasobuccal (*na-zo-buk'-al*). Relating to the nose and cheek.

Nasobuccopharyngeal (*na-zo-buk-o-far-in'-je-al*). Relating to the nose, cheek, and pharynx.

Nasociliary (*na-zo-sil'-e-a-re*). Applied to a nerve distributed to the nose and the ciliary body.

Nasomalar (*na-zo-ma'-lar*). Relating to the nose and the malar bone.

Nasomanometer (*na-zo-man-om'-et-ur*). A manometer supplied with tubes to introduce liquid into the nostrils in order to test the permeability of the nose.

Nasooccipital (*na-zo-ok-sip'-it-al*). Pertaining to the nose and the occiput.

Nasopalpebral (*na-zo-pal'-pe-bral*). Relating to the nose and the eyelids.

Nasorostral (*na-zo-ros'-tral*). Relating to the rostrum of the nose.

Nasoscope (*na-zo'-skōp*). A rhinoscope.

Nasoseptitis, Nasosæptitis (*na-zo-sep-ti'-tis*) [*nasus*, nose; *septum*, septum]. Inflammation of the nasal septa.

Nasoturbinal (*na-zo-tur'-bin-al*). Relating to the nose and the turbinal bones.

Nasrol (*naz'-rol*). Sodium sulfocaffeate. See *Symphorol.*

Nasute. (See Illus. Dict.) 2. Keen of scent.

Nata, Natta (*na'-tah, nat'-ah*). See *Nasta* (Illus. Dict.).

Natrin (*nat'-rin*). An alkaloid isolated from *Solanum tomatillo*, Phil. Syn., *Witheringin.*

Natrix (*na'-triks*). The name in Chili for the bitter plants *Solanum crispum*, R. et P., *S. gayanum*, Phil., and *S. tomatillo*, Phil., which are used in scarlet fever, typhus, measles, etc.

Natto (*nat'-o*). A Japanese dish, fermented soja beans.

Nauclein (*naw'-kle-in*). See *Catechin* (Illus. Dict.).

Nauheim Treatment. See under *Treatment.*

Nausea. (See Illus. Dict.) **N., Creatic, N., Kreatic,** morbid aversion to eating animal food.

Nausia, Nausiasis (*naw'-se-ah, naw-se-a'-sis*). See *Nausea.*

Nausiosis (*naw-se-o'-sis*). 1. Nausea. 2. A venous hemorrhage in which the flow is discharged by jets.

Navel. (See Illus. Dict.) **N., Membranous,** in the fetus the borders of the imperfectly united abdominal plates surrounding the umbilical vesicle. **N., Vascular,** a cicatrix in the center of the navel after the cord has fallen off, corresponding to the junction of the three umbilical vessels.

Naviculare (*na-vik-u-la'-re*) [*navicula*, a small vessel]. The scaphoid bone.

Navicularthritis (*na-vik-u-lar-thri'-tis*). In veterinary practice inflammation of the navicular bone and contiguous tissues resulting in incomplete extension of the joint, tumefaction of the hoof, and pain.

Naviculocuboid (*na-vik-u-lo-ku'-boid*). Relating to the scaphoid and the cuboid bones.

Naviculocuneiform (*na-vik-u-lo-ku-ne'-e-form*). Relating to the scaphoid and cuneiform bones.

Neb [AS.]. A horny plate on the bill of young birds for breaking the egg-shell; it also occurs on the embryos of turtles, tortoises, crocodiles, alligators, and monotremes.

Neck. (See Illus. Dict.) **N., Cephalic,** Wilder's name for the constricted, neck-like region lying between the quadrigeminum and the thalami. Syn., *Isthmus prosencephali.* **N., Madelung's,** "Made-

lung's Fetthals." Diffuse lipoma of the neck. **N.-sweetbread**, the thymus of the calf.

Necremia, Necræmia (*nek-re'-me-ah*) [*νεκρός*, dead; *αἷμα*, blood]. Death of the blood; a condition marked by loss of vitality in the corpuscles and a tendency not to run together.

Necrocystosis (*nek-ro-sis-to'-sis*) [*νεκρός*, dead; *κύτος*, cell]. Death or loss of vitality of the cells.

Necrologist (*nek-rol'-o-jist*) [*νεκρός*, dead; *λόγος*, science]. One skilled in necrology.

Necrophilia. (See Illus. Dict.) 2. A longing for death.

Necrophilous (*nek-rof'-il-us*). Subsisting on dead matter.

Necrosadism (*nek-ro-sād'-izm*) [*νεκρός*, dead; *sadism*]. See *Necrophilism* (Illus. Dict.).

Necrosis. (See Illus. Dict.) **N., Endoglobular,** of Maragliano and Castellino, the degenerative decoloration of erythrocytes; giving rise to shadow corpuscles, "phantoms," or achromacytes (*q. v.*). **N., Fat,** a type of necrosis following fatty degeneration, reducing the entire structure to a fatty emulsion. **N. infantilis,** cancrum oris. **N., Maragliano's.** See *N., Endoglobular.*

Necrospermia (*nek-ro-spurm'-e-ah*) [*νεκρός*, dead; *σπέρμα*, seed]. A form of impotence due to loss of motility in the spermatozoa.

Nectandra. (See Illus. Dict.) **N. cymbarum,** N. ab E., Páo sassafras, Orinoca anise, a large tree of Brazil, the root of which is roborant; the balsamic oil from the bark is tonic, antispasmodic, diuretic, emmenagog, and diaphoretic, and is also applied to ulcers. **N. pichury-major,** Nees et Mart., and **N. pichury-minor,** Nees et Mart., species of Brazil. The seeds, great and small pichury beans, are used in diarrhea and dysentery; they contain fat, an ethereal oil, and safrol.

Nectareous (*nek-ta'-re-us*) [*νέκταρ*, nectar]. Agreeable to the taste.

Nectrianin (*nek-tri-an'-in*). A cancer remedy said to be an extractive of the fungus *Nectria ditissima*, Tul., growing upon old trees.

Nedyia (*ned-i'-e-ah*) [*νήδυια*]. The abdominal viscera.

Nedys (*ned'-is*) [*νηδύς*]. 1. The stomach and bowels. 2. The uterus.

Nefrens (*ne'-frenz*) [*ne*, not; *frendere*, to gnash the teeth]. Without teeth; edentate. In the pl., *nefrendes*, toothless people, whether nurslings or aged persons.

Negrito Palm (*ne-gri'-to*). See *Phytelephas macrocarpa.*

Nematode. (See Illus. Dict.) 2. Altmann's term for the threads formed by a serial arrangement of the granules of protoplasm.

Nemesia (*ne-me'-se-ah*) [*Nemesis*, the goddess of justice]. A genus of spiders of the family *Theraphosidæ*, containing the giant trap-door, bird, mason, or mining spiders.

Nemomena (*nem-o-me'-nah*) [*νέμεσθαι*, to devour, to spread]. Perforating ulcers.

Neoarsycodil (*ne-o-ar-sik'-o-dil*). Sodium methyl arsenite. It is used in tuberculosis. Dose, ⅓–1½ gr. (0.02–0.1 gm.) for 5 days, then stop for 5 days.

Neoblast (*ne'-o-blast*). See *Parablast* (Illus. Dict.).

Neodermin (*ne-o-dur'-min*). An ointment containing difluordiphenyl; used on burns and ulcerated surfaces.

Neodymium (*ne-o-dim'-e-um*) [*νέος*, new; *δίδυμος*, a twin]. According to Welsbach, a decomposition product of didymium forming red salts.

Neoformation (*ne-o-form-a'-shun*). See *Neoplasm* (Illus. Dict.).

Neogenesis (*ne-o-jen'-e-sis*) [*νέος*, new; *γενᾶν*, to produce]. Regeneration of tissues. Cf. *Anagennesis* (Illus. Dict.).

Neogenetic (*ne-o-jen-et'-ik*). Relating to neogenesis.

Neogenic (*ne-o-jen'-ik*). Productive of new growth. **N. Zone.** See under *Zone.*

Neologism (*ne-ol'-o-jizm*) [*νέος*, new; *λόγος*, science]. The utterance of meaningless words by the insane.

Neon (*ne'-on*) [*νέος*, new]. A gaseous element discovered by Ramsay and Travers associated with liquid argon. At. wt. 22.

Neonatal (*ne-o-na'-tal*) [*νέος*, new; *nasci*, to be born]. Relating to the newborn.

Neossidin (*ne-os'-id-in*). The hyalin obtained from neossin.

Nephelium (*nef-e'-le-um*) [*νεφέλη*, a cloud]. A genus of *Sapindaceæ.* **N. lappaceum,** L., a species of Malaya and some parts of China. The seeds furnish Rambutan tallow, the solid stearin of which is chiefly the glycerid of arachic acid (arachin); a little olein is also present.

Nephremia, Nephræmia (*nef-re'-me-ah*) [*νεφρός*, kidney; *αἷμα*, blood]. Renal congestion.

Nephridium. (See Illus. Dict.) 3. The suprarenal capsule.

Nephrin, Nephrina (*nef'-rin, nef-ri'-nah*) [*νεφρός*, the kidney]. See *Cystin* (Illus. Dict.).

Nephritids, Nephritides (*nef-rit'-ids, nef-rit'-id-ēz*) [pl. of *nephritis*]. Morbid conditions of the skin due to disorder of the kidneys.

Nephritis. (See Illus. Dict.) **N. caseosa.** See *Nephrophthisis* (Illus. Dict.). **N., Ether-,** a condition of the kidneys observed in cases of death from inhalation of ether. **N. gravidarum.** See *N., Puerperal* (Illus. Dict.). **N., Lancereaux's Interstitial,** interstitial nephritis due to rheumatism. **N., Scarlatinal,** acute nephritis resulting from scarlet fever. **N., Suppurative,** circumscribed or more diffuse nephritis with formation of abscess, due to trauma, metastatic emboli, or other causes. **N., Tubal,** inflammation of the renal tubes. **N., Typhoid.** See *Nephrotyphus* (Illus. Dict.). **N. uratica,** gouty kidney, partial or more diffuse interstitial nephritis in arthritic subjects due to deposition of urates.

Nephrocystanastomosis (*nef-ro-sist-an-as-to-mo'-sis*) [*νεφρός*, kidney; *κύστις*, bladder; *ἀναστόμωσις*, an opening]. The surgical formation of an opening between the kidney and the urinary bladder.

Nephroerysipelas (*nef-ro-er-is-ip'-el-as*). Simultaneous erysipelas and nephritis.

Nephrogenic (*nef-ro-jen'-ik*) [*νεφρός*, kidney; *γενᾶν*, to produce]. Of renal origin; nephrogenous.

Nephrohemia (*nef-ro-he'-me-ah*). See *Nephremia.*

Nephrologist (*nef-rol'-o-jist*) [*νεφρός*, kidney; *λόγος*, science]. A specialist in renal diseases.

Nephrolysin (*nef-rol'-is-in*) [*νεφρός*, kidney; *λύειν*, to loose]. Lindemann's term for a cytolysin (*q. v.*) produced by inoculation with renal cells.

Nephrolytic (*nef-ro-lit'-ik*). Relating to nephrolysin.

Nephromegaly (*nef-ro-meg'-al-e*). See *Nephromegalia* (Illus. Dict.).

Nephrosis (*nef-ro'-sis*) [*νεφρός*, kidney]. Any renal disease.

Nephrospasis (*nef-ro-spa'-sis*) [*νεφρός*, kidney; *σπᾶν*, to draw]. Extreme renal mobility in which the organ hangs by its pedicle, thus straining the contained vessels and nerves.

Nephrostome, Nephrostoma (*nef'-ros-tōm, -to'-mah*) [*νεφρός*, kidney; *στόμα*, mouth]. The internal mouth of a Wolffian tubule.

Nephrostomy (*nef-ros'-to-me*) [*νεφρός*, kidney; *στόμα*, mouth]. The formation of a fistula leading to the pelvis of the kidney.

Nephrotoxin (*nef-ro-toks'-in*) [νεφρός, kidney; τοξικόν, poison]. A cytotoxin found by E. Metchnikoff in the kidney. Cf. *Hemotoxin*, *Hepatotoxin*, *Leukotoxin*, *Neurotoxin*, *Spermatoxin*, *Trichotoxin*.

Nephrotuberculosis (*nef-ro-tu-ber-ku-lo'-sis*). See *Nephrophthisis* (Illus. Dict.).

Nephroureterectomy (*nef-ro-u-re-tur-ek'-to-me*) [νεφρος, the kidney; οὐρητήρ, ureter; ἐκτομή, excision]. The excision of the kidney and whole ureter at one operation.

Nephrozymase (*nef-ro-zi'-māz*). See *Nephrozymose* (Illus. Dict.).

Nephrozymosis (*nef-ro-zi-mo'-zis*) [νεφρός, the kidney; ζύμη, leaven]. The condition due to or favoring zymotic disease of the kidney.

Nephrus (*nef'-rus*) [νεφρός]. The kidney.

Nephrydrops, Nephrydrosis (*nef'-rid-rops*, *nef-rid-ro'-sis*) [νεφρός, the kidney; ὑδωρ, water]. See *Hydronephrosis* (Illus. Dict.). **N., Subcapsular,** a large collection of urine between the kidney and its capsule.

Nephrydrotic (*nef-rid-rot'-ik*). Relating to nephrydrosis.

Neptunea (*nup-tu'-ne-ah*) [*Neptune*, god of the ocean]. A genus of leguminous plants of the tropics. **N. oleracea,** Lour., the leaves, which are used as food, are diuretic and stomachic.

Nerianthin, Neriantin (*ne-re-an'-thin*, *-tin*). A crystalline glucosid obtained from the leaves of *Nerium oleander*, L.

Neriin (*ne'-ri-in*). A glucosid found by Schmiedeberg in leaves of *Nerium oleander*, L., apparently identical with digitalein. It is used as a heart stimulant and tonic.

Neriodorein (*ne-re-o-do'-re-in*). Same as *Neriin*.

Neriodorin (*ne-re-od'-or-in*). Same as *Oleandrin*.

Nerium. (See Illus. Dict.) **N. oleander,** L., a species of southern Europe and Asia. The leaves and bark are used externally on snake-bites and as an insecticide; internally in epilepsy. An alcoholic extract of the root is recommended in heart disease. Dose, ¾ gr. (0.05 gm.).

Nerolin (*ne'-rol-in*). An artificial compound said to be the ether ethyl of β-naphthol occurring as a white crystalline powder soluble in fixed oils and alcohol and almost insoluble in water. It is used as a substitute for oil of neroli in soap-making.

Neronian (*ne-ro'-ne-an*) [*Nero*, an emperor of Rome]. Cruel, brutal; applied to excessive venesection.

Nerve, Nervus. (See Illus. Dict.) **Nervi acceleratores cordis.** See *Fibers*, *Accelerating*. **N., Accessispinal, N. accessorii willisii, N., Accessory** (of Willis). See *Spinal Accessory* in Table (Illus. Dict.). **N. acusticus,** the auditory nerve. **N. ambulatorius,** the vagus. **Nervi ampullares,** branches of the vestibular nerve distributed to the ampullas of the semicircular canals. **N., Andersch's.** See *Tympanic* (*Jacobson's nerve*) in Table (Illus. Dict.). **N., Arnold's Recurrent,** a sensory branch of the ophthalmic division of the trigeminus that anastomoses with the trochlear nerve and is distributed to the tentorium cerebelli and the posterior part of the falx cerebri. **N., Arthral.** See *Articular* in Table (Illus. Dict.). **N. aschianus,** the first cervical nerve. **N. auricularis posterior superficialis.** See *Mastoid* (1) in Table (Illus. Dict.). **N. auricularis profundus,** the posterior auricular nerve. **N., Axillary.** See *Circumflex* in Table (Illus. Dict.). **N., Bell's Respiratory,** the long thoracic nerve. **N. bigeminus, N. biradiatus,** the second sacral nerve. **N.-bulb.** See *End-bud* and *Motorial end-plate* (Illus. Dict.). **N.-b., Terminal.** See *Krause's Corpuscles* (Illus. Dict.). **N.s, Bulbous,** amputation neuromata, round growths, which form on the divided extremities of the nerves in the stumps left after amputation. **N. coracobrachialis.** See *Musculocutaneous* (of the arm) in Table (Illus. Dict.). **N. crotaphiticobuccinatorius,** the masticatory nerve. **N. cruralis internus, N. cruralis posterior,** the obturator nerve. **N. cubitalis,** the ulnar nerve. **N.-cyclone,** a nervous crisis, as in tabes. **N., Eighth Cranial, N.s, Eighth Pair of.** 1. The auditory nerve [Sömmerring]. 2. The glossopharyngeal, vagus, and accessory spinal, regarded as one [Willis]. **N.-elements, Doctrine of the Individuality of.** See under *Neuron*. **N.s, Eleventh Pair of** [Sömmerring], **N., Eleventh Cranial.** See *Spinal Accessory* in Table (Illus. Dict.). **Nervi erigentes,** excitor or vasodilator nerves of the penis; derived from the first and second and sometimes from the third sacral nerves. They have their origin in the sexual center of the spinal cord. **N., Esodic,** an afferent or centripetal nerve. **N., Exodic,** an efferent or centrifugal nerve. **N., External Motor** (of the eye). See *Abducens* in Table (Illus. Dict.). **N. facialis tertius,** the inferior maxillary nerve. **N., Femorocutaneous,** the external cutaneous nerve of the thigh. **N., Femorogenital.** See *Genitocrural* in Table (Illus. Dict.). **N., Fifth,** the trigeminal. **N.-force** (of Cullen). See *Force*, *Animal*. **N.-force** (of Drake). See *Neuricity* (Illus. Dict.). **N., Fourth,** the trochlear nerve. **N., Furcal,** the fourth lumbar nerve. **N., Galen's,** a small branch of the superior laryngeal nerve that passes along the posterior surface of the cricoarytenoideus posticus and anastomoses with the ascending branch of the inferior laryngeal nerve. **N., Ilioscrotal.** See *Ilioinguinal* in Table (Illus. Dict.). **N., Infragluteal.** See *Gluteal*, *Inferior*, in Table (Illus. Dict.). **N., Infraoccipital.** See *Cervical*, *First* (anterior division) in Table (Illus. Dict.). **N., Inhibitory,** any one the stimulation of which lessens the activity of an organ. **N.s, Innominate,** the fifth pair of cranial nerves. **N.s, Intervertebral.** See *N.s, Spinal* (Illus. Dict.). **N., Ischiadic,** the great sciatic nerve. **N., Krause's,** the ulnar collateral branch of the musculospiral nerve that descends along with the ulnar nerve and enters the lower short fibers of the inner head of the triceps. **N. labialis.** See *Mental* in Table (Illus. Dict.). **N., Lingual** (of the eighth pair). See *Glosssopharyngeal* in Table (Illus. Dict.). **N., Lingual Median, N., Lingual Motor.** See *Hypoglossal* in Table (Illus. Dict.). **N. loquens, N. myoglossus,** the hypoglossal nerve. **N. masticatorius, N., Masticatory,** originates chiefly in the motor nucleus in the pons, but receives an accession of fibers from a nucleus lying beneath and lateral to the mesocele. It innervates the muscles of mastication. **N., Ninth.** 1. Of Willis, the hypoglossal nerve. 2. Of Sömmerring, the glossopharyngeal nerve. **N. oaricus externus, N. oaricus superior.** See *Nerve*, *Dorsal* (of the penis). **N. oaricus inferior, N. oaricus internus,** the perineal nerve. **N. orbitalis, N. orbitarius,** the temporomalar nerve. **N. perforans brachii, N. perforans casserii,** the musculocutaneous nerve of the arm. **N., Peroneal,** the external popliteal nerve. **N., Peroneal, Communicating,** a branch of the external popliteal generally uniting with the short saphenous nerve, but at times it extends down the leg to the heel. **N.-principle of Cullen.** See *Force*, *Animal*. **N.-process,** the axis-cylinder process of a neuron. It is the first outgrowth of the neuroblast. **N., Pudendal, Inferior,** a branch of the lesser sciatic nerve distributed to the front and external part of the scrotum and peri-

neum. **N.-regeneration,** neuranagenesis. **N.s, Renal,** branches of the renal plexus following the distribution of the renal artery. **N., Sappey's,** the mylohyoid nerve. **N., Second,** the optic nerve. **N., Sensory.** Same as *N., Afferent* (Illus. Dict.). **N., Seventh.** See *Facial* in Table (Illus. Dict.). **N., Sixth, N., Sixth Cranial.** See *Abducens* in Table (Illus. Dict.). **N., Sixth Sacral,** the coccygeal nerve. **N., Spiral.** See *Musculospiral* in Table (Illus. Dict.). **N. spiralis,** the radial nerve. **N.s, Sternal,** descending cutaneous divisions of the third and fourth cervical nerves. **N., Subclavian,** a branch of the brachial plexus which supplies the infraclavius muscle. **N., Subcostal,** the intercostal nerve. **N., Sublingual,** a division of the lingual nerve distributed to the sublingual gland. **N., Submaxillary,** the inframaxillary nerve. **N., Suboccipital,** the anterior division of the first cervical nerve. **N., Supragluteal,** the superior gluteal muscle. **N., Suprapubic,** the genitocrural nerve. **N., Tenth, N., Tenth Cranial,** the vagus nerve. **N., Third, N., Third Cranial,** the motor oculi. **N.s, Thyroid,** branches of the middle cervical ganglion distributed to the thyroid. **N., Tiedemann's,** a plexus of delicate nerve-fibers derived from the ciliary nerves, and surrounding the central artery of the retina. **N.-tree,** a neurodendron. **N., Trisplanchnic,** the system of sympathetic nerves. **N., Twelfth Cranial,** the hypoglossal nerve. **N., Tympanichordal.** See *Chorda tympani* (Illus. Dict.). **N.-unit,** a neuron.

Nervimotility (*nur-vi-mo-til'-it-e*). Capability of nerve motion.

Nervitone (*nur'-vit-ōn*). A proprietary remedy said to be a mixture of iron, phosphorus, asafetida, jumbul, and nux vomica.

Nervosanguine (*nur-vo-san'-gwin*). Applied to temperaments which are nervous and sanguine.

Nervosine (*nur'-vo-sēn*). A remedy for hysteria said to consist of reduced iron 0.025%, with valerian, orange-peel, angelica, and licorice extract.

Nervosity (*nur-vos'-it-e*). Excessive nervousness.

Nervotabes, Peripheral. Déjérine's name for a disturbance of a perfectly intact spinal cord presenting clinically the appearance of tabes; due to parenchymatous neuritis of the cutaneous nerves.

Nervous. (See Illus. Dict.) **N. Liquor,** a term used by Richard Mead for the luminiferous ether, a universal electric matter.

Nervuration (*nur-vu-ra'-shun*). The distribution of the nervures in the wing of an insect.

Nest. (See Illus. Dict.) **N.s, Brunn's Epithelial,** branched or solid groups of flat epithelial cells occurring in all normal ureters.

Net. (See Illus. Dict.) **N.-knots.** See *Neurosomes.*

Nettleship's Dots. Minute white dots scattered in considerable numbers between the macula and periphery of the retina; they are associated with pigment changes and night-blindness, and occur in several members of the same family.

Network. (See Illus. Dict.) **N., Purkinje's,** that formed by Purkinje's fibers. **N. of Terminal Bars,** the reticulum formed by the terminal bars on the free surface of many epithelia.

Neu (*nu*). See *Neurilemma* (Illus. Dict.).

Neuralgia. (See Illus. Dict.) Syn., *Desmalgia; Desmatalgia.* See *Signs, Seeligmüller's, Trousseau's.* **N., Brachial,** that affecting one or more branches of the brachial plexus. **N., Cervicooccipital,** that of the ascending branches of the cervical plexus, the great occipital or posterior division of the second spinal nerve. **N., Crural,** that of the anterior crural nerve. **N. hypogastrica,** enteralgia confined to the lowest portion of the intestines. **N., Intercostal.** 1. That which precedes, accompanies, or follows an attack of zona. It is acute, unilateral, and follows the course of a nerve. 2. The stitch in the side which often comes on in healthy children after running. **N., Lumboabdominal,** surface pain confined to a very sensitive intercostal region. **N., Metatarsal,** that of the metatarsal region; probably due to flat-foot. Also called *Morton's neuralgia* and *plantar neuralgia.* **N., Morton's, N., Plantar.** See *N., Metatarsal.* **N., Sciatic,** that of the great sciatic nerve or some of its branches. **N., Supraorbital,** that affecting the supraorbital nerve or its branches. **N., Trifacial, N., Trigeminal,** that affecting the trigeminal nerve.

Neuralgin (*nu-ral'-jin*). A proprietary antipyretic said to consist of a mixture of antifebrin, sodium salicylate, and caffein. Dose, 8–45 gr. (0.5–3 gm.).

Neuralward (*nu'-ral-ward*). See *Neurad* (Illus. Dict.).

Neurarteria (*nu-rar-te'-re-ah*) [*νεῦρον*, nerve; *ἀρτηρία*, artery]. A blending of the smallest nerves and arteries.

Neurasthenia. (See Illus. Dict.) See *Signs, Erben's, Stiller's, Rosenbach's* (2). **N., Angioparalytic, N., Angiopathic,** that attended with vascular disturbance. **N. cordis,** a neurosis in which the heart symptoms dominate. **N., Genitourinary.** See *N. sexualis.* **N. retinæ.** See *Asthenopia* (Illus. Dict.). **N., Sexual, N. sexualis,** that due to lesion of the genital tract.

Neurataxia, Neurataxy (*nu-rah-tak'-se-ah*) [*νεῦρον*, nerve; *ἀταξία*, want of order]. 1. Ataxia of cerebrospinal origin. 2. Neurasthenia (Huchard).

Neuratrophy (*nu-rat'-ro-fe*). See *Neuratrophia* (Illus. Dict.).

Neuraxis. (See Illus. Dict.) Syn., *Encephalomyelonic axis; Encephalospinal axis.* 3. An axis-cylinder.

Neuraxon (*nu-raks'-on*) [*νεῦρον*, nerve; *ἄξων*, axis]. Kölliker's name for the axis-cylinder process or neurite of a nerve-cell.

Neure (*nūr*) [*νεῦρον*, nerve]. Baker's term for a nerve-cell, including all its appendages.

Neurexairesis (*nu-reks-i-re'-sis*) [*νευρον*, nerve; *ἐξαιρεῖν*, to take out]. The operation of extracting a nerve for relief of neuralgia.

Neurilemma. (See Illus. Dict.) Syn., *Neurilyme.* 2. See *Perineurium* (Illus. Dict.).

Neurimotility. See *Nervimotility.*

Neurin. (See Illus. Dict.) **N., Gray,** Owen's name for the cinerea of the central nervous system. **N., White,** the embryonic alba of the central nervous system.

Neurite (*nu'-rīt*) [*νεῦρον*, nerve]. Fisher and Rauber's name for the axis-cylinder process of a nerve-cell; neuraxon.

Neuritis. (See Illus. Dict.) Syn., *Neurophlegmon.* **N., Arsenical,** that accompanying arsenic poisoning. It is characterized by cutaneous pigmentation, muscular atrophy, extreme weakness, and is apt to be mistaken for alcoholic neuritis. **N., Atheromatous,** a form in which necrotic, inflammatory processes take place in the parts of the nerves supplied by arteries affected with atheroma, giving rise to symptoms resembling in character those of the toxic form. **N. axialis** [Förster], a special form of optic neuritis in which the central fibers of the optic nerve which supply the central part of the retina are diseased. It results in central scotoma. **N., Postocular,** that affecting the portion of the optic nerve behind the eyeball. **N., Proliferative,** Virchow's term for that form in which the overgrowth of the connective tissue is so extensive as to convert the

whole nerve into a sclerotic cord. **F., Radicular,** that in which the nerve-roots rather than the plexus are the seats of inflammation. **N., Segmental, N., Segmentary,** that affecting a segment of a nerve. **N., Toxemic,** that due to some unknown poison or virus in the blood. **N., Toxic,** that due to the presence in the blood of some known substance, as lead, silver, arsenic. **N., Tuberculous,** polyneuritis due to the specific action on the nerves of a poison produced by the tubercle bacilli.

Neuroarthritism (*nu-ro-ar'-thrit-izm*). A combined nervous and gouty diathesis.

Neurochitin (*nu-ro-ki'-tin*) [*νεῦρον*, nerve; *chitin*]. The substance forming the skeletal support of nerve-fibers.

Neurochorioretinitis (*nu-ro-ko-re-o-ret-in-i'-tis*). Chorioretinitis combined with optic neuritis.

Neurochoroiditis (*nu-ro-ko-roid-i'-tis*). Combined inflammation of the choroid body and optic nerve.

Neurocyte. (See Illus. Dict.) 3. Fish's name for neuron.

Neurodendrite (*nu-ro-den'-drīt*) [*νεῦρον*, a nerve; *δένδρον*, a tree]. A dendritic and protoplasmic extension or process of a nerve-cell, a combined neuron and dendron.

Neurodendron (*nu-ro-den'-dron*) [*νεῦρον*, nerve; *δένδρον*, tree]. 1. Kölliker's name for the neuron or neurocyte. 2. See *Neurodendrite*.

Neurodermatitis (*nu-ro-dur-mat-i'-tis*). Dermatitis of neuropathic origin.

Neurodermitis (*nu-ro-dur-mi'-tis*). See *Neurodermatitis*.

Neurodin (*nu'-ro-din*) [*νεῦρον*, nerve; *ὀδύνη*, pain]. $C_{11}H_{12}NO_4$. Acetylparaoxyphenylurethane. A derivative of amidophenol and ethylurethane. It occurs in colorless, inodorous crystals, slightly soluble in water; melts at 87° C.; antineuralgic and antipyretic. Dose, antineuralgic, 15–24 gr. (1–1.5 gm.); as antipyretic, 5–10 gr. (0.32–0.65 gm.).

Neurodynamis (*nu-ro-di-na'-mis*). See *Neurodynamia* (Illus. Dict.).

Neuroelectrotherapeutics (*nu-ro-e-lek-tro-ther-a-pu'-tiks*). The treatment of nervous affections by electricity.

Neuroepidermal (*nu-ro-ep-e-dur'-mal*). Relating to the nerves and the skin.

Neuroepithelioma (*nu-ro-ep-e-the-le-o'-ma*) [*νεῦρον*, a nerve; *ἐπί*, upon; *θηλή*, a nipple]. A glioma of the retina. **N. retinæ,** a term proposed by Flexner and Wintersteiner to replace glioma retinæ.

Neurofibril (*nu-ro-fi'-bril*). A conducting fibril of a nerve-cell.

Neurofibromatosis (*nu-ro-fi-bro-mat-o'-sis*) [*νεῦρον*, nerve; *fiber*, fiber]. A disease characterized by the formation of numerous great and small tumefactions of the nerves; described by Recklinghausen.

Neurofil (*nu'-ro-fil*) [*νευρον*, nerve; *filum*, thread]. A network of protoplasmic processes arising from the commencement of the axis-cylinder and surrounding the cell.

Neuroganglion (*nu-ro-gang'-gle-on*). See *Ganglion* (1) (Illus. Dict.).

Neurogastric (*nu-ro-gas'-trik*). Relating to the nerves and the stomach.

Neurogenetic (*nu-ro-jen-et'-ik*). Relating to neurogenesis.

Neurogenous (*nu-roj'-en-us*). Originating in the nervous system.

Neurogeny (*nu-roj'-en-e*). See *Neurogenesis* (Illus. Dict.).

Neurokinet (*nu-ro-kin'-et*) [*νεῦρον*, nerve; *κινεῖν*, to move]. An apparatus devised by v. Üxküll for stimulating the nerves by means of mechanical percussion.

Neurolysin (*nu-rol'-is-in*) [*νεῦρον*, nerve; *λύειν*, to loose]. A cytolysin having specific action upon nerve-cells.

Neuromast. (See Illus. Dict.) 2. A motorial end-plate.

Neuromyology (*nu-ro-mi-ol'-o-je*) [*νεῦρον*, nerve; *μῦς*, muscle; *λόγος*, science]. The classification of muscles with regard to their innervation.

Neuromyositis (*nu-ro-mi-o-si'-tis*) [*νεῦρον*, nerve; *μῦς*, muscle]. Combined neuritis and myositis; it is usually confined to a single limb, generally the arm.

Neuron. (See Illus. Dict.) 3. A nerve-cell including all of its appendages. 4. In arthropods the nervous portion of the eye. 5. Used by the ancients indifferently for nerves, tendons, ligaments, and membranes. **N. Doctrine,** that proposed by Waldeyer (1891). According to Bell, the neuron concept of the nervous system may be briefly stated as follows: "The nervous system, aside from its neuroglia, ependymal cells, bloodvessels, and lymphatics, consists of an enormous number of individual elements or neurons, each neuron in its entirety representing a single body or cell. The foundation for the neuron doctrine rests upon the following facts: (1) That the nervous system agrees with other parts of the body in being cellular; (2) the proof that in the embryo the nerve-cells exist as independent units, many of which are capable of wandering for a considerable distance from the origin; (3) the fact that the nutrition of the nerve-cells is most easily explained from the standpoint of a doctrine which looks upon the nervous system as made up of units, which are not only anatomic but physiologic. **N., Edinger's Law Concerning,** a regular and gradual increase of function of a neuron leads at first to increased growth; but if carried to excess, and especially if irregular and spasmodic, it results in atrophy and degeneration, and ultimately in proliferation of the surrounding tissue. **N., Goldscheider-Marinesco's Law Concerning,** the fewer connections a neuron has, and, consequently, the fewer stimuli it receives, the less is its tendency to degeneration. See also *Law, Müller's* (2). **N.-threshold,** the degree of excitation of a neuron which just suffices to produce a sensation in another with which it is in contact.

Neuronagenesis (*nu-ron-ah-jen'-e-sis*) [*νεῦρον*, nerve; *a*, priv.; *γενᾶν*, to produce]. Failure of the development of neurons. Cf. *Neuranagenesis* (Illus. Dict.).

Neuronal, Neuronic (*nu'-ron-al, nu-ron'-ik*). Relating to a neuron.

Neuronephric (*nu-ro-nef'-rik*) [*νεῦρον*, a nerve; *νεφρός*, the kidney]. Pertaining to the nervous and renal systems.

Neuronephrioblast (*nu-ro-nef'-re-o-blast*) [*νεῦρον*, nerve; *νεφρός*, kidney; *βλαστός*, a germ]. In some invertebrates, cells giving origin to the central nervous system and the renal organs.

Neuronymy (*nu-ron'-im-e*) [*νεῦρον*, nerve; *ὄνυμα*, a name]. Neurologic nomenclature.

Neurooccipital (*nu-ro-ok-sip'-it-al*). Relating to a neural arch and the occiput.

Neurophlegmon (*nu-ro-fleg'-mon*) [*νεῦρον*, nerve; *φλεγμονή*, inflammation]. Neuritis.

Neuropilem, Neuropilema (*nu-ro-pi'-lem, -pi-le'-mah*) [*νεῦρον*, nerve; *πίλος*, felt]. His' term for the dense mat of fibrils formed in some parts by the branching nerve-processes. Syn., *Nerve-felt*.

Neuroplex, Neuroplexus (*nu'-ro-pleks, nu-ro-pleks'-us*). A plexus of nerves.

Neuropodium. (See Illus. Dict.) In the pl., **Neuropodia,** Kölliker's name for dendraxons.

Neurosarcoma (*nu-ro-sar-ko'-mah*). A combined neuroma and sarcoma.

Neurosine (*nu'-ro-sēn*). A neurotic, anodyne, and hypnotic remedy said to contain in each fl. dr. (3.7 c.c.) bromids of sodium, ammonium, and potassium, 5 gr. (0.32 gm.) each; zinc bromid, ⅛ gr.; ext. belladonna and ext. cannabis indica, $\frac{1}{64}$ gr. (0.008 gm.) each; ext. lupuli, 4 gr. (0.26 gm.); fl. ext. cascara sagrada, 5 ♏ (0.3 c.c.); with aromatics.

Neurosis. (See Illus. Dict.) See *Signs, Mann's, Mannkopff's.* **Neuroses, Coordinated-business** [Benedikt]. See *Spasms, Fatigue.* **N., Cyclist's,** Brown's name for a painful disorder characterized by hyperesthesia of the skin of the scrotum, perineum, and thighs, that develops after riding the bicycle for long distances at high speed. **N., Traumatic,** any deviation from the normal state of the nervous system caused by violence. Cf. *Erichsen's Disease.* **N., Westphal's,** a form of hysteria simulating multiple sclerosis.

Neurosolymphatic (*nu-ro-so-lim-fat'-ik*). Both nervous and lymphatic; said of a temperament.

Neurosomes (*nu'-ro-sōmz*) [*νεῦρον*, nerve; *σῶμα*, body]. Held's term for minute granules, variable in size, observed at the nodal points of the axospongium or meshwork making up the structure of axis-cylinders.

Neurospongium. (See Illus. Dict.) 2. The inner reticular layer of the retina.

Neurosuture (*nu-ro-su'-chur*). The suture of a cut nerve.

Neurotagma (*nu-ro-tag'-mah*) [*νεῦρον*, nerve; *τάγμα*, that which has been arranged]. A linear arrangement of the structural elements of a neuron.

Neurotension (*nu-ro-ten'-shun*). See *Neurectasis* (Illus. Dict.).

Neurotheleitis, Neurothelitis (*nu-ro-the-le-i'-tis, nu-ro-the-li'-tis*) [*νεῦρον*, nerve; *θήλη*, nipple]. Inflammation of a nerve papilla.

Neurothelion, Neurothelium (*nu-ro-the'-le-on, -um*) [*νεῦρον*, nerve; *θήλη*, nipple]. A small nerve papilla.

Neurotica (*nu-rot'-ik-ah*) [*νεῦρον*, nerve]. Functional nervous diseases.

Neurotization (*nu-rot-iz-a'-shun*). Vanlair's name for the regeneration of a divided nerve.

Neurotome. (See Illus. Dict.) 2. The nerve-tissues of an embryonic metamere; a neural segment or neuromere.

Neurotomy. (See Illus. Dict.) **N. opticociliaris,** division of the optic and ciliary nerves to prevent threatened sympathetic ophthalmia.

Neurotonia, Neurotony (*nu-ro-to'-ne-ah, nu-rot'-on-e*) [*νεῦρον*, nerve; *τόνος*, a stretching]. See *Nerve-stretching* (Illus. Dict.).

Neurotonic (*nu-ro-ton'-ik*). Having a tonic effect upon the nerves. **N. Reaction,** Remak's term, 1896, for a peculiarly rare form of electric reaction exhibited in a persistent tetanic quivering of the muscles following irritation of the nerve stems. Cf. *Reaction, Myotonic* (Illus. Dict.).

Neurotoxic (*nu-ro-toks'-ik*) [*νεῦρον*, nerve; *τοξικόν*, poison]. Having toxic action on neurons.

Neurotoxin (*nu-ro-toks'-in*). A cytotoxin obtained by E. Metchnikoff from nerve tissue. Cf. *Hematoxin; Hepatotoxin; Leukotoxin; Nephrotoxin; Spermatotoxin; Trichotoxin.*

Neurotrophasthenia (*nu-ro-trof-as-the'-ne-ah*) [*νεῦρον*, nerve; *τροφή*, nourishment; *ἀσθένεια*, weakness]. 'Hughes' name for malnutrition of the nerves.

Neurotropism (*nu-rot'-ro-pizm*) [*νεῦρον*, nerve; *τρόπος*, a turn]. The attraction or repulsion exercised upon regenerating nerve-fibers. A substance is said to have positive neurotropism when these regenerating nerve-fibers have a tendency to grow toward and into it; negative, when they avoid it.

Neurotrototous (*nu-rot'-ro-tus*). Suffering with neurotrosis.

Neurotrosis (*nu-tro-lak'-tis*). A galactagog said to be a liquid extract of *Galega officinalis*, L.

Neutrophil, Neutrophile. (See Illus. Dict.) 2. A leukocyte or histologic element readily stainable with neutral dyes. See under *Color-analysis.*

Nevolipoma (*ne-vo-lip-o'-mah*). A venous nevus combined with lipoma.

Nevus, Nævus. (See Illus. Dict.) **N. cavernosus.** See *N. vascularis tuberosus.* **N. cuticularis.** See *N., Capillary* (Illus. Dict.). **Nævi cystepitheliomatosi disseminati.** See *Hydradenomes.* **N. vascularis flammeus, N. vascularis simplex, N. vinaceous, N. vinosus.** See *N. flammeus* (Illus. Dict.). **N. vascularis fungosus, N. vascularis tuberosus,** a cavernous angioma marked by formation of red or bluish erectile tumors. Syn., *Angioma prominens.*

Newbouldia (*nu-böl'-de-ah*). A genus of the *Bignoniaceæ.* **N. lævis,** Seem., a species of the African tropics; the bark is styptic, astringent, and emmenagog. Dose of fld. ext., 20–60 ♏ (1.2–3.7 c.c.).

New-growth (*nu'-groth*). See *Neoplasm* (Illus. Dict.).

Nexus (*neks'-us*) [*nectere*, to bind]. A tying or binding together, an interlacing. **N. nervorum opticorum,** the chiasm. **N. stamineus oculi,** the ciliary body.

N'go. A caterpillar from which an arrow poison is extracted by the Bushmen of South Africa.

Nhanda-Guacu. The poisonous bird-spider of Brazil, *Avicularia vestiaria,* de Geer.

Niccolic (*nik-ol'-ik*) [*niccolicus*]. Containing nickel.

Niccolum (*nik'-ol-um*). The same as *Nickel.*

Nickelic (*nik'-el-ik*). Containing nickel as a quadrivalent radicle.

Nickelous (*nik'-el-us*). Containing nickel as a bivalent radicle.

Nicker-nuts (*nik'-ur*). Bonduc seeds.

Nicolicin (*nik-ol'-is-in*). A drug exploited as a cure for morphinism found by analysis to contain 3% of morphin.

Nicolum (*nik'-ol-um*). Nickel.

Nicotianomania (*nik-o-she-an-o-ma'-ne-ah*) [*Nicotiana,* a genus of plants named after Jean Nicot, chemist; *mania*]. Insane craving for tobacco.

Nicotin. (See Illus. Dict.) **N. Bitartrate,** white soluble crystals used in tetanus and as antidote in strychnin poisoning. **N. Salicylate,** hexagonal tablets melting at 117.5° C., soluble in water; containing 54% of nicotin; recommended in scabies in 1% lanolin ointment. **N. Tartrate,** $C_{10}H_{14}N_2(C_4H_6O_6) + 2H_2O$, white soluble needles; solution more stable than that of the free alkaloid or the other salts.

Nidamental (*nid-ah-men'-tal*) [*nidus*, nest]. Relating to a nest or to an egg-sac.

Nidulus (*nid'-u-lus*). C. L. Herrick's term for the nucleus of origin of a nerve.

Nidus. (See Illus. Dict.) **N. avis,** a depression or hollow left on the mesial surface of the cuneate lobule after the removal of a tonsil.

Nigranilin (*ni-gran'-il-in*). Anilin black.

Nihil (*ni'-hil*) [L. nothing]. **N. album,** flowers of zinc. **N. græcum,** impure zinc oxid.

Nihilism (*ni'-hil-izm*) [*nihil,* nothing]. Pessimism in regard to the efficacy of drugs.

Niin (*ni'-in*). A fatty substance allied to and probably identical with axin.

Nikalgaya (E. Indies, passed away, hopeless). Vernacular for trypanosomiasis (*q. v.*).

Nikiforoff's Method of fixation of blood films consists

in immersion of the dried films in ether, in absolute alcohol, or in a mixture of equal parts of the two.

Ninsi, Ninsin, Ninsing, Ninzi, Ninzin. Japanese names for ginseng.

Niobate (*ni'-ob-āt*). A salt of niobic acid.

Niobic (*ni-o'-bik*). Containing niobium as a pentad radicle.

Niopa [Venezuelan name]. A snuff prepared from the seeds of *Piptadenia peregrina*, Benth., which produces an intoxication approaching frenzy. Syn., *Niopa*.

Nipple. (See Illus. Dict.) **N. Crater.** See *N., Retracted* (Illus. Dict.).

Nirmali (*nir-mah'-le*). *Strychnos potatorum* (*q. v.*).

Nirvanin (*nir-van'-in*). The hydrochlorate of diethylglycocoll-para-amido-o-oxy-benzoic-methyl-ester; colorless prisms soluble in water and fusing at 185° C. It is a local anesthetic, one-tenth as toxic as cocain, used by Schleich's infiltration method in 0.5%–0.2% solution; in dentistry, in 2%–5% solution.

Nissl Bodies. See under *Body*.

Nitragin (*ni-traj'-in*). A nitrifying bacterial ferment obtained from the root tubercles of leguminous plants.

Nitricum (*ni'-trik-um*). Berzelius' name for an imaginary body which he supposed united with oxygen to form nitrogen.

Nitrifying (*ni-trif-i'-ing*) [*νίτρον*, natron; *facere*, to make]. Applied to bacteria which oxidize ammonia to nitrous and nitric acids.

Nitrobenzolism (*ni-tro-ben'-zol-izm*). Poisoning by nitrobenzol through ingestion of some liquor containing it, or through inhalation of its vapor, or through cutaneous absorption; it is characterized by a bluish-green pigmentation of the skin, the odor of bitter almonds on the breath, brown color of the urine; in light cases by headache and vomiting; in severe cases, by coma, dilation of the pupils, anesthesia, irregularity of the pulse, and convulsions.

Nitroerythrol (*ni-tro-er'-ith-rol*). $C_4H_6(NO_3)_4$. Butine tetranitrate, obtained by dissolving erythrite in nitric acid; large glistening plates, melt at 61° C. It explodes on percussion; used as nitroglycerin.

Nitrogen. (See Illus. Dict.) **N. Benzid,** Mitscherlich's name for azobenzene. **N.-equilibrium,** the state of an animal in which, during a definite period, the nitrogen of the excreta equals in amount the nitrogen of the food. **N. Monoxid.** See *Nitrous Oxid* (Illus. Dict.). **N. Pentoxid,** N_2O_5, nitric anhydrid, a white solid, crystallizing in rhombic crystals or six-sided prisms. It decomposes with explosive violence, if heated, into nitrogen peroxid and oxygen. It possesses powerful oxidizing properties. **N. Peroxid, N. Tetroxid,** NO_2, a liquid at ordinary temperature obtained by action of nitrosyl chlorid on silver nitrite heated to 40° C. It is antiseptic.

Nitroglucose (*ni-tro-glu'-kōs*). A substance obtained from glucose by action of nitric and sulfuric acids. It is used as an arterial stimulant. Dose of 5% solution, ¼–1 ♏ (0.016–0.65 c.c.).

Nitroglycerinism (*ni-tro-glis'-ur-in-izm*). Poisoning by nitroglycerin; in light cases marked by dizziness, pulsation of the temporal arteries, and continuous headache; in severe cases by coma, vomiting, dyspnea, delirium, and edema.

Nitrolevulose (*ni-tro-lev'-u-lōz*). Dextrose nitrate. It has properties similar to nitroglycerin.

Nitromonas (*ni-tro-mo'-nas*) [*νίτρον*, natron; *μονάς*, unit]. A group of bacteria established by Winogradsky (1892) and referred by Migula to the genus *Pseudomonas*. They occur in the soil and convert ammonium salts into nitrites and nitrites into nitrates. They will not grow in gelatin or other organic media.

Nitropropiol (*ni-tro-pro'-pe-ol*). A preparation of orthonitrophenyl propiolic acid and sodium carbonate. It is used for detecting the presence of sugar in the urine. See under *Test*.

Nitrosalol (*ni-tro-sal'-lol*). $C_6H_4(OH)CO_2 . C_6H_4NO_2$. A yellowish powder melting at 148° C., soluble in alcohol or ether, insoluble in water; it is used in making salophen.

Nitrosobacter (*ni-tro-so-bak'-tur*). A rod-like form of nitrifying bacteria.

Nitrosobacteria (*ni-tro-so-bak-te'-re-ah*). Nitrifying bacteria. See *Nitromonas*.

Nitrosococcus (*ni-tro-so-kok'-us*). A coccous form of nitrifying bacteria. Cf. *Nitromonas*.

Nitrosoconiin (*ni-tro-so-ko'-ni-in*). See *Azoconydrin*.

Nitrosomonas (*ni-tro-so-mo'-nas*). A nitrifying bacterium. Cf. *Nitromonas*.

Nitrosophenyldimethylpyrazol (*ni-tro-so-fen-il-dimeth-il-pir'-az-ol*). $C_{11}H_{11}(NO)N_2O$. A substance obtained as a reaction-product of a solution of sodium nitrite with a solution of antipyrin in acidulated water; green needles soluble in alcohol, ether, chloroform, or alkalis; explodes at 200° C. It is antipyretic, analgesic, and diuretic. Syn., *Isonitrosoantipyrin*.

Nitrosyl (*ni'-tro-sil*). NO. A univalent or trivalent radicle found in nitrous acid. **N. Chlorid,** NO . Cl, an orange-yellow gas. **N. Sulfate,** $HSNO_5$, a nitrosyl substitution derivative of sulfuric acid; recommended as a disinfectant.

Nitroxyl (*ni-troks'-il*). NO_2. A univalent radicle found in nitric acid.

Noctiphobia (*nok-te-fo'-be-ah*) [*nox*, night; *φόβος*, fear]. Morbid fear of night and its darkness and silence; at times a distressing accompaniment of neurasthenia.

Node. (See Illus. Dict.) **N.s, Féréol's.** See *Nodosities, Fèrèol's*. **N.s, Haygarth's,** nodosities of the joints in arthritis deformans. **N.s, Heberden-Rosenbach's,** Heberden's nodes. **N., Hensen's.** See *Knot, Hensen's* (Illus. Dict.). **N., Legendre's.** See *Nodosities, Bouchard's* (Illus. Dict.). **N.s, Singer's, N.s, Teacher's.** See *Chorditis nodosa*.

Nodosity. (See Illus. Dict.) **N.s of Féréol,** inconstant subcutaneous nodosities observed in cases of acute articular rheumatism. **N. of the Joints.** Synonym of *Osteoarthritis*. **N., Legendre's.** See *N., Beuchard's* (Illus. Dict.). **N.s, Meynert's,** nodular growths connected with the capsules of joints, tendons, and tendon sheaths, and sometimes seen in cases of rheumatism, especially in children. **N.s, Piedric,** those characteristic of piedra, a disease of the hair, due to a parasitic fungus.

Nodular. (See Illus. Dict.) **N. Disease of the Intestines of Sheep and Cattle,** a nodular formation in the small and large intestines caused by young stages of *Œsophagostoma columbianum*.

Nodule. (See Illus. Dict.) **N., Endolymphangeal,** small nodules formed within lymphatic vessels by localized masses of adenoid tissue. **N.s, Katchenko's Cell-,** decidual and syncytial tissue detached from the decidua in the manner of buds. **N., Lymph-,** more correct term for lymph follicle. **N.s, Lymphangeial, N.s, Lymphatic, N.s, Lymphoid,** localized masses of adenoid tissue formed in various parts of the body and consisting of branched nucleated corpuscles, holding lymphoid cells in the spaces between them. **N., Perilymphangeal,** small nodules formed around lymphatic vessels by localized masses of lymphoid cells. **N., Pulp.** See *Pulp-nodule*.

Nodus. (See Illus. Dict.) **Nodi digitorum.** [Heberden.] Synonym of *Osteoarthritis*. **N. thalami of Luys.** See *Nucleus, Luys'* (Illus. Dict.). **N. vitalis.** See *Center, Respiratory* (Illus. Dict.).

Noematachograph (*no-em-at-ak'-o-graf*) [*νόημα*, a thought; *ταχύς*, swift; *γράφειν*, to write]. An apparatus consisting of a revolving cylinder with an attached tuning-fork to serve as a time-keeper—used in estimating and recording the duration of a mental act.

Noematachometer (*no-em-at-ak-om'-et-ur*) [*νόημα*, a thought; *ταχύς*, swift; *μέτρον*, measure]. An apparatus for estimating the time taken in recording a simple perception.

Noma. (See Illus. Dict.) It is a parainfectious disease due to the presence of *Bacillus diphtheriticus* (Walsh). **N. pudendi, N. vulvæ**, ulceration of the vulva in children.

Nomadic (*no-mad'-ik*) [*νόμας*, roving]. Spreading; said of ulcers.

Nomospore (*no'-mo-spōr*) [*νόμος*, a law; *σπόρος*, seed]. E. Ray Lankester's term (1900) for the merozoit of Simond (1897).

Nonadherent (*non-ad-he'-rent*) [*non*, not; *adhærere*, to adhere]. Not connected to an adjacent organ or part.

Nonalbuminoid (*non-al-bu'-min-oid*). A nitrogenous animal or vegetal compound of simpler composition than a proteid; nonproteid, *e. g.*, the nitrogenous extractive of muscular and connective tissue. Cf. *Creatin*, *Creatinin*, *Xanthin*, *Hypoxanthin*, and allied cleavage products of the proteids.

Nonconductor (*non-kon-duk'-tor*). Any substance not transmitting electricity or heat.

Nondeciduate (*non-de-sid'-u-āt*). Characterized by the absence of a decidua or part to be shed; having reference to the *Adeciduata;* nondeciduous. Cf. *Deciduate.*

Nondeciduous (*non-de-sid'-u-us*). Not liable to be shed; permanent. Cf. *Deciduous.*

Nonigravida (*non-e-grav'-id-ah*) [*nonus*, ninth; *gravida*, a pregnant woman]. A woman pregnant for the ninth time.

Nonipara (*non-ip'-ar-ah*) [*nonus*, ninth; *parere*, to bring forth]. A woman who has borne nine children.

Nonmetal (*non-met'-al*). An element that is not a metal

Nonproteid (*non-pro'-te-id*). See *Nonalbuminoid.*

Nonus (*no'-nus*) [L. ninth]. The hypoglossal nerve.

Nonvalent (*non-va'-lent*). Without chemic valency, incapable of entering into chemic composition.

Nonviable (*non-vi'-ab-l*). Incapable of living.

Nonyl (*non'-il*). C_9H_{19}. The supposititious radicle of the nonyl compounds.

Nordauism (*nor'-dow-izm*) [*Nordau*, a German writer on degeneracy]. Degeneracy.

Nori (*no'-re*). A Japanese gelatin obtained from *Porphyra vulgaris*, employed in cultivating protozoa.

Norma. (See Illus. Dict.) **N. inferior.** See *N. basilaris* (Illus. Dict.). **N. frontalis.** See *N. facialis* (Illus. Dict.). **N. parietalis.** See *N. verticalis* (Illus. Dict.). **N. posterior.** See *N. occipitalis* (Illus. Dict.). **N. sagittalis**, the view of the skull seen in a mesial sagittal section. **N. temporalis.** See *N. lateralis* (Illus. Dict.).

Normocyte (*nor'-mo-sīt*) [*norma*, rule; *κύτος*, cell]. A red blood-corpuscle of normal size (7.5 *μ*). Cf. *Erythrocyte*, *Microcyte*, *Macrocyte*, or *Megalocyte.*

Normotonic (*nor-mo-ton'-ik*) [*norma*, rule; *τόνος*, a stretching]. Relating to normal muscular contraction; to a muscle working under normal physiologic conditions. Cf. *Muscle, After-loaded; M., Loaded.*

Norther (*nor'-thur*). The name given in the southwestern United States to a sudden, bitterly cold wind bringing snow and ice; northers occur from Texas to Montana. As warm weather approaches and vegetation advances rapidly under temperatures of 80° or 90° F., suddenly the north wind blows. In a few hours the most wintry weather is experienced, ice and all the features of a blizzard appearing. [Weber.] Cf. *Foehn, Harmattan, Khamsin, Mistral, Simoon, Sirocco, Solano, Mumuku.*

Nortropinon (*nor-tro'-pin-on*). $C_6H_{11}NO$. A ketone obtained by the oxidation of demethylated tropin with chromic acid; it melts at 70° C.

Nosanthropochemia (*nos-an-thro-po-ke'-me-ah*) [*νόσος*, disease; *ἄνθρωπος*, man; *χημεία*, chemistry]. The application of chemistry to disease.

Nose. (See Illus. Dict.) **N., Saddle, N., Saddleback, N., Swayback**, one with a depression in the bridge due to the loss of the septum.

Nosema. (See Illus. Dict.) **N. bombycis.** See *Corpuscle of Cornalia.*

Noseresthesia, Noseræsthesia (*nos-ur-es-the'-ze-ah*) [*νοσηρός*, diseased; *αἴσθησις*, perception]. Perverted sensibility.

Noserous (*nos'-e-rus*) [*νοσηρός*, diseased]. Diseased, unhealthy.

Nosocarya (*nos-o-kar'-i-a*) [*νόσος*, disease; *κάρνον*, a nut]. Fée's name for ergot of rye.

Nosochorologia (*nos-o-kor-o-lo'-je-ah*). See *Nosochthonography.*

Nosochthonography (*nos-ok-thon-og'-raf-e*) [*νόσος*, disease; *χθών*, the earth; *γράφειν*, to write]. Geography of endemic diseases, medical geography.

Nosocomial. (See Illus. Dict.) 2. Applied to disease caused or aggravated by hospital life.

Nosogeography (*nos-o-ge-og'-raf-e*). See *Nosochthonography.*

Nosographer (*nos-og'-raf-ur*) [*νόσος*, disease; *γράφειν*, to write]. One who writes descriptions of diseases.

Nosohemia, Nosohæmia (*nos-o-he'-me-ah*) [*νόσος*, disease; *αἷμα*, blood]. Disease of the blood.

Nosointoxication (*nos-o-in-toks-ik-a'-shun*) [*νόσος*, disease; *intoxication*]. v. Jaksch's term for autointoxication caused by pathologic processes which alter the normal course of metabolism in such a way as to produce harmful in place of harmless products [Hemmeter]. Cf. *Nosotoxicosis.*

Nosoparasites (*nos-o-par'-as-īts*) [*νόσος*, disease; *παράσιτος*, a parasite]. Liebrich's term for microorganisms found in conjunction with a disease process, but which, while capable of modifying the course of the disease, are not its cause.

Nosophen (*nos'-o-fen*). $C_6H_4C_2O_2(C_6H_2I_2OH)_2$. Tetraiodophenolphthalein, a yellowish-gray powder without odor or taste, insoluble in water or acids, slightly soluble in alcohol, more soluble in ether, chloroform, or alkalis. It is used externally as a substitute for iodoform, internally for catarrh of the stomach and intestines. Dose, 5–8 gr. (0.3–0.5 gm.). Syn., *Iodophen.* Cf. *Antinosin; Eudoxin.*

Nosopoetic (*nos-o-po-et'-ik*). Same as *Nosopoietic* (Illus. Dict.).

Nosotoxic (*nos-o-toks'-ik*). Relating to nosotoxin.

Nosotoxicity (*nos-o-toks-is'-it-e*). The quality of being nosotoxic.

Nosotoxicosis (*nos-o-toks-ik-o'-sis*) [*νόσος*, disease; *τοξικόν*, poison]. An abnormal condition referable to the presence of toxic basic products formed in the system in disease.

Nosotoxin (*nos-o-toks'-in*) [*νόσος*, disease; *τοξικόν*, poison]. A toxin generated in the body by a pathogenic microorganism.

Nosotrophy (*nos-ot'-ro-fe*). See *Nosotrophe* (Illus. Dict.).

Nostalgy (*nos-tal'-je*). See *Nostalgia* (Illus. Dict.).

Nostosite (*nos'-to-sīt*) [*νόστος*, a return home; *σῖτος*, food]. A parasite situated in or upon its permanent host.

Nostrate (*nos'-trāt*) [*noster*, ours]. Endemic.

Nota (*no'-tah*) [*noscere*, to know]. A mark. **N. congenita, N. infantum, N. materna.** See *Nevus;* and *Mark, Birth; Mark, Mother's* (Illus. Dict.). **N. primitiva.** See *Streak, Primitive* (Illus. Dict.).

Notch. (See Illus. Dict.) **N., Clavicular,** a depression at the upper end of the sternum articulating with the clavicle. Syn., *Incisura clavicularis.* **N., Coracoid,** a notch in the upper border of the scapula at the root of the coracoid process. Syn., *Incisura coracoidea; I. semilunaris; Notch, Semilunar.* **N., Frontal.** See *Supraorbital Foramen* (Illus. Dict.). **N., Iliac, Greater, N., Ischiadic, Greater.** See *N., Ischiatic* (Illus. Dict.). **N., Interlobar** (of the liver), the notch in the ventral border of the liver demarcating the right and left lobes. **L., Ischiadic, Lesser.** See *N., Lesser Sciatic* (Illus. Dict.). **N. of the Kidney,** the hilus of the kidney, porta renis. **N., Pterygopalatine,** the pterygopalatine fissure. **N., Sacral, Lower,** a notch in the lower part of the mesal portion of the dorsal surface of the sacrum usually produced by imperfection of the arch of the last sacral vertebra. Syn., *Incisura sacrococcygea.* **N., Sacral, Upper.** See *Hiatus sacralis* (Illus. Dict.). **N., Sacrococcygeal,** the lateral notch at the point of union of the coccyx and sacrum. **N., Scapular,** one at the back of the neck of the scapula through which the supraspinous and infraspinous fossas communicate. **N., Semilunar.** See *N., Coracoid.* **N., Sibson's,** the inward curve of the upper left border of precordial dulness in acute pericardial effusion. **N., Tympanic.** See *N. of Rivinius* (Illus. Dict.).

Nothnägel's Test. See under *Test.*

Nothrous (*no'-thrus*) [*νωθρός*, sluggish]. Drowsy, slow, languid, torpid.

Nothus (*noth'-us*) [*νόθος*, false]. False, spurious.

Notifiable (*no-te-fi'-ah-bl*) [*notificare*, to make known]. Applied to a disease which should be made known to a board of health or other authorities.

Notification (*no-te-fi-ka'-shun*) [*notificare*, to make known]. The act of publishing or giving official notice.

Notoglossus (*no-to-glos'-us*) [*νῶτον*, the back; *γλῶσσα*, the tongue]. See *Lingualis superficialis* under *Muscles.*

Notophorus (*no-tof'-or-us*) [*νῶτον*, back; *φορός*, a carrying]. A monster with a dorsal pouch.

N-rays. See under *Ray.*

Nuciferous (*nu-sif'-ur-us*) [*nux*, a nut; *ferre*, to bear]. Nut-bearing.

Nucin (*nu'-sin*). See *Juglone* (Illus. Dict.).

Nuclear. (See Illus. Dict.) **N. Cap,** a stainable mass in the form of a cone, hollowed out internally like a cap, corresponding to one pole of the nucleus upon which it sits. Ger. *Kernkappen.* **N.-plate.** 1. The equatorial plate, formed by the chromosomes during the prophases of mitosis. 2. The septum which sometimes divides the nucleus in amitotic division. **N. Remains.** See *Ring-bodies.* **N.-sap.** See *Karyenchyma.*

Nuclease (*nu'-kle-āz*). 1. One of the immunizing enzymes found by Emmerich and Löw in cultures of *Bacillus pyocyaneus* and other organisms. 2. A proposed general term to designate any one of the bacteriolytic enzymes because they digest the nucleoproteids of the bacterial cells.

Nucleid (*nu'-kle-id*). A compound of nucleol with an oxid of some metal (iron, copper, silver, mercury, etc.).

Nuclein. (See Illus. Dict.) **N., Ferric.** See *Ferratogen.* **N. Plates,** Lilienfeld's name for blood-plates because they consist of a chemic combination between proteid and nuclein. **N.-therapy,** the employment of nuclein from different glands and blood-serum in the treatment of disease.

Nucleinate (*nu'-kle-in-āt*). A white soluble powder used as a diagnostic in tuberculosis. Dose, 30–45 gr. (2–3 gm.).

Nucleoalbuminuria (*nu-kle-o-al-bu-min-u'-re-ah*). The presence in the urine of nucleoalbumin.

Nucleoalbumose (*nu-kle-o-al'-bu-mōz*). A name given by Matthew to a substance found in the urine in a case of osteomalacia and which he believed to be the partly hydrated albumin of nucleoalbumin.

Nucleofugal (*nu-kle-o-fu'-gal*) [*nucleus; fugere*, to flee]. Moving from a nucleus.

Nucleohiston. (See Illus. Dict.) 2. An albuminoid substance obtained from lymph and thymus gland of calves; a white powder soluble in water, alkalis, and mineral acids. It is used as a bactericide.

Nucleoid. (See Illus. Dict.) 2. A term used by Arnold to designate the substance in the red corpuscles formed from the original nucleus. It is finely granular or fibrillar and is surrounded by a substance which Arnold calls paraplasm.

Nucleol (*nu'-kle-ol*). Nuclein obtained from yeast.

Nucleoloid (*nu-kle'-ol-oid*). Resembling a nucleolus.

Nucleolulus (*nu-kle-ol'-u-lus*). See *Nucleolinus* (Illus. Dict.).

Nucleon (*nu'-kle-on*). See *Paranucleon.*

Nucleonic (*nu-kle-on'-ik*). Pertaining to the nucleus.

Nucleopetal (*nu-kle-op'-et-al*) [*nucleus; petere*, to seek]. Moving toward the nucleus. Cf. *Nucleofugal.*

Nucleoproteids (*nu-kle-o-pro'-te-ids*). Compound proteids which yield true nucleins on pepsin digestion, and also those which, on being boiled with dilute mineral acids, yield, besides proteids, xanthin bases. They occur chiefly in the cell nuclei and are widely diffused in the animal body, and embrace tissue-fibrinogen (Wooldridge), cytoglobin, and preglobin (Alex. Schmidt) or nucleohiston (Kossel and Lilienfeld).

Nucleoreticulum (*nu-kle-o-ret-ik'-u-lum*) [*nucleus; reticulum*, a net]. Any network contained within a nucleus.

Nucleosin (*nu'-kle-o-sin*). A substance, isolated by Miescher from spermatozoa of the salmon, identical with thymin.

Nucleotherapy (*nu-kle-o-ther'-ap-e*). See *Nuclein Therapy.*

Nucleotoxin (*nu-kle-o-toks'-in*) [*nucleus; τοξικόν*, poison]. A toxin derived from cell nuclei; any toxin affecting the nuclei of cells.

Nucleus. (See Illus. Dict.) **N. abducens, N., Abducent, N. abducentis,** a gray nucleus giving origin to the abducens and facial nerves, situated within the faciculus teres, behind the trigeminal nucleus, on the floor of the fourth ventricle. Syn., *Nidus abducentis.* **N., Accessoriovagoglossopharyngeal,** a continuous columnar tract of nerve-cells embedded in the gray matter of the cinereous eminence extending from the level of the calamus scriptorius to that of the striæ acousticæ, and from which the accessory, vagus, and glossopharyngeal nerves arise in succession from below upward. **N., Accessory.** See under *N., Accessoriovagoglossopharyngeal.* **N., Acoustic, N. acusticus.** See *N., Auditory.* **N., Acoustic, Anterior or Ventral, N. acusticus lateralis, N. acusticus superior.** See *N., Auditory External.* **N., Acoustic Inferior, N., Acoustic Internal.** See *N., Auditory Internal.* **N. angularis.** See *N. of Bechterew* (Illus. Dict.). **Nuclei anterolateralis,** the nuclei of the lateral column. **Nuclei, Auditory,** the nuclei in the oblongata giving rise to the auditory nerves. **N., Auditory, Accessory,** a group of small multi-

polar nerve-cells provided with a nucleated sheath like the nerve-cells of ganglia contained in some cinerea situated between the superior root of the auditory nerve and the restis. **N., Auditory, Chief or Principal.** See *N., Auditory Internal.* **N., Auditory External,** a tract of large nerve-cells lying in the oblongata between the inner portion of the cerebral peduncles and the restis; it is widest at the upper extremity in the superior fovea and tapers down to the auditory striæ. Syn., *N., Deiters'; N., Laura's; N., Superior Auditory; N., Auditory Great,* or *Lateral* or *Large-celled; N., Acoustic Anterior; N., Acoustic Lateral* or *Superior.* **N., Auditory, Great, N., Auditory Large-celled, N., Auditory Lateral.** See *N., Auditory External.* **N., Auditory Internal,** a columnar tract of small multipolar cells embedded in the auditory eminence, being widest where it is crossed by the striæ. **N., Béclard's,** a vascular bony nucleus, of lenticular shape, appearing in the cartilage of the lower epiphysis of the femur during the thirty-seventh week of fetal life. **N., Blumenau's,** the lateral nucleus of the cuneate nucleus. **N., Bony,** the center of ossification. **N. bulbi fornicis,** a collection of cinerea in the bulb of the fornix. **N., Burdach's,** a small nucleus of gray matter in the funiculus cuneatus of the oblongata forming the termination of the long fibers of Burdach's column. Syn., *N., Cuneate; N., Clavate; N. of the funiculus gracilis.* **N., Clavate.** See *N., Burdach's.* **N. centralis,** the dentatum. **N. centralis inferior,** a ganglionic mass in the oblongata at the posterior border and near the raphe of the pons. **N. centralis superior,** a ganglionic mass in the tegmentum; it is the cephalic continuation of the nucleus reticularis. **N. cochlearis,** that of the cochlear division of the auditory nerve. **N., Conjugation.** See *N., Segmentation* (Illus. Dict.). **N., Cuneate, N., Cuneate Internal.** See *N., Burdach's.* **N., Cuneate External,** a tract of gray matter contained in the external cuneate funicle. **N., Cuneiform.** See *Ala cinerea* (Illus. Dict.). **N., Darkschewitsch's,** a nucleus situated on each side of the median line in the gray matter near the junction of the sylvian aqueduct with the third ventricle. **N., Deiters.'** See *N., Auditory External.* **N., Dorsal, N. dorsalis.** Same as *Clarke's column* or *nucleus.* **N., Duval's,** an aggregation of large multipolar ganglion cells lying ventrolaterally to the hypoglossal nucleus. **N., Edinger's,** the nucleus of the posterior longitudinal bundle, an aggregation of ganglion cells in the gray matter of the third ventricle at the beginning of the sylvian aqueduct. **N., Edinger-Westphal's,** one of the nuclei of the third cranial nerve in the region of the anterior corpora quadrigemina below the sylvian aqueduct. It is placed anterolaterally. **N., Egg-,** the nucleus of the egg-cell after formation of the polar bodies and before union with the sperm-nucleus. **N., External, N., Extraventricular.** See *Lenticula* (2) (Illus. Dict.). **N., Extramedullary.** See *N., Auditory Accessory.* **N., Facial,** one in the reticula at the back of the pons giving origin to the seventh or facial nerve. **N., Frontoventral.** See *N., Oculomotor.* **N. funiculi gracilis.** See *N., Burdach's.* **N., Gelatinous, N. gelatinoso-cartilagineus, N. gelatinosus,** one situated in the substantia gelatinosa of the oblongata. **N. germinativus.** See *Germinal Spot* (Illus. Dict.). **N., Geniculate, Internal,** the cinerea of the postgeniculum continuous with the thalamus. **N. globuliformis, N. glomi.** See *Globulus* (Illus. Dict.). **N., Glossopharyngeal,** the glossopharyngeal portion of the accessoriovagoglossopharyngeal nucleus. **N., Goll's,** a small nucleus in the fasciculus gracilis of the oblongata in which the long fibers of Goll's column terminate. **N., Hypoglossal,** a columnar tract of large multipolar nerve-cells embedded in the cinerea of the terete funicle in the inferior triangle of the fourth ventricle and giving origin to the nerve-fibers forming the rootlets of the hypoglossal nerve. **N. hypothalamicus,** the subthalamus. **N., Insular,** one entirely separated from adjoining masses of cinerea. **N. intercalatus.** See *N., Staderini's.* **N., Intermediolateral.** See *Column, Intermediolateral.* **N., Intermedullary, Great,** Spitzka's name for the external and internal auditory nuclei considered as one. **N. juxtaolivaris.** See *Olive, Accessory* (1). **N., Kaiser's,** longitudinal motor nuclei of considerable size intercalated in the cervical and lumbar enlargements, between the columna medialis and the columna intermediolateralis. **N., Large-celled Auditory.** See *N., Auditory External.* **N., Lateral,** that part of the cornu of the cord ascending in the oblongata behind the olive. **N., Mesencephalic** (of the trigeminal nerve), Spitzka's name for a group of large nerve-cells in the cinerea surrounding the sylvian aqueduct. The fibers taking origin there join the motor root of the fifth nerve. **N., Mesoblastic,** a nucleus of a cell belonging to the mesoblast. **N., v. Monakow's,** the lateral portion of Burdach's nucleus. **N., Oculomotor,** the nucleus of the third or oculomotor nerve; large pigmented cells embedded in the cinerea at the side of the floor of the ventricular aqueduct below the quadrigeminum. **N., Olivary, Accessory.** See *Olive, Accessory.* **N., Olivary, Accessory External, N., Olivary, Accessory Lateral, N., Olivary, Accessory Superior,** a plate of cinerea on the dorsal aspect of the olive. **N., Olivary, Accessory Internal, N., Olivary, Accessory Median Internal,** a ganglionic gray mass on the inner side of the olive and immediately dorsad of the anterior pyramid. Syn., *N. of the Pyramid; N. pyramidalis; Anterior olive.* **N., Olivary, Superior, N. olivaris superior.** 1. A small folded gray lamina in the pons enclosed by the reticula at the fore part of its lateral area. Syn., *Upper olive; Nucleus of the trapezium.* 2. The tegmental nucleus. **N. of the Oosphere.** See *Pronucleus, Female* (Illus. Dict.). **N., Optic.** See *Pregeniculum* (Illus. Dict.). **N., Ossific.** See *N., Bony.* **N., Ovarian.** See *N., Egg.* **N. of the Ovum,** the female pronucleus. **Nuclei, Peripheral.** See *N., Insular.* **N., Perlia's.** See *N., Spitzka's.* **N. pharyngeus.** See *N., Glossopharyngeal.* **N., Polymorphic,** a cell nucleus which assumes irregular forms. **Nuclei, Pontile, Nuclei pontis,** scattered cinerea included in the intervals in the bundles of fibers of the ventral portion of the pons. Syn., *Nidi pontis.* **N., Post-pyramidal,** a gray nucleus in the oblongata giving origin to the posterior pyramid. **N., Respiratory, N. of Respiration,** Clarke's column. **N., Rolando's,** the external cuneate nucleus. **N., Roller's.** 1. A nucleus situated near the hilum of the olivary body of the oblongata; it is connected with the fibers of the anterolateral fundamental tract of the spinal cord. 2. An aggregation of small ganglion cells situated anteriorly to the nucleus of the hypoglossal nerve. **N., Sacral,** a mass of cinerea in the spinal cord at the level of the origins of the second and third spinal nerves. **N. sæpti pellucidi,** the cinerea of the sæptum lucidum, a thin lamina adjacent to the cavity of the fifth ventricle. **N., Sagittal,** Spitzka's name for the middle part of the oculomotor nucleus. **N. salivatorius,** the center for salivary secretion; the

source of cells from which spring all the precellular fibers which end in the submaxillary ganglion. They begin just before the caudal pole of the facial nucleus and terminate at the frontal end of the masseteric nucleus. **N., Secondary.** See *Paranucleus* (Illus. Dict.). **N., Siemerling's,** the anteroventral nucleus of the anterior group of oculomotor nuclei in the gray matter below the sylvian aqueduct. **N., Spitzka's,** the central nucleus of the oculomotor group in the gray matter below the sylvian aqueduct. **N., Staderini's,** the nucleus intercalatus, an aggregation of ganglion cells situated between the dorsal nucleus of the vagus nerve and that of the hypoglossal nerve. **N., Stilling's.** (See Illus. Dict.) 2. The nucleus of the hypoglossal nerve in the fourth ventricle. **N., Stilling's Sacral,** an island of ganglion-cells in the sacral region of the spinal cord. **N., Styloid,** a bony nodule contained in the cartilages which unite the lesser cornua with the body of the hyoid. **N. subthalamicus,** the subthalamus. **N., Superior** (of the auditory nerve). See *N., Auditory External.* **N. tæniæformis.** See *Claustrum* (Illus. Dict.). **N., Three-grouped, N., Trifacial, N., Trigeminal,** two or three groups of nerve-cells ventrad of the facial nucleus, below the lateral angle of the fourth ventricle. **N. of the Trapezium,** the superior olivary nucleus. **N., Triple,** the oculomotor nucleus. **N., Vagus.** See under *N., Accessorio-vagoglossopharyngeal.* **N., Voit's.** See *Olive, Accessory* (1). **N., Yellow** (of the corpus striatum), Luys' name for the terminal expansion of the superior cerebellar peduncle in the striatum. **N., Yolk-,** a cytoplasmic body, often made up of concentric layers, found beside the germinal vesicle in the ova of amphibians, arachnoids, and some other animals.

Numbness, Waking. Acroparesthesia.

Nummulation (*num-u-la'-shun*) [*nummus,* a coin]. The aggregation of blood-corpuscles into rolls resembling rolls of coin. Cf. *Rouleau.*

Nutone (*nu'-tōn*). A nutritive tonic said to consist of cod-liver oil, malt extract, beef juice, and glycerin emulsion, each 25%; calcium hypophosphite, 1 grain; sodium hypophosphite, 1 grain; tincture of nux vomica, 1 drop in each teaspoonful.

Nutrabin (*nu'-trab-in*). A dietetic prepared from proteids of milk and beef; a cocoa-colored powder flavored with vanilla.

Nutrolactis (*nu-tro-lak'-tis*). A proprietary galactagog said to consist of fluid extracts of *Galega officinalis,* L., and *Tephrosia appolinea,* Lk.

Nutrose (*nu'-trōz*). Neutral casein sodium, a soluble powder containing 13.8% of nitrogen, used as a food in intestinal disorders.

Nyctalgia [*νύξ,* night; *ἄλγος,* pain]. Pain which occurs chiefly during the night; *e. g.,* osteocopic pains of syphilis.

Nyctalope (*nik'-tal-ōp*). One suffering from nyctalopia.

Nycterine (*nik'-tur-ēn*) [*νυκτερινός,* nightly]. 1. Occurring in the night. 2. Obscure.

Nycturia (*nik-tu'-re-ah*) [*νύξ,* night; *οὖρον,* urine]. Nocturnal urinary incontinence.

Nymphectomy (*nim-fek'-to-me*) [*νύμφα,* nymph; *ἐκτομή,* excision]. Excision of the nymphæ.

Nymphfibulation (*nim-fib-u-la'-shun*) [*νύμφα,* nymph; *fibula,* a clasp]. The puncture and locking together of the labia majora.

Nystagmiform (*ni-stag'-me-form*) [*νυσταγμός,* nodding of the head; *forma,* form]. Resembling nystagmus.

Nystagmus. (See Illus. Dict.) See *Sign, Bard's.* **N., Cheyne's,** a form of nystagmus in which the oscillations of the eyeball have a marked rhythm.

O

Oak. (See Illus. Dict.) **O.-red, Grabowski's.** See *Phlobaphene,* under *Oak-bark* (Illus. Dict.). **O.-red, Löwe's, O.-red, Oser's.** See under *Oak-bark* (Illus. Dict.).

Oarialgia (*o-ar-e-al'-je-ah*). See *Oaralgia* (Illus. Dict.).

Oat. (See Illus. Dict.) **O.-cure.** See under *Treatment.* **O.-jelly.** See under *Jelly.*

Obeliad (*o-be'-li-ad*). Toward the obelion.

Object. (See Illus. Dict.) **O.-glass,** the objective of a microscope.

Objectify (*ob-jekt'-e-fi*) [*objicere,* to cast before]. In psychology, to externalize a phantom, to see it as a solid object in the waking world.

Oblinition (*ob-lin-ish'-on*) [*oblinere,* to smear]. Inunction.

Obliquimeter (*ob-liq-wim'-et-ur*) [*obliquus,* oblique; *metare,* to measure]. An instrument fitted with arms employed to indicate the angle formed by comparing the plane of the pelvic brim with the perpendicular axis of the upright body [Truax].

Obsession. (See Illus. Dict.) **O. dentaire** (Galippe, 1891), topoalgia, pseudoneuralgia, or neurasthenic neuralgia erroneously attributed to the teeth.

Obstetricy (*ob-stet'-ris-e*). Blundell's name for obstetrics.

Obturation (*ob-tu-ra'-shun*) [*obturare,* to stop up]. The stopping-up or closing of an opening or passage.

Obturator. (See Illus. Dict.) In dentistry, an instrument used to cover openings in the hard or soft palate. When made of flexible material, to follow the movements of the soft palate and to obliterate openings or spaces in it, it is called an artificial velum.

Occalcarine (*ok-kal'-kar-ēn*). See *Occipitocalcarine.*

Occipito. (See Illus. Dict.) **O.anteriŏr,** applied to the position of the fetus which has the occiput directed ventrad. **O.atlantal, O.atlantoid.** See *O.-atloidean* (Illus. Dict.). **O.calcarine,** pertaining to the occiput and calcar. **O.central,** relating to the occipital lobe and central gyri. **O.cervical,** relating to the occiput and the neck. **O.lateral.** See *Occipitocotyloid* (Illus. Dict.). **O.meningeal,** relating to the occipital bone and the dura. **O.petrosal,** relating to the occipital bone and the petrosa. **O.temporal,** relating to both the occipital and the temporal bones.

Occluding (*ok-lu'-ding*) [*occludere,* to shut or close up]. Applied to the grinding surfaces of molars and bicuspids.

Occlusal (*ok-lu'-sal*). See *Occluding.*

Occlusion. (See Illus. Dict.) 3. The full meeting or contact in a position of rest of the masticating sur-

faces of the upper and lower teeth; it is erroneously called articulation of the teeth.

Ochronosus (*o-kron'-o-sus*) [ὠχρός, yellow; νόσος, disease]. Any disease marked by dark discoloration of the cartilages and allied structures. Cf. *Ochronosis.*

Ochrotyphus (*o-kro-ti'-fus*). Yellow fever.

Ocotea (*ok-ot'-e-ah*) [native name in Guiana]. A genus of laurinaceous trees. **O. cujumary,** Mart., is indigenous to Brazil; the seeds are used in dyspepsia. **O. opifera,** Mart., the Braziljan Canello de Cheiro; the oil from the fruit and the bark are used as an antirheumatic. **O. pretiosa,** Benth., a species indigenous to Brazil, is used in neurasthenia.

Octad (*ok'-tad*) [ὀκτώ, eight]. An octavalent element.

Octavalent (*ok-tav'-al-ent*) [*octo,* eight; *valere,* to be worth]. Having a quantivalence of eight.

Octene (*ok'-tēn*). See *Octylene* (Illus. Dict.).

Octigravida (*ok-te-grav'-id-ah*) [*octo,* eight; *gravida,* a pregnant woman]. A woman pregnant for the eighth time.

Octipara (*ok-tip'-ar-ah*) [*octo,* eight; *parere,* to bring forth]. A woman who has been in labor eight times.

Octivalent. See *Octavalent.*

Octoacetate (*ok-to-as'-et-āt*). A compound of eight molecules of the radicle of acetic acid with a base.

Octoferric (*ok-to-fer'-ik*) [*octo,* eight; *ferrum,* iron]. Containing eight atoms of iron in the molecule.

Oculin (*ok'-u-lin*). An organotherapeutic preparation said to be a glycerin extract from the ciliary body of the eyes of oxen.

Oculo-. (See Illus. Dict.) **O.facial,** relating to the eyes and the face. **O.frontal,** relating to the eyes and the forehead. **O.nasal,** relating to the nose and eye.

Oculus. (See Illus. Dict.) **O. duplex.** See *Binoculus* (Illus. Dict.). **O. genu,** the patella. **Oculi marmarygoides.** See *Metamorphopsia* (Illus. Dict.). **O. ovi,** cicatricula. **O. purulentus,** hypopyon. **O. scapulæ,** the glenoid cavity. **O. simplex.** See *Monoculus* (Illus. Dict.).

Oculustro (*ok-ul-us'-tro*). A soap said to consist of oleate of potassium, glycerin, and turpentine.

Odallin (*od-al'-in*). A glucosid contained in *Cerbera odollam,* Gärt.

Odic (*o'-dik*). Of or pertaining to the theoretic force or influence od. **O.-force.** See *Od* (Illus. Dict.).

Odol (*o'-dol*). A mouth-wash, said to consist of salol, 2.5 parts; oil of peppermint, 0.5 parts; saccharin, 0.004 parts; and alcohol, 97 parts.

Odontalgia. (See Illus. Dict.) **O., Phantom,** pain felt in the space from which a tooth is absent, usually due to cicatricial compression of nerve filaments.

Odonterism (*o-don'-tur-izm*). See *Odontosynerismus* (Illus. Dict.).

Odonthemodia, Odonthæmodia (*o-dont-hem-o'-de-ah*) [ὀδούς, a tooth; αἱμωδία, a having the teeth on edge]. Hemodia, excessive sensibility of the teeth.

Odonthyperesthesis (*o-dont-hi-pur-es-the'-sis*). See *Odonthemodia.*

Odontoatlantal (*o-don-to-at-lan'-tl*). Same as *Atlantoaxial.*

Odontodol (*o-don'-to-dol*). A dental anodyne said to contain cocain hydrochlorid, 1 part; oil of cherry laurel, 1 part; tincture of arnica, 10 parts; solution of ammonium acetate, 20 parts.

Odontoneuralgia (*o-don-to-nu-ral'-je-ah*) [ὀδούς, tooth; *neuralgia*]. Neuralgia due to diseased teeth.

Odontonoid (*o-don'-ton-oid*) [ὀδούς, tooth; εἶδος, likeness]. Tooth-like.

Odontonomy (*o-don-ton'-o-me*) [ὀδούς, tooth; νόμος, law]. The classification of the teeth.

Odorator (*o-dor-a'-tor*) [*odor,* perfume]. An atomizer for diffusing liquid perfumes.

Odyl, Odyle (*od'-il*). See *Od* (Illus. Dict.).

Odynacousis, Odynacusis (*o-din-ah-ku'-sis*) [ὀδύνη, pain; ἀκούειν, to hear]. Pain caused by noises. Cf. *Hyperalgesia, Acoustic.*

Odynolysis (*o-din-ol'-is-is*) [ὀδύνη, pain; λύειν, to loose]. Alleviation of pain.

Odynopeic, Odynopœic (*o-din-o-pe'-ik*) [ὀδύνη, pain; ποιεῖν, to make]. Oxytocic.

Odynophagia (*o-din-o-fa'-je-ah*). See *Odynphagia* (Illus. Dict.).

Odynopœia (*o-din-o-pe'-e-ah*). The induction of labor pains.

Œdemamyces (*e-de-mah-mi'-sez*) [*edema;* μύκης, fungus]. The organism which causes edemamycosis or African horse-sickness.

Œnanthe (*e-nan'-the*) [οἶνος, wine; ἄνθος, a flower; from the similarity of the fragrance of the blossoms to those of the grape]. A genus of umbelliferous plants. **Œ. phellandrium,** Lam., of Europe; the fruit is diuretic, carminative, and is recommended as a specific sedative to the bronchial mucosa. Dose of powdered fruit, 1 dr. in 24 hours.

Œnanthotoxin. See *Enanthotoxin.*

Œnilism (*e'-nil-izm*) [*oinos,* wine]. A form of alcoholism produced by abuse of wine.

Œnochemistry (*e-no-kem'-is-tre*) [οἶνος, wine; *chemistry*]. The chemistry of wines.

Œnoxidase, Œnoxydase (*e-noks'-id-āz*) [οἶνος, wine; *oxidase*]. Cazeneuve's name for the oxidase which causes the browning of wines, the oxidation of the coloring-matter of the wine.

Œstrus. See *Estrus.*

Ohmmeter (*ōm'-e-tur*). An apparatus for estimating electric resistance in ohms.

Oidial (*o-id'-e-al*). Pertaining to or due to a fungus of the genus *Oidium.*

Oidiomycosis (*o-id-e-o-mi-ko'-sis*) [ὠόν, an egg; μύκης, fungus]. A disease produced by yeast fungi of the genus *Oidium.* **O. cutis,** a name proposed by Ricketts for cutaneous disease produced by blastomycetic fungi of the genus *Oidium.* See *Dermatitis, Blastomycetic.*

Oikologic (*oi-kol-oj'-ik*) [οἶκος, a house; λόγος, science]. Relating to the condition and improvement of homes.

Oikology (*oi-kol'-oj-e*) [οἶκος, a house; λόγος, science]. The science of the home.

Oikosite (*oi'-ko-sit*) [οἶκος, a house; σῖτος, food]. Van Beneden's term for a parasite fixed to its host. Cf. *Commensal, Symbiont, Parasite.*

Oil. (See Illus. Dict.) **O. of Absinthium.** See *Oil, Wormwood.* **O., Adul,** an oil from *Sarcostigma kleinii,* W. et Arn., order *Olacineæ;* it is used in India in rheumatism. **O. of Æsculus,** a fixed oil from the horse-chestnut, *Æsculus hippocastanum,* L., used as an application in rheumatism. **O., Ajowan,** an oil distilled from the fruit of *Carum copticum,* Benth. Dose, 1½–3 ♏. **O., Aleurites,** a fixed oil with nutty flavor from the seeds of the candle-nut tree, *Aleurites triloba,* Forst. It is a mild cathartic, acting as castor oil and more promptly. Dose, ½–1 oz. Syn., *Artists' oil; Country walnut oil; Kekune oil; Kekui oil; Belgaum walnut oil; Spanish walnut oil.* **O., Allyl Mustard.** See under *Allyl* (Illus. Dict.). **O., Almond, Bitter,** essential oil from the seed of bitter almonds; a refractive, aromatic liquid with bitter acrid taste and containing hydrocyanic acid; soluble in alcohol and ether; used as a sedative and externally to allay itching. Dose, ⅙–½ ♏ (0.01–0.03 c.c.). Antidotes, emetics, ammonia, brandy, iron persulfate. **O., Almond, Bitter, Artificial.** See *Benzaldehyd* (Illus. Dict.). **O., Almond, Sweet,** fixed oil expressed from almond; sp. gr., 0.915–0.920; miscible in ether and chloroform; used as nutrient and as

cathartic to children. Dose, 60–480 ♏. **O. of Aloes**, a pale yellow liquid, with odor and taste of mint, obtained in small amount from aloes. **O., Anemone.** See *Anemonol* (Illus. Dict.). **O., Angelica**, ethereal oil from root of *Archangelica officinalis*, Hoffm.; used as a tonic. Dose, 1–3 ♏ (0.06–0.2 c.c.). **O., Anilin**, crude anilin obtained from nitrobenzin by the action of reducing agents. **O., Animal**, an oil obtained from destructive distillation of bones; applied in skin-diseases and used internally in hysteria. Dose, 5–20 ♏ (0.3–1.2 c.c.). **O., Anise, Star.** See *O. of Illicium*. **O., Anthos**, rosemary oil. **O., Anthracene.** See under *Anthracene* (Illus. Dict.). **O. of Ants, Artificial**, furfurol. **O., Apple**, amyl valerianate. **O. of Arachis**, a bland yellow oil expressed from peanuts, the fruit of *Arachis hypogæa*, L.; it is used to adulterate olive oil. **O., Arbor vitæ.** See *O., Thuja*. **O., Argan**, a fixed oil from the seeds of the sapotaceous argan tree of Morocco, *Argania sideroxylon*, R. et S. It is used as a substitute for olive oil. **O. of Arnica Flowers**, an essential oil from the flowers of *Arnica montana*, L. It is diaphoretic, diuretic, and emmenagog. **O., Artemisia**, an antiseptic and astringent oil from Roman wormwood, *Artemisia maritima*, L. It is used in skin-diseases. **O., Artists'.** See *O., Aleurites*. **O., Asarum**, a volatile oil distilled from the rhizomes of *Asarum europæum*, L.; a viscid liquid with sharp burning taste. **O. of Asphalt**, a rubefacient, antiseptic oil obtained from destructive distillation of asphalt; it is applied in rheumatism and parasitic skin-diseases. **O., Aspic** (corruption of *spica*). See *O. of Spike*. **O., Bacaba**, oil from various species of *Œnocarpus* indigenous to South America. **O., Badian.** See *O. of Illicium*. **O., Balm, German**, an essential oil from the leaves and tops of *Melissa officinalis*, L.; it is diaphoretic and antispasmodic. Dose, 1–2 ♏ (0.06–0.12 c.c.). Syn., *O., Melissa; O. of Lemon balm*. **O., Bancoul, O., Bankul, O., Bankune.** See *O., Aleurites*. **O., Barbadoes Nuts.** See *O., Jatropha* (Illus. Dict.). **O., Bardane**, a hair oil made by digesting burdock root in olive oil. **O., Basil**, an essential oil from leaves of *Ocimum basilicum*, L. It is antiseptic and stimulant. Dose, 1–2 ♏ (0.06–0.12 c.c.). **O., Bay.** (See Illus. Dict.) 2. See *O., Myrcia*. **O. of Behen.** See *O. of Ben* (Illus. Dict.). **O., Benne.** See *O., Sesame*. **O. of Birch Bark**, volatile oil from the bark of *Betula lenta*, L., containing 99% of methyl salicylate and almost identical with oil of wintergreen. Antirheumatic and antiseptic. Dose, 5–30 ♏ (0.3–1.8 c.c.). **O. of Birch Wood**, an antiseptic black liquid with odor of Russia leather obtained by destructive distillation of white birch, *Betula alba*, L. It is used in skin-diseases. Syn., *Empyreumatic birch oil; Oleum Rusci*. **O., Bitter**, a bitter, green oil extracted from the seeds of *Calophyllum inophyllum*, L., a guttiferous tree of Asia. Syn., *Laurel-nut oil; Tamanu oil; Ndilo oil*. **O.s, Blown**, oxidized fixed oils. **O., Blue**, a liquid mercurial ointment prepared with oil. **O. of Boldus**, a volatile oil from *Peumus boldus*, Mol., used in inflammations of the genitourinary tract. **O. of Canada Snakeroot**, an aromatic, antiseptic stimulant oil from the rhizome of *Asarum Canadense*, L. Dose, 1–2 ♏ (0.06–0.12 c.c.). **O., Candle-fish.** See *O., Eulachon* (Illus. Dict.). **O., Candle-nut.** See *O., Aleurites*. **O., Canella**, an aromatic oil from the bark of *Canella alba*, Murray. Dose, 1–2 ♏ (0.06–0.12 c.c.). **O., Caoutchouc.** See *Dipentene* (Illus. Dict.). **O., Carap**, a bitter concrete oil obtained from seeds of *Carapa guianensis*, Aub. **O., Carbolized Coal**, a compound of carbolic acid with coal-tar, naphtha, benzene, or some fixed oil. **O. of Cascarilla**, a volatile oil from the bark of *Croton eluteria*, Bennet; it is stimulant and aromatic and used as an adjuvant in bitter tonics. Dose, 1–2 ♏ (0.06–0.12 c.c.). **O. of Cedar Leaves**, essential oil from the leaves of *Juniperus virginiana*, L.; sp. gr., 0.885; it is antiseptic and emmenagog. **O. of Cedar Wood**, volatile oil from the wood of *Juniperus virginiana*, L. **O., Cedrat**, an essential oil from the fruit rind of *Citrus medica*, Risso. It is aromatic, stimulant, and antiseptic. Dose, 1.2 ♏ (0.06–0.12 c.c.). **O. of Chamomile, German**, an essential oil from *Matricaria chamomilla*, L.; a thick bluish oil solidifying on exposure to cold. It is used in colic, cramps, etc. Dose, 1–5 ♏ (0.06–0.3 c.c.). **O. of Chamomile, Roman**, an essential oil from the flowers of *Anthemis nobilis*, L. It is tonic and stomachic. Dose, 1–5 ♏ (0.06–0.3 c.c.). **O., Champaca**, a volatile oil used as a perfume from the flowers of *Michelia champaca*, L. **O. of Cherry Laurel**, an essential oil from the leaves of *Prunus laurocerasus*, L. It has the odor and properties of oil of bitter almond; used as a sedative. Dose, 1/6–1/2 ♏ (0.01–0.03 c.c.). **O., Cina.** See *O. of Wormseed, Levant*. **O., Citron.** See *O., Cedrat*. **O. of Citronella**, an essential oil from various species of the grass *Andropogon*. **O., Cochlearia**, a volatile oil from scurvy grass, *Cochlearia officinalis*, L. Its principal constituent is secondary butyl thiocarbamid, C_4H_9. CSN. It is stimulant, aperient, and diuretic. Dose, 2–5 ♏ (0.12–0.3 c.c.). **O. of Cocoanut**, a white semi-solid fat, soluble in alcohol and ether, obtained from the nut of *Cocos nucifera*, L. It is used as an alterant and nutrient, and as ointment base. Dose, 2–4 dr. (8–16 c.c.). **O., Cocum-.** See *Cocum-butter*. **O., Cognac**, ethyl enanthate. **O., Colza**, an oil consisting of glycerid of brassic acid obtained from a variety of *Brassica campestris*, L. **O., Coonda** or **Coondi.** See *O., Carap*. **O., Cotton-seed**, a fixed oil from seeds of cotton, *Gossypium herbaceum*, L.; used as olive oil. **O., Country Walnut.** See *O., Aleurites*. **O., Crab.** See *O., Carap*. **O. of Crithmum**, a limpid volatile oil from *Crithmum maritimum*, L.; it has an acrid aromatic taste; sp. gr., 0.98. **O., Cumin**, a volatile carminative oil from the seeds of *Cuminum cyminum*, L. **O. of Cypress**, a volatile, colorless, oily liquid obtained from the fresh leaves and shoots of *Cupressus sempervirens*, L. It is antiseptic and antispasmodic and is recommended in whooping-cough; used by sprinkling the clothes and room. **O., Damny Mountain.** See *O., Ebony*. **O., Dee.** See *Deelinæ oleum* (Illus. Dict.). **O., Dill**, a volatile oil from fruit of dill, *Peucedanum graveolens*, Benth. et Hook. fil., consisting chiefly of carvol, $C_{10}H_{14}O$, and limonene, $C_{10}H_{16}$; sp. gr., 0.905. It is used as a carminative. Dose, 3–10 ♏ (0.2–0.6 c.c.). **O., Dippel's.** See *O., Animal*. **O.s, Distilled**, volatile oils. **O., Doegling**, oil from the Norwegian whale, *Balæna rostrata*; it is used as an ointment base. **O., Dutch.** See *O., Haarlem*. **O., Earth Nut.** See *O., Arachis*. **O., Ebony**, a fatty oil from the seeds of *Bauhinia tomentosa*, L. Syn., *Damny mountain oil*. **O., Eel**, the fat of eels. **O., Egg-yolk**, an oil obtained from hard-boiled fresh eggs and used in lotions. **O., Eguse**, oil of colocynth seeds imported from Africa. **O.s, Expressed, O.s, Fat.** See *Oil, Fatty* (Illus. Dict.). **O. of Fir Cones**, a volatile oil from the cones of *Picea excelsa*, Lk.; a colorless antiseptic liquid with balsamic odor; used as inhalations in diseases of the respiratory organs. **O. of Fir, Scotch**, an essential antiseptic oil from *Pinus sylvestris*, L.; sp. gr., about 0.87; used as an application in chronic rheumatism. **O. of Fire-**

weed, an essential oil from *Erechthites prœalta*, Raf.; aromatic tonic and stimulant. Dose, 2–6 ♏ (0.12–0.4 c.c.). **O., Fir-wood.** See *Oil of Fir.* **O., Flax-seed.** See *O., Linseed* (Illus. Dict.). **O., Fleabane.** See *O., Erigeron* (Illus. Dict.). **O., Fulmar,** a clear red oil, with a powerful and peculiar odor and properties analogous to cod-liver oil, obtained from the fulmar petrel, *Procellaria glacialis*, L., obtained on the island of St. Kilda, off the British coast. **O., Fusel,** amylic alcohol. **O. of Gaultheria.** See *O. of Wintergreen* (Illus. Dict.). **O. of Gaultheria, Artificial,** methyl salicylate. **O., Gaultheria, from Birch.** See *O. of Birch Bark.* **O., Geranium.** (See Illus. Dict.) 2. See *O., Lemon-grass.* **O., Geranium, Turkish.** See *O., Lemon-grass.* **O., Ginger-grass, O., Vetivert.** See *O., Lemon-grass.* **O., Gingili,** sesame oil. **O., Goldenrod,** a volatile oil from *Solidago odora*, Aiton, used as a perfume. **O., Gomenol,** a terpinol said to be obtained from a variety of *Melaleuca leucadendron*, L. It is recommended in pertussis. Dose, 5–10 c.c. of 5% oil injected into the gluteal muscles. **O., Ground Nut.** See *O., Arachis.* **O., Gru-Gru,** a violet-scented, light yellow solid from the nut of the macaw palm, *Acrocomia lasiospatha*, Mart., of the West Indies. **O., Guaiac,** tiglic aldehyd. **O., Guaiacum-wood,** an essential oil, semi-solid or crystalline at ordinary temperatures, with intense odor of tea, obtained from wood of *Guaiacum officinale*, L. **O., Gynocardia.** See *O., Chaulmoogra* (Illus. Dict.). **O., Haarlem.** See *O., Linseed, Sulfurated, Terebinthinated.* **O., Hemlock,** a volatile oil from the bark of *Tsuga canadensis*, Carr. **O., Herring,** a fixed oil from herrings. **O. of Hops,** a volatile oil from hops, the strobiles of *Humulus-lupulus*, L., soluble in alcohol, ether, or chloroform; sedative, tonic, and narcotic. Dose, 1–5 ♏ (0.06–0.6 c.c.). **O. of Horsemint,** a volatile oil from *Monarda punctata*, Willd.; used as carminative. Dose, 1–10 ♏ (0.06–0.6 c.c.). **O., Hungarian,** enanthic ether, used to impart a flavor of French brandy to inferior liquor. **O. of Hyoscyamus Leaves,** a green oil prepared by heating a fixed oil with fresh leaves of *Hyoscyamus niger*, L; used as a sedative in cough of tuberculosis. Dose, 1–5 ♏ (0.06–0.3 c.c.). **O., Hypericum,** a preparation of the tops of *Hypericum perforatum* macerated in olive oil (4 oz. in 1 pt.), used as an application for bruises. Syn., *Red oil.* **O., Hyperiodized.** See *Iodopin* and *Lipiodol.* **O., Hyssop,** a volatile oil from *Hyssopus officinalis*, L.; sp. gr., about 0.930; used in diarrhea, colic, etc. Dose, 1–5 ♏ (0.06–0.3 c.c.). **O., Illicium,** an essential oil from the fruit of *Illicium anisatum*, Bortr.; its chief constituent is anethol. **O., Iloopay, O., Ilupai,** the fatty oil expressed from the seeds of *Bassia longifolia*, L.; used in skin-diseases. **O. of Indian Corn.** See *O., Maize.* **O. of Indian Grass, O., Indian Melissa.** See *O. of Lemon-grass.* **O., Infernal,** castor oil. **O., Iodoform,** a sterilized solution of iodoform in almond oil (4.5–5% iodoform). **O., Iva,** an essential oil from *Achillea moschata*, Jacq. **O., Joint,** synovia. **O., Juniper, Empyreumatic.** See *O., Cade* (Illus. Dict.). **O., Juniper Wood,** a volatile oil from fresh wood of *Juniperus communis*, L., distilled with water. It is a turpentine-like liquid with feeble odor of juniper. **O., Karwah Thistle,** a cathartic oil expressed from the seeds of *Argemone mexicana*, L. **O., Kekune, O., Kukui.** See *O., Aleurites.* **O., Krumholz.** See *O., Pinus pumilio.* **O., Kundah, O., Kuridah.** See *O., Carap.* **O., Kurung.** See *O., Pongamia.* **O., Lard,** oil from hog's lard; sp. gr., 0.910–0.925 at 14° C.; soluble in alcohol, ether, and chloroform. **O. of Laurel,** a narcotic volatile oil from the fruit of *Laurus nobilis*, L.; sp. gr., 0.88. Rarely used internally. Dose, ⅓–3 ♏ (0.025–0.2. c.c.). **O., Laurel-nut.** See *O., Bitter.* **O. of Lemon Balm.** See *O., Balm.* **O., Lemon-grass,** an essential oil from the leaves of *Andropogon schœnanthus*, L. It is used as an application in rheumatism and internally in cholera. Syn., *Indian melissa oil; Oil of verbena.* **O. of Limes,** an essential oil from the fruit rind of *Citrus limetta*, Risso; stimulant and tonic and used for flavoring. **O., Limetta.** See *O. of Limes.* **O. of Linaloe,** an essential fragrant oil distilled from *Bursera graveolens*, Tr. et Pl., a Mexican wood, and from allied species. **O., Linseed, Sulphurated,** an antiseptic oil obtained from linseed oil by action of sulfur dioxid; contains 14% of sulfur; used in scabies, etc. **O., Linseed, Sulphurated, Terebinthinated,** an antiseptic oily preparation obtained by mixing sulfurated linseed oil with oil of turpentine (1 : 3); used internally in lithiasis, externally in skin-diseases. Dose, 5–15 ♏ (0.3–1 c.c.) in milk. Syn., *Dutch oil; Haarlem oil; Dutch drops.* **O., Macassar,** a preparation of cocoanut oil and the flowers of *Cananga odorata*, Hook. (ylang-ylang); used by the natives of the Moluccas to anoint their bodies during prevalence of fevers. **O., Madia,** a fatty oil from the seeds of a composite annual, *Madia sativa*, Mol.; used as a condiment and in medicine. **O., Maize,** a golden oil of peculiar taste and smell obtained from the germs of corn grains; sp. gr., 0.916 at 25° C. It consists of olein, stearin, and palmitin. **O. of Malefern,** a volatile oil from *Dryopteris filix-mas*, Schott, and *D. marginalis*, A. Gray. It is used as an anthelmintic. Dose, 12–25 ♏ (0.7–1.5 c.c.). **O., Margosa,** a bitter yellow oil with odor of garlic expressed from seeds of *Melia azadirachta*, L. It is used as an anthelmintic and as an application in rheumatism, and in sunstroke. **O. of Marjoram, Wild,** an essential oil from the tops of *Origanum vulgare*, L.; it is antiseptic, tonic, and emmenagog. Dose, 2–10 ♏ (0.12–0.6 c.c.). It is used externally in skin-diseases. **O., Massoy,** an aromatic volatile oil from massoy bark. **O. of Matico,** a volatile antiseptic oil from *Piper angustifolium*, R. et P.; used in diseases of the urinary tract. Dose, ½–1 ♏ (0.03–0.06 c.c.). **O., Meadow Sweet,** salicylous acid. **O.s, Medicinal,** infusions of 1 part of a dry drug in 10 parts of olive oil, or a preparation made by boiling 1 part of a fresh herb in 2 parts of olive oil. **O., Melaleuca.** See *O., Cajeput* (Illus. Dict.). **O., Melissa.** See *O., Balm.* **O. of Milfoil,** an aromatic carminative and tonic oil from the leaves and flowers of *Achillea millefolium*, L.; sp. gr., 0.910–0.920; tonic, astringent, emmenagog. Dose, 1–5 ♏ (0.06–0.3 c.c.). Syn., *O., Yarrow.* **O. of Mint, Curled,** a volatile oil from the leaves of *Mentha crispa*, L.; used as oil of peppermint **O., Mountain Ash,** parasorbic acid. **O., Mountain Pine.** See *O., Pinus pumilio.* **O., Muscatel Sage,** an essential oil from *Salvia sclarea*, L.; sp. gr., about 0.928; used as a perfume. **O., Muscovite.** See *O. of Birch Wood.* **O., Mustard, Artificial.** See *Allylthiocyanate* **O., Myrcia,** a volatile oil from the leaves of *Pimenta acris*, Kost., consisting chiefly of eugenol; sp. gr., 0.965–0.990 at 15° C.; soluble in alcohol, ether, or chloroform; used in making bay-rum. Syn., *Oil of bay.* **O. of Nagkassar** or **Nahor,** an oil from the seeds of *Mesua ferrea*, L.; used locally in rheumatism. **O., Ndilo.** See *O., Bitter.* **O., Neem.** See *O., Margosa.* **O., Niaouli,** a volatile oil from the leaves of *Melaleuca leucadendron*, L., containing 66% of eucalyptol; a thin, pungent, yellow, aromatic, dextrogyre oil; sp.

gr., 0.922; soluble in alcohol, ether, and benzin; used in tuberculosis. Dose, 4 ♏ (0.25 c.c.) 6 times daily. Inj., 16.5 ♏ (1 c.c.) in olive oil. **O., Nicker-seed**, the oil from bonduc seeds, used as an embrocation in rheumatism. **O., Niger-seed**, a thin, bland, yellow oil obtained from the seeds of *Guizotia abyssinica*, Cass., a composite annual cultivated in India and Abyssinia for its seeds. Syn., *Ram-til oil.* **O., Nutmeg**, a volatile oil distilled from nutmeg; a thin yellow liquid; sp. gr., 0.870–0.900. **O., Nutmeg, Fatty**, a fixed oil from nutmeg; a yellowish, soft solid with taste and odor of nutmeg; narcotic and carminative. Dose, 2–5 gr. (0.1–0.32 gm.). Syn., *Nutmeg butter.* **O., Olive.** (See Illus. Dict.) It is a mixture of glyceryl (C_3H_5) with oleic acid ($C_{18}H_{34}O_2$, and palmitic acid ($C_{16}H_{32}O_2$); it consists of two oils having the formulas $C_3H_5(C_{18}H_{33}O_2)_3$, and $C_3H_5(C_{16}H_{31}O_2)_3$ respectively. **O., Omum.** See *O., Ajowan.* **O. of Orange Flowers.** See *O. of Neroli* (Illus. Dict.). **O. of Orange Flowers, Bigarade**, a volatile oil from the flowers and leaves of *Citrus bigaradia*, Duh. **O. of Orange Flower, Petals**, a volatile oil from the petals of *Citrus aurantium*, L. **O. of Orange Flowers, Petit Grain**, a volatile oil from the leaves and unripe fruit of *Citrus bigaradia*, Duh. **O., Orange Peel**, an essential oil from the fresh rind of *Citrus aurantium*, L. **O., Origanum.** See *O., Marjoram, Wild;* also the common but erroneous name for oil of thyme. **O., Palmarosa.** See *O., Lemon-grass.* **O., Paraffin**, chiefly hydrocarbons of the CnH_{2n+2} series, distilled from petroleum; a limpid oil thickening with cold; sp. gr., 0.875–0.900; boils at 300° C. **O., Pastinaca**, a volatile oil, consisting chiefly of ethyl butyrate, contained in the fruit of parsnip, *Pastinaca sativa*, L.; a yellow liquid with pleasant smell; sp. gr., 87. **O., Patchouli**, a volatile oil from the leaves of *Pogostemon heyneanus*, Benth.; a thick, fragrant, brownish liquid; sp. gr., 0.970–0.990. **O., Peach Kernel**, an oil expressed from seed of the peach, *Prunus persica*, Sieb.; Sp. gr., 0.915 at 15° C. Soluble in ether, chloroform, or carbon disulfid; used as almond or olive oil. **O., Peanut.** See *O., Arachis.* **O., Pear**, amyl acetate. **O., Pennyroyal, European.** See *O., Pulegium.* **O., Peppermint, Mitcham**, oil from peppermint cultivated at Mitcham, Surrey, England. **O. of Pine Needles.** See *O., Fir, Scotch.* **O., Pineapple.** See under *Pine* (Illus. Dict.). **O. of Pinus pumilio**, a very fragrant volatile oil from the leaves of *Pinus pumilio*, Haenke; antiseptic and expectorant, and used also in glandular enlargements and skin-diseases. Dose, 5–10 ♏ (0.3–0.6 c.c.). **O. of Pinus Sylvestris.** See *O., Fir, Scotch.* **O., Poho**, oil of Japanese peppermint. **O., Polei, O., Poley.** See *O., Pulegium.* **O., Pongamia, O., Poonga**, oil expressed from the seeds of an East Indian tree, *Pongamia glabra*, Vent. It is a deep yellow to reddish-brown fluid at 60° F., but below that it is solid. It is used by the Hindoos in skin-diseases, and is especially recommended in those due to fungi. **O., Poppy**, oil expressed from the seeds of various species of *Papaver;* used as a substitute for olive and almond oil. **O., Porpoise**, fixed oil from the blubber of the porpoise. **O., Potato**, fusel oil. **O., Ptychotis.** See *O., Ajowan.* **O., Pulegium**, the oil from European pennyroyal, *Mentha pulegium*, L.; its chief constituent is pulegiol, $C_{10}H_{16}O$. It smells like peppermint; boils at 227° C. **O., Pumpkin Seed**, oil from the seeds of *Cucurbita pepo*, L., a red oily liquid; sp. gr., 0.928; it is said to be anthelmintic. **O., Quirinus**, a petroleum issuing near the chapel of St. Quirinus at Tegernsee. **O., Ram-til.** See *O., Niger-seed.* **O., Rape**, a brown or greenish-yellow oil expressed from seeds of a variety of *Brassica campestris.* **O., Ray.** See *O., Skate.* **O., Red.** See *O., Hypericum.* **O., Rhodium**, a volatile oil from rosewood, *Convolvulus scoparius*, L.; used to adulterate oil of rose. **O., Rose Geranium.** See *O., Geranium* (Illus. Dict.). **O., Rosewood.** See *O., Rhodium.* **O., Rusa**, lemon-grass oil. **O., Salad**, olive oil. **O., Sandalwood, East Indian, O., Santal.** See *O., Sandalwood* (Illus. Dict.). **O., Savine**, a poisonous, volatile oil from the fresh tops of *Juniperus sabina*, L. It is irritant and emmenagog. Dose, ½–2 ♏ (0.03–0.12 c.c.). Antidotes, emetics, oil, mucilage, brandy, opium. **O., Scurvy Grass.** See *O., Cochlearia.* **O., Seneca**, crude petroleum. **O., Sesame**, a fixed oil from the seeds of *Sesamum indicum*, L.; sp. gr., 0.919–0.923 at 15° C.; soluble in ether, chloroform, or carbon disulfid. It is laxative and nutrient. Dose, 4–8 dr. (15–30 c.c.). Syn., *Benne oil; Teel oil.* **O., Shark**, a pale acrid oil from the liver of the shark, *Squalus carcharias;* sp. gr., 0.87–0.88. **O., Shealkanta**, the karvah-thistle oil. **O., Simabolee**, a clear oil extracted from curry leaves, *Murraya koenigii*, Spr. **O., Skate**, a yellow neutral oil obtained from the liver of the skate, *Raja batis;* it is used as a substitute for cod-liver oil. **O., Soy**, a bland yellow oil expressed from soja beans, the seeds of *Glycine soja*, Sieb. **O. of Spike**, a volatile oil from the leaves and tops of *Lavandula spica*, Cav.; carminative and rubefacient, and used externally in rheumatism. **O., Spikenard**, lemon-grass oil. **O., Spruce.** See *O., Hemlock.* **O., Storax**, a volatile oil from storax; sp. gr., 0.900. **O., Sumbul**, a volatile oil from the root of *Ferula sumbul*, Hook. fil. **O., Sunflower**, a fixed oil from the seeds of the sunflower, *Helianthus annuus*, L. **O., Sweet Bay.** See *O., Laurel.* **O. of Tagud-nuts**, oil from the seeds of *Phytelephas macrocarpa*, R. et P. **O., Tallicoonah.** See *O., Carap.* **O., Tamanu.** See *O., Bitter.* **O., Tambor**, a purgative oil obtained from *Omphalea oleifera*, Hemsl., of Central America. It is used as castor oil. **O., Tea**, a Chinese fixed oil said to be derived from *Camellia drupifera*, Lour. **O., Teaberry.** See *O., Winterberry* (Illus. Dict.). **O., Teel, O., Til.** See *O., Sesame.* **O., Templin**, oil of *Pinus pumilio.* **O., Theobroma**, cacao-butter. **O., Thuja**, an essential oil from the leaves of *Thuja occidentalis*, L.; emmenagog, tonic and antiseptic. Syn., *O., Arbor vitæ; O., White cedar.* **O., Toulocouna**, carap oil. **O., Tumenol.** See *Tumenol.* **O., of the Tung Tree.** See *O., Aleurites.* **O. of Turpentine**, a volatile oil from the concrete resin of *Pinus palustris* and other species; chiefly consisting of $C_{10}H_{16}$; sp. gr., 0.855–0.870; soluble in ether, slightly so in alcohol; boils at 155°–170° C. It is anthelmintic, antiseptic, diuretic, and rubefacient. Dose, 5–120 ♏ (0.3–7.4 c.c.). **O., Turtle**, oil extracted from turtles' eggs; said to equal cod-liver oil in value. **O., Ugger**, a perfume distilled from agallochum. **O., Valerian**, a volatile oil from the rhizome and root of *Valeriana officinalis*, L.; sp. gr., 0.95; used in nervous diseases. Dose, 4–5 ♏ (0.25–0.3 c.c.). **O. of Verbena.** See *O., Lemon-grass.* **O. of Vitriol**, sulfuric acid. **O., Walnut**, a fixed oil from *Juglans regia.* **O. of Wax**, a volatile oil obtained from wax by fractional distillation. **O., White Cedar.** See *O., Thuja.* **O., Wild-seed**, a fixed oil from mignonette, *Reseda luteola*, L. **O., Wine, Heavy**, a final product of the distillation of alcohol with great excess of sulfuric acid, a yellow oily liquid with pungent odor and acrid taste; sp. gr., 1.096–1.129; soluble in alcohol or ether; boils at

280° C. **O., Wittneben's.** See *O., Cajuput* (Illus. Dict.). **O., Wood.** 1. Gurjun balsam. 2. See *O., Aleurites.* **O., Wormseed, American.** See *O., Chenopodium* (Illus. Dict.). **O. of Wormseed, Levant,** a volatile oil from the flowers of *Artemisia cina*, Berg. et Schmidt, consisting chiefly of cineol, $C_{10}H_{18}O$; sp. gr., about 0.930; soluble in alcohol and ether. It is anthelmintic and tonic. Dose, 1–2 ♏ (0.05–0.12 c.c.). **O., Wormwood, Common,** a volatile oil from the leaves and tops of *Artemisia absinthium*, L., consisting chiefly of thujone, $C_{10}H_{16}O$; sp. gr., 0.925–0.950; soluble in alcohol or ether; analgesic and tonic. Dose, 1–2 ♏ (0.06–0.12 c.c.). **O. of Wormwood, Roman.** See *O. of Artemisia.* **O., Yarrow.** See *O., Milfoil.* **O., Ylang Ylang.** See *O., Cananga* (Illus. Dict.).

Ointment. (See Illus. Dict.) **O., Blue.** See *Hydrargyrum unguent.* (Illus. Dict.). **O., Citrine.** See *Hydrargyrum nitrat. ung.* (Illus. Dict.). **C., Lister's,** bone acid, 1; white wax, 1; paraffin, 2; almond oil, 2 parts. **O., Mercurial, O., Neapolitan.** See *Hydrargyrum unguent.* (Illus. Dict.). **O.-muslins,** strips of muslin impregnated with ointment, applied in eczema.

Old Man's Back. Paralytic kyphosis.

Oldenlandia (*ol-den-land'-e-ah*) [*H. B. Oldenland*, Danish botanist]. A genus of rubiaceous plants. **O. corymbosa,** L., of the East and West Indies, is antispasmodic and antipyretic. **O. umbellata,** L., Indian madder, a species indigenous to the East Indies and cultivated for the root, Chaya, ghé, or chayavar, which yields a red dye and is used in skin-diseases; the leaves are expectorant.

Oleaceous (*o-le-a'-shus*). Relating to the olive or to the order *Oleaceæ.*

Oleandrism (*o-le-an'-drizm*). Poisoning by oleander; analogous to digitalism.

Olearia (*o-le-a'-re-ah*) [*Adam Olearius*, 1600–1671]. A genus of the *Compositæ.* **O. moschata,** Hook., yields eurybin.

Olease (*o'-le-ās*). An enzyme found by Talomei in olives, which causes precipitation of the coloring-matter of olive oil and rancidity by formation of fatty acids.

Oleaster (*o-le-as'-tur*) [L., the wild olive]. 1. The olive tree, *Olea europea*, L. 2. The paradise tree, *Elaeagnus angustifolia*, L.

Olefiant (*ol'-e-fi-ant*) [*oleum*, oil; *facere*, to make]. Making oil.

Oleic (*o'-le-ik*) [*oleum*, oil]. Relating to, containing, or obtained from oil.

Oleobalsamic (*o-le-o-bal-sam'-ik*). Containing oil and balsam. **O. Mixture,** an alcoholic mixture of volatile oils and balsam of Peru.

Oleocreosote (*o-le-o-kre'-o-sōt*). A yellowish oily liquid with a specific gravity 0.950 at 15° C.; soluble in ether, chloroform, and benzine. It is an antiseptic used in catarrh of the respiratory organs, bronchitis, etc. Administered as an emulsion in doses, adults, 40–160 gr. (2.6–10.4 gm.) daily; children, 8–45 gr. (0.52–3 gm.) daily. Syn., *Creosote-oleic ether; Creosote oleate; Oleocreasol.*

Oleoguaiacol (*o-le-o-gwi'-ak-ol*). See *Guaiacol Oleate.*

Oleoinfusion (*o-le-o-in-fu'-shun*). An oily solution of a drug.

Oleosaccharose (*o-le-o-sak'-ar-ōs*). A compound of saccharose with an essential oil.

Oleum. (See Illus. Dict.) **O., Alchitri,** oil of Juniper. **O. anonæ,** ylang ylang oil. **O. nigrum,** a reddish-yellow oil, becoming of the consistency of honey on keeping, obtained in the East Indies from the seeds of *Celastrus paniculatus*, Willd. It is a powerful stimulant and diaphoretic and is used in rheumatism, gout, and various fevers. **O. phosphoratum,** a mixture of phosphorus, 1 gr.; ether, 9 gr.; almond oil, 90 c.c. Each minim contains $\frac{1}{100}$ of a grain of phosphorus; it is prescribed in rachitis. **Olea pinguia,** fixed oils. **O. populeum,** a preparation of 1 part of shredded poplar buds digested in 3 parts of olive oil. **O. provinciale.** See *Oil, Provence* (Illus. Dict.). **O. pulegi,** poley oil; oil from European pennyroyal. **O. ricini naphtholatum,** castor oil containing 0.2% each of α-naphthol, chloroform, and oil of peppermint. **O. templinum.** 1. See *Oil of Pinus pumilio.* 2. A variety of turpentine distilled from the cones of *Abies pectinata*, D. C. **O. unonæ,** ylang ylang oil. **O. vulpium,** a mixture of olive oil and 1% each of dill oil and oil of thyme. **O. wittnebianum.** See *Oil of Cajuput* (Illus. Dict.).

Oleyl (*o'-le-il*). $C_{18}H_{33}O$, the radicle of oleic acid.

Olfactometry (*ol-fak-tom'-et-re*) [*olfacere*, to smell; *metare*, to measure]. The science of measuring the acuteness of the sense of smell.

Olfactory. (See Illus. Dict.) **O. Islands.** See *Islands.*

Oligemia. (See Illus. Dict.) **O. serosa.** Same as *Hydremia.*

Oligidria (*ol-ig-id'-re-ah*). See *Olighydria* (Illus. Dict.).

Oligocytosis (*ol-ig-o-si-to'-sis*) [ὀλίγος, few; κύτος, cell]. See *Oligocythemia* (Illus. Dict.).

Oligogalia (*ol-ig-o-ga'-le-ah*). See *Oligogalactia* (Illus. Dict.).

Oligoglobulia (*ol-ig-o-glo-bu'-le-ah*) [ὀλίγος, few; *globulus*, a small globe]. See *Oligocythemia* (Illus. Dict.).

Oligomania. (See Illus. Dict.) **O., Abulic.** See *Abulomania* (Illus. Dict.). **O., Affective.** Same as *Mania sine delirio.* **O., Agoraphobic.** See *Agoraphobia* (Illus. Dict.). **O., Claustrophobic.** See *Claustrophobia* (Illus. Dict.). **O., Mysophobic.** See *Mysophobia* (Illus. Dict.).

Oligomorphic (*ol-ig-o-mor'-fik*) [ὀλίγος, few; μορφή, form]. Applied to organisms which have but few stages of development.

Oligonitrophil (*ol-ig-o-ni'-tro-fil*). See *Oligonitrophilous.*

Oligonitrophilous (*ol-ig-o-ni-trof'-il-us*) [ὀλίγος, scanty; *nitrogen*; φιλεῖν, to love]. Beijerinck's term, 1902, applied to those organisms which, while occurring freely in nature, develop in nutrient media, containing combined nitrogen, or from which combined nitrogen has not been carefully excluded. They have the ability of assimilating and utilizing atmospheric nitrogen.

Oligophospaturia (*ol-ig-o-fos-fat-u'-re-ah*). A decrease in the amount of phosphates in the urine.

Oligophrenia (*ol-ig-o-fre'-ne-ah*) [ὀλίγος, little; φρεν, mind]. Imbecility.

Oligoplasmia (*ol-ig-o-plaz'-me-ah*) [ὀλίγος, scanty; πλάσμα, a thing molded]. A decrease in the amount of blood-plasma.

Oligospermatism (*ol-ig-o-spurm'-at-izm*). See *Oligospermia* (Illus. Dict.).

Oliguresia (*ol-ig-u-re'-se-ah*). See *Oliguria* (Illus. Dict.).

Olivary. (See Illus. Dict.) 2. The olivary body.

Olive. (See Illus. Dict.) **O., Accessory.** 1. A nucleus composed of two small masses of cinerea, an outer (the external accessory olivary body of Müller) and an inner (the internal accessory olivary body of Müller), within the olive situated above and to the inner side of the dentatum. Syn., *Accessory olivary nucleus; Nucleus juxtaolivaris;* Ger. *Nebenolive; Olivennebenkern;* Fr. *Noyau olivaire accessoire.* 2. A gray

plate dorsad of the olive. Syn., *External accessory olivary nucleus; Lateral accessory olivary nucleus; Superior accessory olivary nucleus;* Ger. *äussere Nebenolive;* Fr. *Noyau juxta-olivaire postéro-externe.* 3. A similar but smaller gray plate dorsad of the pyramid. Syn., *Internal accessory olivary nucleus; Median internal olivary nucleus; Nucleus of the pyramid; N. pyramidalis; Anterior olive.* **O., Anterior.** See *O., Accessory* (3). **O., Inferior,** the olivary body. **O., Superior, O., Upper.** See *Nucleus, Olivary, Superior.* **O., Superior, of Luys,** the tegmental nucleus.

Olivifugal (*ol-iv-if'-u-gal*) [*olive; fugere,* to flee]. Turned or moving from the olive.

Olivin (*ol'-iv-in*). A substance obtained by Braconnot from salicin by action of sulfuric acid.

Olivipetal (*ol-iv-ip'-et-al*) [*olive; petere,* to seek]. Toward the olive.

Oly (*o'-le*). The scum on molten metal.

Olutkombul. See *Abroma angusta,* L.

Omal (*o'-mal*). See *Trichlorphenol* (Illus. Dict.).

Omateal (*o-mat'-e-al*). Relating to the omentum.

Omentosplenopexy (*o-men-to-splen'-o-peks-e*). Omentopexy followed by splenopexy to develop complementary circulation in certain hepaticosplenic lesions.

Omentum. (See Illus. Dict.) **O., Haller's Colic,** a process of the upper right border of the greater omentum which may become adherent to the testis during fetal life and be included in the sac of an inguinal hernia. **O. osseum.** See *Periosteum* (Illus. Dict.). **O., Pancreaticosplenic,** a fold of peritoneum uniting the tail of the pancreas with the lower part of the inner surface of the spleen.

Omocephalus (*o-mo-sef'-al-us*). See *Omacephalus* (Illus. Dict.).

Omphalodymia (*om-fal-o-dim'-e-ah*). See under *Somatodymia.*

Omphalotripsy (*om-fal-o-trip'-se*) [ὀμφάλος, navel; τρίβειν, to rub]. Separation of the umbilical cord by a crushing instrument.

Onage, Onaye. The African name for the arrow-poison obtained from seeds of *Strophanthus hispidus,* D. C.

Oncography (*ong-kog'-raf-e*) [ὄγκος, a swelling; γράφειν, to write]. The recording of the measurement of tumors by an oncometer.

Oncosis. (See Illus. Dict.) 3. Tumefaction.

Oneiric, Oniric (*o-ni'-rik*) [ὄνειρος, a dream]. Relating to dreams; attended by visions.

Oneirism (*o-ni'-rizm*) [ὄνειρος, a dream]. A condition of cerebral automatism analogous to the dream state, as a dream prolonged to the waking period.

Oniomania (*o-ne-o-ma'-ne-ah*) [ὤνιος, to be bought; μανία, madness]. A mania for spending money.

Onkinocele (*ong-kin'-o-sēl'*) [ὄγκος, swelling; ἴς, a fiber; κήλη, tumor]. Inflammation of the tendon-sheaths attended by swelling.

Ononetin (*o-non'-et-in*). $C_{23}H_{22}O_6$. A dissociation-product of onospin.

Ononid (*o-no'-nid*). $C_{18}H_{22}O_8$. A neutral principle contained in the root of *Ononis spinosa;* a yellow, slightly bitter powder soluble in water and alcohol. Syn., *Ononis-glycyrrhizin.*

Ononin (*o-no'-nin*). $C_{30}H_{34}O_{13}$, a glucosid isolated by v. Reinsch from the root of *Ononis spinosa,* L.

Ononis (*o-no'-nis*) [ὄνος, an ass]. A genus of leguminous plants. **O. spinosa,** L., rest-harrow, a shrub of Europe. The diuretic root is used in dropsy and gout.

Ononisglycyrrhizin (*o-no-nis-gli-sur-iz'-zin*). See *Ononid.*

Onospin (*o-nos'-pin*). $C_{29}H_{34}O_{12}$. A dissociation-product of ononin by action of baryta-water with heat.

Onychexallaxis (*on-ik-eks-al-aks'-is*) [ὄνυξ, nail; ἐξάλλαξις, a degenerating]. Degeneration of the nails.

Onychogram (*on'-ik-o-gram*) [ὄνυξ, nail; γράφειν, to write]. The record of the variations in blood-pressure by an onychograph.

Onychograph (*on'-ik-o-graf*) [ὄνυξ, nail; γράφειν, to write]. An instrument devised by Max Herr for recording the variations in blood-pressure in the capillaries of the tips of the fingers. It consists for the most part of the sphygmograph so arranged that the pelotte can be brought against the finger resting upon a hard surface.

Onychography (*on-ik-og'-raf-e*). The tracing of the pulse in the smallest vessels by means of an instrument placed on the nail.

Onychogryphosis (*on-ik-o-gri-fo'-sis*). See *Onychogryposis* (Illus. Dict.).

Onychoma (*on-ik-o'-mah*). A tumor of the nail-bed.

Onychophagist (*on-ik-of'-aj-ist*) [ὄνυξ, nail; φαγεῖν, to eat]. One addicted to biting the finger-nails.

Onychophosis (*on-ik-o-fo'-sis*). See *Onychyposis* (Illus. Dict.).

Onychorrhexis (*on-ik-or-eks'-is*) [ὄνυξ, nail; ῥῆξις, rupture]. The splitting of the nails.

Onychosis. (See Illus. Dict.) **O. gryposis,** onychogryposis. **O. incrassata,** hyperonychosis. **O. lapsus,** onycholysis. **O. mollities,** softening of the nails. **O. pterygium.** See *Pterygium unguis* (Illus. Dict.).

Onyxis. (See Illus. Dict.) **O., Retroungueal,** onychia originating at the root of the nail.

Oocyan (*o-o-si'-an*) [ᾠόν, egg; κύανός, a dark-blue substance]. Of Sorby, the green or blue coloring-matter of eggshells of birds; found to be partly biliverdin and partly a blue derivative of bile-pigments.

Oocyst (*o'-o-sist*) [ᾠόν, egg; κύστις, bladder]. Applied by some writers to the cysts in which the vermicules of the malaria parasite encyst themselves. The term is misleading; spore cyst is preferable.

Oocyte (*o'-o-sīt*) [ᾠόν, egg; κύτος, cell]. The ovarian egg-cell before the formation of the polar bodies; also written ovocyte.

Oogonium. (See Illus. Dict.) 2. The primordial mother-cell which gives rise to the ovarian egg and its follicle. 3. The descendants of the primordial germ-cell from which ultimately arise the oocytes (Boveri); also writen ovogonium.

Ookinete (*o-o-kin'-ēt*) [ᾠόν, egg; κινεῖν, to move]. See *Oocyst.*

Oophoria (*o-o-for'-e-ah*) [ᾠόν, egg; φέρειν, to bear]. Barnes' term for hysteria.

Oophorin (*o-of'-or-in*). An organotherapeutic preparation made from the ovaries of cows and hogs.

Oophoritis. (See Illus. Dict.) **O. serosa,** Olshausen's term for a variety of inflammation mostly described as edema of the ovary. It is said to be produced by gonorrhea and pelvic inflammation or to follow fevers and mumps. The ovaries are enlarged, swollen, smooth, edematous, with no folds or scars. They are heavy and likely to become prolapsed. [Roberts.]

Oophorocystosis (*o-o-for-o-sist-o'-sis*) [ᾠόν, an egg; φορεῖν, to bear; κύστις, bladder]. The formation of ovarian cysts.

Oophorohysterectomy (*o-o-for-o-his-tur-ek'-to-me*) [ᾠόν, egg; φέρειν, to bear; ὑστέρα, womb; ἐκτομή, excision]. Removal of the uterus and ovaries.

Oophorosalpingotomy (*o-o-for-o-sal-pin-got'-o-me*) [ᾠόν, egg; φέρειν, to bear; σάλπιγξ, tube; τέμνειν, to cut]. The surgical removal of the ovary and tube.

Oophorostomy (*o-o-for-os'-to-me*) [ᾠόν, egg; φέρειν, to bear; στόμα, mouth]. The establishment of an opening into an ovarian cyst for drainage.

Oorodein (*o-o-ro'-de-in*) [ᾠόν, egg; ῥόδεος, of roses].

A red or reddish-brown pigment giving color to certain bird's eggs; it is perhaps identical with hematoporphyrin.

Ooscope (*o′-o-skōp*) [ὠόν, egg; σκοπεῖν, to view]. An apparatus for observing the developmental changes in a fertilized egg.

Oospora (*o-os′-po-rah*) [ὠόν, egg; σπορά, seed). A genus of fungi. **O. bovis,** a name proposed for the fungus of actinomycosis by those botanists who regard it as one of the hyphomycetes and as belonging to the *Mucedinæ*. **O. guiguardi,** causes the deposition of carbonate of lime in connective tissue of the walls of cystic tumors and skeletal nodosities.

Oothectomy (*o-o-thek′-to-me*) [ὠόν, egg; θήκη, chest; ἐκτομή, excision]. The surgical removal of an ovary; a term preferred to oophorectomy.

Opacification (*o-pas-if-i-ka′-shun*) [*opacus*, shaded]. The act of becoming opaque.

Opalisin (*o-pal-is′-in*). Wroblewski's name for a proteid found in considerable quantity in human milk, less in mares' milk, and in very small quantity in cows' milk.

Ope (*op′-e*) [ὀπή, an opening]. Same as *Foramen*.

Opeidoscope (*o-pi′-do-skōp*) [ὄψ, a voice; εἶδος, likeness; σκοπεῖν, to view]. An instrument for studying the vibrations of the voice.

Operant (*op′-e-rant*) [*operari*, to work]. 1. Effective, active. 2. An operator.

Operation. (See Illus. Dict.) **Abbe's Incision for Appendicitis,** a lengthy incision in the lateral wall of the abdomen which separates but does not cut the muscle-fiber. **Albert-Frank-Kocher Method of Gastrotomy.** See *Frank's Method*. **O., Asch's,** for deviation of nasal septum, consists in a crucial incision over the deflection, taking up the segments, reduction of the deflection, and insertion of a tube to hold the segments in place. **O., Beyea's,** for gastroptosis, consists in the plication of the gastrohepatic and gastrophrenic ligaments. **O., Bier's,** for amputation through the lower portion of the leg, consists in cuneiform osteotomy upon the tibia above the stump, bending forward the stump with the lower fragment of bone to a right angle with the upper fragment. The two fragments unite and form a foot. **O., Bissell's,** for uterine retroversion; the excision of a section of both the round and broad ligaments sufficient to hold the uterus in a forward position. **O., Catterino's** (A. of Camerino, Italy). See *Hysterokataphraxis*. **O., Equilibrating,** tenotomy on the direct antagonist of a paralyzed ocular muscle. **O., Fehling's,** for uterine prolapse, consists in denuding two long ovals on either side of the median line of the anterior vaginal wall, and uniting their edges with silver wire. **Frank's Method of Gastrotomy** consists in forming a valve out of a small cone of the stomach-wall. The oblique incision is made and a cone of the stomach pulled out and its base sutured to the parietal peritoneum. A second incision is then made immediately above the rib-margin, the bridge of the skin is elevated and the cone pulled up beneath it and the apex sutured into the second wound. The tube is inserted and the first skin-wound closed. **O., Hartley-Krause,** the removal of the entire gasserian ganglion and its roots for relief of facial neuralgia. **O., Hegar's,** for the relief of cancer of the rectum. The knife is carried along the sides of the sacrum, making the letter V, and hinges the flap with a chain saw. Gerster claims good drainage by this method, but condemns it because of the impairment of the flap's vitality. (Hupp.) **O., Heinecke's,** for relief of cancer of the rectum: To avoid whatever tendency toward weakening the pelvic floor Kraske's method involves, Heinecke devised in 1888 a T-shaped incision in the skin, sawing the skin first vertically and then at the level of the fourth foramen transversely, thus making two folding bone doors. These are afterward united by suture. (Hupp.) **O., Hochenegg's,** for relief of cancer of the rectum: A curved incision is made with its convexity to the right, commencing opposite the third foramen of the sacrum, extending outward, and passing the middle line again below the last button of the coccyx. (Hupp.) **O., Ingals',** for ecrasement of the tonsils: A snare guard is inclosed in a ring which is passed over the tonsil as it is held by the forceps, thus facilitating the use of the loop. **O., Jonnesco's,** cystorrhaphy. **Kader's Method of Gastrotomy** consists in the production of a funnel which projects into the stomach by suturing two sections on either side of a tube placed vertically into the stomach. Each pair of sutures increases the amount of peritoneum about the tube and further depresses its point of entrance. **O., Kocher's,** for the relief of cancer of the rectum: A long integumentary incision is made, freely exposing the bone. With a chisel each side of the sacrum is grooved along the inner side of the foramina, beginning at the third. The segment, which he calls the "Knockenspange," is removed. This exposes the sacral canal and makes certain the protection of the nerves. (Hupp.) **O., Krönlein's,** for relief of facial neuralgia: Consists in exposing the third branch of the trigeminus. **O., Labioplastic.** See *Cheiloplasty* (Illus. Dict.). **Laborie's Method of Amputation through the Foot** differs from Chopart's method in the retention of the scaphoid in addition to the calcaneum and astragalus. **O., Lange's,** for resection of the rectum, with osteoplastic transplantation of the anal portion (1881): The knife is carried from each tuber ischii across the perineum in front of the sphincters. The incisions meet in the raphe and are made deep enough to allow of pushing the whole muscular apparatus of the anus upward, including the anal end of the gut. (Hupp.) **O., Levy's,** for relief of cancer of the rectum: In order to spare the fourth sacral nerve and the levator ani's coccygeal insertion, make an incision shaped like an inverted letter U, bending the osteoplastic arc toward the anus. But because of the limited space which it offers, and the very imperfect drainage, it has seldom been used. (Hupp.) **O., Longuet's,** the extraserous transplantation of the testicle for the permanent cure of hydrocele and varicocele. Cf. *Orchidopexy*, *Phlebopexy*, *Scrotopexy*, *Vaginopexy*. **O., Lorenz's,** for congenital dislocation of the hip, consists in reduction of the dislocation and fixation of the head of the femur against the rudimentary acetabulum until a socket is formed. **O., Major,** one requiring great surgical skill and efficiency. **Marwedel's Method of Gastrotomy:** This resembles Witzel's method in all respects except that the serous and muscular coats are incised for 5 cm. (2 inches), the tube passed through the mucosa and buried by closing the incision in the stomach-wall. **O., Matas'** (Rudolph), arteriorrhaphy, for the radical cure of aneurysm consists in arrest of the circulation in the sac, opening, evacuating, and cleansing the sac, and closing the openings by continuous fine sutures. **O., Maydl's,** the transplantation of the ureters into the rectum in treatment of exstrophy of the bladder. **O., Meloplastic,** a plastic operation on the cheek. **O., Mikulicz's Two-time,** resection of the intestine in two operations, two days apart. **O., Minor,** one slight in extent and severity. **O., Motet's,** for ptosis: a strip in the superior rectus is cut and pulled through a buttonhole in the tarsal cartilage and sutured to the upper lid. **Olshausen's Method** for vaginal

fixation consists in suturing the round ligaments and a portion of the broad ligaments instead of the uterine fundus. **O., Park's,** for spina bifida: After the excision of the sac and the ligated stump is pushed back into the canal, a thin piece of sterilized celluloid, so cut that its edges can be sprung in under the bony margin, is fitted into the opening of the spinal canal. **Phelp's Method** for varices of the leg, consists in cutting down over the varices and the application of multiple ligatures. **O., Posadas-Bobrow,** the evacuation of echinococcus cysts and closure of the cavity by suture, called echinococcotomy. **O., Radical,** an operation for a complete cure of a morbid condition. **O., Rehn's,** for relief of cancer of the rectum: A V-shaped incision is made, one leg of the V embracing the entire width of the sacrum below the third foramen, while the other passes along the left side of the sacrum and coccyx. This osteointegumental flap when hinged exposes the diseased rectal cylinder in a most satisfactory way. (Hupp.) **O., Ries-Clarke's,** for carcinoma of the cervix of the uterus: The celiotomic removal of the entire uterus with the broad ligaments, uterovesical ligaments, mesorectum, etc., with any involved glands. **O., Robson's** (Mayo), for spina bifida, consists in excision of the whole or part of the sac. **O., Ruppprecht's,** for removal of carcinomatous inguinal glands. The line of incision extends from the pubic spine to the anterior superior iliac spine, the ends being joined by incisions passing below the glands. This flap is entirely removed; if necessary, the vena saphena may be ligatured. **O., Rydygier's,** circular pylorectomy when the incision is made in the linea alba and the duodenum is sutured directly to the wound made by resecting the stomach. **O., Salzer's,** excision of the whole of the third division of the fifth nerve. **O., Salzer's,** for the radical cure of femoral hernia, consists in stitching Poupart's ligaments to the pectineal fascia. **O., Schede's,** in chronic empyema, resection of the thorax. **O., Schede's,** for varices of the leg, consists in a circular incision around the leg, one cuff rolled up and another down, with the idea of reaching the different venous branches and removing them. **Senn's (E. J.) Method of Gastrotomy** consists in forming an automatic valve from the stomach-wall by constricting a cone near its apex with purse-string suture, and after incising the apex inverting it into the stomach and securing it there by Lembert suture. **O., Shield's,** for the cure of mastoid disease, consists in raising a flap of skin behind the auricle, removing the diseased bone and caseous areas, and finally pressing down the flap of skin into the cavity. **O., Sigaultean.** Synonym of *Symphyseotomy.* **Ssebanejew-Frank's Method of Gastrotomy.** See *Frank's Method.* **O., Story's,** for entropion and trichiasis: The insertion of a piece of mucosa which entirely and permanently removes the cilia from contact with the cornea. **O., Surmay's,** jejunostomy. **O., Talma's,** suture of the omentum to the abdominal wall for relief of ascites due to cirrhosis of the liver. **O., Vitrac's,** See *Ectokelostomy.* **O., Weir's (R. F.),** for the treatment of hallux valgus, consists in a curved incision which admits of the ready extirpation of the bursa and removal of any sesamoid bones, of the dissecting out the dorsal extensor tendon, which is cut near its attachment and secured to the periosteum at the inner side of the base of the first phalanx. It leaves a cicatrice not made sensitive by shoes. **O., Weir's,** appendicostomy, suturing the tip of the appendix to the abdominal wall, and by opening the appendix at the end gaining access to the cecum for the purpose of irrigating the lower bowel in cases of ulceration of the large intestine. **O., White's,** for reduction of dislocation of humerus: That of applying the foot in the axilla, usually ascribed to Sir Astley Cooper, but properly accredited to Charles White, of Manchester (1768).

Ophryoalveoloauricular (*of-re-o-al-ve-o-lo-aw-rik'-ular*). Applied to an angle formed by the ophryon, alveolar point, and auricular point.

Ophryosis (*of-re-o'-sis*) [ὀφρύς, eyebrows]. Spasm of the eyebrow.

Ophthalmectomy (*of-thal-mek'-to-me*) [ὀφθαλμός, eye; ἐκτομή, excision]. Excision of the eye.

Ophthalmemicrania (*of-thal-mem-ik-ra'-ne-ah*). See *Amaurosis, Epileptoid.*

Ophthalmia. (See Illus. Dict.) **O. arida,** xerophthalmia. **O. bellica.** See *O., Military* (Illus. Dict.). **O. epiphora,** hygrophthalmia, ophthalmia with excessive lacrimation. **O. externa, O. mucosa,** conjunctivitis. **O., Jequiritic, O., Jequirity,** purulent conjunctivitis due to the use of a solution of jequirity in treatment of trachoma. **O. nodosa,** conjunctivitis induced by caterpillar hairs, characterized by the formation of round gray swellings where the hairs are embedded. **O. pyorrhoica,** purulent conjunctivitis.

Ophthalmodonesis (*of-thal-mo-do-ne'-sis*) [ὀφθαλμός, eye; δόνησις, a trembling]. Voluntary tremulous or oscillatory movement of the eyes.

Ophthalmoleukoscope (*of-thal-mo-lu'-ko-skōp*) [ὀφθαλμός, eye; λευκός, white; σκοπεῖν, to view]. An instrument for testing color-sense by means of polarized light.

Ophthalmomyositis (*of-thal-mo-mi-o-si'-tis*). See *Ophthalmomyitis* (Illus. Dict.).

Ophthalmopathy (*of-thal-mop'-ath-e*) [ὀοθάλμος, eye; πάθος, disease]. Any disease of the eye. **O., External,** an affection of the eyelids, cornea, conjunctiva, or muscles of the eye. **O., Internal,** that affecting the deeper structures of the eye.

Ophthalmophacometer, Ophthalmophakometer (*of-thal-mo-fa-kom'-et-ur*) [ὀφθαλμός, eye; φακός, lens; μέτρον, measure]. An instrument for measuring the curvature radius of the crystalline lens.

Ophthalmophlebotomy (*of-thal-mo-fleb-ot'-o-me*). See *Phlebophthalmotomy* (Illus. Dict.).

Ophthalmoplegia. (See Illus. Dict.) **O. externa.** (See Illus. Dict.) 2. Of Hutchinson, same as *O., Progressive* (Illus. Dict.). **O., Graux-Féréol Type of,** associated paralysis of the muscles affecting the right internal of one side and the right external of the opposite side. **O. intima** (Hutchinson). See *O. interna* (Illus. Dict.). **O., Parinaud's,** paralysis of the external rectus of one side and spasm of the internal rectus of the other side; it is of peripheral origin. **O., Sauvineau's,** paralysis of the internal rectus muscle of one side and spasm of the external rectus of the opposite side. This affection is the reverse of Parinaud's ophthalmoplegia.

Ophthalmorrhea. (See Illus. Dict.) **O. externa,** a discharge from the eyelids. **O. interna,** a discharge from the eyeball.

Ophthalmospasm (*of-thal-mo-spazm'*) [ὀφθαλμός, the eye; σπασμός, a spasm]. Ocular spasm.

Ophthalmothermometer (*of-thal-mo-thur-mom'-et-ur*). A device for recording local temperature in eye diseases.

Opifex (*op'-e-fex*) [*opus*, work; *facere*, to make; pl., *Opifices*]. A maker. **O. circumductionis.** See *Obliquus superior, Muscles, Table of* (Illus. Dict.).

Opiomania (*o-pe-o-ma'-ne-ah*) [*opium*; μανία, madness]. A morbid desire for opium.

Opisthiobasial. (*o-pis-the-o-ba'-se-al*). Relating to or uniting the opisthion and basion.

Opisthionasial (*o-pis-the-o-na'-ze-al*). Uniting the opisthion and nasion.

Opisthozygosis (*o-pis-tho-zi-go'-sis*) [ὀπισθεν, behind; ζυγοῦν, to join]. The condition of conjoined twins in which the fusion is posterior.

Opium. (See Illus. Dict.) **O., Crude.** See *Affion.* **O., Lettuce,** German lactucarium from juice of *Lactuca virosa,* L.

Opocerebrin (*o-po-ser'-e-brin*) [ὀπός, juice; *cerebrum,* brain]. A proprietary therapeutic preparation from the gray matter of brain; used in nervous diseases, anemia, etc. Dose, 0.2–0.4 gm. twice daily.

Opohepatoidin (*o-po-hep-at-oid'-in*). A proprietary therapeutic preparation from the liver; it is used in icterus and epistaxis. Dose, 8 gr. (0.5 gm.) 3 times daily.

Opohypophysin (*o-po-hi-pof'-is-in*). A proprietary preparation from the hypophysis. It is used in acromegaly. Dose, ¾ gr. (0.05 gm.).

Opolienin (*o-po-li'-en-in*). A proprietary preparation from the spleen. It is used in hypertrophy of the spleen, malarial cachexia, and leukocythemia. Dose, 20–30 gr. (2–6 gm.) twice daily.

Opomammin (*o-po-mam'-in*). A proprietary preparation from the mammary gland; it is used in uterine diseases. Dose, 24 gr. (5–8 gm.) daily.

Opomedullin (*o-po-med-ul'-in*). A proprietary preparation from red bone-marrow; used in anemia, chlorosis, and neurasthenia. Dose, 3–16 gr. (0.2–1.0 gm.) daily.

Opoorchidin (*o-po-or'-kid-in*). A proprietary preparation from the testicles; it is used in spinal and other nervous diseases. Dose, 8–12 gr. (0.5–08 gm.) 3 times daily. Cf. *Orchidin, Orchitin.*

Opoossiin (*o-po-os'-e-in*). A proprietary preparation from yellow bone-marrow; used in rhachitis and osteomalacia. Dose, 3–16 gr. (0.2–1.0 gm.) up to 6 gm. (ʒ 1¼) daily.

Opoovariin (*o-po-ov-ar'-e-in*). A proprietary preparation from the ovaries; it is used in chlorosis, hysteria, and in climacteric symptoms. Dose, 3–12 gr. (0.2–0.8 gm.) 3 times daily.

Opopancreatin (*o-po-pan-kre'-at-in*). A proprietary preparation from the pancreas; used in diabetes mellitus. Dose, 3–12 gr. (0.2–0.8 gm.). Daily dose, 32 gr.–2 dr. (2–8 gm.).

Opoprostatin (*o-po-pros'-tat-in*). A proprietary preparation from the prostate; it is used in hypertrophy of the prostate. Dose, 3 gr. (0.2 gm.) 4 times daily.

Oporeniin (*o-po-ren'-e-in*). A proprietary preparation from the kidneys; used in uremia, chronic nephritis, and albuminuria. Dose, 8–12 gr. (0.5–0.8 gm.) 3 or 4 times daily.

Oposuprarenelin (*o-po-su-pra-ren'-el-in*). A proprietary preparation from the suprarenal capsule; used in diabetes insipidus, Addison's disease, and neurasthenia. Dose, 3–6½ gr. (0.2–0.4 gm.) twice daily.

Opotherapy (*o-po-ther'-a-pe*) [ὀπός, juice; θεραπεία, therapy]. See *Organotherapy* (Illus. Dict.).

Opothymiin (*o-po-thi'-me-in*). A proprietary preparation from the thymus; it is used in Graves' disease, chlorosis, anemia, etc. Dose, 3–8 gr. (0.2–05 gm.). Daily dose, 10–48 gr. (0.6–3 gm.).

Opothyroidin (*o-po-thi-roid'-in*). A preparation from the thyroid gland; it is used in myxedema, cretinism, obesity, etc. Dose, 1–2 gr. 3 times daily.

Opsonin (*op'-so-nin*) [ὀψωνεῖν, to provide food]. Wright's term for that quality of a serum which makes a microbe more susceptible to phagocytosis.

Opticopupillary (*op-tik-o-pu'-pil-a-re*). Pertaining to the pupil and the optic nerve.

Optodynamometer (*op-to-di-nam-om'-et-ur*). See *Optomyometer.*

Optograph. (See Illus. Dict.) 2. Kühne's name for a photograph of an optogram.

Optomyometer (*op-to-mi-om'-et-ur*) [ὀπτός, seen; μῦς, muscle; μέτρον, measure]. An instrument for measuring the strength of the muscles of the eye.

Orbiculare (*or-bik-u-la'-re*). The orbicular bone.

Orbiculostapedial (*or-bik-u-lo-sta-pe'-de-al*). Relating to the orbicular process of the incus and to the stapes.

Orchectomy, Orchiectomy (*or-kek'-to-me, or-ki-ek'-to-me*). See *Orchidectomy* (Illus. Dict.).

Orchichorea. (See Illus. Dict.) **O. alternans,** orchichorea affecting the testicles successively. **O. complete,** that affecting both testicles. **O. simplex,** that affecting only one testicle.

Orchidencephaloma (*or-kid-en-sef-al-o'-mah*). Same as *Orchidomyeloma* (Illus. Dict.).

Orchidin (*or'-kid-in*). A proprietary fluid from the testicle; used as a nervine.

Orchidopexy. (See Illus. Dict.) 3. Longuet's term for the preservation of the testicle which results from its extra-serous transplantation in cases of varicocele. Cf. *Scrotopexy; Vaginopexy; Operation, Longuet's.*

Orchidotherapy (*or-kid-o-ther'-ap-e*). The therapeutic use of testicular extracts.

Orchidotuberculum (*or-kid-o-tu-bur'-ku-lum*). See *Orchidospongioma* (Illus. Dict.).

Orchitin (*or'-kit-in*). A sterilized testicular extract Syn., *Séquardin.* Cf. *Opoorchidin.*

Oreoselin (*o-re-o-sel'-in*). $C_{14}H_{12}O_4$. A crystalline substance obtained from athamantin by action of alkalis with heat.

Oreoselinum (*o-re-o-sel-i'-num*). See *Peucedanum oreoselinum,* Mönch.

Oreoselon (*o-re o-sel'-on*). ($C_{14}H_{10}O_3$). A colorless cauliflower-like mass without taste or smell obtained from athamantin by heating with sulfuric acid.

Orexin. (See Illus. Dict.) **O., Tannate,** a whitish-yellow, odorless, tasteless powder, insoluble in water, freely soluble in dilute acids; used as an appetizer and stomachic. Dose, 4–8 gr. (0.25-0.5 gm.).

Orexoids (*o-reks'-oids*). Merck's name for 5-grain orexin tannate tablets.

Organ. (See Illus. Dict.) **O., End-.** See under *End* (Illus. Dict.). **O.s, Foamy,** viscera containing frothy fluid due to the presence of the gas bacillus (*B. aerogenes capsulatus,* Welch). Ger., *Schaumorgane.* Cf. *Emphysematous gangrene, Gaseous abscesses, Fibropurulent meningitis, Gas sepsis, Physometra.* **O., Gall's,** of firmness: the leg-center controlling movements of the legs **O., Terminal** (of Ruffini). See *End-organ, Ruffini's.* **O.s, Uropoietic,** the kidneys. **O., Vomeronasal.** See *O., Jacobson's* (Illus. Dict.). **O., Weber's,** the sinus pocularis of the male urethra.

Organacidia (*or-gan-as-id'-e-ah*). The presence of organic acids. **O. gastrica,** the presence of large quantities of organic acids in the gastric contents.

Organoferric (*or-gan-o-fer'-ik*). Consisting of iron and some organic substance.

Organology. (See Illus. Dict.) 2. A term proposed by Gerdy in 1844 as a common name under which to consider the phenomena of organic nature now covered by the term biology. Cf. *Organomy; Somiology.*

Organoma (*or-gan-o'-mah*) [ὄργανον, organ; pl., *organomas, organomata*]. A tumor in which can be recognized distinct organs or parts of organs, which, however, are not arranged so as to form a body or part of a body (White).

Organometallic (*or-gan-o-met-al'-ik*). Applied to a combination of an alcoholic radicle with a metal or metalloid.

Organomy. (See Illus. Dict.) 2. A term proposed by Omalius d'Halloy in 1838 as a common name under which to consider the phenomena of organic nature now covered by the term biology. Cf. *Organology; Somiology.*

Organopexia, Organopexy (*or-gan-o-peks'-e-ah, or-gan-o-peks'-e*) [ὄργανον, organ; πῆξις, a fixing in]. The surgical fixation of a misplaced organ.

Organosol (*or-gan'-os-ol*). A proprietary preparation of colloidal silver with an organic solvent; used in gonorrhea.

Orizabin (*o-riz'-ab-in*). See *Jalapin* (Illus. Dict.).

Ormosin (*or'-mo-zin*). A crystalline alkaloid from the seeds of *Ormosia dasycarpa*, Jacks., a leguminous tree of South America; soluble in alcohol and chloroform; melts at 80° C. It is hypnotic, sedative, and narcotic. The hydrochlorid is also used.

Ornamentum (*or-na-men'-tum*) [*ornare*, to adorn]. An ornament. **O. foliaceum.** See *Morsus diaboli* (Illus. Dict.).

Orotherapy. (See Illus. Dict.) 2. See *Orrhotherapy.*

Oroxylin (*o-roks'-il-in*). An acrid principle occurring in yellow crystals isolated by Naylor and Chaplin from the bark of *Oroxylon indicum.*

Oroxylon (*o-roks'-il-on*) [ὄρος, mountain; ξύλον, wood]. A genus of the *Bignoniaceæ.* **O. indicum,** Vent., indigenous to tropical Asia. The root-bark is tonic and astringent and a powerful sudorific. The leaves are applied to ulcers. It contains catalpin and oroxylin.

Orphol (*or'-fol*). See *Bismuth β-naphtholate.*

Orpiment. (See Illus. Dict.) **O., Red.** See *Arsenic Disulfid.*

Orrhodermatosis (*or-o-dur-mat-o'-sis*). See *Serodermatosis* (Illus. Dict.).

Orrhodermitis (*or-o-dur-mi'-tis*). See *Serodermitis* (Illus. Dict.).

Orrhotherapy (*or-o-ther'-a-pe*) [ὀρρός, serum; θεραπεία, therapy]. 1. The treatment of diseases by the injection of sterilized blood-serum from immune animals; serum therapy. 2. See *Orotherapy* (Illus. Dict.).

Orthobromophenol (*or-tho-bro-mo-fe'-nol*). See *Bromophenol.*

Orthochlorphenol (*or-tho-klor'-fe-nol*). See *Chlorphenol* (Illus. Dict.).

Orthocresalol. See *Cresalol* (Illus. Dict.).

Orthodiagram (*or-tho-di'-ah-gram*). The record made by an orthodiagraph.

Orthodiagraph (*or-tho-di'-ah-graf*) [ὀρθος, straight; διά, through; γράφειν, to write]. A radiographic apparatus devised by Moritz of Munich which records accurately and quickly the dimension, form, and position of internal organs of the body or the location of foreign bodies.

Orthodiography (*or-tho-di-og'-raf-e*). The mode of determining by the aid of the Röntgen rays the exact dimensions of an internal organ by the shadow which it throws upon the fluorescent screen.

Orthoform (*or'-tho-form*). $C_6H_3(OH)(NH_2)$-$COOH_2$. A white, crystalline, odorless, tasteless powder, slightly soluble in water, soluble in alcohol or ether; used as a local anesthetic and antiseptic and internally in cancer of the stomach. Dose, 7½–15 gr. (0.5–1 gm.). Syn., *Methylparaamido-metaoxybenzoate.* **O. Emulsion,** orthoform, 25 parts, in olive oil, 100 parts. It is recommended in subcutaneous injection in laryngeal tuberculosis. **O., New,** meta-amido-para-oxy benzoic-methyl ester—a cheaper product used as the original orthoform.

Orthogenesis (*or-tho-jen'-e-sis*) [ὀρθος, straight; γεννᾶν, to produce]. A term proposed by Eimer for definite variations.

Orthomonobromphenol (*or-tho-mon-o-brom-fe'-nol*). See *Bromphenol.*

Orthomonochlorphenol (*or-tho-mon-o-klor'-fe-nol*). See *Monochlorphenol* (Illus. Dict.).

Orthophoria. (See Illus. Dict.) 2. Normal balance of the eye muscles.

Orthoplasy (*or'-tho-plaz-e*) [ὀρθός, straight; πλάσις, a forming, moulding]. The directive or determining influence of organic selection in evolution.

Orthorachic, Orthorrhachic (*or-tho-rak'-ik*) [ὀρθός, straight; ῥάχις, the spine]. Having a straight backbone. Cf. *Kurtorrhacic, Koilrachic, Ensellure.*

Orthosiphonin (*or-tho-si'-fon-in*). A crystalline glucosid found by Van Itallie in *Orthosiphon stamineus,* Benth.

Orthotolylacetamid (*or-tho-tol-il-as-et'-am-id*). See *Acetorthotoluid.*

Os. (See Illus. Dict.) **O. acetabuli.** See *Bone, Cotyloid.* **O. acromiale,** the acromion when not united to the scapula. **O. alæforme,** the sphenoid bone. **O. alare, O. alatum,** the sphenoid bone and alisphenoid bone. **O. ballistæ,** the astragalus. **O. brachii,** the humerus. **Ossa bregmatis,** the parietal bones. **O. calamo simile,** the styloid process of the temporal bone. **O. calcis,** the heel-bone; calcaneum. **O. calvæ.** See *Calvaria* (Illus. Dict.). **O. carpale primum,** the trapezium. **O. carpale quartum,** the unciform bone. **O. carpale secundum,** the trapezoid bone. **O. carpale tertium, O. carpi magnum.** See *O. magnum* in *Table of Bones* (Illus. Dict.). **O. carpi centrale,** an anomalous roundish or triangular ossicle lying between the scaphoid bone, the trapezoid bone, and the os magnum. **O. carpi intermedium,** the semilunar bone. **O. clunium,** the sacrum. **O. coliforme,** the ethmoid bone. **O. cordis,** heart bone, an ossification found at the base of the heart in the ox, camel, pig, giraffe, sheep, horse, and deer. In folk-medicine great therapeutic properties were attributed to that obtained from the stag. **O. coronale,** the frontal bone. **Ossa Cortesii.** See *Ossicles, Riolan's.* **O. crotaphiticum,** the temporal bone. **O. cubitale,** the cuneiform bone of the wrist. **O. epactale proprium.** See *Bone of the Incas.* **Ossa epactalia,** the Wormian bones. **O. furcatorium, O. furcatum, O. furculare,** the clavicle. **O. hamatum,** the unciform bone. **O. Incæ.** See *Bone of the Incas.* **Ossa intercalaria,** the Wormian bones. **O. japonicum,** the divided malar bone, a racial characteristic of the Japanese. **O. jugale, O. jugamentum,** the malar bone. **O. juguli,** the clavicle. **O. lentiforme.** See *Bone, Pisiform* (Illus. Dict.). **O. multangulum majus,** the trapezium. **O. multangulum minus,** the trapezoid bone. **O. multiforme,** the sphenoid bone. **O. naviculare,** the scaphoid bone. **O. orbiculare.** 1. The orbicular bone. 2. The pisiform bone. 3. The lenticular process of the incus. **O. orbiculare Sylvii,** the lenticular process of the incus. **O. orbitale,** the upper of two portions into which the malar bone is sometimes divided by a horizontal suture. **O. paxillare,** the sphenoid bone. **O. pectinis.** the os pubis. **O. pectoris,** the sternum. **O. pedis.** See *Bone, Pedal.* **O. penis.** See *Bone, Penial.* **O. præmaxillare,** the intermaxillary bone. **O. priapi.** See *Bone, Penial.* **Ossa Riolani.** See *Ossicles, Riolan's.* **O. rotundum,** the pisiform bone. **O. scutiforme,** the patella. **O. sedentarium,** the seat bone; the ischium. **Ossa suprasternalia.** See *Cartilages, Brecht's.* **Ossa suturarum,** the Wormian bones. **O. tetragonum,** the parietal bone. **O. triangulare,** the cuneiform bone of the wrist. **O. trigonum,** an ossicle due to the separation of the external tubercle of the posterior surface of the astragalus and ossification from a distinct center. **O. triquetrum,** the cuneiform bone of the wrist. **O. unguis.** See *Bone, Lachrymal* (Illus. Dict.). **O. vespiforme,** the sphenoid bone. **O. ypsiloides,** the hyoid bone. **O. zygomaticum,** the malar bone.

Os. A mouth. // (See Illus. Dict.) **O. internum,**

Braune's. See *Bandl, Ring of* (Illus. Dict.). **O. leporinum,** harelip. **Ora serrata,** the irregular wavy margin of the retina at its end near the ciliary body.

Oscedo (*os-e′-do*) [L.]. Yawning.

Oscheoma (*os-ke-o′-mah*) [*ὀσχεον*, scrotum]. A scrotal tumor.

Oscillator (*os′-il-a-tor*) [*oscillare*, to swing]. An apparatus for application of mechanical therapeutics.

Oscillatoria malariæ (*os-il-a-to-′re-ah*). The name given by Richard, 1882, to the pigmented ameboid bodies and flagellate organisms observed in the blood-discs in cases of ague.

Osler's Disease. See under *Polycythemia.*

Osmometer. (See Illus. Dict.) An apparatus for measuring the osmotic power of different fluids.

Ossagen (*os′-aj-en*). A proprietary remedy used in rickets, said to be the calcium salt of the fatty acids of red bone-marrow. Dose, 2–4 gm. twice daily.

Ossalin (*os′-al-in*). A hygroscopic ointment base prepared from bone-marrow. It occurs as a grayish fat with the odor of tallow. Syn., *Adeps ossium.*

Ossalinate (*os-al′-in-āt*). A proprietary substitute for cod-liver oil said to be the sodium compound of the acid of ox marrow.

Osseoalbumoid (*os-e-o-al′-bu-moid*). A proteid substance resembling elastin, and with properties similar to those of chondroalbuminoid, obtained from bone after hydration of the collagen.

Osseoaponeurotic (*os-e-o-ap-on-u-rot′-ik*). Relating to bone and the aponeurosis of a muscle.

Osseomucoid (*os-e-o-mu′-koid*). A mucin discovered in bone by Wm. J. Gies (1901). It has the elementary composition $C_{47.07}H_{6.67}N_{11.98}S_{2.41}O_{31.85}$. Cf. *Chondromucoid; Tendomucoid.*

Ossicle. (See Illus. Dict.) **O., Andernach's,** the wormian bones. **O., Kerkring's,** a point of ossification in the occipital bone, immediately behind the foramen magnum. **O., Prenasal.** See *Bone, Prenasal.* **O.s, Riolan's,** small bones sometimes found in the suture between the inferior border of the occipital bone and the mastoid portion of the temporal bone.

Ossiculectomy (*os-ik-u-lek′-to-me*) [*ossiculum*, a small bone; *ἐκτομή*, excision]. The excision of an ossicle or of the auditory ossicles.

Ossiculotomy (*os-ik-u-lot′-o-me*) [*ossiculum*, ossicle; *τέμνειν*, to cut]. Surgical incision of the ossicles of the ear.

Ossiculum. (See Illus. Dict.) **Ossicula calcoidea,** the cuneiform bones of the foot. **Ossicula epactalia,** the wormian bones. **O. hamuli,** a horny nodule in the trochlea near the ventral border of the lacrimal groove. **O. jugulare,** one of frequent occurrence in the posterior lacerated foramen. **O. lenticulare Sylvii, O. ovale** (de Valsalva), **O. quartum.** See *Os lenticulare.* **Ossicula rhaphogeminantia,** the wormian bones. **O. semilunare** (Trichmeyer), **O. squamosum, O. Sylvii.** See *Os lenticulare.* **O. tegmenti tympani cuneiforme,** one separated from the cuneiform process of the tegmen tympani. **Ossicula triticea,** the lesser cornua of the hyoid bone.

Ostalgitis (*os-tal-ji′-tis*) [*ὀστέον*, bone; *ἄλγος*, pain]. Inflammation of a bone attended by pain.

Ostarthritis (*os-tar-thri′-tis*). See *Osteoarthritis* (Illus. Dict.).

Ostectomy (*os-tek′-to-me*). See *Osteectomy* (Illus. Dict.).

Osteitis. (See Illus. Dict.) **O. fungosa,** a simple inflammatory hyperplasia of the medulla and of the compact substance of bone characterized by fungoid granulations and leading to new ossification or destructive chronic inflammation. Syn., *Myelitis hyperplastica granulosa.* **O., Hypertrophic Pneumic.** See *Osteoarthropathy, Hypertrophic Pulmonary* (Illus. Dict.). **O. interna,** a form of osteitis occurring deep in the bone. Syn., *Caries centralis.*

Osteoarthropathy. (See Illus. Dict.) **O., Hypertrophic Pneumic, O., Pulmonary.** Same as *O., Hypertrophic Pulmonary* (Illus. Dict.).

Osteocachexia (*os-te-o-kak-eks′-e-ah*). Cachexia due to disease of the bones.

Osteochondritis. (See Illus. Dict.) **O., Syphilitic,** Wegner's term for a peculiar condition of the bones in congenital syphilis. It forms a thick layer, dense and homogeneous, but friable, white, and opaque, like mortar; usually at the meeting-lines between the shafts of the long bones and their epiphyseal cartilages. The lower end of the femur is the favorite seat.

Osteochondrophyte (*os-te-o-kon′-dro-fīt*). A bone tumor in which the proportions of bone and cartilage are nearly equal. Syn., *Echondroma, Osteoid.*

Osteochondrosarcoma (*os-te-o-kon-dro-sar-ko′-mah*). An osteochondroma with sarcomatous features.

Osteocranium (*os-te-o-kra′-ne-um*) [*ὀστέον*, bone; *κρανίον*, cranium]. The ossified cranium as distinguished from the chondrocranium.

Osteocystoid. (See Illus. Dict.) 2. See *Osteocyst* (Illus. Dict.).

Osteofibrolipoma (*os-te-o-fi-bro-lip-o′-mah*). A tumor made up of bony, fibrous, and fatty elements.

Osteofibroma (*os-te-o-fi-bro′-mah*). A combined osteoma and fibroma.

Osteogenesis. (See Illus. Dict.) **O. imperfecta,** a condition characterized by shortness of the extremities with well-developed head and trunk. There is incomplete development of the bone-centers of the head and face and imperfect ossification of the long bones. Cf. *Chondrodystrophy.*

Osteoid. (See Illus. Dict.) 2. An osteoma.

Osteolipochondroma (*os-te-o-lip-o-kon-dro′-mah*) [*ὀστέον*, bone; *λίπος*, fat; *χόνδρος*, cartilage]. A chondroma with osseous and fatty elements.

Osteolysis (*os-te-ol′-is-is*) [*ὀστέον*, bone; *λύειν*, to loose]. Bone degeneration.

Osteoma. (See Illus. Dict.) **O., Cavalryman's,** one occurring at the insertion of the adductor muscle of the thigh.

Osteopathia, Osteopathy. (See Illus. Dict.) 2. A system of healing devised by A. T. Still, based on the idea that all disease is due to misplacement of bones, pressing upon nerves, muscles, etc. **O., Bamberger's Type of Hypertrophic Pulmonary,** a form in which painful thickenings of the long bones, especially of the forearm and leg, are a prominent symptom. **O. hemorrhagica infantum.** See *Disease, Barlow's.*

Osteostixis (*os-te-o-stiks′-is*) [*ὀστέον*, bone; *στίξις*, a pricking]. Surgical puncturing of a bone.

Osteosuture (*os-te-o-su′-chur*). See *Osteorrhaphy* (Illus. Dict.).

Osteosynovitis (*os-te-o-si-no-vi′-tis*). Synovitis complicated with osteitis of adjacent bones.

Osteotabes (*os-te-o-ta′-bez*) [*ὀστέον*, bone; *tabes*]. Bone degeneration of infants beginning with the destruction of the cells of the lymphoid or splenoid bone-marrow, which disappears completely in parts and is replaced by soft gelatinous tissue; later the spongy bone diminishes, and lastly the compact bone. Cf. *Disease, Barlow's.*

Osteotympanic (*os-te-o-tim′-pan-ik*). See *Craniotympanic.*

Ostiary (*os-te-a′-re*) [*ostium*, a mouth]. Relating to an opening or orifice; ostial.

Ostoembryon (*os-to-em′-bre-on*). See *Lithopedion* (Illus. Dict.).

Ostoid (*os′-toid*). See *Osteoid* (Illus. Dict.).

Ostreotoxism (*os-tre-o-toks'-izm*) [ὄστρεον, oyster; τοξικόν, poison]. See *Mytilotoxism*.

Othil (*o-thil'*). See *Acetyl*.

Otitic (*o-tit'-ik*). Relating to otitis.

Otitis. (See Illus. Dict.) **O. intima.** See *O. labyrinthica* (Illus. Dict.). **O. media.** (See Illus. Dict.) **Gull-Toynbee's Law:** In otitis media the cerebellum and lateral sinus are likely to become involved by mastoid disease, while the cerebrum is threatened by caries of the roof of the tympanum. See *Sign, Politzer's*. **O. m. mucosa,** a chronic inflammation of the tympanic mucosa attended by mucous discharge into the cavity of the tympanum. **O. m. purulenta tuberculosa,** purulent otitis media with rapid destruction of the tympanic membrane due to *Bacillus tuberculosis*.

Otogenous (*o-toj'-en-us*) [οὖς, the ear; γεννᾶν, to produce]. Originating in the ear.

Otohemineurasthenia (*o-to-hem-i-nu-ras-the'-ne-ah*) [οὖς, the ear; ἡμι, half; νεῦρον, nerve; ἀσθένια, weakness]. A condition in which hearing is limited exclusively to one ear, without the evidence of any material lesion of the auditory apparatus.

Otohysteroneurasthenia (*o-to-his-tur-o-nu-ras-the'-ne-ah*). The complex of auricular neurasthenia combined with auricular hysteria.

Otomassage (*o-to-mas-sahzh'*). Massage of the ear.

Otomyasthenia (*o-to-mi-as-the'-ne-ah*) [οὖς, ear; μῦς, muscle; ἀσθένεια, weakness]. 1. Weakness of the muscles of the ear. 2. Defective hearing due to a paretic condition of the tensor tympani and stapedius muscles.

Otonecrectomy (*o-to-ne-krek'-to-me*). See *Otonecrectomy* (Illus. Dict.).

Otoneurasthenia (*o-to-nu-ras-the'-ne-ah*) [οὖς, the ear; νεῦρον, nerve; ἀσθένεια, weakness]. A condition of deficient tone of the auditory apparatus.

Otopolypus (*o-to-pol'-ip-us*). A polypus occurring in the ear.

Otor (*o'-tor*) [οὖς, ear]. Aural.

Otorhinolaryngology (*o-to-ri-no-lar-in-gol'-o-je*) [οὖς, ear; ῥίς, nose; λάρυγξ, larynx]. The anatomy, physiology and pathology of the ear, nose and throat.

Otoscope. (See Illus. Dict.) **O., Electric,** a device similar to the electric laryngoscope used for examination of the external meatus.

Ototraumatoneurasthenia (*o-to-trau-mat-o-nu-ras-the'-ne-ah*). Otoneurasthenia due to trauma.

Oturia, Otury (*o-tu'-re-ah, o-tu'-re*) [οὖς, ear; οὖρον, urine]. A supposed urinary discharge from the ear.

Ouabaïn. (See Illus. Dict.) $C_{30}H_{46}O_{12}$. A glucosid closely resembling strophanthin. It is obtained from the wood of *Acokanthera venenata*, G. Don., and from the wood of *Carissa schimperi*, RBr. Introduced into the stomach it is non-poisonous, but taken into the blood directly it is extremely virulent; $\frac{1}{15}$ of a grain (0.00101 gm.) being a lethal dose to man. It acts upon the heart and respiratory centers. As a local anesthetic it has 10 times the power of cocain. It has been recommended for whooping-cough in doses of $\frac{1}{1000}$ gr. (0.000065 gm.), repeated with caution. Cf. *Acokantherin*.

Oudeterospore (*oo-de'-ter-o-spōr*) [οὐδέτερος, neither of the two; σπόρος, spore]. E. R. Lankester's term (1900) for schizont (*q. v.*).

Outpatient (*out-pa'-shent*). A hospital patient treated without the walls.

Ovadin (*o'-vad-in*). A proprietary preparation of the ovaries of animals containing iodin.

Ovalbumin (*o-val'-bu-min*). The albumin, or more correctly the mixture of albumins, of the white of egg; its composition is not definitely established.

Ovaraden (*o-var-ad'-en*). An organo-therapeutic preparation from the ovaries of animals; used as a nervine. Dose, 3 to 6 gm. daily.

Ovariin (*o-var'-e-in*). An organo-therapeutic preparation made from the ovaries of cows: used in ovarian disorders. Dose, 1–1.5 gm. 3 times daily in pills.

Ovarine (*o-var-ēn'*). The sterilized extract of the ovaries of the pig; used in diseases of women, sterility, etc.

Ovarioepilepsy (*o-va-re-o-ep-il-ep-se*). See *Hystero-epilepsy* (Illus. Dict.).

Ovariosalpingectomy. See *Oophorosalpingectomy*.

Ovariostomy (*o-va-re-os'-to-me*). See *Oophorostomy*.

Ovaserum (*o-va-se'-rum*). The serum of an animal which has acquired specific precipitating action by the inoculation of egg-albumin and may be used as a test for egg-albumin. Cf. *Lactoserum*.

Over. (See Illus. Dict.) **O.bite,** lack of coaptation of upper and lower teeth. **O.extension,** extension of a joint beyond the normal limit.

Ovidia (*o-vid'-e-ah*). A genus of plants of the order *Thymelæaceæ*. **O. pillo-pillo,** Meissn., a shrub native of Chili, where it is used as an emetic and purgative. Its use is attended with danger. In regular practice it is used as a substitute for mezereon and sometimes improperly referred to as *Daphne pillu*.

Oviprotogen (*o-vi-pro'-to-jen*). A proprietary dietetic, said to be a methylene compound of albumin, given in milk to infants, and used hypodermically also.

Ovocenter (*o-vo-sent'-ter*) [ὠόν, egg; κέντρον, center]. The centrosome of the ovarian egg during fertilization.

Ovocyte (*o'-vo-sīt*). The same as *Oöcyte*.

Ovoglobulin (*o-vo-glob'-u-lin*) [*ovum*, egg; *globulin*]. The globulin of white of egg; according to Corin and Berard, there are two in albumen, one coagulating at 57.5° C. and the other at 67° C.

Ovogonium. See *Oögonium*.

Ovolecithin (*o-vo-les'-ith-in*). See *Lecithin* (Illus. Dict.).

Ovomucin (*o-vo-mu'-sin*). A glycoproteid described by Osborne and Campbell as composing about 7% of the proteid matter of egg white. Cf. *Ovalbumin, Ovomucoid, Conalbumin*.

Ovomucoid (*o-vo-mu'-koid*). A glycoproteid obtained by Osborne and Campbell from egg white, after all the proteids coagulable by heat had been separated, being precipitated by ammonium sulfate solution. Cf. *Ovalbumin, Ovomucin, Conalbumin*.

Ovos (*o'-vos*). A proprietary substitute for meat extract prepared from yeast.

Ovovitellin (*o-vo-vit'-el-in*). A proteid, probably a nucleoalbumin, contained in the yolk of egg; a white granular substance soluble in dilute acids, alkalis, and a 10% solution of common salt.

Oxalism (*oks'-al-izm*). Poisoning by oxalic acid or potassium binoxalate. It is characterized by gastro-enteritis with nephritis, collapse, cyanosis, mydriasis, labored breathing and dyspnea.

Oxalium (*oks-a'-le-um*). Potassium binoxalate.

Oxamethane (*oks-am-eth'-ān*). $C_4H_7NO_3$. The ethyl ether of oxamic acid, obtained from oxalic ether by action of ammonia; soluble in alcohol; melts at 115° C. Syn. *Acetyloxymethane*.

Oxaphor (*oks'-a-for*). A 50% alcoholic solution of oxycamphor; used in dyspnea. Dose, 15 ♏ (1.0 gm.) 2 or 3 times daily.

Oxatyl (*oks'-at-il*). See *Carboxyl* (Illus. Dict.).

Oxid. (See Illus. Dict.) **O., Acid,** an oxid which produces an acid when combined with water; an anhydrid.

Oxidase (*oks'-id-āz*). A name given by Lillie to the inherent substance of the living cell-nucleus that pos-

sesses the power of setting free active oxygen. Columnar epithelium and glandular tissue are rich in oxidase. Syn., *Oydase; Oxidation Ferment.*

Oxims (*oks'-ims*). A series of chemical compounds for the most part the product of the action of hydroxylamin upon aldehyds and ketons.

Oxols (*oks'-ols*). A collective name for antiseptic fluid mixtures of a 3% solution of hydrogen dioxid, 32%–38% alcohol, and 1% naphthol, menthol, or other substance. Cf. *Naphthoxol; Menthoxol; Camphoroxol.*

Oxyaceton (*oks-e-as'-et-on*). See *Acetylcarbinol.*

Oxyalizarin (*oks-e-al-iz-a'-rin*). See *Purpurin* (Illus. Dict.).

Oxyammonia (*oks-e-am-o'-ne-ah*). See *Hydroxylamin* (Illus. Dict.).

Oxyanthracene (*oks-e-an'-thras-ēn*). See *Anthrol* (Illus. Dict.).

Oxybromid (*oks-e-bro'-mid*). A compound of an element or radicle with oxygen and bromin. Syn., *Acibromid.*

Oxycamphor (*oks-e-kam'-for*). $C_{10}H_{15}O$ (OH). An oxidation product of camphor, a white, crystalline, soluble powder which melts at 203°–205° C. It is used in dyspnea. Dose, 8–16 gr. (0.5–1 gm.) 2 or 3 times daily.

Oxychlorid (*oks-e-klo'-rid*). A compound of an element or radicle with oxygen and chlorin. Syn., *Acichlorid.*

Oxychromatin (*oks-e-kro'-mat-in*). The lanthanin of Heidenhain. See *Linin* (2) (Illus. Dict.).

Oxyconiin (*oks-e-ko'-ne-in*). See *Conhydrin* (Illus. Dict.).

Oxycymol (*oks-e-si'-mol*). See *Carvacrol* (Illus. Dict.).

Oxydases (*oks-e-da'-zes*). See *Ferments, Oxidation* and *Oxidase.*

Oxydimethylchinizin (*oks-e-di-meth-il-kin'-iz-in*). See *Antipyrin* (Illus. Dict.).

Oxydine (*oks'-e-dēn*). An active substance resembling laccase found by Boutroux in brown bread.

Oxydol (*oks'-ed-ol*). A solution of hydrogen dioxid.

Oxygen. (See Illus. Dict.) **O.-carrier,** a catalytic substance capable of absorbing molecules of oxygen and in turn of splitting these to give off atomic oxygen; the nucleo-proteids are the oxygen-carriers of living matter.

Oxyhematoporphyrin (*oks-e-hem-at-o-por'-fir-in*). Harris' name for a peculiar substance found in the urine and closely allied to urohematoporphyrin, but producing a red instead of an orange color.

Oxymethylene (*oks-e-meth'-il-ēn*). Formic aldehyd.

Oxyphenylethylamin (*oks-e-fen-il-eth-il-am'-in*). A product of pancreatic digestion (Emerson).

Oxypodia (*oks-e-po'-de-ah*) [ὀξύς, acid; πούς, foot]. See *Talipes equinus* (Illus. Dict.).

Oxypropylenediisoamylamin (*oks-e-pro-pil-ēn-di-īs-o-am-il-am'-in*). A synthetic alkaloid occurring as a clear fluid, soluble in alcohol, ether, or oils, insoluble in water, with action similar to atropin.

Oxyquinaseptol (*oks-e-kwin-ah-sep'-tol*). Same as *Diaphtherin.*

Oxysepsin (*oks-e-sep'-sin*). An oxidized toxin prepared from cultures of *Bacillus tuberculosis.*

Oxyspartein. (See Illus. Dict.) **O. Hydrochlorate,** $C_{15}H_{24}N_2O.2HCl$, broad transparent needles, soluble in water or alcohol, melt at 48°–50° C. It is used hypodermically in heart-disease. Dose, ¾–1½ gr. (0.05–0.1 gm.).

Oxyspore (*oks'-e-spōr*). See *Exotospore.*

Oxytoxin (*oke-e-toks'-in*). An oxidized toxin.

Oxytuberculin (*oks-e-tu-bur'-ku-lin*). An oxidized tuberculin. Dose, 20 c.c. daily.

Oxyvaselin (*oks-e-vas'-el-in*). Vasogen.

Oxyzymol (*oks-e-zi'-mol*). See *Carvacrol* (Illus. Dict.).

Ozalin (*o'-za-lin*). A proprietary disinfectant, said to consist of a mixture of sulfates of calcium, magnesium, and iron with caustic soda and magnesia.

Ozocrotia (*o-zo-kro'-she-ah*) [ὄζη, stench; χρώς, skin]. An offensive odor of the skin.

Ozonatin (*o-zo'-nat-in*). A proprietary disinfectant containing oil of turpentine and other oils.

Ozonator (*o'-zo-na-tor*). An apparatus for generating ozone.

Ozonoform (*o-zo'-no-form*). A proprietary disinfectant said to consist of ozone and a distillate of the fir tree.

Ozonometry (*o-zo-nom'-et-re*) [ὄζειν, to smell; μέτρον, measure]. The estimation of the amount of ozone in the atmosphere.

Ozonoscope (*o-zo'-no-skōp*) [ὄζειν, to smell; σκοπεῖν, to view]. A test paper saturated with starch and iodin used in determining the amount of ozone in the air.

P

Pachometer (*pak-om'-et-ur*) [παχύς, thick; μέτρον, a measure]. An instrument made in various forms for measuring the thickness of a body.

Pachycephalous (*pak-e-sef'-al-us*) [παχύς, thick; κεφαλή, head]. One having a thick skull from union of the parietal and occipital bones.

Pachycnemous (*pak-e-ne'-mus*) [παχύς, thick; κνήμη, the leg]. Having thick legs.

Pachydactilia (*pak-e-dak-til'-e-ah*) [παχύς, thick; δάκτυλος, a finger]. A condition characterized by great thickness of the fingers.

Pachydermatosis (*pak-e-durm-at-o'-sis*) [παχύς, thick; δέρμα, the skin; νόσος, disease]. Hypertrophic rosacea.

Pachygastrous (*pak-e-gas'-trus*) [παχύς, thick; γαστήρ, the belly]. Having a large abdomen.

Pachyhemia (*pak-e-he'-me-ah*). See *Pechyemia* (Illus. Dict.).

Pachyhymenia (*pak-e-hi-me'-ne-ah*). See *Pachymenia* (Illus. Dict.).

Pachyleptomeningitis (*pak-e-lep-to-men-in-ji'-tis*) [παχύς, thick; λεπτός, thin; μῆνιγξ, membrane]. Combined inflammation of the pia and dura.

Pachymeningitis. (See Illus. Dict.) **P., Cerebral, P. cerebralis,** inflammation of the dura of the brain. **P. cervicalis hypertrophica** (Charcot), a form of primary inflammation of the spinal dura producing pain and partial paralysis of one or the other arm. **P. externa,** inflammation of the external layers of the dura. **P. interna,** that affecting the internal layer of the dura. **P. spinalis externa.** See *Peripachymeningitis* (Illus. Dict.). **P., Syphilitic,** that due to syphilis.

Pachymose (*pak'-e-mōz*) [παχύς, thick]. A heptahydric alcohol discovered by Champollion in the truffle,

Pachyma cocos, Fr. (the tuckahoe or Indian loaf), a fungus growing in the Carolina fir forests.

Pachyotous (*pak-e-o'-tus*) [παχύς, thick; οὖς, the ear]. Having thick ears.

Pachypelviperitonitis (*pak-e-pel-ve-per-it-on-i'-tis*) [παχύς, thick; *pelvis*; *peritonitis*]. Pelvic peritonitis with a fibrous deposit over the uterus.

Pachypodous, Pachypous (*pak-ip'-o-dus, pak'-ip-us*) [παχύς, thick; πούς, a foot]. Having very thick feet.

Pachyrrhizid (*pak-ir-ri'-zid*) [παχύς, thick; ῥίζα, root]. A non-nitrogenous principle isolated by Greshof from the seed of *Pachyrrhizus angulatus*, Rich., a leguminous plant of the Philippines and Antilles; it is used to poison fish.

Pachysalpingitis (*pak-e-sal-pin-ji'-tis*). Chronic parenchymatous salpingitis.

Pachysalpingoovaritis (*pak-e-sal-ping-o-o-var-i'-tis*). Inflammation of the ovary and oviduct with thickening of the parts.

Pachysomia (*pak-e-so' me-ah*) [παχύς, thick; σῶμα, body]. Abnormal growth in thickness of the soft parts of the body, especially as in akromegaly.

Pachytic (*pak-it'-ik*) [παχύτης, thickness]. Fat, thick, obese; also having the power of thickening the fluids of the body.

Pachytrichous (*pak-it'-rik-us*) [παχύς, thick; θρίξ, the hair]. Furnished with thick hair.

Pachyvaginalitis (*pak-e-vaj-in-al-i'-tis*) [παχύς, thick; *vagina*]. Hemorrhagic inflammation of the tunica vaginalis of the testicle, leading to hematocele.

Packing. (See Illus. Dict.) 2. The material employed for filling a cavity. 3. Treatment with the pack.

Paidology (*pa-dol'-o-je*). See *Pedology* (Illus. Dict.).

Pain. (See Illus. Dict.) **P., After-,** pain following labor, due to contraction of the uterus. **P., Brodie's,** the pain caused by lifting a fold of the skin in the neighborhood of a joint in articular neuralgia. **P., Charcot's,** hysteric pain in the ovarian region. **P.s, Hypophrenic,** those which have their origin beneath the diaphragm and may or may not radiate in different directions. **P.s, Niggling,** the first labor pains. **P., Terebrating, P., Terebrant,** boring pain.

Painless (*pain'-les*). Without pain. **P. Tic.** See under *Tic*.

Paku Kidang. See *Cibotium* and *Penghawar djambi*.

Palaceus (*pal-a'-she-us*) [*pala*, a spade]. Shovel-like; applied to structures which have the margins decurrent on the support.

Palamotheca (*pal-am-o-the'-ka*) [παλάμη, the palm of the hand; θήκη, a case]. Illiger's term for the epidermis of the interdigital membrane of some mammals, and of web-footed birds.

Palategraph (*pal'-at-graf*). See *Palate Myograph* (Illus. Dict.).

Palatine. (See Illus. Dict.) 2. The palate bone.

Palatograph (*pal-at'-o-graf*). See *Palate Myograph* (Illus. Dict.).

Palatosalpingeus (*pal-at-o-sal-pin'-je-us*) [*palatum*, palate; σάλπιγξ, a war-trumpet]. The tensor palati muscle.

Palatouvularis (*pal-at-o-u-vu-la'-ris*) [*palatum*, the palate; *uvula*]. See *Azygos uvulæ*, *Table of Muscles* (Illus. Dict.).

Palicourin (*pal-ik-oo'-rin*). A crystalline alkaloid isolated from *Palicourea rigida*, H. B. K., and other species, and from *Psychotria verticillata*, Müll., of the order *Rubinaceæ*.

Palimbolous (*pal-im'-bo-lus*) [πάλιν, backward; βάλλειν to cast]. Changing often; applied to diseases with very inconstant symptoms.

Palinodia (*pal-in-o'-de-ah*) [πάλιν, again; ὠδός, a way]. A recurrence or relapse of a disease.

Palladic (*pal-ad'-ik*). Containing palladium as a quadrivalent radicle.

Palladious (*pal-ad-e-us*). Containing palladium as a bivalent radicle.

Palladium. (See Illus. Dict.) **P. Chlorid,** used in treatment of tuberculosis. Dose, 10 drops of a 3% solution.

Pallium. (See Illus. Dict.) 2. Of the brain, the fissured portion of each cerebral hemisphere, exclusive of the caudatum and the rhinencephal; in most of the lower mammals it is relatively much smaller.

Palm Butter. See *Palm oil* (Illus. Dict.).

Palmarosa (*pal-mah-ro'-zah*). See *Oil, Palmarosa*.

Palmelol (*pal'-mel-ol*). A proprietary preparation said to be obtained from the saw palmetto, *Serenoa serrulata*, Hook.

Palmiacol (*pal-me'-ak-ol*). $C_{23}H_{40}O_2$. A proprietary remedy for tuberculosis, asthma, etc., said to be a derivative of guaiacol. Dose, 3 ♏, 3 or 4 times daily.

Palmitate (*pal'-mit-āt*) [*palma*, a palm-tree]. A salt of palmitic acid.

Palmitic (*pal-mit'-ik*). 1. Relating to or derived from palm oil. 2. Relating to palmitin.

Palmityl (*pal'-mit-il*) [*palma*, the palm tree; ὕλη, the stuff of which a thing is made]. The radicle, $C_{16}H_{33}O$, of palmitic acid.

Palmula (*pal'-mu-lah*) [dim. of *palma*, the palm of the hand]. In biology a small palmate organ.

Palmulate (*pal'-mu-lāt*) [*palma*, the palm of the hand]. Furnished with a palmula.

Palmule (*pal'-mūl*). See *Palmula*.

Palpate. (See Illus. Dict.) 2. Furnished with tactile organs.

Palpation. (See Illus. Dict.) **P., Mediate,** a method of physical examination performed by placing the phonendoscope on the chest after removing the tubes and resting the palmar surface of the hand upon the instrument, thus intensifying the vibrations.

Palpatometer (*pal-pat-om'-et-ur*) [*palpare*, to stroke; μέτρον, a measure]. An instrument for measuring arterial tension.

Palpatopercussion (*pal-pat-o-pur-kush'-on*). Combined palpation and percussion.

Palpebrate (*pal'-pe-brāt*) [*palpebrare*, to wink frequently]. 1. Furnished with eyelids. 2. To wink.

Palpebration (*pal-pe-bra'-shun*) [*palpebrare*, to blink, to wink frequently]. The act of winking; nictitation.

Palpebrin (*pal'-peb-rin*). A proprietary remedy used externally in eye-diseases; it is said to consist of boric acid, mercuric chlorid, zinc sulfate, and glycerin.

Palpebrofrontal (*pal-pe-bro-frunt'-al*). Relating to the eyelid and the brow.

Palsy. (See Illus. Dict.) **P., Caisson, P., Diver's.** See *Caisson Disease* (Illus. Dict.). **P., Crossed.** See *Hemiplegia, Crossed*. **P., Glossolabiolaryngeal.** See *Paralysis, Bulbar* (Illus. Dict.). **P., Hammer,** a curious variety of fatigue spasm seen in pen, blade, and file forgers. Spasms of the flexors and pronators of the forearm appear, then gradual weakness of the whole triad, and finally muscular atrophy (Fagge and Pye-Smith). Syn., *Hammer spasm; Hephestic hemiplegia; Hammer cramp; Hammerman's cramp; Smith's cramp*. **P., Histrionic.** See *Paralysis, Histrionic*. **P., Hysteric.** See *Paralysis, Hysteric* (Illus. Dict.). **P., Lead.** See *Paralysis, Lead* (Illus. Dict.). **P., Local,** progressive muscular atrophy. **P., Mercurial, P., Mercurial Shaking.** See *Tremor, Mercurial*, and *Mercurial Palsy* (Illus. Dict.). **P., Metallic.** 1. Lead paralysis. 2. Mercurial tremor. **P., Mimic Facial.** See *Paralysis, Bell's* (Illus. Dict.). **P., Night,** acroparesthesia. **P., Ocular, Féréol-Graux's Type,** associated paralysis

of the internal rectus muscle of one side and of the external rectus of the other; it is of nuclear origin. **P., Painter's,** lead paralysis. **P., Partial,** progressive muscular atrophy. **P., Psychic.** See *Paralysis, Hysteric* (Illus. Dict.). **P., Salaam.** See *Eclampsia nutans* (Illus. Dict.). **P., Scribe,** writer's cramp. **P., Seamstress'.** See *Cramp, Seamstresses'* (Illus. Dict.). **P. of the Serratus,** paralysis of the serratus magnus, due to a lesion of the posterior thoracic nerve. **P., Shaking, Mercurial.** See *Tremor, Mercurial* (Illus. Dict.). **P., Transverse.** See *Hemiplegia, Crossed.*

Paludein (*pal-u'-de-in*) [*Paludina*, a genus of freshwater snails]. The mucus of the snail *Paludina vivipara*, L., which has been used to make a pectoral syrup.

Palus. (See Illus. Dict.) 2. The penis. **P. sanctus,** guaiacum wood.

Panacea. (See Illus. Dict.) **P. anglica,** a mixture of magnesium carbonate and calcium carbonate.

Panama Bark. See *Quillaia Bark* (Illus. Dict.).

Panaris. (See Illus. Dict.) **P., Quinquaud's,** an affection of neuropathic origin differing from Morvan's disease inasmuch as it is painful and never accompanies paretic phenomena, and ordinarily does not entail necrosis of the phalanges.

Panaritium, Panarium (*pan-ar-ish'-e-um, pan-a'-re-um*). Same as *Paronychia.* **P. cutaneum,** onychia.

Panarthritis. (See Illus. Dict.) **P. urica.** See *Arthritis urica.*

Panbioma (*pan-bi-o'-ma*) [πᾶς, all; βίος, life]. The general principle of life. Cf. *Bionergy.*

Panblastic (*pan-blas'-tik*) [πᾶς, all; βλαστός, a shoot]. Connected with all the layers of the blastoderm.

Pancarditis (*pan-kar-di'-tis*) [πᾶς, all; καρδία, the heart]. General inflammation of the heart.

Panchrestous (*pan-kres'-tus*) [πᾶς, all; χρηστός, useful]. Useful for everything; relating to a panacea.

Pancolpohysterectomy (*pan-kol-po-his-ter-ek'-to-me*). See *Panhysterokolpectomy.*

Pancreaden (*pan-kre'-ad-en*). The direct extract of pancreas attenuated with calcium carbon; used in pancreatic diabetes. Dose, 4–6 dr. (10–15 gm.) daily.

Pancreas. (See Illus. Dict.) **P. aberrans, P. accessorium, P. succenturiatum.** See *P., Accessory* (Illus. Dict.). **P. divisum, P. parvum.** See *P., Lesser* (Illus. Dict.). **P. glomeruli,** Kühne and Lea's name for the islands of Langerhans. **P., Head of,** the enlarged right extremity of the pancreas. **P., Tail of,** the narrower, left extremity of the pancreas.

Pancreatolipase (*pan-kre-at-o-lip'-āz*). Lipase as found in the pancreatic juice.

Pancreatolith (*pan-kre-at'-o-lith*) [*pancreas; λίθος*, stone]. A calculus of the pancreas.

Pancreon, Pankreon (*pan'-kre-on*). A preparation obtained by the action of tannic acid on pancreatin. It is a grayish, odorless powder having a strong tryptolytic power. Dose, 7½ gr. (0.5 gm.) 3 times daily.

Panduroid (*pan-du'-roid*). See *Pandurate* (Illus. Dict.).

Pane, Fulminating. See *Plate, Franklin.*

Panelectroscope (*pan-el-ek'-tro-skōp*) [πᾶς, all; ἤλεκτρον, amber; σκοπεῖν, to view]. An inspection apparatus for use in proctoscopy, esophagoscopy, urethroscopy, etc. It throws concentrated light through the whole tube, thus illuminating the spot that is to be inspected.

Panesthesia. (See Illus. Dict.) 2. The undifferentiated sensory capacity of the supposed primal germ (F. W. H. Myers).

Pangaduine (*pan-gad'-u-in*). A crystalline solid prepared by Bouillot (1894), soluble in alcohol and in a mixture of water and glycerin; it is said to contain the basic principles of cod-liver oil; indicated in all affections due to faulty elimination.

Panglossia (*pan-glos'-e-ah*) [παγγλωσσία, wordiness]. Excessive or insane garrulity.

Panhidrosis (*pan-hi-dro'-sis*) [πᾶς, all; ἱδρώς, sweating]. See *Panidrosis* (Illus. Dict.).

Panhydrometer (*pan-hi-drom'-et-ur*) [πᾶς, all; ὕδωρ, water; μέτρον a measure]. An instrument for determining the specific gravity of any liquid.

Panhygrous (*pan-hi'-grus*) [πᾶς, all; ὑγρός, moist]. Damp as to the entire surface.

Panhyperemia (*pan-hi-per-e'-me-ah*) [πᾶς, all; ὑπέρ, above; αἷμα, blood]. Plethora.

Panhysterokolpectomy (*pan-his-ter-o-kol-pek'-to-me*) [πᾶς, all; ὑστέρα, womb; κόλπος, vagina; ἐκτομή, excision]. G. M. Edebohls' name for complete removal of the uterus and vagina in prolapse of uterus.

Pani-ghao (native word, Assam). See *Itch, Coolie.*

Panivorous (*pan-iv'-or-us*) [*panis*, bread; *vorare*, to devour]. Subsisting on bread.

Panmeristic (*pan-mer-is'-tik*) [πᾶς, all; μέρος, a part]. Relating to an ultimate protoplasmic structure composed of independent vital units.

Panmnesia (*pan-e'-se-ah*) [πᾶς, all; μνῆσις, remembrance]. A potential remembrance of all impressions.

Panneuritis. (See Illus. Dict.) **P. epidemica,** beriberi.

Panniculus. (See Illus. Dict.) **P. carnosus.** See *P. adiposus* (Illus. Dict.). **P. cordis,** the pericardium. **P. hymenius, P. virginis,** the hymen.

Panniform (*pan'-e-form*) [*pannus*, a piece of cloth; *forma*, shape]. In biology, having the appearance of cloth, as some lichens.

Pannosity (*pan-os'-it-e*) [*pannus*, a piece of cloth]. Softness of the skin.

Pannus. (See Illus. Dict.) 2. Chloasma. **P. caratus.** See *Carate* (Illus. Dict.). **P. hepaticus,** chloasma. **P., Phlyctenular,** the vascularized and cloudy condition of the cornea induced by phlyctenular inflammation. **P. tenuis,** slight pannus. Cf. *P. crassus.*

Panodic (*pan-od'-ik*) [πᾶς, all; ὁδος, a way]. See *Panthodic* (Illus. Dict.).

Panopeptone (*pan-o-pep'-tōn*). A dietetic said to consist of bread and beef, cooked, peptonized, sterilized, concentrated, and preserved in sherry. Dose, 1 tablespoonful.

Panophobia. (See Illus. Dict.) 2. Sudden fear, panic.

Panophthalmia, Panophthalmitis. (See Illus. Dict.) **P. bovina carcinomatosa,** cancer of the entire eyeball in cattle of Argentina. [Voges.] **P. purulenta,** severe panophthalmitis with great protrusion of the eyeball and formation of pus, which usually breaks through the sclera or cornea and destroys the sight. Syn., *Abscessus oculi.*

Pansinusitis (*pan-si-nus-i'-tis*) [πᾶς, all; *sinus*]. Inflammation attacking all the sinuses of a part or region.

Pansymmetry (*pan-sim'-et-re*). Entire symmetry.

Pantachromatic (*pan-tak-kro-mat'-ik*) [πᾶς, all; *a*, priv.; χρῶμα, color]. Colorless throughout.

Pantherapist (*pan-ther'-ap-ist*) [πᾶς, all; θεραπεια, therapy]. See *Eclectic* (Illus. Dict.).

Pantogen (*pan'-to-jen*) [πᾶς, all; γεννᾶν, to produce]. Hinrichs' term for a hypothetic primordial world-stuff from which all elements are derived. Cf. *Protyl.*

Pantomorphia (*pan-to-mor'-fe-ah*) [πᾶς, all; μορφή, form]. General or complete symmetry. Cf. *Pantamorphia.*

Pantopelagian (*pan-to-pel-a'-je-an*) [πᾶς, all; πέλαγος, the sea]. Frequenting all seas, or the whole sea, as the albatross and stormy petrel.

Panus (*pa'-nus*) [L., a swelling]. An inflamed non-

suppurating lymphatic gland. **P. faucium**, an inflamed gland in the throat. **P. inguinalis**, a bubo.

Paopereira Bark. See *Pereira* (Illus. Dict.).

Papagayos. Violent winds which prevail during a great part of the year along the shores of Colombia and Chili. Cf. *Foehn*, *Khamsin*, *Mistral*, *Mumuku*, *Norther*, *Simoon*, *Sirocco*.

Papain. (See Illus. Dict.) **P.-proteolysis**, the conversion of proteids into true peptones by action of papain.

Papilla. (See Illus. Dict.) **P., Acoustic, P. acoustica basilaris, P. basilaris**, in comparative anatomy a small rounded eminence on the wall of the cochlea, in man lengthened out to the organ of Corti. **Papillæ arcuatæ.** Same as *P., Filiform* (Illus. Dict.). **Papillæ calyciformes, Papillæ capitatæ, Papillæ coralliformes.** See *P.s, Circumvallate* (Illus. Dict.). **Papillæ corii, Papillæ cutis, P.s, Cutaneous.** See *P.s of the Skin* (Illus. Dict.). **P., Engorged**, papillitis. **P.s, Gustatory, Papillæ gustus**, those papillas of the tongue which are furnished with taste-buds. **P.s, Lenticular, Papillæ linguæ majores, Papillæ linguæ obtusæ, Papillæ maximæ, Papillæ mucosæ**, the circumvallate papillas. **Papillæ mediæ**, the fungiform papillas. **Papillæ minimæ, Papillæ minores**, the filiform papillas. **P.s, Pyramidal, Papillæ pyramidales**, the circumvallate papillas. **P. salivalis buccalis, P. s. superior**, one marking in the mouth, the orifice of Stenson's duct. **P. salivalis inferior.** See *Caruncula sublingualis*. **Papillæ semilenticulares**, the fungiform papillas. **Papillæ vallatæ, Papillæ volutatæ**, the circumvallate papillas. **P.s, Vascular**, papillas of the skin containing capillary loops. **Papillæ villosæ.** See *P., Filiform* (Illus. Dict.).

Papillar (*pap'-il-ar*). Relating to papillas, bearing papillas; papillary; papillose.

Papillectomy (*pap-il-ek'-to-me*) [*papilla; ἐκτομή*, excision]. Surgical removal of papillas.

Papilloadenocystoma (*pap-il-o-ad-en-o-sist-o'-ma*). Papilloma combined with adenoma and cystoma.

Papilloma. (See Illus. Dict.) **P. areoelevatum**, mycosis fungoides. **P. corneum, P. durum.** See *P., Hard* (Illus. Dict.). **P. diffusum**, multiple papillomas occurring on the legs and buttock. **P. neuroticum**, a painless, mostly congenital affection characterized by warty or papillomatous growth occurring on one side of the body along the course of a nerve. Syn., *Nævus unius lateris*. **P. piæ matris**, a soft round cerebral tumor developed from papillomatous growth of the pia.

Papine (*pap'-ēn*). A proprietary anodyne said to contain the pain-relieving principle of opium.

Paprica, Paprika (*pap-re'-kah*). The dried and pulverized capsules of *Capsicum annuum*, L. Syn., *Spanish pepper; Turkish pepper*.

Papulation (*pap-u-la'-shun*) [*papula*, a pimple]. The stage, in certain eruptive diseases, marked by the formation of papules.

Papulosquamous (*pap-u-lo-skwa'-mus*). Characterized both by papules and scales.

Papyriferous (*pap-i-rif'-ur-us*) [*papyrus*, paper; *ferre*, to bear]. Bearing paper, or something resembling it in appearance, as the bark of the birch, *Betula papyracea*, Ait.

Papyrine (*pap-i'-rēn*) [*papyrus*, paper]. 1. Resembling paper. 2. A modification of cellulose obtained by the action of sulfuric acid.

Paraacetophenolethyl-carbonate (*par-ah-as-et-o-fe-nol-eth-il-kar'-bon-āt*). A crystalline powder without color or taste used as an analgesic and hypnotic. Dose, 8 gr. (0.5 gm.).

Para-amidoacetanilid (*par-ah-am-id-o-as-et-an'-il-id*). See *Paraphenylendiamin*.

Para-amidoazobenzene (*par-ah-am-id-o-az-o-ben'-zēn*). $C_{12}H_{11}N_3$, yellow crystals or orange prisms derived from anilin and anilin hydrochlorate by treating with alkali; soluble in alcohol and ether; melts at 126° C.; boils above 360° C. **P. Hydrochlorate**, $C_{12}H_{11}N_3HCl$, steel-blue needles or scales.

Para-appendicitis (*par-ah-ap-en-dis-i'-tis*). Suppurative inflammation of the connective tissue adjacent to that part of the appendix not covered with the peritoneum.

Parablasta (*par-ah-blas'-tah*) [*παρά*, beside; *βλαστός*, a germ]. Eisenmann's term for a disease in which anatomic changes occur in the tissues.

Parabolanus (*par-ah-bol-a'-nus*) [*παράβολος*, venturesome]. In the fourth and fifth centuries, a layman who devoted himself to the care of the sick in times of plague and epidemics.

Parabolong [Bicol. dial. Philippine Islands]. The medicine man or native doctor of the island of Luzon.

Paracasein (*par-ah-ka'-se-in*). A substance closely resembling casein in composition and split off from it during the coagulation of milk. Syn., *Curd*.

Paracelsian (*par-as-el'-se-an*). 1. Relating to the Swiss physician and alchemist, Aurelius Phillippus Theophrastus Bombastus Paracelsus ab Hohenheim, 1493–1541. 2. A follower of Paracelsus.

Paracelsist (*par-as-el'-sist*). See *Paracelsian* (2).

Paracetanisidin (*par-as-et-an-is'-id-in*). Methacetin.

Parachlorphenol (*par-ah-klōr-fe'-nol*). $C_6H_4(Cl)OH$. A substitution product of phenol; a crystalline solid melting at 37° C., boils at 217° C. It is an antiseptic and disinfectant and is also employed in a 2%–3% ointment in treatment of erysipelas. **P., Paste**, a paste said to consist of equal parts of lanolin, vaselin, starch, and parachlorphenol; it is used in lupus.

Parachlorsalol (*par-ah-klor-sa'-lol*). Parachlorphenol salicylate; a crystalline substance, soluble in alcohol or ether and insoluble in water. It is used as an internal and external antiseptic like salol. Dose, 60–90 gr. (4–6 gm.) daily.

Paracholia. (See Illus. Dict.) 2. Pick's term for the prodrome of disturbed liver-cell activity in consequence of which the bile pours over the bloodvessels and lymphvessels. **P.-autointoxication**, jaundice occasioned by intestinal toxins, *e. g.*, icterus neonatorum. [Pick.] **P.-infection**, a disease *sui generis* which is localized in the intestine from which the toxins causing the jaundice are carried to the liver. [Pick.] **P., Nervous**, that due to a reflex from the sensitive nerves of the gall-bladder to the secretory nerves of the liver; emotional jaundice. [Pick.] **P., Toxic**, a jaundice occasioned by phosphorus, chloroform or animal poisons. [Pick].

Parachromophoric, Parachromophorous (*par-ah-kro-mof'-or-ik, -us*) [*πάρά*, beside; *χρῶμά*, color; *φορός*, bearing]. Possessing color which remains within the cell as a passive metabolic product, as in some bacteria.

Parachroous (*par-ak'-ro-us*) [*παράχροος*, faded]. Faded; having an altered color.

Parachymosin (*par-ah-ki'-mo-sin*) [*παρά*, beside; *χυμός*, juice]. The chymosin or rennin found in the human stomach and in that of the pig.

Paracolletic (*par-ah-kol-et'-ik*) [*παρά*, beside; *κολλᾶν*, to glue]. Having the capacity of sticking together; agglutinant.

Paracolpitis. (See Illus. Dict.) Syn., *Perivaginitis*. **P. dissecans** [Matthews Duncan], a form of vaginitis in which the cellular tissue is deeply affected, as in erysipelatous or phlegmonous perivaginitis. **P. phleg-**

monosa dissecans (Markonett, 1864), severe vaginitis with sloughing of part of the vaginal wall and of the vaginal portion of the cervix.

Paracolpium (*par-ah-kol'-pe-um*) [παρά, beside; κόλπος, the womb]. The connective tissue lying around the vagina.

Paraconule (*par-ah-kon'-ūl*) [παρά, beside; κῶνος, cone]. An upper extra cusp of a human molar.

Paracresol (*par-ah-kre'-sol*). C_7H_8O. White prisms with odor of phenol obtained by fusing cresol-sulfonate with potassium hydrate; soluble in alcohol, ether, or chloroform; melts at 36° C.; boils at 198° C. It is a disinfectant. Syn., *Paracresylic acid; Paraoxytoluene; Paramethylphenol.*

Paracresotate (*par-ah-kres'-o-tāt*). $C_6H_3(OH)(CH_3)CO_2Na$. A crystalline powder obtained by heating creosol sodium with carbonic acid; recommended in acute articular rheumatism. Dose, 45–90 gr. (3–6 gm.) daily.

Paracresotinic-phenyl-ester (*par-ah-kres-o-tin-ik-fen-il-es'-ter*). Methyl salol.

Paracrises (*par-ak'-ris-ēz*) [παρά, beside; κρινεῖν, to secrete]. Disorders of the secretory function.

Paracusis. (See Illus. Dict.) **P., Willis',** increased hearing power in the presence of a strong noise.

Paracyclesis (*par-ah-si-kle'-sis*) [παρά, beside; κύκλησις, a revolution]. A disturbance of the circulation.

Paracystium (*par-ah-sis'-te-um*) [παρά, beside; κύστις, a bladder]. The connective tissue which surrounds the bladder.

Paradichlorobenzol (*par-ah-di-klor-o-ben'-zol*). $C_6H_4Cl_2$, monoclinic transparent plates obtained from benzene by action of chloral; it is soluble in alcohol and ether; melts at 56.4° C.; boils at 173.2° C.

Paradioxybenzol (*par-ah-di-oks-e-ben'-zol*). Hydroquinon.

Paradiphenol (*par-ah-di-fe'-nol*). Hydroquinon.

Paradox. See *Paradoxia* (Illus. Dict.). **P., Weber's,** a muscle when so loaded as to be unable to contract, may elongate.

Paraechinococcic (*par-ah-ek-i-no-kok'-sik*). A term applied by Devé to the lesser developmental cycle of echinococci in which the metamorphoses accomplished within a single host are susceptible of reproducing themselves indefinitely, with the peculiarity that at the end of each scolex stage the parasites may, if circumstances permit, return to the natural evolutive cycle.

Paraethoxyphenylurethane (*par-ah-eth-oks-e-fen-il-u'-reth-ān*). Thermodin.

Paraform, Paraformaldehyd (*par'-ah-form, par-ah-form-al'-de-hīd*). See *Formaldehyd, Para-.*

Paraganglin (*par-ah-gan'-glin*). A proprietary extract of the myelinic part of the suprarenal gland of the ox. Dose, 40–60 drops daily.

Paraglin (*par-ag'-lin*). See *Smilacin* (2).

Paraglycogen (*par-ah-gli'-ko-jen*) [παρά, beside; γλυκύς, sweet; γεννᾶν, to produce]. A substance found in the granules of *Gregarinæ* by Frenzel. Cf. *Alveolin; Paralveolin; Morulin; Paramorulin; Antienzyme; Zooamylon.*

Paragonimiasis (*par-ah-go-ne-mi'-a-sis*). See *Hemoptysis, Parasitic.*

Parahemoglobin (*par-ah-hem-o-glo'-bin*). 1. Nencki's name for a polymeric modification of oxyhemoglobin. 2. A proprietary preparation of blood containing 5% of iron.

Parainfectious (*par-ah-in-fek'-shus*). Pertaining to or characteristic of pathologic states attributable to infection, which occur as accessory or by-conditions to some already existing disease.

Paralactate (*par-ah-lak'-tāt*). A salt of paralactic acid.

Paralexia (*par-al-eks'-e-ah*) [παρά, beside; *alexia*]. A kind of alexia characterized by substitution of other words than those in the text, in reading.

Parallage (*par-al'-aj-e*). See *Parallaxis* (Illus. Dict.).

Parallagma (*par-al-ag'-ma*) [παράλλαγμα, alternation]. See *Parallaxis* (Illus. Dict.).

Parallax. (See Illus. Dict.) **P., Stereoscopic.** See *P., Binocular* (Illus. Dict.). **P. Test,** a method of locating opacities in the cornea, lens, and vitreous. It is used with the plane mirror at 10 to 12 inches. A body situated anterior to the plane of the pupil will move in the direction taken by the eye, while one posterior to the plane of the lens will move against the direction taken by the eye. Bodies lying about the same plane as the pupil will show little if any movement. **P., Vertical,** the apparent shifting of an object upward or downward.

Parallelic (*par-al-el'-ik*). Relating to parallelism.

Parallelism. (See Illus. Dict.) **P. of Disease,** the tendency in diseases to simulate others.

Paralveolin (*par-al-ve'-ol-in*) [παρά, beside; *alveolus*, a small hollow]. Frenzel's name for a substance found by him with alveolin in the deutomerites of *Gregarinæ.* Cf. *Alveolin; Paraglycogen; Morulin; Paramorulin; Antienzyme.*

Paralysin (*par-al'-is-in*). See *Agglutinin.*

Paralysis. (See Illus. Dict.) See *Signs, Bell's, Charcot's, Revilliod's.* **P., Acute Amyotrophic Spinal.** Synonym of *P., Acute Atrophic.* **P., Amyotrophic,** that occurring as the sequel of some acute disease and attended by atrophy of certain muscles. **P., Anesthetic,** that observed after surgical operations and accredited to the effect of the anesthetic or to conditions attending the anesthesia. See *P., Narcosis.* **P., Angio-,** vasomotor paralysis. **P., Asthenic-bulbar.** See *Myasthenia gravis pseudoparalytica.* **P., Atrophic Bulbar.** Synonym of *P., Bulbar.* **P., Atrophic Muscular.** See *P., Amyotrophic.* **P., Atrophospastic.** See *Sclerosis, Amyotrophic Lateral* (Illus. Dict.). **P., Bifacial,** paralysis of both sides of the face. **P., Birth.** See *Birth-palsy;* and *Paraplegia, Infantile Spasmodic* (Illus. Dict.). **P., Bulbar, Acute.** See under *Bulbar* (Illus. Dict.). **P. cum tremore.** Synonym of *Paralysis agitans.* **P., Ehret's,** a traumatic neurosis, following injury to the inner side of the foot or ankle, consisting of spasmodic contracture of the muscles which raise the inner border of the foot, and functional paralysis of the peroneal muscles. **P., Enzootic Bulbar,** a disease in horses possibly due to a vegetal toxin which affects chiefly the oblongata. **P., v. Heine's Infantile,** spastic spinal paralysis of infancy. **P., Histrionic,** a name for Bell's facial palsy, because it destroys the power of facial expression. **P. insanorum.** Same as *P., General* (of the insane). **P., Intermittent, Arteriosclerotic Muscular.** See *Claudication, Intermittent.* **P., Kussmaul-Landry's.** See *P., Acute Ascending* (Illus. Dict.). **P., Labial,** paralysis of the lips. **P., Labioglossopharyngeal.** See *P., Bulbar* (Illus. Dict.). **P., Masked.** See *P., Pseudohypertrophic* (Illus. Dict.). **P., Mercurial.** See under *Mercurial* (Illus. Dict.). **P., Metadiphtheritic.** See *P., Diphtheric* (Illus. Dict.). **P. metallica,** lead palsy. **P., Mimetic Facial.** See *P., Facial* (Illus. Dict.). **P., Myosclerotic.** See *P., Pseudohypertrophic* (Illus. Dict.). **P., Narcosis,** combined paralysis in the region of the brachial plexus due to prolonged narcosis during which the arm is elevated with the head resting upon it, or it is pressed against the edge of the table. **P., Nonne's Pseudospastic,** a form of hysteria or hypochondriasis, marked by striking stiffness of the spine from muscular tension. **P., Nothnägel Type**

of. See *Sign, Nothnägel's.* **P., Oculomotor,** that affecting the oculomotor nerve. **P., Panama,** beriberi. **P., Peripheral Anesthesia.** See *P., Narcosis.* **P., Peripheric.** 1. Progressive muscular atrophy. 2. See *P., Peripheral* (Illus. Dict.). **P., Postdiphtheric,** that following diphtheria; it involves the pharynx and sometimes the esophagus. **P., Progressive, Fatty Muscular.** See *P., Pseudohypertrophic* (Illus. Dict.). **P., Psychic,** that due to psychic defect and not to disease of the motor tract or to motor areas of the cortex. **P., Puttee,** paralysis of the feet and toes of soldiers in the South African war; it was due to wearing puttees which pressed upon certain nerves during long marches. **P., Remak's Type,** paralysis affecting the muscles of the arm—the deltoid, biceps, brachialis anticus, and supinator longus. **P., Saturday Night, P., Sunday Morning,** musculospiral paralysis of workmen who have fallen asleep after a debauch on Saturday night. Cf. *P., Narcosis.* **P. scorbutica,** pellagra. **P. spinalis,** paraplegia. **P., Struempell's Type of Spastic,** the familial form of spastic spinal paralysis. **P., Subacute Atrophic Spinal,** a rare form of progressive muscular atrophy, described by Duchenne in 1849–1853 as *paralysie générale spinale antérieure subaiguë.* Erb gave it the name *poliomyelitis anterior subacuta et chronica.* **P., Telephone,** partial vocal paralysis from excessive use of the telephone. **P., Touch.** See *Astereoagnosis* and *Aphasia, Tactile.* **P. tremula.** See *P. agitans* (Illus. Dict.). **P., Zenker's,** paresis and disturbance of sensation in the lower extremities, the external popliteal nerve being most involved; it is caused by frequent and prolonged kneeling or squatting.

Paramargarin (*par-ah-mar'-jar-in*). Hydromargaric acid.

Paramecium. (See Illus. Dict.) 2. See *Parasites, Table of* (Illus. Dict.).

Parameria (*par-am-ē'-re-ah*). A genus of apocynaceous shrubs. **P. vulneraria,** Radlk., of Malaya, is used as a vulnerary. Cf. *Balsam, Tagulavay.*

Paramesial (*par-ah-mē'-se-al*) [παρά, beside; μέσος, middle]. Located near the mesial line.

Parametrism (*par-ah-met'-rizm*) [παρά, beside; μήτρα, the womb]. Spasmodic action of the smooth muscular fibers of the broad ligament accompanied by pain; it has been observed in intraligamentary cellulitis.

Parametritis. (See Illus. Dict.) **P., Anterior,** "a rare form, the cellulitis being limited to the loose vesicouterine cellular tissue or that between the symphysis and the bladder. The swelling is anterior, and the pus generally tracks into the bladder, vagina or inguinal region. It is likely to be mistaken for an ovarian cyst." [Roberts.] **P. chronica atrophicans** (Freund), inflammatory hypertrophy of the connective tissue of the pelvis progressing to cicatricial atrophy. **P. chronica posterior** (B. S. Schultze), chronic inflammatory processes in Douglas' folds, causing fixation of the uterus at the level of the internal os and anteflexion by shortening of the folds and torsion of the uterus when only one fold is shortened. **P., Remote,** parametritis marked by formation of abscesses in places more or less remote from the focus of the disease.

Paramonochlorphenol (*par-ah-mon-o-klōr'-fe-nol*). $C_6H_4(Cl).OH(1:4)$. A crystalline body obtained by the chlorination of phenol; melts at 40° C., boils at 217° C.; soluble in alkalis, but sparingly in water. It is antiseptic and employed in erysipelas, tuberculous diseases of throat, etc., in 5%–20% solution in glycerin.

Paramorulin (*par-ah-mor'-u-lin*) [παρά, beside; *morulin,* the "nucleolus" of *Gregarinæ*]. In biology, the name given by Frenzel to the substance composing the nuclear network of *Gregarinæ.* Cf. *Morulin; Alveolin; Paralveolin; Paraglycogen; Antienzym.*

Paramucin (*par-ah-mu'-sin*). A colloid isolated by Mitjukoff from an ovarian cyst; it differed from mucin and pseudomucin by reducing Fehling's solution before boiling with acid.

Paranesthesia (*par-an-es-the'-ze-ah*). See *Paraanesthesia* (Illus. Dict.).

Paranoia. (See Illus. Dict.) **P., Sander's Type of,** paranoia appearing in youth; paranoia originaria. **P., Séglas' Type of,** psychomotor type of paranoia.

Paranomia (*par-ah-nō'-me-ah*) [παρά, beside; ὄνομα, a name]. See *Aphasia, Optic,* and *A., Tactile.*

Paranuclein (*par-ah-nu'-kle-in*) [παρά, beside; *nucleus,* nucleus]. 1. Kossel's name for the phosphorized product, according to Liebermann a combination of albumin with metaphosphoric acid, which is split off from the nucleo-albumins by action of pepsin hydrochloric acid; it occurs as an insoluble residue. Syn., *Pseudonuclein.* 2. See *Pyrenin* (Illus. Dict.).

Paranucleon (*par-ah-nu'-kle-on*). Siegfried's name for phosphocarnic acid, a complex body supposed by him to constitute the source of energy of muscle, in which it occurs in 0.1%. It gives rise to lactic acid and CO_2 on hydrolysis.

Paranucleoproteids (*par-ah-nu-kle-o-prō'-te-ids*). A synonym of *Nucleoalbumins.*

Paraoxyethylacetanilid (*par-ah-oks-e-eth-il-as-et-an'-il-id*). Phenacetin.

Paraoxyethylformanilid (*par-ah-oks-e-eth-il-form-an'-il-id*). See *Formylphenetidin.*

Paraoxymethylacetanilid (*par-ah-oks-e-meth-il-as-et-an-il-id*). Methacetin.

Paraphenetidinvanillinethylcarbonate (*par-ah-fe-net-id-in-va-nil-in-eth-il-kar'-bon-āt*). Eupyrin.

Paraphenetolcarbamid (*par-ah-fe-net-ol-kar-bam'-id*). Sucrol.

Paraphenylendiamin. (See Illus. Dict.) $C_6H_8N_2$. A crystalline substance obtained by the nitration of acetanilid and reduction with tin and hydrochloric acid; soluble in water, alcohol, and ether; melts at 140° C., boils at 297° C. It is used in the manufacture of certain hair dyes and gives rise to eczema of the scalp and eyelids, or poisoning marked by vomiting, diarrhea, etc. Syn., *Paradiamidobenzene; Paraamidoacetanilid.*

Paraplasm. (See Illus. Dict.) 3. See *Exoplasm* (Illus. Dict.). 4. See under *Nucleoid.*

Paraplast (*par'-ah-plast*). The proprietary name for a plaster mass, said to consist of caoutchouc, lanolin, resin, and gum dammar, variously medicated and spread on fine, thick cotton web.

Paraplastic. (See Illus. Dict.) **P. Formations,** the contractile substance of the muscular fibrillas, the nervous fibers, and the red blood-corpuscles.

Paraplegia. (See Illus. Dict.) **P., Choreic,** a weakness of muscles; a paresis of movement often observed in limbs affected with chorea. **P. diabetica,** Charcot's name for a peripheral paralysis of the extensor muscles of the feet in diabetic subjects. It differs from tabes in absence of disturbance of coordination and sensibility. Syn., *Diabetic Pseudotabes.* **P., Ideal,** reflex paraplegia due to emotion. **P., Mephitic,** beriberi. **P. rheumatica,** mucous colitis. **P. simplex senilis,** that dependent upon disturbed nutrition of the cortex causing, in advanced age, paralysis of the legs without muscular atrophy. **P. spastica congenitalis.** See *Paralysis, Cerebral Infantile* (Illus. Dict.). **P. spastica primaria,** lateral sclerosis. **P., Syphilitic,** paralysis of the lower limbs as a remote effect of syphilis.

Paraplegiform (*par-ah-plej'-e-form*). Resembling paraplegia.

Parapleuritis (*par-ah-plu-ri'-tis*) [παρά, beside; πλευρόν, the side]. 1. Pleurodynia. 2. A slight degree of pleuritis.

Parapsis. (See Illus. Dict.) **P. expers,** anesthesia. **P. illusoria,** disturbed sensations causing illusions. **P. pruritus,** itching.

Parapyknomorphous (*par-ah-pik-no-mor'-fus*) [παρά, beside; πυκνός, thick; μορφή, form]. A term applied by Nissl to nerve-cells in which the arrangement of the stainable portion of the cell-body is intermediate between that of pyknomorphous and apyknomorphous cells.

Pararthria. (See Illus. Dict.) **P. centralis,** that due to cerebral disturbance. **P. literalis paretica,** stammering. **P. syllabaris paretica,** imperfect articulation of syllables due to paralysis or paresis.

Parasacral (*par-ah-sa'-kral*). Beside or near the sacrum.

Parasite. (See Illus. Dict.) **P., Commensal.** See *Commensal* (Illus. Dict.). **P., External.** See *Ectoparasite* (Illus. Dict.). Cf. *Ectozoan, Parazoan.* **P., Facultative.** See under *Facultative* (Illus. Dict.). **P., False.** See *Pseudoparasite* (Illus. Dict.). **P., Obligatory,** one that cannot exist removed from its host.

Parasitifer (*par-as-it'-if-er*) [παράσιτος, a parasite; φέρειν, to bear]. The host of a parasite.

Parasitogenetic (*par-as-it-o-jen'-et-ik*) [παράσιτος, a parasite; γένεσις, genesis]. Originating from the presence and activity of parasites.

Parasyphilis, Parasyphilosis (*par-ah-sif'-il-is, sif-il-o'-sis*). Parasyphilitic affections (Fournier); a series of morbid manifestations not having the anatomopathologic characteristics of syphilis, but apparently of syphilitic origin; *e. g.*, tabes, general paralysis, etc.

Parathyroid. (See Illus. Dict.) 2. See *Glands, Parathyroid.*

Parathyroidectomy (*par-ah-thi-roid-ek'-to-me*) [παρά, beside; *thyroid*; εκτομή, an excision]. Excision of a parathyroid gland.

Paratolyldimethylpyrazolon (*par-ah-tol-il-di-meth-il-pi-ra'-zol-on*). Tolypyrin.

Paratyphoid (*par-ah-ti'-foid*). Meltzer's name for an affection first described by Gwyn (1898) and produced by *Bacillus paracolon,* Gwyn. It presents all the characteristic symptoms of typhoid, but the Widal reaction is negative; the sera, however, react promptly to other bacteria belonging to the colon-typhus group, which may be isolated from the blood or from the excrement.

Paratyphus (*par-ah-ti'-fus*). Schottenmüller's name for paratyphoid.

Paratypic, Paratypicus (*par-ah-tip'-ik, -us*). Irregular, not typical in character.

Paraurethral (*par-ah-u-re'-thral*). Beside the urethra.

Paraxon (*par-aks'-on*) [παρά, beside; *axon*]. v. Lenhossék's term for a lateral branch of the axis-cylinder process of a nerve-cell; a collateral fiber.

Parazoon (*par-ah-zo'-on*) [παρά, beside; ζῶον, an animal]. An ectoparasite. Cf. *Ectozoan.*

Parelectronomic (*par-e-lek-tro-nom'-ik*) [παρά, beside; ἤλεκτρον, amber; νόμος, law]. Unresponsive to electromotive stimulus.

Parencephalia (*par-en-sef-a'-le-ah*) [παρά, beside; ἐγκέφαλος, brain]. Congenital malformation of the brain.

Parerethism (*par-er'-eth-ism*). See *Parerethisis* (Illus. Dict.).

Parergon, Parergy (*par-ur'-gon, -je*) [παρά, beside; ἔργον, work; pl. *parerga*]. 1. An appendage. 2. By-work; work undertaken as a recreation from severer labors. Ger. *Nebenwerk.*

Paresifying (*par-es'-e-fi-ing*). Causing paresis.

Paresthesia. (See Illus. Dict.) **P., Berger's,** paresthesia in youthful subjects, of one or both lower extremities without objective symptoms, accompanied by weakness. **P., Bernhardt's,** abnormal sensation, especially of numbness, with hypesthesia and pain on exertion, in the region supplied by the external cutaneous nerve of the thigh. **P. olfactoria,** parosmia. **P. of Pharynx.** See *Globus hystericus* (Illus. Dict.).

Parfocal (*par-fo'-kal*). A term used to designate microscopic oculars and objectives which are so constructed or so mounted that in changing from one to another the image will remain in focus.

Parica. See under *Piptadenia peregrina.*

Parietalia (*par-i-et-a'-le-ah*) [*paries,* wall]. The bones that collectively form the vault of the cranium.

Parietaria (*par-i-et-a'-re-ah*) [*paries,* a wall]. A genus of plants of the order *Urticaceæ.* **P. officinalis,** L., pellitory, a species of southern Europe, is used as a diuretic and vulnerary.

Parietin (*par-i'-et-in*). Same as *Chrysophanic Acid.*

Parietosquamosal (*par-i-et-o-skwa-mo'-sal*). Relating to the parietal bone and the squamosa.

Pariglin (*par'-ig-lin*). See *Smilacin* (2).

Paristhmitis. (See Illus. Dict.) 2. A term used by Greek writers to designate ordinary throat-diseases.

Parithelioma (*par-ith-e-le-o'-mah*) [παρά, beside; θηλή, the nipple]. A tumor located near the nipple.

Parkesin (*park'-es-in*). A mixture of linseed oil and chlorin sulfid in a solution of collodium in nitrobenzol. It is used as a substitute for caoutchouc.

Parodontitis (*par-o-don-ti'-tis*) [παρά, beside; ὀδούς, tooth]. Inflammation of the tissues surrounding a tooth.

Parodynia (*par-o-din'-e-ah*). See *Parodinia* (Illus. Dict.).

Parolive (*par-ol'-iv*). An accessory olive.

Paronymy (*par-on'-im-e*) [παρά, beside; ὄνυμα, name]. 1. The relation of a word in one language to its antecedent in another. 2. The principle of using in modern languages paronyms or derivations of Latin or Greek words rather than heteronyms that have no common antecedent. Cf. *Pecilonymy.*

Parophthalmoncus (*par-of-thal-mon'-kus*) [παρά, beside; ὀφθαλμος, the eye; ὄγκος, a tumor]. A tumor near the eye.

Paroplexia (*par-o-pleks'-e-ah*) [παρά, beside; πλήσσειν, to strike]. Paraplegia.

Paroptic (*par-op'-tik*) [πάρα, beside; ὤψις, vision]. Applied to colors produced by the diffraction of light rays.

Parovariotomy (*par-o-va-re-ot'-o-me*) [παρά, beside; ὠόν, egg; τέμνειν, to cut]. Excision of a parovarian cyst.

Parovaritis (*par-o-var-i'-tis*). Inflammation of a parovarium.

Paroxia (*par-oks'-e-ah*). See *Pica* (Illus. Dict.).

Paroxyntic (*par-oks-in'-tik*) [παροξύνειν, to excite]. Same as *Paroxysmal.*

Parrot. (See Illus. Dict.) **P. Disease.** See *Psittacosis.*

Pars. (See Illus. Dict.) **P. anterior.** See *Preinsula* (Illus. Dict.). **P. centralis.** See *Cella* (Illus. Dict.). **P. frontale.** See *Preoperculum* (c) (Illus. Dict.). **P. inferior fossæ rhomboideæ.** See *Calamus* (Illus. Dict.). **P. intermedia of Wrisberg,** a small nerve which joins the facial in the auditory canal after passing between the fifth and eighth cranial nerves. **P. lateralis foraminis interventricularis.** See *Porta* (Illus. Dict.). **P. marginalis.** See *Paratela* (Illus. Dict.).

P. medialis foraminis interventricularis. See *Aula* (1) (Illus. Dict.). **P. metencephalica ventriculi quarti.** See *Epicela* (2) (Illus. Dict.). **P. posterior.** See *Postinsula* (Illus. Dict.). **P. sphincteria inferior,** the lowest portion of the esophagus. **P. temporale.** See *Postgeniculum* (Illus. Dict.).

Parturition. (See Illus. Dict.) **McClintock's Rule,** a pulse of 100 or more beats a minute, after parturition, indicates impending postpartum hemorrhage.

Partus. (See Illus. Dict.) **P. agrippinus** [*æger partus*, difficult labor], labor with breech presentation.

Parurocystis (*par-u-ro-sis'-tis*) [παρά, beside; οὖρον, urine; κύστις, the bladder]. See *Bladder, Supplementary.*

Paschachurda (*pas-kah-koor'-dah*) [Persian]. An endemic disease among the inhabitants of Tashkent characterized by thick, stratified granulomas in the corium; it differs from lupus in that it is diffused over the whole skin and never attacks the mucosa. Syn., *Tashkent ulcer; Jaman Dschaegan.*

Passavant's Cushion. See under *Cushion.*

Passiflora. (See Illus. Dict.) **P. incarnata,** L., of North America, is used as a narcotic and anodyne. Dose of fld. ext., 2–5 ♏ (0.13–0.9 c.c.). **P. quadrangularis,** L., a species of the West Indies; the root causes vomiting, tetanus, convulsions, and paralysis, but has been prescribed as an anthelmintic.

Passiflorin (*pas-i-flor'-in*). An alkaloid isolated from the root of *Passiflora quadrangularis,* L.

Paste. (See Illus. Dict.) **P., Fruit,** inspissated fruit juice. **P., Piffard's,** copper sulfate, 1 part; tartarated soda, 5 parts; caustic soda, 2 parts. It is used as a test for sugar in urine. **P., Serum,** a sterilized mixture of serum from ox-blood with 25% of zinc oxid; used as a film on abrasions or diseased surfaces. **P., Sulfuric Acid,** a caustic mixture of equal parts of sulfuric acid and powdered saffron.

Pasteur's Exhaustion Theory. See under *Immunity.*

Pasteurella (*pas-tur-el'-ah*). A group of polymorphic cocco-bacilli destitute of spores or cilia. They do not take Gram's stain, do not liquefy gelatin, do not coagulate milk, give no visible growth on acid potato, do not cause indol in pancreatic bouillon, do not redden the jelly of Wurtz; are aerobic, facultative, anaerobic.

Pasteurellose (*pas-tur-el'-ōz*). Ligniere's (1901) term for hemorrhagic septicemia in animals.

Pasture-evil. See *Milk-sickness* (Illus. Dict.).

Patch. (See Illus. Dict.) **P., Hutchinson.** See under *Signs* (Illus. Dict.). **P., Moth,** chloasma. **P., White,** a circumscribed opacity in the fibrous investment of the spleen or in the pericardium over the apex of the left ventricle, caused by attrition against a rib-nodule in rachitis.

Patchoulin (*patch-oo'-lin*). $C_{15}H_{26}O$. A crystalline substance, homologous with borneol, melting at 59° C., boiling at 296° C., contained in oil of patchouli; by action of hydrochloric acid it is decomposed into water and patchoulen. Syn., *Patchouli camphor.*

Patefying (*pat-e-fi'-ing*) [*patere,* to stand open]. The act of rendering patent.

Patelloid, Patelloidean (*pat-el'-oid, pat-el-oid'-e-an*). Disc-like, shaped like a knee-pan; patelliform.

Pathemate (*path'-em-āt*) [πάθημα, a suffering]. Pertaining to emotional excitement.

Pathoamins (*path-o-am'-ins*). Selmi's term for the basic substances found in disease.

Pathogenicity (*path-o-jen-is'-it-e*). The condition of being pathogenic.

Pathology. (See Illus. Dict.) **P., Solidistic, P., Solid.** See *Solidism* (Illus. Dict.).

Paulocardia (*paw-lo-kar'-de-ah*) [παῦλα, pause; καρδία, heart]. A subjective sensation of intermission or momentary stopping of the heart-beat sometimes observed in cases of gastric neurasthenia.

Paulowilhelmia (*paw-lo-vil-helm'-e-ah*). A genus of acanthaceous plants. **P. speciosa,** Hochst., an African species; under the name of adubiri or aquapim, the wood is used as a fish poison on the Gold Coast.

Pavilion. (See Illus. Dict.) 2. In anatomy a tent-shaped structure. 3. A small building dependent upon but separate from the main structure.

Pawpaw. See *Carica papaya.*

Payta-bark. A variety of cinchona obtained from Payta, a seaport of Peru.

Pea (*pe*). The common name for the genus *Pisum* and its fruits. **P., Issue.** See under *Issue* (Illus. Dict.).

Pearl. (See Illus. Dict.) **P. ash,** crude potassium carbonate. **P.s, Epstein's,** small, slightly elevated, yellowish-white masses on each side of the median line of the hard palate at birth. **P.s, Laënnec's.** See under *Signs* (Illus. Dict.). **P.-white,** bismuth oxychlorid.

Peciloblast, Pecilocyte, Pecilocythemia, Pecilocytosis, Pecilothermal. See *Poikiloblast; Poikilocyte,* etc. (Illus. Dict.).

Pecilonymy, Pœcilonymy (*pe-sil-on'-im-e*) [ποικίλος, various; ὄνυμα, name]. The use in one and the same publication of different names for the same part; terminologic inconsistency; *e. g.,* hippocampus, hippocampus major, cornu ammonis. Syn., *Poikilonymy.*

Pectate (*pek'-tāt*). A salt of pectic acid.

Pectinase (*pek'-tin-āz*). The enzyme capable of transforming pectin.

Pectineal. (See Illus. Dict.) 2. Belonging to the os pubis.

Pectoriloquy. (See Illus. Dict.) **P., Aphonic.** 1. Laënnec's name for the sound heard in auscultating a lung in which there is a cavity. 2. The sound heard in auscultation of one having a pleuritic effusion when he speaks in a low tone.

Pectosate (*pek'-to-sāt*). A salt of pectosic acid.

Pedal. (See Illus. Dict.) 2. Pertaining to the pes or crusta of the crus cerebri and pons.

Pederast, Pederist (*ped'-er-ast, -ist*). One who practises pederasty.

Pedetic (*ped-et'-ik*). Exhibiting or pertaining to pedesis.

Pedication (*ped-i-ka'-shun*) [παιδικά, a darling]. Sodomy with a boy.

Pedicle. (See Illus. Dict.) **P., Vitelline,** the pedicle uniting the umbilical vesicle to the embryo.

Pedicterus, Pædicterus (*ped-ik'-ter-us*) [παῖς, a child; ἴκτερος, the jaundice]. Icterus neonatorum.

Pedicular. (See Illus. Dict.) Lousy, belonging to the genus *Pediculus.*

Pediculate, Pediculated (*ped-ik'-u-lāt*) [*pediculus,* a little foot]. Furnished with a footstalk.

Pediculin (*ped-ik'-u-lin*) [*pediculus,* a louse]. A proprietary insecticide said to consist of limestone, 65%; and crude naphthalin, 35%.

Pediculofrontal (*ped-ik-u-lo-frunt'-al*). Relating to the pedicles of the frontal gyri.

Pediculoparietal (*ped-ik-u-lo-par-i'-et-al*). Relating to the pedicles of the cerebral gyri and the parietal region.

Pedimeter, Pediometer. See *Pedometer* (Illus. Dict.).

Pedion. (See Illus. Dict.) 2. The surfaces of the metatarsus (Galen). 3. The metatarsus (Casp. Hofmann). 4. The tarsus (Bartholin).

Pedioneuralgia (*pe-de-o-nu-ral'-je-ah*). See *Pedialgia* (Illus. Dict.).

Pediopathy, Pædiopathy (*pe-de-op'-ath-e*). See *Pedopathy* (Illus. Dict.).

Pediotrophy, Pædiotrophy (*pe-de-ot'-ro-fe*). See *Pedotrophy* (Illus. Dict.).

Pedobaromacrometer, Pædobaromacrometer (*pe-do-bar-o-mak-rom'-et-ur*). See *Baromacrometer* (Illus. Dict.).

Pedobarometer, Pædobarometer (*pe-do-bar-om'-et-ur*) [παῖς, a child; βάρος, weight; μέτρον, a measure]. An instrument for determining the weight of a child. Cf. *Baromacrometer*.

Pedopea, Pædopæa (*pe-do'-pe-ah*) [παιδοποιεῖν, to beget children]. The procreation of children.

Pedostathmion, Pædostathmion (*pe-do-stath'-me-on*) [παῖς, a child; σταθμίον, a standard weight]. See *Pedobarometer*.

Peganum (*peg'-an-um*) [πήγανον, rue]. A genus of rutaceous plants. **P. harmala**, L., wild rue, a species of southern Europe and of Asia, is diaphoretic, emmenagog, anthelmintic, and contains the alkaloids harmalin and harmin.

Pegmatic (*peg-mat'-ik*) [πῆγμα, a concrement]. Pertaining to or producing coagulation.

Pegmin (*peg'-min*). See *Buffy Coat* (Illus. Dict.).

Pejorate (*pe'-jor-āt*) [*pejor*, comparative of *malus*, bad]. To grow worse.

Pekelharing's Theory of Blood-coagulation. See under *Blood*.

Pelade. (See Illus. Dict.) 2. A disease resembling pellagra due to eating maize infected by the fungus *Scleorotium zeinum*, Roulin. Syn., *Pelatina*.

Pelagin (*pel'-aj-in*). A proprietary remedy for sea-sickness, said to consist of a solution of antipyrin, caffein, and cocain.

Pelatina (*pel-at-e'-nah*). See *Pelade*.

Pelicochirometresis (*pel-ik-o-ki-ro-met-re'-sis*) [πελίκη, a wooden bowl; χείρ, the hand; μέτρον, a measure]. Digital pelvimetry.

Pellagrazein, Pellagrocein, Pellagrozein. See *Pellagracein* (Illus. Dict.).

Pellentia (*pel-en'-she-ah*) [*pellere*, to drive]. Abortifacient drugs.

Pelletierin. (See Illus. Dict.) Syn., *Punicin*. **P. Hydrobromid**, occurs in brown deliquescent masses soluble in water and alcohol. It is used in paralysis of the eye muscles. Dose, 4–6 gr. (0.25–0.4 gm.). **P. Hydrochlorate**, used as a teniafuge. Dose, 4½–8 gr. (0.3–0.5 gm.). **P. Sulfate**, a brown syrup soluble in water and alcohol; used as an anthelmintic. Dose, 6 gr. (0.4 gm.) with 8 gr. (0.52 gm.) of tannin in 1 fl. oz. (30 c.c.) of water, followed by cathartic. **P. Tannate**, a grayish-brown tasteless powder soluble in dilute acids; a prompt anthelmintic. Dose, 8–24 gr. (0.52–1.6 gm.) in 1 oz. of water followed by purgative.

Pellotin (*pel'-ot-in*). $C_{13}H_{19}NO_3$. An alkaloid isolated by Heffter from the Mexican cactus, *Anhalonium williamsi*, Lem. It is a hypnotic; the hydrochlorate, occurring in colorless, bitter crystals, soluble in water, is preferred. Dose, 0.05–0.08 gm.; subcutaneous dose, 0.02–0.04 gm.

Pelmatic (*pel-mat'-ik*) [πέλμα, sole]. Relating to the sole of the foot.

Pelohemia, Pelohæmia (*pe-lo-he'-me-ah*) [πηλός, mud; αἷμα, blood]. Excessive thickness of the blood.

Pelopathist (*pe-lop'-ath-ist*) [πηλός, mud; πάθος, disease]. One who practises pelopathy.

Pelopathy (*pe-lop'-ath-e*). The treatment of diseases by the application of mud. Cf. *Fangotherapy*.

Pelotherapy (*pe-lo-ther'-ap-e*). See *Pelopathy*.

Peltation (*pel-ta'-shun*) [πέλτη, a shield]. The protection afforded by inoculation with a serum.

Pelvifixation (*pel-ve-fiks-a'-shun*). Surgical fixation of a misplaced pelvic organ.

Pelvioscopy (*pel-ve-os'-ko-pe*). See *Pelveoscopy* (Illus. Dict.).

Pelvirectal (*pel-ve-rek'-tal*). Relating to the pelvis and the rectum.

Pelvis. (See Illus. Dict.) **P., Caoutchouc, P., India Rubber, P., Rubber**, an osteomalacic pelvis in which the curved, shortened, and compressed bones may be stretched without breaking. **P., Cuneiform**, a pelvis with a cuneiform inlet. **P., Halesteretic.** See *P., Kilian's* (Illus. Dict.). **P., Hauder's**, one with a brim narrowed by exostoses. **P. obtecta, P., Prague, P., Rokitanski's, P., Roofed in, P., Spondylolisthetic**, the pelvic deformity due to spondylolisthesis. **P., Thorny.** See *P. spinosa* (Illus. Dict.). **P. vera.** See *P., True* (Illus. Dict.). **P., Wedge-shaped.** See *P., Cuneiform*.

Pelvisacrum (*pel-ve-sa'-krum*). The pelvis and sacrum taken conjointly.

Pelvitrochanterian (*pel-ve-tro-kan-te'-re-an*). Relating to the pelvis and the great trochanter of the femur.

Pengawar or Penghawar Djambi. The long soft hairs obtained from rhizomes of various ferns from Sumatra and Java, particularly from the genus *Cibotium*. It is used as a mechanical styptic and was employed extensively in the Franco-Prussian war. Syn., *Paku kidang*. See under *Cibotium*.

Penicilliger (*pen-is-il'-ij-ur*) [*penicillum*, a painter's brush]. Bearing a tuft of hairs.

Penis. (See Illus. Dict.) Syn., *Palus; Mutinus; Muto; Membrum genitale vivorum; M. seminale; M. virile; Menta; Mentula; Priapus; Psole; Phallus; Pater omnium viventium; Peculiam; Peos*. **P.-bone.** See *Bone, Penial*. **P. captivatus**, one held in the vagina during copulation by spasm of the perineal muscles of the female. **P. cerebri**, the pineal gland. **P., Clubbed**, a deformity of the penis consisting of a permanent flexure toward the scrotum. **P., Crura of**, the corpora cavernosi. **P. factitious, P. succedaneus**, an artificial penis. Syn., *Fascinum; Dildoe*. **P. lipodermus.** See *Paraphimosis* (Illus. Dict.). **P. palmatus, P., Webbed**, one enclosed by the skin of the scrotum.

Penjavar yambi. See *Penghawar Djambi*.

Pennalism (*pen'-al-izm*). Barbarity as practised by higher classmen upon junior students in the universities of the seventeenth century.

Pennyroyal. (See Illus. Dict.) **P., European**, the plant *Mentha pulegium*, L., which contains an essential oil.

Penological (*pe-no-log'-ik-al*). Pertaining to penology.

Penologist (*pe-nol'-o-jist*). One who makes a study of crime and its cause and prevention.

Penology, Pænology (*pe-nol'-o-je*) [ποινή, penalty; λόγος, science]. In anthropology, the science treating of crime, its punishment and prevention; the study of the management of prisons, etc.

Pentacrinin (*pen-tak'-rin-in*). See *Pigments, Conspectus of* (Illus. Dict.).

Pentene (*pen'-tēn*). Amylene.

Pentosan (*pen'-to-san*). A complex carbohydrate capable of forming a pentose by hydrolysis.

Pentosazon (*pen-to-saz'-on*). A body described by Salkowski as occurring in urine, which possesses marked reducing qualities, but is incapable of fermentation. Its phenylhydrazin derivative crystallizes in orange-yellow needles, melting at 159°. It is soluble in hot water, insoluble in cold. It represents an abnormality in the total metabolism of the body.

Pentosuria (*pen-tōs-u'-re-ah*) [*pentose*; οὖρον, urine]. A rare disease characterized by the presence of pentose in the urine. It is easily confounded with glycosuria and diabetes. The patient can consume sugar as well

as a healthy person, and polarization is necessary to determine that it is a five-atom sugar (pentose) in the urine rather than one containing six atoms of carbon, as glucose.

Pentyl (*pen'-til*) [*πέντε*, five; *ὕλη*, matter]. C_5H_{11}. A univalent hydrocarbon. **P.-hydrid.** See *Amyl-hydrid.*

Pentylene (*pen'-til-ēn*). See *Amyl hydrid.*

Pentylic (*pen-til'-ik*). Relating to or containing pentyl or amyl.

Pentylidene (*pen-til'-id-ēn*). See *Amylidene.*

Peos (*pe'-os*) [*πέος*]. The penis.

Pepantic (*pep-an'-tik*). See *Pepastic* (Illus. Dict.).

Peporesin (*pe-po-res'-in*). A hard substance discovered by Haeckel in the husk of the seed of *Cucurbita pepo;* it is a vermicide.

Pepper. (See Illus. Dict.) **P., Black,** the unripe fruit of *Piper nigrum,* dried and pulverized. **P., Cayenne.** See *Capsicum* (Illus. Dict.). **P., Long,** the fruit of *Piper longum,* L. **P., Oleoresin,** ethereal extract of fruit of *Piper nigrum,* L.; it is carminative and stimulant. Dose, ¼–1 ♏ (0.015–0.06 c.c.). **P., White,** the dried and pulverized ripe fruit of *Piper nigrum* after it has been freed from pulpy matter and the dark outer pericarp.

Peppermint Cartridge. See *Drain-tester, Hudson's.*

Pepsin. (See Illus. Dict.) **P., Plant, P., Vegetable.** See *Papain* (Illus. Dict.).

Pepsiniferous (*pep-sin-if'-ur-us*) [*pepsin; ferre,* to bear]. Producing pepsin.

Pepsinogenous (*pep-sin-oj'-en-us*). See *Pepsiniferous.*

Peptinotoxin (*pep tin-o-toks'-in*). See *Peptotoxin* (Illus. Dict.).

Peptomangan (*pep-to-man'-gan*). A proprietary compound used in tuberculosis, etc., said to consist of iron, manganese, and peptone.

Peptone. (See Illus. Dict.) **P., Albumen,** a light yellow powder used as a nutrient obtained from white of egg by action of pepsin with a little hydrochloric acid. **P. Anhydrid.** See *Albuminate* (Illus. Dict.). **P., Beef,** true peptone from beef used as a nutrient in dyspepsia; a light brown powder soluble in water. **P., Bismuthated.** See *Bismuth, Peptonized.* **P., Casein,** peptonized casein from milk; a yellow hygroscopic powder used as a nutrient. **P., Mercuric.** See *Mercury Peptonate.* **P., Milk.** See *P., Casein.* **P., Para-.** See *Syntonin* (Illus. Dict.). **P. Powder,** a nutrient containing 91% of peptone.

Peptosin (*pep'-to-zin*). A proprietary preparation of pepsin.

Peptothyroid (*pep-to-thi'-roid*). A proprietary peptonized preparation of thyroid extract.

Peracidity (*pur-as-id'-it-e*) [*per,* thoroughly; *acidus,* acid]. Excessive acidity.

Perarticulation (*pur-ar-tik-u-la'-shun*) [*per,* thoroughly; *articulus,* a joint]. Synonym of *Diarthrosis* (Illus. Dict.).

Perchlorhydria (*pur-klor-hi'-dre-ah*). See *Hyperchlorhydria* (Illus. Dict.).

Percipient. (See Illus. Dict.) 2. In psychology, the recipient and transmitter of a motor, sensory, or telepathic impression.

Percussion. (See Illus. Dict.) **P., Direct.** See *P., Immediate* (Illus. Dict.). **P., Hammer,** that in which a hammer is used. **P.-noises,** sounds elicited in percussion which are devoid of tone.

Perdynamin (*pur-di-nam'-in*). A proprietary preparation of iron.

Perencephalia, Perencephaly (*pur-en-sef-a'-le-ah, pur-en-sef'-al-e*) [*πήρα,* a pouch; *ἐγκέφαλος,* brain]. A condition marked by multiple cystic brain tumors.

Perezia (*pa-ra-the'-ah*). A genus of composite herbs indigenous to Mexico and South America. Several species yield pipitzahuac or pipitzahoic acid.

Perezon (*pur-e'-zon*). See *Acid, Pipitzahoic.*

Perfection Chain of Liebnitz (the échelle of Bonnet). The theory that existing forms of life constitute a scale of ascent from polyps to man. The conception of the gradual rise of higher forms of life by descent and modification from lower forms still existing.

Perforatus. (See Illus. Dict.) 2. A muscle the tendon of which is perforated by another.

Periacinous (*per-e-as'-in-us*) [*περί,* around; *acinus,* a grape]. Lying around an acinus.

Perialgia (*per-e-al'-je-ah*) [*περί,* very; *ἄλγος,* pain]. Marked by excruciating pain.

Perialienitis, P. cirrhosa (*per-e-āl-yen-i'-tis*) [*περί,* around; *alienitas,* causes of disease extraneous to the body]. Noninfectious inflammation due to the presence of a foreign body.

Periappendicitis (*per-e-ap-en-dis-i'-tis*). Inflammation of the tissue around the vermiform appendix.

Periaxillary (*per-e-aks-il-a'-re*). Around the axilla.

Periaxonal (*per-e-aks'-on-al*) [*περί,* around; *ἄξων,* axis]. Around an axon.

Peribronchiolitis (*per-e-brong-ke-o-li'-tis*). Inflammation around the bronchioles.

Pericardicentesis, Pericardiocentesis (*per-e-kar-di-sen-te'-sis, per-e-kar-de-o-sen-te'-sis*) [*περί,* around; *καρδία,* the heart; *κέντησις,* a pricking]. Puncture of the pericardium.

Pericardiopleural (*per-e-kar-de-o-plu'-ral*). Relating to the pleuræ and the pericardium.

Pericarditis. (See Illus. Dict.) See *Signs, Broadbent's, Paul's, Josseraud's, Warthin's, Oppolzer's.* **P. exsudatoria sanguinolenta.** See *Hemopericardium* (Illus. Dict.). **P., Moist,** that attended by an effusion. **P., Typhoid,** that in which there is high fever and typhoid symptoms.

Pericardium. (See Illus. Dict.) Syn., *Membrana cor circumplexa; External membrane* (of the heart); *Panniculus cordis; Indumentum cordis; Involucrum cordis.* **P., Adherent.** See *Signs, Fisher's, Friedreich's, Kreyssig's, Kussmaul's.* **P. externum,** the ectal fibrous coat of the pericardium. **P. internum,** the serous layer of the pericardium. **P. parietale.** See *P. externum.* **P., Visceral.** See *P. internum.*

Pericardosis (*per-e-kar-do'-sis*). Microbic infection of the pericardium.

Pericementitis (*per-e-sem-ent-i'-tis*) [*περί,* around; *cementum,* cement]. Fauchard's disease; progressive necrosis of the dental alveoli.

Pericementum (*per-e-sem-ent'-um*) [*περί,* around; *cementum*]. The peridental membrane, a dense fibrous tissue covering the cementum of a tooth.

Pericholangitis (*per-e-ko-lan-ji'-tis*). See *Periangiocholitis* (Illus. Dict.).

Perichondral (*per-e-kon'-dral*). Relating to the perichondrium.

Pericolitis. (See Illus. Dict.) **P. sinistra,** membranous colitis.

Periconchitis (*per-e-kon-ki'-tis*) [*περί,* around; *κόγχη,* the socket of the eye]. Inflammation of the periosteum or lining membrane of the orbit.

Pericoxitis (*per-e-koks-i'-tis*). Coxitis extending to the adjacent tissues.

Pericranium. (See Illus. Dict.) **P. internum.** See *Endocranium* (Illus. Dict.).

Pericystium (*per-e-sis'-te-um*) [*περί,* around; *κύστις,* cyst]. The vascular wall of a cyst.

Pericytial (*per-e-sit'-e-al*) [*περί,* around; *κύτος,* cell]. Surrounding a cell.

Peridendritic (*per-e-den-drit'-ik*). Surrounding a dendrite.

Periencephalomeningitis (*per-e-en-sef-al-o-men-in-ji'-tis*). See *Periencephalitis* (Illus. Dict.).

Periendothelioma (*per-e-en-do-the-le-o'-mah*). Borrmann's name for a tumor originating in the endothelium of the lymphatics and the perithelium of the blood-vessels.

Periepithelioma (*per-e-ep-e-the-le-o'-mah*). A tumor originating in the vascular epithelium; *i. e.*, the endothelium lining the bloodvessels or lymphatics.

Perifistular (*per-e-fis'-tu-lar*). Around a fistula.

Perifolliculitis. (See Illus. Dict.) **P. abscedens.** See *Furunculosis* (Illus. Dict.). **P., Necrotic,** a disease of the skin follicles, characterized by a primary nodular induration, followed by ulceration, the ulcers being deep with the edges irregularly sinuous, indurated and steep.

Periglandulitis (*per-e-gland-u-li'-tis*). Inflammation of the tissues about a small gland.

Perihernia ry, Perihernious (*per-e-hur'-ne-a-re, -ne-us*). Applied to tissue immediately about a hernia.

Perihysteric (*per-e-his-ter'-ik*) [περί, around; ὑστέρα, the womb]. Around the uterus; periuterine.

Perikaryon (*per'e-kar'-e-on*) [περί, around; κάρνον, a nut]. The cytoplasm of a neuron.

Perikaryoplasm (*per-e-kar'-e-o-plazm*) [μερί, around; κάρνον, nut; πλάσμα, anything formed]. A term applied by Chamberlain (1898) to a granular zone giving rise to kinoplastic fibers in the pollen mother-cells of *Cobea scandens*, Cav.

Perimadarous (*per-e-mad'-ar-us*) [περί, around; μαδαρός, bald]. Applied to a spreading ulcer with the epiderm peeling off before its advance.

Perimastitis (*per-e-mast-i'-tis*). Inflammation of the connective tissue surrounding the mammary gland.

Perimetrosalpingitis (*per-e-met-ro-sal-pin-ji'-tis*). Pozzi's collective name for periuterine inflammation, including perimetritis, parametritis, pelveo-peritonitis, etc.

Perimyoendocarditis (*per-e-mi-o-en-do-kar-di'-tis*). Combined pericarditis, myocarditis, and endocarditis.

Perimysium. (See Illus. Dict.) **P. externum,** the epimysium. **P. internum,** the endomysium.

Perineocolporectomyomectomy (*per-in-e-o-kol-po-rek-to-mi-o-mek'-to-me*). Excision of a myoma by incision of the perineum, vagina, and rectum.

Perineoscrotal (*per-in-e-o-skro'-tal*). Relating to the perineum and scrotum.

Perineovaginal (*per-in-e-o-vaj'-in-al*). Relating to the perineum and vagina.

Perineovaginorectal (*per-in-e-o-vaj-in-o-rek'-tal*). Relating to the perineum, vagina, and rectum.

Perinephros (*per-e-nef'-ros*) [περί, around; νεφρός, kidney]. See *Perinephrium* (Illus. Dict.).

Perineurium. (See Illus. Dict.) Syn., *Indumentum nervorum; Involucrum nervorum; Membranula nervorum.* **P. internum.** See *Neuroglia* (Illus. Dict.).

Periodate (*pur-i'-o-dāt*). A salt of periodic acid.

Periodocasein (*pur-i-o-do-ka'-se-in*). A proprietary compound of iodin and casein, used in myxedema.

Periodology (*pe-re-od-ol'-o-je*) [περίοδος, period; λόγος, science]. The sum of what is known concerning the tendency of certain diseases and morbid phenomena to recur at stated periods.

Periomphacous (*per-e-om'-fak-us*) [περί, around; ὀμφακώδης, like unripe grapes]. Immature, unripe; applied to abscesses.

Perion (*per'-e-on*) [περί, around; ὠόν, egg]. The decidua.

Perionychium (*per-e-on-ik'-e-um*) [περί, around; ὄνυξ, nail]. The border of epiderm at the root of the nail.

Perioophoric (*per-e-o-of'-or-ik*) [περί, around; ὠοφόρος, bearing eggs]. Periuterine.

Perioophorosalpingitis (*per-e-o-of-or-o-sal-pin-ji'-tis*) [περί, around; ὠοφόρος, bearing eggs; σάλπιγξ, tube]. Inflammation of the tissues surrounding the ovary and oviduct.

Periophthalmic (*per-e-of-thal'-mik*). Around the eye.

Periople (*per-e-op'-le*) [περί, around; ὁπλή, a hoof]. The bands of horny matter which run obliquely inward from the heel of a horse's foot, including the frog between them. Syn., *Bar; Coronary frog band; Perioplic band.*

Perioplic (*per-e-op'-lik*). Relating to the periople. **P. Bands.** See *Periople.*

Periorchitis. (See Illus. Dict.) **P. prolifera,** Kocher's name for periorchitis associated with proliferation of the connective-tissue elements of the tunica albuginea.

Periost (*per'-e-ost*). Same as *Periosteum.*

Periosteomedullitis, Periostomedullitis. See *Periosteo-osteomyelitis* (Illus. Dict.).

Periosteosis. (See Illus. Dict.) 2. See *Periosteoma* (Illus. Dict.). 3. The formation of a tumor of the periosteum.

Periosteotome (*per-e-os-te'-o-tōm*) [περί, around; ὀστέον, bone; τέμνειν, to cut]. An instrument for dividing and lifting the periosteum from a bone.

Periostosteitis, Periostitis (*per-e-ost-os-te-i'-tis, per-e-ost-i'tis*). Simultaneous periostitis and osteitis.

Periovaritis (*per-e-o-var-i'-tis*). See *Perioophoritis.*

Peripheraphose (*per-if-ur-ah'-fōs*). See under *Phose.*

Peripherocentral (*per-if-ur-o-sen'-tral*). Relating to the center and also to the periphery.

Peripherophose (*per-if'-ur-o-fōs*). See under *Phose.*

Periplast. (See Illus. Dict.) 3. The attraction-sphere. **P., Daughter,** the centrosome.

Periploca (*per-ip'-lo-ka*) [περί, around; πλέκειν, to twine]. A genus of plants of the order *Asclepidaceæ.* **P. græca,** L., milk vine or silk vine, a European species naturalized in western New York. The leaves are used as an emollient; the milky juice has been used to poison animals; the bark contains a glucosid, periplocin.

Periplocin (*per-ip'-lo-sin*). $C_{70}H_{48}O_{12}$. A crystalline glucosid obtained from the bark of *Periploca græca,* L.; melts at 205° C., soluble in alcohol, insoluble in ether. It is a powerful cardiac poison; used subcutaneously in heart-disease. Max. daily dose, $\frac{1}{64}$ gr.

Peripneumonia. (See Illus. Dict.) Until the time of Bichat, 1771–1802, pleurisy, pneumonia, and bronchitis were confounded under this term. 2. Pleuropneumonia.

Peripsoitis (*per-e-so-i'-tis*). See *Psoitis* (Illus. Dict.).

Perirectitis (*per-e-rek-ti'-tis*). See *Periproctitis* (Illus. Dict.).

Perirrigation (*per-ir-e-ga'-shun*). See *Perrigation* (Illus. Dict.).

Perisalpingoovaritis (*per-e-sal-pin-go-o-va-ri'-tis*). See *Perioophorosalpingitis.*

Periscelis (*per-is'-kel-is*) [περί, around; σκέλος, leg]. Herpes occurring around the leg where the garter binds it.

Periscleritis (*per-e-skle-ri'-tis*). See *Episcleritis* (Illus. Dict.).

Perisinal, Perisinous, Perisinuous (*per-e-si'-nal, -nus, per-e-sin'-u-us*). Surrounding a sinus.

Perisinuitis, Perisinusitis (*per-e-si-nu-i'-tis, -si'-tis*). Inflammation of the tissue about a sinus.

Perispondylitis (*per-e-spon-dil-i'-tis*) [περί, around; σπόνδυλος, a vertebra]. Inflammation of the tissues around a vertebra. **P., Gibney's,** a painful condition of the muscles of the spine.

Perissarteria (*per-is-ar-te'-re-ah*). See *Arterioperissia.*

Peristaphylitis (*per-e-staf-il-i'-tis*) [περί, around; σταφυλή, the uvula]. Inflammation of the tissues surrounding the uvula.

Peristerna (*per-e-stur'-nah*) [περί, around; *sternum*]. A name for the lateral portions of the chest.

Peritendineum. (See Illus. Dict.) **P. externum,** that surrounding the entire tendon. **P. internum,** the extension of the external tendon-sheath among and around the bundles which compose the tendon.

Peritenonium (*per-e-ten-o'-ne-um*). See *Peritendineum* (Illus. Dict.).

Perithelial (*per-e-the'-le-al*). Relating to the perithelium.

Perithelioma (*per-e-the-le-o'-mah*). A tumor originating in the perithelium of a vessel.

Peritome (*per-it'-om-e*) [περί, around; τομή, a cutting]. Circumcision.

Peritoneopexy (*per-it-on-e-o-peks'-e*) [*peritoneum*; πῆξις, a fixing in]. Gottschalk's operation of fixation of the uterus by the vaginal route in the treatment of retroflexions of this organ.

Peritonism (*per'-it-on-izm*). **1.** A false peritonitis soon yielding to treatment. **2.** A complex of serious phenomena complicating peritonitis or diseases of those parts covered by peritoneum.

Peritonitis. (See Illus. Dict.) **P., Gonorrheal,** that due to extension of gonorrhea by way of the fallopian tubes. **P. hepatica,** perihepatitis. **P. hypochondriaca.** See *P., Diaphragmatic* (Illus. Dict.). **P., Metastatic,** that arising from infectious processes not connected with the peritoneum; it may develop during the existence of an acute infectious disease. **P. omentalis.** See *Epiploitis* (Illus. Dict.). **P., Parietal,** inflammation of the serous lining of the peritoneal cavity. **P., Permeation,** that produced by the penetration of the healthy intestinal wall by bacteria. **P., Pneumococcous,** that due to invasion of pneumococci. **P., Serous, P. serosa,** that accompanied by liquid exudation. **P., Subdiaphragmatic,** subphrenic abscess. **P., Traumatic,** that due to some injury having established a communication between the peritoneal cavity and the surface of the body or some of the hollow organs, through which channel pyogenic cocci enter. **P., Visceral,** inflammation of the peritoneal coat of any of the abdominal or pelvic organs.

Peritrochanteric (*per-e-tro-kan-ter'-ik*). Situated about a trochanter.

Periumbilical (*per-e-um-bil'-ik-al*). Surrounding the umbilicus.

Periureteric (*per-e-u-re-ter'-ik*) [περί, around; οὐρητήρ, ureter]. Surrounding the ureters.

Periureteritis (*per-e-u-re-tur-i'-tis*). Inflammation of the tissues around a ureter.

Perivaginitis. (See Illus. Dict.) **P., Dissecting Phlegmonous.** See *Paracolpitis phlegmonosa dissecans.*

Perixenitis (*per-e-zen-i'-tis*) [περί, around; ξένος, a stranger]. Inflammation around a foreign body embedded in the tissues. Cf. *Perialienitis.*

Perle (*purl*) [Fr. and Ger. a pearl; pl. *perles*]. A capsule for administration of medicine.

Perlsucht [Ger.]. See *Tuberculosis, Bovine.*

Permixion (*pur-mik'-shun*) [*permiscere*, to mingle]. A perfect chemical mixture.

Pernambuco Wood. The wood of *Cæsalpinia echinata*, Lam. (*q. v.*). It is used as an astringent and roborant and contains the dye brazilin.

Peromoplasty (*pe-rom-o-plas'-te*) [πήρωμα, a maiming; πλάσσειν, to form]. The formation of a new stump after an operation in which the stump projects.

Peronin (*pur-o'-nin*). $C_{24}H_{25}NO_3$. CHl. Benzylmorphin hydrochlorate; a synthetic substitution product of morphin possessing feeble narcotic properties, but useful as a somnifacient and in allaying cough. It is a white powder soluble in water, insoluble in alcohol, chloroform, or ether. Dose, ⅔–1½ gr. Max. daily dose, 6 gr.

Peronospora. (See Illus. Dict.) **P. lutea,** Carmona (1885), a name given by Carmona to micrococci which he mistook for zoospores.

Perosmic (*pur-os'-mik*). Containing osmium as an octavalent radicle. **P. Anhydrid.** See *Acid, Osmic,* and *Osmic Acid* (Illus. Dict.). It is used internally in muscular rheumatism. Dose, $\frac{1}{64}$ gr. (0.001 gm.). Antidote, sulfureted hydrogen. Syn., *Osmium tetroxid; Perosmic acid.*

Peroxidate, Peroxidize (*pur-oks'-id-āt, pur-oks'-id-īz*) [*per*, thoroughly; ὀξίς, sharp]. To oxidize completely.

Peroxol (*pur-oks'-ol*). A combination of 3% solution of hydrogen peroxid with camphor (camphoroxol), menthol (menthoxol), or naphthol (naphthoxol).

Peroxydase (*pur-oks'-e-dāz*). Loew's term for an enzyme found by him in tobacco; it is capable of producing all the phenomena of fermentation. Cf. *Oxydase.*

Perpœna (*pur-pe'-nah*). A proprietary analgesic said to be a coal-tar derivative. Dose, 5–8 gr. (0.3–0.6 gm.).

Perseveration (*pur-sev-ur-a'-shun*) [*perseverare*, to persist]. Neisser's term for a senseless repetition of plainly spoken words or of imperfect speech; it is attributed by Pick to cerebral fatigue originating partly in cerebral lesion, partly in functional or exhaustion psychosis.

Persistence-time. The period succeeding the contraction of the ventricle of the heart but prior to the occurrence of relaxation. At this point the aortic orifice is wide open and the semilunar valves in readiness to close. Ger., *Verharrungszeit.*

Persodine (*pur'-so-dēn*). The proprietary name for a solution of 2 parts of sodium persulfate in 300 parts of water. It is used as an appetizer. Dose, 1 teaspoonful to a tablespoonful (5 c.c.–15 c.c.) before meals.

Person. (See Illus. Dict.) **2.** The bodily form of a human being.

Persona (*pur-so'-nah*) [L.]. A person; a single individual.

Personality (*pur-son-al'-it-e*) [*persona*, a person]. That which characterizes a person. **P., Alternation of.** See *P., Disintegration of.* **P., Disintegration of,** a term used in psychology for a condition in which the sense of personality is not continuous, but is broken by the intervention of a secondary personality, with distinct trains of memory for each state. **P., Secondary,** an alteration of memory and character, the result of shock and disease; it disappears after a time or alternates with the original or primary personality.

Personation (*pur-son-a'-shun*). Assumption of the character or attributes of another with intent to defraud.

Perspiration. (See Illus. Dict.) **2.** Wrongly applied to the liquid excreted from the skin; sweat.

Perstriction (*pur-strik'-shun*) [*per*, through; *stringere*, to bind]. The arrest of hemorrhage by ligating the bleeding vessel.

Persulfate (*pur-sul'-fāt*). The sulfate which contains a greater proportion of the sulfuric acid radicle than the other sulfates of the same radicle.

Persulfid (*pur-sul'-fid*). The compound of sulfur with an element or radicle which contains more sulfur than the other compounds of sulfur with the same element or radicle.

Pertussin (*pur-tus'-in*). A proprietary remedy for whooping-cough said to consist of the fluid extract of thyme mixed with syrup to procure an infusion in the strength of 1 : 7.

Perucognac (*pe-ru-kon'-yak*). A preparation employed in tuberculosis said to consist of the active principle of balsam of Peru, 25 gr.; cinnamic acid, 10%, in a liter of cognac.

Peruiferous (*pe-ru-if'-ur-us*). Yielding balsam of Peru.

Peruol (*pe'-ru-ol*). A mixture of peruscabin and castor oil. It is used in scabies.

Peruscabin (*pe-ru-ska'-bin*). Synthetic benzoic-acid benzyl ester. It is used in scabies.

Pes. (See Illus. Dict.) **P. anserinus.** See *P. anserinus major.* **P. anserinus fasciæ latæ,** the four or five flat radiating fibers of the fascia lata immediately below the internal condyle of the femur. **P. anserinus major,** the radiation formed by the three primary branches of the facial nerve after its emergence from the stylomastoid foramen. **P. anserinus minor.** See *P., Infraorbital.* **P. anserinus nervi mediani.** See *Plexus anserinus nervi mediani.* **P. arcuatus,** talipes cavus. **P. calcaneovalgus,** talipes calcaneovalgus. **P. calcaneus,** talipes. **P. cavus, P. excavatus,** talipes cavus. **P. corvinus,** crow's-foot, the wrinkles radiating from the outer canthus of the eye. **P. febricitans,** elephantiasis. **P. gigas,** macropodia. **P., Infraorbital,** the radiating rami of the infraorbital nerve after it emerges from the infraorbital canal. **P. olfactorius,** the inner root of the olfactory lobe [Wilder]. **P. pedunculi,** the crusta of the crus cerebri. **P. staticus adultorium, P. valgus adolescentium,** flat-foot.

Pessary. (See Illus. Dict.) 2. A vaginal suppository.

Pest. (See Illus. Dict.) **P., Endemic Miasmatic.** See *Pestis minor.* **P., Justinenne.** See *Plague, Justinian.*

Pestilence. (See Illus. Dict.) **P., Aborted.** See *Pestis minor.* **P., Choleric,** Asiatic cholera. **P. glandula,** the plague. **P., Hemogastric,** yellow fever. **P., Hip.** See *Quebrabunda.* **P., Lesser, P., Masked.** See *Pestis minor.* **P., Septic,** the plague.

Pestis. (See Illus. Dict.) **P. minor,** an oriental disease resembling the plague but not necessarily fatal. It is believed to have been a mild or modified form of bubonic plague. Syn., *Endemic miasmatic pest; Aborted pestilence; Lesser pestilence; Masked pestilence;* Fr., *Peste fruste.* **Peste fruste** [Fr.]. See *Pestis minor.*

Petalobacteria (*pet-al-o-bak-te'-re-ah*) [πέταλον, leaf; *Bacterium*]. Bacteria in the zooglea stage.

Petanelle (*pet'-an-el'*). A patented preparation of fibrous peat used as an absorbent.

Petiolus. (See Illus. Dict.) 2. The manubrium of the malleus. **P. glandulæ pinealis.** See *Peduncle of the Pineal Gland* (Illus. Dict.).

Petit-grain (*pet-e-grān*) [Fr.]. Orange berries; small, unripe, bitter oranges.

Petroleum. (See Illus. Dict.) **P. Ether, Light,** canadol. **P.-jelly,** petrolatum.

Petrolization (*pet-rol-i-za'-shun*) [*petra,* rock; *oleum,* oil]. The act or process of treating waters with kerosene for the extermination of mosquitos.

Petrolize (*pet'-rol-īz*). To treat waters with kerosene.

Petrooccipital (*pet-ro-ok'-sip'-it-al*). Relating to the petrosa and the occipital bone.

Petrosapol (*pet-ro-sa'-pol*). A proprietary combination said to consist of soap and certain constituents of petroleum residue. It is used in the treatment of diseases of the scalp.

Petrosulfol (*pet-ro-sul'-fol*). A proprietary product closely resembling ichthyol, but with less disagreeable odor; used as ichthyol.

Petrous. (See Illus. Dict.) 2. Relating to the petrous portion of the temporal bone.

Petrox (*pet'-roks*). A mixture of paraffin oil, 100 parts; oleic acid, 50 parts; and alcoholic ammonia solution, 25 parts; a substitute for vasogen.

Pettenkofer's Soil-water or Ground-water Theory, is that cholera never prevails epidemically where the soil is impermeable to water, or where the level of the soil water is not liable to fluctuations.

Petuning (*pet-u'-ning*). A process of sprinkling tobacco with some special preparation to aid in the fermentation and flavoring.

Peucedanum. (See Illus. Dict.) **P. cambyi,** Coulter, chuklusa of North America, is used as food by the Indians. **P. oreoselinum,** Mönch., indigenous to middle and southern Europe. The root, leaves, and fruit are used in jaundice and as an antipyretic; it contains athamantin. **P. palustre,** Mönch., the root is used in epilepsy and in whooping-cough. Dose, 20–30 gr. (1.29–1.94 gm.) 3 times daily and rapidly increased to 4 times that amount.

Peucine (*pu'-sēn*) [πεύκη, the fir]. Resin; pitch.

Peucinous (*pu'-sin-us*) [πεύκη, the fir]. Relating to or like the fir-tree, resinous.

Pexin (*pek'-sin*) [πῆξις, a curdling]. Rennin.

Pexinogen (*peks-in'-o-jen*)[πῆξις, a curdling; γεννᾶν, to produce]. See *Renninogen* (Illus. Dict.).

Peyote (*pa'-o-ta*). See *Mescal.*

Pfeiffer's Phenomenon, P.'s Reaction. See *Bacteriolysis* and *Reaction, P.'s.*

Phace, Phacea (*fa'-se, fa-se'-ah*) [φακός, a lentil]. The crystalline lens.

Phacicous (*fa'-sik-us*) [φακός, a lentil]. Belonging to the crystalline lens. Lentil-shaped.

Phacocele (*fa'-ko-sēl*). See *Phacentocele* (Illus. Dict.).

Phacoideitis (*fa-koid-i'-tis*). See *Phacitis* (Illus. Dict.).

Phacolysis, Phakolysis (*fa-kol'-is-is*) [φακός, lens; λύειν, to loose]. 1. Dissolution or disintegration of the crystalline lens. 2. An operation for relief of high myopia consisting in discission of the crystalline lens followed by extraction.

Phacoplanesis (*fa-ko-plan-e'-sis*) [φακός, a lentil; πλάνησις, a making to wander]. Displacement of the lens of the eye from the posterior to the anterior chamber and back again.

Phacoscopy, Phakoscopy (*fa-kos'-co-pe*) [φακός, a lens; σκοπεῖν, to view]. The observation and estimation of the changes in the lens of the eye caused by accommodative influences.

Phacotherapy, Phakotherapy (*fa-ko-ther'-ap-e*)[φακός, lens; θεραπεία, therapy]. Heliotherapy.

Phacozymase (*fa-ko-zi'-māz*) [φακός, lens; ζύμη, a ferment]. Béchamp's name for an albuminous body found with crystalbumin in the watery extract of the crystalline lens, which coagulates at 55° C. and contains a diastatic enzyme.

Phænakistoscope. See *Phenakistoscope.*

Phænology. See *Phenology* (Illus. Dict.).

Phæoretin (*fe-or-et'-in*)[φαιός, dusky; ῥητίνη, resin]. $C_{14}H_8O_7$. A resinous extract from rhubarb-root, various species of the genus *Rheum.* It occurs as a yellowish-brown powder soluble in alcohol and alkalis.

Phagedenism, Phagedænism (*faj'-ed-en-izm*). Rapidly progressive ulcerative processes of the soft parts, difficult to control and frequently complicated with chancroid bubos.

Phagedenoma, Phagedænoma (*faj-ed-en-o'-mah*). A phagedenic ulcer.

Phagolysis (*fag-ol′-is-is*) [φαγεῖν, to eat; λύειν, to loose]. Destruction or dissolution of phagocytes.

Phagotherapy (*fag-o-ther′-ap-e*) [φαγεῖν, to eat; θεραπεία, therapy]. Treatment by superalimentation.

Phalacromatic, Phalacromatous (*fal-ak-ro-mat′-ik, -us*). Relating to phalacrosis, bald.

Phalacrotic, Phalacrous (*fal-ak-rot′-ik, fal-ak′-rus*) [φαλακρός]. Bald.

Phalanges. (See Illus. Dict.) **P., Deiters'**, the phalangeal process of Deiters' cells in the organ of Corti.

Phalangiasis (*fal-an-ji-a′-sis*). See *Phalangosis* (Illus. Dict.).

Phalangitis. (See Illus. Dict.) **P. syphilitica.** See under *Dactylitis syphilitica.*

Phallin (*fal′-in*). A toxalbumin contained in the death cup fungus, *Amanita phalloides*, Fr.

Phantasm. (See Illus. Dict.) **P., Verbal,** a delirious conception of new words and of new meanings of old words.

Phantasmatics (*fan-taz-mat′-iks*) [φαντάζειν, to render visible]. The study or exposition of the cause of the appearance of phantoms.

Phantasmatology (*fan-taz-mat-ol′-o-je*). See *Phantasmology* (Illus. Dict.).

Phantom. (See Illus. Dict.) **P., Imitative,** a phantom tumor in a neurotic individual showing a tendency to mimic diseases or deformity of others. [Bennett.] **P., Occupation,** a phantom tumor resulting from the prolonged or continuous strain of muscles which become hard and enlarged, and may remain so for a time, even after the occupation of the individual has been discontinued. [Bennett.]

Phantoscopy (*fan-tos′-ko-pe*). See *Retinoscopy* (Illus. Dict.).

Pharbitin, Pharbitisin (*far-bit′-in, far-bit′-is-in*). The kalandana of the Indian pharmacy, a resinous substance isomeric with convolvulin contained in *Ipomœa hederacea*, Jacq. It is used as a cathartic. Dose, 7–10 gr. (0.45–0.64 gm.).

Pharcidous (*far′-sid-us*) [φαρκίς, a wrinkle]. Wrinkled, rugose, full of wrinkles.

Pharmachemics (*far-mah-kem′-iks*). A subdivision of materia medica which includes solubilities and incompatibilities. (Potter.)

Pharmacooryctology (*far-mak-o-or-ik-tol′-o-je*) [φάρμακον, drug; ὀρυκτός, dug out, quarried; λόγος, science]. The science of mineral drugs.

Pharmacopolist. (See Illus. Dict.) They came in about 400 A. D. as a class of citizens in Rome to whom was delegated the duty of preparing drugs ordered by physicians.

Pharmacotaxis (*far-mak-o-taks′-is*) [φάρμακον, drug; τάξις, an arranging]. The preparation of drugs.

Pharyngitis. (See Illus. Dict.) **P. lateralis,** the type marked by special involvement of the lateral walls of the pharynx. **P., Lithemic,** a sense of fullness in the throat with a feeling of rigidity associated with heat and dryness; due to gouty diathesis. **P., Pultaceous.** See *Angina, Pultaceous.*

Pharyngomaxillary (*far-in-go-maks′-il-a-re*). Relating to the pharynx and the jaw.

Pharyngopalatine (*far-in-go-pal′-at-in*). Relating to the pharynx and the palate.

Pharyngoparalysis (*far-in-go-par-al′-is-is*). See *Pharyngoplegia* (Illus. Dict.).

Pharyngoplasty (*far-in-go-plas′-te*) [φάρυγξ, pharynx; πλάσσειν, to form]. Plastic surgery of the pharynx.

Pharyngopleural (*far-in-go-plu′-ral*). Relating to the pharynx and to the pleuræ.

Pharyngoscleroma (*far-in-go-skle-ro′-mah*). Laryngeal scleroma.

Pharyngospasmodic (*far-in-go-spas-mod′-ik*). Relating to spasmodic contraction of the pharyngeal muscles.

Pharyngostenous (*far-in-go-ste′-nus*) [φάρυγξ, pharynx; στενός, narrow]. Relating to stricture of the pharynx.

Pharyngotherapy (*far-in-go-ther′-a-pe*) [φάρυγξ, pharynx; θεραπεία, therapy]. The treatment of diseases of the pharynx by direct applications or irrigations.

Pharyngotyphoid (*far-in-go-ti′-foid*). See *Pharyngotyphus* (Illus. Dict.).

Pharyngoxerosis (*far-in-go-zer-o′-sis*) [φάρυγξ, pharynx; ξερός, dry]. Dryness of the pharynx.

Phaselin (*fa′-sel-in*). A proprietary digestant said to be a constituent of a wild bean of Mexico.

Phaseolin (*fa-se′-ol-in*). A globulin obtained from beans.

Phaseolunatin (*fa-se-o-lu′-nat-in*). A cyanogenetic glucosid contained in *Phaseolus lunatus*, L.

Phaseolus (*fa-se′-ol-us*) [φασήολος, the kidney bean]. A genus of leguminous herbs many species and varieties of which are cultivated for their edible seeds and pods. **P. lunatus,** L., Lima-bean, indigenous to the East Indies, cultivated in America for the edible seeds. **P. mungo,** L., indigenous to the East Indies and Asia, is employed as a remedy for beri-beri. **P. semierectus,** L., of the West Indies. The seeds are used to poison fish. **P. trilobus,** Ait., of East India and China; the leaves are used as a tonic; the root, rich in amylon, is used in China under the name of koh as an emetic, diaphoretic, and antiphlogistic.

Phaseomannite (*fa-se-o-man′-it*). See *Inosite* (Illus. Dict.).

Phasotrophy (*fa-sot′-ro-fe*) [φάσις, appearance; τρόπος, a turn]. Brühl's name for the phenomenon presented by those chemical bodies which, according to their method of formation, appear in two modifications belonging to the same class, yet showing themselves to be identical. Syn., *Virtual tautomerism* (v. Pechmann).

Phecine (*fe′-sēn*). $C_6H_4(OH)_2SO_4$. Sulfometadihydroxybenzene, a sulfate of the double hydrate of benzene; it is said to be a non-irritant antiseptic and prophylactic, and is indicated in diseases of the skin.

Phediuretin (*fe-di-u-re′-tin*). See *Pheduretin* (Illus. Dict.).

Phellandrene (*fel-an′-drēn*). $C_{12}H_{16}$. A terpene present in the ethereal oil of *Œnanthe phellandrium*, Lam.; boils at 171°–172° C.

Phenacethydrazin (*fe-nas-et-hi-dra′-in*). See *Hydracetin* (Illus. Dict.).

Phenacylidin (*fe-nas-il′-id-in*). $C_6H_4(OC_2H_5)NH.CH_2CO.C_6H_5$. An antipyretic substance obtained by the condensation of bromoacetophenone and paraphenetidin, forming a powder insoluble in water, recommended in veterinary practice.

Phenacylphenetedin (*fe-nas-il-fe-net′-id-in*). A nontoxic phenacetin preparation, easily soluble in alcohol and glycerin and insoluble in water.

Phenakistoscope, Phænakistoscope (*fe-nak-is′-to-skōp*) [φενακιστής, an imposter; σκοπεῖν, to view]. That form of stroboscope in which the figures and slits revolve in the same direction. Syn., *Direct stroboscope; Zoetrope.*

Phenalgene (*fe-nal′-jēn*). A proprietary analgesic said to contain acetanilid, sodium bicarbonate, etc.

Phenalgin (*fe-nal′-jin*). A proprietary antipyretic and analgesic said to be an ammoniated combination of phenyl and acetamid. Dose, 3–10 gr. (0.1–0.64 gm.). Syn., *Ammoniophenylacetamid.*

Phenanthraquinon. See *Phenanthrenequinon.*

Phenanthrenequinone (*fe-nan-thrēn-kwin'-ōn*). $C_{14}H_8O_2$. An oxidation product of phenanthrene, forming orange-colored needles or prisms, soluble in ether-benzene, acetic acid, or hot alcohol, melting at 202° C. It gives a dark green coloration with concentrated sulfuric acid.

Phenatol (*fe'-nat-ol*). A proprietary antipyretic and anodyne said to be a combination of the carbonate, bicarbonate, sulfate, and chlorid of soda with acetanilid and caffein.

Phenazon (*fe'-naz-on*). Antipyrin.

Phene (*fēn*). Benzene.

Phenedin (*fe'-ned-in*). Phenacetin.

Phenegol (*fe'-ne-gol*). $C_6H_5 . O . NO_2 . SO_3K$. Mercury potassium nitro-paraphenol sulfonate. It is antiseptic and bactericide.

Phenesol. See *Phenosal*.

Phenethyl (*fe-neth'-il*). See *Phenetol* (Illus. Dict.).

Phenethylene (*fe-neth'-il-ēn*). See *Styrol* (Illus. Dict.).

Phenetidin. (See Illus. Dict.) **P. Acetosalicylate.** See *Phenosal*. **P. Citrate,** a condensation product of para-amidophenetol with citric acid; sedative and antipyretic. **P.-methylglycollate,** kryofin.

Phenetidinuria (*fe-net-id-in-u'-re-ah*). A condition marked by the presence of phenetidin in the urine.

Phenetol. (See Illus. Dict.) **P.-carbamid.** See *Dulcitol* (Illus. Dict.).

Phenicate (*fe'-nik-āt*). To charge with phenol or phenic acid.

Phenidin, Phenin (*fe'-nid-in, fe'-nin*). Phenacetin.

Phenigmus, Phœnigmus. (See Illus. Dict.) **P. Petechial.** See *Purpura simplex* (Illus. Dict.).

Phenocoll, Phenocollum. (See Illus. Dict.) Syn., *Amidoacetophenetidin*. **P. Acetate,** bulky, acicular crystals, readily soluble in water and adapted for subcutaneous injections. **P. Carbonate,** a colorless crystalline powder, quite insoluble in water, used as the hydrochlorid. **P. Salicylate.** See *Salocoll* (Illus. Dict.).

Phenocreosote (*fe-no-kre'-o-sōt*). A preparation of creasote and carbolic acid.

Phenol. (See Illus. Dict.) Syn., *Oxanilin*. **P.-anytol,** a combination of anytol and phenol used as a bactericide. **P. Benzoate.** See *Phenyl Benzoate*. **P.-bismuth,** bismuth carbonate. **P. Camphor.** See under *Camphor*. **P. Celluloid,** a protective varnish for wounds, prepared from pyroxylin, carbolic acid, and camphor. **P., Cymic,** carvacrol. **P.diiodid,** a precipitate from a combination of solutions of sodium, phenol, and iodopotassium iodid, forming a violet-red odorless powder, insoluble in water and recommended as a wound antiseptic. Syn., *Diiodophenoliodid*. **P. Mercury,** mercury carbolate. **P., Natrosulforicinic.** See *P. and Sodium Sulforicinate*. **P. Orthomonobromo,** C_6H_5BrO, an oily violet-colored liquid with strong odor, soluble in ether, chloroform, or 100 parts of water; boils at 195° C. It is used as a wound antiseptic and in erysipelas, 1%–2% in petrolatum, twice daily. **P. Orthomonochlor,** C_6H_5ClO, a colorless antiseptic liquid, soluble in alcohol or ether, melting at 7° C., used with petrolatum in skin-diseases, etc. **P. Paramonochloro,** $C_6H_4Cl . OH(4:1)$, a crystalline antiseptic substance, soluble in alkalis, slightly in water, melting at 37° C., boils at 217° C. It is used in syphilitic diseases of the eyes and in tuberculosis of the throat in 5%–20% solution in glycerin. **P.phthalein.** (See Illus. Dict.) It is recommended as a purgative. Dose, 1½–4 gr. (0.1–0.2 gm.). Syn., *Purgo; Purgen*. **P. and Sodium Sulforicinate,** a yellow liquid consisting of synthetic carbolic acid, 20%, and sodium sulforicinate, 80%. It is used in 20% aqueous solutions in skin-diseases and in painting false diphtheric membranes, etc. **P. Sulforicinate,** a solution of phenol in sulforicinic acid, used in 20% solution in tuberculosis of the throat. **P. Trichlorid.** See *Trichlorphenol* (Illus. Dict.).

Phenolid (*fe'-nol-id*). A proprietary preparation said to be a mixture of acetanilid and sodium salicylate or sodium bicarbonate. Dose, 5–10 gr. (0.3–0.6 gm.).

Phenolin (*fe'-nol-in*). See *Cresin*.

Phenomenism (*fe-nom'-en-izm*) [*φαινόμενον*, that which is seen]. A belief in phenomena and a rejection of the idea of relation between cause and effect.

Phenomenist (*fe-nom'-en-ist*). One who advocates phenomenism.

Phenomenology (*fe-nom-en-ol'-o-je*). The science of phenomena.

Phenomenon. (See Illus. Dict.) **P., Aubert's,** an optical illusion by which, when the head is inclined to one side, a vertical line is made to appear oblique toward the opposite side. **P., Babinski's.** See *Reflex, Babinski's*. **P., Bell's.** See under *Signs and Symptoms*. **P., Bordet's.** See *Reaction, Pfeiffer's*, from which it differs only in the use of a small quantity of normal serum instead of fresh peritoneal fluid. **P., Brown's.** See *Pedesis* (Illus. Dict.). **P., Diaphragm.** See *Sign, Litten's*. **P., Erben's.** See under *Signs*. **P., Face.** See *Sign, Chvostek's*. **P., Great Toe.** See *Reflex, Babinski's*. **P., Kühne's Muscular.** See *P., Porret's* (Illus. Dict.). **P., Litten's.** See *Sign, Litten's*. **P., Osler's,** the agglutination of the blood-platelets observed in blood immediately after its withdrawal from the body. **P., Pfeiffer's.** See *Reaction, Pfeiffer's*, and *Bacteriolysis*. **P., Phrenic,** isolated, regular spasms of the left half of the diaphragm in tetanus; described as a pathognomonic sign by Solovier, 1902. **Phenomena of Raynaud.** See *Acroasphyxia* (Illus. Dict.). **P., Ritter-Rollet's,** flexion of the foot following the application of a mild galvanic current, and extension following that of a strong current. **P., Traube's.** See under *Signs*.

Phenophthalein (*fe-no-tha'-le-in*). See *Phenolphthalein* (Illus. Dict.).

Phenopyrin (*fe-no-pi'-rin*). See *Antipyrin Carbolate*.

Phenosal (*fe'-no-sal*). Phenetidin acetosalicylate; an antipyretic compound of 57% of phenacetin and 43% of salicylic acid, forming a white crystalline powder. It is indicated in acute articular rheumatism. Dose, 8 gr. (0.5 gm.) 2 to 6 times daily. Syn., *Paraphenetidin salicylacetic acid*.

Phenosalyl (*fe-no-sal'-il*). A thick syrupy liquid said to consist of carbolic acid, 8 gm.; salicylic acid, 1 gm.; lactic acid, 2 gm.; menthol, 0.1 gm., mixed with heat. It is an external antiseptic used in conjunctivitis in 0.2%–0.4% solution; in eczema, in 1% solution.

Phenosuccin (*fe-no-suk'-sin*). $C_6H_4(OC_2H_5)N(COCH_3)_2$. Colorless needles derived from para-amidophenol by action of succinic acid; insoluble in cold water, melting at 155° C.; antipyretic and antineuralgic. Dose, 15–45 gr. (1–3 gm.) daily. Syn., *Pyrantin*.

Phenosuccinate (*fe-no-suk'-sin-āt*). The sodium salt of phenosuccin, forming a white soluble powder. It is preferred to phenosuccin; dose, 7½–46 gr. (0.5–3 gm.).

Phenoxin (*fe-noks'-in*). A trade name for carbon tetrachlorid.

Phenoxycaffein (*fe-noks-e-kaf'-e-in*). $C_8H_9(OC_6H_5)N_4O_2$. A white crystalline powder, soluble in alcohol; melts at 142° C. It is anesthetic and narcotic; used subcutaneously in sciatica. Dose, 4 gr. (0.26 gm.).

Phenyl. (See Illus. Dict.) **P.acetamid.** See *Acetanilid* (Illus. Dict.). **P.acetylchlorid,** C_8H_7OCl, a colorless, fuming liquid. **P.alanin,** phenylamidopropionic acid, $C_8H_{11}NO_2$(?), a product of the putrefaction of proteids and, according to Nencki, a constituent of the proteid molecule. **P.-anilin.** See *Diphenylamin* (Illus. Dict.). **P. Benzamid.** See *Benzanilid* (Illus. Dict). **P. Benzene.** See *Diphenyl* (Illus. Dict.). **P. Benzoate,** $C_6H_5OC_7H_7$, prismatic crystals soluble in alcohol and ether, boils at 314° C. Syn., *Benzophenid; Phenol benzoate; Benzocarbolic acid.* **P.-benzoyl-carbinol** See *Benzoin* (2). **P.-chinaldin.** See *P.-quinaldin.* **P.-chinolin.** See *P.-quinolin.* **P. Chlorid.** See *Benzene, Monochlorated.* **P. Chloroform,** $C_6H_5 . CCl_3$, a liquid with penetrating odor. **P.-cocain,** a local anesthetic, used in dentistry, prepared by heating a mixture of carbolic acid, 1 part, and cocain, 2 parts. **P. Cyanid.** See *Benzonitrite* (Illus. Dict.). **P.-dihydrochinazolin.** See *Orexin* (Illus. Dict.). **P.-dihydronaphthalene.** See *Atronol.* **P.dimethylpyrazolon,** antipyrin. **P.-diphenylcarbinol.** See *Benzaurin.* **P.ethylamin,** $C_8H_{11}N$, a base obtained by decomposition of phenyl-*a*-amido-propionic acid. **P.ethylcarbamate.** See *Euphorin* or *P. Urethane* (Illus. Dict.). **P.-formamid.** See *Formanilid* (Illus. Dict.). **P. Glycolate.** See *Antipyrin Mendelate.* **P.-glycolphenetidin, P.-glycolylphenetidin.** See *Amygdophenin.* **P. Hydrate,** carbolic acid. **P.hydrazinacetylethyl.** See *Acetylethylphenylhydrazin.* **P.hydroxylamin,** C_6H_5NHOH, a product of nitrobenzol by reduction with tin; a very active blood-poison. **P.-hydroxypropylmethylamin.** See *Ephedrin, Pseudo-.* **P.methyl.** See *Benzyl* (Illus. Dict.). **P.methylacetone.** See *Acetophenone* (Illus. Dict.). **P.methylketon.** See *Acetophenone* (Illus. Dict.). **P.methylpyrazol,** $C_{10}H_{10}NO_2$, obtained from phenylhydrazin by action of acetoacetic ether forming white crystalline powder or prisms soluble in alcohol or hot water; melts at 127° C. **P.-quinaldin,** $C_9H_5(C_6H_5)N$, an antiperiodic said to be prepared by the action of hydrochloric acid on a mixture of anilin, acetophenone, and aldehyd. Dose, 1½–3 gr. (0.1–0.2 gm.). It is used externally as a local irritant. **P.quinolin,** a derivative of quinolin by the entrance of the phenyl groups into its pyridin molecule. It is more active than quinin. **P.sulfocarbamid, P.thiocarbamid, P.thiourea,** $C_7H_8N_2S$, obtained from phenyl mustard oil by action of ammonia forming colorless needles with bitter taste, soluble in alcohol, melts at 54° C. **P. Sulfochlorid.** See *Benzene-sulfo-chlorid.*

Phenylate (*fe′-nil-āt*). A carbolate.

Phenylon (*fe′-nil-on*). Antipyrin.

Phera [bursting of abscess]. East Indian vernacular for trypanosomiasis (*q. v.*).

Phesin (*fe′-sin*). $C_6H_3 . O . C_2H_5SO_3Na . NH . CO . CH_3$. A proprietary sulfo-derivative of phenacetin; an odorless, amorphous, grayish-red powder with slightly saline taste, soluble in water. It is antipyretic. Dose, 8–15 gr. (0.5–1 gm.).

Pheta [E. Ind. fatal]. Vernacular for trypanosomiasis (*q. v.*).

Phetra [abscess]. East Indian vernacular for trypanosomiasis (*q. v.*).

Phidippus (*fi-dip′-us*) [φειδιππίδης, an Athenian courier]. A genus of jumping spiders of the family *Attidæ*. **P. morsitans,** Walckenaer, a European species to which venomous properties are attributed.

Phillyrea (*fil-ir′-e-ah*) [φιλύρα, the linden tree, from the similarity of the leaves]. A genus of the *Oleaceæ*. **P. latifolia,** L., the stone linden of southern Europe; the leaves are diuretic and emmenagog and are used in ulcerations of the mouth. It contains phyllirin.

Phillyrin (*fil′-i-rin*). $C_{27}H_{34}O_{11} + H_2O$. A crystalline glucosid found in the bark and leaves of the stone lindens, *Phillyrea latifolia*, L., *P. angustifolia*, L., and *P. media*, L., by Carboncini (1836). It has a slightly bitter taste and is soluble in hot water and alcohol. On heating with dilute hydrochloric acid it splits into glucose and phillygenin, $C_{21}H_{24}O_6$. It is antimalarial.

Philocytase (*fil-o-si′-tās*) [φιλεῖν, to love; κύτος, a cell]. Metchnikoff's name for the intermediary body of Ehrlich.

Philoprogenitiveness (*fil-o-pro-jen′-it-iv-nes*) [φιλεῖν, to love; πρό, before; γεννᾶν, to produce]. Spurzheim's term for love of progeny; the instinctive love of young.

Philosaprotic (*fil-o-sap-rot′-ik*). See *Saprophytic* (Illus. Dict.).

Philothion (*fil-o-thi′-on*) [φιλεῖν, to love; θεῖον, sulfur]. A body isolated by de Ray-Pailhade from yeast and from animal tissue; apparently a combination of hydrogen with a hypothetic radicle and having the property of developing sulfureted hydrogen from finely divided sulfur.

Philozoist(*fil-o-zo′-ist*) [φιλεῖν, to love; ζῶον, animal]. A person specially fond of animals; an antivivisectionist.

Philyrin (*fil′-i-rin*). See *Phillyrin.*

Phimosiotomy (*fi-mo-se-ot′-o-me*). See *Phimosientomy* (Illus. Dict.).

Phimosis. (See Illus. Dict.) Syn., *Ligatura glandis.* **P. adnata, P. puerilis,** congenital phimosis. **P. circumligata.** See *Paraphimosis* (Illus. Dict.). **P. œdematodes,** phimosis with edema of the prepuce. Syn., *Hydrophimosis.*

Phimotic (*fi-mot′-ik*). Relating to phimosis.

Phisiotherapy (*fiz-e-o-ther′-ap-e*) [φύσις, nature; θεραπεία, therapy]. The application of natural remedies, air, water, sunlight, etc., in the treatment of disease.

Phitgaya [burst]. East Indian vernacular for trypanosomiasis.

Phlebitis. (See Illus. Dict.) **P. nodularis necrotisans,** a form marked by inflammatory spots on the skin becoming necrotic in the center and forming ulcers which spread peripherally. **P. umbilicalis,** inflammation of the umbilical vein in a new-born child, due to sepsis.

Phlebopexy (*fleb′-o-peks-e*) [φλέψ, a vein; πῆξις, a fixing in]. Longuet's term for the preservation of the venous reticulum which results from the extraserous transplantation of the testicle in cases of varicocele. Cf. *Orchidopexy; Scrotopexy; Vaginopexy; Operation, Longuet's.*

Phlebotomy. (See Illus. Dict.) 2. Dissection of the veins.

Phlegmasia. (See Illus. Dict.) **P. adenosa.** See *Adenitis* (Illus. Dict.). **P. cellularis,** cellulitis. **P. glandulosa,** adenitis. **P. lactea.** See *P. alba dolens* (Illus. Dict.). **P. membranæ mucosæ gastropulmonalis.** See *Aphthæ tropicæ.* **P. myoica,** myositis.

Phlegmatopyra (*fleg-mat-o-pi′-rah*). See *Fever, Adenomeningeal.*

Phlegmon. (See Illus. Dict.) **P., Dupuytren's,** unilateral phlegmonous suppuration occupying the anterolateral portion of the neck. **P., Gas,** a phlegmon in which more or less offensive gas is formed with the pus and escapes on incision. **P., Ileac** [Mayor, 1893], sigmoiditis with extension of the inflammation to the peritoneum and the adjacent pericolic cellular tissue. **P. ligneux,** a peculiar form of chronic inflammation of

the skin and subcutaneous tissue marked by a slow clinical course and a wooden consistency. It occurs most frequently on the neck. Ger., *Holzphlegmon.* **P., Parametric,** acute parametritis with well-defined swelling. **P., Perihernious,** Nicoladoni's term (1875) for inflammation of the subserous cell-tissue of a hernial sac. **P., Perinephritic,** perinephritis. **P., Peri-uterine,** an acute perimetritis with well-defined swelling. **P., Simple,** that in which the inflammation is not of a malignant type and is circumscribed. **P., Sublingual,** Ludwig's angina.

Phlegmonodœa (*fleg-mon-o-de'-ah*) [φλεγμονή, inflammation]. A division of idiopathic enteritis according to Cullen (1820). The term is applicable to peritonitis alone. Cf. *Erythematica.*

Phlogogen, Phlogogon (*flo'-go-jen, flo'-go-gon*) [φλόγωσις, inflammation; γεννᾶν, to produce]. Any substance having the property of exciting inflammation in a tissue with which it comes in contact; an irritant.

Phlogogenetic (*flo-go-jen-et'-ik*). See *Phlogogen.*

Phlogoid (*flo'-goid*). Inflammatory in appearance.

Phlogosed (*flo'-gōsd*). Inflamed.

Phlogozelotism. (See Illus. Dict.) **2.** See *Phlebotomania* (Illus. Dict.).

Phlogourgia (*flo-go-ur'-je-ah*). See *Phlogochymia* (Illus. Dict.).

Phloroglucinol. (See Illus. Dict.) **2.** A solution consisting of 2 grams of phloroglucin dissolved in 25 c.c. spirits of wine and having 5 c.c. of hydrochloric acid added to it; it is used in testing for cellulose, which is colored immediately magenta red when moistened by it.

Phloxol (*floks'-ol*). A hydrocarbon found by Trimble in the root of *Phlox ovata,* L.

Phobia (*fo'-be-ah*) [φόβος, fear]. Any obsession of fear characteristic of insanity. Cf. *Claustrophobia, Aichmophobia,* etc.

Phobiferous (*fo-bif'-ur-us*) [φόβη, a lock of hair; φέρειν, to bear]. Furnished with a mane or with thick hairs on the dorsal surface of the thorax.

Phœnicein (*fe-nis'-e-in*) [φοίνιξ, purple-red]. A coloring-matter found in *Copaifera bracteata,* Benth., a leguminous plant of South America.

Phœnix (*fe'-niks*) [φοίνιξ, the palm]. A genus of palms, *Palmæ.* **P. dactylifera,** the date palm of Arabia and Africa and widely cultivated elsewhere. The leaf buds, fruit, and seeds are eaten, the sap furnishes palm wine, the unripe fruit is used as an astringent and galactafuge, and the fruit juice made into a syrup as an expectorant. **P. reclinata,** Jacq., of South Africa, furnishes sago. **P. silvestris,** Roxb., the wild date tree, an Asiatic species, furnishes date sugar and a gum, kharjura. The clusters of male flowers are used for the fertilization (palmification) of the cultivated dates.

Phœnixin (*fe-niks'-in.*). Carbon tetrachlorid.

Phœnixis. See *Phenixis* (Illus. Dict.).

Pholidote (*fol'-id-ōt*) [φολιδωτός, clad with scales]. Scaly, covered with scales.

Phonendoscope (*fo-nen'-do-skōp*) [φωνή, a sound; ἐνδον, within; σκοπεῖν, to view]. A variety of stethoscope invented by Bianchi that intensifies the auscultatory sounds.

Phonendoscopy (*fo-nen-dos'-ko-pe*). Examination by means of a phonendoscope.

Phonomassage (*fo-no-mas-ahzh'*) [φωνή, a sound; *massage*]. Action upon the tympanum by sound vibrations conducted into the auditory canal.

Phononeumomassage (*fo-no-nu-mo-mas-ahzh'*) [φῶνή, sound; πνεῦμα, air; *massage*]. The exercise of the muscles, ligaments, and articulating surfaces of the inner ear by means of an electric apparatus.

Phonoscope (*fo'-no-skōp*) [φωνή, a sound; σκοπεῖν, to examine]. A form of stethoscope invented by Ladendorf and Stein for intensifying the tone in auscultation. Cf. *Phonendoscope.*

Phoria (*fo'-re-ah*) [φορός, tending]. A colloquialism used to represent one or more of the terms, orthophoria, heterophoria, exophoria, esophoria, hyperphoria, etc.

Phorometria, Phorometry (*for-o-met'-re-ah, for-om'-et-re*) [φορά, motion; μέτρον, measure]. The measurement of motion.

Phorooptometer (*for-o-op-tom'-et-ur*) [φορά, motion; ὀπτός, visible; μέτρον, measure]. An apparatus devised by J. F. Herbert and C. A. Oliver for optical testing of muscular defects. It consists of a trial-frame, Stevens phorometer, Risley rotating prism, and Maddox multiple rod with red glass, the whole mounted on an adjustable swinging arm.

Phorotone (*for'-o-tōn*) [φορά, motion; τόνος, strength]. An apparatus for exercising the eye muscles.

Phose (*fōs*) [φῶς, light]. A subjective sensation of light or color, *e. g.,* scotoma scintillans. **Aphose,** a subjective sensation of shadow or darkness, *e. g.,* muscæ volitantes. **Centraphose,** an aphose originating in the optic centers. **Centrophose,** a phose originating in the optic centers. **Chromophose,** a subjective sensation of color. **Peripheraphose,** a peripheral aphose. **Peripherophose,** a phose originating in the peripheral organs of vision (the optic nerve or eyeball). **P.s, Bowditch's,** when the eye is turned toward a surface brightly illuminated, as the sky, a sheet of white paper on which the sun shines, etc., the field of vision is filled with bright moving bodies, due to reflections from the corpuscles of the retinal capillaries and varying in appearance according to illumination, method of observation, etc. Syn., *Norton's aphoses.*

Phosgenic (*fos-jen'-ik*). See *Photogenic* (Illus. Dict.).

Phosis (*fo'-sis*). The formation of a phose.

Phosote (*fo'-sōt*). A syrupy liquid, almost without odor or taste, consisting of creasote, 80%, and phosphoric anhydrid, 20%. Dose, 2 c.c. daily.

Phosphatol (*fos'-fat-ol*). A thick reddish-yellow liquid obtained by action of phosphorous trichlorid on creasote in an alcoholic solution of soda. It has a burning taste, boils at 140° C., contains 90% of creasote, and is soluble in alcohol and oils; used in tuberculosis.

Phosphatoptosis (*fos-fāt-o-to'-sis*) [*phosphate;* πτῶσις, a fall]. Spontaneous precipitation of phosphates in the urine.

Phosphergot (*fos-fur'-got*). A mixture of sodium phosphate and ergot of which there are various modifications. It is indicated in general debility.

Phospherrin (*fos-fer'-in*). A mixture said to consist of ferric chlorid, phosphoric acid, and glycerin.

Phosphogenic (*fos-fo-jen'-ik*). See *Phosphorogenic* (Illus. Dict.).

Phosphoglycoproteids (*fos-fo-gli-ko-pro'-te-ids*). The same as *Nucleoalbumins.*

Phosphoguaicol (*fos-fo-gwi'-ak-ol*). See *Guaiacol Phosphite.*

Phosphology (*fos-fol'-o-je*) [*phosphorus;* λόγος, science]. The science of phosphorus and its compounds, the effect upon the animal economy, etc.

Phosphonecrosis, Phosphornecrosis (*fos-fo-ne-kro'-sis, fos-for-ne-kro'-sis*). See under *Phosphorus* (Illus. Dict.).

Phosphoric. (See Illus. Dict.) **2.** Containing phosphorus as a quinquivalent body.

Phosphoroscope (*fos-for'-o-skōp*) [φωσφόρος, bringing light; σκοπεῖν, to examine]. Becquerel's instrument

for comparative estimation of the degree of phosphorescence in solids, liquids, and gases.

Phosphorous (*fos'-for-us*). Containing phosphorus as a trivalent radicle.

Phosphotal (*fos'-fōt-al*). Creasote phosphite. See *Phosphatol.*

Phosphovinate (*fos-fo'-vin-āt*). A salt of phosphovinic acid.

Phossy Mouth. See *Jaw, Phossy.*

Photе (*fōt*) [φῶς, light]. The unit of photochemic energy employed in connection with determination of the solidity of colors to average solar light at noon.

Photic (*fo'-tik*) [φῶς, light]. Relating to light.

Photobacterium (*fo-to-bak-te're-um*). See *Bacteria, Table of* (Illus. Dict.).

Photochromoscope (*fo-to-kro'-mo-skōp*) [φῶς, light; χρῶμα, color; σκοπεῖν, to view]. An apparatus for exhibiting photographs reproducing the natural colors of the objects. Cf. *Kromskop.*

Photoelectricity (*fo-to-e-lek-tris'-it-e*). Electricity produced by the decomposition of the element of a galvanic battery by action of light.

Photoelement (*fo-to-el'-e-ment*). The element of a galvanic battery which by decomposition gives photoelectricity.

Photofluoroscope (*fo-to-flu'-o-ro-skōp*). See *Fluoroscope.*

Photogenesis (*fo-to-jen'-e-sis*) [φῶς, light; γεννᾶν, to produce]. The production of light or of phosphorescence.

Photogenic (*fo-to-jen'-ik*) [φῶς, light; γεννᾶν, producing]. Light-producing; applied to phosphorescent organisms.

Photographometer (*fo-to-graf-om'-et-ur*). A device used with a camera to estimate the amount of a deformity. Cf. *Scoliosometer; Goniometer.*

Photography. (See Illus. Dict.) **P., New, P., X-ray.** See *Skiagraphy.*

Photolyte (*fo'-to-līt*) [φῶς, light; λύειν, to loose]. Any substance which decomposes by action of light.

Photomechanical (*fo-to-me-kan'-ik-al*). Mechanical and due to the action of light.

Photometry (*fo-tom'-et-re*) [φῶς, light; μέτρον, measure]. The measurement of the intensity of light.

Photopathy (*fo-top'-ath-e*) [φῶς, light; πάθος, a passive state]. A term proposed by Holmes (1901) as the antonym of phototaxis.

Photophilic (*fo-to-fil'-ik*) [φῶς, light; φιλεῖν, to love]. Seeking or loving light.

Photophylia (*fo-to-fil'-e-ah*) [φῶς, light; φῖλία, love]. Fondness of light.

Photoptic (*fo-top'-tik*) [φῶς, light; ὀπτικός, pertaining to sight]. Relating to photopsia.

Photoscope (*fo-to-skōp*) [φῶς, light; σκοπεῖν, to view]. 1. A fluoroscope. 2. An instrument used in inspecting the antrum of Highmore as regards the translucency of its walls.

Photo-shootur. The native Indian name for a disease similar to vaccinia, affecting the udder of the camel. It is communicated to those milking the camels.

Photoskioptic (*fo-to-ski-op'-tik*) [φῶς, light; σκία, shadow; ὀπτικός, pertaining to sight]. Skiagraphic.

Photosyntax (*fo-to-sin'-taks*) [φῶς, light; συντάσσειν, to arrange]. See *Phytosyntax.*

Photosynthesis (*fo-to-sin'-the-sis*) [φῶς, light; σύνθεσις, putting together]. The building up of an organic compound by the action of light through the agency of chlorophyll, considered to be due to a soluble ferment, the chlorophyll acting simply as a chemical screen or sensibilizer.

Phototachometer (*fo-to-tak-om'-et-ur*) [φῶς, light; τάχος, speed; μέτρον, measure]. An apparatus for determining the velocity of light rays.

Phototherapy (*fo-to-ther'-ap-e*) [φῶς, light; θεραπεία, therapy]. 1. See *Phototherapeutics* (Illus. Dict.). 2. The application of the concentrated chemic rays of light (violet and ultra-violet rays) in the treatment of skin-diseases; introduced by Finsen. Syn., *Actinotherapy; Leucotherapy; Leukotherapy.* 3. The treatment of smallpox by red light. Cf. *Radiotherapy.*

Photra (*fo'-trah*) [abscess]. East Indian vernacular for trypanosomiasis.

Phoxocheilous (*foks-o-ki'-lus*) [φοξός, pointed; χεῖλος, a lip]. Having pointed lips.

Phragmatic (*frag-mat'-ik*) [φραγμός, a fence]. Inclosed, shut in; applied to cattle subject to colic.

Phragmidiothrix (*frag-mid'-i-o-thriks*) [φραγμός, a fence; θρίξ, hair]. A genus of bacteria belonging to the *Chlamidobacteriaceæ;* filaments unbranched; divisions in three directions; sheath scarcely visible. Cf. *Leptothrix; Cladothrix; Crenothrix.*

Phragmos, Phragmus (*frag'-mos, -mus*) [φραγμός, a fence]. The entire dentition encircling the mouth as with a fence.

Phren [pl. *phrenes*]. (See Illus. Dict.) 3. The epigastrium. **Phrenes.** 1. The præcordia. 2. The diaphragm.

Phrenalgia. (See Illus. Dict.) 3. Neuralgia of the diaphragm. **P. sine delirio.** See *Hypomelancholia* and *Melancholia, Simple* (Illus. Dict.).

Phrenasthenic (*fren-as-then'-ik*) [φρήν, mind; *asthenia*]. 1. Relating to phrenasthenia; idiotic, imbecile. 2. A feeble-minded person.

Phrenauxe (*fren-awks'-e*) [φρήν, mind; αὔξη, enlargement]. Hypertrophy of the substance of the brain.

Phrenetiasis (*fren-e-ti-a'-sis*). See *Phrenitis* (Illus. Dict.).

Phrenitic. (See Illus. Dict.) 2. Relating to the mind.

Phrenohepatic (*fren-o-hep-at'-ik*) [φρήν, diaphragm; ἧπαρ, liver]. Pertaining to the diaphragm and the liver.

Phrenoparalysis (*fren-o-par-al'-e-sis*). See *Phrenoplegia.*

Phrenopathy (*fren-op'-ath-e*) [φρήν, mind; πάθος disease]. Metaphysical healing.

Phrenoplegia. (See Illus. Dict.) 2. Paralysis of the diaphragm.

Phrenopneumonitis (*fren-o-nu-mon-i'-tis*). A. Hester's name for pneumonia associated with meningitis.

Phrenorthosis (*fren-or-tho'-sis*). See *Orthophrenia* (Illus. Dict.).

Phrynolysin (*frin-ol'-is-in*) [φρύνη, a toad; λύειν, to loose]. A substance extracted by Prōscher from the skins of toads by action of salt solution; it has the action of a toxin, is hemolytic for the blood of various animals, and is destroyed by digestive ferments, by alkalis or by heating to 50° C. Cf. *Bufonin; Bufotalin; Bufotenin.*

Phthalic (*thal'-ik*). Pertaining to or derived from naphthalene.

Phthinoid (*thi'-noid*) [φθίνειν, to waste; εἶδος, likeness]. Having a tuberculous character, *e. g.*, phthinoid bronchitis.

Phthiriasis. (See Illus. Dict.) **P. ciliorum,** an affection of the margin of the eyelid due to the presence of *Pediculus pubis* in the lashes. Syn., *Blepharitis pediculosa.*

Phthiriophagous (*thi-ri-of'-a-gus*) [φθείρ, a louse; φαγεῖν, to devour]. Subsisting on lice.

Phthisicotherapy (*tiz-ik-o-ther'-ap-e*). See *Phthisiotherapy.*

Phthisin (*tiz'-in*). A proprietary preparation of the bronchial glands of animals; used in diseases of the lungs.

Phthisiotherapy (*tiz-e-o-ther'-ap-e*) [φθισικός, consumptive; θεραπεία, therapy]. Therapeutic measures for the cure of pulmonary tuberculosis.

Phyllobiology (*fil-o-bi-ol'-o-je*) [φύλλον, a leaf; *biology*]. The science of biologic phenomena associated with leaves of deciduous plants.

Phyllyrin. See *Phillyrin.*

Physaliphorous (*fis-al-if'-or-us*) [φυσαλλίς, a bladder; φέρειν to bear]. Furnished with vesicles or bladders; relating to or containing physaliphores.

Physalis alkekengi. (See Illus. Dict.) The fruit is aperient, diuretic, and febrifugal. Dose, 6–12 berries or 1 oz. of expressed juice.

Physicist. (See Illus. Dict.) 2. One versed in physics.

Physiergic (*fiz-e-ur'-jik*) [φύσις, nature; ἐργον, work]. Relating to, due to, or acted upon by the forces of nature.

Physiobathmism (*fiz-e-o-bath'-mizm*) [φύσις, nature; βαθός, a threshold]. E. D. Cope's word for inherited growth energy which has been interfered with by physical energy.

Physiocratia (*fiz-e-o-kra'-she-ah*). See *Physiautocracy* (Illus. Dict.).

Physiopathology (*fiz-e-o-path-ol'-o-je*). The study of function as affected by disease.

Physiotherapy (*fiz-e-o-ther'-ap-e*). See *Physiautotherapia* (Illus. Dict.).

Physis (*fiz'-is*) [φύσις, nature]. One of the names applied to the *vis vitæ* or vital principle. Cf. *Psyche, Pneuma, Thermon.*

Physopathists (*fiz-op'-ath-ists*) [φύσις, nature; πάθος, disease]. A designation adopted by the botanic physicians of New England about 1852.

Physostigminism (*fi-sos-tig'-min-izm*). Poisoning by physostigmin; marked by gastralgia, vertigo, myasthenia, disordered vision with miosis, and in severe cases with a condition resembling paralysis. Syn., *Eserism.*

Phytanatomy (*fi-tan-at'-o-me*) [φυτόν, a plant; *anatomy*]. Vegetable anatomy.

Phytelephas (*fi-tel'-e-fas*) [φυτόν, plant; ἐλεφας, elephant]. A genus of palms. **P. macrocarpa,** R. et P., a South American species, the negrito palm. The unripe seeds and the fruit are used in making liquors, the leaf buds are eaten and the ripe seeds, Tagud nuts, constitute vegetable ivory, introduced into commerce about 1826.

Phytiphagous (*fi-tif'-ag-us*). See *Phytophagous* (Illus. Dict.).

Phytogenous (*fi-toj'-en-us*) [φυτόν, plant; γεννᾶν, to produce]. Of vegetable origin.

Phytolacca. (See Illus. Dict.) 2. A genus of plants of the order *Phytolaccaceæ.* **P. acinosa,** Roxb., an Asiatic species, has been used long in Japan as a diuretic.

Phytolaccotoxin (*fi-to-lak-o-toks'-in*). An amorphous resin, acting as a spinal convulsant, found in *Phytolacca acinosa,* Roxb.

Phytolin (*fi'-tol-in*). A proprietary liquid said to be prepared from berries of *Phytolacca decandra,* L.; used in obesity. Dose, 10 drops one half-hour before and one hour after meals.

Phytomelin (*fi-tom'-el-in*). See *Rutin* (Illus. Dict.).

Phytopathogenic (*fi-to-path-o-jen'-ik*) [φυτόν, plant; πάθος, disease; γεννᾶν, to produce]. Causing disease in plants.

Phytopsyche (*fi-to-si'-ke*) [φυτόν, plant; ψυχή, soul]. The plant soul; according to Haeckel, it is the summary of the entire psychic activity of the tissue-forming multicellular plant.

Phytosyntax (*fi-to-sin'-taks*) [φυτόν, plant; συντάσσειν, to put together]. A term introduced by Barnes to designate the process of formation of complex carbon compounds out of simple ones under the influence of light. Cf. *Photosynthesis.*

Pian-bois. A disease common to the forest regions of Guiana. It is characterized by circumscribed tumefactions of the skin, particularly of the legs; they give rise to crateriform ulcers; there is severe pain in the legs and enlargement of the inguinal glands. The disease is distinct from pian proper or frambesia.

Piazza's Fluid. Sodium chlorid and ferric chlorid each 1 gm., water 4 c.c. It is used as a means of coagulating blood.

Picardy-sweat. See *Fever, Miliary* (Illus. Dict.).

Picein (*pi'-se-in*) [*picea,* the pitch pine]. $C_{14}H_{18}O_7 \cdot H_2O$. A glucosid isolated by Tanret from the leaves of the Norway spruce, *Picea excelsa,* Link.

Piceol (*pi'-se-ol*). A decomposition-product of picein, by action of emulsin.

Pichurim Beans (*pe-chu'-rim*). The seeds of *Nectandra pichury-major* and *N. pichury-minor* (*q. v.*). **P. Camphor.** See under *Camphor.* **P. Fat,** the fatty oil from pichurim beans.

Pickeridge (*pik'-ur-idj*). See *Warbles* (Illus. Dict.).

Pick's Preserving Fluid. See under *Stains, Pick's Method.*

Picnometer. See *Pycnometer* (Illus. Dict.).

Picote (*pe-kot'*) [Fr.]. Smallpox.

Picræna (*pik-re'-nah*) [πικρός, bitter]. A genus of the *Simarubeæ* indigenous to the West Indies. **P. excelsa,** bitter ash, Jamaica quassia, picræna wood, furnishes Jamaica-quassia. **P. vellozii,** Engl., quina quassia, a Brazilian species; the bark is used in dyspepsia and in intermittent fever. It or a nearly allied species furnishes cascara amarga and contains the alkaloid picrasmin.

Picramin (*pik-ram'-in*). Berzelius' name for amarin (*q. v.*).

Picramnia (*pik-ram'-ne-ah*) [πικρός, bitter]. A genus of the *Simarubeæ.* **P. pentandra,** Sw., a West Indian species called macary-bitter, majo-bitter tree, is a bitter tonic. The bark of the root and stem (Honduras bark) is used in colic, syphilis, and cholera.

Picrasma (*pik-raz'-mah*) [πικρός, bitter]. A genus of the *Simarubeæ.* The bark of **P. javanica,** Bl., of Java, and of **P. quassoides,** Benn., of India, is used as an antipyretic, the wood as a substitute for quassia; the last contains quassiin.

Picrasmin (*pik-raz'-min*). $C_{35}H_{46}O_{10}$. A crystalline alkaloid contained in *Picræna vellozii,* Eng.

Picratol (*pik'-rat-ol*). See *Silver trinitrophenolate.*

Picroadonidin (*pik-ro-ad-on'-id-in*). A name given by Podwyssotski to the active principle of *Adonis vernalis,* L., described by him as an intensely bitter, amorphous glucosid and powerful cardiac poison.

Picroanilin (*pik-ro-an'-il-in*). A histologic stain consisting of a mixture of saturated solutions of picric acid and anilin blue.

Picrocrocin (*pik-ro-kro'-sin*). $C_{38}H_{66}O_{17}$. A bitter glucosid extracted by Kayser from saffron (the stigmas of *Crocus sativa,* L.), forming colorless prisms soluble in water and alcohol, melting at 75° C. By action of dilute acids or baryta water it splits into crocose and a terpene.

Picroformal (*pik-ro-form'-al*). A fixing agent consisting of a mixture of a saturated solution of picric acid and a 6% aqueous solution of formal.

Picrol (*pik'-rol*). $C_6HI_2(OH)_2SO_3K$. A white, odorless, crystalline powder containing 52% of iodin; soluble in alcohol and ether; used as a wound antiseptic. Syn., *Potassium diiodoresorcinmonosulfate.*

Picronigrosin (*pik-ro-ni'-gro-sin*). A stain consisting of picric acid and nigrosin in alcohol.

Picropyrin (*pik-ro-pi'-rin*). A derivative of picric

acid and antipyrin occurring in yellow inflammable needles.

Picrorhiza (*pik-ro-ri'-zah*) [πικρός, bitter; ῥίζα, root]. A genus of the *Scrophularineæ*. **P. kurroa,** Royle, indigenous to northern India, is called there kutki, kurroe, kali-kutki, and kutaki. The bitter root is in high repute as a tonic and antiperiodic, and contains cathartic acid and picrorrhizin.

Picrotoxinism (*pik-ro-toks'-in-izm*). Poisoning by picrotoxin; characterized by spasms of an epileptiform nature or resembling tetanus, followed by loss of consciousness and coma.

Picryl (*pik'-ril*). The radicle of picric acid.

Piesimeter, Piesmeter. See *Piesometer*.

Piesometer. (See Illus. Dict.) 2. An apparatus for testing the sensitiveness of the skin to pressure. Syn., *Piesmeter; Piesimeter*.

Pigment. (See Illus. Dict.) **Acid Fuchsin,** produced by the action of sulfuric acid at 120° C. upon rosanilin. Syn., *Rosanilin sulfonic acid; Fuchsin S.* **Aldehyd-blue,** a blue pigment obtained by action of aldehyd on a solution of rosanilin in sulfuric acid. **Alizarin-blue Green,** a product of alizarin-blue and sulfuric acid. **Alizarin-bordeaux,** $C_{14}H_4O_2$–1, 2, 5, 8, –$(OH)_4$, obtained by heating oxyanthraquinon with fuming sulfuric acid. Syn., *Quinalizarin.* **Alizarin-green,** a pigment obtained from alizarin blue by action of sulfuric acid. **Alizarin-indigo Blue,** a pigment obtained from alizarin blue by treating with sulfuric acid. **Alizarin-yellow A,** a dyestuff prepared from benzoic acid and pyrogallol; it melts at 140° C. **Amethyst,** a violet dyestuff obtained from phenosafranin. **Anilin Blue-black,** a preparation of the oxy-azo series (azoschwarz). It is employed as a histologic stain. **Azo-black,** any black dye resulting from union of azonaphthalenediazosulfonic acid with naphtholmonosulfonic acid; *e.g., naphthol black.* **Bitter Almond-oil Green.** See *Malachite Green* in *Conspectus of Pigments* (Illus. Dict.). **Blue-black, B.** See *Anilin Blue-black.* **Catechin-red,** a red substance obtained with catechin as a deposit from a solution of catechu in boiling water. **Cholera-blue,** a color base obtained from cholera-red by dissolving it in concentrated sulfuric acid and then neutralizing with caustic soda. **Cholera-red,** a color base found in cultures of cholera bacilli which give upon addition of mineral acids a beautiful violet color. On rendering the solution alkaline and shaking it with benzol, the cholera-red is obtained in brownish-red lamellas. Distillation of cholera-red with zinc dust gives indol. **Friesland-green.** See *Brunswick Green* in *Conspectus of Pigments* (Illus. Dict.). **Morin blanc** (Chevreul). See *Morin* (Illus. Dict.). **Morin jaune** (Chevreul). See *Maclurin* (Illus. Dict.). **Thénard's Blue,** a pigment consisting of alumina colored with an oxid or phosphate of cobalt. Syn., *Cobalt ultramarine.* **Victoria-blue,** $C_{33}H_{11}N_3HCl$, a blue coloring-matter occurring in crystalline grains of a shining bronze color soluble in hot water and alcohol. Syn., *Night blue; Phenyltramethyl triamido-a-naphtyl-diphenylcarbinol hydrochlorate.*

Pigmentodermia (*pig-ment-o-dur'-me-ah*). See *Chromodermatosis* (Illus. Dict.).

Pigmentophage (*pig-ment'-o-fāj*) [*pigment*; φάγειν, to eat]. Metchnikoff's name for a phagocyte which destroys the pigment of hairs and thus produces grayness.

Pikrocrocin. See *Picrocrocin*.

Pila (*pi'-lah*) [L.]. A ball. **Pilæ damarum** [*dama*, a fallow deer]. See *Ægagropilus* (Illus. Dict.).

Pilaf, Pilau, Pilaw (*pi'-laf, pi'-law*) [N. Gr. πιλάκι; Ital. *risotto*). A dish consisting of rice stewed with meat, variously flavored; the favorite national dish of Turkey and used throughout the Orient.

Pilation (*pi-la'-shun*). See *Fracture, Capillary* (Illus. Dict.).

Pile. (See Illus. Dict.) **P., Prostatic,** a condition of enlarged prostate in which hemorrhage results. **P., Thermoelectric,** a battery in which an electric current is generated on heating the bars of two kinds of metal soldered together, of which the pile consists. An index registering the exact degree of heat is moved by the current.

Pileum. (See Illus. Dict.) 2. A lobe of the cerebellum lying between the vermis and the paraflocculus. Its relation to the peduncle is like that of a cap. [Stroud.]

Pilgrim's Diarrhea. See under *Diarrhea*.

Piliganin (*pi-lig'-an-in*). $C_{15}H_{24}N_2O$(?). An alkaloid obtained by Adrian from piligan, *Lycopodium saussurus*, Lam., occurring as a yellow, transparent mass soluble in water, alcohol, or chloroform. It is emetic, cathartic, drastic, anthelmintic, antispasmic. Dose, 1/6–1/3 gr. (0.01–0.02 gm.). The hydrochlorate is used in the same way.

Pilin (*pi'-lin*). A proprietary cosmetic said to be 60% alcohol, perfumed and colored and containing benzoic acid.

Pillar. (See Illus. Dict.) **P.s, Muscular,** the muscle columns. **P.s, Uskow's,** in the embryo, two folds or ridges which grow from the dorsolateral region of the body-wall and unite with the septum transversum to form the diaphragm. **P.s of velum pendulum palati,** the pillars of the fauces.

Pilocarpidin (*pil-o-kar'-pid-in*). An alkaloid from jaborandi similar in physiologic effect to pilocarpin but weaker.

Pilocarpin, Pilocarpina. (See Illus. Dict.) **P. Borate,** $(C_{11}H_{16}N_2O_2)_2B_4O_7$, white lumps, soluble in water and alcohol; diaphoretic, myotic, and sialagog. Dose, 1/8–1/3 gr. (0.008–0.02 gm.). **P. Hydrobromate,** $C_{11}H_{16}N_2O_2$. HBr, white crystals soluble in water, alcohol, or chloroform. Dose, 1/6–1/4 gr. (0.008–0.16 gm.) in water. **P. physostigmin.** See *Eserinpilocarpin.* **P. Tannate,** a grayish-white powder used as a sialagog, myotic, and diaphoretic. Dose, 1/8–1/4 gr. (0.008–0.016 gm.). **P. Valerianate,** white crystals soluble in water used as sialagog, myotic, and diuretic. Dose, 1/8–1/4 gr.

Pimpinellin (*pim-pin-el'-in*). A bitter crystallizable substance isolated from the root of *Pimpinella saxifraga*. Melts at 97° C.

Pimple. (See Illus. Dict.) **P., Amboyna,** frambesia. **P.s, Goose.** See *Goose-skin* (Illus. Dict.).

Pinapin (*pin'-ap-in*). A fermented pineapple juice, recommended in treatment of catarrh of the stomach; also as a spray in nasal catarrh.

Pinckneya (*pink'-ne-ah*) [named for *C. C. Pinckney*]. A genus of the *Rubiaceæ*. **P. pubens,** Michx., bitter-bark tree, Florida-bark tree, Georgia-bark tree, a small tree of the Southern States. The bark is astringent and tonic and is used in intermittent fevers. Dose of infusion, 2 drams.

Pinckneyin (*pink'-ne-in*). A glucosid found in bark of *Pinckneya pubens*, Michx.

Pinel's System [Philippe Pinel, French alienist, 1745–1826]. In the treatment of the insane, suppression of all forceful proceedings.

Pineoline (*pin'-e-o-lēn*). A proprietary extract of the needles of *Pinus pumilio*, Haenke, combined with vaselin and lanolin; it is used as an application in skin-diseases.

Ping-pong Ankle. See under *Tenosynovitis*.

Pin-head (*pin'-hed*). Terminating in a knob. The

word is used to describe certain microbes; *e. g.*, *Bacillus tetani.*

Pinnaculum (*pin-ak'-u-lum*) [*pinna*, a peak]. Wedelius' name for the uvula.

Pinnate. (See Illus. Dict.) **P., Abruptly,** ending without a terminal leaflet or tendril.

Pinocytosis (*pin-o-si-to'-sis*) [πίνειν, to drink; κύτος, a cell]. Gabritschewsky's (1894) term for the property exhibited by phagocytes of imbibing and absorbing liquid substances.

Pinol (*pi'-nol*). The commercial name for the oil distilled from the needles of *Pinus pumilio*, Hänke. It is recommended in tuberculosis, rheumatism, etc., and can be used externally and internally.

Pinus (*pi'-nus*) [L. a pine or fir tree]. 1. A genus of coniferous trees. 2. The pineal gland. **P. cembra,** L., Russian cedar, stone pine, the πεύκη of the ancients, growing in the Alps and northern Asia, has edible seeds which contain 50% of a fatty oil used in pulmonary complaints. It furnishes Hungarian or Carpathian turpentine. **P. longifolia,** Roxb., indigenous to Asia. It furnishes the turpentine gandabiroja. The oleoresin exuding from the bark and the resin are extensively used in India as an application for ulcers and abscesses, as a basis for plasters and an ingredient in ointments, and internally in gonorrhea; the tar is used in bronchitis and tuberculosis and on skin-diseases. **P. palustris,** Mil., swamp pine, pitch pine, hard pine, long-life pine, southern pine, of the Southern States, furnishes turpentine and tar. **P. pinaster,** Sol., cluster pine, seaside pine, star pine, of southern France, furnishes French or Bordeaux turpentine, levorotary pinene, and Burgundy pitch. **P. pumilio,** Häncke, mountain or knee pine, growing on the Alps, yields a turpentine and an oil used in medicine. It contains pinene, phellandrene, silvestrene, cadinene, and bornyl acetate. **P. strobus,** L., Weymouth pine, white pine of the northern United States; the bark is astringent and antiseptic, used in diarrhea and dysentery. Dose of fld. ext., 30–60 ♏ (1.8–3.7 c.c.). **P. sylvestris,** L., Scotch pine or fir, abundant in Europe and Asia, furnishes tar-pitch and turpentine; an oil distilled from the leaves is used in medicine; the young pine cones are used as a diuretic. An extract from the leaves is used as a diuretic and antiseptic. Dose, 3–6 gr. (0.2–0.4 gm.).

Pioepithelium (*pi-o-ep-e-the'-le-um*) [πίων, fat; *epithelium*]. Epithelium containing fat.

Pion (*pi'-on*) [πίον, fat]. Fat.

Pionemia, Pionæmia (*pi-on-e'-me-ah*) [πίον, fat; αἷμα, blood]. See *Lipemia* (Illus. Dict.).

Piorkowski's Culture Medium. See under *Medium.*

Pioxemia, Pioxæmia (*pi-oks-e'-me-ah*). See *Lipemia* (Illus. Dict.).

Piper. (See Illus. Dict.) A genus of plants of the order *Piperaceæ*. **P. angustifolium,** R. et P., of South America, the leaves are used as a styptic; this property was discovered by a soldier, Matico, so it is called yerba del soldato; they are also used in gonorrhea and as betel. **P. jaborandi,** Vell., is a Brazilian species; the root, jaborandi do mate, is diaphoretic, stimulant, and antiperiodic. Dose, of fld. ext., 10–30 ♏ (0.6–1.8 c.c.). **P. mollicomum,** Kth., jaborandi mano, of Brazil; the leaves are used as jaborandi and in baths in treatment of rheumatism, the root as a sudorific and the fruit in gonorrhea. **P. ovatum,** Vahl., a species of the West Indies. The leaves are used in hydrophobia; it contains the alkaloid piperovatin.

Piperazidin (*pi-per-az'-id-in*). See *Piperazin* (Illus. Dict.).

Piperazin. (See Illus. Dict.) Syn., *Diethylenediamin; Ethylenimin; Dispermin; Piperazidin.* **P. Quinate,** a white amorphous powder, very soluble in water; used in gout. Dose, 75–120 gr. (5–8 gm.) daily in broken doses. Syn., *Sidonal.* **P. Water,** a combination of equal parts of piperazin and phenocoll. Used in gout.

Piperidin. (See Illus. Dict.) **P. Bitartrate,** colorless crystals having a pleasant taste and freely soluble in water. It is recommended in uratic diathesis. Dose, 10–16 gr. 3 times daily. **P. guaiacolate,** $C_5H_{11}N.(C_7H_8O_2)_2$, needles or flakes, slightly soluble in water, melting at 80° C. It is used in tuberculosis. Dose, 10 gr. twice daily. Syn., *Guaiaperol.*

Piperism (*pi'-pur-izm*). Poisoning by pepper, marked by acute gastritis.

Piperovatin (*pi-pur-o'-va-tin*). $C_{16}H_{21}NO_2$. A crystalline alkaloid isolated from *Piper ovatum*, Vahl.; soluble in alcohol, slightly soluble in water, dilute alkalis, and acids. It is a heart poison and depressant of the motor and sensory nerves, and acts as strychnin.

Pipi (*pe'-pe*). The Brazilian name for the root of the grass *Vetiveria tetrandra*, Gom.; used in rheumatism and paralysis.

Pipitzahoac, Pipitzahoic, Pipitzahuac (*pip-it-za-ho'-ak, -ik, -hu'-ak*). The Mexican name for the root of *Trixis pipitzahuac*, Schulz Bip. (*Perezia turbinata*, Lex.). It is used as a purgative. Dose, 45–75 gr. (3–5 gm.). **P. Acid.** See under *Acid.*

Piptadenia (*pip-tad-e'-ne-ah*) [πίπτειν, to fall; ἀδήν, a gland]. A genus of leguminous plants. **P. peregrina,** a species growing in South America, where the powdered seeds are smoked instead of tobacco by the Orinoco Indians, and the pods, mixed with flour of cassava and lime, form an intoxicating snuff called niopa or nupa in Venezuela and parica in Brazil.

Pirogoff's Formula for treatment of favus: Sublimed sulfur, ½ oz.; potassium carbonate, 1 oz.; distilled water, ½ oz.; tincture of iodin, 1 oz.; lard, 3 oz.

Piroplasma (*pi-ro-plaz'-mah*) [πῦρ, fire; πλάσσειν, to mold]. A genus of hematozoa. **P. bigeminum,** Nocard and Motas, parasitic in the red blood-corpuscles of dogs and cattle.

Piroplasmosis (*pi-ro-plaz-mo'-sis*). An affection of cattle and sheep due to infection with the protozoon, *Piroplasma bigeminum.*

Pistacia. (See Illus. Dict.) **P. terebinthus,** L., growing in the countries around the Mediterranean, furnishes Chian turpentine; the fruit (kokonetza) is edible; the oil (schoinocladon) is used in rheumatism and gout, the bark and leaves in dysentery and albuminuria; the leaves punctured by insects furnish a gall (carobe di guida). Cf. *Alk.*

Pistia (*pis'-te-ah*) [πιστός, drinking]. A genus of the *Aroideæ*. **P. stratiotes,** L., tropic duck-weed, growing in the water of warm countries. The leaves are used internally in diabetes and dysentery, externally on hemorrhoids and abscesses.

Pit. (See Illus. Dict.) **P., Auditory,** the embryonic depression preceding the labyrinth. **P., Basilar,** the depression upon the palatal surfaces of the upper incisor teeth, at the base of the cingulums.

Pitaya Bark (*pit-a'-ah*). The bark of *Cinchona pitayensis*, Wedd.

Pitayamin (*pit-a-am'-in*). An alkaloid found by Hesse in pitaya bark.

Pitayin (*pit-a'-in*). See *Quinidina* (Illus. Dict.).

Pitchiri, Pitchery. See *Pituri.*

Pith. (See Illus. Dict.) 2. To transect the oblongata, with or without the subsequent destruction or removal of the brain or spinal cord or both. With birds or

mammals the respiratory center is injured so as to cause immediate death; hence this method is sometimes used in slaughtering.

Pithecanthropus. Sing. of *Pithecanthropi*. (See Illus. Dict.) **P. erectus**, a fossil ape-man of Java discovered by a Dutch military surgeon, Eugene Dubois, in 1894.

Pithecoid (*pith'-e-koid*) [πίθηκος, an ape; εἶδος, likeness]. Resembling an ape. **P. Theory**, the theory of man's descent from the ape.

Pituita. (See Illus. Dict.) 2. Colorless, transparent, stringy sputum, frothy at the top, and which when the froth has been removed, resembles water stirred up with white of egg (Laënnec). **P. alba**, anasarca.

Pituital (*pit-u'-it-al*). Relating to pituita.

Pituri (*pit-u'-re*). The dried and powdered tops and leaves of *Duboisia hopwoodii*, F. v. Müll., the masticatory of the aborigines of Central Australia, corresponding to the betel nut (*Areca catechu*) of the Eastern Archipelago or the taezi-kaat (*Catha edulis*) of Arabia. In small quantities it is a powerful stimulant, assuaging hunger and enabling long journeys to be made without fatigue. It was introduced into medicine in 1873. Syn., *Pitchiri; Pitchery; Bedgery; Pedgery.*

Piturin (*pit-u'-rin*). A brown, liquid, acrid alkaloid isolated from pichuri by Livirsidge, 1880.

Pityriasis. (See Illus. Dict.) **P. furfuracea**, seborrhœa sicca. **P., Gibert's, P., Hebra's.** See *P. rosea* (Illus. Dict.). **P. indica.** See *P. nigra* (Illus. Dict.). **P. linguæ**, leukoplakia. **P. versicolor.** (See Illus. Dict.) C. W. Allen's iodin test is of value for recognition of suspected areas; it consists in the application of iodin solution, preferably Lugol's (iodi, 5; potass. iodidi, 10; aquæ, 100). The diseased portion will stain deep brown or mahogany color, in contrast to the light yellow coloration of healthy tissue.

Piuri (*pi-u'-re*). Indian yellow, a coloring-matter used in water-colors, made in India from the urine of cows fed on mango leaves.

Pivot. (See Illus. Dict.) **P., Clack, P., Clacking**, a means devised by Magiola for attaching an artificial crown to the root of a natural tooth.

Pixine (*piks'-ēn*). A surgical dressing said to consist of Burgundy pitch with a wool-fat base.

Pixol (*piks'-ol*). A solution of wood tar in soap.

Place, Kiesselbach's. The point at which the nasal septum, owing to its thinness, is especially liable to perforation.

Placenta. (See Illus. Dict.) Syn., *Deuterion.* See *Law, Leopold's.* **P., Accessory.** See *P. succenturiata* (Illus. Dict.). **P. biloba, P. bipartita.** See *P., Dimidiate.* **P. circumvallata**, a thickening or fungiform enlargement of the placenta at the point at which the decidua vera and the decidua reflexa would have united in cases in which such union has been thwarted by hypersecretion of the former or by endometritic processes. **P., Dimidiate**, one with two lobes. **P., Duncan's Position of**, the marginal position generally assumed by the placenta on presenting itself at the os uteri for expulsion. **P. inclusa.** See *P. incarcerata* (Illus. Dict.). **P. oblata, P. obvia**, placenta prævia. **P., Reflexal**, one formed by development of chorionic villi on the decidua reflexa. **P., Schultze's Position of**, the position assumed by the placenta when its central portion bulges downward and is expelled in advance of the periphery. **P., Stone**, one containing calcareous deposits. **P., Student's**, a retained placenta due to improper manipulation. **P. triquetra, P. unilobata**, an intermediate form between the usual placenta and the placenta succenturiata, in which there is marked projection of a portion of the border, as if a lobe were about to be detached. **P. uteri, P., Uterine, P. uterina**, the maternal placenta. **P. zonaria, P., Zonary.** See *P., Annular* (Illus. Dict.).

Placentoma (*pla-sen-to'-mah*). A neoplasm springing from a retained portion of a placenta.

Placentophagy (*pla-sen-tof'-aj-e*) [*placenta*; φαγεῖν, to eat]. The eating of the placenta by certain mammals, and, as recorded by Carreri in 1719, a custom among the Yakouts, where the father and his friends used to eat the placenta ceremonially. According to Raynaud, of Algiers (1902), it is practised among the Soudanese.

Placentotherapy (*pla-sen-to-ther'-ap-e*) [πλακούς, a flat cake; θεραπεία, therapy]. The remedial use of preparations or the placenta of animals in cases of absent or defective lactation. Syn., *Placental opotherapy.*

Placido's Disc. See under *Disc.*

Plagiocephalism. See *Plagiocephaly* (Illus. Dict.).

Plague. (See Illus. Dict.) **P., Justinian**, the first epidemic of the bubonic plague in Europe of which there is any precise record, beginning in the reign of the emperor Justinian, 542 A.D., and lasting fifty years. **P. Loodiana** [India]. Local name for anthrax. **P., Oriental.** See *Plague* (Illus. Dict.). **P., Siberian Cattle.** Synonym of *Anthrax.*

Planation (*pla-na'-shun*). Harrison Allen's term for those movements of the hand taking place in the plane of the flexor surface of the forearm.

Plancus (*plang'-kus*) [*planca*, a board]. 1. A person with flat feet. 2. Flat-footed.

Plane. (See Illus. Dict.) **P., Hodge's**, a plane parallel to that of the pelvic inlet, passing through the upper border of the os pubis and the middle of the second sacral vertebra. **P., Infraorbital**, that part of the orbital surface of the superior maxillary bone ectad of the infraorbital canal. **P., Listing's**, the vertical transverse plane perpendicular to the anteroposterior axis of the eyeball, which passes through the center of motion of the eyes and in which lie the vertical and transverse axes of normal voluntary rotation. **P.s, Principal.** See *P., Focal* (Illus. Dict.).

Planiceps (*pla'-ne-seps*) [*planus*, flat; *caput*, a head]. Flat-headed.

Planidens (*pla'-ne-dens*) [*planus*, flat; *dens*, a tooth]. Having flat teeth.

Planipes (*pla'-ne-pēz*) [*planus*, flat; *pes*, a foot]. Having flat feet.

Planimeter (*pla-nim'-et-ur*). 1. See *Perimeter.* 2. An instrument which measures a plane by tracing the periphery.

Planiventer (*pla-ne-vent'-ur*) [*planus*, flat; *venter*, the belly]. Having a flat abdomen.

Planktonocrit (*plank-ton'-o-krit*) [πλαγκτός, wandering; κριτός, estimated]. An apparatus invented by Charles S. Dolley for the quantitative estimation of plankton.

Planococcus (*plan-o-kok'-us*) [πλάνη, a wandering; κόκκυς, a berry]. A genus of eubacteria of the family *Coccaceæ* having cell division in one, two, or three directions; cells separate, flagellated.

Planocompressed (*pla-no-kom-prest'*). So compressed that the opposite sides are flat.

Planoconcave (*pla-no-kon-kāv'*). Concave on one surface and flat on the opposite side.

Planoconical (*pla-no-kon'-ik-al*). Having one side flat and the other conical.

Planoconvex (*pla-no-kon-veks'*). Plane on one side and convex on the other.

Planocyte (*plan'-o-sīt*) [πλάνη, a wandering; κύτος, cell]. A wandering cell.

Planoorbicular (*pla-no-or bik'-u-lar*). Having one plane surface and one orbicular.

Planorheumatism (*plan-o-ru'-mat-izm*) [πλάνη, a wandering; *rheumatism*]. Wandering or metastatic rheumatism.

Planosarcina (*plan-o-sar'-sin-ah*) [πλάνη, a wandering; *sarcina*, a bundle]. A genus of eubacteria, of the family *Coccaceæ*, having cell division in three directions, cells united in packets of eight; flagellated.

Planospiral. See *Planispiral* (Illus. Dict.).

Planosubulate (*pla-no-sub'-u-lāt*) [*planus*, flat; *subula*, an awl]. Flat and smooth and resembling an awl.

Planta (*plan'-tah*) [L.]. The sole.

Plantose (*plan'-tōz*). A pale-yellow dietetic powder prepared from the oil-cake of rape seed, containing 12% of nitrogen. Dose, 30–90 gr. (1–3 oz.) daily.

Planury (*plan'-u-re*). Same as *Planuria* or *Uroplania* (Illus. Dict.).

Plaque. (See Illus. Dict.) **P., Charcot's,** hyperesthetic spots observed most frequently in the cervical and sacral regions of neurasthenics. **P.s, Opaline,** scattered white spots, like those caused by nitrate of silver, seen on the fauces, hard palate, cheeks, and lips; an early affection in syphilis. **P.s, Peyer's,** the agminated glands of the ileum.

Plasma. (See Illus. Dict.) **P.-current, P.-layer, P.-stream, P.-zone.** See *Poiseuille's Space* (Illus. Dict.).

Plasmacules (*plaz'-ma-kūls*). See *Hemokonia*.

Plasmain (*plaz'-mah-in*) [πλάσμα, plasma]. $C_{15}H_{15}N$. A leukomain isolated from blood by Wurz (1889).

Plasmarhexis, Plasmatorhexis. See *Plasmorrhexis*.

Plasmatosis (*plaz-mat-o'-sis*) [πλάσμα, plasma]. The liquefaction of cell substance as seen in the cells of the secreting milk gland and in the cells of secreting glands of the cervix uteri.

Plasmexhidrosis (*plaz-meks-hi-dro'-sis*) [πλάσμα, plasma; ἐξ, out of; ἱδρωσις, sweat]. The exudation of plasma from the bloodvessels.

Plasmocinesis (*plaz-mo-sin-e'-sis*). See *Plasmokinesis* (Illus. Dict.).

Plasmocyte (*plaz'-mo-sīt*) [πλάσμα, something molded; κύτος, a cell]. Any cell, other than blood-corpuscles, free in the blood-plasma.

Plasmodiophora (*plaz-mo-di-of'-o-rah*) [πλάσμα, a thing formed; εἰδος, likeness; φέρειν, to bear]. A genus of fungi. **P. brassicæ,** Woronin, a fungus parasitic upon cabbages. The close resemblance of the bodies found in cancer cells to certain stages in the growth of this fungus has been pointed out by Navaschine and others.

Plasmogony. (See Illus. Dict.) **2.** The differentiation of individual primitive organisms out of the simplest protoplasmic compounds in the form of monera. (Haeckel.) Cf. *Autogony*.

Plasmolysis. (See Illus. Dict.) **3.** The escape of the soluble substances of the blood-corpuscle.

Plasmon (*plaz'-mon*) [πλάσμα, plasma]. The unaltered proteid of milk. **P.-butter,** a mixture of the unaltered proteid of milk (6.58%) with butter (51.50%), water 41.20%, salt 0.72%. It resembles clotted cream in appearance and taste and serves as a substitute for cod-liver oil.

Plasmophagous (*plaz-mof'-ag-us*) [πλάσμα, plasma; φαγεῖν, to eat]. Living upon protoplasm; applied to organisms causing decomposition of organic matter.

Plasmoptysis (*plaz-mo-ti'-sis*) [πλάσμα, plasma; πτύσις, a splitting]. A. Fischer's term for plasmoschisis (2).

Plasmorrhexis (*plaz-mor-eks'-is*) [πλάσμα, plasma; ῥῆξις, a bursting]. The rupture of a cell and the escape or loss of the plasma. Syn., *Erythrocytorrhexis*.

Plasmoschisis. (See Illus. Dict.) **2.** The splitting of a cell, as the formation of disciform bodies by red blood-corpuscles. Syn., *Plasmoptysis*. See *Erythrocytoschisis*.

Plasmosome (*plaz'-mo-sōm*) [πλάσμα, plasm; σῶμα, body]. Arnold's term for one of the granular structural elements of cells.

Plasmotropic (*plaz-mo-trop'-ik*) [πλάσμα, plasma; τροπή, a change]. Producing protoplasmic degeneration; applied to hemolytic action which leaves the red corpuscles intact in the circulation, but through the influence of poisons on the liver, spleen, and bone-marrow, causes excessive destruction of them in these organs.

Plasom (*plaz'-ōm*). A proprietary preparation from milk.

Plastogamy (*plas-tog'-am-e*) [πλάσμα, plasma; γάμος, marriage]. Permanent conjugation of cells which is limited to the cytoplasm. Cf. *Karyogamy*.

Plate. (See Illus. Dict.) **P., Bone.** See *P., Approximation* (Illus. Dict.). **P.-bone,** the scapula. **P., Collecting.** See *P., Negative*, of a voltaic cell (Illus. Dict.). **P., Cytoplasmic,** the part of the cell-plate contained within the cell-body. **P., Deck,** in the embryonic medullary cord a thin zone or plate connecting the dorsal zone of the His (*q. v.*). Ger., *Deckplatte*. **P., End-.** (See Illus. Dict.) **2.** The achromatic masses at the poles of the spindle in the mitosis of *Protozoa*, probably equivalent to the attraction-spheres. Syn., *Pole-plates*. **P., Epiphysial.** See *Disc, Epiphysial*. **P., Franklin,** a glass plate partially covered on both sides with tinfoil, used as a condenser in frictional electricity. When rolled up, it constitutes a Leyden or Kleist jar. Syn., *Fulminating pane*. **P., Generating.** See *P., Positive* (Illus. Dict.). **P., Horn** (Ger., *Hornplatte*), Haeckel's term for the *Lamella ceratina* (Illus. Dict.). **P., Infraspinous,** the postscapula. **P., Internasal.** See *P., Frontonasal* (Illus. Dict.). **Ps., Intervertebral,** the intervertebral discs. **P., Kidney, Primitive.** See *Lamella renalis* (Illus. Dict.). **P., Leather.** See *Lamella coriaria* (Illus. Dict.). **P., Loral,** in herpetology, the plate between the eye and the mouth. **P.s, Mansford's** (John G.), an apparatus for applying electricity, consisting of two small metal plates of opposite electric value which are placed over two blistered areas on the skin at some distance apart and the plates connected with a wire. **P., Marrow.** Ger., *Markplatte*. See *Lamella medullaris* (Illus. Dict.). **P., Mucous.** See *Lamella mucosa* (Illus. Dict.). **P., Neural.** See *P., Dorsal* (Illus. Dict.). **P., Nucleus.** Ger., *Kernplatte*. See *P., Equatorial* (Illus. Dict.). **P., Pole.** See *P., End-*. **P., Prescapular,** the prescapula. **P., Primitive Kidney.** See *Lamella renalis* (Illus. Dict.). **P., Principal,** *Hauptplatte* of Waldeyer, the main plate of plate-like connective-tissue cells which contains the nucleus and has two or more secondary plates extending at right angles to it. **P., Regulation,** a plate worn in the mouth to correct irregularities in the position of the teeth. **P., Retention,** a plate worn in the mouth to keep in position teeth which have been straightened from abnormal positions by a regulation plate. **P., Secondary.** See under *P., Principal*. **P.s, Senn's.** See *P.s, Approximation* (Illus. Dict.). **P., Spiral.** See *Lamina spiralis* (Illus. Dict.). **P., Tarsal,** a tarsal cartilage. **P., Terminal.** See *P., End-*. **P., Top-,** the cuticular formation, sometimes homogeneous, sometimes striated, on the free surface of many columnar cells.

Platelet. (See Illus. Dict.) **2.** A microscopic plate or plaque-like body. **P., Yolk.** See under *Yolk*.

Platiculture (*pla-te-kul'-chur*). The cultivation of bacteria on plates.

Plating (*pla'-ting*). See *Platiculture*.

Platinibromid (*plat-in-e-bro'-mid*). A salt of bromoplatinic acid.

Platinode (*pla'-tin-ōd*). See *Plate, Negative*, of a voltaic cell (Illus. Dict.).

Platinoid (*plat'-in-oid*) [*platinum*, εἶδος, likeness]. **1.** Resembling platinum; applied to those metals which are found associated with platinum.

Plattnerite (*plat'-nur-it*) [*K. F. Plattner*, a German chemist, 1800–1858]. PbO_2. A native plumbic peroxid.

Platt's Chlorides. A clear disinfectant liquid said to be a solution of chlorids of magnesium, potassium, sodium, zinc, and alum.

Platycrania (*plat-e-kra'-ne-ah*) [πλατύς, broad; κρανίον, skull]. The flattened condition of the skull produced artificially among savage tribes.

Platylobus (*plat-il'-o-bus*) [πλατύς, broad; *lobus*, lobe]. Having broad lobes.

Platymesaticephalic. See *Platymesocephalic*.

Platymesocephalic (*plat-e-mes-o-sef-al'-ik*) [πλατύς, broad; μέσος, middle; κεφαλή, head]. Applied to a skull exhibiting both platycephaly and mesocephaly.

Platymorphia (*plat-e-mor'-fe-ah*) [πλάτυς, wide; μορφή, form]. A flatness in the formation of the eye and shortening of the anteroposterior diameter, resulting in hyperopia.

Platymyoid (*plat-e-mi'-oid*) [πλατύς, flat; μῦς, muscle; εἶδος, likeness]. Applied to muscle-cells in which the contractile layer presents an even surface.

Platyrrhinian (*plat-ir-in'-e-an*). **1.** See *Platyrrhinic* (Illus. Dict.). **2.** An individual having a broad flat nose.

Platysma. (See Illus. Dict.) **P., Uterine,** Champney's term for the muscular fibers of the peritoneum covering the ovary; observed in cases of cysts of the broad ligament.

Platystencephalia, Platystencephaly (*plat-is-ten-sef-a'-le-ah, plat-is-ten-sef'-al-e*) [πλατύστατος, widest; ἐγκέφαλος, brain]. The condition of a skull very wide at the occiput and with prominent jaws.

Platystencephalic (*plat-is-ten-sef-al'-ik*). Applied to skulls marked by great width in the occipital region and with prominent jaws.

Platystencephalism (*plat-is-ten-sef'-al-izm*). See *Platystencephaly*.

Platytrope (*plat'-e-trōp*). See *Platetrope* (Illus. Dict.).

Pleochroic (*ple-o-kro'-ik*). See *Pleochromatic* (Illus. Dict.).

Plesiomorphic (*ples-e-o-mor'-fik*) [πλησίος, near; μορφή, form]. Almost identical in form.

Plesiomorphism (*ples-e-o-mor'-fizm*). The condition of crystals which are almost alike in form but not identical.

Plessesthesia, Plessæsthesia (*ples-es-the'-ze-ah*) [πλήσσειν, to strike; αἰσθησις, perception by the senses]. A form of palpatory percussion performed by placing the left middle finger firmly against the body surface and percussing with the index-finger of the right hand, allowing it to remain in contact with the left finger for a few seconds.

Plessigraph (*ples'-e-graph*) [πλήσσειν, to strike; γράφειν, to write]. Of Peter, a form of plessimeter which permits close distinctions to be made in the quality of the sounds elicited and by means of a crayon attached to the stem, organs or dull areas may be mapped on the surface of the skin.

Plessimetry. See *Pleximetry*.

Plethora. (See Illus. Dict.) **P., Cellular, P. sanguinea.** See *Polycythemia* (Illus. Dict.).

Pleurectomy (*pleu-rek'-to-me*) [πλευρά, pleura; ἐκτομή, a cutting out]. Excision of a part of the pleura.

Pleuresia, Pleuresis (*plu-re'-zhe-ah, plu-re'-sis*). See *Pleurisy* (Illus. Dict.).

Pleurisy. (See Illus. Dict.) Syn., *Morbus lateralis; M. laterum*. See *Signs, Andral's, de Mussey's, Przewalski's*. Cf. *Levaschoff's Method*, under *Treatment*. **P., Bastard.** See *Bronchitis, Capillary* (Illus. Dict.). **P., False,** pleurodynia. **P., Fetid.** See *P., Ichorous* (Illus. Dict.). **P., Humid, P., Moist,** that accompanied by expectoration. **P., Loculated.** See *P., Encysted* (Illus. Dict.). **P., Metapneumonic,** pleurisy following pneumonia. **P., Plastic,** that marked by a deposit of a layer of semisolid exudate. **P., Rheumatic, P., Rheumatismal,** pleurodynia. **P., Sclerocalcareous.** See *P., Calcareous* (Illus. Dict.). **P., Serofibrinous,** a form marked by fluid exudate containing flocculi and the deposit of some fibrin. **P., Typhoid,** that marked by symptoms of typhoid. **P. with Effusion,** pleurisy with effusion into the pleural sac.

Pleuritis. (See Illus. Dict.) See *Sign, Beatty-Bright's*. **P. ventosa,** Sauvages' name for a pain over the lower ribs believed to be due to the presence of gas in the approximate intestines.

Pleuritogenous (*plu-rit-oj'-en-us*) [*pleuritis*; γεννᾶν, to produce]. Causing pleuritis.

Pleurocentesis (*plu-ro-sen-te'-sis*) [πλευρά, pleura; κέντησις, a pricking]. Surgical puncture of the pleura.

Pleurocholecystitis (*plu-ro-ko-le-sist-i'-tis*) [πλευρά, pleura; χολή, bile; κύστις, bladder]. Simultaneous inflammation of the pleura and the gallbladder.

Pleurodynia. (See Illus. Dict.) **P. ventosa.** See *Pleuritis ventosa*.

Pleurolith (*plu'-ro-lith*) [*pleura*; λίθος, a stone]. A calculus occurring in the pleura.

Pleuroma (*plu-ro'-mah*) [pl. *pleuromata*]. See *Pleuron* (Illus. Dict.).

Pleurophorous (*plu-rof'-or-us*) [πλευρά, the pleura; φορεῖν, to bear]. Furnished with a membrane.

Pleuropneumonitis (*plu-ro-nu-mon-i'-tis*). See *Pleuropneumonia* (Illus. Dict.).

Pleurorrhea. (See Illus. Dict.) **P. chylosa,** chylothorax. **P. lymphatica,** hydrothorax. **P. purulenta,** empyema. **P. sanguinea,** hemorrhagic pleurisy. **P. serosa,** hydrothorax.

Pleurosomia (*plu-ro-so'-me-ah*) [πλευρά, side; σῶμα, body]. A form of monstrosity characterized by an eventration in the side of the abdomen and thorax, covered only by a membrane.

Pleurosomus (*plu-ro-so'-mus*). A monster exhibiting pleurosomia.

Pleurosternite (*plu-ro-stur'-nīt*) [πλευρόν, a rib; στέρνιτης, of the breast]. Beecher's term for the membrane beneath each pleuron or pleurotergite in *Trilobites*.

Pleurotergite (*plu-ro-tur'-jit*) [πλευρόν, rib; *tergum*, the back]. Jaekel's term for the pleuron of *Trilobites*.

Pleurotetanus (*plu-ro-tet'-an-us*). See *Pleurothotonus* (Illus. Dict.).

Pleurotyphoid (*plu-ro-ti'-foid*). Typhoid fever with involvement of the pleura.

Pleximetry (*pleks-im'-et-re*). Percussion by means of a pleximeter.

Plexus. (See Illus. Dict.) **P., Accessory.** See *P., Ranvier's*. **P. alveolaris.** See *Veins, Alveolar*. **P. anserinus.** See *Pes anserinus*. **P. anserinus major, P. anserinus nervi facialis.** See *Pes anserinus major*. **P. anserinus nervi mediani,** the roots

of origin of the median nerve given off by the eighth cervical nerve. Syn., *Pes anserinus nervi mediani.* **P., Arnold's Ground,** a plexus formed by the axis-cylinders of nonmedullated nerve-fibers in smooth muscular tissue. **P., Basilar, P. basilaris,** of Virchow, the transverse sinus. **P., Bulbocavernous, P. bulbocavernosus,** branches of the pudendal plexus located in the region of the urethra. **P. capitis,** one formed over the epicranium by the junction of branches of the trigeminal nerve and upper cervical nerves. **P., Cardiac Superior.** See *P., Cardiac Posterior* (Illus. Dict.). **P. cardiacus inferior.** See *P., Cardiac Anterior* (Illus. Dict.). **P., Carotid, P. caroticus,** the internal carotid plexus. **P., Carotid Common, P. caroticus communis,** one formed of sympathetic fibers about the common carotid artery. **P. cervicobrachialis,** the cervical and brachial plexus regarded as one. **P. chorioideus foraminis interventricularis.** See *Auliplexus* or *Portiplex* (Illus. Dict.). **P. chorioideus impar.** See *P., Choroid* (Illus. Dict.). **P. chorioideus interpositus,** a fold of the pia lying between the choroid plexuses of the lateral ventricles. **P. chorioideus lateralis,** the paraplexus. **P. chorioideus medius,** the diaplex. **P., Choroid, Inferior, P. chorioides cerebelli.** See *Metaplexus* (Illus. Dict.). **P., Choroid Lateral, P. chorioidei laterales.** See *Paraplexus* (Illus. Dict.). **P., Choroid Median,** the diaplex. **P. chorioides cerebri.** See *Diaplex* (Illus. Dict.). **P. chorioideus ventriculi lateralis.** See *Paraplexus* (Illus. Dict.). **P. chorioideus ventriculi quarti.** See *Metaplex* (Illus. Dict.). **P. chorioideus ventriculi tertii.** See *Diaplex* (Illus. Dict.). **P. chorioideus telencephali.** See *Prosoplexus* (Illus. Dict.). **P. circularis foraminis magni,** that part of the occipital sinus extending around the edge of the foramen magnum to the jugular foramen. Syn., *Marginal sinus.* **P.s, Colic,** the divisions of the mesenteric plexuses which accompany the colic arteries. **P. coronarius dexter.** See *P., Coronary Anterior* (Illus. Dict.). **P. coronarius sinister.** See *P., Coronary Posterior* (Illus. Dict.). **P., Cruveilhier's.** (See Illus. Dict.) 2. The plexus of varicose veins constituting one of the varieties of angioma. **P., Deep.** See *Cardiac, Great* (Illus. Dict.). **P., Deferential, P. deferentialis,** the extension of the vesical plexus supplying the vas deferens, the seminal vesicle, and half of the prostate. **P., Dorsispinal,** the dorsispinal veins and their intercommunications. **P. enterícus.** See *P., Meissner's* (Illus. Dict.). **P., Exner's,** a layer of nerve-plexuses, probably formed by the junction of sensory and motor fibers, in the cerebral cortex, near the surface. **P., Extraspinal,** the network formed by the dorsispinal veins. **P., Facial,** one around a portion of the facial artery. **P., Femoral,** the lumbar plexus. **P., Femoral, Inferior.** See *P., Sacral* (Illus. Dict.). **P., Gangliform Semilunar,** the celiac plexus. **P., Gerlach's.** See *Gerlach's Network* (Illus. Dict.). **P., Great.** See *P., Deep.* **P. gustatoriosensorius,** one in the tongue made up of branches from the glossopharyngeal and gustatory nerves. **P., Guttural.** See *P., Pharyngeal* (Illus. Dict.). **P., Haller's Laryngeal,** the network formed by branches of the external laryngeal and sympathetic nerves on the outer surface of the inferior constrictor pharyngis. **P. hederaceus.** See *P., Pampiniform* (Illus. Dict.). **P., Heller's,** the network of arteries in the deeper layer of the intestinal submucosa. **P., Hovius'.** See *P., Leber's.* **P., Ileocolic,** the division of the superior mesenteric plexus which accompanies the ileocolic artery. **P., Inframaxillary.** See *P., Dental, Inferior* (Illus. Dict.). **P., Infrathyroideal,** Cloquet's name for the one formed ventrad of the trachea by the anastomosis between the branches of the right and left inferior thyroid veins. **P., Interepithelial,** the network of nerves between the cells of the corneal epithelium. **P. intermeseraicus.** See *P., Aortic* (abdominal) (Illus. Dict.). **P., Interpterygoid,** that portion of the pterygoid plexus lying between the external and internal pterygoid muscles. **P., Intraepithelial,** the network formed by the ultimate fibrils of the subepithelial plexus distributed among the epithelial cells of the cornea. **P., Intraspinal,** the venous network surrounding the spinal canal and opening into the lumbar, vertebral, intercostal, and lateral sacral veins. **P., Jugular,** a reticulum of lymphatics and glands on the lateral aspect of the neck. **P., Jugular, Deep,** a lymphatic plexus below the base of the skull lying upon the internal jugular vein. **P., Jugular, Superficial,** a name for the lymphatics coming from the ear, temple, and occiput, opening into the vessel that accompanies the internal jugular vein. **P., Laryngeal,** a network of the branches of the sympathetic and external laryngeal nerves situated on the outer aspect of the inferior constrictor of the larynx. **P., Leber's,** a plexus of venules in front of Schlemm's canal, with which it communicates. **P., Lumbosacral,** the lumbar, sacral, and coccygeal plexuses taken as one. **P. magnus profundus,** Scarpa's name for the deep cardiac plexus. **P., Mammary, Internal, P. mammarius internus,** the sympathetic plexus surrounding the internal mammary artery. **P., Median,** the celiac plexus. **P., Meissner- Billroth's.** See *P., Meissner's* (Illus Dict.). **P., Meningeal, P. meningeus medius,** the sympathetic plexus on the middle meningeal artery; it is a continuation of that on the external carotid. **P., Molecular,** the reticulum of myelonic and amyelonic nerve-fibers in the outermost layer of the cerebral cortex. **P., Musculointestinal, P., Myenteric, External, P. myentericus externus.** See *P., Auerbach's* (Illus. Dict.). **P., Myenteric, Internal, P. myentericus internus.** See *P., Meissner's* (Illus. Dict.). **P. nervi vagi,** the lateral part of the metaplexus. **P., Omental,** the gastroepiploic plexus. **P., Opisthogastric,** the solar plexus. **P., Ovarian, Inferior,** a nerve plexus lying between the folds of the broad ligament and giving off branches to the ovary and round ligament. **P.s, Panizza's,** two lymphatic plexuses lying in the lateral fossa of the preputial frenum; they are formed by the deeper lymphatic vessels of the integument of the glans penis. **P.s, Pneumogastric,** the anterior and posterior pulmonary plexus and the esophageal plexus. **P., Polymorphic,** a nerve plexus in the fourth layer of the cortex. **P., Popliteal, P. popliteus,** a sort of plexus around the popliteal artery formed by the small branches of the anterior crural nerve. **P.s, Preaortic,** a comprehensive term for the plexuses of the sympathetic lying near to and ventrad of the aorta, *e. g.*, the pharyngeal plexus, solar plexus, posterior pulmonary plexus. **P.s, Prevertebral.** See *P., Solar, P., Cardiac,* and *P., Hypogastric* (Illus. Dict.). **P., Prostaticovesical,** the pudendal plexus of veins. **P., Pterygoid, External,** the superficial part of the pterygoid plexus of veins; it receives the buccal and masseteric veins. **P., Pterygoid, Internal,** the dorsal part of the pterygoid plexus of veins. **P. pubicus impar,** the pudendal plexus of veins. **P. pubicus par,** veins passing on each side of the pudendal plexus to the plexus bulbo-cavernosus. **P., Pudendocaudal,** the pudendal and coccygeal considered as one. **P. pudendohæmorrhoidalis, P. pudendovesicalis, P. pudendus,** the pudendal plexus of veins. **P., Ramiform, P. ramiformis,** a plexus formed by the fibers

of two or more nerve trunks. **P., Ranvier's.** See *P., Stroma, Superficial.* **P., Ranvier's Accessory,** the superficial stroma plexus of the cornea. **P., Reticular.** 1. The choroid plexus. 2. The bulb of the vestibule. **P. retiformis,** the bulb of the vestibule. **P., Sacral, Anterior.** See *P., Sacral* (Illus. Dict.). 2. The venous plexus on the ventral aspect of the sacrum. **P., Sacral, Lymphatic,** a plexus of lymphatic vessels in the hollow of the sacrum. **P., Sacral, Posterior.** 1. One formed by the sacral veins on the dorsal aspect of the sacrum. 2. One formed by the posterior branches of the two lower lumbar and sacral nerves dorsad of the sacroiliac articulation. **P. sacrococcygeus,** the coccygeal plexus. **P., Sacrolumbar.** See *P., Lumbosacral.* **P., Sciatic.** See *P., Sacral* (Illus. Dict.). **P. simplicissimus,** an anastomosis between two nerve trunks, in which only one gives out fibers. **P., Stenon's,** a venous plexus encircling Stenon's duct. **P., Stroma,** the plexus of axis-cylinders formed by the nerves of the cornea. **P., Stroma, Deep,** that formed by the deeper series of nerves entering the cornea from the sclerotic and distributed between the laminas of the mesocornea. **P., Stroma, Superficial,** that formed by the superficial series of nerves entering the cornea from the sclerotica and proceeding to the ectocornea, where they form the subepithelial plexus. Syn., *Ranvier's plexus.* **P., Subarachnoid,** one formed occasionally over the pia by the union of small inconstant branches of spinal nerve roots. **P., Subcutaneous, of the Abdomen,** the venous ramifications on the ventral abdominal wall. **P., Subepithelial,** the reticulum formed by the terminal filaments of the ciliary nerves beneath the corneal epithelium. **P., Sublingual,** the reticulum formed by the interlacing of the branches of the lingual nerve supplying the sublingual gland. **P., Submolecular,** one in the small pyramidal-cell layer of the cortex. **P., Submucous, P. submucosus,** Meissner's plexus. **P., Subpleural Mediastinal,** one situated beneath the pleura made up of branches of the internal mammary artery and those from the superior phrenic, bronchial, and intercostal arteries. **P., Supraclavicular,** a plexus of lymphatics near the subclavian vessels. **P., Temporal, Superficial,** a plexus derived from the external carotid plexus attending the branches of the external carotid artery to the eyelids and the external ear. **P., Testicular, P. testicularis,** the spermatic plexus. **P. thyroideus impar,** a venous reticulum formed by the inferior thyroid veins ventrad of the trachea. **P., Transverse Anterior,** a plexus formed by small transverse veins in the vertebral canal lying between the posterior common ligament and the dorsal surface of the bodies of the vertebras. **P., Triangular,** a network formed by the sensory root of the trigeminal nerve on the gasserian ganglion. **P., Uterine, Anterior,** a network formed by branches from the inferior hypogastric plexus distributed to the cervix and the ventral surface of the uterus. **P., Uterine, Common, P. uterinus communis,** the hypogastric plexus. **P., Uterine, Great, P. uterinus magnus.** 1. The hypogastric plexus in the female. 2. The lower part of the hypogastric plexus. **P., Uterine, Posterior,** a plexus of nerves derived from the hypogastric plexuses and distributed to the lateral and dorsal surfaces of the uterus. **P., Uterine, Superior,** the pelvic plexus. **P. uterinus lateralis inferior, P., Uterine, Inferior.** See *P., Uterine, Anterior.* **P. uterinus lateralis superior.** See *P., Uterine, Posterior.* **P. uterinus venosus,** the uterine plexus of veins. **P. vasis deferentis.** See *P. deferentialis.* **P. venæ portæ, P. venæ portarum,** a network on the portal vein formed by the branches of the hepatic plexus. **P. venosus,** any plexus of veins. **P. vesicæ felleæ,** the cystic plexus. **P., Vesicovaginal,** a reticulum formed by the filaments of the pelvic plexus supplying the inferior part and side of the bladder and the adjacent part of the vagina. **P. vesiculæ seminalis.** See *P. deferentialis.* **P., Walther's Arteriosonervous,** the cavernous plexus.

Pli (*plē*) [Fr.]. 1. A gyrus or convolution. 2. A fold. 3. Plica.

Plica. (See Illus. Dict.) 4. The same as *P. polonica.* 5. A ridge. **P. triangularis,** a triangular-shaped membrane which has been termed the capsule or operculum of the tonsil; first described by His in 1885. It arises from the anterior pillar and becomes visible at the fifth month of fetal life, and in a typical case extends from the upper posterior portion of the pillar backward and downward until it is finally lost in the tissues at the base of the tongue. **P. ureterica.** See *Bar, Mercier's.* **P. Vateri, P. verticalis duodeni.** See *Ampulla of Vater* (Illus. Dict.).

Plicadentin (*pli-kah-den'-tin*). See *Plicidentine* (Illus. Dict.).

Plomb (*plum*) [Fr. *plomber*, to plug a tooth]. A filling for a cavity. **P., Iodoform** (of Mosetig-Moorhof), an antibacillary agent used for filling bone cavities after operations for tuberculosis or osteomyelitis. It consists of iodoform, 40 parts, spermaceti and oil of sesame, each 30 parts. The menstruum is sterilized thoroughly by boiling; the finely powdered and sterilized iodoform is added slowly to the mixture and agitated constantly until it cools off, to insure a uniform dissemination of the iodoform throughout the mass, which solidifies at an ordinary temperature. After the cavity is prepared the mixture is heated and in a fluid state is poured into it, when it again becomes firm and fills the cavity like dentists' amalgam in a carious tooth (N. Senn).

Ploration (*plo-ra'-shun*) [*plorare*, to weep]. Lacrimation.

Plug. (See Illus. Dict.) **P.s, Fungoid, P.s, Traube's.** See *P.s, Dittrich's* (Illus. Dict.). **P., Imlach's Fat.** See under *Imlach.*

Plugger (*plug'-ur*) [D. *plug*, a bung]. An instrument for the insertion and impacture of filling materials in cavities in teeth. **P., Electric,** an instrument in which an interrupted current magnetizes electromagnets, the armature of which delivers a blow upon the head of dental plugging mallets used to impact gold foil in prepared cavities of teeth.

Plumbagin (*plum-baj'-in*). A peculiar crystallizable principle found in *Plumbago europæa*, L., *P. rosea*, L., and *P., zeylanica*, L.

Plumbago (*plum-ba'-go*) [*plumbum*, lead]. A genus of the *Plumbaginea*, leadwort. **P. europæa,** L., is indigenous to Europe. The root (radix dentariæ) and acrid juice are vesicant. It is used in toothache, as an application in skin-diseases, and internally as an emetic. It contains ophioxylon and plumbagin. **P. zeylanica,** L., chitrak, chita, of the old-word tropics. The poisonous root is used in China as a sudorific, sialagog, antiperiodic, and vesicant under the name of yen-lai-hung.

Plumbite (*plum'-bīt*). A general term for any compound formed by union of lead oxid with a base.

Plumula. (See Illus. Dict.) 2. Arnold's name for minute transverse furrows on the roof of the aqueduct of Sylvius.

Pluricordonal (*plu-re-kord'-on-al*) [*plus*, more; *chorda*, a string]. Having several processes.

Plurifetation (*plu-re-fe-ta'-shun*) [*plus*, more; *fœtus*, fetus]. The conception of twins, triplets, etc.

Plurimammate (*plu-re-mam'-āt*) [*plus*, more; *mamma*, a breast]. 1. Having several breasts, polymastic. 2. A person or animal having several breasts.

Plurinucleate (*plu-re-nu'-kle-āt*). Polynucleate.

Pluriserial (*plu-re-se'-re-al*). Made up of several series, multiserial.

Plurisy (*plu'-ris-e*). Same as *Plethora*.

Plurivalent (*plu-riv'-al-ent*). See *Multivalent* (Illus. Dict.).

Pluviograph (*plu'-ve-o-graf*) [*pluvia*, rain; γράφειν, to write]. A self-registering rain-gage.

Pluviometer (*plu-ve-om'-et-ur*) [*pluvia*, rain; *metare*, to measure]. A rain-gage.

Pluviometric (*plu-ve-o-met'-rik*). Relating to the measurement of rainfalls.

Pluviometry (*plu-ve-om'-et-re*). The measurement of rainfall.

Pluvioscope (*plu'-ve-o-skōp*). See *Pluviometer*.

Pneumascope (*nu'-mah-skōp*). See *Pneumatoscope*.

Pneumathorax. See *Pneumothorax* (Illus. Dict.).

Pneumatinuria (*nu-mat-in-u'-re-ah*). See *Pneumaturia* (Illus. Dict.).

Pneumatocele (*nu-mat'-o-sēl*). 1. See *Aerocele*. 2. See *Pneumonocele* (Illus. Dict.). **P. capitis, P. cranii.** See *Physocephalus* (Illus. Dict.). **P. vaginalis,** one of the tunica vaginalis testes.

Pneumatochemic (*nu-mat-o-kem'-ik*). 1. Relating to the chemistry of gases. 2. Relating to treatment of pulmonary disease by inhalation of medicated vapors. **P. Apparatus of Priestley.** See *Pneumatic Trough* (Illus. Dict.).

Pneumatogeny (*nu-mat-oj'-en-e*) [πνεῦμα, breath; γεννᾶν, to produce]. Artificial respiration.

Pneumatograph. See *Pneumograph* (Illus. Dict.).

Pneumatopericardium. See *Pneumopericardium* (Illus. Dict.).

Pneumatoscope (*nu-mat'-o-skōp*) [πνεῦμα, air; σκοπεῖν, to xamine]. 1. Wintrich's apparatus for measuring the gas in expired air. 2. Gabritschewsky's instrument for internal auscultation of the thorax. 3. An instrument for determining the presence of foreign bodies in the mastoid sinuses. 4. See *Pneumograph* (Illus. Dict.).

Pneumatosis. (See Illus. Dict.) **P. abdominis,** tympanites. **P. enterica,** flatulent colic. **P. pericardii,** pneumopericardium.

Pneumin (*nu'-min*). See *Methylene Creosote*.

Pneumoarctia (*nu-mo-ark'-te-ah*) [πνεύμων, lung; *arctare*, to contract]. Contraction of the lungs, pneumonostenosis.

Pneumobacillin (*nu-mo-bas-il'-in*). A toxic extract of pneumobacilli.

Pneumobulbous (*nu-mo-bul'-bus*). Relating to the lung and the oblongata or bulb; applied to asthma.

Pneumochemic. See *Pneumatochemic*.

Pneumochirurgia (*nu-mo-ki-rur'-ge-ah*) [πνεύμων, lung; χειρουργία, surgery]. Surgery of the lungs.

Pneumocholosis. See *Pneumonocholosis* (Illus. Dict.).

Pneumococcemia (*nu-mo-kok-se'-me-ah*) [*pneumococcus*; αἷμα, blood]. The presence of pneumococci in the blood.

Pneumococcia (*nu-mo-kok'-se-ah*). Generalized infection by pneumococci.

Pneumoectasis. See *Pneumonectasis* (Illus. Dict.).

Pneumoedema. See *Pneumonedema* (Illus. Dict.).

Pneumoerysipelas (*nu-mo-er-e-sip'-el-as*). Pneumonia associated with erysipelas.

Pneumogalactocele (*nu-mo-gal-ak'-to-sēl*) [πνεῦμα, air; γάλα, milk; κήλη, tumor]. A galactocele containing gas. **P. mastitis aerogenes,** a purulent tumor of the breast giving a tympanic note upon percussion owing to the presence of gas.

Pneumohematothorax. See *Pneumohemothorax* (Illus. Dict.).

Pneumohydrometra (*nu-mo-hi-dro-me'-trah*) [πνεῦμα, air; *hydrometra*]. Hydrometra associated with the generation of gas in the uterus from the decomposition of fluid.

Pneumolithiasis. See *Pneumonolithiasis* (Illus. Dict.).

Pneumomassage (*nu-mo-mas-ahzh'*) [πνεῦμα, air; μάσσειν, to knead]. A form of double massage for the treatment of chronic catarrhal otitis media, consisting of inflation of air into the drum cavity, by means of a catheter at the same moment that the membrana tympani is drawn outward by rarefaction of the air in the external auditory canal, by an arrangement of rubber ball and tubing worked by the hand.

Pneumomelanosis. See *Pneumonomelanosis* (Illus. Dict.).

Pneumomycosis. (See Illus. Dict.) **P. aspergillina, P., Aspergillar,** a form of pneumomycosis due to the presence of the fungus *Aspergillus fumigatus*. **P. mucorina,** that ascribed to species of *Mucor* growing in cavities of the lungs or in the tracheal mucosa.

Pneumonia. (See Illus. Dict.) Syn., *Inflammatio pectoris acuta; Pleumonia; Pulmonia; Pulmonitis*. **P. anginosa,** lobar pneumonia. **P., Appendicular,** a form of croupous pneumonia which in its onset closely resembles appendicitis. **P., Asthenic.** See *P., Adynamic* (Illus. Dict.). **P., Buhl's Desquamative,** caseous pneumonia, in which the exudate consists principally of desquamated alveolar epithelium. **P., Cotton,** a form of pneumonia occurring among workmen in cotton mills; due to mechanical irritation. Cf. *Byssinosis*. **P., Desnos',** "pneumonie pseudopleurétique." See *Disease, Grancher's*. **P., Disseminated,** bronchopneumonia. **P., Edematous,** a form associated with edema in the base of the lungs. **P., Ephemeral,** congestion of the lungs. **P. errans,** that slowly diffusing until the whole lung is involved. **P., Ether,** pneumonia following operations in which ether has been employed as an anesthetic. **P. exquisita, P. legitima,** lobar pneumonia. **P., Indurative.** See *P., Desquamative*. **P., Inhalation.** See *P., Aspiration* (Illus. Dict.). **P., Injection.** See *Turbid Pneumonia* (Illus. Dict.). **P., Intercurrent,** pneumonia complicating other diseases. **P., Metastatic,** suppurative pneumonia due to metastasis in pyemia. **P. morbillosa,** pneumonia associated with measles. **P., Nervous,** that in which nervous prostration is a dominant symptom. **P. pestifera,** typhoid pneumonia of a virulent type. **P., Patchy,** bronchopneumonia. **P., Pleuritic.** See *P., Pleurogenous* (Illus. Dict.). **P., Pseudopleuritic.** See *P., Desnos'*. **P., Putrid.** See *P., Bilious* (Illus. Dict.). **P., Ship,** a form of pneumonia which attacks horses on board ships. It is regarded as true gangrene of the lungs. **P., Sthenic,** that sometimes occurring in persons of robust constitution, characterized by a full pulse. **P., Stoll's,** "bilious pneumonia"; a variety of pneumonia with gastrohepatic symptoms. **P., Superficial,** inflammation involving only the part of the lung adjacent to the pleura. **P., Suppurative.** See *P., Purulent* (Illus. Dict.). **P., Turbid.** See *Turbid Pneumonia* (Illus. Dict.). **P. vera,** lobar pneumonia not complicated with other diseases or forms. **P., Vesicular,** bronchopneumonia.

Pneumonology. See *Pneumology* (Illus. Dict.).

Pneumonopexy (*nu-mon-o-peks'-e*) [πνεύμων, lung; πῆξις, a fixing in]. Fixation of a stump of lung tissue to the thoracic wall in connection with pneumonectomy for gangrene, hernia, or other pulmonary lesion.

Pneumonopleuresis (*nu-mon-o-plu-re'-sis*). See *Pneumonopleuritis* (Illus. Dict.).

Pneumonorrhaphy (*nu-mon-or'-af-e*) [πνεύμων, lung; ῥαφή, a seam]. Suture of lacerations of the lung.

Pneumonotyphus. See *Pneumotyphus* (Illus. Dict.).

Pneumopaludism (*nu-mo-pal'-u-dism*) [πνεῦμα, breath; *palus*, a marsh]. A manifestation of malaria characterized by the impairment of the percussion resonance at one apex, bronchial respiratory murmurs, bronchophony, without râles, friction, or expectoration; the cough occurs only in paroxysms.

Pneumoparalysis. See *Pneumonoparalysis* (Illus. Dict.).

Pneumoperitoneum (*nu-mo-per-it-on-e'-um*) [πνεῦμα, air; *peritoneum*]. The presence of gas in the peritoneal cavity.

Pneumophlebitis. See *Pneumonophlebitis* (Illus. Dict.).

Pneumoprotein (*nu-mo-pro'-te-in*). A protein elaborated by pneumococci.

Pneumoptysis (*nu-mo-ti'-sis*). Same as *Pneumonoptysis* and *Hemoptysis* (Illus. Dict.).

Pneumopyra (*nu-mo-pi'-rah*) [πνεύμων, lung; πῦρ, fire]. Malignant bronchitis.

Pneumorachis, Pneumorrhachis. See *Pneumatorrhachis* (Illus. Dict.).

Pneumorrhagia. See *Pneumonorrhagia* (Illus. Dict.).

Pneumothermomassage (*nu-mo-thur-mo-mas-ahzh'*) [πνεῦμα, air; θέρμη, heat; μάσσειν, to knead]. The application to the surface of the body of currents of air under varying degrees of pressure and of temperatures, and variously medicated or not.

Pneumothorax. (See Illus. Dict.) See *Sign, Pfuhl's; Wintrich's* (Illus. Dict.); *Leyden's.* **P., Closed.** See *P. by Occlusion* (Illus. Dict.). **P., Loculated,** a rare form in which the air and fluid, if present, are confined by pleural adhesions to a limited space. **P., Open.** See *P., Patent* (Illus. Dict.).

Pneumotyposis (*nu-mo-ti-po'-sis*) [πνεύμων, lung; τύπος, type]. See *Pneumonia, Bilious* (Illus. Dict.).

Pneumouria (*nu-mo-u'-re-ah*). See *Pneumaturia* (Illus. Dict.).

Pneusimeter (*nu-sim'-et-ur*) [πνεῦσις, a breathing; μέτρον, a measure]. An apparatus used as a spirometer to measure the vital capacity of the chest in respiration.

Pock. (See Illus. Dict.) **P.-sowing,** a form of inoculation against smallpox practised by the Chinese as early as 1000 years B.C., by introducing into the nasal cavities of young children pledgets of cotton saturated with variolous pus. [Park.]

Pocket. (See Illus. Dict.) **P., Anal,** a saccular fold of the rectal mucosa. Syn., *Horner's Saccule; Physick's Pocket.* **P., Physick's.** See *P., Anal.* **P., Rathke's.** See *Pouch, R.'s* (Illus. Dict.). **P., Seesel's.** See *Pouch, Seesel's* (Illus. Dict.).

Poculent (*pŏ'-ku-lent*) [*poculentus*]. Drinkable, potable.

Podex. (See Illus. Dict.) 2. The fundament, anus.

Podocone (*pod'-o-kōn*) [πούς, a foot; κῶνος, a cone]. The prolongation of the operculum into the interior of the capsule of monopylian rhizopods.

Pododynamometer (*pod-o-di-nam-om'-et-ur*) [πούς, a foot; *dynamometer*]. An apparatus for testing the strength of the muscles of the feet.

Podometer. See *Pedometer* (Illus. Dict.).

Podophyllin. (See Illus. Dict.) 2. A glucosid contained in the resin of *Podophyllum peltatum*, L.

Podophylloresin (*pod-o-fil-o-res'-in*). See *Podophyllin* (Illus. Dict.).

Podophyllotoxin. (See Illus. Dict.) $C_{35}H_{24}O_9 + 2H_2O$, bitter, whitish-yellow lumps or powder; used as a purgative in severe constipation. Dose, $\frac{1}{12}$–$\frac{1}{8}$ gr. (0.0054–0.008 gm.).

Pœcilonomy. See *Pecilonomy.*

Pœlé-bark. See *Polé-bark.*

Pœonin (*pe'-o-nin*). See *Corallin* (Illus. Dict.).

Poi (*po'-i*) [Hawaiian]. A favorite food in the Sandwich Islands made by pounding the corms of the taro, *Colocasia antiquorum*, Schott, to an adhesive mass and allowing it to ferment.

Poikilonomy. See *Pecilonomy.*

Point. (See Illus. Dict.) **P., Archimedean,** the point in consciousness at which there is first recognition of one's own existence, the supposed point or fulcrum on which to rear the whole structure of philosophy. **P., Barker's,** a point on the skull, located 1¼ inches above and behind the auricular point. It is the point of election for trephining in cases of abscess of the temporosphenoidal lobe. **P.s, Beard-Valleix's.** See *P.s, Valleix's* (Illus. Dict.). **P., Broca's,** the auricular point, the center of the external auditory meatus. **P., Covering,** a name for the corresponding retinal points. **P. of Direct Vision,** that place in the monocular field at which forms can be most accurately distinguished. **P., Follicular** (of J. Renaut). See *Islands, Langerhans'.* **P., Guéneau-de Mussey's.** See *P., de Mussey's,* under *Signs.* **P., Méglin's Palatine,** the point of emergence of the large palatine nerve from the palatomaxillary canal; it constitutes at times one of the painful points in neuralgia of the superior maxillary branch of the trigeminus. **P., Mental.** See under *Craniometric* (Illus. Dict.). **P., Monro's,** the point sometimes selected in paracentesis abdominis midway on Monro's line. **P., de Mussey's.** See under *Signs.* **P., Nasofrontal,** the nasion. **P., Premaxillary.** See *P., Alveolar* (Illus. Dict.). **P., Pressure,** any area on the surface of the body marked by hyperesthesia. **P., Scapular,** a pressure-point at the lower angle of the scapula usually observed in cases of neuralgia of the brachial plexus. **P., Spasmogenic.** See *Zone, Hysterogenic* (Illus. Dict.). **P., Spinous,** a sensitive point over a spinous process. **P., Subtemporal,** Topinard's name for the point at which the sphenotemporal suture is crossed by the infratemporal crest. **P. of Sylvius,** a point on the equatorial ophryon-inion line located $\frac{21}{100}$ posterior to the ophryon. Syn., *Punctum sylvii.* **P., Temporal,** a painful point in neuralgia over the auriculotemporal nerve. **P., Vogt's,** the point selected by Vogt for trephining in cases of traumatic meningeal hemorrhage. It is found at the intersection of a horizontal line two fingers' breadths above the zygomatic arch, and of a vertical line a thumb's breadth behind the ascending sphenofrontal process of the zygoma. **P., Voillemier's,** a point on the linea alba 6 to 7 cm. below a line drawn between the two anterior superior spines of the ilium; suprapubic puncture of the bladder is made at this point in fat or edematous subjects. **P.s, Ziemssen's Motor,** points of election in electrization of muscles; they correspond to the places of entrance of the motor nerves into the muscles. **P., Zygomaxillary,** v. Török's name for the lowest point on the zygomaxillary suture. **P., Zygoorbital,** the highest point on the zygomaxillary suture.

Poison. (See Illus. Dict.) **P., Acrid.** See *P., Irritant* (Illus. Dict.). **P., Acronarcotic,** one that is irritating to the part to which it is applied but acts on the brain or myelon or both. **P.s, Cellular,** cytotoxins. **P., Putrescent, P., Septic,** a venom or virus. **P., Sausage.** See *Allantotoxicon* (Illus. Dict.) and *Botulismotoxin.* **P., Vascular,** one which acts by augmenting or decreasing the blood-pressure in the vessels.

Poisoning. (See Illus. Dict.) 2. The condition brought about by a poison. **P., Crowd.** See *Ochlesis* (Illus. Dict.).

Poke (*pōk*). 1. See *Phytolacca.* 2. Scrofula. 3. The

swimming bladder of fish. **P., Indian,** *Veratrum viride.*

Polariscopist (*po-lar-is'-ko-pist*). An adept in the use of the polariscope.

Polé-bark. The bark of *Alstonia spectabilis*, R. Br., used as a stomachic.

Poleozone (*po-le'-o-zōn*). A bactericide said to be obtained from potassium chlorate by action of sulfuric acid.

Poliomyelitis. (See Illus. Dict.) **P. anterior progressiva longissima.** Synonym of *Atrophy, Progressive Muscular.* **P. anterior subacuta et chronica** [Erb]. See *Paralysis, Subacute Atrophic Spinal.*

Poliosis. (See Illus. Dict.) Syn., *Achromatosis congenitalis.* **P. circumscripta,** vitiligo, or partial albinism.

Politobiotherapy (*pol-it-o-bi-o-ther'-ap-e*) [πολίτης, citizen; βίος, life; θεραπεία, therapy]. The medical and sanitary supervision of citizens.

Politzer's Luminous Cone. A brightly illuminated area in the shape of an isosceles triangle which has its base near the lower circumference and its apex at the umbo of the membrana tympani. **P.'s Test.** See under *Signs.*

Pollicar (*pol'-ik-ar*) [*pollex*, the thumb]. Relating to the thumb, pollical.

Pollodic (*pol-o'-dik*) [πολλοί, many; ὁδός, a way]. Panodic; applied by Marshall Hall to nervous force proceeding from one point to any other point of the spinal nervous system.

Polonium (*pol-o'-ne-um*) [*Poland*, country of the discoverers]. A radioactive element isolated by M. and Mme. Curie from pitchblende in 1898.

Poltfoot (*polt'-fŭt*). Club-foot.

Polus (*po'-lus*). See *Pole* (Illus. Dict.). 2. The patella. **P. temporalis,** Thane's term for the starting-point of the boundary-line of the temporal lobe of the brain, 20 mm. above the arcus zygomaticus and 15 mm. behind the processus marginalis (the external angular process).

Polyacid (*pol-e-as'-id*) [πολύς, many; *acid*]. Applied to a base or basic radicle capable of saturating several molecules of the acid radicle.

Polyadenitis. (See Illus. Dict.) **P., Malignant,** bubonic plague.

Polyalcoholism (*pol-e-al'-ko-hol-izm*). Poisoning by a mixture of alcohols.

Polyanemia (*pol-e-an-e'-me-ah*) [πολύς, much; ἀναιμία, want of blood]. Excessive anemia.

Polyarthritis. (See Illus. Dict.) **P. anginosa,** articular rheumatism with angina. **P. deformans.** See *Arthritis deformans* (Illus. Dict.). **P. scarlatinosa,** that occurring in the desquamative stage of scarlet fever and of short duration. Syn., *Synovitis scarlatinosa.* **P., Vertebral,** inflammation of the intervertebral discs without caries of the bones of the vertebras.

Polyatomicity (*pol-e-at-om-is'-it-e*). The capacity to combine with more than two atoms of a univalent element Syn., *Multivalency.*

Polyaxon. (See Illus. Dict.) 2. A neuron having more than two axons.

Polybaphia (*pol-e-ba'-fe-ah*) [πολύς, many; βαφή, dye]. The condition of being many colored. Cf. *Pleiochromia.*

Polycardia (*pol-e-kar'-de-ah*). See *Tachycardia* (Illus. Dict.).

Polychroma (*pol-e-kro'-mah*) [πολύς, many; χρῶμα, color]. See *Esculin* (Illus. Dict.).

Polychromatophil, Polychromatophile (*pol-e-kro-mat'-o-fil, -fil*) [πολύς, many; χρῶμα, color; φιλεῖν, to love]. 1. An erythrocyte which has lost its affinity for acid stain and which with mixtures of acid and basic dyes is stained atypically by either or both elements. 2. See *Polychromatophilic.*

Polychromatophilia (*pol-e-kro-mat-o-fil'-e-ah*). The presence in the blood of polychromatophils.

Polychromatophilic (*pol-e-kro-mat-o-fil'-ik*). Exhibiting no special affinity for acid or basic dyes.

Polychromemia, Polychromæmia (*pol-e-kro-me'-me-ah*) [πολύς, many; χρῶμα, color; αἷμα, blood]. The increase in coloring-matter in the blood as a sequel of polycythemia.

Polychromin (*pol-e-kro'-min*) [πολύς, many; χρῶμα, color]. See *Aureolin.*

Polychylic (*pol-e-ki'-lik*) [πολύς, much; χυλός, juice]. Relating to an excess of chyle.

Polyclonia (*pol-e-klo'-ne-ah*) [πολύς, many; κλόνος, commotion]. An affection said to be distinct from tic and chorea but marked by clonic spasms.

Polycrotism (*pol-e-kro'-tizm*) [πολύς, many; κρότος, pulse]. Condition of a pulse having more than one secondary rhythm to each heart-beat.

Polycythemia. (See Illus. Dict.) **P. cyanotica,** Osler's disease, polycythemia associated with chronic cyanosis, enlargement of the spleen, and constipation without any sign of disease of the heart, lungs, or kidneys and with no emphysema.

Polydactylia (*pol-e-dak-til'-e-ah*). See *Polydactylism* (Illus. Dict.).

Polyestrous, Polyæstrus (*pol-e-es'-trus*) [πολύς, many; οἶστρος, the gad-fly, hence vehement desire]. Heape's term for such females as have a continuous series of short periods of sexual rest. The human female exhibits a series of diestrous cycles—proestrum, estrus, metestrum, and diestrum—in succession.

Polyformin (*pol-e-form'-in*). An antiseptic compound obtained by dissolving resorcin in aqueous formic aldehyd and adding an excess of ammonia; it is an insoluble, odorless, amorphous, yellow-brown powder used as iodoform. **P., Soluble,** $(C_6H_4(OH_2)_2—(CH_2)_6N_4$, diresorcin hexamethylenetetramin, a combination of two molecules of resorcin with one molecule of hexamethylenetetramin (urotropin); white crystals, very soluble in water and alcohol, insoluble in ether, benzol, and oils. It is used internally as an antiferment; externally in skin-diseases.

Polygonia (*pol-e-go'-ne-ah*) [πολύς, many; γωνία, an angle]. The condition of having many angles.

Polyhedral (*pol-e-he'-dral*) [πολύς, many; ἕδρα, a seat, a base]. Having many surfaces.

Polyhidria (*pol-e-hi'-dre-ah*). See *Polyhidrosis* (Illus. Dict.).

Polyhygroma (*pol-e-hi-gro'-mah*). See *Polygroma* (Illus. Dict.).

Polyhyperemia, Polyhyperæmia (*pol-e-hi-pur-e'-me-ah*). See *Polyperemia* or *Plethora* (Illus. Dict.).

Polylalia (*pol-e-la'-le-ah*) [πολύς, many; λαλεῖν, to speak]. Mimicking.

Polyleptic (*pol-e-lep'-tik*) [πολύς, many; λαμβάνειν, to sieze]. Characterized by numerous remissions and exacerbations.

Polymenia (*pol-e-me'-ne-ah*) [πολύς, much; μῆνες, months]. Menorrhagia.

Polymeria. (See Illus. Dict.) **P. promiscua translativa,** transposition of viscera.

Polymeric. (See Illus. Dict.) 2. Applied to muscles which are derived from two or more myotomes.

Polymerismic (*pol-e-mer-is'-mik*). Relating to polymerism.

Polymorphonuclear (*pol-e-mor-fo-nu'-kle-ar*). Applied to polynuclear leukocytes which have nuclei exceedingly irregular in form, being twisted or knotted or presenting the appearance of being divided into dis-

tinct portions, though in reality a thin lamina of nuclear substance unites them.

Polymyoclonus (*pol-e-mi-o-klo'-nus*) [πολύς many; μῦς, muscle; κλόνος, commotion]. See *Paramyoclonus* (Illus. Dict.).

Polynesic (*pol-e-ne'-sik*) [πολύς, many; νῆσος, island]. Occurring in several foci; *e. g.*, polynesic sclerosis.

Polyneurotic (*pol-e-nu-rot'-ik*) [πολύς, many; νεῦρον, nerve]. See *Polyneuric* (Illus. Dict.).

Polynuclearneutrophilic (*pol-e-nu-kle-ar-nu-tro-fil'-ik*). Relating to polynuclear leukocytes which are readily stainable with neutral dyes.

Polynucleosis (*pol-e-nu-kle-o'-sis*) [πολύς, many; *nucleus*]. The condition of having many polynuclear cells in the blood or in a pathologic exudate.

Polynychia (*pol-e-nik'-e-ah*). See *Polyonychia* (Illus. Dict.).

Polyops (*pol'-e-ops*) [πολύς, many; ὄψ, the eye]. A monster with two bodies and a head furnished with two pairs of eyes (Geoffroy Sainte Hilaire).

Polyp. (See Illus. Dict.) **P., Hoffmann's,** papillary hypertrophy of the nasal mucous membrane presenting the appearance of a papilloma.

Polyplasmia (*pol-e-plaz'-me-ah*) [πολύς, much; πλάσμα, plasm]. Extreme fluidity of the blood.

Polypodium (*pol-e-po'-de-um*) [πολύς, many; πούς, foot]. A genus of ferns several species of which are asserted to have medical properties. **P. aureum** is a species of the West Indies; the rhizome is used as a styptic. **P. calaguala,** Lechl. (**P. sporadolepis,** Kze.), the true calaguala, a species of Mexico and Peru, has a high reputation as a solvent and diaphoretic. See under *Calaguala*. **P. quercifolium,** L., is indigenous to the East Indies, where the juice of the rhizome is used in inflammation of the eyes and in gonorrhea. The rhizome is used in malaria and as a tonic. **P. vulgare,** L., common on the rocks in both Europe and America, has been used as an expectorant in chronic catarrh and asthma. Dose, 1–8 drams.

Polyporus. (See Illus. Dict.) **P. fomentarius,** L., a European species found growing on trees, especially on the beech. The soft spore-bearing tissue serves as tinder and for arresting hemorrhage. Syn., *Astringent agaric; Surgeon's agaric; Fungus igniarius; Agaricus chirurgorum.* **P. igniarius,** L., a European species found growing on trees, especially upon the willow and oak. It affords tinder and is used in arresting hemorrhage. Syn., *Astringent agaric; Surgeon's agaric; Fungus igniarius; Agaricus chirurgorum.* **P. officinalis,** Vill., a variable and irregular species, growing on the larch, particularly upon *Larix sibirica,* Led., of northern Russia and Siberia, and also found in Idaho and Montana. It is used in night-sweats of tuberculosis. Dose fld. ext., 1–15 ♏ (0.06–0.9 c.c.). It yields agaricin, laricin, and fungin. Syn., *Larch agaric; Purging agaric; White agaric.*

Polyposis. (See Illus. Dict.) 2. The condition of being affected with polypi. **P. ventriculi,** a plicate, warty condition of the gastric mucosa associated with hypertrophy and catarrh. Fr., *Etat mamelonné.*

Polypragmasia (*pol-e-prag-ma'-se-ah*) [πολυπραγμονεῖν, to be a busybody]. Meddlesomeness in practice.

Polyprotodont (*pol-e-pro'-to-dont*) [πολύς, many; πρῶτος, first; ὀδούς, tooth]. Applied to animals having more than six incisors in the upper jaw.

Polypsychism (*pol-e-si'-kizm*) [πολύς, many; ψυχή, mind]. The psychic aspect of polyzoism.

Polyptrite. See *Polypotrite* (Illus. Dict.).

Polyradicular (*pol-e-rad-ik'-u-lar*) [πολύς, many; *radix,* a root]. Applied to teeth having more than two roots.

Polysarcia. (See Illus. Dict.) **P. adultorum,** excessive development of soft tissues in adults. Syn., *Acmeopolysarcia.*

Polyserositis (*pol-e-se-ro-si'-tis*). See *Polyorrhomenitis* (Illus. Dict.).

Polysinuitis, Polysinusitis (*pol-e-sin-u-i'-tis, -si'-tis*). Simultaneous inflammation of several sinuses.

Polysolvol (*pol-e-sol'-vol*). A thick, clear, yellow liquid which has the property of dissolving large quantities of phenol, menthol, salicylic acid, etc. It is obtained by treating castor oil successively with strong sulfuric acid and sodium chlorid and neutralizing the sulforicinic acid obtained with sodium hydrate. Syn., *Solvin sodium* or *Ammonium sulforicinate.*

Polysomus (*pol-e-so'-mus*) [πολύς, many; σῶμα, body]. A monster fetus having one head and several bodies.

Polysthenic (*pol-e-sthen'-ik*) [πολύς, much; σθένος, strength]. Excessively strong.

Polystichalbin (*pol-e-stik-al'-bin*). $C_{32}H_{26}O_9$. A body extracted by Poulsson from the rhizome of *Aspidium spinulosum,* Sw., insoluble in water, freely soluble in hot alcohol. Syn., *White polystichic acid.*

Polystichin (*pol-e'-stik-in*) [πολύς, many; στίχος, a row]. $C_{22}H_{24}O_9$. A body extracted by Poulsson from the rhizome of the fern *Aspidium* (*Polystichum*) *spinulosum,* Sw. It is insoluble in water, freely soluble in hot alcohol.

Polystichinin (*pol-e-stik'-in-in*). $C_{18}H_{22}O_8$. A body isolated from the rhizome of *Aspidium spinulosum,* Sw., by Poulsson; insoluble in water, more or less readily soluble in ether, chloroform, and acetone.

Polystichocitrin (*pol-e-stik-o-sit'-rin*). $C_{15}H_{22}O_9$. A constituent of the rhizome of *Aspidium spinulosum,* Sw., found by Poulsson; insoluble in water, freely soluble in hot alcohol.

Polystichoflavin (*pol-e-stik-o-fla'-vin*). $C_{24}H_{30}O_{11}$. A constituent of the rhizome of *Aspidium spinulosum,* Sw., found by Poulsson. It is insoluble in water, freely soluble in hot alcohol. Syn., *Yellow polystichic acid.*

Polytrichum (*pol-it'-rik-um*) [πολύς, many; θρίξ, hair]. A genus of mosses, hair moss. **P. juniperinum,** Hedw., hair-cap moss, a species indigenous to the United States and Europe, is a powerful diuretic. Dose fld. ext., 20–60 ♏ (1.2–3.7 c.c.).

Polyuria. (See Illus. Dict.) **P. spastica,** intermittent polyuria with hysteric symptoms accompanying convulsions.

Polyzoism (*pol-e-zo'-izm*) [πολύς, many; ζῶον, animal]. The property in a complex organism of being composed of minor and quasi-independent organisms (like the *Polyzoa*). Syn., *Colonial constitution.* Cf. *Polypsychism.*

Pomelo (*pom'-el-o*) [East Indian]. The grape-fruit.

Pommelfoot (*pum'-el-fut*). Club-foot.

Pommel-joint (*pum'-el-joint*). Condyloid joint.

Ponfick's Shadows or Shadow Corpuscles. See *Achromacyte.*

Ponogene (*pon'-o-jēn*) [πόνος, work; γεννᾶν, to produce]. Waste-matter of the nervous system.

Ponogenic (*pon-o-jen'-ik*). Relating to ponogene. **P. Toxins.** See under *Toxin.*

Ponograph (*pon'-o-graf*) [πόνος, pain; γράφειν, to write]. An apparatus for determining and registering sensitiveness to pain.

Pons. (See Illus. Dict.) 2. The pons varolii. **P. basilaris,** the basilar process of the occipital bone. **P. sylvii,** the quadrigeminum. **P. zygomaticus,** the zygoma.

Ponticinerea (*pon-te-sin-e'-re-ah*). The cinerea of the pons; the pontile nuclei.

Ponticulus. (See Illus. Dict.) Syn., *Propons.* **P. promontorii,** a faint bony ridge on the inner wall of

the tympanic cavity extending from the pyramid to the promontory and below the foramen ovale.

Pontirhaphe (*pon-te-raf'-e*) [*pons*, a bridge; *ῥάφη*, a seam]. Wilder's name for the mesial basal groove of the pons.

Populus. (See Illus. Dict.) A genus of shrubs and trees of the order *Salicineæ*. **P. monilifera**, Ait., cotton-wood, of the United States, is said to be a powerful antiperiodic; the wood and the bark of the root are used.

Porcelain. (See Illus. Dict.) **P., Réaumur's,** devitrified glass, made by heating glass, containing little alkaline silicate, to fusing point and then cooling slowly. It is partially crystallized and may be made transparent by refusion.

Porcellaneous, Porcellanous (*por-sel-a'-ne-us, por-sel'-an-us*). Relating to or having the appearance of porcelain; applied to a condition of the skin in fever.

Porcosan (*por'-ko-san*). A remedy for hog erysipelas prepared from weakened cultures of *Bacillus erysipelatos suis*, Koch.

Porencephalitis (*por-en-sef-al-i'-tis*) [*πόρος*, pore; *ἐγκέφαλος*, the brain]. Encephalitis with a tendency to the formation of cavities.

Pornotherapy (*por-no-ther'-ap-e*) [*πόρνη*, a prostitute; *θεραπεία*, therapy]. The medical supervision of prostitutes as related to public hygiene.

Porogamy (*po-rog'-am-e*) [*πόρος*, a pore; *γάμός*, a marriage]. A term proposed by Treub for the usual process of pollination in which the pollen tube reaches the embryo-sac by the usual route of the micropyl. Cf. *Chalazogomy; Mesogomy.*

Porphyreus (*por-fi'-re-us*) [*πορφύρα*, purple]. In biology showing spots of purple upon a ground of another hue.

Porphyrin. (See Illus. Dict.) $C_{21}H_{25}N_3O_2$ (Hesse). A white substance, giving a blue fluorescence in acid solutions melting at 97° C., obtained from *Alstonia constricta*, F. v. Mül. It is antipyretic.

Porphyuria (*por-fe-u'-re-ah*). See *Porphyruria* (Illus. Dict.).

Porriginous (*por-ij'-in-us*). Relating to porrigo; scurfy.

Posadas-Bobrow's Operation. See under *Operation.*

Posadas, Protozoic Disease of. See *Dermatitis Blastomycetic.*

Position. (See Illus. Dict.) **P., Bonnet's,** the position assumed by the thigh in coxitis; flexion, abduction, and outward rotation. **P., Duncan's.** See under *Placenta.* **P., Fowler's,** that obtained by elevating the foot of the bed 24 to 30 inches. **P., High Pelvic.** See *Posture, Trendelenburg's* (Illus. Dict.). **P., Schultze's.** See under *Placenta.* **P., Walcher's,** a dorsal posture with the hips at the edge of the table and lower extremities hanging.

Positivity (*pos-it-iv'-it-e*). The condition of a body which exhibits positive electricity.

Positor (*pos'-it-or*) [*ponere*, to place]. See *Repositor* (Illus. Dict.).

Posologic. (See Illus. Dict.) **P., Table,** a dosage table.

Postaccessual (*post-ak-ses'-u-al*) [*post*, after; *accessio*, a paroxysm]. Occurring after a paroxysm.

Postdiphtheric (*post-dif-ther'-ik*). Following an attack of diphtheria.

Posteroexternal (*post-e-ro-eks-tur'-nal*). Ectad of a posterior aspect.

Posterointernal (*post-e-ro-in-tur'-nal*). Entad of a posterior aspect.

Posteromedian (*post-e-ro-me'-de-an*). Located in the middle of a posterior aspect.

Posthoplasty. See *Posthioplasty* (Illus. Dict.).

Posthypnotic (*post-hip-not'-ik*). Applied to a suggestion given during a hypnotic trance but intended to operate after the trance has ceased.

Postischial (*post-is'-ke-al*). Dorsad of the ischium.

Postotic (*post-o'-tik*) [*post*, after; *οὖς*, ear]. Behind the auditory vesicle.

Postpneumonic (*post-nu-mon'-ik*). Following pneumonia.

Postponent (*post-po'-nent*) [*post*, after; *ponere*, to place]. Delayed in recurrence.

Postpyramids (*post-pir'-am-ids*). The posterior pyramids.

Postscarlatinal (*post-skar-lat-i'-nal*). Occurring after scarlatina.

Posttarsal (*post-tar'-sal*). Located behind the tarsus.

Posttyphoid (*post-ti'-foid*). Following typhoid.

Postulate (*pos'-tu-lāt*) [*postulare*, to demand]. A self-evident proposition. **P.s, Koch's.** See *Law, Koch's.*

Postvaccinal (*post-vaks-'sin-nal*). Following vaccination.

Postvelum (*post-ve'-lum*) [*post*, after; *velum*, a veil]. See *Kilos.*

Potain's Method for indicating the size of the heart: The greatest height of the cardiac area is multiplied by the greatest breadth, and the product by an empiric coefficient, 0.83; the result in square centimeters is approximate if the figure obtained does not deviate far from the usual outlines.

Potamophobia (*pot-am-of-o'-be-ah*) [*ποταμός*, river; *φόβος*, fear]. The morbid fear of rivers, lakes, and other large sheets of water.

Potash. (See Illus. Dict.) **P., Alum,** aluminium and potassium sulfate. **P., Aqueous, P., Solution of.** See *Postassæ liquor* (Illus. Dict.). **P.-blue.** See *Potassium-blue* (Illus. Dict.). **P., Caustic,** potassium hydrate or potassium hydroxid. **P., Red Prussiate of.** See *Potassium Ferricyanid* (Illus. Dict.). **P., Yellow Prussiate of.** See *Potassium Ferrocyanid* (Illus. Dict.).

Potassa. (See Illus. Dict.) **P., Sulfurated,** a hard, brittle, brown substance with alkaline, bitter taste obtained by fusing together potassium carbonate and sublimated sulfur. It is alterative and emetic. Used internally in gout and scrofula. Dose, 2–10 gr. (0.13–0.65 gm.). Externally in parasitic skin-diseases.

Potassioantimonic (*po-tas-e-o-an-ti-mo'-nik*). Containing potassium and antimony.

Potassiobarytic (*po-tas-e-o-bar-it'-ik*). Containing potassium and barium.

Potassiocupric (*po-tas-e-o-ku'-prik*). Containing copper and potassium.

Potassium. (See Illus. Dict.) **P. and Aluminium Salicylate,** a crystalline reaction-product of aluminium salicylate and potassium acetate; soluble in water and used as an antiseptic and in rheumatism. **P. and Ammonium Tartrate,** $NH_4 . KC_4H_4O_6$, transparent crystals, soluble in water, obtained from cream of tartar with ammonium carbonate. It is used as a cathartic. **P.-amylxanthogenate,** $K . (C_5H_{11})CS_2O$, yellow scales, soluble in water, used as an antiparasitic. **P. Antimonate,** $K_2H_2Sb_2O_7 + 6H_2O$, small crystalline granules soluble in water. Syn., *White oxid of antimony; Diaphoretic antimony.* **P. Arsenate,** K_2HAsO_4, extremely poisonous crystals, soluble in water; used as an antiperiodic and alterative. Dose, $\frac{1}{20}$–$\frac{1}{10}$ gr. (0.003–0.006 gm.). Max. dose, $\frac{1}{10}$ gr. (0.006 gm.) single; ½ gr. (0.022 gm.) daily. **P. Aurobromid,** $AuBr_3KBr + 2H_2O$, purple crystals soluble in water or alcohol, with a red-brown color; antiseptic. Subcutaneous dose, 0.008–0.012 gm. **P. Benzoate,** $KC_7H_5O_2 + 3H_2O$, white crystalline effer-

vescent masses, soluble in water and alcohol. Dose, 5–20 gr. (0.32–1.3 gm.). **P. Bicarbonate.** (See Illus. Dict.) It is highly recommended in influenza and to abort colds. Dose, 30 gr. every 4 hours. **P. Binoxalate,** $KHC_2O_4 + H_2O$, white prisms, soluble in water. In dilute solution used as a drink. Dose, ⅛–1½ gr. (0.008–0.1 gm.). Syn., *Acid potassium oxalate; Sal acetosella; Salt of sorrel; Essential salt of lemons; Oxalium.* **P. Bisulfate,** $KHSO_4$, colorless plates soluble in water; aperient and tonic. Dose, 60–120 gr. (4–8 gm.). Syn., *Acid potassium sulfate; Potassium hydrogen sulfate.* **P. Bisulfite,** $KHSO_3$, white acicular crystals, soluble in water; antiseptic. Dose, 5–30 gr. (0.32–2 gm.). Syn., *P. hydrogen sulfite.* **P. Borosulfate,** $SO_2.OBo.OK$, colorless, odorless, vitreous masses of faint, harsh, acidulous taste, soluble in water; an internal and external antiseptic. Dose, 0.3–0.6 gm., 5 or 6 times daily. Syn., *Borol.* **P. Camphorate,** $K_2C_{10}H_{14}O_4$, white, antiseptic crystals, soluble in water, used in night-sweats of tuberculosis, gonorrhea, etc. Dose, 10–30 gr. (0.65–2 gm.). **P. Cantharidate,** $K_2C_{10}H_{12}O_5 + 2H_2O$, white powder or crystals, soluble in water, used subcutaneously in attenuated solution in tuberculosis. **P. Carbolate,** C_6H_5OK, white, antiseptic crystals, soluble in water; used in diarrhea and dysentery. Dose, 1–5 gr. (0.065–0.32 gm.). **P. Citrate, Effervescent,** a white powder, soluble in water with effervescence, consisting of a mixture of citric acid, potassium bicarbonate, and sugar; used as a refrigerant and diaphoretic. Dose, 30–90 gr. (2–6 gm.). **P. Creosote Sulfonate,** it is used in tuberculosis. Dose, 5 to 20 gr. **P.-diiodoparaphenol-sulfonate.** See *P. Sozoiodolate.* **P.-diiodoresorcinmonosulfate.** See *Picrol.* **P. Dithiocarbonate,** K_2COS_2, an orange-red, crystalline powder, soluble in water, used externally on skin-diseases; eczema, 5%–10% ointment; psoriasis, 20% ointment. **P. Dithionate.** See *P. Hyposulfate.* **P.-ethyldithiocarbonate, P.-ethylxanthogenate.** See *P. Xanthogenate.* **P. Fluoresceinate,** $K_2C_{20}H_{10}O_5$, the potassium salt of fluorescein; a yellowish-red powder soluble in water. It is used to detect corneal ulcerations. **P.-glycerino-phosphate,** $K_2PO_4C_3H_5(OH) + H_2O$, a white, vitreous mass, very soluble in water; a nerve tonic. Inj., 3–4 gr. (0.2–0.25 gm.) daily in water containing sodium chlorid. **P.-guaiacol Sulfonate,** a fine, white powder, soluble in water, containing 60% of guaiacol. Dose, 5–15 gr. (0.97 to 0.32 gm.). Syn., *Thiocol.* **P. Hydroxid.** See *P. hydras* (Illus. Dict.). **P. Hypophosphite,** KPH_2O_2, white, granular powder or opaque crystals, soluble in water or alcohol; it explodes with violence on trituration or on heating with any oxidizer; used as a nerve stimulant. Dose, 10–30 gr. (0.65–2 gm.). **P.-indigodisulfonate,** $K_2C_{16}H_8N_2O_2(SO_3)_2$, dark-blue powder soluble in water. Syn., *P. Sulfindigolate; P. Indigosulfate.* **P. Iodid.** (See Illus. Dict.) Recommended in lobar pneumonia. Dose, 10–15 gr. increased by 5 or 10 gr. every 2 or 3 hours. **P. and Magnesium Chlorid,** a milk-white or pink-colored mineral found in Stassfurt, Prussia; it is a double magnesium and potassium chlorid associated with rock salt. It is very extensively employed in the preparation of potassium salts. **P. Nitrate with P. Sulfate,** a mixture of 80% of potassium nitrate with 20% of potassium sulfate, soluble in water; antiseptic and diuretic. **P. Nitrite,** KNO_2, white, amorphous sticks soluble in water; used in asthma, epilepsy, etc. Dose, ¼–2 gr. (0.016–0.13 gm.) several times daily. **P. Nitroprussiate,** $K_2F_2.NO.(CN)_5 + 2H_2O$, garnet-red crystals, soluble in water and alcohol, used as a test for albumin in urine.

P. Oleate, a detergent and emollient containing $KC_{18}H_{33}O_2$. **P. Osmate.** See *P. Perosmate.* **P. Oxalate,** $K_2C_2O_4 + H_2O$, colorless crystals, soluble in water; used in the treatment of phlegmonous inflammations in injections of 1% aqueous solution into the tissues surrounding the focus of the disease. **P.-oxyquinolin Sulfate.** See *Chinosol.* **P. Percarbonate,** $K_2C_2O_6$, first obtained by A. v. Hansen by the electrolysis of potash solutions. It is a colorless powder which slowly decomposes under the action of water. It is recommended as a substitute for hydrogen peroxid in analytic chemistry for demonstrating vanadium, titanium, etc., and for the oxidation of ferrous into ferric salts. Syn., *Antihypo.* **P. Perchlorate,** $KClO_4$, white crystals, slightly soluble in water; used as an antipyretic, antiperiodic, sedative, and diuretic. Dose, 5–15 gr. (0.32–1 gm.). Syn., *Hyperchlorate of Potassium.* **P. Permanganate.** (See Illus. Dict.) It is highly recommended in saturated solution for burns. **P. Perosmate,** $K_2OsO_4 + 2H_2O$, violet crystals used as an alterative and sedative in epilepsy, goiter, etc. Dose, $\frac{1}{16}$–¼ gr. (0.004–0.16 gm.). Syn., *Potassium osmate.* **P. Persulfate,** used for removing traces of the thiosulfate from photographic plates. **P. Phosphate, Dibasic,** K_2HPO_4, an amorphous, white powder, soluble in water, used as an alterative. Dose, 10–30 gr. (0.65–1.2 gm.). Syn., *Dipotassium orthophosphate.* **P. Rhodanid.** See *P. Sulfocyanate.* **P. Salicylate,** $KC_7H_5O_3$, a white powder, soluble in water or alcohol; antipyretic, analgesic, antirheumatic. Dose, 6–15 gr. (0.4–1 gm.). **P. Salicylite,** $KC_7H_5O_2 + H_2O$, yellow powder, soluble in water or alcohol; antirheumatic. Dose, 3–15 gr. (0.2–1 gm.). Syn., *Potassium-salicylaldehyd.* **P. Silicate,** K_2SiO_3 (approximately), used in making fixed dressings for fractures. Syn., *Soluble glass; Water-glass.* **P. Silicate, Liquid.** See under *Solution.* **P. and Sodium Borotartrate,** white, deliquescent powder or granules, soluble in water, consisting of 71.5% of potassium bitartrate and 28.5% of borax. It is used as a cathartic and antiseptic. Dose, 60–240 gr. (15–30 gm.). **P. Sozoiodolate,** $KHC_6H_2I_2OSO_3$, a white crystalline powder obtained from phenolparasulfonic acid in an aqueous hydrochloric acid solution by action of a solution of potassium iodid and potassium iodate. It contains 58.3% of iodin, 20% of phenol, and 7% of sulfur; soluble in hot water, melts at 120° C. It is bactericidal and is used externally in 3% ointment. Syn., *P.-diiodoparaphenol-sulfonate; P. sozoiodol.* **P. Succinate.** (See Illus. Dict.) $K_2C_4H_4O_4$; used in delirium tremens. Dose, 5–10 gr. (0.32–0.65 gm.). **P. Sulfindigotate.** See *P. Indigodisulfonate.* **P. Sulfite,** $K_2SO_3 + 2H_2O$, white, opaque crystals or white powder slightly soluble in water or alcohol; it is antiseptic and laxative and used in acid fermentation of the stomach. Dose, 15–60 gr. (1–4 gm.). **P. Sulfobenzoate,** $KC_7H_5SO_5 + 5H_2O$, clear crystals, soluble in water or alcohol; used as a wash, 4%–5% solution on skin-diseases. **P. Sulfocarbolate,** $KC_6H_5SO_4 + H_2O$, white crystals, soluble in water or alcohol, melts at 400° C. It is antiparasitic, germicidal, and antiseptic. **P. Sulfocarbonate,** K_2CS_3, yellow crystals, soluble in water, used in baths for skin-diseases. **P. Sulfocyanate,** KCNS, colorless needles, soluble in water or alcohol; sedative, antispasmodic, and anodyne. Dose, ¾–3 gr. (0.05–0.2 gm.). Max. dose, 4½ gr. (0.3 gm.) single; 24 gr. (1.5 gm.) daily. Syn., *P. rhodanid; P. sulfocyanid; P. thiocyanate.* **P. Sulfophenate.** See *P. Sulfocarbolate.* **P. Valerianate,** $KC_5H_9O_2$, an amorphous mass, soluble in water, used as a stimulant in low fevers, hysteria, etc. Dose, 2–5 gr. (0.13–0.32 gm.) several times

daily. **P. Xanthate, P. Xanthogenate,** $KC_3H_5S_2O$, light-yellow crystals, soluble in water or alcohol, obtained from carbon disulfid by action of an alcoholic solution of potassium hydrate. It is used as an insecticide. Syn., *P. ethyldithiocarbonate; P. ethylxanthogenate.*

Potentia (*po-ten'-she-ah*) [L.]. Power, potency, ability, faculty. **P. coeundi,** capacity for copulation. **P. generandi,** procreance. **P. irritans,** a stimulus. **P. sexualis,** it resides in the lumbar center of the spinal cord. [Hollander.]

Potentiation. See *Potentization.*

Potentization (*po-tent-i-za'-shun*). In homeopathy, the rendering of drugs potent by attenuation, dynamization, etc.

Potentize (*po'-tent-īz*) [*posse*, to be able]. To render potent; in homeopathy, applied to drugs.

Potentor (*po-tent'-or*) [*potentia*, power]. A device for the mechanical treatment of male impotence due to lack of penile erectility.

Potex (*po'-teks*) [L.]. The anus, podex.

Potocytosis (*po-to-si-to'-sis*) [πίνειν, to drink; κύτος, cell]. S. J. Meltzer's term for the ability of cells to drink solutions.

Pott's Puffy Swelling or **Tumor.** See under *Tumor* (Illus. Dict.).

Pouch. (See Illus. Dict.) **P., Broca's,** a pear-shaped sac lying in the tissues of the labia majora; it is analogous in structure to the dartos, but contains no muscular fibers. **P., Pressure,** a bulge in the wall of the esophagus due to a weakened condition. **P., Prussak's.** See *Prussak's Space* (Illus. Dict.). **P.s, Tracheal,** a rare condition described by Virchow, arising from the posterior wall of the trachea and extending latterly and upward, may present above the clavicle and reach below and behind the thyroid, thus resembling goiter. **P., Vitelline,** the umbilical vesicle. **P., Weber's,** the prostatic vesicle. **P., Winslow's,** the lesser omentum.

Pounce (*pownz'*). 1. The pulverized resin of *Juniperus communis.* 2. Pumice stone.

Pourd Milk. Colostrum.

Pousse (*pus*) [Fr.]. See *Asthma of Solipeds.*

Poussée (*pus'-a*) [Fr.]. A peculiar cutaneous reaction, at times an actual dermatitis, which often results about the tenth day after beginning the baths of Loèche-les-Bains.

Poverty. (See Illus. Dict.) **P.-line,** the minimum of physical existence with no allowance for a single item except the primitive animal demands for food, shelter, heat, light, and clothing.

Powder. (See Illus. Dict.) **P., Arsenical, of Côme.** See *Frère Côme, Arsenical Paste of* (Illus. Dict.). **P., Arsenical, of Justamond,** a caustic consisting of antimony sulfid, 16 parts; arsenious acid, 1 part, fused and powdered when cold and mixed with 5 parts of opium. **P., Cancer.** See *P., Martin's.* **P., Carthusian,** kermes mineral. **P. of Cornacchino,** a powder consisting of cream tartar, 2 parts; scammony, 4 parts; antimonium diaphoreticum lotum, 3 parts. Syn., *Pulvis cornacchinus; P. Cornacchini; P. trium diabolorum; Earl of Warwick's powder.* **P., Countess',** cinchona. **P., Cyprus,** ambrette, the seeds of *Hibiscus abelmoschus,* L. **P., Darby's Condition,** sodium sulfate, 8 parts; sulfur, 4 parts; fenugreek, 4 parts; gentian, 2 parts; black antimony, 2 parts. **P., Divine,** an aperient mixture given in the Egyptian pharmacopœia consisting of the carbonates of magnesium, iron, ammonium, and sodium with ginger and licorice. **P., Dupuytren's,** a caustic powder consisting of arsenious acid, 1 part; calomel, 200 parts. **P. of Faynard,** charcoal used as a styptic. **P., Gascoigne's,** a mixture of bezoar with an absorbent powder. **P., Gascoin's,** a compound powder much used in the middle ages in cases of measles, smallpox, and all spotted fevers. It contained, in addition to bezoar and crab's eyes, red coral, white amber, harts' horn philosophically prepared, and jelly of English viper's skins. **P., Gout** (of Duke of Portland). See *P., Portland.* **P., Gregory's,** compound powder of rhubarb, consisting of rhubarb, 2 oz.; light magnesia, 6 oz.; ginger, 1 oz. **P., Lucas-Championnière's Antiseptic,** it consists of equal parts of carbonate of magnesia, iodoform, powdered benzoin, and powdered gray cinchona. **P., Martin's Cancer,** one consisting of arsenic oxid and the root of beech drops, *Epifagus americanus,* Nutt. **P., Plummer's,** one containing equal parts of mercury and sulfurated antimony. **P., Portland,** a noted remedy for gout consisting of equal parts of the tops and leaves of *Teucrium chamædrys,* L., and *Erythrea centaurium,* Pers., the leaves of *Ajuga chamæpitys,* Schreb., and the roots of *Gentiana lutea,* L., and *Aristolochia rotunda,* L. Dose, 1 dr. daily before breakfast for 3 months; 2 scruples for 3 months; ½ dr. for 6 months, and finally ½ dr. every other day for a year. **P., Putty.** See *Putty-powder.* **P. of the Three Sanders,** a mixture of yellow, red, and white sandal-wood, each 95 parts; roses, 1010 parts; violets, 150 parts; rhubarb, 70 parts; calcined ivory, portulaca seeds, and licorice juice, each 70 parts; starch, gum arabic, and tragacanth, each 50 parts. Syn., *Diatrion santalorum.* **P., Taplin's,** a mixture of powdered sulfur, 8 parts; potassium bitartrate, 2 parts; potassium nitrate, 1 part; gentian, 2 parts; fenugreek, 4 parts; aniseed, 1 part; black antimony, 2 parts. **P., Tyree's Antiseptic,** a proprietary preparation said to contain alum, biborate of sodium, eucalyptus, carbolic acid, thymol, wintergreen, and peppermint.

Power. (See Illus. Dict.) **P., Inherent,** irritability. **P., Nervous,** the activity of the nervous system. **P., Rotatory,** in polariscopy that exhibited by an optically active substance which rotates the plane of polarization. **P., Saturating,** the power possessed by acids and bases of combining with other bodies until all the combining capacity of the atoms of the molecule of the acid or base is satisfied. **P., Tonic,** irritability. **P., Transmitting.** See under *Transmitting.*

Pox. (See Illus. Dict.) **P., Black,** smallpox. **P., Sheep.** See *Sheep-pox* (Illus. Dict.). **P., Swine.** See *Swine-pox* (Illus. Dict.). **P., Water.** See *Itch, Coolie.*

Practicum (*prak'-ti-kum*) [Ger. *Prakticum*, from πρακτικός, practical]. Applied to a class-exercise in natural history at which specimens are examined, dissected, or experimented upon; commonly less advanced and individual than laboratory work.

Practise (*prak'-tis*) [*practicare*, to practise]. To perform a physician's duty. Cf. *Practice.*

Præparator (*pre-par'-a-tor*). Gruber's name for amboceptor.

Prasoid (*pra'-soid*). 1. A solution of globularin and globularetin; used in acute gout and rheumatism. Dose, 15–20 drops 3 times daily. 2. [πράσον, the leek; εἶδος, likeness]. The color of a leek, leek-green.

Pratique (*prah'-teek*) [Fr.]. The bill-of-health given to vessels by a health officer.

Praxagorean (*praks-ah-go'-re-an*). A follower of the medical doctrines of Praxagoras, a successor of Hippocrates, and, like him, a native of Cos.

Praxinoscope (*praks-in'-o-skōp*) [πρᾶξις, a doing; σκοπεῖν, to examine]. A modification of the zoetrope adapted to the purposes of laryngologic instruction.

Preatactic (*pre-ah-tak'-tik*). See *Preataxic* (Illus. Dict.).

Precartilage (*pre-kar'-til-āj*). See *Prochondrium* (Illus. Dict.).

Precipitate. (See Illus. Dict.) 2. Headlong; applied to labor. 3. To cause precipitation. **P., Fusible, White.** See *Mercury-ammonium Chlorid, Fusible.* **P., Infusible, White, P., Lémery's,** ammoniated mercury. **P., Yellow,** yellow oxid of mercury.

Precipitin (*pre-sip'-it-in*). Any one of many absolutely specific precipitating bodies, which, according to the Ehrlich lateral chain theory, are uniceptors, composed of a haptophore group and a coagulative complex.

Preclavicular (*pre-kla-vik'-u-lar*). Ventrad of the clavicle.

Precognition (*pre-kog-nish'-un*) [*præ*, before; *cognoscere*, to know]. A knowledge of impending events supernormally acquired.

Preconvulsant (*pre-kon-vul'-sant*). Relating to the stadium of a disease preceding convulsions.

Precuneate (*pre-ku'-ne-āt*). See *Precuneal* (Illus. Dict.).

Preepiglottic (*pre-ep-e-glot'-ik*). Ventrad of the epiglottis.

Preeruptive (*pre-e-rup'-tiv*). Preceding eruption.

Prefrontal. (See Illus. Dict.) 2. The middle part of the ethmoid bone (Owen).

Pregnancy. (See Illus. Dict.) Cf. *Gestation, Table of* (Illus. Dict.). See *Signs, Ahlfeld's; Jacquemier's; Kennedy's; Mayor's; Osiander's; Pinard's; Rasch's; Reusner's; Rinmann's; Schaefer's.* **P., Fallopian.** See *P., Tubal* (Illus. Dict.). **P., Intramural,** interstitial pregnancy. **P., Mesenteric,** tuboligamentary pregnancy. **P., Parietal,** interstitial pregnancy. **P., Sarcofetal,** that in which both a fetus and a mole are present. **P., Sarcohysteric,** spurious pregnancy due to a mole. **P., Tuboligamentary,** that in which there is secondary invasion of the broad ligament and subperitoneal tissues. **P., Uteroabdominal,** that in which there is one fetus in the uterus and another in the abdominal cavity. **P., Uteroovarian,** that in which there is one fetus in the uterus and another in the ovary. **P., Uterotubal,** that in which one fetus is in the uterus, another in the oviduct.

Preleukemic (*pre-lu-ke'-mik*). The stadium in a disease preceding the development of leukemia. Syn., *Aleukemic.*

Prelimbic (*pre-lim'-bik*) [*præ*, before; *limbus*, a border, a band]. Lying in front of a border or band.

Premorphism (*pre-mor'-fizm*) [*præ*, before; *μορφή*, form]. The formative potentiality of a primitive cell as determined by its "physiological units" or "determinants." Cf. *Id; Idant; Idiosome; Biophore; Morphoplasm; Plasome.*

Premycosic, Premycotic (*pre-mi-ko'-sik, pre-mi-kot'-ik*) [*præ*, before; *μύκης*, fungus]. Before the maturity of the fungal element in a mycotic disease.

Preoblongata, Præoblongata (*pre-ob-lon-ga'-tah*) [*præ*, before; *oblongata*]. The cephalic portion of the oblongata; situated mainly between the pons and the fourth ventricle.

Preovarian (*pre-o-va'-re-an*). Ventrad of the ovary.

Preperitoneal. See *Properitoneal* (Illus. Dict.).

Prepotent (*pre-po'-tent*) [*præ*, before; *posse*, to be able]. Having a marked tendency to transmit individual characters to offspring.

Prepuberal (*pre-pu'-bur-al*). Prior to puberty.

Presbytic (*pres-bit'-ik*). Suffering from presbyopia.

Presbytism (*pres'-bit-izm*). Presbyopia.

Presenile (*pre-se'-nil*) [*præ*, before; *senilis*, age]. Prematurely old.

Presenility (*pre-se-nil'-it-e*). Premature old age. See *Progeria.*

Presentation. (See Illus. Dict.) **P., Oblique, P., Trunk.** See *P., Transverse* (Illus. Dict.).

Press of Herophilus. See *Torcular* (Illus. Dict.).

Pressor. (See Illus. Dict.) 2. A substance found by Schäffer and Vincent in the infundibular part of the hypophysis producing a rise in blood-pressure. Cf. *Depressor.* **P., Nerves,** nerves which under stimulation cause the vasomotor centers to react.

Pressure. (See Illus. Dict.) **P., Bipolar,** pressure on the two ends of a bone. It is used in the diagnosis of fractures from contusions, producing pain in the case of the former. **P.-effects, P.-signs,** symptoms manifested in the course of disease due to pressure upon certain organs.

Pretarsal (*pre-tar'-sal*). Located anterior to a tarsus.

Preversion (*pre-vur'-shun*) [*præ*, before; *vertere*, to turn]. A tendency to characteristics assumed to lie at a further point of the evolutionary progress of a species than has yet been reached. Cf. *Reversion.*

Prevertiginous (*pre-vur-tij'-in-us*) [*præ*, before; *vertere*, to turn]. Dizzy with a tendency to fall prone.

Primisternal, Primisternalis (*pri-mis-tur'-nal, pri-mis-tur-na'-lis*). Relating to the manubrium of the sternum.

Primula. (See Illus. Dict.) **P. obconica,** Hance, produces a troublesome erythema of the skin among gardeners. Cf. *Dermatitis, Primal.*

Primulin (*prim'-u-lin*). See *Cyclamin.*

Prismatoid (*priz'-mat-oid*). See *Prismoid* (Illus. Dict.).

Prismosphere (*priz'-mo-sfēr.*) A combination of a prism and a globular lens.

Probion (*pro-bi'-on*) [*πρό*, before; *βιος*, life]. A primary organism produced from unorganized potentially organic substance [Nägeli]. Merely a drop of homogeneous structureless plasm, devoid of any form and composed of albuminates associated only with the compounds necessary for nutrition.

Procerity (*pro-ser'-it-e*) [*procerus*, chief]. The propagation of an able-bodied race by careful selection and breeding. Cf. *Megalanthropogenesia.*

Process, Processus. (See Illus. Dict.) **P., Accessory,** of the first and second lumbar vertebras. See *Anapophysis* (Illus. Dict.). **P., Anconeal,** the olecranon. **P., Arciform.** See *Fibers, Arciform.* **P.s, Articular.** See *Zygopophyses* (Illus. Dict.). **P.s, Articular, Anterior or Superior.** See *Prezygapophyses* (Illus. Dict.). **P.s, Articular, Inferior or Posterior.** See *Postzygopophyses* (Illus. Dict.). **P. azygos,** rostrum sphenoidale. **P., Basipterygoid,** one of the spurs that grow out from the base of the skull to catch the pterygoid bones in lizards and running birds. **P., Belenoid,** the styloid process. **P., Blumenbach's,** the uncinate process of the ethmoid bone. **P. caudatus.** 1. The caudate lobe of the liver. 2. The lower end of one of the divisions of the antihelix of the external ear. **P., Conical,** the odontoid process. **P., Corner Base.** See *P., Lateral-base* (Illus. Dict.). **P., Cricoid,** a slight projection on the lower border of the thyroid cartilage. **P., Cruciate,** the cross-shaped appearance of the tentorium, falx cerebelli, and falx cerebri near the internal occipital eminence. **P., Cubital,** the lower and articular end of the humerus. **P., Cuneiform.** 1. The uncinate process of the ethmoid. 2. The basal process of the occipital bone. **P., Dendritic,** the branched process of a nerve-cell. **P., Dentate,** the odontoid process. **P., Ectopterygoid,** the external pterygoid process of the sphenoid. **P., Endopterygoid,** the internal pterygoid process of the sphenoid. **P. falciformis major,**

the falx cerebri. P. falciformis minor, the falx cerebelli. **P., Floccular,** the flocculus. **P., Foliaceous,** a process of the ethmoid bone projecting into the frontal cells. **P., Gottstein's Basal,** the attenuated process of an outer hair-cell connecting the latter with the basilar membrane of Corti's organ. **P., Gowers' Intermediate,** the lateral horn, a projection of the intermediate gray substance in the dorsal region of the spinal cord. **P. of the Incus.** See *P., Long* (of incus), and *P., Short* (of incus). **P., Inframalleolar,** a ridge on the exterior of the calcaneum between the grooves for the reception of the peroneal muscles. **P., Infrapineal,** the posterior peduncle of the epiphysis. **P., Infundibuliform.** See *Processus infundibuli* (Illus. Dict.). **P., Innominate.** See *P., Jugular* (Illus. Dict.). **P., Intermediate,** the intermediolateral tract. **P., Intrajugular,** a small spinous process of the petrosa which crosses the jugular foramen. **P., Jugal.** 1. The zygoma. 2. The external angular process. 3. The malar process of the superior maxillary. **P., Jugular, Accessory,** Weber's name for an inconstant eminence on the occipital bone bounding the jugular notch ventrally. **P., Jugular, Anterior.** See *P., Jugular Accessory.* **P., Jugular, Middle.** See *P., Intrajugular.* **P., Lemurian, P. lemurianicus,** a muscular process at the angle of the mandible. Syn., *Lemurian tubercle; Processus Sandifortii.* **P. marginalis.** See *Process, External Angular* (Illus. Dict.). **P., Metacromial,** the superior branch of a bifurcated acromion. **P.s, Oblique.** See *Zygopophyses* (Illus. Dict.). **P., Pineal,** the epiphysis. **P., Preclinoid,** the anterior clinoid process. **P. pyramidalis.** See *Pyramid of the Thyroid Gland.* **P., Riedel's.** See *Lobe, Riedel's.* **P., Sandifort's.** See *P., Lemurian.* **P., Sömmerring's,** the external angular process. **P. spelæus,** a process of the ethmoid bone projecting into the sphenoidal sinus. **P., Sphenomaxillary,** an inconstant downward prolongation of the greater wing of the sphenoid. **P. of Spix.** See *Lingula mandibularis* (Illus. Dict.). **P., Sulcate,** an inconstant process of the palate bone connecting the orbital process with the sphenoid process. **P., Supracondyloid, Lateral** (of the femur), an occasional projection above the external condyle of the femur. **P., Supracondyloid, Middle** (of the femur), the projection above the internal condyle of the femur attaching the inner head of the gastrocnemius. **P., Sustentacular** (of the calcaneum). See *Sustentaculum tali* (Illus. Dict.). **P.s, Tactile,** nerve papillas. **P., Todd's Ascending.** See *Scarpa's Fascia* (Illus. Dict.). **P., Trochlear,** Hyrtl's name for a groove in a bone for the reception of a tendon. **P., Trochlear** (of the calcaneum), the peroneal spine. **P. tuberositatis navicularis,** an inconstant process attached to the tuberosity of the scaphoid bone of the foot.

Prochoresis (*pro-ko-re'-sis*) [προχώρησις, a going on or advancing]. The motor activity of the stomach.

Prochromatin (*pro-kro'-mat-in*). See *Pyrenin* (Illus. Dict.).

Prockia (*prok'-e-ah*). A genus of the *Tiliaceæ.* **P. theaformis,** Willd., a Madagascar species; the bark is emetic.

Procrisis. See *Proëcerisis* (Illus. Dict.).

Proctitis. (See Illus. Dict.) **P., Gonorrheal, P. gonorrhoica, P. pyorrhoica,** inflammation of the rectum due to gonococci. Syn., *Gonorrheal rectal ulcer.*

Proctococcypexy, Proctococcypexia (*prok-to-kok-se-peks'-e, -ah*) [πρωκτός, anus; coccyx; πῆξις, a fixing in]. Suturing of the rectum to the coccyx.

Proctocolonoscopy (*prok-to-ko-lon-os'-ko-pe*) [πρωκτός, anus; κόλον, colon; σκοπεῖν, to examine]. Inspection of the interior of the rectum and colon.

Proctocystotome (*prok-to-sist'-o-tōm*) [πρωκτός, anus; κύστις, bladder; τομή, a cutting]. An instrument designed expressly for use in proctocystotomy.

Proctocystotomia (*prok-to-sist-o-to'-me-ah*). Rectal cystotomy, proctocystotomy.

Proctology (*prok-tol'-o-je*) [πρωκτός, anus; λόγος, science]. The science of the anatomy, functions, and diseases of the rectum.

Proctopexy, Proctopexia (*prok-to-peks'-e, -ah*) [πρωκτός, anus; πῆξις, a fixing in]. The fixation of the rectum to another part by sutures.

Proctoplasty. (See Illus. Dict.) **P., Verneuil's.** See *Proctotomy, Linear.*

Proctoscope (*prok'-to-skōp*) [πρωκτός, the anus; σκοπεῖν, to examine]. An instrument for inspection of the rectum.

Proctoscopy (*prok-tos'-ko-pe*). Ocular inspection of the rectum with the aid of special instruments.

Proctosigmoidectomy (*prok-to-sig-moid-ek'-to-me*). Excision of the anus and sigmoid flexure.

Proctostomy (*prok-tos'-to-me*) [πρωκτός, anus; στόμα, a mouth]. The establishment of an opening into the rectum.

Proctotomy. (See Illus. Dict.) **P., External,** the operation of dividing the rectum and the anus and the tissue lying between the anus and the tip of the coccyx. **P., Internal,** division of the parts as in external proctotomy, but without cutting the sphincters. **P., Linear,** an incision of the dorsal rectal wall and of all the tissues lying between the anus and a subcutaneous opening made in front of the coccyx.

Procursive (*pro-kur'-siv*) [*pro,* forward; *currere,* to run]. Having a tendency to go forward; *e. g.,* precursive epilepsy.

Procurvation (*pro-kur-va'-shun*) [*procurvare,* to bend forward]. A forward inclination of the body.

Prodiagnosis (*pro-di-ag-no'-sis*) [πρό, before; *diagnosis*]. A prediction of the onset of a disease.

Product (*prod'-ukt*) [*producere,* to produce]. Effect, result. **P., Addition,** a compound resulting from the direct union of two bodies. Syn., *Addition-compound.*

Proeminent (*pro-em-in'-ent*) [*pro,* in front of; *eminens,* prominent]. Projecting. **P. Vertebra,** the seventh cervical vertebra, so called because its spinous process projects beyond the others.

Proenzyme (*pro-en'-zīm*). See *Zymogen* (Illus. Dict.).

Proestrous (*pro-es'-trus*). Pertaining to the proestrum or initial stage of the sexual season of females.

Proestrum, Proœstrum (*pro-es'-trum*) [πρό, before; αἴστρος, a gad fly]. Heape's term for the "coming in season" or initial stage of the sexual season in females. The proestrum (so-called "heat") of lower mammals is homologically the menstruation of the primates. Cf. *Estrus; Metestrum; Anestrum; Diestrum; Monestrum; Polyestrum.*

Proferment (*pro-fur'-ment*). See *Zymogen* (Illus. Dict.).

Profundus. (See Illus. Dict.) 2. A deep-seated muscle or nerve; in the feminine *profunda,* a deep-seated artery or vein.

Progastor (*pro-gas'-tor*) [πρό, before; γαστήρ, belly]. One who has a pendulous abdomen.

Progeria (*pro-je'-re-ah*) [πρό, ἔρος, premature old age]. A form of senilism, observed in two instances, of rapid onset, with retention of intelligence and without any perceptible cause; marked by falling off of the hair, shriveling of the nails, and emaciation due to atrophy or imperfect development of some of the connective tissues, especially the fat, and more particularly the subcutaneous fat. Cf. *Ateleiosis.*

Proiotia, Proiotes (*pro-i-o'-she-ah, pro-i-o'-tēz*) [πρωιότης, earliness]. Sexual precocity.

Prolapse. (See Illus. Dict.) Syn., *Delapsus.* **P., Frank,** uterine displacement in which "the inverted vagina forms a bag hanging from the vulva, at the bottom of which lies the uterus, generally retroverted, otherwise unaltered; it is unchanged, unstretched; and is completely and frankly prolapsed." [Roberts.] **P. of Funis.** See *P. of the Cord* (Illus. Dict.). **P., Morgagni's,** chronic hyperplastic inflammation of the mucosa and submucosa of Morgagni's ventricle. It is not a true prolapse. **P. of the Ovary,** downward displacement of the ovary. **P. of the Tongue.** See *Glossocele* and *Paraglossa* (Illus. Dict.).

Proleptic. (See Illus. Dict.) 3. Anticipatory; assuming a knowledge of a fact not yet communicated.

Proletaneous (*pro-le-ta'-ne-us*) [*proles*, offspring]. Prolific, fecund.

Proleukemic. See *Preleukemic.*

Proloal. The Chilian name for *Lomatia obliqua*, R. Br.

Promnesia (*pro-ne'-se-ah*) [πρό, before; μνῆσις, remembrance]. The paradoxic sensation of recollecting a scene or event which is now occurring for the first time. (Myers.)

Promontory. (See Illus. Dict.) **P., Double, P., False, of Sacrum.** See *Prominence, Double* (Illus. Dict.). **P., Sacrovertebral.** See *Promontory of the Sacrum* (Illus. Dict.).

Promorphism, Promorphosis (*pro-mor'-fizm, pro-mor-fo'-sis*) [πρό, forwards; μορφή, form]. The evolution of an organism, organ, or tissue into higher differentiation. Cf. *Premorphism.*

Pronæus (*pro-ne'-us*) [πρόναος, the first room of a temple]. The vagina; also the vestibule of the vagina.

Pronate (*pro'-nāt*) [*pronare*, to bend forward]. To place in a prone position.

Pronatoflexor (*pro-na-to-fleks'-or*). Relating to the pronator and flexor muscles. **P. Mass.** See under *Mass.*

Proovarium. See *Paraovarium.*

Propago (*pro-pa'-go*) [L. a slip or shoot; pl. *propagines*]. An offset; applied to the smaller branches of vessels or nerves.

Propanal (*pro'-pan-al*). Propionic aldehyd.

Propanenitril (*pro-pān-ni'-tril*). See *Ethyl Cyanid.*

Propanolon (*pro-pan'-ol-on*). See *Acetylcarbinol;* and *Aldehyd, Pyroracemic.*

Propanon (*pro'-pan-on*). See *Acetone* (Illus. Dict.).

Propenylate (*pro-pen'-il-āt*). A compound of an ether or metal with glyceryl.

Prophase (*pro'-fāz*) [πρό, before; φαίνειν, to show]. The first stage of karyokinesis or indirect cell division. Cf. *Anaphase; Metaphase.*

Prophetin (*prof'-et-in*). $C_{23}H_{36}O_7$. An amorphous, resin-like, bitter glucosid, found by Walz in the fruit of *Cucumis prophetarum*, L., and of *Momordica elaterium*, L.; easily soluble in alcohol and ether, slightly soluble in water. On boiling with dilute hydrochloric acid it splits into grape-sugar and prophoretin, ($C_{26}H_{30}O_4$), an amorphous resinous body.

Prophylactol (*pro-fil-ak'-tol*). A proprietary liquid said to consist of 20% of protocol and glycerin with the addition of corrosive sublimate in the proportion of one part to 2000. It is used by injection in diseases of the urinary tract.

Propine (*pro'-pēn*). See *Allylene.*

Propinyl (*pro'-pin-il*). C_3H_3. A radicle.

Propional (*pro-pe-on'-al*). Propionic aldehyd.

Propionate (*pro-pe'-on-āt*). A salt of propionic acid.

Propione. (See Illus. Dict.) Dose, as hypnotic, 8–45 gr. (0.5–3 gm.); as sedative, 8 gr. (0.5 gm.).

Propionitril (*pro-pe-o-ni'-tril*). See *Ethyl Cyanid.*

Proplacental (*pro-pla-sen'-tal*). See *Preplacental* (Illus. Dict.).

Proplex (*pro'-pleks*). See *Proplexus* (Illus. Dict.).

Propylamin. (See Illus. Dict.) 2. A misnomer for an aqueous solution of trimethylamin, a colorless, caustic, antiseptic liquid.

Prorennin (*pro-ren'-in*) [πρῶτος, first; *rennin*]. The mother-substance, zymogen or preliminary material of rennin or chymosin. Syn., *Chymosinogen; Pexinogen.* See *Renninogen* (Illus. Dict.).

Prorrhaphy (*pror'-af-e*). See *Advancement* (Illus. Dict.).

Prosecretin (*pro-se-kre'-tin*) [πρῶτος, first; *secretin*]. The precursor of secretin (*q. v.*).

Prosencephal. (See Illus. Dict.) 2. Of Wilder, includes only the cerebral hemispheres, excluding the olfactory bulbs and rhinencephalon.

Prosopic (*pros-o'-pik*) [πρόσωποι, the face]. Relating to the face, facial.

Prosopis (*pros-o'-pis*) [πρόσωπον, the face]. A genus of leguminous trees and shrubs. **P. juliflora,** D. C., honey mesquite, algaroba, a tree of the West Indies, Texas, and Central America, yields mesquite gum. From the fruit the Indians prepare an intoxicating drink (alole, vino mesquite). **P. strombulifera,** Benth., mastuerzo, a species of South America, used in diarrhea and gonorrhea.

Prosopolepsy (*pros-o-po-lep'-se*) [πρόσωπον, face; λαμβάνειν, to detect]. Character-reading from the face.

Prosphysectomy (*pros-fiz-ek'-to-me*) [προσφυσις, a growing to, an appendage; ἐκτομή, excision]. Appendicectomy.

Prosphysis. (See Illus. Dict.) In the plural, *prosphyses*, very slender filaments mingled with the spores in the urns of mosses and the spore-cases of *Hepaticæ.*

Prostaden (*pros'-tad-en*) [προστάτης, prostate; ἀδήν, gland]. An extract of prostate gland used in prostatic hypertrophy. Dose, 30 gr. (2 gm.) daily.

Prostatism (*pros'-tat-izm*). A morbid nervous condition due to prostatic disease.

Prostatocystotomy (*pros-tat-o-sist-ot'-o-me*) [προστάτης, prostate; κύστις, bladder; τέμνειν, to cut]. Surgical incision of the prostate and bladder.

Prostatomegaly (*pros-tat-o-meg'-al-e*) [προστάτης, prostate; μεγάλη, great]. Prostatic hypertrophy.

Prostatomyomectomy (*pros-tat-o-mi-o-mek'-to-me*) [προστάτης, prostate; μῦς, muscle; ἐκτομή, excision]. Removal of a prostatic myoma.

Prostatovesiculitis (*pros-tat-o-ves-ik-u-li'-tis*). Inflammation of the seminal vesicles combined with prostatitis.

Prostetic (*pros-tet'-ik*) [πρός, at the side of; τίκτειν, to bear]. Applied by Kossel (1891) to combinations of a proteid nucleus with a side-chain.

Prostheon. See *Prosthion* (Illus. Dict.).

Prosthesis. (See Illus. Dict.) **P., Gersuny's Paraffin,** the replacement of the cartilaginous portion of the nasal septum by paraffin.

Prostholytic (*pros-tho-lit'-ik*) [πρόσθεν, before; λύειν, to loose]. Progressive change. Cf. *Catalytic; Dialytic; Hemilytic.*

Prostitute. (See Illus. Dict.) **P.'s Colic.** See *Colica scortorum* (Illus. Dict.).

Protal (*pro'-tal*) [πρῶτος, first]. First, primary, initial, hereditary.

Protalbin-silver. See under *Silver.*

Protargol (*pro-tar'-gol*). A silver albumose occurring as a yellow powder containing 8% of silver; freely soluble in water. It is recommended in gonorrhea in ¼%–1% solutions.

Protease (*pro'-te-āz*). A name given by Malfitano to a diastase produced by *Aspergillus niger.* It resembles

in its properties papayin and the proteolytic enzyme of malt. It acts upon gelatin, nucleoalbumins, globulin, and albuminates, but not upon albumin, whereby it is distinguished from pepsin.

Protectin (*pro-tek'-tin*). Tissue paper with coating of adhesive rubber mixture on one side.

Proteic (*pro-te'-ik*). Relating to protein. **P. Substances,** proteids.

Proteids. (See Illus. Dict.) **P.s, Compound,** a class of bodies more complex than simple proteids which yields as nearest splitting products, simple proteids on one side and nonproteid bodies, such as coloring-matters, carbohydrates, xanthin bases, etc., on the other. They are divided into three groups—the hemoglobins, glycoproteids, and nucleoproteids (Hammarsten). **P., Immune.** See under *Immune.*

Protein. (See Illus. Dict.) **P., Pyocyaneous,** a preparation made from cultures of *Bacillus pyocyaneus* by means of potash solutions. It is recommended in the treatment of suppurating ulcers.

Proteosoma (*pro-te-o-so'-mah*) [πρωτέυς, a sea god, capable of assuming many forms; σῶμα, a body]. A genus of parasitic coccidia which infest the blood discs of birds. See *Parasites, Table of Animal.*

Proteosuria (*pro-te-o-su'-re-ah*) [*proteose;* οὖρον, urine]. The presence of proteoses in the urine.

Proteuria (*pro-te-u'-re-ah*). The presence of proteids in the urine.

Proteuric (*pro-te-u'-rik*). Relating to proteuria.

Prothrombin (*pro-throm'-bin*) [πρῶτος, first; *thrombin*]. A nucleoproteid enzyme of the blood-plasma which brings about coagulation by changing fibrinogen into fibrin by combining with soluble lime salt, and thus forming fibrin-ferment or thrombin.

Prothymia (*pro-thi'-me-ah*) [προθυμια, zeal, readiness]. Intellectual alertness.

Protium (*pro'-te-um*). A genus of the order *Burseraceæ.* **A. altissimum,** March., a species of South America, yields a resin similar to tacamahac and elemi. The bark and the wood (white cedar) are recommended in intermittent fever and urinary diseases. **P. aracouchini,** March., a species of Guiana, yields a balsam, black frankincense, aracouxini, alouchi or acouchi balsam, used as a vulnerary and antiseptic. **P. guianense,** March., yields a very aromatic resin occurring in commerce as elemi or balsamo, real, yellow tacamahac, tacamahac incoloré or frankincense of Cayenne. **P. heptaphyllum,** March., of Columbia, yields Mauritius tacamahac. **P. icicariba,** March., a species of tropic America, yields the West Indian elemi or anime.

Protogen (*pro'-to-jen*) [πρῶτος, first; γεννάν, to produce]. 1. Any albuminoid compound which does not coagulate when heated in aqueous solution. 2. A dietetic obtained by action of formic aldehyd on egg-albumin.

Protometer (*pro-tom'-et-ur*) [πρῶτος, first; μέτρον, measure]. An instrument for measuring the forward projection of the eyeball. It consists of a rule with one straight and one curved edge with parallel lines on the upper surface, along which the observer sights.

Protomorphic. (See Illus. Dict.) **P. Races,** the remnants of the primitive people; aborigines, people still in a state of nature. Ger. *Naturvölker.*

Proton. (See Illus. Dict.) 2. Kossel's name for any one of a group of substances closely allied to protamins but differing from them in the solubility of their sulfates. They occur as intermediate products during the hydrolytic decomposition of protamins into hexon bases. 3. A food prepared from milk casein.

Protonephros. See *Protonephron* (Illus. Dict.).

Protoneuron (*pro-to-nu'-ron*) [πρῶτος, first; νεῦρον, nerve]. One of a peculiar type of bipolar neurocytes or ganglion cells of the cerebrospinal system, characterized by the entrance of the axis-cylinder of an afferent nerve fibril through one of its prolongations, terminating in its endoplasm. It constitutes a primary, autonomous centripetal end-organ. Syn., *Centripetal protoneuron; Sensitive protoneuron; First neuron of the sensitive chain; Peripheral sensitive neuron.*

Protonitrate (*pro-to-ni'-trāt*). One of a series of salts which contains the smallest proportion of the nitric acid radicle in combination.

Protonuclein (*pro-to-nu'-kle-in*) [πρῶτος, first; *nuclein*]. $C_{29}H_{49}N_{10}P_5O_{32}$. A preparation from the lymphoid tissues of animals with the addition of milk-sugar and gum benzoin. It is used as an invigorator. Dose, 3–10 gr. several times daily. Applied also in substance to cancerous wounds.

Protophyllin (*pro-to-fil'-in*) [πρῶτος, first; φύλλον, a leaf]. A name given by Gautier and Timiriazeff to a colorless hydrid of chlorophyll, capable of reducing carbon dioxid with liberation of oxygen and restitution of chlorophyll; it turns green on exposure to air or in an atmosphere of carbon dioxid under influence of sunlight. Its existence has been determined in etiolated plants.

Protopia, Protopin. (See Illus. Dict.) It is hypnotic and analgesic. Dose, 40–150 gr. (2.5–10 gm.).

Protoplasm. (See Illus. Dict.) 2. According to v. Kupffer, the internal or endoplastic portions of the cell-body—that is, those adjacent to the nucleus, or the primary and active portion of the cell as distinguished from the paraplasm or secondary and passive portion. Cf. *Cytoplasm.*

Protoplastin (*pro-to-plast'-in*) [πρῶτος, first; πλαστός, formed]. Hanstein's term for the basal substance of protoplasm.

Protoprotein (*pro-to-pro'-te-in*). Loeb's term for "that material which by being converted into organized nucleoproteids forms living matter."

Protothrombin. See *Prothrombin.*

Prototoxins (*pro-to-toks'-ins*) [πρῶτος, first; *toxins*]. Dissociation products of toxins differing from deutero-toxins and tritotoxins in having a stronger affinity than either for the antitoxins.

Prototoxoid (*pro-to-toks'-oid*) [πρῶτος, first; *toxoid*]. A transformation product of prototoxin in which the toxicity of the prototoxin is lost, but the combining power retained. See under *Toxoids.*

Prototroch (*pro'-to-trok*) [πρῶτος, first; τροχός, a wheel]. The embryonic precursor of the orbit.

Prototrophic (*pro-to-tro'-fik*) [πρῶτος, first; τροφή, nourishment]. Applied by A. Fischer to organisms which do not require organic matter or have not the faculty of decomposing proteid stuff. Cf. *Metatrophic; Paratrophic.*

Protoxoid. Same as *Prototoxoid.*

Protropin. See *Protopin* (Illus. Dict.).

Protrypsin (*pro-trip'-sin*). See *Trypsinogen* (Illus. Dict.).

Protylin (*pro'-til-in*). A synthetic product containing 2.7% of phosphorus; a white powder insoluble in water used in neurasthenia. Dose, 2–4 coffee-spoonfuls.

Provence Cane. See *Arundo donax.*

Prox. luc. Abbreviation of *proxima luce,* the day before.

Prozonal (*pro-zo'-nal*) [*pro,* before; *zona,* a zone]. Applied by Fürbringer to nerve-trunks lying in front of a sclerozone.

Prual (*pru'-al*). A virulent toxic substance said to be obtained from the root of *Coptosapelta flavescens* Korth., a rubiaceous plant of Malaya.

Pruinate (*pru'-in-āt*) [*pruina,* hoar frost]. Appearing as if covered with hoar frost; covered with a bloom.

Prurigo. (See Illus. Dict.) Syn., *Cnesmos; Scabies sicca papulosa.* **P. secandi,** a mania for performing operations. **P. simplex, P. vulgaris,** the mild type with isolated papules. **P., Winter.** See *Pruritus hiemalis* (Illus. Dict.).

Pruritus. (See Illus. Dict.) **P., Bath,** Stelwagon's term for a burning sensation varying from a slight pricking to an intense itching experienced by some persons after a bath. It is usually confined to the lower extremities, but is sometimes on the arms and occasionally general, the attack lasting from a few minutes to half an hour or more. **P., Duhring's, P., Duncan's.** See *P. hiemalis* (Illus. Dict.). **P., Senile, of the Tongue,** a form of glossitis described by Baumgarten, characterized by itching and burning of the tongue. **P. vulvæ,** hyperesthesia of the nerves of the vulva accompanied by intense itching (Balloch). See *Lutaud's Lotion.*

Psamma (*sam'-ah*) [ψάμμη, sand]. Sand occurring as a urinary deposit. Syn., *Psammus; Psammodes; Arenula.*

Psellismus. (See Illus. Dict.) **P. mercurialis,** the unintelligible, hurried, jerking speech accompanying mercurial tremor. **P. nasitas,** rhinophonia. **P. rhotacismus.** See *Rhotacism* (Illus. Dict.).

Pseudalbuminuria. See *Pseudo-albuminuria* (Illus. Dict.).

Pseudephedrin (*su-def-ed'-rin*). See *Ephedrin, Pseudo-.*

Pseudiphtheric (*su-dif'-ther-ik*). Simulating diphtheria.

Pseudleukemia. See *Pseudoleukemia* (Illus. Dict.).

Pseudoacromegaly (*su-do-ak-ro-meg'-al-e*) [ψευδής, false; ἄκρος, extremity; μεγάλη, large]. See *Osteoarthropathy, Hypertrophic Pulmonary* (Illus. Dict.).

Pseudoagraphia (*su-do-ah-graf'-e-ah*). The form of agraphia in which meaningless or disconnected words can be written.

Pseudoalveolar (*su-do-al-ve'-o-lar*). Simulating alveolar tissue.

Pseudoanorexia (*su-do-an-or-eks'-e-ah*) [ψευδής, false; α, priv.; ὀρέξις, appetite]. Rejection of food because of gastric distress.

Pseodoappendicitis (*su-do-ap-en-dis-i'-tis*). A condition simulating appendicitis but without any lesion of the appendix.

Pseudoappendix (*su-do-ap-en'-diks*). Condamin and Voron's name for a condition simulating appendicitis occurring in hysteric subjects or associated with secondary syphilis. Cf. *Typhosis, Syphilitic.*

Pseudoataxia (*su-do-ah-taks'-e-ah*). See *Pseudotabes* (Illus. Dict.).

Pseudobacillus. (See Illus. Dict.) **Pseudobacilli** (of Hayem), very minute, pedetic, rod-shaped products of corpuscular fragmentation observed in poikilocytosis.

Pseudocarcinoma. (See Illus. Dict.) **P. labii,** cancrum oris.

Pseudocartilaginous (*su-do-kar-til-aj'-in-us*). Simulating cartilage in structure.

Pseudoceliotomy (*su-do-se-le-ot'-o-me*) [ψευδής, false; κοιλία, belly; τομή, a cutting]. The pretended performance of abdominal section.

Pseudochalazion (*su-do-kal-a'-ze-on*). A malignant lesion of the conjunctiva resembling chalazion.

Pseudochancre (*su-do-shang'-ker*). An indurated sore simulating chancre.

Pseudochlorosis (*su-do-klo-ro'-sis*). Leache's term for a form of chlorosis in which there was no diminution of the number of erythrocytes.

Pseudochromatin (*su-do-kro'-mat-in*). See *Pyrenin* (Illus. Dict.).

Pseudocirrhosis (*su-do-sir-o'-sis*). A condition marked by ascites, dyspnea, and cyanosis, believed to be due to combined cirrhosis and peritoneal disease.

Pseudoclump (*su'-do-klump*). A clump of bacteria in broth typhoid cultures, which simulates closely the clumps formed by specific typhoid agglutinins.

Pseudocodein (*su-do-ko'-de-in*). $C_{18}H_{21}NO_3$. A derivative of cŏdein obtained by Merck; in physiologic action analogous to codein but weaker, and differing from codein in a higher melting-point, 182° C., and in being precipitated instantly by ammonia in fine needles.

Pseudocyesis. (See Illus. Dict.) **P. molaris,** molar pregnancy.

Pseudocylindroid (*su-do-sil'-in-droid*). A band of mucus or any substance in the urine simulating a renal cast.

Pseudodiascope (*su-do-di'-ah-skōp*) [ψευδής, false; διασκοπεῖν, to look through]. An instrument invented by Ward to demonstrate the persistence of visual impressions made upon the retina.

Pseudodiastolic (*su-do-di-as-tol'-ik*). Apparently diastolic.

Pseudodyspepsia (*su-do-dis-pep'-se-ah*). Nervous dyspepsia or gastric neurasthenia.

Pseudoedema (*su-do-e-de'-mah*). A condition simulating edema.

Pseudoendometritis (*su-do-en-do-met-ri'-tis*). A condition resembling endometritis marked by changes in the bloodvessels, hyperplasia of the glands, and atrophy.

Pseudoephedrin (*su-do-ef-ed'-rin*). See *Ephedrin, Pseudo-.*

Pseudoepilepsy (*su-do-ep-e-lep'-se*). Disorders simulating epilepsy, wholly or partially of rachitic origin.

Pseudoepithelioma (*su-do-ep-ith-e-le-o'-mah*). An affection of the skin simulating epithelioma. **P. with Blastomyces.** Synonym of *Blastomycetic dermatitis.*

Pseudoesthesia (*su-do-es-the'-ze-ah*). See *Pseudesthesia* (Illus. Dict.).

Pseudofluctuation (*su-do-fluk-tu-a'-shun*). A tremor simulating fluctuation, sometimes observed on tapping lipomas.

Pseudoform (*su'-do-form*). In chemistry an unstable form of a derivative.

Pseudofracture (*su-do-frak'-chur*). A spontaneous fracture.

Pseudogelatin (*su-do-jel'-at-in*). Any gelatinous substance obtained from vegetable tissues.

Pseudogeusesthesia (*su-do-gus-es-the'-ze-ah*) [ψευδής, false; γεῦσις, taste; αἴσθησις, sensation]. Color-gustation; a state in which gustatory impressions also occasion color perceptions.

Pseudohelminth (*su-do-hel'-minth*). See *Pseudelminth* (Illus. Dict.).

Pseudohematocele (*su-do-hem-at'-o-sēl*). Hematocele occurring outside of the peritoneal cavity.

Pseudohemoglobin (*su-do-hem-o-glo'-bin*). Ludwig and Siegfried's name for a loose combination of hemoglobin and oxygen believed to be an intermediate step between hemoglobin and oxyhemoglobin, on the reduction of the latter.

Pseudohernia (*su-do-hur'-ne-ah*). An empty hernia sac resembling strangulated hernia when inflamed.

Pseudoheterotopia (*su-do-het-ur-o-to'-pe-ah*) [ψευδής, false; ἕτερος, other; τόπος, place]. Misplacement of cerebral alba or cinerea by unskilful manipulation in an autopsy.

Pseudohydrarthrosis (*su-do-hi-drar-thro'-sis*). Of Dubrenil, an apparent dropsy of the knee-joint from effusion into the ligament between the patella and the tuberosity of the tibia, and especially into the fat tissue of the synovial bursa.

Pseudohyoscyamin. See *Hyoscyamin, Pseudo-.*

Pseudohypertrophia, Pseudohypertrophy. (See Illus. Dict.) **P., Muscular, P. musculorum.** See *Pseudohypertrophic Paralysis* (Illus. Dict.).

Pseudoileus (*su-do-il'-e-us*). Reflex ileus due to constriction of the mesentery, or of a diverticulum or from traction of a pedicled ovarian tumor, contusion of the testicle or abdomen, or from movable kidney.

Pseudoinfluenza (*su-do-in-flu-en'-za*). A disease simulating influenza but not due to *Bacillus influenzæ.*

Pseudoisochromatic (*su-do-is-o-kro-mat'-ik*) [ψευδής, false; ἴσος, equal; χρῶμα, color]. Of different colors, yet apparently of the same color. Cf. *Anisochromatic.*

Pseudoisopyrin (*su-do-is-o-pi'-rin*). An alkaloid found by Harsten with isopyrin in the root of *Isopyrum thalactroides*, L., a ranunculaceous plant of southern Europe.

Pseudojaundice (*su-do-jawn'-dis*). Hematogenous jaundice without hepatic disease.

Pseudoleukemia. (See Illus. Dict.) Syn., *Anemia splenica; Cachexia splenica; C. lymphatica; Adenia.* **P., Infantile.** See *Disease, v. Jaksch's* (Illus. Dict.). **P., Tuberculous,** that due to tubercle bacilli. Syn., *Sternberg's disease.*

Pseudolien (*su-do-li'-en*) [ψευδής, false; *lien*, the spleen]. See *Spleen, Accessory* (Illus. Dict.).

Pseudologia, Pseudology (*su-do-lo'-je-ah, su-dol'-o-je*) [ψευδής, false; λόγος, science]. The science of lying. **P. phantastica,** Anton Delbrück's term for the pathologic lying disposition of the imbecile.

Pseudolupus (*su-do-lu'-pus*). A disease simulating lupus vulgaris produced by a species of oïdium. **P. vulgaris.** See *Dermatitis, Blastomycetic.*

Pseudomalaria (*su-do-mal-a'-re-ah*). A disease simulating malaria, but due to toxemia.

Pseudomamma (*su-do-mam'-ah*). A mamma-like structure sometimes occurring in dermoid cysts.

Peudomelanotic (*su-do-mel-an-ot'-ik*). Relating to pseudomelanosis.

Pseudomeninx (*su-do-men'-inks*) [ψευδής, false; μῆνιγξ, membrane]. A false membrane.

Pseudomeric (*su-do-mer'-ik*). Relating to the phenomenon in which one and the same carbon compound can react in accordance with different structural formulas (Richter). Syn., *Tautomeric; Desmotrophic; Merotropic.*

Pseudomerism (*su-do-mer'-izm*) [ψευδής, false; μέρος, a part]. See *Tautomerism* (2) (Illus. Dict.).

Pseudomodification (*su-do-mod-if-ik-a'-shun*). See *Pseudoform.*

Pseudomola (*su-do-mo'-la*). A spurious mole.

Pseudomonas (*su-do-mo'-nas*) [ψευδής, false; μόνας, monad]. A genus of the family *Bacteriaceæ*, consisting of straight, cylindric cells, occasionally short filaments; motile, flagella monotrichous or amphitrichous; endospores known in only a few species. They are often pigmented. Several species are known to cause diseases of plants, *e. g., P. campestris*, cabbage brown rot; *P. destructans*, white rot of turnips; *P. hyacinthi*, yellows of hyacinths; *P. phaseoli*, blight of beans; *P. stewarti*, bacteriosis of sweet corn.

Pseudomorphia (*su-do-mor'-fe-ah*). See *Pseudomorphin* (Illus. Dict.).

Pseudomyxoma (*su-do-mix-o'-mah*). A tumor containing colloid matter derived from a ruptured mucous cyst. **P. peritonei,** Werth's name for peritonitis due to contact with colloid material from ovarian tumors.

Pseudoneuroma (*su-do-nu-ro'-mah*). A new-growth, such as a fibroma, myxoma, etc., growing from a nerve and simulating a neuroma.

Pseudonuclein (*su-do-nu'-kle-in*). See *Paranuclein.*

Pseudoparalysis. (See Illus. Dict.) **P. agitans.** See *Dystaxia agitans.* **P. myasthenica,** Jolly's name for bulbar paralysis without apparent anatomic lesion.

Pseudopellagra (*su-do-pel-ag'-rah*). An affection regarded by some authorities as quite distinct from pellagra, but presenting skin symptoms similar to pellagra.

Pseudoperipneumonia (*su-do-per-e-nu-mo'-ne-ah*). See *Peripneumonia notha* (Illus. Dict.).

Pseudophlegmon (*su-do-fleg'-mon*). A simulated furuncle due to trophic nerve lesion.

Pseudophlogosis (*su-do-flo-go'-sis*) [ψευδής, false; φλόγωσις, inflammation]. Spurious or seeming inflammation. **P. ventriculi resolutiva et colliquitiva,** gastromalacia (*q. v.*).

Pseudophysostigmin (*su-do-fi-sos-tig'-min*). $C_{15}H_{21}N_2O_3$ (?). An alkaloid from Cali nuts, or false Calabar bean, seeds of a species of *Mucuna* or *Dolichos*, of tropic America. It is a white crystalline powder, soluble in alcohol or ether.

Pseudopraxia (*so-do-praks'-e-ah*) [ψευδής, false; πρᾶξις, a doing]. See *Apraxia* (Illus. Dict.).

Pseudopsora (*su-do-so'-rah*). False psora, psydracium.

Pseudoptosis (*su-do-to'-sis*). A condition resembling ptosis caused by a fold of skin and fat depending below the edge of the eyelid.

Pseudopurpurin (*su-do-pur'-pu-rin*). An orange coloring-matter found in madder.

Pseudorabies (*su-do-ra'-be-ēz*). See *Lyssophobia* (Illus. Dict.).

Pseudoreaction (*su-do-re-ak'-shun*). Agglutination not due to typhoid bacilli. Cf. *Pseudoclump.*

Pseudorraphe (*su-dor-raf'-e*) [ψευδής, false; ῥαφή, seam]. A false suture

Pseudosarcocele (*su-do-sar'-ko-sēl*). See *Andrum* (Illus. Dict.).

Pseudoscheocele (*su-do-ske'-o-sēl*) [ψευδής, false; *oscheocele*]. False scrotal hernia.

Pseudosolution (*su-do-sol-u'-shun*). See *Solution, Colloidal.*

Pseudosphincter (*su-do-sfink'-tur*) [ψευδής, false; σφιγκτήρ, that which is bound tightly]. An imperfect sphincter.

Pseudospleen, Pseudosplen (*su-do-splēn, -splen*). See *Spleen, Accessory* (Illus. Dict.).

Pseudosteogenesis (*su-dos-te-o-jen'-e-sis*) [ψευδής, false; ὀστέον, bone; γεννᾶν, to produce]. Abnormal bone-formation.

Pseudosteoma (*su-dos-te-o'-mah*) [ψευδής, false; *osteoma*]. An abnormal bony formation.

Pseudosteum (*su-dos'-te-um*). An abnormal bony growth.

Pseudostome. (See Illus. Dict.) 3. The surface bordered by the adoral zone in infusoria.

Pseudostosis (*su-dos-to'-sis*) [ψευδής, false; ὀστέον, bone]. The formation of an abnormal bony growth.

Pseudotabes. (See Illus. Dict.) 2. Gowers' term for the ataxic form of alcoholic multiple neuritis. **P. potentorum.** Synonym of *Alcoholic Paraplegia.*

Pseudoterpene (*su-do-tur'-pēn*). An isomeric hydrocarbon of the group $C_{10}H_{16}$.

Pseudotetanus (*su-do-tet'-an-us*). A rare type of tetany in which the masseters and dorsal muscles are principally involved. Syn., *Escherich's symptom complex.*

Pseudothyroid (*su-do-thi'-roid*). The structure of the frog which originates in the region occupied in the tadpole by a portion of the basihyobranchialis muscle and which is supplied by a branch of the external carotid artery, the ramus musculoglandularis. Ger. *Kiemenrest.*

Pseudotoxin (*su-do-toks'-in*). A name given to extract of belladonna containing other substances.

Pseudotrichogenesis (*su-do-trik-o-jen'-e-sis*). See *Pseudotrichosis*.

Pseudotrichosis (*su-do-trik-o'-sis*) [ψευδής, false; θρίξ, hair]. The growth of hair in an abnormal location.

Pseudotuberculosis (*su-do-tu-bur-ku-lo'-sis*) [ψευδής, false; *tuberculum*, a tubercle]. A condition simulating tuberculosis, but due to other infection than that of *Bacillus tuberculosis*. See *Paratuberculosis*.

Pseudoturbinal (*su-do-tur'-bin-al*). In comparative anatomy an osseous eminence accessory to the turbinal bone.

Pseudotympany (*su-do-tim'-pan-e*). See *Abdomen, Accordeon*.

Pseudovacuoles (*su-do-vak'-u-ōlz*). Transparent bodies containing pigment found by Laveran in blood of malarial patients.

Pseudovermicule (*su-do-vur'-mik-ūl*) [ψευδής, false; *vermes*, worm]. The motile stage in the development history of certain plasmodia, as that produced from the fertilized macrogamete in the case of the malarial parasite and allied organisms. Cf. *Microgamete, Gamete*.

Pseudoxanthoma, P. elastica (*su-do-zan-tho'-mah*). Darier's name for a rare chronic disease of the skin characterized by an eruption of yellowish plaques, slightly elevated, with an especial predilection for certain parts of the skin, *e. g.*, lower abdomen, axilla, sides of neck, etc., in which it differs from true xanthoma, which affects by preference the flexures of fingers, the extensor surfaces of elbows and knees, etc. It differs histologically from true xanthoma in being a degeneration of the elastic tissue of the skin.

Pseudulcus (*sūd-ul'-kus*). A false ulcer. **P. ventriculi**, a sensory neurosis of the stomach closely resembling gastric ulcer.

Pseudydrops (*sūd-i'-drops*) [ψευδής, false; ὑδρωψ, dropsy]. False dropsy.

Psida (*si'-da*). Pomegranate-bark.

Psilosis. (See Illus. Dict.) 2. See *Aphthæ tropicæ*. 3. See *Ptilosis* (Illus. Dict.).

Psilothin, Psilothinum (*si-lo'-thin, si-lo-thi'-num*). A depilatory cerate containing elemi, 40%; benzoin, 10%; rosin, 8%; yellow wax, 10%; and diachylon plaster, 30%; applied warm, and then cool, remove with the hair adhering.

Psilothric (*si-lō'-thrik*) [ψίλωθρον, a depilatory]. Depilatory.

Psilotic (*si-lo'-tik*). Relating to depilation or to sprue.

Psittacism (*sit'-as-izm*) [ψίττακος, a parrot]. The acquisition of ability to produce sounds by mere parrot-like imitation.

Psittacosis (*sit-ak-o'-sis*) [ψίττακος, a parrot]. A disease of birds, especially parrots, introduced into Paris, in 1891, by some parrots from South America, and marked by diarrhea, depression, and loss of feathers. It is transmissible to man, in whom it runs the course of a violent typhoid fever without abdominal symptoms but with pulmonary disorders resembling severe infectious pneumonia. The period of incubation is from 7 to 12 days and the duration about 30 days. It is due to *Bacillus psittacosis*, Widal and Sicard.

Psoadotomia (*so-ad-o-to'-me-ah*) [ψοαι, the loin muscles; τομή, a cutting]. Incision of the psoas muscle.

Psole (*so'-le*) [ψωλή]. The penis.

Psophometer (*sof-om'-et-ur*) [ψόφος, a noise; μέτρον, measure]. A stethoscope.

Psoralea (*so-ral-e'-ah*) [ψωραλέος, mangy]. A genus of leguminous plants. **P. bituminosa**, L., Harzklee, a species of southern Europe, is antispasmodic, antipyretic, and emmenagog. It is the trisphyllon of Nicander, the triphyllon of Hippocrates and Galen. **P. corylifolia**, L., a species of Arabia, East India, and China. The seeds are used as a stomachic in leprosy and skin-diseases and the fruit in spermatorrhea. **P. esculenta**, Pursh., prairie turnip of the northwestern United States, is used as food by the Indians. **P. glandulosa**, L., a species of Chili; the root is emetic; the leaf, chulen or culen, is used as a stomachic, anthelmintic, and vulnerary. The root of **P. melilotoides**, Michx., Congo root, Bob's root, Samson's snake root, of Virginia, is recommended as an aromatic bitter tonic. **P. pentaphylla**, L., of Mexico; the root is used as a substitute for contrayerva. It contains psoralin.

Psoralin (*so'-ral-in*). An alkaloid discovered by Lozano, 1893, in *Psoralea pentaphylla*, L. Its action is antiperiodic.

Psorenteritis (*so-ren-ter-i'-tis*) [ψώρα, scabies; ἔντερον, intestine]. The intestinal condition in Asiatic cholera.

Psoriasic (*so-ri-a'-sik*). Relating to psoriasis.

Psoriasiform (*so-ri-as'-e-form*). Resembling psoriasis.

Psoriasis. (See Illus. Dict.) Syn., *Scabby leprosy; Willan's leprosy; Lepidosis psoriasis* (Willan); *Lepra albaras; L. alphosis; L. crustacea; L. crustosa; L. Græcorum; L. of Willan*. **P. abdominalis**, a form affecting the trunk. See *P. inveterata* (Illus. Dict.). **P. asturiensis.** 1. Pellagra. 2. Leprosy. **P. capillitii**, a dry psoriasis of the scalp. **P. composita**, psoriasis combined with some other skin-disease. **P. linguaæ, P., Lingual.** See *Leukoplakia buccalis* (Illus. Dict.). **P. lotricum**, a form attacking the hands and arms particularly of washwomen. Syn., *Washwoman's itch; Eczema lotricum*. **P. membranæ mucosæ oris.** See *Leukoplakia buccalis* (Illus. Dict.). **P. osteacea**, psoriasis associated with affections of joints. **P. pistorum**, baker's itch.

Psoroneurilymitis (*so-ro-nu-ril-im-i'-tis*) [ψώρα, the itch; νεῦρον, nerve; λῦμα, a thing to be removed]. F. W. Sieber's term for neurilemmitis induced by the irritation of scabies.

Psoroneurymenitis (*so-ro-nu-re-men-i'-tis*). See *Psoroneurilymitis*.

Psorophora (*so-rof'-or-ah*) [ψώρα, itch; φορά, a bringing forth]. A genus of large mosquitos established by Desvoidy, of which but one species inhabits the United States. **P. howardii**, Coquillett, a species discovered by Cohen in South Carolina.

Psorospermosis. (See Illus. Dict.) **P. follicularis cutis, P. follicularis vegetans.** See *Keratosis follicularis* and *Darier's Disease* (Illus. Dict.).

Psychal. See *Psychic* (Illus. Dict.).

Psychalia (*si-ka'-le-ah*) [ψυχή, mind]. A morbid condition attended by hallucinations.

Psychasthenia (*si-kas-the'-ne-ah*) [ψυχή, mind; ἀσθένεια, weakness]. Mental fatigue.

Psyche. (See Illus. Dict.) 2. One of the names applied to the vis vitæ or vital principle. Cf. *Physis, Pneuma, Thermon*.

Psycheism (*si'-ke-izm*). Hypnotism.

Psychiatrics (*si-ke-at'-riks*). See *Psychiatry* (Illus. Dict.).

Psychoalgalia (*si-ko-al-ga'-le-ah*) [ψυχή, mind; ἄλγος, pain]. Mind-pain, intense mental distress and melancholy associated with such hallucinations as lead to utter despair. Syn., *Algopsychalia*.

Psychocortical (*si-ko-kor'-tik-al*). Relating to the portion of the cortex controlling mental operations.

Psychology. (See Illus. Dict.) **P., Abnormal**, the study of all irregular or unusual mental phenomena, as illusions, hallucinations, trance, hypnotism, automatism, intoxication and psychic effects of drugs, telepathy, in-

sanity, etc. Cf. *Psychopathology; Psychiatry.* **P., Experimental.** See *Psychophysics* (Illus. Dict.). **P., Physiologic.** See *Psychometry, Physiologic* (Illus. Dict.).

Psychoneurosis. (See Illus. Dict.) **P. maidica,** pellagra.

Psychopathia, Psychopathy. (See Illus. Dict.) **P. chirurgicalis,** Pryor's term for a mania for being operated upon. **P. sexualis,** combined mental and sexual disorders.

Psychoplegic (*si-ko-ple'-jik*) [ψυχή, mind; πληγή, a blow]. A drug which acts by an elective affinity for the gray matter of the brain, lessening its excitability and suppressing its receptivity.

Psychoragia, Psychorrhagia (*si-ko-raj'-e-ah*) [ψυχορραγία]. The death agony.

Psychosexual (*si-ko-seks'-u-al*). Relating to combined mental and sexual diseases.

Psychosis. (See Illus. Dict.) **Psychoses, Inanition,** those "due partly to transitory inhibition and excitation of larger or smaller areas of the cortex." (Flechsig.) **P., Korsakow's,** a peculiar form of mental aberration marked by rapid psychic exhaustion, inability to comprehend and elaborate external impressions, grave disturbance of memory, and illusions; observed in cases of polyneuritis.

Psychotic (*si-kot'-ik*). 1. Pertaining to psychosis. 2. Analeptic.

Psychotria (*si-ko'-tre-ah*) [ψυχή, mind; τρέφειν, to nourish]. A genus of the *Rubiaceæ.* **P. emetica,** Mut., a small tree indigenous to Colombia and Peru, furnishes in its root a substitute for true ipecacuanha. **P. ipecacuanha,** Stokes, furnishes ipecacuanha. It contains the alkaloids emetin, cephælin, and psychotrin.

Psychotrin (*si-ko'-trin*). An alkaloid sparingly soluble in ether, present in relatively small proportions in ipecac, *Psychotria ipecacuanha,* Stokes.

Psychovisual (*si-ko-viz'-u-al*). Relating to subjective vision or to vision unaccompanied by stimulation of the retina. **P. Sensations.** See under *Sensations.*

Psychralgia. See *Psychroalgia.*

Psychroalgia (*si-kro-al'-je-ah*) [ψυχρός, cold; ἄλγος, pain]. A morbid condition characterized by a painful subjective sense of cold.

Psychroesthesia (*si-kro-es-the'-ze-ah*) [ψυχρός, cold; αἰσθησις; sensation]. Subjective sensation of cold.

Psychrophilic (*si-kro-fil'-ik*) [ψυχρός, cold; φιλεῖν, to love]. Applied to microorganisms which develop best at room-temperature, 15°–20° C. Cf. *Mesophilic; Thermophilic.*

Psychrophose (*si'-kro-fōz*) [ψυχρός, cold; φῶς, light]. Michael's apparatus for transillumination; it is filled with phosphorescent substance and illuminated by means of an electric current.

Psychrotherapy (*si-kro-ther'-ap-e*). See *Crymotherapy.*

Psycopathy. See *Psychopathy* (Illus. Dict.).

Ptelein (*te'-le-in*). An alcoholic extract from the root bark of *Ptelea trifoliata,* L., soluble in alcohol; used as a tonic and in dyspepsia. Dose, 1–3 gr. (0.065–0.2 gm.).

Ptenium, Ptenum (*te'-ne-um, te'-num*) [πτηνός, winged]. A name given to osmium because of its volatility.

Pteric (*ter'-ik*). Pertaining to the pterion.

Pterocarpin (*ter-o-kar'-pin*) [πτερόν, wing; καρπός, fruit]. An alkaloid contained in red sandal-wood, *Pterocarpus santalidus,* Roxb.

Pteroid (*ter'-oid*) [πτερόν, a wing]. Wing-like. **P. Bone,** a third bone of the forearm found in the skeletons of fossil reptiles (ornithosaurs), the homolog of a similar bone in the existing *Chrysochloris capensis,* the golden mole.

Pterygoid. (See Illus. Dict.) 2. Pertaining to the pterygoid processes of the sphenoid bone. 3. The pterygoid bone. 4. The internal pterygoid plate.

Pterygoin, Pterygium. (See Illus. Dict.) 4. Celsus' name for the growth of the epidermis over the nails. 5. In biology a term applied to wing-shaped appendages. **P. digiti,** paronychia. **P., Fleshy.** See *P. carnosum* (Illus. Dict.). **P. lardaceum, P. pingue,** pinguecula.

Pterygoma. (See Illus. Dict.) 2. The lobe of the ear.

Ptomain (*to'-mah-in*) [πτῶμα, corpse]. A basic nitrogenous compound, resembling the alkaloids, produced by the action of bacteria on organic matter. As they are usually formed in putrefactive processes, ptomains have also been termed putrefactive alkaloids. Some are poisonous, many are not.

Ptomatin (*to'-mat-in*). Kobert's name for ptomain.

Ptomatinuria (*to-mat-in-u'-re-ah*) [*ptomain;* οὖρον, urine]. The presence of ptomains in the urine.

Ptomatropism (*to-mat'-ro-pizm*). See *Zootrophotoxism tropeinicus.*

Ptosis. (See Illus. Dict.) Syn., *Diaptosis.* **P., Abdominal,** enteroptosis. See *Disease, Glénard's* (Illus. Dict.). **P. adiposa.** See *Pseudoptosis.* **P. diplopia.** Same as *Synechia, Posterior.* **P., Horner's.** See *P. sympathica* (Illus. Dict.). **P. iridis,** prolapse of the iris.

Ptyalocele. (See Illus. Dict.) **P., Sublingual.** See *Ranula* (Illus. Dict.).

Ptyalolith. See *Ptyalith* (Illus. Dict.).

Ptyaluria (*ti-al-u'-re-ah*) [πτίαλον, saliva; οὖρον, urine]. The supposed discharge of urine by a salivary duct. Cf. *Rhyostamaturia* (Illus. Dict.).

Puber (*pu'-bur*) [L., an adult]. One who has arrived at the age of puberty.

Puberic (*pu'-bur-ik*). Relating to puberty; puberal.

Pubertas (*pu-bur'-tas*) [L.]. Puberty. **P. plena,** complete puberty. **P. præcox,** puberty at a very early age.

Puccinia (*puk-sin'-e-ah*) [*Thomas Puccini,* Prof. of Anatomy at Florence]. A genus of fungi. **P. graminis** and **P. rubigovera** cause colic in cattle if straw is infected with them.

Puchury, Puchyry (*pu-chu'-re, pu-chi'-re*). Pichurim beans. See under *Nectandria.*

Puericulture (*pu-er-e-kul'-chur*) [*puer,* a child; *cultura,* culture]. That branch of hygiene which deals with the rearing of children and with the care of women during pregnancy that they may bring forth healthy offspring.

Puerperalism (*pu-ur'-pur-al-izm*). A comprehensive term for all the pathologic conditions incident to the puerperal state. **P., Infantile,** any pathologic condition incident to the newborn child. **P., Infectious,** puerperal disease due to infection.

Puerperant (*pu-ur'-pur-ant*) [*puer,* a boy; *parere,* to bear]. A puerperal woman.

Puerperism (*pu-ur'-pur-izm*). See *Puerperalism.*

Puerperium. (See Illus. Dict.) 2. The newborn child.

Pug. (See Illus. Dict.) 2. Abbreviation of *pugillus.*

Pugnus (*pug'-nus*) [L., a fist]. 1. A handful. 2. The appendicular lobe. A special development of the medifloculus inclosed in a cell in the petrous bone, in rodents, some carnivora, *Chiromys,* monkeys, and some other mammals. [Stroud.]

Pulassari Bark (*pu-las-ar'-e*) [Javanese]. The bark of *Alyxia stellata,* R. et Sch. (*q. v.*).

Pulegiol (*pu-le'-je-ol*). See *Pulegone.*

Pulegium (*pu-le'-je-um*) [*pulex,* a flea; *fugere,* to flee]. 1. The pharmaceutic name for *Mentha pule-*

gium, L., European pennyroyal. 2. A genus of the *Labiatæ* now referred to *Mentha*.

Pulegone (*pu'-leg-ōn*). $C_{10}H_{16}O$. A ketone isomeric with camphor and the active constituent of the ethereal oil of *Mentha pulegium*, L.; it has an odor of peppermint and boils at 227° C.

Pulicaris (*pu-lik-a'-ris*) [*pulex*, a flea]. Marked with little spots like flea bites. **P. morbus**, a name for typhus, applied because of the petechiæ which occur in that disease.

Pulmoform (*pul'-mo-form*). See *Methylene diguaiacol*.

Pulmonia (*pul-mo'-ne-ah*) [*pulmo*, a lung]. See *Pneumonia* (Illus. Dict.).

Pulmonin (*pul'-mon-in*). An organotherapeutic preparation made from calves' lungs, and used in pulmonary affections.

Pulp. (See Illus. Dict.) **P. Canal**, that portion of the pulp cavity of the roots of teeth extending from the apical foramina to the bottom of the pulp chamber. **P. Cavity**, that part of the interior of a tooth occupied by the body of the pulp. **P., Cerebral**, the substance of the brain. **P. Chamber**, the central portion of the crown of a tooth, containing the body of the pulp. **P. Elements**, the cells composing the parenchyma of an organ. **P.-nodule**, a nodular mass of secondary dentine occupying some portions of the dental pulp. **P.-stone**, a pulp-nodule. **P.-tissue**, the elemental substances composing the dental pulp.

Pulpation (*pulp-a'-shun*). See *Pulpefaction* (Illus. Dict.).

Pulsation. (See Illus. Dict.) **P., Aortic.** 1. The normal pulsation of the aorta. 2. See *Pulsating Aorta* (Illus. Dict.). **P., Endopleural.** See *Pulse, Endopleural* (Illus. Dict.). **P., Exopleural.** See *Pulse, Exopleural* (Illus. Dict.).

Pulse, Pulsus [pl. *pulses*, *pulsus*]. (See Illus. Dict.) See *Law, Marey's*. **P., Abnormal.** See *P., Irregular* (Illus. Dict.). **P. acriticus.** See *Pulse of Irritation*. **P., Alternating**, a variety in which a large pulsation alternates with a small one. **P., Anatricrotic**, a pulse-wave with three breaks on the rise. **P. annuens et circumnuens.** See *Pulse, Deficient*. **P., Ardent**, one with a quick, full wave which seems to strike the finger at a single point. **P. bicroticus, P. biferiens.** See *P., Dicrotic* (Illus. Dict.). **P., Bigeminal**, one in which the beats occur in pairs, so that the longer pause follows every two beats. **P. bis pulsans.** See *Pulse, Dicrotic* (Illus. Dict.). **P.-breath**, a peculiar audible pulsation of the breath issuing from the mouth and corresponding to the heart beats; observed in cases of dry cavities of the lungs, with thick walls not separated from the heart by permeable lung tissue. **P., Caprizant**, goat-leap pulse. **P., Catadicrotic**, a pulse with three beats, two expansions being seen in the line of descent in the sphygmographic tracing. **P., Catatricrotic**, one which shows three expansions in the line of descent in the sphygmographic tracing. **P. celer tricrotus.** See *P., Tricrotic* (Illus. Dict.). **P., Complex**, one alternating continuously from hard and rapid to soft and slow. **P., Contracted**, a small pulse, with high tension. **P. coturnisans** [*coturnix*, a partridge], a pulse doubly or trebly compound, like the drumming of a partridge. **P. creber**, a frequent pulse. **P., Critical.** See *Pulsus inciduus* (Illus. Dict.). **P., Deep**, one which cannot be perceived without firm pressure. **P., Deficient**, a flickering pulse. **P., Depressed**, a pulse both deep and weak. **P. dorcadisans** [*dorcas*, a gazelle]. See *Pulsus caprizans* (Illus. Dict.). **P. duriusculus.** See *P., High-tension* (Illus. Dict.). **P., Equal.** See *P. æqualis* (Illus. Dict.). **P., Febrile**, the pulse characteristic of fever; full, soft, and frequent, and exhibiting a well-marked dicrotism. **P. fibrans.** See *Pulse, Jerking* (Illus. Dict.). **P., Flickering**, one so weak that some of the beats are imperceptible. **P. fluctuosus, P. fluens.** See *Pulse, Undulating* (Illus. Dict.). **P., Formicant**, a small, feeble pulse likened to the movements of ants. **P., Frequent, P. frequens**, a pulse which recurs with frequency or at short intervals and differing from a quick pulse in which the pulse-wave has a quick rise. **P., Funic**, the arterial tide in the umbilical cord. **P. fusalis, P. gazellans.** See *P. caprizans* (Illus. Dict.). **P., Hectic.** See *P., Febrile*. **P. humilis.** See *P., Low*. **P. incidens solani.** See *Pulse, Undulating* (Illus. Dict.). **P., Incident.** See *Pulsu inciduus* (Illus. Dict.). **P. inspiratione intermittens.** See *Pulse, Paradoxic* (Illus. Dict.). **P., Intricate**, an irregular, small, infrequent pulse. **P. of Irritation**, a hard, contracted, frequent pulse. **P., Jarring.** See *P., Vibrating*. **P., Kussmaul's.** See *P., Paradoxic* (Illus. Dict.). **P., Languid**, a weak, infrequent pulse. **P., Large**, one with an ample pulse-wave. **P., Long**, one with a long pulse-wave. **P., Low**, a pulse so small as to be almost imperceptible. **P. mallearis.** See *P., Dicrotic* (Illus. Dict.). **P.-measurer**, a pulsimeter. **P., Monneret's**, the soft, full, and slow pulse of icterus. **P., Mouse-tail.** See *Pulsus myurus* (Illus. Dict.). **P., Nail**, the pulsation of the blood under the nails. **P. nervinus.** See *P. of Irritation*. **P., Organic**, a pulse occurring in disease and believed to indicate by its character the organ affected. **P. privatio**, absence of pulse; syncope. **P., Quincke's**, rhythmic reddening and blanching of the finger-nails, dependent upon oscillations of blood-pressure which are propagated into the capillaries; it is found in aortic insufficiency. **P. quinquigeminus**, one with a longer interval after every fifth beat. **P., Radial**, the pulsation of the radial artery. **P. remittens.** See *Pulse, Intermittent* (Illus. Dict.). **P. resiliens.** See *P., Dicrotic* (Illus. Dict.). **P., Resisting.** See *P., Hard* (Illus. Dict.). **P. retardus**, a delayed pulse. **P., Retrosternal**, a venous pulse believed to be due to the pulsation of the left innominate vein, perceived on depressing the integument of the suprasternal notch. **P., Running**, a very weak, frequent pulse with low tension in the arteries, one pulse-wave running into the next with no apparent interval; it is observed after hemorrhage. **P., Senile**, one characteristic of old age. The secondary waves on the descending line of the sphygmogram are prominent and the first descending wave relatively large. **P. serratus, P. serrinus**, a full, hard, strong pulse. **P., Shabby**, an ill-defined pulse due to weak heart and relaxed arteries. **P., Sharp.** Same as *P., Quick* (Illus. Dict.). **P., Sharp-tailed.** See *Pulsus myurus* (Illus. Dict.). **P., Shuttle**, one observed by E. P. Hughes in rheumatic endocarditis, in which the wave passed under the finger as if floating something solid with a fluid. **P., Small**, one with a wave of small scope. **P., Stokes'.** See *P., Corrigan's* (Illus. Dict.). **P., Strong**, one with a strong wave demonstrating a powerfully contracting left ventricle. **P., Subungual Capillary**, one observed beneath the nail by raising its tip; believed to be due to a serous reflux synchronous with the cardiac systole. **P., Supple**, a soft, full pulse. **P., Supradicrotic**, a dicrotic pulse in which the dicrotic wave resembles the cardiac beat. **P., Throbbing.** See *P., Corrigan's* (Illus. Dict.). **P., Uterine**, one supposed to indicate the menstrual flow. **P. vacillans.** See *P., Intermittent* (Illus. Dict.). **P. varius**, a changeable pulse. **P. venarum.** See *Pulse, Venous* (Illus. Dict.). **P. vibrans, P.,**

Vibrating, a tense pulse with a wave arising quickly, giving the impression under the finger of the vibrations of a piece of tense catgut.

Pulseless (*puls'-les*). Devoid of pulse or pulsation.

Pulsific (*pul-sif'-ik*) [*pulsare*, to beat; *facere*, to make]. Causing pulsation.

Pulverulence (*pul-ver'-u-lenz*) [*pulver*, powder]. The condition of being reduced to powder.

Pulvillus. (See Illus. Dict.) 2. An olive-shaped pad of lint used in plugging deep wounds.

Pulvinar. (See Illus. Dict.) **P. epiglottidus.** See *Cushion of the Epiglottis*. **P. humuli,** a hop pillow. **P. medicatum,** a medicated pillow. **P. ventriculi,** the pancreas.

Pumacuchu [Peruvian, lion's mane]. The rhatany growing in the province of Tarina, Peru.

Pumex (*pu'-meks*) [*spumex*, foam]. See *Pumice* (Illus. Dict.).

Pumiciform (*pu-mis'-e-form*). Having the appearance of pumice stone.

Pumilin (*pu'-mil-in*). The oil from the young branches of *Pinus pumilio*, Hăncke.

Pumilio (*pu-mil'-e-o*) [L.]. A dwarf, a pigmy, as *Pinus pumilio*, Hăncke.

Pummel-foot (*pum'-el*). Club-foot.

Pump. (See Illus. Dict.) **P., Alvegniat's,** a mercurial air-pump used in estimating the gaseous constituents of the blood.

Puncticulum (*punk-tik'-u-lum*) [dim. of *punctum*, a point; pl. *puncticula*]. A small point; petechia.

Punctum. (See Illus. Dict.) **P. adhæsionis.** See *P. fixum* (Illus. Dict.). **P. alæ vomeris,** the point upon the rostrum of the sphenoid where it is included between the alæ vomeris. **P. bregmatis.** See *Bregma* (Illus. Dict.). **Puncta ciliaria,** the perforations through which the eyelashes emerge. **P. congelationis,** the freezing-point. **P. foraminis magni posterius.** See *Opisthion* (Illus. Dict.). **P. lambdoideum,** a point constructed by Chipault on the median inionasal line $\frac{80}{100}$ from the nasion. A line connecting this with the processus marginalis of the zygoma corresponds to the sulcus temporalis primus. **P. mobile, P. mobile musculare.** See *P. insertionis* (Illus. Dict.). **P. occipitale.** See *Pole, Occipital* (Illus. Dict.). **P. ossificationis.** See *Center of Ossification*. **P. præiniale,** a point constructed by Chipault on the median inionasal line $\frac{95}{100}$ from the nasion. A line connecting this with the processus marginalis of the zygoma corresponds with the transverse portion of the sinus lateralis. **P. prælambdoideum,** a point constructed by Chipault on the median inionasal line $\frac{70}{100}$ from the nasion. A line connecting this with the processus marginalis of the zygoma corresponds with the sylvian fissure. **P. prærolandicum,** according to Chipault, a point on the median inionasal line $\frac{45}{100}$ from the nasion. A line connecting this point with the point representing the union of the second and third tenths of the sylvian line reckoned from the processus marginalis of the zygoma corresponds with the ramus anterior ascendens fissuræ Sylvii. **P. protuberantiæ occipitalis.** Same as *Inion*. **P. rolandicum,** a point constructed by Chipault on the median inionasal line $\frac{55}{100}$ from the nasion. A line connecting this point with a point representing the union of the third and fourth tenths of the sylvian line, reckoned from the processus marginalis of the zygoma, corresponds to the sulcus cerebralis.

Puncture. (See Illus. Dict.) 2. To make a small deep wound with a pointed instrument. **P.-doctors,** physicians enthusiastic for acupuncture. **P., Exploratory,** the puncture of a cyst or cavity for removal of a portion of its contents for examination. **P., Lumbar, P., Quincke's Spinal,** the puncture of the spinal canal for the withdrawal of cerebrospinal fluid in hydrocephalus.

Punctus (*punk'-tus*). See *Punctum* (Illus. Dict.). **P. ruber saliens.** See *Punctum saliens* (Illus. Dict.).

Puniceous (*pu-nish'-us*) [*puniceus*, red]. Bright-carmin color.

Punktograph (*punk'-to-graf*) [*punctum*, point; γράφειν, to record]. A radiographic instrument for the surgical localization of foreign bodies, as bullets embedded in the tissues.

Pupil, Pupilla. (See Illus. Dict.) **P. factitia.** See *Pupil, Artificial* (Illus. Dict.). **P., Multiple,** the presence of bands dividing the pupil into several portions due to persistence of portions of the fetal pupillary membrane. **Pupillæ velum,** the curtain of the pupil. See *Membrane, Pupillary* (Illus. Dict.).

Pupillate. (See Illus. Dict.) 2. In biology, resembling the pupil of the eye.

Pupilloscopy (*pu-pil-os'-ko-pe*). See *Retinoscopy*. (Illus. Dict.).

Puppis (*pup'-is*) [L. stern of a vessel]. The forehead. **P. os,** the frontal bone.

Pupula (*pu'-pul-ah*). See *Pupilla* (Illus. Dict.). **Pupulæ,** the tips or pulps of the fingers.

Pural (*pu'-ral*). A disinfecting agent consisting of powdered wood charcoal, saturated with a mixture of menthol, carbolic and benzoic acids, and compressed into cylinders, which are ignited for disinfection.

Purana (*pu-ran'-ah*). East Indian vernacular for surra or trypanosomiasis (*q. v.*).

Purgatin, Purgatol (*purʹ-ga-tin, -ol*). See *Anthrapurpurin diacetate*.

Purgen (*purʹ-jen*). See *Phenolphthalein*.

Purgerine (*purʹ-jer-in*). A proprietary syrup of senna; laxative.

Purging. (See Illus. Dict.) **P.-berries,** the fruit of *Rhamnus cathartica*, L. **P. Root,** the root of *Euphorbia collorata*, Eng. **P., White.** See *Diarrhea, Chronic Tropical* (Illus. Dict.).

Purgo (*purʹ-go*). See *Phenolphthalein*.

Purin (*pu'-rin*). The name given by E. Fisher to a carbon-nitrogen nucleus occurring in many products of tissue changes. **P.-bases, P.-bodies,** those derived from purin by simple substitution of the various hydrogen atoms by hydroxyl, amid, or alkyl groups; *e. g.*, adenin, hypoxanthin, guanin, xanthin, and the methyl xanthins, theobromin, caffein, etc., together with uric acid. [Raymond.] **P.s, Endogenous,** those originating from nuclein cleavage during metabolic processes. **P.s, Exogenous,** those derived from the purin bodies of food stuffs.

Purinometer (*pu-rin-omʹ-et-ur*) [*purin*; μέτρον, measure]. An apparatus consisting of a graduated separator with a uniform bore for the clinical estimation of urinary purins.

Puro (*pu'-ro*). A meat juice, made by expression of the meat. It contains 21% of unchanged albumin.

Puroform (*pu'-ro-form*). An antiseptic and disinfectant said to consist of a combination of zinc and formic aldehyd, thymol, menthol, and eucalyptol.

Puronal (*pu'-ron-al*). A proprietary antiseptic compound said to contain acetanilid, 97.22%, and bismuth oxyiodid, 2.35%.

Purple. (See Illus. Dict.) **P., Retinal.** See *P., Visual* (Illus. Dict.).

Purples. (See Illus. Dict.) 3. Swine fever.

Purpura. (See Illus. Dict.) 2. Purple. **P. alba, P. alba benigna et maligna,** miliaria. **P.s, Henoch's,** a variety of purpura with gastrointestinal symptoms occurring chiefly in young subjects; also a rapidly

fatal form of purpura (purpura fulminans). **P., Landouzy's,** a form of purpura with grave systemic symptoms. **P. maculosa,** purpura characterized by acneiform papular eruption. Syn., *Acne scorbutica.* **P. mineralis Cassii.** See *Purple of Cassius.* **P. nervosa.** See *P., Henoch's.* **P. rubra,** a form of miliaria marked with red pustules. **P., Saline,** that due to changes in the saline constituents of the blood. **P. symptomatica,** that complicating other diseases. **P., Toxic, P. toxica,** that due to the introduction of toxic substances into the system. **P. urticata, P. vibicea,** the same as *P. urticans,* which is now regarded as a variety of erythema multiformis.

Purpurein (*pur-pu'-re-in*). $C_{33}H_{20}N_2O_{10}$ (Stenhouse). A body analogous to orcein obtained from purpurin by action of sulfuric acid; it crystallizes in fine carmin needles, showing green in reflected light; easily soluble in alcohol and alkaline solutions.

Purpuriferous (*pur-pu-rif'-ur-us*) [*purpura,* purple; *ferre,* to bear]. Producing purple.

Purpurinuria (*pur-pu-rin-u'-re-ah*). See *Porphyruria* (Illus. Dict.).

Purpurissum (*pur-pu-ris'-um*). See *Hydrargyri sulph. rub.* (Illus. Dict.).

Purpurolein (*pur-pu-ro'-le-in*). A red principle produced from the juice of *Sorghum vulgare,* Pers., after fermentation or treatment with sulfuric acid; also called *carmin de sorgho.* Cf. *Purpurein, Xantholein.*

Purr (*pur*). A low murmur.

Pursianin (*pur-si-a'-nin*). A laxative fluid said to be obtained from *Rhamnus purshiana,* D. C.

Pursiness (*pur'-se-nes*) [ME. *pursynes,* shortness of breath]. See *Asthma of Solipeds.*

Pus. (See Illus. Dict.) **P. æquale, P. benignum, P. bonum.** See *P., Laudable* (Illus. Dict.). **P., Orange,** pus colored by the presence of hematoidin crystals. **P.-tube,** pyosalpinx.

Pustuloderma (*pus-tu-lo-dur'-mah*) [*pustula,* pustule; *δέρμα,* the skin]. Any skin-disease characterized by the formation of pustules.

Putamineous (*pu-tam-in'-e-us*). Putaminous, relating to the putamen.

Putrefactionist (*pu-tre-fak'-shun-ist*) [*putridus,* rotten; *facere,* to make]. An advocate of the theory of a putrefactive origin of disease.

Putrescentia (*pu-tres-en'-she-ah*). See *Putresence* (Illus. Dict.). **P. uteri,** the severest form of puerperal endometritis with sanious ulceration of the wall of the uterus extending to the peritoneum.

Putrescibility (*pu-tres-e-bil'-it-e*) [*putrescere,* to grow rotten]. Capacity for undergoing putrefaction.

Putrilaginous (*pu-tril-aj'-in-us*) [*putris,* rotten]. Gangrenous.

Putrivorous (*pu-triv'-or-us*) [*putris,* rotten; *vorare,* to devour]. Subsisting upon putrid matter.

Putromain (*pu-tro-ma'-in*). A ptomain developed in putrefactive processes.

Putty. (See Illus. Dict.) **P.-powder,** a compound of lead and tin employed in polishing glass; it is the cause of plumbism among glass-polishers.

Pycnatoms, Pyknatoms (*pik-nat'-oms*) [*πυκνός,* compact]. Haeckel's term for the centers of condensation or primitive minute parts of the hypothetic universal substance.

Pycnomorphous, Pyknomorphous (*pik-no-morf'-us*) [*πυκνός,* compact; *μορφή,* form]. A term applied by Nissl to nerve-cells in which the stained parts of the cell-body are compactly arranged.

Pycnosphygmia, Pyknosphygmia (*pik-no-sfig'-me-ah*). See *Tachycardia* (Illus. Dict.).

Pyelocystostomosis (*pi-e-lo-sist-o-sto-mo'-sis*) [*πύελος,* a trough, the pelvis of the kidney; *κύστις,* bladder; *στόμα,* mouth]. The establishment of direct communication between the kidney and the bladder.

Pyelonephritis. (See Illus. Dict.) **P., Suppurative,** of cattle, due to *Bacillus renalis bovis,* Künnemann, and *B. pyelonephritidis boum,* Künnemann. **P., Tuberculous,** that due to the tubercle bacillus.

Pyemia, Pyæmia. (See Illus. Dict.) Syn., *Purulent Absorption.* **P., Metastatic, P., Multiplex,** the condition of multiple abscess due to infected thrombi of pyemic origin. **P., Otitic,** that resulting from middle-ear disease. **P., Otogenic, P., Otogenous,** pyemia originating in the ear.

Pygalgia (*pi-gal'-je-ah*) [*πυγή,* rump; *ἄλγος,* pain]. Pain in the buttocks.

Pygalopubic (*pi-gal-o-pu'-bik*) [*πυγή,* rump; *pubes,* pubes]. Relating to the buttocks and the pubes.

Pyknatoms. See *Pycnatoms.*

Pyknometer. See *Pycnometer* (Illus. Dict.).

Pyknomorphous. See *Pycnomorphous.*

Pyknosis. See *Pycnosis* (Illus. Dict.).

Pylar (*pi'-lar*). Relating to the pyla.

Pyle (*pi'-le*) [*πύλη,* a gate]. The portal vein.

Pylema, Pylæma. See *Pylemia* (Illus. Dict.).

Pylethrombophlebitis (*pi-le-throm-bo-fleb-i'-tis*) [*πύλη,* gate; *θρόμβωσις,* thrombosis; *φλέψ,* vein]. Inflammation and thrombosis of the portal vein.

Pyloralgia (*pi-lor-al'-je-ah*) [*πυλωρός,* pylorus; *ἄλγος,* pain]. Pain in the region of the pylorus.

Pylorocolic (*pi-lor-o-kol'-ik*). Pertaining to or connecting the pyloric end of the stomach with a transverse colon.

Pylorodiosis (*pi-lor-o-di-o'-sis*) [*πυλωρός,* pylorus; *διωσις,* a pushing through]. Loreto's operation, digital divulsion of the pyloric orifice following gastrotomy.

Pylorospasm (*pi-lor'-o-spazm*). Spasm of the pylorus.

Pylorus. (See Illus. Dict.) **P., Antrum of,** the portion of the stomach between the pyloric orifice and the sphincter antri pylorici or transverse band. Syn., *Antrum pylori.* **P. proprius,** the pyloric valve.

Pyocyanase (*pi-o-si'-an-āz*) [*πύον,* pus; *κύανος,* blue]. The specific bacteriolytic enzyme of *Bacillus pyocyaneus.* It digests the bacilli of typhoid, diphtheria, and cholera, and also fibrin. It is a yellowish-green, alkaline, amorphous substance, soluble in water, to which it imparts a greenish tint. Cf. *Cholerase; Typhase.*

Pyocyanigenic, Pyocyanogenic (*pi-o-si-an-i-jen'-ik, pi-o-si-an-o-jen'-ik*) [*πύον,* pus; *κύανος,* blue; *γεννᾶν,* to produce]. Producing pyocyanin, as does *Bacillus pyocyaneus.*

Pyocyanolysin (*pi-o-si-an-ol'-is-in*) [*πύον,* pus; *κύανος,* blue; *λύειν,* to loose]. A hemolysin produced in broth cultures by *Bacillus pyocyaneus.*

Pyodermia (*pi-o-dur'-me-ah*) [*πύον,* pus; *δέρμα,* skin]. Any cutaneous lesion of the skin due to staphylococci.

Pyodermitis. (See Illus. Dict.) **P. vegetante.** See *Dermatitis, Vegetative.*

Pyoemesis (*pi-o-em-e'-sis*). See *Pyemesis* (Illus. Dict.).

Pyogenin (*pi-oj'-en-in*). $C_{63}H_{128}N_2O_{19}$. A substance obtained from the cell-body of pus-cells.

Pyoktanin. (See Illus. Dict.) **P., Blue,** $C_{31}H_{28}N_3Cl$, a nontoxic, violet, crystalline powder, soluble in 12 parts of 90% alcohol, 50 parts of glycerin, 30 parts of boiling water, 75 parts of cold water; used as an antiseptic, disinfectant, and analgesic. Dose, 1–5 gr. (0.065–0.32 gm.); max. dose 10 gr. (0.65 gm.) single, 20 gr. (1.3 gm.) daily. Dusting-powder, 1 : 1000–1 : 100; aqueous solution, 1–4 : 10,000. Syn., *Methyl violet; Dahlia violet; Paris violet; Penta and hexamethylpararosanilin hydrochlorate.* **P.-mer-**

cury, a compound of pyoktanin and mercury. Applied in 1 : 200 solution or with equal parts of starch. **P., Yellow**, $C_{17}H_{24}N_3ClO$, a yellow powder soluble in water and alcohol; an antiseptic and disinfectant, but weaker than blue pyoktanin. Dose, 1–8 gr. (0.065–0.52 gm.); max. dose, 15 gr. (1 gm.) daily; aqueous solution, 1–4 : 10,000; dusting-powder, 1–2%; ointment, 2%–10%. Syn., *Paurean; Apyonin; C. P. Auramin; Imidotetramethyldiamidodiphenyl methane hydrochlorate.*

Pyootorrhea (*pi-o-o-tor-e'-ah*) [πύον, pus; οὖς, ear; ῥεῖν, to flow]. See *Otopyorrhea* (Illus. Dict.).

Pyoovarium (*pi-o-o-va'-re-um*) [πύον, pus; *ovarium*, ovary]. Ovarian abscess.

Pyopericarditis (*pi-o-per-e-kar-di'-tis*) [πύον, pus; περί, around; καρδία, the heart]. Suppurative pericarditis.

Pyophthalmia. (See Illus. Dict.) **P. neonatorum.** See *Ophthalmia neonatorum* (Illus. Dict.).

Pyophysometra (*pi-o-fi-so-me'-tra*) [πύον, pus; φῦσα, wind; μήτρα, womb]. The presence of pus and gas in the uterus.

Pyopneumopericarditis (*pi-o-nu-mo-per-e-kar-di'-tis*) [πύον, pus; πνεῦμα, air; *pericarditis*]. Pericarditis complicated by the presence of pus and gas in the pericardium.

Pyopneumothorax. (See Illus. Dict.) See *Sign, Pfuhl-Jaffé's.* **P., Subphrenic**, Leyden's name for a collection of air and pus beneath the diaphragm.

Pyopoietic (*pi-o-poi-et'-ik*) [πύον, pus; ποιεῖν, to make]. Secreting pus, suppurative.

Pyosalpingooophoritis (*pi-o-sal-ping-o-o-of-or-i'-tis*) [πύον, pus; σάλπιγξ, a tube; ὠόν, an egg; φορεῖν, to bear]. Combined suppurative inflammation of the ovary and oviduct.

Pyosin (*pi'-o-sin*). $C_{67}H_{110}N_2O_{15}$. A substance obtained from the body plasma of pus-cells. Cf. *Pyogenin.*

Pyostatic (*pi-o-stat'-ik*) [πύον, pus; στατικός, causing to stand]. 1. Preventing the formation of pus. 2. An agent arresting the secretion of pus.

Pyothorax. (See Illus. Dict.) **P., Subphrenic**, an abscess beneath the diaphragm.

Pyoturia (*pi-o-tu'-re-ah*). See *Pyuria* (Illus. Dict.).

Pyoureter (*pi-o-u'-re-tur*). An accumulation of pus in a ureter.

Pyracid (*pi-ras'-id*). See *Pyroacid* (Illus. Dict.).

Pyraloxin (*pi-ral-oks'-in*). See *Pyrogallol, Oxidized.*

Pyramid. (See Illus. Dict.) **P.s, Decussation of.** See under *Decussation.* **P., Lalouette's.** See *P., Thyroid.* **P., Malacarne's**, a crucial projection formed by the union of the vermis inferior of the cerebellum, at the junction of its posterior and middle thirds, with two transverse prolongations which pass into the corresponding hemispheres. **P.s, Renal.** See *P.s, Malpighian* and *P.s of Ferrein* (Illus. Dict.). **P., Temporal**, the petrosa. **P., Thyroid, P. of the Thyroid Gland**, an inconstant pyramidal process of variable length, ascending from the thyroid isthmus or contiguous parts of the lobes, generally the left one, and attached to the body of the hyoid by a band of loose connective tissue. Syn., *Lalouette's pyramid; Processus pyramidalis; Middle lobe of the thyroid; Third lobe of the thyroid.* **P. of the Tympanum**, a hollow conical process situated on the inner wall of the tympanum; the stapedius muscle passes through an aperture at its apex. **P. of the Vestibule.** See *Crista vestibuli.* **P.s, Wistar's**, the cornua of the sphenoid.

Pyramidon (*pi-ram'-id-on*). Dimethylamidophenyldimethylpyrazolon, a yellowish-white, crystalline, almost tasteless powder, recommended as an antipyretic in doses of 5–8 gr. (0.32–0.51 gm.) every 2 hours. **P. Camphorate**, it is used in the treatment of tuberculosis. Dose, 0.75 to 1 gm. **P. Salicylate**, it is used in pulmonary tuberculosis. Dose, 0.75 gm.

Pyramis. (See Illus. Dict.) [pl. *pyramides.*] 2. The modiolus. 3. The pyramid of the thyroid. 4. The petrosa. 5. The anterior pyramid of the oblongata. 6. The penis. **P. cochleæ**, the modiolus. **P. laminosa.** See *Pyramid of the Cerebellum* (Illus. Dict.). **P. ossis temporis, P. trigona**, the petrosa. **P. vermis**, the pyramid of the cerebellum. **P. vestibuli.** See *Crista vestibuli.*

Pyrantimonate (*pi-ran'-ti-mon-āt*). A salt of pyrantimonic acid.

Pyrantin (*pi-ran'-tin*). See *Phenosuccin.* **P., Soluble**, sodium salt of paraethoxylphenylsuccinamic acid. A useful antipyretic. Dose, 1 to 3 gm. daily.

Pyranum (*pi-ra'-num*). The sodium salt of a combination of benzoic acid, thymol, and salicylic acid; used as an antirheumatic and analgesic. Dose, 7–30 gr. (0.45–1.94 gm.) 2 or 3 times daily.

Pyrazin (*pi-raz'-in*). Antipyrin. **P. Hexahydrid**, piperazin.

Pyrazol. (See Illus. Dict.) It is used as a diuretic. Dose, 15–30 gr. (1–2 gm.). Syn., *Phenylmethylpyrazol carbonic acid.*

Pyretin (*pi-re'-tin*). An antipyretic said to consist of acetanilid, 58.7 parts; caffein, 6.74 parts; sodium bicarbonate, 19.5 parts; and calcium carbonate, 13.5 parts. Dose, 3–8 gr. (0.194–0.518 gm.).

Pyretologist (*pi-ret-ol'-o-jist*) [πυρετός, fever; λόγος, science]. A specialist in fevers.

Pyretometer (*pi-ret-om'-et-ur*) [πυρετός, fever; μέτρον, measure]. A clinical thermometer.

Pyretotyposis (*pi-ret-o-ti-po'-sis*) [πυρετός, fever; τύπωσις, a forming]. Intermittent fever.

Pyrigenous (*pi-rij'-en-us*). See *Pyrogenous* and *Empyreumatic* (Illus. Dict.).

Pyrisol. See *Pyrosal.*

Pyroamarin (*pi-ro-am-a'-rin*). A substance derived from amarin by dry distillation.

Pyroantimonate (*pi-ro-an'-te-mon-āt*). Potassium antimonate.

Pyroborate (*pi-ro-bo'-rāt*). A salt of pyroboric acid. Syn., *Biborate.*

Pyrocatechinuria (*pi-ro-kat-e-kin-u'-re-ah*) [*pyrocatechin*; οὖρον, urine]. The presence of pyrocatechin in the urine.

Pyroelectric (*pi-ro-e-lek'-trik*). Applied to the phenomenon of electric polarity developed in certain crystalline bodies by action of heat.

Pyrofistine (*pi-ro-fis'-tēn*). An antiphlogistic said to consist of glycerin, oil of eucalyptus, magnesium, gaultheria, aluminia, silica, iron carbonate, sodium, and peppermint.

Pyroform (*pi'-ro-form*). Bismuth oxyiodid pyrogallol; used in skin-diseases and said to be less toxic than pyrogallol.

Pyrogallol. (See Illus. Dict.) **P.-bismuth**, a dark-green powder containing 50% of bismuth and 50% of pyrogallol; used as an intestinal disinfectant and wound antiseptic. **P., Oxidized**, a stable brown or black powder, slightly soluble in water, insoluble in alcohol or ether, used as a substitute for pyrogallol as less irritating and only slightly toxic. Dose, 0.05–1 gm. daily. Ointment on skin-diseases, 5 gm. to 25 gm. each of adeps lanæ and vaselin.

Pyrogallolism (*pi-ro-gal'-ol-izm*). Poisoning by pyrogallic acid through external use in psoriasis; marked by rigor, diarrhea, hemoglobinuria, and by longer continuance, with icterus.

Pyrogallopyrine (*pi-ro-gal-o-pi'-rin*). A reaction-product of pyrogallol and antipyrin.

Pyrokinate (*pi-ro-ki'-nāt*). A salt of pyrokinic acid.

Pyrolignite (*pi-ro-lig'-nīt*). A salt of pyroligneous acid.

Pyromalate (*pi-ro-mal'-āt*). A salt of pyromalic acid.

Pyromania. (See Illus. Dict.) 2. The quality of being readily ignited.

Pyromellitic (*pi-ro-mel-it'-ik*). Obtained by combustion or distillation from a mellitic compound.

Pyromucate (*pi-ro-mu'-kāt*). A salt of pyromucic acid.

Pyronyxis (*pi-ro-niks'-is*) [πῦρ, fire; νύξις, a pricking]. Ignipuncture.

Pyrophoric (*pi-rof'-or-ik*) [πῦρ, fire; φορεῖν, to bear]. Burning spontaneously, said of finely divided iron.

Pyroplasmosis. See *Piroplasmosis*. **P. hominis.** See *Fever, Spotted* (2).

Pyrosal (*pi'-ro-sal*). Antipyrin salicylacetate, $C_9H_8O_5C_{11}H_{12}N_2O$; a white crystalline powder containing 50% of antipyrin; sparingly soluble in water, alcohol, or ether, and fuses at 146°–150° C.; antipyretic and antineuralgic. Dose, 8 gr. (0.5 gm.) 2 to 6 times daily.

Pyrosoma. See *Pirosoma*.

Pyroxylon. See *Pyroxylin* (Illus. Dict.).

Pyrozol (*pi'-ro-zol*). A proprietary antiseptic said to be a coal-tar derivative.

Pyrozone (*pi'-ro-zōn*). A 3% aqueous solution of absolute hydrogen peroxid, H_2O_2. An internal and external antiseptic. It is also used externally in a 5% and a 25% ethereal solution.

Pyrrhonian (*pir-o'-ne-an*) [*Pyrrho* of Elis, 360–270 B. C.]. Of or pertaining to the school or doctrines of Pyrrhonism, which taught skepticism on the ground that the senses and consciousness are untrustworthy sources of knowledge.

Pyrrhopin (*pir'-o-pin*). Polex's name for sanguinarin.

Pyrrol. (See Illus. Dict.) **P., Tetraiodated.** See *Iodol* (Illus. Dict.).

Pyryle (*pir'-il*) [πῦρ, fire; ὕλη, matter]. The name given by Fosse to the radicle derived from pyrane by the loss of an atom of hydrogen.

Pythogenetic, Pythogenous (*pi-tho-jen-et'-ik, pi-thoj'-en-us*). 1. See *Pythogenic* (Illus. Dict.). 2. Giving rise to putrefaction.

Pyuria. (See Illus. Dict.) Syn., *Pyorrhœa urinalis; Pyoturia*. **P. chylosa, P. lactea,** chyluria. **P., Miliary,** a form in which miliary bodies, consisting of pus-cells, epithelial cells, and blood-corpuscles, are discharged with the urine. **P. mucosa, P. serosa,** cystirrhea. **P. renalis,** that in which the pus takes origin in the kidney. **P. urethralis,** pyuria in which the pus is discharged from the urethral mucosa. **P. vesicalis,** that in which the pus is discharged from the bladder. **P. viscida,** cystirrhea.

Q

Quadriforous (*kwod-rif'-or-us*) [*quattuor*, four; *forus*, a passage]. Provided with four openings.

Quadrigeminum (*kwod-rij-em'-in-um*) [*quadrigeminus*, fourfold]. The corpus quadrigeminum.

Quadriguttate (*kwod-re-gut'-āt*) [*quattuor*, four; *gutta*, a drop]. Marked with four spots or drops.

Quadrille (*kwod-ril'*) [Fr.]. An embryologic term introduced by Fol to designate that complex movement undergone by the dividing centrosomes previous to the formation of the cleavage centrosomes. **Q. of Centers, Q. of Centrosomes.** See *Centrosomes, Quadrille of*.

Quadriparity (*kwod-re-par'-it-e*) [*quattuor*, four; *parere*, to bear]. The state of having borne four children. Cf. *Quartiparous*.

Quadripunctate (*kwod-re-punk'-tāt*) [*quattuor*, four; *punctum*, a point]. Having four points or spots.

Quadristrigate (*kwod-re-stri'-gāt*) [*quattuor*, four; *stria*, a streak]. Marked with four bands or zones.

Quantum (*kwon'-tum*) [L.]. As much as. **Q., Normal,** a constant quantity or standard.

Quartiparous (*kwor-tip'-ar-us*) [*quartus*, fourth; *parere*, to bring forth]. Having borne four children. Cf. *Quadriparity*.

Quartisternum (*kwor-te-stur'-num*) [*quartus*, fourth; *sternum*]. A part of the sternum having a special center of ossification corresponding with the fourth intercostal space.

Quasipercept (*kwas-e-pur'-sept*) [*quasi*, as it were; *percipere*, to perceive]. In psychology the more or less objectified phantasm which the percipient does in a sense perceive.

Quass (*kwos*). A Russian distilled or fermented beverage.

Quassia. (See Illus. Dict.) **Q., Jamaica,** *Picræna excelsa*, Lindley. **Q., Surinam,** *Quassia amara*, L. fil.

Quassiin (*kwos'-e-in*). See *Quassin* (Illus. Dict.).

Quassin. (See Illus. Dict.) $C_{20}H_{26}O_6$ (?), very bitter, white crystals soluble in alcohol and chloroform; used as a tonic. Dose, ⅓–⅓ gr. (0.002–0.02 gm.).

Quebrabunda (*ka-brah-bun'-dah*) [Port.]. A disease said to be similar to beriberi which attacks horses and pigs in the island of Marajó, Brazil. Syn., *Straddling disease; Hip pestilence*.

Quebrachamin (*ka-brah'-kam-in*). $C_{21}H_{26}N_2O_3$. One of six alkaloids found by Hesse in bark of *Aspidosperma quebracho-blanco*, Schlecht; white, bitter scales, slightly soluble in alcohol, ether, or chloroform; melts at 142° C.

Quebrachin. (See Illus. Dict.) $C_{21}H_{26}N_2O_3$. Pale acicular crystals, slightly soluble in alcohol and ether. It is used internally and hypodermically in dyspnea. Dose, ½–1½ gr. (0.05–0.1 gm.). **Q. Hydrochlorate,** $C_{21}H_{26}N_2O_3 \cdot HCl$, white crystals soluble in water or alcohol. Dose, ¾–1½ gr. (0.05–0.1 gm.). **Q. Hypo,** $C_{21}H_{26}N_2O_3$, a yellow amorphous powder, soluble in alcohol, ether, or chloroform; melts at 80° C.; obtained by Hesse from the bark of *Aspidiosperma quebracho-blanco*, Schlecht.

Quebracho. (See Illus. Dict.) **Q. colorado, Q. Red,** the wood of *Quebrachia lorentzii*, Griseb., a tree of Argentine; it has been used as a substitute for quebracho. **Q. Gum,** the dried juice or watery extract of *Quebrachia lorentzii*. **Q., White.** See *Quebracho* (Illus. Dict.).

Quebrachol (*ka-brah'-kol*). $C_{20}H_{34}O$. A levorotary, crystalline substance found by Hesse in the bark of

Aspidosperma quebracho-blanco, Schlecht. Syn., *Quebrachyl alcohol.*

Quef [Icelandic]. Grip.

Queræscitrin (*kwur-es-sit'-rin*). See *Quercitrin* (Illus. Dict.).

Quercetin (*kwur'-se-tin*). $C_{24}H_{16}O_{11} + 3H_2O$. A dissociation product of quercitrin, rutin, sophorin, or robinin. It is a citron-yellow, crystalline powder, soluble in alkalis and in alcohol. It is used as a dye.

Quercicolous (*kwur-sik'-ol-us*) [*quercus*, the oak; *colere*, to inhabit]. Parasitic upon oak trees.

Quercimelin (*kwur-sim'-el-in*). See *Quercitrin* (Illus. Dict.).

Quercitannin (*kwur-sit-an'-in*). See *Quercitannic Acid* (Illus. Dict.).

Quercitol (*kwur'-sit-ol*). See *Quercite* (Illus. Dict.).

Quercuron Bark (*kwur'-ku-ron*). The bark of *Quercus discolor*, Ait. (*Q. tinctoria*, Bart.).

Quercynol (*kwur'-sin-ol*). A proprietary remedy said to consist of extract of *Quercus alba* with cyanol and extract of *Hyoscyamus*. It is used in vaginal wafers.

Quick. (See Illus. Dict.) 2. A sensitive, vital, tender part, the flesh under a nail.

Quillaga. See *Quillaia* (Illus. Dict.).

Quillayin (*kwil-a'-in*). See *Saponin* (Illus. Dict.).

Quina (*kwin'-ah*). Same as *Cinchona*. **Q. blanca**, the bark of *Croton niveus*, Jacq. **Q. calisaya**, yellow cinchona bark. **Q. colorada**, red cinchona bark. **Q. morada**, the bark of *Pogonopus febrifugus*, Benth., a South American tree. Syn., *Cascarilla verdadera.*

Quinacetin Sulfate (*kwin-as'-et-in*). $(C_{37}H_{31}NO_2)_2 \cdot H_2SO_4H_2O$. An antipyretic and anodyne. Dose, 5–15 gr. (0.32–0.97 gm.).

Quinaldin. (See Illus. Dict.) Syn., *Chinaldin a-methyl-quinolin.* **Q. Sulfate**, $C_{10}H_9N \cdot H_2SO_4$, colorless prisms, melting at 211°–213° C.

Quinalgen (*kwin-al'-jen*). See *Analgen* (Illus. Dict.).

Quinaphenin (*kwin-af'-en-in*). A white, tasteless powder analogous to aristoquinin, obtained by action of quinin on the hydrochlorate of eloxyphenylcarbamic acid; slightly soluble in water, soluble in alcohol, ether, benzene, chloroform, or acids. In whooping-cough, dose, for young children, 1–2½ gr. daily; older children, 3–5 gr.

Quinaphthol (*kwin-af'-thol*). See *Chinaphthol.*

Quinaquina (*kwin-ah-kwin'-ah*). Cinchona.

Quinaseptol (*kwin-ah-sep'-tōl*). See *Diaphthol.* **Q., Argentic**, an odorless harmless antiseptic and hemostatic which promotes granulation.

Quinate (*kwin'-āt*). A salt of quinic acid.

Quince. (See Illus. Dict.) **Q., Bengal.** See *Bela* (Illus. Dict.).

Quincoca (*kwin-ko'-kah*). A tonic said to be a combination of quinin, coca leaves, gentian, wild cherry, orange peel, and aromatics exhausted with port wine.

Quinhydrone (*kwin-hi'-drōn*). $C_6H_6O_2 \cdot C_6H_4O_2$. A reaction-product of an aqueous solution of quinone and hydroquinone; green prisms with pungent taste, soluble in hot water, alcohol, ether, or ammonium.

Quinic. (See Illus. Dict.) **Q. Anhydrid.** See *Quinid.*

Quinid (*kwin'-id*). $C_7H_{10}O_5$. A vitreous mass obtained from quinic acid by prolonged heating.

Quinidamin (*kwin-id'-am-in*). $C_{19}H_{24}N_2O_2$. An alkaloid obtained from *Cinchona rosulenta*, How., and *C. succirubra*, Pav. Syn., *Conchinamin.*

Quinidin. (See Illus. Dict.) **Q. Bisulfate**, $C_{20}H_{24}N_2O_2 \cdot H_2SO_4 + 4H_2O$, bitter colorless fluorescent crystals soluble in water. Dose, 5–60 gr. (0.32–4 gm.). **Q. Citrate**, $C_{20}H_{24}N_2O_2 \cdot C_6H_8O_7$, white crystals soluble in alcohol. Dose, 1½–12 gr. (0.1–0.8 gm.). **Q. Dihydrobromate**, $C_{20}H_{24}N_2O_2 \cdot 2HBr$, white crystals soluble in water. Dose as tonic, ½–3 gr. (0.032–0.2 gm.) 3 times daily, antiperiodic 20–60 gr.; for a cold, 5–10 gr. **Q. Glycyrrhizate**, a combination of quinidin sulfate, ammonium carbonate, and extract of licorice root; a yellowish powder insoluble in water. **Q. Tannate**, a yellowish-white powder used in diarrhea, nephritis, and malaria. Dose, 0.1–0.8 gm., twice daily.

Quinimetry (*kwin-im'-et-re*) [*quinia*; *μέτρον*, measure]. The determination of the amount of alkaloids contained in samples of cinchona bark. Syn., *Quinimetry.*

Quinin. (See Illus. Dict.) **Q. Acetate**, $C_{20}H_{24}N_2O_2 \cdot C_2H_4O_2$, fine acicular crystals, soluble in alcohol and hot water. Dose, 1–15 gr. (0.065–1 gm.). **Q. Albuminate**, white or yellowish scales, soluble in dilute hydrochloric acid. Dose, 1–15 gr. (0.065–1 gm.). **Q. and Ammonium Citrate**, a combination of 66⅔% of quinin citrate and 33⅓% of ammonium citrate; a bulky powder. Dose, 1–40 gr. (0.066–2.5 gm.). **Q. Anisate**, $(C_{20}H_{24}N_2O_2)_2C_{20}H_{22}O + 2H_2O$, shining crystals, soluble in ether or hot alcohol. Dose, 1–40 gr. (0.066–2.5 gm.). Syn., *Anetholquinin.* **Q. Arsenate**, $2(C_{20}H_{24}N_2O_2) \cdot H_3AsO_4 + 8H_2O$, white poisonous crystals soluble in hot water. Antiperiodic. Dose, $\frac{1}{16}$–⅛ gr. (0.004–0.008 gm.). Max. single dose, ⅛ gr. (0.008 gm.). Antidotes, emetics, hot milk and water with mustard, followed by milk with magnesia, dialyzed iron. **Q. Arsenite**, $C_{20}H_{24}N_2O_2 \cdot H_3AsO_3 + 2H_2O$, a white powder, soluble in hot water; antiperiodic. Dose, $\frac{1}{12}$–½ gr. (0.005–0.03 gm.). **Q. Benzoate**, $C_{20}H_{24}N_2O_2 \cdot C_7H_6O_2$, a crystalline powder. Dose, 2–20 gr. (0.13–1.3 gm.). **Q. Borate**, $C_{20}H_{24}N_2O_2 \cdot H_3BO_3$ (?), white crystals, soluble in alcohol and water. Dose, 1–30 gr. (0.065–2 gm.). **Q. Bromate**, $C_{20}H_{24}N_2O_2 \cdot HBrO_3$, white crystals, soluble in water. Antiseptic and antipyretic. Dose, 1–30 gr. **Q. Camphorate**, $(C_{20}H_{24}N_2O_2)_3 \cdot C_{10}H_{16}O_4$, white powder, soluble in alcohol; antiseptic and antipyretic. Dose, 1–30 gr. (0.06–1.94 gm.). **Q. Carbolate**, $C_{20}H_{24}N_2O_2 \cdot C_6H_6O$, white powder, soluble in alcohol, 80 parts, or in water, 400 parts. Antiseptic and antipyretic. Dose, 1–30 gr. (0.06–1.94 gm.). Syn., *Q. Phenolate*; *Phenolquinin.* **Q. Caseinate**, a compound of quinin and casein. **Q. Chlorate**, $C_{20}H_{24}N_2O_2 \cdot HClO_3 + 1\frac{3}{4}H_2O$, explosive white crystals, soluble in water and alcohol; used in fevers with symptoms of angina. **Q. Chlorophosphate**, $C_{20}H_{24}N_2O_2 \cdot HCl \cdot 2PO_4H_3 + 3H_2O$, colorless crystals, soluble in 2 parts of water and containing about 50% of the alkaloid. It has proved efficient in obstinate cases of malaria. **Q. Cinnamate**, $C_{20}H_{24}N_2O_2 \cdot C_9H_8O_2$, small yellowish crystals, soluble in alcohol; antipyretic and antiseptic. Dose, 1–30 gr. (0.066–2 gm.). **Q. Citrate**, $(C_{20}H_{24}N_2O_2)_3 \cdot C_6H_8O_7 + 7H_2O$, small, white crystals, soluble in alcohol or hot water. Dose, 2–20 gr. (0.13–1.29 gm.). **Q. Citrate with Iron Pyrophosphate**, yellowish scales, used in malaria associated with anemia. **Q. Citrohydrochlorate**, a white powder used as the sulfate. Dose, 1–30 gr. (0.06–1.94 gm.). **Q. Citrosalicylate**, a white powder, soluble in alcohol, used in malarial neuralgia. **Q. Dihydrobromate**, $C_{20}H_{24}N_2O_2 \cdot 2HBr + 3H_2O$, yellow powder, soluble in 6 parts of water or in alcohol. Dose, 2–20 gr. (0.13–1.3 gm.). Syn., *Q. bihydrobromate*; *Acid hydrobromate.* **Q. Dihydrochlorate**, $C_{30}H_{24}N_2O_2 \cdot 2HCl + 2H_2O$, white crystals, soluble in water or alcohol, rendering it suitable for hypodermic uses. **Q. Dihydroiodate**, $C_{20}H_{24}N_2O_2 \cdot HI + 5H_2O$, yellowish crystals, soluble in water and alcohol, used as antipyretic. Dose, 1–30 gr. **Q. Ethyl Carbonate, Q. Ethyl Carbonic Ester.** See

Euquinin. **Q. Ethylsulfate,** $C_{22}H_{20}N_2O_6$, obtained from a hot alcoholic solution of sodium sulfovinate and quinin sulfate; white crystals, containing 71% of quinin, soluble in water. It is recommended for subcutaneous use. Dose, 3–8 gr. (0.19–0.52 gm.). Syn., *Q. sulfovinate; Q. sulfoethylate.* **Q. Ferrichlorid.** See *Iron and Quinin Chlorid, Ferric.* **Q. Ferroarsenate.** See *Iron and Quinin Arsenate.* **Q. Ferroarsenite.** See *Iron and Quinin Arsenite.* **Q. Ferrocyanid,** $C_{20}H_{24}N_2O_2 . H_4Fe(CN)6 + 3H_2O$, orange crystals or a yellowish amorphous powder, soluble in alcohol; used in night sweats of tuberculosis. Dose, 5–10 gr. (0.32–0.65 gm.). **Q. Ferrohypophosphite.** See *Iron and Quinin Hypophosphite.* **Q. Ferrovalerianate.** See *Iron and Quinin Valerianate.* **Q. Formate,** $C_{20}H_{24}N_2O_2 . CH_2O_2$, white crystals, soluble in water; used as quinin sulfate. **Q. Glycerophosphate,** $(C_{20}H_{24}N_2O_2)_2 . C_3H_7O_3 . PO_3$, colorless needles, soluble in hot water and alcohol; used in malaria, neuralgia, etc. Dose, 0.1 gm. Syn., *Kineurin.* **Q. Guaiacolbisulfonate.** See *Guaiaquin.* **Q. Hydrochlorophosphate.** See *Q. Phosphohydrochlorid.* **Q. Hydrochlorosulfate,** $C_{20}H_{24}N_2O_2 . HCl . H_2SO_4 + 3H_2O$, acicular crystals, soluble in water, recommended for hypodermic use as causing less pain than any other salt of quinin. Syn., *Q. Sulfomuriate.* **Q. Hydroiodate,** $C_{20}H_{24}N_2O_2 . HI$, yellowish powder, used as a nervous sedative and in neuralgia internally or subcutaneously. Dose, 1–1½ gr. (0.06 0.1 gm.). **Q. Hydroquinone-Hydrochlorid,** fine soluble acicular crystals, recommended as a febrifuge. **Q. Ichthyolsulfonate.** See *Q. Sulfoichthyolate.* **Q. and Iron Tannate,** yellowish powder. Dose, 2–10 gr. (0.13–0.65 gm.). **Q. Iodohydroiodate,** $C_{20}H_{24}N_2O_2 . I . HI$, brown powder, insoluble in water, soluble in alcohol. Dose, 1–5 gr. (0.065–0.32 gm.). **Q. Iodosulfate.** See *Herapathite* (Illus. Dict.). **Q. Lygosinate,** a combination of quinin and lygosin (diorthocumarketone); a fine orange-yellow powder, soluble in alcohol, chloroform, and benzine. It is bactericide and antiseptic and used as a dusting-powder. **Q. Methylhydrazin Perchlorate,** a compound made by the fusion of quinin hydrochlorate, caffein, and antipyrin. **Q. Muriate.** See *Q. Hydrochlorate* (Illus. Dict.). **Q., Neutral Carbonic Ester of,** aristochin, a tasteless white powder, insoluble in water, containing 96.1% of quinin. **Q. Nitrate,** $C_{20}H_{24}N_2O_2 . HNO_3 + H_2O$, bitter colorless crystals, soluble in water, antiperiodic. Dose, 1–30 gr. **Q. Oleate,** a mixture of exsiccated quinin, 1 part, and oleic acid, 3 parts; soluble in alcohol, ether, and oleic acid. It is used in the administration of quinin by inunction. **Q. Peptonate,** a brown powder containing 80% of peptone and 20% of quinin; nutrient and tonic. Dose, 5–60 gr. (0.32–4 gm.). **Q. Phenate, Q. Phenolate.** See *Q. Carbolate.* **Q. Phosphate,** $(C_{20}H_{24}N_2O_2)_2H_3PO_4 + 8H_2O$, fine white needles, soluble in alcohol; antiperiodic. Dose, 1–30 gr. **Q. Phosphohydrochlorid,** $C_{20}H_{24}N_2O_2 . HCl . 2H_3PO_4 . 3H_2O$, a compound of quinin hydrochlorid, phosphoric acid, and hydrochloric acid. It is used in nervous headache and malaria. **Q. Phthalate,** $(C_{20}H_{24}N_2O_2)_2C_8H_6O_4$, light translucent scales, melting at 70° C.; used as the sulfate. Dose, 1–30 gr. **Q. Quinate,** $C_{20}H_{24}N_2O_2 . C_7H_{12}O_6 + 2H_2O$, white crystals, soluble in water or alcohol; used subcutaneously. Dose, as the sulfate. **Q. Quinovate,** $C_{20}H_{24}N_2O_2 . C_{24}H_{38}O_4$ (?), yellowish powder, soluble in alcohol; antiperiodic. Dose, 1–30 gr. **Q. Saccharate, Q. Saccharinate,** $C_{20}H_{24}N_2O_2 . C_6H_{10}O_8$, antipyretic and antiseptic. Dose, 1–30 gr. **Q., Salicylic Ester of.** See *Saloquinin.* **Q. Silicofluorid,** small crystals, soluble in water, insoluble in alcohol; used as an antipyretic and antiseptic. **Q. Stearate,** $C_{20}H_{22}N_2O_2 . C_{18}H_{36}O_2$, bitter crystals, soluble in alcohol, used as the sulfate by inunction. **Q. Sulfocarbolate,** $(C_{20}H_{24}N_2O_2)_2C_6H_6OSO_3 + 2H_2O$, white crystals, soluble in alcohol. Dose, 1–8 gr. (0.065–0.52 gm.). Syn., *Q. Phenolsulfonate.* **Q. Sulfochlorhydrate,** used by injection in carcinoma. Dose, 0.50–0 60 cg. every other day. **Q. Sulfocresotate,** an intestinal antiseptic. **Q. Sulfoethylate.** See *Q. Ethylsulfate.* **Q. Sulfoichthyolate,** a combination of quinin sulfate and ichthyol, given in pills. **Q. Sulfomuriate.** See *Q. Hydrochlorosulfate.* **Q. Sulfotartrate,** a compound of quinin sulfate and tartaric acid; white powder, soluble in hot water; antipyretic, antiseptic. Dose, 1–30 gr. **Q. Sulfovinate.** See *Q. Ethylsulfate.* **Q. Thymate,** a white powder, soluble in alcohol, used as the sulfate. Dose, 1–30 gr. **Q.-urethane,** a nonirritant compound of quinin and urethane made by heating 3 parts of quinin hydrochlorate with 15 parts of urethane and 3 parts of water; used for intravenous injection of quinin.

Quiniometry (*kwin-e-om'-et-re*). See *Quinimetry.*

Quinism (*kwin'-izm*). See *Cinchonism* or *Quininism* (Illus. Dict.).

Quinochloral (*kwin-o-klo'-ral*). See *Chinoral.*

Quinochromin (*kwin-o-kro'-min*). $C_{26}H_{38}O_2$. A decomposition product of quinovic acid; it resembles anthraquinone, crystallizes in yellow needles, is easily soluble in chloroform or hot acetic acid, and with difficulty in alcohol; it melts at 252° C. and distils at higher temperatures.

Quinoform (*kwin'-o-form*). See *Chinoform.*

Quinoidin. (See Illus. Dict.) **Q. Borate,** yellowish scales, soluble in water and alcohol; used as quinoidin. Dose, 8–15 gr. (0.52–1 gm.). **Q. Citrate,** reddish scales, soluble in water and alcohol. Dose, 5–25 gr. (0.32–1.6 gm.). **Q. Tannate,** yellow or brown powder, slightly soluble in alcohol, antipyretic, astringent, and tonic. Dose, 2–12 gr. (0.13–0.8 gm.); veterinary practice in hog cholera, 24 gr. (1.5 gm.) 3 times daily.

Quinol (*kwin'-ol*). See *Hydroquinone* (Illus. Dict.).

Quinolein (*kwin'-o-le-in*). Same as *Quinolin.*

Quinolin. (See Illus. Dict.) **Q.-bismuth Sulfocyanate,** $(CHN . HSCN)_3 Bi(SCN)_3$, a granular, orange-red powder, insoluble in water, alcohol, or ether; melts at 76° C. It is used in treatment of gonorrhea, skin-diseases, and ulcers in 0.5%–1% solution. Syn., *Crurin; Chinolinbismuth rhodanate; Bismuth quinolin sulfocyanate.* **Q.-blue.** See *Cyanin* (2) (Illus. Dict.). **Q.-resorcin,** a gray powder used as an antipyretic and antiseptic. **Q. Salicylate,** $C_9H_7N . C_7H_6O_3$, white crystalline powder, soluble in alcohol, ether and oils; antiseptic and antirheumatic. Dose, 8–15 gr. (0.5–1 gm.). Application, 0.7% aqueous solution. **Q. Sulfate,** $C_9H_7N . H_2SO_4$, white powder, soluble in water; melts at 164° C. Antiseptic and used as quinolin. **Q. Tartrate,** $(C_9H_7N)_3(C_4H_6O_6)_4$, white crystals with sharp taste, soluble in 80 parts of water or 150 parts of alcohol, melt at 125° C.; antipyretic and antiseptic. Dose, 5–15 gr. (0.32–1 gm.). Max. dose, 30 gr. (2 gm.) single; 90 gr. (6 gm.) daily. Injection in gonorrhea, 0.7% aqueous solution.

Quinologist (*kwin-ol'-o-jist*) [*quinin; λόγος*, science]. An adept in quinology.

Quinone. (See Illus. Dict.) 3. A phenol derivative found in the soil and due to the action of a soil fungus, *Streptothrix chromagena.*

Quinopyrin (*kwin-o-pi'-rin*). A concentrated aqueous solution of quinin hydrochlorid, 50%, and antipyrin, 33⅓%; used subcutaneously in malaria. Syn., *Chinopyrin.*

Quinoral. See *Chinoral.*

Quinosol (*kwin'-o-sol*). 1. Potassium oxyquinolin sulfate. See *Chinosol.* 2. The proprietary name for a neutral combination of tricresyl sulfonate and quinolin, 33%, with tricresol, 17%. It is not caustic and is soluble in water to the extent of 1 in 25. A disinfectant for surgical instruments, and bactericide. Application, 0.1–2% solutions. Syn., *Cresochin; Kresochin.*

Quinoterpene (*kwin-o-tur'-pen*). $C_{30}H_{48}$. A decomposition product occurring in the distillation of quinovic acid, brenzquinovic acid, and novic acid. Syn., *Chinoterpene.*

Quinotoxin (*kwin-o-toks'-in*). See *Chinotoxin.*

Quinotropin (*kwin-o-tro'-pin*). Urotropin quinate.

Quinova. (See Illus. Dict.) **Q.-bitter,** same as quinova. **Q.-sugar,** $C_6H_{12}O_8$, a substance resembling mannitan obtained from quinovin.

Quinovate (*kwin'-o-vāt*). A salt of quinovic acid.

Quinovit (*kwin'-o-vit*). $C_6H_{12}O_4$. A decomposition product of quinovin; it is a dextrorotary, uncrystallizable, unfermentable bitter substance. Syn., *Chinovit.*

Quinquina (*kwin'-kwin-ah*). Cinchona.

Quinquivalent, Quinquevalent (*kwin-kwiv'-a-lent, kwin-kwev'-a-lent*) [*quinque*, five; *valere*, to be worth]. In chemistry, having an atomicity of five; capable of being combined with or of replacing five hydrogen atoms in a compound.

Quinsy. (See Illus. Dict.) Syn., *Acute parenchymatous tonsillitis; Tonsillar abscess; Phlegmonous abscess.* **Q., Lingual,** a rare form originating in the tonsillar tissues and progressing to acute purulent glossitis. **Q., Membranous,** membranous angina.

Quintane (*kwin'-tān*). C_5H_{12}. Amyl hydrid.

Quintipara (*kwin-tip'-ar-ah*) [*quintus*, fifth; *parere*, to bring forth]. A woman who has been in labor five times.

Quintisternum (*kwin-te-stur'-num*) [*quintus*, five; *sternum*]. A part of the sternum having a special center of ossification, corresponding with the fifth intercostal space.

Quionin (*kwi'-o-nin*). "Tasteless quinin." A mixture of cinchona alkaloids, principally cinchonidin, occurring in granular masses coated with resin.

Quirica (*ke-re'-ka*) [Sp.]. See *Carate* (1) (Illus. Dict.).

Quotient. (See Illus. Dict.) **Q., Blood,** the result obtained by dividing the quantity of hemoglobin in the blood by the number of erythrocytes, expressed in each case as a percentage of the normal amount. **Q., Flesh,** Argutinsky's name for the relationship of the carbon to nitrogen in flesh; on an average, 3.24 : 1. **Q., Proteid,** the result of dividing the amount of globulin in the blood-plasma by the amount of albumin in it.

R

Rabbeting (*rab'-et-ing*) [O.F. *rabouter*, to push back]. The interlocking of the broken serrated edges of a fractured bone.

Rabdoidal (*rab-doid'-al*). See *Rhabdoidal* (Illus. Dict.).

Rabelaisin (*rab-el-a'-is-in*). A glucosid isolated by Plugge from the bark of *Lunasia amara*, Blanco, a rutaceous tree of the Philippine Islands; the bark is used in inflammation of the eye and as an arrow-poison by the Negritos. It causes vomiting and cramps.

Rabiate (*ra'-be-āt*) [*rabies*, rage]. Rabid.

Rabies. (See Illus. Dict.) **R., Street,** Pasteur's term for the rabies of dogs infected naturally. Fr. *Rage des rues.*

Rabitor (*ra'-be-tor*). An individual affected with rabies.

Rachicocainization (*ra-ke-ko-ka-in-i-za'-shun*) [*ῥάχις*, spine; *cocainization*]. The induction of anesthesia by the injection of a solution of cocain hydrochlorate into the subarachnoid space by means of a lumbar puncture.

Rachilysis (*ra-kil'-is-is*) [*ῥάχις*, spine; *λύειν*, to loose]. Forcible correction of spinal curvature by combined mechanical traction and pressure.

Rachitism (*ra'-kit-izm*). Rachitis. **R. of Adults.** See *Osteomalacia* (Illus. Dict.).

Rachitol (*ra'-kit-ol*). An extract of suprarenal glands; used in the treatment of rachitis.

Rachitropacocainization (*ra-ke-tro-pa-ko-ka-in-i-za'-shun*). Subarachnoid cocainization by means of tropacocain. Cf. *Rachicocainization.*

Radal (*ra'-dal*). A 20% solution of protargol; used as a prophylactic in gonorrhea.

Radesyge. (See Illus. Dict.) **R. canadensis.** See *Syphiloid, Canadian* (Illus. Dict.).

Radiant (*ra'-de-ant*) [*radius*, ray]. Emitting rays.

Radiatio, Radiation. (See Illus. Dict.) **R., Callosal, R. caudicea, R. caudicis, R. centralis, R. corporis callosi, R. medullaris cerebri.** See *Corona radiata* (Illus. Dict.). **R., Occipitothalamic.** See *R., Optic, of Gratiolet* (Illus. Dict.). **R., Polar,** the astral rays of the mitotic figure. **R., Striothalmic,** Edinger's name for an extensive fiber system connecting the striatum with the nuclei of the thalamus and with the subthalamic region. **R., Tegmental,** a tract in the region ventrad of the thalamus; its fibers passing from the cortex of the superior parietal lobule are distributed into the capsula, into the spinal cord below the thalamus and part sink into the lenticular nucleus. **R. thalami optici.** See *R., Thalamic* (Illus. Dict.).

Radicle. (See Illus. Dict.) **R., Acid,** a group of nonmetallic atoms, especially one containing carbon, which may in many reactions remain unaltered and pass from one compound to another. **R., Alkali,** a radicle which produces an alkali when substituted for an atom of hydrogen in water. **R., Vascular,** vessels uniting to form a larger vessel. **R.s, Venous,** the capillaries forming the smallest veins. Syn., *Capillaries, Venous.*

Radiculalgia (*rad-ik-u-lal'-je-ah*) [*radicula*, a little root; *ἄλγος*, pain]. Neuralgia affecting the nerve-roots.

Radioactive (*ra-de-o-ak'-tiv*) [*radiare*, to emit rays; *actitare*, to act]. Exhibiting radiant energy.

Radioactivity (*ra-de-o-ak-tiv'-it-e*). The property of exhibiting radiant energy.

Radiochronometer (*ra-de-o-kro-nom'-et-ur*) [*radius*, ray; *χρονός*, time; *μέτρον*, measure]. An instrument for testing the character of Röntgen tubes.

Radiode (*ra'-de-ōd*) [*radius*, a ray; *ὁδός*, a way]. An electric attachment for application of radium.

Radiodermatitis (*ra-de-o-dur-mat-i'-tis*). See *Actinodermatitis*.

Radiodiagnosis (*ra-de-o-di-ag-no'-sis*) [*radius*, a ray; *διά*, apart; *γνῶσις*, knowledge]. The diagnosis of a lesion by means of radiography or radioscopy.

Radiograph (*ra'-de-o-graf*) [*radius*, ray; *γράφειν*, to write]. The picture obtained by action of radiant energy upon a sensitive plate. Cf. *Skiagraph*.

Radiographer (*ra-de-og'-raf-ur*). One skilled in radiography.

Radiography (*ra-de-og'-ra-fe*) [*radius*, a ray; *γράφειν*, to write]. The securing of a picture by the action of radiant energy upon a sensitive plate. Syn., *Skiagraphy*. **R., Stereoscopic.** See *Radiostereoscopy*.

Radiology (*ra-de-ol'-o-je*) [*radius*, a ray; *λόγος*, science]. The science of radiant energy.

Radiometer (*ra-de-om'-et-ur*) [*radius*, ray; *metare*, to measure]. An instrument for testing the penetration in radiography, a skiameter.

Radiopraxis (*ra-de-o-praks'-is*) [*radius*, ray; *πρᾶξις*, action, practice]. The art of applying radiant energy either in therapeutics or for other purposes.

Radioscopy (*ra-de-os'-ko-pe*) [*radius*, a ray; *σκοπεῖν*, to view]. The process of securing an image of an object upon a fluorescent screen by means of radiant energy. **R., Stereoscopic.** See *Radiostereoscopy*.

Radiostereoscopy (*ra-de-o-ster-e-os'-ko-pe*) [*radius*, ray; *στερεός*, solid; *σκοπεῖν*, to view]. The application of the principle of the stereoscope, obtaining a viewpoint for the left eye and one for the right by lateral displacement of the tube along the plane of the plate, determining this displacement by the formula of Marie and Ribault for the purpose of demonstrating the different planes in which various objects shown by radioscopy are situated.

Radiotherapeutic (*ra-de-o-ther-ap-u'-tik*) [*radius*, a ray; *θεραπεία*, therapy]. Having reference to the therapeutic use of radiant energy.

Radiotherapeutics (*ra-de-o-ther-ap-u'-tiks*). See *Radiotherapy*.

Radiotherapy (*ra-de-o-ther'-ap-e*). The treatment of disease by means of radiant energy. Cf. *Phototherapy*.

Radium (*ra'-de-um*) [*radiare*, to emit rays]. An elementary body discovered in 1899 by Madame Curie in pitchblende, characterized by the phenomenon (radioactivity) which Henri Becquerel had described for uranium. It is obtained by the fractional reprecipitation or recrystallization of the barium chlorid prepared from the pitchblende. Radioactivity appears to be a manifestation of subatomic energy; the atom of radium being in a state of slow disintegration gives off a gaseous emanation, which has the spectrum of helium. Other radioactive substances are uranium, thorium, polonium, and actinium. It appears that radioactive elements are undergoing spontaneous transmutation into other elements.

Raffinase (*raf'-in-āz*). The enzyme which decomposes raffinose; it is found in the seed of the cotton plant, in the root of the sugar beet, in certain yeasts, and in barley and wheat during germination.

Railway Sickness. See *Car-sickness* (Illus. Dict.).

Raise (*rāz*) [ME. *raisen*, to raise]. To expectorate.

Rale. (See Illus. Dict.) **R., Hirtz's**, a moist, subcrepitant rale, of a somewhat metallic character, pathognomonic of tuberculous softening. **R., Laënnec's**, a modified subcrepitant rale due to mucus in the bronchioles; it is noted in pulmonary emphysema. **R., Metallic, R., Metallic Tinkling.** See *Metallic Tinkling* (Illus. Dict.). **R., Piping.** See *R., Sibilant* (Illus. Dict.). **R.s, Skoda's Consonating.** See *R., Consonating* (Illus. Dict.).

Ramaninjana (*ram-an-in-yah'-nah*). A nervous disease of Madagascar.

Rape Seed. The seed of wild turnip, a variety of *Brassica campestris*, L.

Raphe, Rhaphe. (See Illus. Dict.) **R. of the Ampulla**, a longitudinal ridge on the roof of the ampulla of the semicircular canal. **R. of the Pons**, the intersection of the fibers at the meson as seen in transection. **R., Stilling's**, a narrow band connecting the pyramids of the oblongata.

Raphidiospore (*ra-fid'-e-o-spōr*). See *Exotospore*.

Rash. (See Illus. Dict.) **R., Amygdalotomy**, that which generally appears on the second or third day after the operation, on the neck, chest, or abdomen; it may be papular, roseolar, or erythematous in type; and lasts from two to five days. It may occur at any age, being noticed twice as often in females as in males. **R., Crimson**, measles. **R., Doctor's**, a neurotic erythema occurring during a medical examination. **R., Purple**, purpura. **R., Red**, erythema. **R., Summer**, lichen tropicus. **R., Tonsillotomy.** See *R., Amygdalotomy*.

Rasion (*ra'-zhun*) [*radere*, to scrape]. The scraping of drugs with a file.

Ration. (See Illus. Dict.) **R., Emergency**, one with high force-value and with sufficient available nitrogen for the needs of hard labor, prepared in compact form and designed for occasions when the use of the regular ration is impracticable.

UNITED STATES ARMY EMERGENCY RATION.

	Quantity (in ounces)	Protein (grams)	Fats (grams)	Carbohydrates (grams)	Full Value (calories)
Hard Bread,	16.	70.76	5.89	332.94	1.712
Bacon,	10.	24.94	218.14	. . .	2.030

(*Munson.*)

Raw, Rawed (*rah*, *rahd*) [AS. *hreaw*, raw]. Excoriated or abraded.

Rawp. Hoarseness.

Ray. (See Illus. Dict.) 3. A skate, a fish allied to the shark. **R.s, Actinic.** See *R.s, Ultraviolet*. **R.s, Alpha**, rays discovered in 1899 by Rutherford, emanating from uranium, thorium, and radium, and differing from cathode rays in having much less penetrating power and in not being deviated ordinarily either by a magnet or by an electrically charged body. **R.s, Becquerel**, invisible radiations consisting of electrified material, particles or ions projected from radioactive bodies, such as uranium, radium, polonium, or their salts, without evident cause, and persisting over long periods. Syn., *Uranium rays*. **R.s, Beta**, Rutherford's name for the cathode rays emitted by radioactive substances. They differ from the *a*-rays in greater penetrating power, weaker electric power, and in carry-

ing a negative charge. **R.s, Cathode,** or **Kathode,** the stream of negatively electrified particles first observed by Plücker emanating from the cathode of a Crookes tube and passing in straight lines regardless of the anode. They are capable of deflection with a magnet and produce fluorescence and heat wherever they impinge. **R.s, Diacathodic,** bluish rays obtained by directing the ordinary cathode rays upon a piece of wire gauze or upon a spiral of wire which is itself negatively electrified. They are not directly affected by a magnet, they can produce fluorescence of the glass where they meet the walls of the tube and can cast shadows of intervening objects; but the fluorescence is of a different kind, for ordinary soda glass gives a dark orange fluorescence instead of its usual golden-green tint. (S. P. Thompson.) **R.s, Gamma,** a type of Becquerel rays more highly penetrating than the α-rays and β-rays, but insignificant in energy compared with them. **R.s, Goldstein,** cathode rays which have been altered by being passed through a perforated metallic plate. Syn., *Positive rays;* Ger. *Kanalstrahlen.* **R.s, Goodspeed** (Arthur W.), reported rays which emanate from the human body and are strong enough to make a photograph; probably identical with the n-rays of Blondlot. **R.s, Hard,** Röntgen rays coming from a tube the exhaustion of which is sufficient to cause a considerable difference in the potential between the cathode and the anode and in the velocity of the cathode rays. They have high penetrating powers. Cf. *R.s, Soft.* **R.s, Hertzian,** radiant energy having the greatest wave length of any yet discovered in the spectrum, supposed to be several miles in length. These rays have the peculiar property of converting poor electric contacts into good ones when they fall upon them. **R.s, Heterocentric.** See *Heterocentric.* **R.s, Homocentric.** See under *Homocentric* (Illus. Dict.). **R.s, Lenard,** cathode rays outside the vacuum tube as described by Philipp Lenard (1894) and secured by him by means of an aluminium window. **R.s, Light,** rectilinear transverse vibrations of ether, propagated at the speed of 186,400 miles per second. They may be refracted, reflected, and polarized. See *Light* (Illus. Dict.). **R.s, N,** a form of ether waves discovered by Blondlot (1903) and named after the initial letter of Nancy, in the university of which his researches were conducted. They increase the brightness of an electric spark or the luminosity of phosphorescent bodies; they are emitted by the *x*-ray tube, by an Auer-Welsbach incandescent gas mantle, by the ordinary gas flame, but not by a Bunsen burner; the sun emits these in abundance, as does the Nernst lamp. Compression, torsion, and strain of many solids will cause the emission of the rays; living bodies, plants, and animals emit them. Cf. *R.s, Goodspeed's.* **R.s, Niewenglowski's,** certain luminous rays emitted from phosphorescent substances which may pass through opaque screens and affect sensitive plates. Niewenglowski was probably the first to establish the existence of such rays. **R.s, Paracathodic,** rays closely resembling cathode rays, produced when ordinary cathode rays strike upon an anticathode, as in the focus tubes. If the vacuum is low, they are emitted from the anticathode in nearly equal intensity in all directions. They can be deflected electrostatically and magnetically and can cast shadows of all objects on the glass walls. (S. P. Thompson.) **R.s, Photographic.** See *R.s, Ultraviolet.* **R.s, Polar,** the astral rays of the mitotic figure. **R.s, Positive.** See *R.s, Goldstein's.* **R.s, Röntgen,** that form of radiant energy discovered by the German physician Wilhelm Konrad Röntgen, 1895, and called by him *x*-ray. **R.s, S. of Sagnac,** secondary rays emanating from metals on which Röntgen rays fall and distinguished from the primary rays irregularly refracted by difference in character, not being nearly so penetrating; the lighter the metal struck by the primary rays, the more penetrating the secondary rays. **R.s, Soft,** rays coming from a tube the pressure in which is fairly low; they are readily absorbed. Cf. *R.s, Hard.* **R., Spiracular,** the small cartilage which supports the operculum of the blowhole, between the eye and the ear of the shark. **R.s, Ultraviolet,** waves of the luminiferous ether which do not affect the retina. They can be reflected, refracted, and polarized; they will not traverse many bodies that are pervious to the rays of the visible spectrum; they produce photographic and photochemic effects; they rapidly destroy the vitality of bacteria; they will discharge an electroscope if electrified negatively, but not if electrified positively; they excite bright green luminescence in willemite and blue luminescence in polysulfid of calcium. Syn., *Actinic rays; Photographic rays.* **R.s, Uranium.** See *R.s, Becquerel.* **R.s, X-,** rectilinear longitudinal vibrations of the ether detected by Röntgen (1895). They are incapable of being refracted, are not deflected by magnetic or electric forces, but may be reflected to a slight extent, though the greater part of the effect produced by the incidence of the primary rays of high penetrating power is the emission of secondary rays of small penetrating power. They affect a photographic plate and the retina; they penetrate and traverse many bodies that are opaque to luminous rays; they readily traverse living tissues and influence the nutrition of the deeper ones; they have no appreciable effect on the vitality of bacteria; they will discharge an electroscope either positively or negatively electrified; they will excite bright green luminescence in willemite and white luminescence in calcium polysulfid; rock salt is opaque to *x*-rays.

Reaction. (See Illus. Dict.) **R., Addition,** the direct union of two or more molecules to form a new molecule. **R., Bareggi's,** twenty or thirty drops of blood collected in a small test-tube and allowed to stand for 24 hours will show a nonretracted clot and a small amount of serum if the blood has been taken from a typhoid patient. In tuberculosis, on the other hand, the clot will retract considerably and an abundance of serum will be formed. **R., Bechterew's,** the minimum strength of the electric current necessary to provoke muscular contraction requires a gradual diminution at every interruption of the current or change in density, to prevent tetanic contraction which will occur if the initial strength is maintained. It is observed in tetany. **R., Bremer's.** See under *Tests.* **R., Chameleon,** the peculiar change of color observed in cultures of *Pseudomonas pyocyanea,* from green to brown and back to original brown. **R., Clump,** the agglutination of bacteria or of leukocytes as the result of the action of certain enzymes, lysins, or toxins. **R., Consensual,** reaction which is independent of the will. **R., Ehrlich's Diazo.** See under *Diazo* (Illus. Dict.). **R., Electric,** response to electric stimulus. **R., Franklinic, of Degeneration,** a rare form of reaction of degeneration produced by static electricity and similar to that obtained by the faradic current. **R., Gerhardt's Bordeaux.** See under *Tests.* **R., Gruber's,** the addition of some of the cultures of *Spirillum cholerae asiaticae* to the serum of an animal rendered immune to cholera causes these organisms to become nonmotile and to agglutinate. The reaction does not occur with other species. **R., Gruber-Widal's.** See *R., Widal's.* **R., Iodin,** iodophilia. See *Iodin-reaction.* **R., Jolly's Electric,** when the contractility of a muscle is exhausted by the faradic current, it can still be excited by the influence of the will, and, in-

versely, when voluntary movements are impossible, the muscle can contract itself by faradization. This phenomenon is observed in certain amyotrophies. **R., Mixed,** a reaction normal in the nerve and altered in the muscle. It is called by Erb the middle form of degenerative reaction. **R., Myasthenic,** that in which the normal tetanic contraction of a muscle under faradic stimulation becomes less intense and of shorter duration with every consecutive stimulus and finally ceases, the muscle being exhausted. Syn., *Faradic exhaustibility*. **R., Myotonic, of Erb,** contractions caused by either the faradic or galvanic current and characterized by attaining their maximum slowly and relaxing slowly. The vermicular, wave-like contractions pass from the cathode to the anode. **R., Neurotonic,** in electrotherapy, a tonic persistence of contraction, after the current has been broken, upon galvanic and faradic stimulation of the nerve alone, in contradistinction to the myotonic persistency that follows faradic stimulation of the muscle. [Jacoby.] **R., Pietrowski's,** the biuret reaction. See *Tests, Table of* (Illus. Dict.). **R., Pfeiffer's,** the addition of some of the peritoneal effusion provoked in a guinea-pig by inoculating it with a mixture of blood-serum of an animal immune to cholera, and of bouillon to which a small portion of a culture of the *Spirillum choleræ asiaticæ* has been added, causes these organisms to become nonmotile and to agglutinate. The absence of this phenomenon proves that the spirillum under investigation is of a different species. **R., Strauss',** the injection of material containing the bacillus of glanders into the abdominal cavity of a male guinea-pig is followed in a few days by a characteristic, generally purulent, inflammation of the testes. **R., Thread,** a peculiar reaction, consisting in the formation of long interlacing threads, produced in certain bacteria, *Bacillus coli communis, B. proteus,* etc., when brought in contact with blood-serum, especially that blood-serum obtained from the body of the individual whence the bacteria were obtained. Syn., *Filamentation; Thread-formation.* Ger., *Fadenbildung.* **R., Wernicke's.** See under *Signs* (Illus. Dict.). **R., Widal's,** the addition of a few drops of a culture of *Bacillus typhi abdominalis* to the serum of a typhoid fever patient causes an agglutination and loss of movement of the bacilli.

Reader's Cramp. A spasm of the ocular muscles following prolonged reading.

Reamputation (*re-am-pu-ta'-shun*). A second amputation of a part.

Réaumur's Porcelain. See under *Porcelain.*

Receptacle. (See Illus. Dict.) **R., Tympanic Tensor,** one lying close to the hiatus of Fallopius in the anterior wall of the tympanum. The conic eminence formed by its tympanic end, prolonged backward into the tympanum, transmits, through an aperture at its apex, the tendon of the tensor tympani. Syn., *Canalis tensor tympani; C. tensor tympani; Fossa cochleariformis.*

Receptor (*re-sep'-tor*) [*recipere,* to receive]. A name given by Ehrlich to the atomic lateral chain or haptophorous group, which, existing in each cell in addition to its nucleus, combines with the intermediary body. **R. of the First Order,** one that unites with a toxin. **R. of the Second Order,** one that has two haptophore groups, one of which unites with a nutritional substance (immune body) and the other with a fermentative substance (complement). (Gay.)

Recess, Recessus. (See Illus. Dict.) **R., Ampullar,** the ampulla of the semicircular canal of the inner ear. **R., Auditory,** a depression of the ectoderm on each side of the cephalic extremity of the embryo, constituting the first foreshadowing of the internal ear. It is the precursor of the auditory vesicle. **R. aulæ.** See *R., Aulic.* **R., Aulic,** Bergmann's name for a triangular recess between the columns of the fornix immediately dorsad of the anterior commissure. Syn., *R., Triangular; Recessusaulæ; Foveola triangularis seriata.* **R., Duodenojejunal,** a pouch of the mesentery on the right side of the jejunum and near its union with the duodenum. Syn., *Duodenojejunal fossa.* **R., Epiphyseal,** the preferred name for pineal recess. **R., Epitympanic.** Synonym of *Attic.* **R., Hepaticorenal,** that formed by the hepaticocolic ligament. **R., Ileocecal,** the ileocecal fossa. **R., Incisive,** a depression on the nasal septum immediately above the anterior palatine canal. **R., Infrapineal.** See *Recessus conarii* (Illus. Dict.). **R., Infundibuloform.** See *Fossa of Rosenmüller* (Illus. Dict.). **R., Jugular.** See *Fossa, Jugular* (Illus. Dict.). **R., Laryngopharyngeal,** the lower pyramidal part of the pharynx from which the esophagus and larynx open. **R. opticus,** the conic depression at the beginning of each optic nerve where it leaves the chiasma, the remnant of the cavity of the stalk of the optic vesicle (Wilder). **R., Palatal.** See *Fossa, Supratonsillar.* **R., Pineal.** See *Recessus conarii* (Illus. Dict.). **R. sacci lachrymalis,** an inconstant anterior pouch of the lacrimal sac. **R., Salpingopharyngeal,** an inconstant pharyngeal diverticulum adjacent to the pharyngeal opening of the eustachian tube. **R., Stensonian.** See *R., Incisive.* **R., Subcecal.** See *Pouch, Subcecal* (Illus. Dict.). **R., Subsigmoid,** the pouch made in the peritoneum by the mesentericomesocolic ligament. **R., Sulciform.** See *Fossa, Sulciform.* **R., Triangular.** See *R., Aulic.* **R. utriculi,** a recess at the upper part of the utricle of the inner ear. **R. venosus.** See *Fossa, Landzert's.* **R. vesicæ urinariæ,** the lower portion of the urinary bladder.

Recession (*re-sesh'-un*) [*recedere,* to recede]. The gradual withdrawal of a part from its normal position, as the recession of the gums from the necks of the teeth.

Recessive (*re-ses'-iv*). See under *Law, Mendel's.*

Reciprocal (*re-sip'-ro-kal*) [*recipere,* to receive]. In psychology, applied to those instances in which there is both agency and percipience at each end of the telepathic chain. **R., Reception,** a mode of articulation in which the articular surface is convex on one side and concave on the other.

Reclination. (See Illus. Dict.) **2.** A voluntary movement of the muscles.

Recomposition (*re-kom-po-zish'-un*) [*recomponere,* to reunite]. Reunion of parts or constituents after temporary dissolution.

Rectectomy (*rek-tek'-to-me*). See *Proctectomy* (Illus. Dict.).

Rectoabdominal (*rek-to-ab-dom'-in-al*). Relating to the abdomen and the rectum.

Rectocolitis (*rek-to-kol-i'-tis*). Combined inflammation of the mucosa of the rectum and colon.

Rectocystotomy (*rek-to-sist-ot'-o-me*) [*rectum,* rectum; κίστις, a bladder; τομή, a cutting]. Incision of the bladder through the rectum.

Rectolabial (*rek-to-la'-be-al*). Relating to the rectum and the labia pudendi.

Rectostomy (*rek-tos'-to-me*) [*rectum; στόμα,* mouth]. The surgical formation of an artificial anus in the rectum above a stricture.

Rectum. (See Illus. Dict.) **R., Physick's Encysted,** hypertrophic dilation of the rectal pouches. See *Diseases, Table of* (Illus. Dict.).

Red Water. (See Illus. Dict.) **2.** Synonym of *Texas fever.*

Rédressment. (See Illus. Dict.) **R. forcé,** the forcible correction of a deformity or restoration of a displaced part.

Reducin (*re-du'-sin*). See *Leukomains, Table of* (Illus. Dict.).

Reduction. (See Illus. Dict.) Syn., *Diaplacis.* **R. en bloc.** See *R. en masse* (Illus. Dict.). **Allis' Method** in dorsal dislocations of the right femur: The surgeon kneeling by the side of the supine subject grasps the ankle with his right hand and places the bent elbow of his left arm beneath the popliteal space. He now turns the bent leg outward by means of the ankle and lifts it skyward; next he turns the bent leg inward and brings the femur down in extension. **Kocher's Method** in dislocation of arm: The elbow is carried firmly to the side with the forearm at a right angle to the arm. The arm is then forcibly rotated outward until the forearm points away from the body; next the arm is carried up from the body until it is in the horizontal plane, running through the glenoid cavity. The scapula is fixed and firm extension is made during these movements. When the arm comes to the level of the shoulder, it is gradually rotated inward and is again brought to the side with the forearm across the body. The head slips into place with the inward rotation. **K.'s Method** in dorsal dislocation: The luxated thigh is rotated inward and fixed to a right angle, bringing the head to the acetabulum. It is then lifted upward, the thigh rotated outward and straightened as it is brought down parallel with the other thigh. **K.'s Method** in forward suprapubic dislocations: Hyperextension followed by flexion with simultaneous pressure upon the head of the thigh, and at last inward rotation. **McBurney's Method** in fracture of the humerus consists in cutting down upon the fracture and exercising traction and reduction by means of a hook passed through a hole drilled in the upper fragment. **Middledorpf's Method** of reducing dorsal dislocation consists in strong flexion, abduction, and outward rotation of the extremity.

Reevolution (*re-ev-ol-u'-shun*). Hughlings Jackson's term for a symptom following an epileptic attack, which consists of three stages: (1) Suspension of power to understand speech (word-deafness); (2) perception of words and echolalia without comprehension; (3) return to conscious perception of speech with continued lack of comprehension.

Reflex. (See Illus. Dict.) See *Law, Laségue's,* and *L., Pflüger's.* **Achilles-jerk,** Babinski's reflex. **R.-action.** See under *Action* (Illus. Dict.). **R., Anal,** a contraction of the sphincter ani on anal irritation. See *A., Rectal.* **R., Babinski's,** "phénomène des orteils." Extension instead of flexion of the toes on exciting the sole of the foot; it is connected with a lesion of the pyramidal tract and is found in organic, but not in hysteric, hemiplegia. Cf. *R., Schäfer's.* **R., Bone,** a reflex muscular contraction evoked by blows over a bone. **R., Choking.** See *R., Pharyngeal* (Illus. Dict.). **R., Corneomandibular,** F. v. Sölder describes it as manifested by a side movement of the lower jaw toward the side opposite the eye tested when the cornea is lightly touched and the mouth is slightly open. The reflex center, he thinks, lies in the fifth motor nucleus, and the arc is constituted by the sensory and motor branches of the trigeminus. **R., Cranial,** any brain reflex. **R., Fascial,** a reflex induced by a sudden tap over a fascia. **R., Faucial,** irritation of the fauces producing vomiting. **R., Femoral,** a reflex movement produced in certain spinal diseases, as in some cases of transverse myelitis, by irritation of the skin on the upper anterior aspect of the thigh. It consists in plantar flexion of the first three toes and of the foot, and extension of the knee-joint. **R., Frontal,** a true cutaneous reflex described by McCarthy in which all the branches of the ophthalmic nerve are concerned in its production. See *R., Supraorbital.* **R.-function,** a function due to reflex action. **R., Geigel's,** the inguinal reflex in the female, corresponding to the cremasteric reflex in the male. **R., Genital,** reflex irritation due to abnormality of the genitals. **R., Gifford's,** contraction of the pupil occurring when a strong effort is made to close the lids which are kept apart. The phenomenon is noted in a certain portion of normal eyes, but more frequently in cases of reflex and accommodative iridoplegia, especially in dementia paralytica, tabes, partial or total blindness from diseases of the optic nerve or retina, etc. **R., Guttural,** a reflex observed in cases of diseased genitalia in women, in which the patient is very desirous of spitting but cannot. **R., Haab's Pupil,** if a bright object already present in the visual field be looked at, the pupils contract, while there is no appreciable change during convergence or accommodation. This points to a cortical lesion. **Knee-jerk** (see Illus. Dict.), **Rosenberg's Method** of inducing: By causing the patient to read aloud a difficult passage, the production of the knee-jerk is facilitated. **R., Muscle, R., Muscular.** See *R., Tendon* (Illus. Dict.). **R., Ophthalmic.** See *R., Supraorbital.* **R.s, Organic,** reflex movements associated with organic life. **R.s, Pathic,** movements resulting from stimulation of a sensory nerve. **R., Penile,** retraction of the penis when percussed on the under surface near the root. **R., Piltz's,** alteration of the size of the pupil when the attention is suddenly fixed. **R., Rectal,** the reflex by which the aggregation of feces in the rectum induces defecation. **R., Rennie Palm,** a reflex described by George E. Rennie, consisting in a contraction of the digital flexors induced by tickling of the palm. **R., Schäfer's,** pinching of the tendo Achillis at its middle or upper third causes slight flexion of the foot and toes in normal persons, but extension of the foot and toes in cases of organic hemiplegia. The significance of this reflex is the same as that of Babinski's toe phenomenon. **R.-spasm, Saltatorial** [Bamberger, 1859]. Synonym of *Spasm, saltatorial.* **R., Supraorbital,** a slight but distinct contraction of the orbicularis palpebrarum on striking the supraorbital nerve or one of its branches with a slight blow. **R., Triceps,** extension of the forearm on tapping the elbow-tendon. **R., Visceral,** one of a group of reflexes: as, *Blinking,* from touching the cornea; *Penile,* erection on slight contact or produced by passing a catheter; *Rectal,* constriction of the bowel following introduction of a foreign body, as a suppository; *Sneezing,* that produced by a draft of cold air or a brilliant light; *Swallowing,* that due to stimulation of the center situated in the bulb; *Vesicle,* contraction of the bladder following irritation of the urethral orifice, *e. g.,* incontinence of urine in children, by reason of a long prepuce; *Vomiting,* from tickling the fauces. **R., Weiss',** a curvilinear reflex on the nasal side of the optic disc, regarded as a prodromal sign of myopia. **R., Westphal-Piltz's.** See *R., Gifford's.*

Reflex-multiplicator (*re-fleks-mul-te-pli-ka'-tor*) [*reflexus,* thrown back; *multiplicare,* to multiply]. An apparatus constructed by Sommer for the registration of tendon reflexes, especially the knee-phenomenon.

Reflexograph (*re-fleks'-o-graf*) [*reflectere,* to bend back; γράφειν, to write]. An instrument devised by Bechterew for measuring, timing, and charting automatically knee-jerks and other tendon reflexes.

Reflexophil (*re-fleks'-o-fil*) [*reflex; φιλεῖν*, to love]. Attended by reflex activity.

Refract (*re-frakt'*) [*refrangere*, to break back]. 1. To bend back. 2. To estimate the degree of ametropia in the eye.

Refraction. (See Illus. Dict.) Syn., *Diaclasia*, *Diaclasis*. See *Law of Sines, L., Snell's*. 2. The act or process of correcting errors of ocular refraction. **R.-equivalent, R., Specific.** See *Refractive Power, Specific* (Illus. Dict.).

Refractoscopy (*re-frakt-os'-ko-pe*). See *Retinoscopy* (Illus. Dict.).

Refringent (*re-frin'-jent*) [*refringere*, to break]. See *Refractive* (Illus. Dict.).

Regard (*re-gard'*) [OF. *regarder*]. View. **R., Field of.** See under *Field*. **R., Line of.** See under *Line*. **R., Plane of.** See under *Plane* (Illus. Dict.). **R., Point of.** See under *Point* (Illus. Dict.).

Regianin (*re-ji-a'-nin*) [*regius*, kingly]. A principle, probably identical with nucin, obtained by Phipson from English walnut, the nut of *Juglans regia*, L.

Regio, Region. (See Illus. Dict.) **R., Motor.** See *Area, Motor*. **R., Parotid.** See *R., Retromaxillary*. **R., Pelvitrochanterian,** the space lying posteriorly between the great trochanter and the pelvis. **R., Perisinal,** the area around a sinus. **R., Prefrontal,** the part of the frontal lobe anterior to the precentral fissure; it is also called prefrontal lobe. **R., Prevertebral,** the ventral surface of the vertebral column. **R., Pulmovascular,** the part of the thorax in which the lung overlaps the origins of the large vessels. **R., Retromaxillary,** the area dorsad of the superior maxilla. Syn., *R., Parotid*. **R., Sacrococcygeal,** that part of the dorsal wall of the pelvis corresponding to the ventral surface of the sacrum and coccyx. **R., Sciatic,** the region of the sacrosciatic foramina. **R., Sensory.** See *Sensorium* (Illus. Dict.). **R., Sternal, Inferior,** the part of the sternal region lying below the margins of the third costal cartilages. **R., Sternal, Superior,** that portion of the sternal region lying above the lower margins of the third costal cartilages. **R., Subclavicular.** See *R., Infraclavicular* (Illus. Dict.). **R., Submammary.** Same as *R., Inframammary* (Illus. Dict.). **R., Subscapular.** See *R., Infrascapular* (Illus. Dict.). **R., Suprainguinal,** that bounded by the rectus abdominis muscle, Poupart's ligament, and a line through the iliac crest. **R., Tegmental,** the tegmentum and corresponding parts of the pons and oblongata to the decussation of the pyramids. **R., Thyrohyoid,** the region around the thyroid cartilage and the hyoid bone.

Reglementation (*reg-le-men-ta'-shun*) [Fr. *règlé*, regulated]. The legal restriction of prostitution.

Reguline (*reg'-u-lēn*). Metallic.

Regulum (*reg'-u-lum*) [*regulus*, a prince]. A pure uncombined metal.

Regulus (*reg'-u-lus*). A metal reduced from its ore to the metallic state.

Regurgitation. (See Illus. Dict.) **R., Aortic,** that of the blood-serum through the aorta from incompetence of the valves. **R., Functional,** a form of mitral regurgitation due to contraction of the chordæ tendineæ and papillary muscles. **R., Mitral.** See under *Mitral* (Illus. Dict.).

Reindeer Tendon. See under *Tendon*.

Relief (*re-lēf'*) [OF. *relef*, a raising]. 1. The partial removal of anything distressing, alleviation. 2. Projection. **R., Binocular,** a binocular combination of pictures, which differ according to certain laws, whereby the points seem to correspond perfectly and the picture is no longer flat but in relief. [Scripture.]

Remarcol (*re-mark'-ol*). Sodium fluorid.

Remission. (See Illus. Dict.) Syn., *Abatement; Ablation*. **R.s, Legroux's,** Trêves de Legroux. Lengthy remissions which sometimes occur in the course of pulmonary tuberculosis.

Remulus (*rem'-u-lus*) [L. a small oar]. The narrow dorsal portion of a rib.

Renaden (*ren'-ad-en*). A proprietary preparation from kidneys; used in chronic nephritis. Dose, 1½–2 dr. (6–8 gm.).

Renipuncture (*ren-e-punk'-chur*) [*ren*, kidney; *pungere*, to prick]. Puncture of the capsule of the kidney.

Rennogen (*ren'-o-jen*). See *Renninogen* (Illus. Dict.).

Renocutaneous (*ren-o-ku-ta'-ne-us*) [*ren*, kidney; *cutis*, skin]. Relating to the kidneys and the skin.

Renogastric (*ren-o-gas'-trik*) [*ren*, kidney; *γαστήρ*, stomach]. Relating to the kidney and the stomach.

Renointestinal (*ren-o-in-tes'-tin-al*). Relating to the kidney and the intestines.

Renopulmonary (*ren-o-pul'-mon-a-re*). Relating to the kidney and the lungs.

Reorganization (*re-or-gan-iz-a'-shun*) [*re*, again; *organization*]. Healing by the development of tissue elements similar to those lost through some morbid process. Cf. *Regeneration; Intention*.

Repercussive (*re-pur-kus'-iv*) [*repercutere*, to drive back]. 1. Repellant. 2. A repellant drug.

Reposing (*re-pō'-zing*) [*reponere*, to replace]. Returning an abnormally placed part to its proper position. **R. the Features,** in dentistry, a term including everything necessary to bring each and all of the visible parts of the face and mouth into harmony of relation to each other; this necessarily includes the teeth, the relation of the lower to the upper jaw, the lips, cheeks, and soft parts of the face that have assumed a wrong position by reason of the loss of the natural organs.

Resacetin (*rez-as'-et-in*). A salt of oxyphenyl-acetic acid.

Resaldol (*rez-al'-dol*). An acetyl derivative of saloform and resorcin; an intestinal astringent and antiseptic. Dose, 30–75 gm. daily.

Resalgin (*rez-al'-jin*). See *Resorcylalgin*.

Resinate (*rez'-in-āt*). Berzelius' term for a compound of a resin with a base.

Resineon (*rez-in'-e-on*). A volatile oil distilled from rosin with potash and freed from carbolic acid. It is used as a wound antiseptic and in treatment of skin-diseases.

Resinol (*rez'-in-ol*). See *Retinol* (Illus. Dict.).

Resistance. (See Illus. Dict.) **R., Animal.** See *Immunity* and *Phagocytosis* (Illus. Dict.). **R.-coil.** See under *Coil*. **R., Issaeff's Period of,** a temporary power of resistance to inoculation by virulent cultures of bacteria conferred by the injection of various substances, such as salt solution, urine, serum, etc. **R., Vital.** See *Immunity* and *Phagocytosis*.

Resistivity (*re-sis-tiv'-it-e*) [*resistare*, to withstand]. The amount or character of electric resistance exhibited by a body.

Resol (*rez'-ol*). A disinfectant mixture of saponified wood-tar and methyl alcohol.

Resonance. (See Illus. Dict.) **R., Chamber.** See under *Chamber*. **R., Hydatid,** a peculiar sound heard in combined auscultation and percussion of hydatid cysts. It is not heard in other cystic conditions.

Resopyrin. (See Illus. Dict.) It is used in any condition where antipyrin and resorcin are indicated. Dose, 5–10 gr. (0.32–0.65 gm.).

Resorbent (*re-sorb'-ent*) [*resorbere*, to draw to itself]. 1. Favoring resorption. 2. A drug which aids in the process of resorption.

Resorbin (*re-sorb'-in*). A very penetrating ointment base consisting of an emulsion of sweet almond oil, a small quantity of wax, and a dilute aqueous solution of gelatin or soap.

Resorcin. (See Illus. Dict.) Syn., *Resorcinol; Metadioxybenzene; Metadihydroxybenzene.* **R. Camphor.** See *Camphor.* **R.-eucalyptol,** a white crystalline powder, soluble in alcohol, used as a wound antiseptic and on skin-diseases in ointment or alcoholic solution. Syn., *Eucalyptol resorin.* **R.-mercury Acetate.** See *Mercury Resorcin Acetate.* **R. Monacetate.** See *Euresol.* **R.-phthalein.** See *Fluorescein.* **R.-salol,** an antiseptic substance obtained from resorcin by action of phenyl salicylate; used in intestinal inflammation, etc. Dose, 3–9 gr. (0.2–0.6 gm.).

Resorcinol (*re-zor'-sin-ol*). 1. Same as *Resorcin.* 2. A combination of equal parts of resorcin and iodoform fused together; an amorphous brown powder with odor of iodin and taste of iodoform. It is used as a surgical dusting-powder 20%–50% with starch, or 7%–15% ointment.

Resorcinopyrin (*re-zor-sin-o-pi'-rin*). See *Resopyrin* (Illus. Dict.).

Resorcylalgin (*re-zor-sil-al'-jin*). A crystalline derivative of β-resorcylic acid and antipyrin, soluble in alcohol, ether, or chloroform, or 150 parts of water; melts at 115° C. It is antipyretic and anodyne. Syn., *Resalgin.*

Resorption. (See Illus. Dict.) 2. The process through which the roots of temporary teeth disappear. Occasionally the roots of permanent teeth suffer resorption. **R., Cutaneous.** See *Absorption, Cutaneous* (Illus. Dict.). **R.-infection,** a mode of infection marked by the development of bacteria at a distance from the point of introduction.

Respirable (*res'-pir-ab-l*) [*respirare,* to breathe]. Suitable or adapted for breathing.

Respiration. (See Illus. Dict.) **R., Absent,** suppression of respiratory sounds. **R., Accelerated,** when exceeding 25 respirations a minute. **R., Corrigan's,** "nervous or cerebral respiration." Frequent shallow and blowing breathing in low fevers—*e. g.,* in typhus. **R., Kussmaul's,** the deep, labored respiration of diabetic coma. **R., Postural, R., Prone.** See *Artificial Respiration, Hall's Method* (Illus. Dict.). **R., Vesiculocavernous,** respiration that is both vesicular and cavernous.

Respiratory. (See Illus. Dict.) **R. Bundle or Column.** See *Solitary Bundle* (Illus. Dict.). **R. Excursion,** the entire movement of the chest during the complete act of respiration.

Rest. (See Illus. Dict.) 2. A mass of embryonic cells, which, having been misplaced during organic differentiation, remain quiescent and fail to reach their normal evolution. They at times act as foci of new-growths or of other pathologic phenomena. **R., Adrenal, R., Suprarenal,** masses of aberrant adrenal tissue occasionally met with beneath the capsule of the kidney. See *Strumæ lipomatodes aberratæ renis* (Grawitz).

Resuscitation. (See Illus. Dict.) **R., Marshall Hall's Method.** See under *Artificial Respiration* (Illus. Dict.). **R. of the New-born, Ogata's Shaking Method,** the feet are grasped by one hand and the shoulders held by the other; the trunk is gradually raised, and the head brought near the feet, the body being strongly flexed at the hip-joint while the chest is pressed with the hand. The head is then raised, the trunk gradually extended, and the child thus returned to its former extended position. Should a repetition of this procedure prove unavailing, after a moment's pause in the second position the hand on the back is suddenly removed, the upper part of the child's body being thus thrown down and shaken. This should be done eight to ten times a minute, and a warm bath given after each eight or ten shakings. **R., Stroke,** for asphyxia (Ogata's method): A light stroke over the anteroinferior margin of the chest with the palmar side of the extended fingers, repeated 10 to 15 times a minute. The respiration is stimulated, the heart's action excited, and the circulation accelerated.

Resuscitator. (See Illus. Dict.) **R., Intragastric,** an apparatus devised by Fenton B. Turck for the purpose of reducing surgical shock and collapse. It consists simply of a double stomach-tube, at one end of which is attached a soft-rubber bag. By this means heat is applied in a uniform and diffuse manner, up to 135° F.

Retainer (*re-ta'-nur*) [*retinere,* to keep back]. A dental appliance for holding in position teeth which have been moved.

Retamin (*ret-am'-in*) [*retama,* the Spanish name for genista]. $C_{15}H_{26}N_2O$. An alkaloid from the bark of *Genista sphærocarpa,* Lam.

Rete. (See Illus. Dict.) **R. arteriosum capitis,** a network over the upper part of the cranium formed by the anastomosis of the frontal, temporal, and occipital arteries. **R. arteriosum faciei,** a network formed by the terminal branches of the facial, infraorbital, ophthalmic, and internal maxillary arteries. **R. articulare genu,** one formed by the anastomosis of the arteries over the anterior and lateral surfaces of the knee. **R. cubitale.** See *R. articulare cubiti* (Illus. Dict.). **R. dorsalis pedis,** an arterial network on the dorsum of the foot formed by branches of the tarsal and metatarsal arteries joined by perforating plantar branches. **R. majus,** the great omentum. **R. mirabile of Malpighi,** the network formed by the ultimate ramifications of the pulmonary artery. **R. mirabile unipolar.** See *R., Unipolar* (Illus. Dict.). **R. venosum volare manus,** a palmar network of the hand.

Retentio, Retention. (See Illus. Dict.) **R.-hypothesis** (of Chauveau). See *Retention Theory* under *Immunity.* **R. mensium,** a condition in which menstruation occurs but its products are retained in consequence of atresia of the genital canal. [Roberts.]

Reticula (*re-tik'-u-lah*) [pl. of *reticulum,* a network]. The preferred name for formatio reticularis.

Reticulin (*re-tik'-u-lin*). A body found by Siegfried in the fibers of reticular tissue with a percentage composition: C, 52.88; H, 6.97; N, 15.63; S, 1.88; P, 0.34; ash, 2.27; but believed by other authorities to be simply collagen coagulated by reagents combined with proteid and nuclein residues of cells.

Retina. (See Illus. Dict.) **R., Physiologic, Middle Point of.** See *Fovea centralis* (Illus. Dict.). **R., Watered-silk Appearance of.** See *Reflex, Watered-silk* (Illus. Dict.).

Retinaculum. (See Illus. Dict.) **R. musculare tendinis subscapularis majoris,** a name for the inconstant brachio-capsularis muscle originating in the shaft of the humerus and inserted into the capsular ligament of the shoulder-joint. **R. tendinum,** one formed by the ligamentous bands which hold the peroneal tendons in place at the outer side of the ankle. **Retinacula, Weitbrecht's,** flat bands lying on the neck of the femur and formed by the deeper fibers of the capsular ligament, which are reflected upward along the neck to be attached near the head.

Retinitis. (See Illus. Dict.) See *Spots, Roth's.* **R. apoplectica,** retinal apoplexy. **R., Central Recurrent,** a rare form of syphilitic retinitis characterized by a central dark scotoma which disappears in a few days to return in a few weeks; the attacks becoming more frequent. **R., Jacobson's,** a diffuse syphilitic retinitis.

Retinophotoscopy (*ret-in-o-fo-tos'-ko-pe*). See *Retinoscopy* (Illus. Dict.).

Retinoskioscopy (*ret-in-o-ski-os'-ko-pe*). See *Retinoscopy* (Illus. Dict.).

Retroanteroamnesia (*re-tro-an-ter-o-am-ne'-ze-ah*). See *Retroanterograde Amnesia* (Illus. Dict.).

Retroauricular (*re-tro-aw-rik'-u-lar*). Dorsad of the auricle of the ear or of the heart.

Retrocecal (*re-tro-se'-kal*). Pertaining to the back of the cecum.

Retrocognition (*re-tro-kog-nish'-un*) [*retro*, back; *cognoscere*, to know]. Knowledge of the past supernormally acquired.

Retrocolic (*re-tro-ko'-lik*). Behind the colon.

Retrocollis (*re-tro-kol'-is*) [*retro*, back; *collis*, the nape of the neck]. Torticollis.

Retrojector (*re-tro-jek'-tor*) [*retro*, back; *jacere*, to throw]. An instrument for washing out the uterus.

Retromastoid (*re-tro-mas'-toid*). Behind the mastoid.

Retropharynx (*re-tro-far'-inks*). The posterior portion of the pharynx.

Retroplacental (*re-tro-pla-sent'-al*). Dorsad of the placenta.

Retroversioflexion (*re-tro-vur-se-o-flek'-shun*). Combined retroversion and retroflexion.

Retroversion (*re-tro-vur'-shun*) [*retro*, back; *vertere*, to turn]. A turning backward of a part or organ.

Reunient (*re-ūn'-yent*) [*re*, again; *unire*, to unite]. Uniting divided parts.

Réuniol (*re-ūn'-e-ol*) [*Réunion*, an island in the Indian Ocean; *oleum*, oil]. A proprietary substitute for attar of rose, said to be derived from Algerine, French and Réunion geranium oil. It resists oxidation and has the perfume of the tea rose. It is soluble in alcohol, fats, and fixed oils.

Revellent (*re-vel'-ent*) [*re*, again; *vellere*, to pluck, to pull]. See *Revulsive* (Illus. Dict.).

Reversion. (See Illus. Dict.) 4. The chemical action opposed to inversion (the hydrolytic cleavage of compound sugars into monosaccharids) whereby monosaccharids are condensed into complicated carbohydrates. **R., Neogenetic,** the anomalous adult development of an embryonic rudiment. **R., Paleogenetic,** reversion to an atavus so remote that the rudiment is not even represented in the embryo.

Rhagoid (*rag'-oid*) [*ῥάξ*, a grape; *εἶδος*, likeness]. Resembling a grape.

Rhamnase (*ram'-nās*). An enzyme found in the seeds of *Rhamnus infectoria*, L. It acts upon xanthorhamnin, producing rhamnetin and isodulcite.

Rhamnin. (See Illus. Dict.) 2. A fluid extract of cascara sagrada; it is recommended in the treatment of obstinate constipation.

Rhatany. (See Illus. Dict.) **R.-red,** $C_{20}H_{18}O_8$, a pigment obtained by Grabowsky, 1867, from *Krameria triandra*, R. et P.

Rhax (*raks*) [*ῥαξ*, a grape]. A genus of spider-like arachnoids of the family *Solpugidæ*. **R. furiosa,** Ehren., a poisonous species of Arabia. **R. melana,** a poisonous species of Egypt.

Rheostat. (See Illus. Dict.) **R., Carbon.** See *R., Graphite.* **R., Fluid.** See *R., Water* (Illus. Dict.). **R., Graphite,** an electric resistance apparatus in which graphite or carbonaceous material is used so as to admit of gradual or extensive variations of current, *e. g.*, the Rudisch graphite pencil rheostat, or the Velter carbon rheostat. **R., Velter.** See under *R., Graphite.* **R., Wire,** a resistance coil.

Rheotachygraphy (*re-o-tak-ig'-raf-e*) [*ῥέον*, current; *ταχύς*, swift; *γράφειν*, to write]. The registration of the curve of variation in electromotive action of muscles.

Rheotome. (See Illus. Dict.) **R., Differential,** one for indicating the negative variation in muscle currents.

Rhestocythemia, Rhæstocythæmia (*re-sto-si-the'-me-ah*) [*ῥωστός*, destroyed; *κύτος*, cell; *αἷμα*, blood]. The presence of broken-down erythrocytes in the blood.

Rheumacilate (*ru-mas'-il-āt*). Synthetic methyl salicylate.

Rheumagon (*ru'-ma-gon*) [*ῥεῦμα*, a flux; *ἄγειν*, to carry off]. A proprietary analgesic used in gout and syphilis, said to be a fluid preparation of sodium iodid and sodium phosphate. Dose, ½ dram, 3 times daily.

Rheumatin (*ru'-mat-in*). See *Salequinum salicylate.*

Rheumatisant (*ru-mat'-is-ant*). One affected with rheumatism.

Rheumatism, Rheumatismus. (See Illus. Dict.) **R. abdominis,** rheumatism of the muscles of the abdomen, celiorrheuma. **R., Besnier's,** simple chronic circular rheumatism; chronic arthrosynovitis. **R. brachii,** rheumatism of the arm. **R. cancrosus,** face-ache, prosopalgia. **R., Capsular.** See *R., McLeod's.* **R., Chronic, R., Crippling,** osteoarthritis. **R. cruris,** rheumatism of the leg. **R., Deltoid,** muscular rheumatism limited to the deltoid muscle. **R. extremitatum,** rheumatism affecting the hands and feet. **R. faciei,** rheumatism of the face. **R. febrilis,** dengue. **R., Fibrous,** chronic rheumatism affecting chiefly the fibrous structures around the joints. **R. frigidus, R. habitualis, R. inveteratus, R. longus,** chronic rheumatism. **R., Inflammatory,** acute articular rheumatism. See *Rheumatism* (Illus. Dict.). **R. larvatus,** marked rheumatism. **R., Lead, R., Metallic,** the rheumatic pains incident to lead poisoning. **R., McLeod's Capsular,** rheumatoid arthritis attended with considerable effusion into the synovial sacs, sheaths, and bursas. **R. partialis,** local rheumatism. **R. phlegmonodes.** See *R., Muscular* (Illus. Dict.). **R. spurius nervosus,** neuralgia. **R., Synovial,** a rheumatic disorder of the synovial membranes with serous accumulation. **R. universalis febrilis,** acute rheumatism.

Rheumatismoid (*ru-mat-iz'-moid*). See *Rheumatoid* (Illus. Dict.).

Rheumatosis (*ru-mat-o'-sis*) [*ῥεῦμα*, flux]. The condition due to the action of poisons in the blood affecting the articular and endocardial parts.

Rheumatospasm (*ru-mat'-o-spazm*) [*ῥεῦμα*, flux; *σπασμός*, spasm]. Spasms due to rheumatism.

Rheumodontalgia (*ru-mo-don-tal'-je-ah*) [*ῥεῦμα*, flux; *ὀδούς*, tooth; *ἄλγος*, pain]. Toothache of rheumatic origin.

Rheumorchitis (*ru-mor-ki'-tis*). Orchitis of rheumatic origin.

Rheumotorrhea (*ru-mo-tor-e'-ah*) [*ῥεῦμα*, flux; otorrhea]. Rheumatic otorrhea.

Rhinalgin (*ri-nal'-jin*). A nasal suppository, recommended in coryza, said to contain cacao-butter, 1 gm.; alumnol, 0.01 gm.; menthol, 0.025 gm.; and oil of valerian, 0.025 gm.

Rhinanthin (*ri-nan'-thin*). $C_{29}H_{52}O_{29}$(?). A glucosid found by Ludwig in the seeds of *Rhinanthus major*, Ehrb.

Rhinanthogenin (*ri-nan-thoj'-en-in*). $C_{12}H_{10}O_4$. A dissociation product of rhinanthin.

Rhinanthus (*ri-nan'-thus*) [*ῥις*, the nose; *ἄνθος*, flower]. A genus of the *Scrophularineæ*. **R. major,** Ehrb., a species of Europe, has poisonous seeds used as an insecticide; they contain rhinanthin.

Rhinedema, Rhinœdema (*ri-ne-de'-mah*) [*ῥις*, nose; *edema*]. Edema affecting the nose.

Rhinenchysis (*ri-nen'-ki-sis*) [*ῥις*, nose; *ἐγχεῖν*, to

pour in]. The injection of liquid into the nasal cavities.

Rhinhematoma (*rin-hem-at-o′-mah*) [ῥίς, nose; *hematoma*]. An effusion of blood into the nasal cartilage.

Rhinocanthectomy (*ri-no-kan-thek′-to-me*). See *Rhinommectomy*.

Rhinocheiloplasty (*ri-no-ki-lo-plas′-te*) [ῥίς, nose; χεῖλος, lip; πλάσσειν, to form]. Plastic surgery of the nose and lip.

Rhinolite (*ri′-no-lit*). See *Rhinolith* (Illus. Dict.).

Rhinomiosis (*ri-no-mi-o′-sis*) [ῥίς, nose; μείωσις, a lessening]. Operative shortening of the length of the nose.

Rhinommectomy (*ri-nom-ek′-to-me*). See *Rhinommectome* (Illus. Dict.).

Rhinopharyngolith (*ri-no-far-ing′-go-lith*) [ῥίς, nose; φάρυγξ, pharynx; λίθος, stone]. A nasopharyngeal calculus.

Rhinorrhea. (See Illus. Dict.) **R., Cerebrospinal,** the escape of cerebrospinal fluid through the nose.

Rhinosalpingitis (*ri-no-sal-pin-ji′-tis*) [ῥίς, nose; σάλπιγξ, tube]. Simultaneous inflammation of the nasal mucosa and the eustachian tube.

Rhinosclerin (*ri-no-skle′-rin*) [ῥις, nose; σκληρός, hard]. A preparation from cultures of *Bacillus rhinoscleromatis;* used in the treatment of rhinoscleroma.

Rhipicephalus (*ri-pis-ef′-al-us*) [ῥιπίς, a fan; κεφαλή, head]. A genus of ticks. **R. shipleyi,** the brown tick of South Africa, the agent of transmission of Rhodesian cattle disease.

Rhizology (*ri-zol′-o-je*) [ῥίζα, root; λόγος, science]. The scientific study of roots.

Rhizomelic (*ri-zo′-mel-ik*) [ῥίζα, root; μέλος, a limb]. Affecting or relating to the roots of members.

Rhizoneure (*ri′-zon-ūr*) [ῥίζα, root; νεῦρον, nerve]. One of those cells that form nerve-roots.

Rhizoneuron (*ri-zo-nu′-ron*) [ῥίζα, roots; νεῦρον, nerve]. A neuron, the nerve processes of which leave the spinal cord through the anterior horn; a motor nerve-cell.

Rhodallin. See *Thiosinamin* (Illus. Dict.).

Rhodanate (*ro′-dan-āt*). A sulfocyanate.

Rhodanid (*ro′-dan-id*). A salt of sulfocyanic acid.

Rhodeose (*ro′-de-ōz*) [ῥόδον, a rose]. $C_6H_{12}O_5$. A methylpentose derived from convolvulin: best obtained from methylphenyl hydrazon by means of benzaldehyd. It forms colorless, sweet-smelling, anhydrous needles, readily soluble in water, with difficulty in alcohol.

Rhodesian Cattle Disease. An African disease of cattle transmitted by the brown tick, *Rhipicephalus shipleyi.* Syn., *African coast fever; Rhodesian tick fever; Rhodesian red water; Virulent red water.*

Rhodinol (*ro′-din-ol*) [ῥόδον, a rose]. $C_{10}H_{20}O$. An olefinic terpene alcohol found with geraniol in oils of rose, pelargonium, and geranium; it boils at 113°–114° C. Syn., *Eläoptene of attar of rose.*

Rhodogenesis (*ro-do-jen′-es-is*) [ῥόδον, a rose; γεννᾶν, to produce]. The regeneration of visual purple which has been bleached by light.

Rhodophylaxis (*ro-do-fil-aks′-is*) [ῥόδον, rose; φύλαξις, a guarding]. The property possessed by the retinal epithelium of producing rhodogenesis.

Rhox (*roks*) [ῥώξ]. A name given by Nicander and other writers to a poisonous spider, *Latrodectus tridecimguttatus.*

Rhynchocœl (*rin′-ko-sēl*) [ῥύγχος, a snout; κοιλία, a cavity]. A spacious cavity containing the proboscis in Nemertian worms. It is filled with fluid in which float long narrow cells, the rhynchocœl corpuscles.

Rhythmophone (*rith′-mo-fōn*) [ῥυθμός, rhythm; φωνή, sound]. A form of microphone for studying the heart-beat and pulse-beat.

Rib. (See Illus. Dict.) **R.s, Abdominal.** 1. The floating ribs. 2. Ossifications of the inscriptiones tendinæ. **R.s, Asternal,** the false ribs. See under *Rib* (Illus. Dict.). **R.s, Cervical,** rib-like processes extending ventrally from the cervical vertebras. **R.s, Sacral,** the separate points of ossification of the lateral parts of the sternum. **R.s, Short,** those that do not articulate with the sternum, the false ribs. **R.s, Sternal,** the true ribs. **R.s, Vertebrochondral,** the highest three false ribs of man on each side. They are united in front by their costal cartilages. **R.s, Zahn's,** the whitish transverse markings often formed on the surface of a thrombus by the extremities of the columns of blood-platelets and leukocytes.

Ribbert's Theory of the Origin of Cancer, according to which the connective-tissue cells increase to such an extent that they invade the epithelial layer and nip off epithelial cells or groups of cells, such isolated epithelium being capable of producing cancer.

Ribose (*ri′-bōz*). $C_4H_5(OH)_4.CHO$. A pentose obtained by reduction of the lactone of ribonic acid.

Richardson's Method of Auscultation. The introduction into the esophagus of an elastic bougie or tube connected with the ear pieces of a stethoscope.

Richardsonia (*rich-ard-so′-ne-ah*) [*Louis Claude Marie Richard,* French botanist, 1754–1821]. A genus of plants of the order *Rubiaceæ.* **R. pilosa,** H. B. et K., a species of the American tropics; the root, poaya alba, white or undulated ipecacuanha, Mexican cocoa, is used as a substitute for true ipecac.

Ricinate (*ris′-in-āt*). A salt of ricinic acid.

Ricinism (*ris′-in-izm*). Poisoning from seeds of *Ricinus communis,* L., used as an abortifacient; it is marked by hemorrhagic gastroenteritis and icterus.

Ricinoleate (*ris-in-o′-le-āt*). A salt of ricinoleic acid.

Ricinolein (*ris-in-o′-le-in*). $C_{57}H_{104}O_9$. Glyceryl ricinoleate, one of the constituents of castor oil.

Rickets. (See Illus. Dict.) **R., Fatal.** See *Achondroplasia* and *Achondroplasy* (Illus. Dict.).

Rider's Leg. A strain of the adductor muscles of the thigh.

Ridge. (See Illus. Dict.) **R.s, Marginal,** the ridges of enamel on the outer edges of the occlusal surface of the bicuspids and molars. **R., Oblique,** the ridge extending across the occlusal surface of upper molars, from the mesiolingual tubercle to the distalbuccal. **R.s, Palatine,** the central ridge together with the lateral corrugations of the mucosa of the hard palate; they are especially noticeable in the human fetus. **R., Pterygoid.** See *Crest, Infratemporal.* **R., Transverse,** a ridge running across the crown of a superior molar. **R., Triangular,** the ridge extending from the point of a cusp or tubercle toward the center of the crown of a tooth. **R., Villous** (of chorion), ridge-like radiating villi occurring on the exterior aspect of the chorion during the formation of placenta diffusa.

Riga Balsam. See under *Balsam.*

Right. (See Illus. Dict.) **R.-eyedness,** dextrocularity, the condition of using the right eye with more expertness and correctness than the left.

Rigid (*rij′-id*) [*rigidus,* stiff]. Stiff, hard. **R. Os.** See *Rigidity, Anatomic* (Illus. Dict.).

Rigor. (See Illus. Dict.) **R., Acid,** muscular rigidity produced by an acid. Syn., *Acid stiffening.* **R., Heat,** momentary stiffness of muscles produced by warming, in the case of frogs to 40° C.; in mammalia, to 48°–50° C.; in birds, to 53° C. **R., Water,** muscular rigidity produced by distilled water.

Rima. (See Illus. Dict.) **R. cartilaginosa.** See *Respiratory Glottis* (Illus. Dict.). **R. glottidis cartilagineæ,** the opening of the respiratory glottis. **R. glottidis membranaceæ,** the opening of the vocal

glottis. R. hyperglottica, R. ligamentosa. See *R. glottidis* (Illus. Dict.).

Rind. (See Illus. Dict.) **R. Disease,** a disease of sugar-cane in the West Indies, said to be identical with the red smut disease of Java, due to the fungus *Colletotrichum falcatum.*

Ring. (See Illus. Dict.) **R., Arnold's Tendinous,** the mass of fibrous tissue from which the fibers of the median layer of the tympanic membrane originate; it is arranged around the periphery of the tympanitic membrane, which it unites with the inner edge of the external auditory canal. **R., Arthritic.** See *Zone, Sclerotic.* **R.-bodies,** peculiar ring-shaped bodies of great variety found by R. C. Cabot by means of Wright's stain in the erythrocytes in pernicious anemia, leukemia, and lead poisoning. **R.s, Böttcher's,** the first row of meshes in the reticular membrane of the cochlear canal, extending outward from the union of the inner and outer pillars. **R.s, Bronchial,** the bronchial cartilages. **R.s, Donders',** rainbow-colored rings seen in cases of glaucoma and by normal and cataractous eyes when the pupil is dilated. They are attributed to the diffraction of light by the cortex of the crystalline lens. **R.s, Festooned, R.s, Fibrocartilaginous, R.s, Fibrous** (of heart), fibrous rings surrounding the auriculoventricular and arterial orifices of the heart and attaching its muscular fibers. **R., Mascagni's,** in the fetus a circle formed by the small capillary branches of the blood-vessels near the zonule of Zinn. Syn., *Circulus Mascagnii.* **R.s, Meyer's, R.s, Meyer-Wöhler's,** the faint rings seen to surround a candle-flame or a similar source of light against a dark background; they appear more distinct, as Wöhler has shown, when the eyes are exposed for a short time to the fumes of osmic acid. The phenomenon is due to the diffraction of light by cellular elements on the surface of the cornea. **R., Navel,** the constriction existing between the umbilicus and the umbilical cord. **R., Schröder's Contraction.** See *R., Bandl's* (Illus. Dict.). **R., Vieussens',** the annulus ovalis of the right auricle. **R., Waldeyer's Tonsillar,** the ring formed by the two fauciai tonsils, the pharyngeal tonsil, and smaller groups of adenoid follicles at the base of the tongue and behind the posterior pillars of the fauces. **R.s, Wöhler's.** See *R.s, Meyer's.* **R., Zinn's,** the circular fibrous sheath formed by the common tendon of the internal, external, and inferior rectus muscles.

Ringworm. (See Illus. Dict.) **R., Bowditch Island, R., Indian, R., Solomon's Island, R., Tokelau.** See *Tinea imbricata* (Illus. Dict.). **R., Ulcerative.** See *Herpes exedens.* **R., Vesicular.** See *Herpes progenitalis* (Illus. Dict.).

Ripples (*rip'-els*). Scotch vernacular term for locomotor ataxia.

Rivalry (*ri'-val-re*) [*rivales,* near neighbors who used the same brook]. A struggle for supremacy. **R. of Colors,** a rivalry of the visual fields of the two eyes, a different color being presented to each. **R. of Contours,** a rivalry of the contours of two objects, one of which is presented to each eye, when they overlap in the binocular field of vision. **R., Retinal.** See *R., Strife.* **R., Strife,** the alternate mastery of one or the other sensation, color, contour, etc., in the eyes when the fields of vision of the two eyes are incapable of being combined into one image. **R. of Visual Fields.** See *R., Strife.*

Riverius' Draft. A solution of sodium citrate.

Riviera (*re-ve-a'-rah*) [It. coast], **R., Eastern, R., Liburnian.** The Austrian Adriatic coast. It has a higher relative humidity and is rather colder than the Western Riviera; the climate is more changeable and subject to disagreeable winds, especially the "bora," worst in winter and early spring. Abbazia is the best-known health resort. [Weber.] **R., Western, or Riviera di Ponente,** the narrow strip of coast land between Toulon and Genoa; extending from 43° to 44.5° latitude north, from one to four miles in width, and is open to the Mediterranean on the south and southeast. It has a dry soil,—chiefly of chalk,—and is sheltered more or less by mountain ridges on the northeast and northwest. The chief characteristics of the Riviera climate are its winter warmth, its relative dryness and small number of rainy days, and its brightness —qualities that render it cheering to the mind and stimulating to the body. During the six winter months one hundred days or more may be expected to be fine enough for most invalids to be in the open air for several hours. [Weber.]

Rixolin (*riks'-ol-in*). A mixture of petroleum and light oil of camphor.

Robin (*ro'-bin*). A toxic albuminoid obtained from the bark of the locust tree, *Robinia pseudacacia,* L., a powder partly soluble in water, with action similar to abrin and ricin.

Robiquet's Soluble Ferric Pyrophosphate. See *Ammonium Citrate.*

Roborant. (See Illus. Dict.) 2. A tonic or strengthening remedy.

Roborat (*ro'-bor-at*) [*robor,* strength]. An albuminous dietetic prepared from maize, containing lecithin and glycerin phosphoric acid.

Roborin (*ro'-bor-in*). A grayish-green powder or brown mass, obtained from blood and said to consist of water 7.6%, calcium carbonate 10.23%, common salt 1.7%, iron oxid 0.49%, other mineral substances 1.28%, albuminoids 78.63%; the last are principally calcic albuminates.

Rod. (See Illus. Dict.) **R.-bipolars,** bipolar cells of the inner nuclear layer of the retina, connected externally with the rods of the retina and internally with the rods of the ganglionic layer. **R.s, Corti's,** the pillars of the arch of the organ of Corti. **R.-fibers,** one of the fibers of the retinal rods. **R.-granules,** cells of the outer nuclear layer of the retina; they are characterized by transverse striations and give off processes connected with the rods of the ninth layer. Cf. *Cone-granules.* **R. Wax.** See under *Wax.*

Rodagen (*rod'-ah-jen*). A proprietary preparation of goats' milk said to contain 50% of milk-sugar. It is used in treatment of exophthalmic goiter. Daily dose, 75–150 gr. (5–10 gm.).

Roeschlaub's "Excitement" Theory of Life. See under *Life.*

Rohun Bark (*ro'-un*). The bark of *Soymida febrifuga,* Juss.

Rokusho [Japanese]. A form of verdigris produced by the action of plum juice vinegar on plates of copper containing impurities; employed by Japanese artists for artificially bronzing copper medals.

Rolandic (*ro-land'-ik*). Relating to or named in honor of Louis Rolando an Italian anatomist, 1773–1831.

Rolandometer (*ro-land-om'-et-ur*). A device of Köhler for locating on the head the place of the fissure of Roland. It consists of a flexible steel band which is laid close to the skull over the median line from the lambda to the nasion; another perpendicular band passes through the preauricular point to the median band; a third posterior band begins at the base of the processus mastoideus and passes perpendicularly to the median band; both of these bands are movable on the median band. The anterior band is marked into three equal divisions; the middle third is divided. If now a fourth band is passed from the point of union of the posterior band with the median band to the lower half

of the middle third of the anterior band, it will locate the lower end of the fissure of Roland.

Rolfinked (*rol-finkd'*). Dissected; term used in 1629 by the peasants of Jena and neighborhood in their terror at the possibility of having the corpses dug up and dissected—as the result of the public dissections made by the anatomist Rolfink. Cf. *Burking*.

Rollet, Stroma of. See under *Stroma*.

Rongeur (*rōn-zher*). A gouge forceps.

Röntgenism (*rent'-gen-izm*) [*Wilhelm Konrad Röntgen*, a German physician]. The application of the *x*-rays in therapeutics.

Röntograph (*rent'-o-graf*). Synonym of *Skiagram*.

Röntography (*rent-og'-raf-e*). Synonym of *Skiagraphy*.

Rophetic (*ro-fet'-ik*) [ῥοφητικός, given to supping up]. A mechanic absorbent agent, as a dusting-powder, sponge, etc.

Rosa. (See Illus. Dict.) Synonym of *Erysipelas*. **R. asturica, R. asturiensis,** pellagra. **R. saltans,** urticaria.

Rosacea. (See Illus. Dict.) **R. pustulosa,** erythema accompanied by the formation of pustules. Syn., *Acne pustulosa*.

Rosaginin (*ro-saj'-in-in*) [*rosago*, the oleander]. A glucosid contained in *Nerium oleander*, L.

Rosalia (*ro-sa'-le-ah*). 1. Scarlatina. 2. Measles. 3. Erythema.

Rosanilin. (See Illus. Dict.) **R. Acetate, R. Hydrochlorate,** $C_{19}H_{26}N_3ClO_4 + C_{20}H_{28}N_3ClO_4$, medicinal fuchsin prepared without arsenic. See *Fuchsin* (Illus. Dict.).

Rosaurin (*ro-saw'-rin*). See *Acid, Rosolic*.

Rose Spots. See under *Spot*.

Rosein (*ro'-se-in*). See *Fuchsin* (Illus. Dict.).

Rosella (*ro-sel'-ah*). See *Rubeola* (Illus. Dict.).

Roseola. (See Illus. Dict.) Fr. *roséole, rosace, feu rouge*. Ger. *Feuermasern, Wiebeln*. **R. acnosa,** acne rosacea. **R., Iodic,** the form of iodin rash which is red in color. **R. ficosa.** See *Sycosis* (Illus. Dict.). **R. punctata,** a variety characterized by minute red spots. **R., Trousseau's,** rubeola; rötheln. **R. variolosa,** Rayer's name for a rash sometimes observed on the face in the prodromic stage of smallpox, appearing first as clear red spots from the size of a lentil to that of the finger-nail. Syn., *Erythema variolosa*.

Roséoles à verre bleu. Faint syphilides discovered by means of cobalt glasses worn close to the eyes before they are revealed to the naked eye.

Roset, Rosette. (See Illus. Dict.) 2. A congery of cells from the neuroepithelial layer of the retina described by Wintersteiner as a characteristic of glioma of the retina. They correspond to the external limiting membrane of the retina, with rudimentary rods and cones projecting into the central cavity.

Rosolio. (See Illus. Dict.) **R. fersa,** measles.

Rostrum. (See Illus. Dict.) **R. externum, R. posterius,** the olecranon. **R. lacerti** [lizard's-beak, so called on account of its shape], a surgical instrument of the sixteenth century used to extract balls which had been flattened or embedded in bone. **R. olecrani,** the beak-like end of the olecranon. **R. porcinum,** the acromion. **R. sphenoidale,** the median keel-like ridge on the inferior aspect of the body of the sphenoid which is received in the upper grooved border of the vomer. Syn., *Processus azygos; Beak of the sphenoid*.

Rot. (See Illus. Dict.) **R., Black,** of grapes, a disease of grapes due to the pyrenomycetic fungus, *Læstadia bidwellii*, Ellis. **R., Brown,** a disease of potatoes, tomatoes, and egg-plant characterized by wilting and turning brown, caused by *Bacillus solanacearum*, E. F. Smith. **R., White, of Carrots,** a white rot attacking the crown of the carrot and penetrating to the root. It is caused by *Bacillus carotovorus*, Jones.

Rotacism. See *Rhotacism* (Illus. Dict.).

Rotation. (See Illus. Dict.) 3. In dentistry, the operation by which a tooth is turned or twisted into its normal position. **R., Wheel,** of Helmholtz, the tilting of the vertical meridians of the eye. Syn., *Declination* (Stevens); *Torsion*. Ger. *Raddrehung*.

Rotatory Power. See under *Power*.

Rotoin (*ro'-to-in*) [*roto*, the Japanese name for *Scopolio japonica*]. The base or mixture (?) of bases, from *Scopolio japonica*, Maxim.

Rottlerin (*rot'-ler-in*). $C_{22}H_{20}O_6$. A bitter principle from kamala, *Mallotus philippinensis*, Müll.; a reddish-brown crystalline powder, soluble in ether, boiling alcohol, acetic acid, or alkaline solutions, melts at 200° C. It is used as an anthelmintic. Syn., *Kamalin; Mallotoxin*.

Rotulian (*ro-tu'-le-an*). See *Rotular* (Illus. Dict.).

Rouge. (See Illus. Dict.) **R. badois,** a red pigment obtained from the stem of *Sorghum vulgare*, Pers., used as a dye for wool.

Rouget's Motorial End-plates. See *Motorial End-plate* (Illus. Dict.).

Rough-on-Rats. A proprietary rat-poison, a mixture of arsenious oxid with barium carbonate.

Rouleau (*ru-lo*) [Fr. a roll; pl. *rouleaux*]. Applied to the arrangement of the red blood-corpuscles when drawn from the system, forming cylindric rolls like piles of coin.

Roup. (See Illus. Dict.) It is due to *Bacillus cacosmus*, Harrison and Street. **R., Diphtheric,** a contagious disease of fowls which first affects the mucosa of the nasal passages, the eyes, the mouth and pharynx, and which may extend to the trachea, bronchi and the intestines. The disease is characterized by a grayish-yellow fibrinous exudate (false membrane) which forms on the mucosa of the parts mentioned.

Routinist (*roo-te'-nist*) [OF. *routine*, dim. of *route*, a beaten path]. A physician who does not deviate in his treatment from an unvarying routine.

Rubeola. (See Illus. Dict.) **R. germanica, R. spuria.** See *Rubella* (Illus. Dict.).

Rubeolin (*ru-be'-ol-in*) [*rubeus*, red]. Farr's name for the specific toxin of measles.

Rubiadin, Rubiadipin, Rubiafin, Rubiagin, Rubian, Rubianin, Rubiretin. See *Pigments, Conspectus of* (Illus. Dict.).

Rubian (*ru'-be-an*). See *Xanthin*, in *Pigments, Conspectus of* (vegetable) (Illus. Dict.).

Rubidium. (See Illus. Dict.) **R. Chlorate,** $RbClO_3$, small crystals, soluble in water, used as a heart stimulant. Dose, 5 gr. (0.32 gm.). **R. Iodid,** RbI, white cubic crystals, soluble in water; used as an alterative. It has action identical with that of potassium iodid, but does not derange the stomach. Dose, 1–5 gr. (0.065–0.32 gm.). **R. Sulfate,** Rb_2SO_4, rhombic crystals soluble in water and used as a cathartic. **R. Tartrate,** $RbC_4H_5O_6$, colorless crystals, soluble in water, used as a sedative and antiepileptic. Dose, 3–5 gr. (0.2–0.32 gm.).

Rubinat (*ru'-bin-at*). A natural bitter water found in Spain containing sodium sulfate with small amounts of sulfates of potassium, calcium, and magnesium, sodium chlorid, and silicates of iron and aluminium.

Rubitin (*rub'-it-in*). A proprietary preparation said to consist of menthol, ether, camphor, soap, laurel oil, and oil of rosemary. It is applied by friction.

Rubor. (See Illus. Dict.) **R., Regional,** isolated spots which become red, with elevation of temperature, observed after local cyanosis.

Rubrescin (*ru-bres'-in*). Rosenfeld and Silber's name

for a compound of resorcin, 50 gm., and chloral hydrate, 25 gm. It is used in 1% solution as an indicator for alkalimetry and acidimetry.

Rubrin (*ru'-brin*) [*ruber*, red]. See *Hematin* (Illus. Dict.).

Rubrol. A solution used by injection in gonorrhea and said to consist of boric acid, thymol, and a coal-tar derivative in water.

Rubrum (*ru'-brum*) [*ruber*, red]. The preferred name for the nucleus ruber.

Rubwunga. The vernacular name for the bubonic plague in the region of Kissiba in Central Africa.

Ruffini's End-organs. See under *End.*

Rufin (*ru'-fin*). $C_{21}H_{20}O_8$. Mulder's name for a derivative of phloridzin obtained by heating to 200°–235° C. It occurs as a resinous mass of a beautiful red color, soluble in alkalis. Syn., *Caramel of phloridzin* (Schiff).

Ruga. (See Illus. Dict.) **Rugæ, Palatal,** the elevations upon the mucous covering of the hard palate; they assist in speech and deglutition.

Rumenotomy (*ru-men-ot'-o-me*) [*rumen*, the gullet; *τέμνειν*, to cut]. Incision of the rumen or paunch of an animal.

Rumicin (*ru'-mis-in*). Chrysophanic acid.

Rusty. (See Illus. Dict.) **R.-spot,** a bacterial trouble of Cheddar cheese due to *Bacillus rudensis*, Cornell, and characterized by reddish-yellow discoloration scattered in points and blotches throughout the mass; the cheese is not poisonous nor is the flavor impaired.

Rut (*rut*) [OF. a roaring]. 1. The state of concomitant menstruation and ovulation in the lower animals. Syn., *Œstrus; Estrus.* 2. The condition of a male animal in which it is capable of inseminating. Some animals have a localized time (rutting season), as, for example, the stag; others are sexually capable the year round, and therefore do not rut. According to some writers, the term rutting season should not be employed in speaking of the sexual season of female animals.

Rutabulum (*ru-tab'-u-lum*) [L.]. The penis.

Rutidoma, Rytidosis (*ru-tid-o'-mah, ri-tid-o'-sis*). See *Rutidosis* (Illus. Dict.).

S

Sabadin (*sab'-ad-in*). $C_{29}H_{51}NO_8$ (Merck). An alkaloid from the seeds of *Schænocaulon officinale*, A. Gray, occurring in white acicular crystals, soluble in water, alcohol, and ether; melts at 240° C. It is sternutatory.

Sabadinin (*sab-ad'-in-in*). $C_{27}H_{45}NO_8$. An alkaloid found (1890) in seeds of *Schænocaulon officinale*, A. Gray; acicular crystals, soluble in water, alcohol, or ether.

Sabatilla (*sab-at-il'-ah*). See *Cebadilla* (Illus. Dict.).

Sabattin (*sab-at'-in*). A glucosid obtained from *Sabattia elliottii*, Steud., quinin flower; it is antiperiodic and antipyretic.

Sabinism (*sab'-in-izm*) [*sabina*, juniper]. Poisoning by *Juniperus virginiana* and *J. sabina*, L., which contain an ethereal oil and the young tops of which are used as an abortefacient. It is marked by acute gastroenteritis, with peritonitis and hemorrhagic nephritis, metrorrhagia, and abortion, and later dyspnea and stercorous breathing, coma, general anesthesia, and asphyxia.

Sabulum (*sab'-u-lum*) [L.]. Fine gravel. **S. conarii.** See *Acervulus* and *Brain-sand* (Illus. Dict.).

Saburra. (See Illus. Dict.) **S. verminosa,** helminthiasis.

Sac. (See Illus. Dict.) **S., Conjunctival,** that formed by the reflection of the palpebral conjunctiva. **S., Dorsal,** a recess between the epiphysis and the roof of the third ventricle. Syn., *Suprapineal recess.* **S., Endolymphatic,** a sac of the dura included in the aqueduct of the vestibule. See under *Duct, Endolymphatic* (Illus. Dict.). **S. of the Epididymis,** the visceral layer of the tunica vaginalis covering the epididymis. **S., Epiploic.** See *S., Omental* (Illus. Dict.). **S., Hilton's.** See *Ventricle of Morgagni* (Illus. Dict.). **S., Lacteal.** See *Receptaculum chyli* (Illus. Dict.). **S. of the Pulmonary Veins,** the left auricle of the heart. **S., Serous,** the closed cavity formed by any serous membrane. **S., Tubotympanic,** the diverticulum of the primitive gut forming the tympanic cavity and the eustachian tube. **S., Umbilical,** the umbilical vesicle. **S. of the Venæ Cavæ,** the right auricle of the heart.

Saccharoscope (*sak-ar'-o-skōp*) [*σάκχαρον*, sugar; *σκοπεῖν*, to view]. An instrument for determining and registering the amount of sugar in the urine.

Saccharin. (See Illus. Dict.) Syn., *Benzoyl sulfonicimid; Orthosulfaminbenzoic anhydrid; Glusid; Glucusimid; Saccharinol; Sycose; Saccharinose; Zuckerin.* **S.-sodium,** a soluble powder containing 90% of saccharin; used as an intestinal antiseptic. Dose, 15 gr. (1 gm.) once or twice daily.

Saccharinol, Saccharinose (*sak-ar'-in-ol, -ōz*). Saccharin.

Saccharobacillus (*sak-ar-o-bas-il'-us*). See *Bacillus pasteurianus*, in *Table of Bacteria* (Illus. Dict.).

Saccharolactate (*sak-ar-o-lak'-tāt*). See *Saccholactate.*

Saccharomyces. (See Illus. Dict.) **S. farciminosus,** causes epizootic lymphangitis. **S. granulomatosus,** Sanfelice, 1898, obtained from granulomatous nodule of a pig. Inoculated in swine, it produced similar lesions, but was not pathogenic to other animals. **S. lithogenes,** Sanfelice (1895), from a carcinomatous metastasis in an ox, the primary tumor occurring in the liver. It killed white mice in eight days after subcutaneous inoculation. **S. neoformans,** Sanfelice (1895), isolated from fermenting grape juice. It produced nodules in all organs of guineapigs, except brain, heart, and suprarenals; death occurred in 20 to 30 days after inoculation. He emphasized the similarity of the organisms to the so-called coccidia of cancers. **S. niger,** Maffucci and Sirleo (1894), isolated from the tissues of a guineapig which died of marasmus. It produced enlargement of lymph glands and suppuration at the point of inoculation in guineapigs, rabbits, chickens, and dogs. **S. ruber,** Demme, 1891, a red, budding fungus found in milk, which produced gastroenteritis in children. Shown by Casagrandi (1897) to be pathogenic for guineapigs, dogs, and mice when inoculated subcutaneously or into the abdomen. **S. septicus,** de Galtano, found in urinary sediment. An exceptionally virulent species producing fatal fibrinous

peritonitis and septicemia in guineapigs in 12 hours. **S. theobromæ**, Preyer, the yeast causing the fermentation in the curing of cacao. **S. tumefaciens albus**, Foulerton, isolated from patients in cases of pharyngitis.

Saccharomycosis (*sak-ar-o-mi-ko'-sis*). A pathological condition due to yeasts or *Saccharomyces*. **S. hominis**, name given by Busse (1894) to pyemia produced by a pathogenic yeast. Syn., *Saccharomycosis subcutaneus tumefaciens*, Curtis. Fr. *Saccharomycose humaine* (Curtis, 1896).

Saccharosuria (*sak-ar-o-su'-re-ah*) [*saccharose; οὖρον*, urine]. The presence of saccharose in the urine.

Sacchlactate (*sak-klak'-tāt*). See *Saccholactate*.

Saccholactate (*sak-o-lak'-tāt*). A salt of saccholactic acid.

Sacchorrhea (*sak-or-e'-ah*) [*σάκχαρον*, sugar; *ῥεῖν*, to flow]. Glycosuria.

Saccocystis (*sak-o-sist'-is*) [*σάκκος*, a sac; *κύστις*, a bladder]. See *Bladder, Supplementary*.

Saccule, Sacculus. (See Illus. Dict.) **S. cæcalis.** See *S. laryngis* (Illus. Dict.). **Sacculi chalicophori**, the lacunæ of bone. **S. chylifer.** See *Receptaculum chyli* (Illus. Dict.). **S. cordis**, the pericardium. **S. ellipticus, S. hemiellipticus.** See *Utricle* (2) (Illus. Dict.). **S., Horner's.** See *Pocket, Anal.* **S. labyrinthi, S. proprius, S. rotundus, S. sphæricus.** See *S. of the Vestibule* (Illus. Dict.). **S. rorifer**, the receptaculum chyli.

Sacculocochlear (*sak-u-lo-kok'-le-ar*). Relating to the saccule of the vestibule and the cochlea.

Saccurocystis (*sak-u-ro-sist'-is*). See *Bladder, Supplementary*.

Sacrache (*sāk'-rāk*) [*sacrum; ache*]. A word employed by Matthews Duncan for sacral pain in the gravid woman.

Sacrectomy (*sa-krek'-to-me*) [*sacrum; ἐκτομή*, excision]. Excison of part of the sacrum. See *Operation, Kraske's* (1) (Illus. Dict.).

Sacroanterior (*sa-kro-an-te'-re-or*). Applied to a fetus having the sacrum directed forward.

Sacrodynia (*sa-kro-din'-e-ah*) [*sacrum; ὀδύνη*, pain]. Pain referred to the region of the os sacrum in cases of hysteria or neurasthenia.

Sacroposterior (*sa-kro-pos-te'-re-or*). Applied to a fetus having the sacrum directed backward.

Sacrotomy (*sa-krot'-o-me*) [*sacrum; τέμνειν*, to cut]. Excision of the lower portion of the sacrum.

Sacrouterine (*sa-kro-u'-tur-ēn*). Pertaining to the sacrum and the uterus.

Sactosalpinx (*sak-to-sal'-pinks*) [*σακτός*, crammed; *σάλπιγξ*, tube]. The obstruction of a fallopian tube and consequent distention from retained secretion. **S. hæmorrhagica.** See *Hematosalpinx* (Illus. Dict.).

Saddle. (See Illus. Dict.) **S.-arch**, that form of dental vault the section of which represents the shape of a saddle. **S.-back**, lordosis. **S.-head.** See *Clinocephalus*. **S., Turkish.** See *Sella turcica* (Illus. Dict.).

Saga (*sa'-gah*) [L., a wise woman]. A midwife.

Sagapin (*sag'-ap-in*). See *Sagapenum* (Illus. Dict.).

Sagotia (*sa-go'-she-ah*). A genus of plants of the order *Euphorbiaceæ*. **S. racemosa**, Baill., Aratacio, a South American species used as a tonic and aphrodisiac.

Sagradin (*sag-rah'-din*). The proprietary name for a 20% solution of bitterless extract of cascara sagrada with spirit of peppermint.

St. Gothard's Disease. Anemia due to *Uncinaria duodenalis*. Cf. *Uncinariasis*. **St. Roch's Disease**, bubo. **St. Sement's Disease**, syphilis. **St. Vitus' Dance.** (See Illus. Dict.) So named because in the epidemic of chorea in Strasburg in 1488 those who were afflicted were sent on a pilgrimage to the chapel of St. Vitus at Zabern, a town in Alsace-Lorraine. **St. Vitus' Dance of the Voice**, stammering.

Sakee, Saki. See *Saké* (Illus. Dict.).

Sal. (See Illus. Dict.) **S. acetosella**, potassium binoxalate. **S. carolin factit.** See under *Stains, Pick's Method*. **S. enixum**, potassium bisulfate. **S. prunellæ, S. prunelle.** 1. A fused mixture of potassium nitrate, 128 parts, and sulfur, 1 part. 2. Fused potassium nitrate. **S. rupium**, rock salt.

Salactol (*sal-ak'-tol*). A combination of the sodium salts of salicylic and lactic acids dissolved in a 1% solution of hydrogen peroxid; it is recommended in diphtheria. The solution is applied as a spray or with a brush and given internally in doses of a tablespoonful (15 c.c.).

Salamid (*sal'-am-id*). An amidogen derivative of salicylic acid, which it closely resembles in therapeutic properties, but acts more promptly and in smaller doses.

Salantol (*sal-an'-tol*). See *Salacetol* (Illus. Dict.).

Salazolon (*sal-az'-ol-on*). See *Salipyrin* (Illus. Dict.).

Salborol (*sal-bo'-rol*). A compound of salol and boric acid, used in rheumatism.

Saldanin (*sal'-dan-in*). A local anesthetic said to be prepared from *Datura arborea*, L.

Salhypnone (*sal-hip'-nōn*). $C_6H_4O(COC_6H_5)COOCH_3$. A benzoylmethylsalicylic ester; long colorless needles, insoluble in water, sparingly soluble in alcohol and ether; melts at 113°–114°. It is used as an antiseptic.

Salicamar (*sal-ik'-am-ar*). $CH_2OH \cdot CHOH \cdot CH_2 \cdot O \cdot C_6H_4CO \cdot CH_2 \cdot CHOH \cdot CH_2OH$. A glycerin ether of glycerol salicylic acid; recommended as a stomachic and antirheumatic.

Salicin. (See Illus. Dict.) Dose, 5–30 gr. (0.333–2 gm.). Max. dose, 150 gr. (10 gm.) daily.

Salicol (*sal'-ik-ol*). A proprietary solution said to consist of methyl alcohol, salicylic acid, and oil of wintergreen in water; used as antiseptic and cosmetic.

Salicule (*sal'-ik-ūl*). See *Salicyl* (Illus. Dict.).

Salicyl. (See Illus. Dict.) **S. Acetate**, $C_7H_3 \cdot O \cdot C_7H_5O_2O$, aceto-salicylic anhydrid. **S.acetol.** See *Salacetol* (Illus. Dict.). **S.-anilid.** See *Salifebrin*. **S.-anilidbromacetanilid, S.-bromanilid.** See *Antinervin* (Illus. Dict.). **S.-creasote**, a paste prescribed by Unna in skin-diseases, consisting of a mixture of salicylic acid, creasote, wax, and cerate. **S.-*p*-phenetidin.** See *Malakin* (Illus. Dict.). **S.-quinin Salicylate.** See *Saloquinin Salicylate*. **S.-resorcin**, $C_{13}H_{10}O_4$, obtained from salicylic acid and resorcin with heat. It occurs in plates slightly soluble in water; melts at 133° C. It is antiseptic, antipyretic, and analgesic, and used in typhoid, diarrhea, etc. Dose, 5–15 gr. (0.32–1 gm.). Max. dose, 15 gr. single, 60 gr. daily. **S.urate**, a salt of salicyluric acid.

Salicylated (*sal'-is-il-a-ted*). Impregnated with salicylic acid.

Salicylic. (See Illus. Dict.) **S. Acid Glycerin-ester**, recommended as a valuable antirheumatic remedy. **S.-alcohol.** See *Saligenin* (Illus. Dict.). **S. Aldehyd**, salicylous acid; used as an internal antiseptic. Dose, 0.1–0.5 gm. daily. **S.-amid.** See *Salicylamid* (Illus. Dict.). **S.-amylester.** See *Amyl Salicylate*. **S. Anhydrid.** See *Aldehyd, Salicylic* (Illus. Dict.). **S. Cream**, an antiseptic mixture of powdered salicylic acid, 2 dr.; carbolic acid, 1 dr.; glycerin, 10 dr. **S. Naphthylic Ester.** See *Betol* (Illus. Dict.). **S.-phenyl-ester.** See *Salol* (Illus. Dict.). **S. Silk**, a dressing made of silk

waste impregnated with 10% salicylic acid and a little glycerin. **S. Suet**, one part of salicylic acid in 49 parts of mutton suet; used as a dressing for sores. **S.-thymol-ester**, thymol acetate. **S. Wool**, cotton impregnated with 4%–10% of salicylic acid and an equal amount of glycerin.

Salicylid (*sal-is'-il-id*). An anhydrid of salicylic acid. **S.-phenetidin.** See *Malakin* (Illus. Dict.).

Salicylize (*sal'-is-il-īz*). To treat with salicylic acid.

Salicylol (*sal'-is-il-ol*). See *Aldehyd, Salicylic* (Illus. Dict.).

Salifebrin (*sal-e-feb'-rin*). Salicylanilid; $C_{13}H_{11}NO_2$, a white permanent powder, insoluble in water, freely soluble in alcohol; recommended as an antipyretic and antineuralgic. It colors blue litmus paper red.

Saliferous (*sal-if'-ur-us*) [*sal*, salt; *ferre*, to bear]. Producing salt.

Saliformin (*sal-e-form'-in*). $(CH_2)_6N_4 . C_6H_4(OH)CO-OH$. A white, crystalline powder, of sour taste, soluble in water and alcohol. It is an antiseptic and uric acid solvent. Dose, 1–2 gm. Syn., *Formin salicylate; Hexamethylenetetraminsalicylate; Urotropin salicylate.*

Saligallol (*sal-e-gal'-ol*). Pyrogallol disalicylate, a resinous solid, soluble in acetone or chloroform. Used as vehicle for dermic applications and as a varnish.

Salinigrin (*sal-in-ig'-rin*). A substance said to be a glucosid from the bark of *Salix nigra*, Marsch.

Saliphen, Saliphenin (*sal'-i-fen, sal-i-fe'-nin*). See *Malakin* (Illus. Dict.).

Salipyrazolon (*sal-e-pi-raz'-ol-on*). See *Salipyrin* (Illus. Dict.).

Salisbury Method. See under *Treatment* (Illus. Dict.).

Salitannol (*sal-e-tan'-ol*). $C_{14}H_{16}O_7$. A condensation product of salicylic and gallic acids by action of phosphorous oxychlorid; a white amorphous powder, soluble in solutions of caustic alkalis, slightly soluble in alcohol. Recommended as a surgical antiseptic.

Salithymol (*sal-e-thi'-mol*). Thymol salicylate (*q. v.*).

Salivation. (See Illus. Dict.) **S., Psychic.** See *Aptyalia* (2).

Salivator (*sal'-iv-a-tor*) [*saliva*]. An agent causing salivation.

Salivatory (*sal-iv-a'-to-re*). Salivant; stimulating the secretion of saliva.

Sallenders (*sal'-en-durz*). See *Mallenders* (Illus. Dict.).

Salmiac (*sal'-me-ak*). Ammonium chlorid.

Salmin (*sal'-min*). $C_{30}H_{57}N_{17}O_6 + 4H_2O$. A protamin from salmon, identical or isomeric with clupein.

Salochinin. See *Saloquinon.*

Salol. (See Illus. Dict.) **S., Camphorated**, a mixture of 75% of salol with 25% of camphor; an oily liquid, soluble in alcohol, ether, chloroform or oils; a local anesthetic, antiseptic, and analgesic. Dose, 3–10 gr. (0.2–0.65 gm.). Syn., *Camphor salol.* **S., Tribromid**, $C_6H_4 . OH . COO . C_6H_2Br_3$, a white, odorless, tasteless powder, freely soluble in chloroform and glacial acetic acid, insoluble in ether or alcohol. It is a combined hypnotic and hemostatic. Dose, 32 gr. (2 gm.). Syn., *Cordol.*

Salolism (*sa-lol'-izm*). Poisoning by salol, a mixture of salicylism and carbolism in which the symptoms of the latter predominate.

Salop. See *Salep* (Illus. Dict.).

Saloquinin (*sal-o-kwin'-in*). $C_6H_4 . OH . CO . O . C_{20}H_{23}N_2O$. The quinin ester of salicylic acid; a crystalline, absolutely tasteless substance, insoluble in water, readily soluble in alcohol or ether, melts at 130° C. It is used as quinin. Dose, 10–30 gr. (0.65–2 gm.), several times daily. **S. Salicylate**, $C_6H_4 . OH . COO . C_{20}H_{23}N_2O . C_6H_4 . OH . COOH$, crystallizes in white needles, soluble with difficulty in water, melts at 179° C. It is tasteless and recommended in rheumatism. Dose, 15 gr. (1 gm.) 3 times daily. Syn., *Rheumatin.*

Salosantal (*sal-o-san'-tal*). A 33% solution of salol in sandal-wood oil with the addition of a little oil of peppermint. It is indicated in cystitis, prostatitis, etc. Dose, 10–20 drops 3 times daily after meals.

Salpingion (*sal-pin'-je-on*). The point at the inferior surface of the apex of the petrosa.

Salpingitis. (See Illus. Dict.) **S., Chronic Parenchymatous**, pachysalpingitis, chronic interstitial inflammation and thickening of the muscular coat of the fallopian tube. **S., Chronic Vegetating**, excessive hypertrophy of the mucosa of the fallopian tube. **S., Gonorrheal**, that due to infection with gonococci. **S., Hemorrhagic**, hematosalpinx. **S., Interstitial**, that marked with excessive formation of connective tissue. **S., Isthmic Nodular**, follicular inflammation of the small constricted portion (isthmus) of the oviduct with formation of small nodules of muscular and connective tissue. **S., Mural.** See *S., Chronic Parenchymatous.* **S., Nodular**, a form marked by formation of solid nodules. Cf. *S., Tuberculous.* **S., Parenchymatous.** See *S., Chronic Parenchymatous.* **S., Pneumococcous**, that due to infection with pneumococci. **S., Pseudofollicular**, adenomyoma originating in the tubal epithelium. **S., Purulent**, salpingitis with secretion of pus instead of mucus or serum. **S., Tuberculous**, that marked by the infiltration of the lining membrane and walls of the tube with tuberculous nodules.

Salpingocatheterism (*sal-ping-go-cath'-e-tur-izm*). Catheterization of the eustachian tube.

Salpingocele (*sal-ping'-go-sēl*) [σάλπιγξ, tube; κήλη, a tumor]. Hernia of the oviduct.

Salpingoooperitonitis (*sal-ping-go-o-o-per-it-on-i'-tis*). Inflammation of the peritoneum lining the oviduct.

Salpingooophorocele (*sal-ping-go-o-of'-or-o-sēl*) [*salpingocele; oophorocele*]. Hernial protrusion of the ovary and oviduct.

Salpingoovariotomy (*sal-ping-go-o-va-ri-ot'-o-me*). See *Salpingo-oophorectomy* (Illus. Dict.).

Salpingoovaritis (*sal-ping-go-o-var-i'-tis*). See *Salpingo-oophoritis* (Illus. Dict.).

Salpingoscope (*sal-ping'-go-skōp*) [σάλπιγξ, tube; σκοπεῖν, to look]. A modified cystoscope provided with an electric lamp of low voltage for exploration of the nasopharynx.

Salpyrin (*sal-pi'-rin*). See *Salipyrin* (Illus. Dict.).

Salseparin (*sal-se'-par-in*). See *Smilacin* (2).

Salt. (See Illus. Dict.) **S., Alkaline.** See *S., Basic* (Illus. Dict.). **S., Aperient, of Frederick**, sodium sulfate. **S. of Barilla**, sodium carbonate. **S. of Bones**, ammonium carbonate. **S., Carlsbad**, a salt prepared from one of the springs at Carlsbad or made in imitation of it. Each spring contains in varying degrees carbonates of magnesia, iron, manganese, calcium, strontium, lithium, and sodium, sulfates of sodium and potassium, sodium chlorid, sodium fluorid, sodium borate, and calcium phosphate. **S. of Colcothar**, sulfate of iron. **S., Crab Orchard**, a mild saline purgative produced from the evaporated water of springs at Crab Orchard, Kentucky. It contains magnesium, sodium, and potassium sulfates and a little iron and lithium. **S. of Lemons**, potassium binoxalate. **S.s, Preston's.** See *Smelling Salts, English* (Illus. Dict.). **S., Purging, Tasteless**, sodium phosphate. **S.s, Secondary.** Same as *S., Neutral* (Illus. Dict.). **S.-sickness.** See under *Sickness.* **S. of Soda**, sodium carbonate. **S. of Sorrel**, potassium binoxalate derived from

species of *Oxalis* and *Rumex*. **S.s, Spirit of,** hydrochloric acid. **S.-starvation.** See *Hypochlorization*. **S. of Tartar,** pure carbonate of potash. **S. of Urine,** ammonium carbonate. **S. of Vitriol,** zinc sulfate. **S. of Wisdom,** sal alembroth. **S. of Wormwood,** potash prepared from wormwood.

Saltans (*sal'-tanz*) [L.]. Dancing. **S. rosa,** urticaria.

Salted (*solt'-ed*). A term applied to animals that have recovered from South African horse-sickness.

Saltus. (See Illus. Dict.) **S. tendinum.** See *Subsultus tendinum* (Illus. Dict.).

Salubrin (*sal-u'-brin*) [*salubritas*, healthfulness]. A compound said to contain 2% of anhydrous acetic acid, 25% of acetic ether, 50% of alcohol, and the remainder distilled water. It is antiseptic, astringent, and hemostatic, and is used diluted with water, as a gargle and on compresses.

Salubrol (*sal-u'-brol*). Tetrabromomethylenediantipyrin. An inodorous, antiseptic powder used like iodoform.

Salumin, S., Insoluble. (See Illus. Dict.) **S., Soluble.** See *Aluminum Salicylate, Ammoniated.*

Samandarin (*sa-man'-dar-in*). $C_{34}.H_{60}N_2O_5$. A toxic albuminoid peculiar to *Salamandra*, isolated by Zalewsky, 1866.

Sambucin (*sam-bu'-sin*) [*Sambucus*, the elder]. An alcoholic fluid extract of the bark of *Sambucus nigra*, Linn. It is a diuretic.

Sanatogen (*san-at'-o-jen*). A dietetic containing 90% of casein and 5% of sodium phosphoglycerid. Dose, 1 teaspoonful (5 c.c.) added to soup, cocoa, etc.

Sanatolyn (*san-at'-ol-in*). A disinfectant said to consist of carbolic and sulfuric acid with percentage of ferrous sulfate.

Sand. (See Illus. Dict.) **S., Auditory,** otoliths. **S.blind.** See *Metamorphopsia* (Illus. Dict.). **S., Intestinal,** gritty material passed with the stools. **S., Pineal.** See *Acervulus* and *Brain Sand* (Illus. Dict.). **S.-tumor.** See *Psammoma* (Illus. Dict.).

Sandarac. (See Illus. Dict.) **S. Varnish,** in dentistry a solution of gum sandarac in alcohol used as a separating medium in making plaster casts.

Sandaracin (*san-dar'-as-in*). Giese's name for sandarac which has been exposed to action of alcohol. It is a mixture of two of the three resins of which sandarac is said to be composed.

Sanders, S.-wood (*san'-durz*). Sandal-wood. See *Santalum* (Illus. Dict.).

S.-angle. See *Angle, Sigma* (Illus. Dict.).

Sangostol (*sang'-go-stol*). See *Liquor calcii iodoferrati.*

Sanguimotion (*sang-gwi-mo'-shun*) [*sanguis*, blood; *movere*, to move]. The circulation of the blood.

Sanguimotory (*sang-gwi-mo'-tor-e*). Relating to the circulation of the blood.

Sanguinal (*sang'-gwin-al*). See *Sanguinol* (Illus. Dict.).

Sanguinarin. (See Illus. Dict. [1]) Dose, ½–⅓–¾ gr. (0.005–0.011 gm.) in solution. Small doses expectorant, large doses emetic. **S. Nitrate,** $C_{17}H_{15}NO_4.HNO_3$, a red crystalline powder, soluble in water and alcohol. Dosage and uses as alkaloid. **S. Sulfate,** $(C_{17}H_{15}NO_4)_2.H_2SO_4$, red crystalline powder, soluble in water and alcohol. Dosage and uses as the alkaloid.

Sanguino (*sang'-gwin-o*). A proprietary preparation said to contain all iron salts, albumins, fats, and carbohydrates formed in the animal organism.

Sanguinoform (*sang-gwin'-o-form*). A therapeutic preparation of blood said to be obtained from the embryonic blood-forming organs of animals.

Sanitary. (See Illus. Dict.) **S. Cordon,** a line of guards to control ingress or egress to an infected locality. **S. Police.** See *Police* (Illus. Dict.).

Sanitorium. (See Illus. Dict.) **S., Ocean,** a ship so constructed as to be specially adapted to the requirements of invalids or convalescents and to making long cruises.

Sanmethyl (*san-meth'-il*). A proprietary preparation said to consist of methylene-blue, copaiba, salol, oils of sandal-wood and cinnamon, and the oleoresins of cubebs and matico. It is used in gonorrhea. Dose, in capsules, 10 ♏ (0.666 c.c.).

Sanmetra (*san-met'-rah*) [*sanus*, healthy; *μήτρα*, womb]. A combination of zinc sulfate, 1 gr.; antipyrin, 2 gr.; ichthyol, 5 gr.; fluid hydrastis, 5 gr.; creasote, 1–2 gr.; extract of hyoscyamus, 1–2 gr.; menthol and thymol each, 1–25 gr.; oil of eucalyptus, 1 gr. It is indicated in vaginal, uterine, and pelvic diseases and used in suppositories.

Sanmetto (*san'-met-o*). A proprietary preparation recommended in genitourinary diseases and said to consist of sandal-wood and saw-palmetto. Dose, 1 teaspoonful (5 c.c.) 4 times daily.

Sano (*san'-o*). A dietetic said to consist of dextrinated barley flour with a high percentage of proteids; according to analysis, it consists of water, 13.7%; proteids, 12.5%; fat, 1.6%; mineral matter, 1.85%; soluble carbohydrates, 4.1%; cellulose, 1.4%; and starch, 64.9%.

Sanoderma (*san-o-dur'-mah*). A sterilized muslin bandage saturated with bismuth subnitrate.

Sanoform (*san'-o-form*). $C_6H_2I_2OHCOOCH_3$. The methyl ether of diiodosalicylic acid. It is a white, tasteless, odorless, permanent powder, containing 62.7% iodin; melts at 110° C.; soluble in alcohol, ether, or vaselin. It is used as a surgical dressing in powder or 10% ointment.

Sanose (*san'-ōz*). A proprietary dietetic said to contain 80% of casein and 20% of albumose; a white, odorless, tasteless powder forming an emulsion when stirred with water or milk. Dose, 20–50 gm. in a pint of milk.

Sanosin (*san'-o-sin*). A mixture of sulfur, charcoal, and eucalyptus leaves. The fumes of this when ignited are used by inhalation in the treatment of pulmonary tuberculosis.

Santal (*san'-tal*). Santalum, white sandal-wood.

Santalal (*san'-tal-al*). $C_{15}H_{24}O$. A constituent of santal oil found by Chapoteaut; boils at 300° C.

Santalol (*san'-tal-ol*). $C_{15}H_{26}O$. A constituent of oil of santal found by Chapoteaut; it boils at 310° C.

Santa Lucia Bark. The bark of *Exostemma floribundum*, R. et Sch., a rubiaceous tree of the Antilles.

Santalum. (See Illus. Dict.) **Diatrion santalorum** [*διὰ τριῶν σανταλων*]. See *Powder of the Three Sanders.*

Santan (*san'-tan*). Bismutan.

Santol (*san'-tol*). $C_8H_6O_3$. A crystalline substance isomeric with piperonal found by H. Weidel (1870) in white sandal-wood.

Santolina (*san-to-li'-na*) [*santalum*, sandal-wood, because of the similarity of odor]. A genus of composite plants. **S. chamæcyparissus,** L., of Europe; the herb and fruit are anthelmintic, antispasmodic, and stomachic. As anthelmintic, dose for adults—of decoction, 5 oz. for 4 successive mornings, then followed by cathartic.

Santoninoxim (*san-ton-in-oks'-im*). $C_{15}H_{18}O_2(NOH)$. A derivative of santonin by action of an alcoholic solution of hydroxylamin hydrochlorate with soda; a white crystalline powder, less toxic than santonin and used as a vermicide. Dose for adults, 5 gr. (0.3

gm.) divided into 2 doses and taken at intervals of one to two hours followed by cathartic. Repeat for 2 or 3 days.

Santonism (*san'-ton-izm*). Poisoning from overdosage of santonin.

Saphism. See *Sapphism* (Illus. Dict.).

Sapidity (*sap-id'-it-e*) [*sapere*, to taste]. The property or quality of a substance which gives it taste.

Sapodermin (*sap-o-dur'-min*). An antiseptic soap, containing albuminate of mercury; used in the treatment of parasitic and fungoid diseases.

Sapogenin (*sap-oj'-en-in*). $C_{34}H_{54}O_9$ (Hesse). A derivative of saponin by action of dilute acids with heat. It occurs in needles grouped in stars, soluble in alcohol or ether. Syn., *Saporetin*.

Sapolan (*sap'-ol-an*). A compound said to consist of a naphtha product, 2.5 parts; soap, 3%–4%; lanolin, 1.5 parts; it is used in skin-diseases.

Saponal (*sap'-o-nal*). A cleansing compound said to consist of soap, 20%; sodium carbonate, 60%; sodium chlorid, 2.2%; and water, 11%.

Saponaria (*sap-o-na'-re-ah*) [*sapo*, soap]. A genus of plants of the order *Caryophyllaceæ*. **S. officinalis**, L., soapwort; bouncing bet. A species growing wild abundantly in the United States and Europe in the vicinity of houses. The root, rhizome, and stolons are used in gout, syphilis, and as an expectorant. It contains saponin, sapotoxin, saporetin, etc.

Saponarius (*sap-o-na'-re-us*). Of a soapy character.

Saponetin (*sap-on-et'-in*). A microcrystalline body, $C_{40}H_{66}O_{15}$, obtained by heating saponin with dilute acids.

Saponiform (*sap-on'-e-form*). Soap-like in appearance and consistency.

Saponin. (See Illus. Dict.) **S., Coal-tar.** See *Liquor carbonis detergens*.

Saponinism (*sap-o'-nin-izm*). See *Githagism*.

Saponule, Saponulus (*sap'-on-ūl, sap-on'-u-lus*). Imperfect soaps formed by combination of essential oils with bases.

Saporetin, Saporrhetin (*sap-or-et'-in*). See *Sapogenin*.

Saporosity (*sap-or-os'-it-e*) [*sapor*, taste]. Sapidity.

Sapotin (*sap'-o-tin*). A glucosid, $C_{29}H_{52}O_{20}$, extracted from the seed of the sapodilla plum, the fruit of *Achras sapota*, L., occurring in minute crystals, which melt at 240° C. It is readily soluble in water, less so in alcohol, and insoluble in ether, benzin, or chloroform.

Sapotiretin (*sap-o-tir-et'-in*). $C_{17}H_{32}O_{10}$. A product obtained from sapotin by boiling it with dilute sulfuric acid; insoluble in water, readily soluble in alcohol.

Sappan-wood (*sap-an'-wood*). The wood of *Cæsalpina sappan*, L.; used as a dye as a substitute for hematoxylon.

Sapremia, Sapræmia [σαπρός, putrid; αἷμα, blood]. The intoxication produced by absorption of the results of putrefaction of a contained material within a more or less shut containing cavity whose walls are capable of absorption of noxious products as they form; so long as the putrefaction is limited to the contained mass it is sapremia; when the process spreads from the containing tissue, it becomes septicemia (Roswell Park).

Saprolegnia (*sap-ro-leg'-ne-ah*) [σαπρός, putrid; λέγνον, an edge]. Fly-fungus. A genus of oomycetous fungi of the order *Saprolegnieæ*. Four species are known, *S. monoica*, Pringsh.; *S. dioeca*, Pringsh.; *S. asterophora*, DBy.; and *S. ferax*, N. *ab* E. They are all saprophytes on dead plants and animals, especially flies, in water with the exception of the last named species, which is both saphrophyte and facultative parasite. It is the cause of fish or salmon disease.

Saprophagous (*sap-rof'-a-gus*) [σαπρός, putrid; φαγεῖν, to eat]. Subsisting on decaying matter.

Saprostomous (*sap-ros'-to-mus*) [σαπρός, putrid; στόμα, mouth]. Having offensive breath.

Sár [E. Ind. rotten]. Vernacular for trypanosomiasis (surra) (*q. v.*).

Sara [E. Ind. rotten fowl]. Vernacular for surra or trypanosomiasis (*q. v.*).

Sarc (*sark*) [σάρξ, flesh]. Proposed by B. G. Wilder for the belly, body, or fleshy portions of a muscle.

Sarcinuria (*sar-sin-u'-re-ah*) [*sarcin*; οὖρον, urine]. The discharge of sarcin with the urine.

Sarcoblast (*sar'-ko-blast*). (See Illus. Dict.) 2. Marchesini's term for *Sarcoplast* (1) (Illus. Dict.).

Sarcocarcinoma (*sar-ko-kar-sin-o'-mah*). A tumor composed of malignant growth of both carcinomatous and sarcomatous types. Syn., *Hemangiosarcoma*.

Sarcocele (*sar'-ko-sēl*). (See Illus. Dict.) **S. malleosa**, that due to *Bacillus mallei*, Löffler. **S. Syphilitic**, syphilitic orchitis.

Sarcocephalus (*sar-ko-sef'-al-us*) [σάρξ, flesh; κεφαλή, head]. A genus of the *Rubiaceæ*. **S. esculentus**, Sab., a shrub of western Africa, the Guinea or Sierra Leone peach, yields an astringent antipyretic bark, doundaké or doundaki (*q. v.*); it is the quinquina africane or kina du Rio Nuñez of the French. The wood, called nijmo, is tonic and astringent. It contains the alkaloid doundakin.

Sarcocyte (*sar'-ko-sīt*) [σάρξ, flesh; κύτος, cell]. See *Ectoplasm* (Illus. Dict.).

Sarcoenchondroma (*sar-ko-en-kon-dro'-mah*). A combined sarcoma and enchondroma.

Sarcoepiplomphalus (*sar-ko-ep-e-plom'-fal-us*) [σάρξ, flesh; ἐπίπλοον, caul; ὀμφαλός, navel; κήλη, hernia]. An umbilical hernia forming a fleshy mass from great thickening of the omentum.

Sarcoma. (See Illus. Dict.) **S. of Abernethy.** See *S., Adipose*. **S., Adipose**, one containing fatty elements. **S., Angioplastic**, a tumor of the testicle first described by Malazzez and Monod as composed of a protoplasmic network with irregular spaces and trabeculas, the latter made up of anastomosing giant cells. The name *Epithelioma syncytiomatodes testiculi* is proposed for it. **S. carcinomatodes**, a scirrhous cancer. **S. deciduocellulare** (Sänger). See *Deciduoma malignum* (Illus. Dict.). **S. epulis.** See *Epulis* (Illus. Dict.). **S., Glandular**, Hodgkin's disease. **S., Granulation.** See *S., Round-celled, Small* (Illus. Dict.). **S. lipomatodes, S., Lipomatous**, one characterized by infiltration of fat. **S. lymphadenoides.** See *Lymphosarcoma* (Illus. Dict.). **S., Mastoid**, a sarcoma of the mammary gland. **S. molle.** See *Lymphosarcoma* (Illus. Dict.). **S. molluscum**, multiple connective-tissue tumors of the skin containing few spindle cells. **S., Mucous.** See *S., Myxo-* (Illus. Dict.). **S., Müller's**, "sarcoma phyllodes"; adenofibroma of the breast. **S. myxomatodes**, a myxosarcoma. **S. scroti**, a sarcocele.

Sarcoplasmic (*sar-ko-plaz'-mik*). Containing sarcoplasm.

Sarcoplastic (*sar-ko-plas'-tik*) [σάρξ, flesh; πλάσσειν, to form]. Forming flesh.

Sarcosporidiasis (*sar-ko-spo-rid-i-a'-sis*) [*Sarcosporidia*, a genus of psorosperms]. A disease produced by sporozoa of the order *Sarcosporideæ*.

Sarcostosis. (See Illus. Dict.) 2. See *Osteosarcoma* (Illus. Dict.).

Sarcotripsy (*sar-ko-trip'-se*) [σάρξ, flesh; τρίβειν, to rub]. See *Écrasement* (Illus. Dict.).

Sarcotriptor (*sar-ko-trip'-tor*). See *Écraseur* (Illus. Dict.).

Sardinian Laugh. See *Risus sardonicus* (Illus. Dict.).

Sardinin (*sar'-din-in*). A ptomain found by Griffiths in sardines which had undergone putrefaction.

Sarkin. See *Sarcin* (Illus. Dict.).

Sarsaparilla. (See Illus. Dict.) **S., American,** the roots of Mexican and South American species of *Smilax*, notably those of *S. cordata-ovata*, Rich., *S. cumanensis*, H. et B., *S. febrifuga*, Kth., *S. fluminensis*, Steud., *S. japicanga*, Griseb., *S. ornata*, Lem., *S. virginiana*, Mill., *S. papyracea*, Duham, *S. syphilitica*, H. B. Kth. **S. de Rios,** the root of *Smilax brasiliensis*, Sprg. Syn., *China japicanga*. **S., Jamaica.** See *S., Red*. **S., Red,** the root of *Bromelia pinguin*, L., of tropical America. **S., Texas,** the root of *Menispermum canadense*, L.

Sarsaparillin (*sar-sa-par-il'-in*). See *Smilacin* (2).

Sarsasaponin (*sar-sah-sap'-on-in*). $12(C_{22}H_{36}O_{10}) + 2H_2O$. A glucosid found by Kobert (1892) in sarsaparilla. It is the most poisonous of its constituents.

Sassafras. (See Illus. Dict.) **S. goesianum.** See *Massoia aromatica*. **S. Nuts,** pichurim beans. **S., Swamp,** *Magnolia glauca*.

Sassafrid (*sas'-ah-frid'*). A peculiar principle of *Sassafras officinale*, Fr. Nees, isolated by Reinach.

Sassafrol (*sas'-af-rol'*). See *Safrol* (Illus. Dict.).

Sassolin [It.]. Boric acid extracted from the deposits in lagoons of Tuscany.

Satamuli. The native name in India for *Asparagus racemosus*, Willd. It is used as a diuretic and as a sedative in nervous pain.

Satellites. (See Illus. Dict.) Lord Kelvin's term for the separate units of electricity, the electrons of Coney.

Satellitism (*sat'-el-it-ism*). Mutualism; symbiosis.

Sathe, Sathon (*sa'-the, sa'-thon*) [*σάθη*]. The penis.

Saturnine. (See Illus. Dict.) **S. Breath,** the peculiar sweet breath characteristic of lead poisoning.

Satyria (*sat-i'-re-ah*). A genitourinary tonic said to consist of saw palmetto (*Serenoa serrulata*, Hook. fil.), false bittersweet (*Celastrus scandens*, L.), muira-puama (*Liriosoma ovata*, Miers.), couch grass (*Agropyron repens*, Beauv.), and phosphorus, administered in an aromatic vehicle. Dose, 1 teaspoonful (5 c.c.) 4 times daily after meals.

Satyriasis. (See Illus. Dict.) Syn., *Erotic insanity*. 2. See *Priapism* (Illus. Dict.).

Saucy Bark. See *Casca Bark* (Illus. Dict.).

Sausarism (*saw'-sar-izm*) [*σαυσαρισμός*]. 1. Paralysis of the tongue. 2. Dryness of the tongue.

Savakin Gum. See *Gum, Suakim*.

Saxoline (*saks'-ol-ēn*). A proprietary soft petrolatum.

Scabbard (*skab'-ard*) [ME. *scauberd*, a sheath]. A veterinary term for the prepuce of the horse.

Scabies. (See Illus. Dict.) **S. agria,** lichen. **S., Boeck's,** scabies crustosa; Norwegian itch. **S. capitis,** a disease of the hairy scalp marked by exudation and formation of crusts. Syn., *Achores capitis*. **S. capitis favosa,** favus. **S. crustosa.** See *Itch, Norway* (Illus. Dict.). Cf. *Radesyges*. **S. fera.** See *Ecthyma* (Illus. Dict.). **S. ferina,** mange. **S. humida, S. miliaris,** eczema. **S. lymphatica,** that accompanied by vesicular eruption. Syn., *Watery itch*. **S. papuliformis, S. papulosa,** a form marked by papular efflorescence. Syn., *Rank itch*. **S. pecorina,** a form affecting sheep. Syn., *Sheep itch*. **S. purulenta, S. pustulosa,** that in which there is formation of large pustules resembling those of smallpox, occurring on the wrists of children. Syn., *Rocky itch*.

Scala. (See Illus. Dict.) **S. anterior cochleæ, S. externa cochleæ.** See *S. vestibuli* (Illus. Dict.). **S. clausa, S. inferior cochleæ, S. interna cochleæ.** See *S. tympani* (Illus. Dict.). **S. rhythmica.** See *Nucleus, Hypoglossal*.

Scaling. (See Illus. Dict.) 2. A pharmaceutic method consisting of drying concentrated solutions of drugs on glass plates.

Scallard (*skal'-ard*). Porrigo.

Scaly. (See Illus. Dict.) **S.-skin,** a contagious disease common in the Louisiade, Marshall, and Gilbert groups of South Sea Islands. It is an eruption of small, dry, horny scales giving the sufferers a repulsive appearance. It is probably mycetogenic in origin.

Scamma (*skam'-ah*) [*σκάμμα*, a trench]. Same as *Fossa*.

Scaphion. (See Illus. Dict.) 2. The capsule of a poppy.

Scaphohydrocephaly (*skaf-o-hi-dro-sef'-al-e*) [*σκάφη*, a boat; *ὕδωρ*, water; *κεφαλή*, head]. Scaphocephalism due to hydrocephaly.

Scaphoidoastragalan (*skaf-oid-o-as-trag'-al-an*). Relating to the scaphoid bone and the astragalus.

Scaphoidocuboid (*skaf-oid-o-ku'-boid*). Relating to the scaphoid and cuboid bones.

Scaphoidocunean (*skaf-oid-o-ku-ne'-an*). See *Cuneoscaphoid*.

Scapula. (See Illus. Dict.) **Scapulæ alatæ,** of Galen and Aristotle, a wing-like appearance of the shoulder-blade in thin persons of weak musculature, especially in paralysis of the serratus anticus major.

Scapulectomy (*skap-u-lek'-to-me*) [*scapula; ἐκτομή*, excision]. Surgical removal of the scapula.

Scarlatinoid. (See Illus. Dict.) 2. A disease simulating scarlatina. **S., Puerperal,** Littré's name for a rash resembling scarlatina sometimes followed by vesication and pustulation of the affected parts, but without fever; observed in puerperants. Syn., *Erythema diffusum* (Braun); *Porphyra* (Retzius).

Scarlatinosis (*skar-lat-in-o'-sis*). The toxic state due to the specific toxin of scarlatina.

Scarlievo. See *Scherlievo*.

Scat (*skat*). A hermaphrodite.

Scatemia, Scatæmia (*skat-e'-me-ah*) [*σκατός*, dung; *αἷμα*, blood]. Autointoxication from retained fecal matter.

Scatiatria (*skat-i-at'-re-ah*) [*σκότος*, dung; *ἰατρεία*, a healing]. Medical treatment directed to the condition of the feces.

Scatocolica (*skat-o-kol'-ik-ah*) [*σκατός*, dung; *κωλικός*, having the colic]. Stercoraceous colic.

Scatocyanin (*skat-o-si'-an-in*) [*σκατός*, dung; *κύανος*, dark-blue]. A derivative of chlorophyll, resembling but not identical with phyllocyanin, discovered by E. Schunck (1901). It crystallizes in rhombic plates, pale-brown by transmitted light, purplish-blue with brilliant metallic luster by reflected light, decomposed by heat, insoluble in ether, alcohol, or benzol; soluble in chloroform.

Scatodiarrhea (*skat-o-di-ar-e'-ah*). Stercoraceous diarrhea.

Scatophagous (*skat-of'-ag-us*) [*σκατός*, dung; *φαγεῖν*, to eat]. Coprophagous; excrement-eating.

Scatosin (*skat'-o-sin*) [*σκατός*, dung]. $C_{10}H_{16}N_2O_2$. A base isolated by F. Baum, 1893, from the products of pancreatic autodigestion; it is probably related to scatol.

Scatt (*skat*). See *Anthrax* (2) (Illus. Dict.).

Scatulation (*skat-u-la'-shun*) [ML. *scatula*, a box]. The state or condition of incasement. **S.-theory.** See *Incasement, Theory of* (Illus. Dict.).

Scelotyrbe. (See Illus. Dict.) **S. agitans, S. festi-**

nans (Sauvages), paralysis agitans. **S. fibrilis.** See *Subsultus tendineum* (Illus. Dict.). **S. spastica,** chronic spasms affecting the lower limbs and causing lameness. **S. tarantismus,** chorea.

Schemograph (*skē'-mo-graf*) [σχῆμα, form; γράφειν, to write]. An apparatus for tracing the outline of the field of vision; the measurement of the field is made with the perimeter.

Schenck Method. The determination of sex of infants by regulation of the mother's diet before and during pregnancy.

Scherlievo, Scherljevo (*shair-ya-vo*) [*Scherlievo,* a village in Fiume]. A contagious disease, now regarded as a virulent form of syphilis, which appeared toward the close of the eighteenth century on the coast of the Gulf of Quarnero in Croatia, and Istria, introduced by sailors returned from a Turkish campaign. Syn., *Morbus croatus; M. fiumeniensis; M. illyricus; Mal de Fiume; Maladie de Fiume.*

Schindalesis. See *Schindylesis* (Illus. Dict.).

Schistocyte (*skis'-to-sīt*) [σχιστός, cleft; κύτος, cell]. 1. A blood-corpuscle in process of segmentation. 2. Ehrlich's name for a poïkilocyte.

Schistocytosis (*skis-to-si-to'-sis*) [σχιστός, cleft; κύτος, cell]. 1. An aggregation of schistocytes in the blood. 2. The splitting process of blood-corpuscles.

Schistometer (*skis-tom'-et-ur*) [σκιστός, cleft; μέτρον, measure]. A device for measuring the distance between the vocal cords.

Schistoprosopia (*skis-to-pro-so'-pe-ah*) [σκιστός, cleft; πρόσοπον, face]. Congenital fissure of the face.

Schizatrichia. See *Schizotrichia* (Illus. Dict.).

Schizaxon (*skiz-aks'-on*) [σχίζειν, to divide; ἄξων, axis]. An axon which divides in its course into equal or nearly equal branches.

Schizocyte. See *Schistocyte.*

Schizocytosis. See *Schistocytosis.*

Schizogonic (*skiz-o-gon'-ik*). Relating to schizogony.

Schizogony. (See Illus. Dict.) 2. A form of multiple division in which the contents of the oocyst eventually split up into swarm spores. Cf. *Sporogony.*

Schizont (*skiz'-ont*) [σχίζειν, to divide]. Schaudinn's term for the mother cell in coccidia which by multiple division gives rise to merozoites. Syn., *Oudeterospore* (E. R. Lankester, 1900); *Sporocyte* (Ron, 1899). Cf. *Sporont.*

Schleich Method for producing anesthesia. See under *Anesthetic.*

Schmidt's Blood-coagulation Theory. See under *Blood.* **S.'s** (Ad.) **Method for Demonstrating Disturbances in the Functions of the Intestines.** It is formed upon the amount of the fermentation of the feces. The patient is given daily 1560 gm. milk, four eggs, three pieces (100 gm.) of zwieback, a plate of oatmeal-soup (40 gm.), with 10 gm. of sugar, a plate of flour soup made with 25 gm. of wheat flour and 10 gm. of sugar, and one cup of bouillon; 120 gm. of potatoes are also given. A small amount (0.3 gm.) of carmin is given to color and designate the first stool to be examined. A small portion of the stool is dried to constant weight and weighed. It is then mixed with water and placed in a fermentation tube and kept at 37° C. Fermentation with the evolution of gases sets in and is divided into an early and a late fermentation. Early fermentation occurs during the first 24 or 48 hours. Later fermentation begins slowly on the second or third day. In the early fermentation it is the starch that is acted upon, while in the late it is the albuminous cellulose materials. Early fermentation can be considered as present only when in the first 24 hours an evident amount of gas is formed. Normally after the diet described there should be no such fermentation. Its occurrence indicates faulty starch digestion and an abnormal condition of the bowels, especially of the small intestines.

Schoen's Theory of Accommodation. See under *Accommodation.*

School of Medicine, Dogmatic. See under *Medicine.*

Schott's Method. See *Treatment, Schott's* (Illus. Dict.).

Schreiber's Maneuver. Friction of the skin of the thigh and leg to reinforce the patellar and Achilles tendon reflexes.

Sciagraphy. See *Skiagraphy.*

Sciameter. See *Skiameter.*

Sciascopia, Sciascopy (*ski-as-ko'-pe-ah, ski-as'-ko-pe*). See *Retinoscopy* (Illus. Dict.).

Science. (See Illus. Dict.) **S., Hermetic** (with reference to Hermes Trismegistus, the author of alchemy and the occult sciences), alchemy. Syn., *Philosophia hermetica.*

Scillain (*sil'-a-in*). See *Scillitoxin* (Illus. Dict.).

Scillipicrin. (See Illus. Dict.) It is used as diuretic in doses of 8–45 gr. (0.5–3 gm.) daily.

Scillism (*sil'-izm*) [*scilla,* squill]. Poisoning from extracts or tinctures of squill due to the contained glucosid, scillitoxin. It is marked by vomiting, retarded pulse, and stupor.

Scillitic (*sil-it'-ik*). Pertaining to or containing squills.

Scillitoxin. (See Illus. Dict.) It is used as a diuretic in doses of $\frac{1}{60}$–$\frac{1}{30}$ gr. (0.001–0.002 gm.) several times daily. Max. daily dose, ¼ gr. (0.05 gm.).

Scissile (*sis'-il*) [*scindere,* to divide]. Capable of being divided.

Scissiparous (*sis-ip'-ar-us*). See *Fissiparous* (Illus. Dict.).

Scleracne (*skle-rak'-ne*) [σκληρός, hard; *acne*]. Acne indurata.

Scleradenitis (*skle-rad-en-i'-tis*) [σκλερός, hard; ἀδήν, a gland]. See *Adenosclerosis* (Illus. Dict.).

Sclerangia (*skle-ran'-je-ah*) [σκληρός, hard; ἀγγεῖον, a vessel]. 1. A sense of hardness yielded by a vessel. 2. See *Angiosclerosis.*

Scleredema (*skle-re-de'-mah*). See *Sclerema neonatorum* (Illus. Dict.).

Sclerema. (See Illus. Dict.) **S. adiposum,** a grave form of sclerema neonatorum marked by extreme hardness of the skin, atrophy, and adherence to the subcutaneous tissues. **S. adultorum.** See *Keloid of Addison* (Illus. Dict.). **S. cutis,** scleroderma. **S. œdematosum,** a generally fatal form of sclerema neonatorum marked by edema of the skin with induration, impairment of muscular action, and subnormal temperature. Syn., *Compact edema of infants.* **S., Partial,** Schwimmer's name for scleroderma occurring in limited areas. Fr. *Sclérème en placards.* **S. universale,** Schwimmer's name for scleroderma affecting at once the whole surface of the body, or from single areas of sclerosis of the skin gradually diffusing itself over the entire body. Syn., *Carcinus eburneus* (Alibert); *Cutis tensa chronica* (Fuchs); *Elephantiasis sclerosa* (Rasmussen); *Sclerosis cutis* (Wilson).

Scleremia, Scleremus (*skle-re'-me-ah, -mus*). Same as *Sclerema.*

Scleroconjunctivitis (*skle-ro-kon-junk-ti-vi'-tis*). Simultaneous conjunctivitis and sclerotitis.

Sclerocornea (*skle-ro-kor'-ne-ah*). The sclera and cornea regarded as one.

Sclerocyclotomy (*skle-ro-si-klot'-o-me*) [σκληρός, hard; κύκλος, a circle; τομή, a cutting]. Hancock's operation of division of the ciliary muscle.

Scleroedema (*skle-ro-e-de'-mah*). See *Sclerema neonatorum* (Illus. Dict.).

Sclerogeny (*skle-roj'-en-e*) [σκληρός, hard; γεννᾶν, to produce]. The formation of sclerous tissue.

Sclerokeratoiritis (*skle-ro-ker-at-o-i-ri'-tis*). Combined inflammation of the sclera, cornea, and iris.

Scleromatocystis (*skle-ro-mat-o-sist'-is*) [σκληρός, hard; κύστις, bladder]. Induration of a cyst, but especially of the gall-bladder or urinary bladder.

Sclerometer (*skle-rom'-et-ur*) [σκληρός, hard; μέτρον, measure]. An apparatus for determining the hardness of substances.

Sclerosis. (See Illus. Dict.) **S. of Middle Ear,** v. Trŏltsch's name for otitis media hypertrophica. **S., Multiple Cerebral,** multiple sclerosis affecting only the brain. **S., Multiple Cerebrospinal,** multiple sclerosis affecting both the brain and spinal cord. **S., Neural,** sclerosis attended by chronic neuritis. **S. telæ cellularis et adiposæ,** scleroderma. **S. testis,** sarcocele. **S., Tuberous,** a form marked by hypertrophy and increased density of the involved areas. **S., Ulcerating** [Bäumler], the primary lesion of syphilis; Hunterian or indurated chancre. **S., Vascular,** sclerosis of the walls of bloodvessels, arteriosclerosis.

Sclerothrix. (See Illus. Dict.) 2. Of Metchnikoff, a genus of *Mycobacteriaceæ* included in *Mycobacterium,* Lehmann and Neumann.

Sclerotic. (See Illus. Dict.) 3. See *Sclera* (Illus. Dict.).

Sclerotica (*skle-rot'-ik-ah*). See *Sclera* (Illus. Dict.).

Sclerotidectomy (*skle-rot-id-ek'-to-me*). See *Sclerot-iconyxis* (Illus. Dict.).

Sclerotome. (See Illus. Dict.) 3. The skeletal tissue of an embryonic metamere.

Sclerozone (*skle'-ro-zōn*) [σκληρός, hard; ζώνη, zone]. That portion of the surface of a bone giving attachment to the muscle derived from a given myotome.

Sclopetarius (*sklo-pet-a'-re-us*) [L.]. Relating to a gun. **Sclopetaria vulnera,** gunshot wounds. Syn., *Sclopetica vulnera.*

Scobinate (*sko'-bin-āt*) [*scobus,* a file]. Having a rough surface.

Scolecitis (*sko-le-si'-tis*) [σκώληξ, a worm]. Appendicitis.

Scolecoiditis (*sko-le-koid-i'-tis*) [σκώληξ, a worm; εἶδος, likeness]. Appendicitis.

Scolectomy (*sko-lek'-to-me*). Appendicectomy.

Scoliasis. See *Scoliosis* (Illus. Dict.).

Scolicoiditis (*sko-le-koid-i'-tis*). Gerster's name for appendicitis.

Scoliocoiditis (*sko-le-o-koid-i'-tis*). Nothnägel's term for appendicitis.

Scoliolordosis (*sko-le-o-lor-do'-sis*). Combined scoliosis and lordosis.

Scoliosiometry (*sko-le-o-si-om'-et-re*) [σκολίος, curved; μέτρον, a measure]. The estimation of the degree of deformity in scoliosis.

Scoliosometry. See *Scoliosiometry.*

Scoliotome (*sko'-le-o-tōm*) [σκολίος, curved; τόνος, a stretching]. An apparatus for elongating the spine and lessening the rotation in lateral curvature.

Scombrin (*skom'-brin*) [*Scomber,* a genus of fishes]. A protamin obtained from mature spermatozoa of mackerel.

Scombron (*skom'-bron*). Bang's name for a histon obtained from immature spermatozoa of mackerel.

Scopolamin (*sko-pol-am'-in*). The active principle of *Scopolia carniolica,* Jacq., $C_{17}H_{22}NO_4$, an alkaloid apparently identical with hyoscin, used with morphin in producing anesthesia by Schneiderlin's and Korff's method. **S. Hydrobromid,** $C_{17}H_{21}NO_4HBr$, hygroscopic crystals, used as a mydriatic and sedative. Externally in ophthalmology, $\frac{1}{10}$–$\frac{1}{5}$% solution; subcutaneously for insane, $\frac{1}{250}$–$\frac{1}{64}$ gr.

Scopophobia (*sko-po-fo'-be-ah*) [σκοπεῖν, to examine; φόβος, fear]. A morbid dread of being seen.

Scoracrasia (*skor-ak-ra'-she-ah*). See *Scoracratia* (Illus. Dict.).

Scorbutus. (See Illus. Dict.) **S. oris.** See *Cancrum oris* (Illus. Dict.).

Scoretemia, Scoretæmia (*skor-e-te'-me-ah*). See *Scatemia.*

Scotogram (*sko'-to-gram*) [σκότος, darkness; γράφειν, to write]. See *Skiagram.*

Scotography (*sko-tog'-raf-e*). Skiagraphy.

Scotoma. (See Illus. Dict.) **S., Annular.** See *S., Ring* (Illus. Dict.).

Scotometer. (See Illus. Dict.) 2. An instrument used in the detection of central scotomas.

Scotommeter, Scotomometer (*sko-tom'-et-ur, sko-to-tom'-et-ur*). See *Scotometer* (Illus. Dict.).

Scotosis (*sko-to'-sis*). See *Scotoma* (Illus. Dict.).

Scototherapy (*sko-to-ther'-ap-e*) [σκότος, darkness; θεραπεία, therapy]. The treatment of malaria and other diseases by keeping the patient in a dark room and in the intervals between the attacks of the disease clothing him in garments impenetrable by light.

Scrattage (*skrat-ahj*) [Fr.]. Ophthalmoxysis, the oldest method of mechanical treatment of trachoma, the scratching out of the granules; revived in 1890. Syn., *Brassage.*

Scrofulotuberculosis (*skrof-u-lo-tu-bur-ku-lo'-sis*). Attenuated tuberculosis.

Scroll. (See Illus. Dict.) **S.-bone,** a turbinate bone.

Scrophularin (*skrof-u-la'-rin*). A principle obtained by Walz from *Scrophularia nodosa,* L.

Scrotopexy (*skro-to-peks'-e*) [*scrotum; πῆξις,* a fixing in]. Longuet's term for the preservation of the scrotum which results from the extraserous transplantation of the testicle in cases of varicocele. Cf. *Orchidopexy; Phlebopexy; Vaginopexy; Operation, Longuet's.*

Scrumpox (*skrum'-poks*). A name used in England among school children for impetigo contagiosa.

Sculcopin (*skul'-ko-pin*). The proprietary name for a preparation of hydrastis and skullcap, used as a local astringent.

Scutellarin. (See Illus. Dict.) 2. $C_{10}H_8O_8$. A nontoxic principle derived from the root of *Scutellaria lateriflora,* L., forming flat yellow needles, soluble in alcohol, ether, or alkalis, melting at 199° C. It is used as a tonic and sedative in nervous diseases. Dose, ¾–4 gr. (0.05–0.26 gm.).

Scutulate (*sku'-tu-lāt*) [*scutulum,* a little shield]. Shaped like a lozenge.

Scymnol (*sim'-nol*) [*Scymnus,* a genus of sharks]. $C_{27}H_{46}O_5$ or $C_{32}H_{54}O_6$. An organic base obtained by Hammarsten from the bile of sharks.

Scyphoid (*si'-foid, ski'-foid*) [σκίφος, a drinking cup]. Cup-shaped.

Scythian Lamb. See *Cibotium barometz.*

Scytoblasta (*si-to-blas'-tah*). See *Scytoblastema* (Illus. Dict.).

Scytodephic, Scytodepsic (*si-to-de'-fik, si-to-dep'-sik*) [σκῦτος, a hide; δέφειν, to soften]. Relating to tannin, tannic.

Sebaceofollicular (*se-ba-se-o-fol-ik'-u-lar*). Relating to a sebaceous follicle.

Sebileau's Sublingual Hollow. A pyramidal area with its base upward, extending along beneath the tongue, and formed by the oral mucosa and the sublingual glands, the apex below at the point where the mylohyoid muscle covers the geniohyoid.

Seborrhea, Seborrhœa. (See Illus. Dict.) **S. flavescens.** See *S. nasi* (Illus. Dict.). **S. ichthyosis,** a variety characterized by the formation of large plate-

like crusts. **S. pityriasiformis.** See *S. furfuracea* (Illus. Dict.).

Seborrheic, Seborrhoic (*seb-or-e'-ik, seb-or-o'-ik*). 1. Affected with seborrhea. 2. One suffering with seborrhea.

Secalia (*sek-a'-le-ah*). See *Trimethylamin* (Illus. Dict.).

Secalose (*sek'-al-ōs*). A carbohydrate from green rye, soluble in water.

Secretin (*se-kre'-tin*) [*secernere*, to separate]. A body produced in the epithelial cells of the duodenum by the contact of acid. It is absorbed from the cells by the blood and excites the pancreas to secretion.

Secretogog (*se-kre'-to-gog*) [*secretion*; ἀγωγός, a leading]. 1. Stimulating the secretory function. 2. An agent which stimulates secretion.

Secretory. (See Illus. Dict.) **S. Capillaries,** minute canaliculi into which gland-cells discharge their secretion; they are simple or branched, sometimes anastomose, forming a network enveloping the gland-cell, and open individually or united in a single trunk into the lumen of the gland. They occur in the fundus glands of the stomach, where the capillary networks envelop the parietal cells, in the liver, and in other glands.

Sectile (*sek'-til*) [*secare*, to cut]. Capable of being cut.

Sectio, Section. (See Illus. Dict.) **S.-cutter,** a microtome. **S. mariana.** See *S. mediana* (Illus. Dict.). **S. nympharum,** nymphotomy. **S., Occipital,** a transverse section through the middle of the occipital lobe. **S., Parietal,** a transverse vertical section through the ascending parietal convolution. **S., Perineal,** external urethrotomy without a guide. **S.s, Pitres',** a series of sections through the brain for postmortem examination.

Secundagravida (*se-kun-dah-grav'-id-ah*) [*secundus*, second; *gravidus*, pregnant]. A woman pregnant the second time.

Secundipara (*se-kun-dip'-ar-ah*) [*secundus*, second; *parere*, to bring forth]. A woman who has borne two children.

Secundiparity (*se-kun-dip-ar'-it-e*). The state of being a secundipara.

Secundiparous (*se-kun-dip'-ar-us*). Having borne two children.

Sedatin (*sed'-at-in*). 1. Antipyrin. 2. See *Valeryl phenetidin.*

Sedimentator (*sed-i-ment'-at-or*). A centrifugal apparatus for producing a rapid deposit of the sediment of urine.

Seebeck-Holmgren's Test. See *Holmgren's Test* (Illus. Dict.).

Seehear (*se'-hēr*). Of W. Rollins, a stethoscope fitted with a sound chamber and fluorescent screen by means of which the heart and lungs are rendered both visible and audible.

Segment. (See Illus. Dict.) **S., Vertebral.** 1. See *Somatome* (Illus. Dict.). 2. The cusps of the heart-valves.

Segregator (*seg'-re-ga-tor*) [*segregare*, to separate]. An instrument by means of which urine from each kidney may be secured without danger of admixture.

Seisesthesia (*si-zes-the'-ze-ah*) [σεισις, a concussion; αἰσθησις, sensation]. Perception of concussion.

Seismic (*sīz'-mik*) [σεισμός, an earthquake]. Relating to earthquakes.

Seismotherapy (*sīz-mo-ther'-ap-e*) [σεισμός, a shaking; θεραπεία therapy]. The therapeutic use of mechanic vibration, vibrotherapeutics. Cf. *Shaking cure.*

Sejunction (*se-junk'-shun*) [*sejungere*, to disunite]. In psychology the interruption of the continuity of association-complexes, tending to break up personality.

Selector (*se-lek'-tor*) [*seligere*, to choose]. A device for selecting or separating. **S., Cell,** an appliance for regulating the current strength in galvanic electricity. A good selector must admit of an increase or a decrease of electromotive force through the introduction of one cell at a time; it must permit of such increase or decrease without producing any interruption in the flow of the current. All selectors are constructed upon one of three principles: the crank, the rider, or the plug system (Jacoby).

Seleniate (*sel-en'-e-āt*). A salt of selenic acid.

Seleniferous (*sel-en-if'-ur-us*) [*selenium*; *ferre*, to bear]. Containing selenium.

Selenin B. (*sel-en'-in*) [σελήνη, the moon]. The active toxic element in cultures of *Diplococcus semilunaris*, Klebs.

Selenitic (*sel-en-it'-ik*). Containing selenite.

Selenogamia (*sel-en-o-gam'-e-ah*) [σελήνη, the moon; γαμός, marriage]. Somnambulism.

Selenopyrin (*sel-en-o-pi'-rin*). A reaction-product of potassium selinid with a so-called antipyrin chlorid.

Sella. (See Illus. Dict.) **E. equina, S. sphenoidalis.** See *S. turcica* (Illus. Dict.).

Semantics (*sem-an'-tiks*) [σεμαντικός, significant]. The science of significations.

Semenuria. See *Seminuria* (Illus. Dict.).

Semicanal, Semicanalis (*sem-e-kan-al', -is*) [*semi*, half; *canalis*, a canal]. A canal open on one side; a sulcus or groove. **S. humeri.** See *Groove, Bicipital* (Illus. Dict.). **S. nervi vidiani,** the groove on the temporal bone for the passage of the vidian nerve. **S. tensor tympani.** See *Receptacle, Tympanic Tensor.* **S. tubæ eustachii.** See *Sulcus tubæ eustachii.* **S. tympanicus.** See *Canal, Tympanic* (Illus. Dict.).

Semicordate (*sem-e-kor'-dāt*) [*semi*, half; *cor*, the heart]. Shaped like the half of a heart that has been divided longitudinally.

Semicretinism (*sem-e-kre'-tin-izm*). The condition of being a semicretin (*q. v.*).

Semidecussation (*sem-e-de-kus-a'-shun*). Partial decussation.

Semiglutin (*sem-e-glu'-tin*). $C_{55}H_{85}N_{17}O_{22}$. A derivative of gelatin resembling a peptone.

Seminalism (*sem'-in-al-izm*) [*seminalis*, relating to seed, primary]. A vitalistic theory proposed by Bouchet, of Paris, which teaches that the vital forces of man and beasts are totally distinct and that beasts have an intelligence of instinct and man one of abstraction. [Park.]

Seminex (*sem'-e-neks*) [*semi*, half; *nex*, death]. Half dead.

Seminist (*sem'-in-ist*). See *Spermist* (Illus. Dict.).

Seminormal (*sem-e-nor'-mal*). Of one-half the normal strength.

Semiography. See *Semeiography* (Illus. Dict.).

Semisomnis (*sem-e-som'-nis*) [*semi*, half; *somnus*, sleep]. Coma.

Semisomnous (*sem-e-som'-nus*). Relating to a comatose condition.

Semisoporus (*sem-e-so'-por-us*) [*semi*, half; *sopor*, sleep]. Coma.

Semivalent (*sem-iv'-al-ent*) [*semi*, half; *valere*, to be able]. Of one-half the normal valency.

Sempiternal (*sem-pi-tur'-nal*) [*sempiternus*, everlasting]. Applied to an indivisible specific totality bringing back the past to the present, in opposition throughout all time to the remainder of transitory nature (Montgomery).

Senalbin (*sen-al'-bin*). $C_{20}H_{44}N_2S_2O_{16}$. A glucosid found in white mustard, *Brassica alba*, Hook.

Senecin. (See Illus. Dict.) 2. An alkaloid found in 1895 in *Senecio vulgaris*, L.

Senecio. (See Illus. Dict.) **S. canicida,** Moc., yerba del Puebla, a Mexican species, is diuretic and is recommended in treatment of epilepsy. **S. cineraria,** D. C., a species of South America; the fresh juice of the leaves, stems, and flowers is recommended in treatment of capsular and lenticular cataracts and other diseases of the eye.

Senegal Gum. See under *Gum.*

Senegin. (See Illus. Dict.) $C_{35}H_{52}O_{17}$ (Hesse), a yellowish powder, soluble in water; used as an expectorant and diuretic. Dose, ½–2 gr. (0.032–0.13 gm.).

Seng. A proprietary digestant said to be derived from ginseng, *Aralia quinquefolia,* Decne.

Senilism (*sen'-il-izm*) [*senex,* an old man]. A condition of prematurity. See *Progeria.* Cf. *Infantilism; Ateleiosis.*

Seniocin (*sen-i'-o-sin*). An alkaloid obtained from *Senecio vulgaris,* L., and *S. jacobæa,* L.

Senki. A disease resembling lepra and associated with colic, described by Kömpfer in 1713 as peculiar to Japan.

Senna. (See Illus. Dict.) **S., Deresinate,** that from which the resin has been removed by maceration in alcohol to prevent griping.

Sennaar Gum. See *Gum, Senegal.*

Sennite (*sen'-īt*). $C_{21}H_{42}N_{19}$. A nonfermentable sugar found in senna occurring in soluble warty crystals. Syn., *Cathartomannit.*

Sensation. (See Illus. Dict.) **S., Correlative,** stimulation of the cerebrum by a sensation carried by a single sensory nerve. **S., Cutaneous,** a sensation produced through the medium of the skin. **S., Eccentric,** the conception of locality. **S., External,** a sensation transmitted from a peripheral sense-organ. **S., General.** Same as *S., Subjective.* **S., Girdle.** See *Girdle-pain* (Illus. Dict.). **S., Internal.** See *S., Subjective.* **S., Objective,** an external sensation due to some objective agency. **S.s, Psychovisual,** sensations of sight without the stimulation of the retina; visions. **S., Radiating.** See *S., Secondary* (1). **S., Secondary.** 1. Müller's name for the excitement of one sensation by another or the extension of morbid sensations in disease to unaffected parts. 2. A sensation of one type attending a sensation of another type. Cf. *Audition colorée* (Illus. Dict.). **S., Special,** any sensation produced by the special senses. **S., Subjective.** See under *Subjective* (Illus. Dict.). **S., Tactile,** one produced through the sense of touch. **S., Transference of.** See *Clairvoyance* (Illus. Dict.).

Sensibility. (See Illus. Dict.) **S., Recurrent,** Longet's and Magendie's term for the sensibility observed in the anterior roots of the spinal nerves, which appeared to be dependent on the posterior root, and not inherent like the sensibility of the posterior root itself. The existence of recurrent sensibility was denied by Longet.

Sensibilizer (*sen-sib'-il-i-zur*) [*sensibilis,* perceptible by the senses]. A substance which, acting as a chemic screen, conduces to synthesis or other chemic processes.

Sensitive. (See Illus. Dict.) **S. Soul** of Stahl, the immortal principle.

Sensitized (*sen'-sit-īzd*). Rendered sensitive.

Sensitizer. Bordet's name (1899) for the intermediary body of Ehrlich. Syn., *Substance sensibilisatrice.*

Sensitometer (*sen-sit-om'-et-ur*) [*sentire,* to perceive; *metare,* to measure]. An instrument devised by G. W. Hough for ascertaining the sensitiveness of photographic plates.

Sensomobile (*sen-so-mob'-ĕl*) [*sensus,* feeling; *mobilis,* movable]. Moving in response to stimulation.

Sensomobility (*sen-so-mob-il'-it-e*). The capacity for movement in response to a sensory stimulus.

Sensoriglandular (*sen-so-re-gland'-u-lar*). Causing glandular action by stimulation of the sensory nerves.

Sensorimetabolism (*sen-so-re-met-ab'-ol-izm*). Metabolism resulting from stimulation of the sensory nerves.

Sensorimuscular (*sen-so-re-mus'-ku-lar*). Producing muscular action in response to stimulation of the sensory nerves.

Sensory. (See Illus. Dict.) **S. Crossway.** See *Crossway.*

Sentina (*sen-ti'-nah*) [L., the hold of a ship]. The epiphysis.

Sentinal (*sen'-tin-al*) [*sentina,* the dirty bilge water in the hold of a ship; the hold of a ship; a cesspool]. **S.-pile,** the thickened wall of the anal pocket at the lower end of an anal fissure.

Sepedogenesis (*se-ped-o-jen'-e-sis*) [σήπειν, to be rotten; γεννᾶν, to produce]. Putrescence.

Sepedon (*se'-ped-on*) [σήπειν, to be rotten]. Putridity.

Seplasia (*se-plah'-ze-ah*). A quarter in the city of Capua inhabited by druggists and perfumers. **Seplasiæ,** the druggists dwelling in the seplasia.

Sepsis. (See Illus. Dict.) **S., Gas,** a septic condition due the gas bacillus, *B. aerogenes capsulatus.*

Sepsometer (*sep-som'-et-ur*). See *Septometer* (2) (Illus. Dict.).

Septentrionalin (*sep-ten-tri-o-nal'-in*). An alkaloid found by Rosenthal in *Aconitum lycoctonum,* L. Its physiologic action resembles that of curare; it is used as an antidote to strychnin and in treatment of tetanus and hydrophobia.

Septhemia, Septhæmia (*sep-the'-me-ah*). Synonym of *Septicemia.*

Septic. (See Illus. Dict.) **S.-tank,** in sewage treatment a large closed chamber through which the sewage is allowed to pass slowly. Cf. *Contact-bed.*

Septicemia. (See Illus. Dict.) **S., Bacillar, of Chickens,** a disease of chickens described by Fuhrmann as due to a specific bacillus belonging to the colon group. **S., Goose,** a rapidly fatal disease of geese due to a specific microbe. The infection takes place by way of the mucosa of the head.

Septicogenic (*sep-tik-o-jen'-ik*) [σηπτός, rotten; γεννᾶν, to produce]. Applied to a group of microorganisms established by Cohn producing ordinary putrefaction as distinguished from that which produces disease. Cf. *Pathogenic.*

Septicophlebitis (*sep-tik-o-fleb-i'-tis*). Phlebitis due to toxemia.

Septimetritis (*sep-te-met-ri'-tis*). Metritis due to septic poisoning.

Septipara (*sep-tip'-ar-ah*) [*septum,* seven; *parere,* to bear]. A woman who has been in labor for the seventh time.

Septoforma (*sep-to-form'-ah*). A condensation product of formic aldehyd dissolved in an alcoholic solution of linseed oil-potassium soap. It is used as an antiseptic and antiparasitic in veterinary practice.

Septomarginal (*sep-to-mar'-jin-al*). Relating to the margin of a septum.

Septopyemia, Septopyæmia (*sep-to-pi-e'-me-ah*). See *Septicopyemia* (Illus. Dict.).

Septulum. (See Illus. Dict.) **Septula fibrosa,** fibrous trabeculas extending from the deep fascia of the penis into the corpus cavernosus. **Septula interalveolaria,** the septa dividing the alveoli of the lungs. **Septula medullaria,** processes radiating from the periphery of the gray substance of the spinal cord into the white substance. **Septula renum.** See *Columna bertini* (Illus. Dict.).

Septum, Sæptum. (See Illus. Dict.) **S. atrium,** the auricular septum of the heart. **S., Bigelow's,** the calcar femorale, a nearly vertical spur of compact tissue in the neck of the femur, a little in front of the lesser trochanter. **S., Douglas',** in the fetus the septum formed by the union of Rathke's folds transforming the rectum into a complete canal. **S. pellucidum.** See *S. lucidum* (Illus. Dict.). **S. of the Pons,** the median raphe of the pons formed by the decussation of nerve-fibers. **S. scalæ.** See *Lamina spiralis* (Illus. Dict.). **S. thoracis.** See *Mediastinum* (Illus. Dict.). **S., Triangular Medullary.** See *S. lucidum* (Illus. Dict.). **S., Ventricular.** 1. Same as *S. lucidum.* 2. Same as *S. ventriculorum* (Illus. Dict.).

Séquardin (*sa-kwar'-din*). A sterilized testicular extract (Brown-Séquard).

Sereh Disease. A disease of sugar-cane of West Indies and South America due to *Hypocrea sacchari.*

Serenoa (*ser-e-no'-ah*) [*Sereno Watson,* American botanist]. A genus of palms of one species, **S. serrulata,** Hook., the saw palmetto of North and South America. The fruit is diuretic and sedative and used in diseases of the genitourinary tract. Dose of extract, 0.52–1.3 gm.; fld. ext., 3.7–7.4 c.c.

Séribèle (*sa-re-bāl'*). A teniafuge said to consist of the seeds and root bark of *Connarus guianensis,* Lamb. Dose, 60 gm. in decoction.

Serochrome (*se'-ro-krōm*) [*serum; χρῶμα,* color]. Gilbert's name for the pigments (lipochrome, lutein) which serve to give color to normal serum.

Serocolitis (*se-ro-co-li'-tis*). Inflammation of the serous covering of the colon.

Serocyst (*se'-ro-sist*). A tumor containing cysts filled with serum.

Serodiagnosis (*se-ro-di-ag-no'-sis*). Diagnosis based upon the reaction of blood-serum of typhoid fever patients upon cultures of *Bacillus typhi abdominalis,* Eberth., which are immobilized, agglutinated, and split up. Cf. *Reaction, Widal.*

Seroenteritis (*se-ro-en-ter-i'-tis*). Inflammation of the serous covering of the small intestine.

Seroformalin (*se-ro-form'-al-in*). A preparation of dried coagulated blood-serum and formalin; used as an antiseptic dusting-powder.

Seroglobulin (*se-ro-glob'-u-lin*). See *Paraglobulin* (Illus. Dict.).

Serohepatitis (*se-ro-hep-at-i'-tis*) [*serum; ἧπαρ,* liver]. Inflammation of the hepatic peritoneum.

Seroid (*se'-roid*) [*serum; εἶδος,* likeness]. Resembling a serous membrane.

Serolemma (*se-ro-lem'-ah*) [*serum; λέμμα,* a husk, a peel]. The embryonic external layer of the amnion.

Serolipase (*se-ro-lip'-āz*). Lipase as found in blood-serum.

Seromembranous (*se-ro-mem'-bran-us*). Serous and membranous.

Serosine. See *Bromanilin.*

Serositis (*se-ro-si'-tis*). Inflammation of a serous membrane.

Serotaxis (*se-ro-taks'-is*) [*serum; τάξις,* arrangement]. In diagnosis the determination of the blood to the skin by application of a solution of caustic potash.

Serotherapy. (See Illus. Dict.) 2. Whey cure.

Serpedo (*sur-pe'-do*) [*serpere,* to creep]. Same as *Psoriasis.*

Serpes (*sur'-pēz*) [*serpere,* to creep]. Herpes.

Serpeta (*sur-pe'-tah*). A disease of orange trees, discovered in Castellon, Spain, appearing in the form of a mildew on the branches, causing the leaves to turn yellow and decay.

Serrago (*ser-a'-go*) [L.]. Sawdust.

Serum. (See Illus. Dict.) **S., Adamkiewicz's.** See *Cancroin* (Illus. Dict.). **S., Anticancerous,** a serum provided by the inoculation of an ass previously infected with the filtered juice of a neoplastic tumor. (Ch. Richet and Héricourt, 1895.) **S., Antidiphtheric,** one prepared by (1) the production of diphtheric toxin by means of bouillon cultures, (2) the immunization of horses, and (3) the collection and separation of the blood-serum from the immunized animals. If 1 c.c. of this serum suffices to protect perfectly a guineapig against a fatal dose of the toxin, and without even the occurrence of a localized reaction at the site of the injection, the serum is said to contain one immunizing unit in the cubic centimeter; if 0.1 c.c. suffices, it has 10 units; if 0.01 c.c., it has 100 units per cubic centimeter. In Germany the least allowed by law is 100 units. **S., Antiepitheliomatous,** one obtained from animals by inoculation with cultures of pathogenic yeasts isolated from cancerous tumors. Syn., *S. of Hoffmann, Villiers and Wlaeff.* **S., Antimorphin,** a resistance substance conferring immunity to the action of morphin poison obtained by L. Hirschlaff from animals treated with increasing doses of morphin. **S., Antiscarlatinal.** See *S., v. Leyden's,* and *S., Moser's.* **S., Antistaphylococcic** or **Antistaphylococcous,** a serum produced in the goat by Pröscher that will immunize rabbits against from 5 to 7 times the lethal dose of culture of staphylococcus when used in doses of 1–5 c.c. **S., Antistreptococcic** or **Antistreptococcous.** 1. A specific serum obtained by Piorkowski against the streptococcus which causes the disease called "Pferdedruse," a contagious, catarrhal affection of the nasal and pharyngeal membranes of horses. The serum has protective and curative properties. It agglutinates the specific streptococcus in dilutions of 1 : 100, the streptococcus of angina but slightly or not at all, and other pathogenic species in dilutions of less than 1 : 25. Piorkowski concludes that there are specific races of streptococci and that success in the use of an antistreptococcous serum will be obtained only where an antiserum for the specific organism found in the particular group of cases is used. 2. See *S., Moser's.* **S., Antitoxic,** that which acts upon the bacterial toxins and is not bactericidal. **S., Antityphoid,** a sterilized culture of typhoid bacilli used by vaccination as a prophylaxis against typhoid. Cf. *Jez's antityphoid extract.* **S., Antivenomous.** See *Antivenin.* **S., Bactericidal,** that which destroys bacteria but has no effect upon toxins. **S., Bardel's:** sodium chlorid, 1 gm.; carbolic acid, 0.50 gm.; sodium phosphate, 3 gm.; sodium sulfate, 2 gm.; water, to 100 c.c. **S., Behring's, S. of Behring-Roux.** See *S., Antidiphtheric.* **S., Bichloruretted,** of Chéron, mercuric chlorid, 0.5 cg.; sodium chlorid, 2 gm.; distilled water, 200 c.c.; crystallized phenic acid added when the serum is quite cold, 2 gm. Dose, 20 gm. injected into the gluteal region every 8 days for syphilis. **S., Calmette's.** See *Antivenin.* **S., Cancer.** 1. Cancer-juice. 2. See *Cancroin* (Illus. Dict.). **S., Cantani's:** sodium chlorid, 4 gm.; sodium carbonate, 3 gm.; water, 1000 c.c. **S.-casein,** Panum's name for paraglobulin. **S., Cerebrospinal,** cerebrospinal fluid. **S., Chéron's:** carbolic acid, 1 gm.; sodium chlorid, 2 gm.; sodium phosphate, 4 gm.; sodium sulfate, 8 gm.; boiled distilled water, 100 c.c. **Sera, Clumping,** sera capable of producing agglutination of bacteria. **S., Crocq's:** sodium phosphate, 2 gm.; distilled water, 100 c.c. **S.-diagnosis.** See *Serodiagnosis.* **S., Globulicidal,** a hemolytic serum. **S., Haffkine's.** 1. A sterilized culture of cholera bacilli for conferring immunity against cholera. See *H.'s Method,* under *Immunization.* 2. A serum

obtained by heating a virulent culture of plague bacilli to 70° C. It is used as a prophylactic against cholera. **S., Hayem's:** (1) sodium chlorid, 5 gm.; sodium sulfate, 10 gm.; sterilized water, 1 liter. (2) sodium chlorid, 7.5 gm.; sterilized water, 1000 c.c. Syn., *S., Physiologic.* **S. of Hoffmann.** See *S., Anti-epitheliomatous.* **S., Huchard's:** sodium phosphate, 10 gm.; sodium chlorid, 5 gm.; sodium sulfate, 2.5 gm.; distilled water, to 100 c.c. **S., Huchard's Concentrated:** sodium chlorid, 5 gm.; sodium phosphate, 10 gm.; sodium sulfate, 2.5 gm.; carbolic acid, 1.5 gm.; water, 100 c.c. **S., Jequiritol,** an antitoxin prepared on the principle of Behring's method, which has the power of rapidly and surely paralyzing the effects of jequiritol in the human system when applied locally in the conjunctival sac, and when injected subcutaneously. **S., Kronecker and Lichtenstein's:** sodium chlorid, from 6 to 7.5 gm.; sodium carbonate, 0.10 gm.; water, 1000 c.c. **S., Latta's:** sodium chlorid, from 3 to 5 gm.; sodium carbonate, 1.7 gm.; water, 3400 c.c. **S., Leclerc's** (very strong): sodium chlorid, 4 gm.; sodium phosphate, sodium sulfate, of each, 0.5 gm.; boiled distilled water, 100 c.c. **S., Leukotoxic,** one which destroys the leukocytes. **S., v. Leyden's,** blood-serum taken from convalescent scarlet-fever patients. Cf. *S., Moser's.* **S., Luton's:** crystallized sodium phosphate, 5 gm.; sodium sulfate, 10 gm.; boiled distilled water, 100 c.c. **S., Maragliano's,** an antituberculous serum obtained from an ass or horse treated with repeated injections of tuberculous toxin. **S., Marmorek's,** a polyvalent serum obtained by the inoculation of animals with streptococci of various origin. **S., Mathieu's:** sodium sulfate, 6 gm.; sodium phosphate, 4 gm.; sodium chlorid, 1 gm.; glycerin, 20 gm.; distilled water, to 100 c.c. **S., Moser's** (Paul), an antistreptococcous serum obtained by simultaneous inoculation of horses with several varieties of streptococci taken from the blood of scarlet-fever patients. **S., Neurotoxic,** one which acts directly upon the nerve tissues. **S., Normal,** that of which 0.1 c.c. neutralizes 10 times the minimal lethal dose of a specific bacterial poison. **S., Paquin's,** an antitoxic serum of tuberculosis produced by successive inoculation of horses. It is injected in daily doses of from 10 to 150 drops. **S., Parascandolo's,** an immunizing serum produced by inoculation of animals with mixed cultures of streptococci and staphylococci. **S., Physiologic.** See *S., Hayem's* (2). **S.s, Polyvalent,** serums derived from animals infected by a number of different streptococci. **S., Protective,** any immunizing serum. Cf. *S., Haffkine's.* **S., Renzi's:** iodin, 1 gm.; potassium iodid, 3 gm.; sodium chlorid, 6 gm.; water, 1000 c.c. **S., Richet and Héricourt's.** See *S., Anticancerous.* **S., Roussel's:** sodium phosphate, 50 gm.; water, 1000 c.c. **S., Roux's.** See *S., Antidiphtheric.* **S., Sapellier's:** sodium chlorid, 60 gm.; potassium chlorid, 5 gm.; sodium carbonate, 31 gm.; sodium phosphate, 4.5 gm.; potassium sulfate, 3.5 gm.; boiled water, 1000 c.c. **S., Schiess's:** sodium chlorid, 75 gm.; sodium bicarbonate, 50 gm.; water, 1000 c.c. **S., Schwartz's:** sodium chlorid, 6 gm.; solution of caustic soda, 2 drops; water, 1000 gm. **S., Sclavo's,** cultures of pneumococci in egg-albumin. **S., Seraphthin,** a proprietary prophylactic against foot and mouth disease. **S. sublimatum,** one part of corrosive sublimate to from 50 to 100 parts of serum. It is used subcutaneously as antiseptic, and for impregnating bandages. **S., Sydmann's:** sodium chlorid, 6 gm.; sodium bicarbonate, 1 gm.; water, 1000 c.c. **S. of Tizzoni and Cattani,** obtained by evaporating in a vacuum the serum of an immunized horse. Each gram of the powdered residue corresponds to 10 c.c. of the serum. **S., Trunecek's,** for the treatment of symptoms caused by arteriosclerosis: sodium chlorid, 4.92 gm.; sodium sulfate, 0.44 gm.; sodium carbonate, 0.21 gm.; potassium sulfate, 0.40 gm.; sodium phosphate, 0.15 gm. This is given in hypodermatic injections of 1 c.c. every 3 or 4 days, increasing to 5 to 7 c.c., or in rectal injections of 35 c.c. **S., Vandervelde's:** 1. Sodium glycerophosphate, sodium chlorid, of each, 3 gm.; water, 1000 c.c. 2. Sodium chlorid, potassium chlorid, of each, 3 gm.; sodium carbonate, 2.5 gm.; sodium phosphate, 3 gm.; potassium sulfate, 2 gm.; water, to 100 c.c. **S. of Villiers and Wlaeff.** See *S., Antiepitheliomatous.* **S. of Wlaeff.** See *S., Anti-epitheliomatous.* **S., Yersin's,** serum of a horse immunized by intravenous injection of a virulent culture of the plague bacillus.

Serumal (*se'-ru-mal*). Relating to the serum. **S. Calculus,** a calculus formed about the teeth by exudation from diseased gums.

Sesquih. Abbreviation of *sesquihora,* an hour and a half.

Sesunc. Abbreviation of *sesuncia,* an ounce and a half.

Set [ME. *setten*]. 1. To reduce the displacement in a fracture and apply suitable bandages. 2. To harden, to solidify—as a cement or amalgam.

Setaria (*se-ta'-re-ah*) [*seta,* a bristle]. A genus of grasses including millet, *S. italica,* Beauv.

Setarin (*se-ta'-rin*). A toxic glucosid isolated by E. F. Ladd, 1899, from millet, *Setaria italica,* Beauv.

Setfast. See *Furunculus* (Illus. Dict.).

Setose (*se'-tōz*) [*seta,* a bristle]. Beset with bristle-like appendages.

Sevadilla. See *Cebadilla* (Illus. Dict.).

Seviparous (*se-vip'-ar-us*) [*sevum,* suet; *parere,* to produce]. Sebiferous, fat-producing.

Sextipara (*seks-tip'-ar-ah*) [*sextus,* sixth; *parere,* to produce]. A woman in labor for the sixth time.

Sexual. (See Illus. Dict.) **S. Involution,** the menopause.

Shabbed, Shabby (*shabd, shab'-e*). Mangy, scabby.

Shaddock (*shad'-ok*) [*Captain Shaddock,* who introduced the tree into the West Indies from Java in the early part of the eighteenth century]. The fruit of *Citrus decumana,* L., grape fruit.

Shadowgram (*shad'-o-gram*). See *Skiagram.*

Shadowgraph (*shad'-o-graf*). See *Skiagraph.*

Shameful Diseases. Venereal diseases; those the avowal of which would tend to incriminate or degrade the patient.

Shank. (See Illus. Dict.) **S., Black,** a disease of potatoes due to *Bacillus phytophthorus.*

Shanker (*shank'-ur*). See *Chancre* (Illus. Dict.).

Shape [AS. *gesceap,* a creation, pl. *gesceapu,* the genitals]. The vulva.

Share (*shār*) [AS. *scare,* the pubes]. **S.-bone,** the os pubis.

Shea Butter. See *Bambuc Butter.*

Sheath. (See Illus. Dict.) **S., Crural,** the femoral sheath. See under *Femoral* (Illus. Dict.). **S., Henle's.** (See Illus. Dict.) 2. The cellular layer forming the outer portion of the inner root-sheath of the hair. **S., Neural.** See *S., Medullary* (Illus. Dict.). **S. of the Optic Nerve.** See *S., Dural* (Illus. Dict.). **S., Pial,** the investment of the optic nerve derived from the pia. **S. of Rectus,** that formed by the aponeuroses of the external and internal oblique muscles and the transversalis. **S., Schwalbe's,** the delicate sheath which covers elastic fibers.

Sheldon's Method of hemostasis in disarticulation of the hip-joint consists in a preliminary disarticulation of the head of the femur, followed by the introduction of the

artery forceps into the wound behind the femur and clamping of the femoral vessels.

Shell. (See Illus. Dict.) **S.-hearing,** the induction of hallucinatory voices by listening to a shell.

Sherbet (*shur'-bet*) [Pers. *sharbat*]. An oriental, cooling drink made from fruit juices and water, sweetened, flavored, and iced with mountain snow.

Shield. (See Illus. Dict.) **S., Antithermic,** a protective covering of the cautery to prevent destruction of the tissues about the field of operation. **S. Bone,** the scapula.

Shikimi, Shikimia. See *Sikimin* (Illus. Dict.).

Shimu-mushi. See *Shima mushi* (Illus. Dict.).

Shorea (*sho-re'-ah*) [*Sir John Shore*, Baron Teignmouth, Governor General of India, 1793]. A genus of plants of the order *Dipterocarpæ*. **S. robusta,** Gaertn. f., the sal-tree, a native of the East Indies, yields Bengal dammar or dammar of the sal-tree.

Short. (See Illus. Dict.) **S.-circuiting,** a modification of Nélaton's operation for intestinal obstruction consisting either in lateral approximation and union or lateral implantation. **S.sightedness,** myopia. **S.-windedness,** dyspnea.

Shoulder. (See Illus. Dict.) **S., Noisy,** of R. H. Sayre, a grating of the muscles over the scapula on moving the shoulder up and down, believed to be due to a snapping tendon between or a bursa beneath the scapula. **S., Slipped, S., Splayed,** a dislocated shoulder. **S.-wrench,** a sprain or dislocation of the shoulder.

Shucks. A strong tea of corn shucks, used as a remedy for chronic malaria in the southern United States.

Shuttle-bone. The scaphoid.

Siagantritis (*si-ag-an-tri'-tis*). See *Siagonantritis* (Illus. Dict.).

Sialemesis (*si-al-em-e'-sis*) [σίαλον, saliva; ἔμεσις, vomiting]. The hysteric vomiting of saliva.

Sialic, Sialine (*si-al'-ik, si'-al-ēn*) [σιαλος, saliva]. Having the nature of saliva.

Sialoductilitis, Sialoductitis (*si-al-o-duk-til-i'-tis, si-al-o-duk-ti'-tis*). Inflammation of Stenson's duct.

Sialogenous (*si-al-oj'-en-us*) [σίαλον, saliva; γεννᾶν, to produce]. Generating saliva.

Sialosemeiology (*si-al-o-se-mi-ol'-o-je*) [σίαλον, saliva; σημεῖον, sign; λόγος, science]. Diagnosis based upon examination of the saliva.

Siberian Cattle Plague. See *Anthrax* (Illus. Dict.).

Sibilismus. (See Illus. Dict.) **S. aurium,** tinnitus aurium.

Sicco (*sik'-o*). Dried hematogen (*q. v.*); a black-brown, tasteless powder, soluble in water, indicated in anemia, chlorosis, etc. Dose, 5–7 gm. daily; children, 0.25 gm.

Sickingia (*sik-in'-je-ah*) [*Count v. Sickingen*, of Vienna]. A genus of rubiaceous plants. **S. rubra,** Schum., casca de arariba, a species found in Brazil and Japan, furnishes arariba bark, used in intermittent fever. It contains the alkaloid aribin and a red coloring-matter. **S. viridiflora,** Schum., casca de arariba branca, of Brazil, furnishes a bark used in malaria.

Sickness. (See Illus. Dict.) **S., African Horse-.** See *Edemamycosis*, and *Horse-sickness*. **S., Ceylon,** beriberi. **S., Country,** nostalgia. **S., Creeping,** chronic ergotism. **S., Jumping,** a form of choromania. See *Jumpers* (Illus. Dict.). **S., Leaguer,** typhus. **S., Milk.** (See Illus. Dict.) 2. See *Milk-sickness* (Illus. Dict.). **S., Painted.** See *Pinta* (Illus. Dict.). **S., Railway.** See *Car-sickness* (Illus. Dict.). **S., Salt,** a condition of starvation due to animals being confined on poor pastures consisting of dry wire grass and other inferior vegetation. **S., Spotted.** See *Pinta* and *Carate* (Illus. Dict.). **S., Sweating.** See *Sweating-sickness* (Illus. Dict.). **S., Theater,** Paul's name for malaise with dyspnea and oppression followed by weak pulse and syncope, usually observed in women who have dined hurriedly and reached a crowded theater in a heated condition. See *Vertigo, Stomachal* (Illus. Dict.).

Sicopirin, Sicopyrin (*sik-o-pi'-rin*). $C_{16}H_{12}O_5$. A glucosidal body found by Peckolt in the root-bark of *Bowditchia virgiloides*, H. et B.

Sida (*si'-dah*) [σιδη, a malvaceous plant]. A genus of plants of the order *Malvaceæ*. **S. paniculata,** L., a species of Peru, is an active vermifuge. Its action is believed to be due to the very minute but resisting bristles which cover its leaves. **S. rhombifolia,** L., Queensland hemp, containing a great amount of mucilage, is used in Australia for snake-bite, pulmonary complaints, and in making poultices.

Side. (See Illus. Dict.) **S.-chain.** See *Receptor*. **S.-c. Theory.** See under *Lateral* and under *Immunity*.

Siderant, Siderante (*sid'-er-ant, sid-er-an'-te*) [*siderari*, to be blasted or planet struck]. Characterized by sudden and abrupt onset as though the result of malign astral influences.

Siderism (*sid'-er-ism*) [*siderites*, the lodestone]. The curative influences long supposed to be exerted over the body by the lodestone; the priests of Samothrace drove a thriving trade in magnetized iron rings worn as amulets and cure-alls; they were worn by the worshipers of the Cabiri, afterward by the Roman priests of Jupiter, and in recent times so-called "rheumatism rings" and magnetic belts and insoles give evidence of the persistence of a belief in siderism.

Siderophone (*sid-er'-o-fōn*) [σιδηρος, iron; φωνή, a sound]. An electric appliance devised by Martin Jannson (1902) as an improvement upon Asmus' sideroscope for detecting the presence of small splinters of iron.

Sideroscope (*sid-er'-o-skōp*) [σίδηρος, iron; σκοπεῖν, to examine]. An instrument for the detection of particles of iron or steel in the eyes.

Siderosis. (See Illus. Dict.) 2. A recognized type of lung-disease (pneumoconiosis) due to the inhalation of metallic dust. Cf. *Anthracosis; Chalicosis; Silicosis: Byssinosis*.

Sidonal (*si'-don-al*). See *Piperazin quinate*. **S., New,** quinic acid anhydrid, a white tasteless powder, soluble in water, used as a uric acid solvent. Dose, 75–120 gr. (5–8 gm.) daily, given in 4 or more doses.

Sigillation (*sij-il-a'-shun*) [*sigillum*, a seal]. The mark of a cicatrix.

Sigmatoid. See *Sigmoid* (Illus. Dict.).

Sigmoidopexy (*sig-moid-o-peks'-e*) [*sigmoid*; πῆξις, a fixing]. An operation for prolapse of the rectum by fixation of the sigmoid flexure.

Sigmoidoproctostomy (*sig-moid-o-prok-tos'-to-me*) [σίγμα, letter s; εἶδος, likeness; πρωκτός, anus; τομή, a cutting]. Anastomosis of the sigmoid flexure of the colon with the rectum.

Sigmoidoscope (*sig-moid'-o-skōp*) [*sigmoid*; σκοπεῖν, to view]. An appliance for the inspection of the sigmoid flexure; it differs from the proctoscope in its greater length and diameter.

Sigmoidoscopy (*sig-moid-os'-ko-pe*) [*sigmoid*; σκοπεῖν, to examine]. Visual inspection of the sigmoid flexure with the aid of special instruments.

Signs and Symptoms. (See Illus. Dict.) **S., Achilles,** the Achilles tendon reflex. **Adherent Pericardium.** See *S., Broadbent's, Kreyssig's, Kussmaul's, Sanders', Williams'*. **S., Ahlfeld's,** irregular tetanic contractions affecting localized areas of the uterus, observed after the third month of pregnancy. **Alcoholism.** See *S., Quinquaud's*. **Andral's Decubitus,** the position usually assumed in the early stage

of pleurisy by the patient, who seeks to alleviate the pain by lying on the sound side. **Anesthesia.** See *S., Lehman's.* **Aneurysm.** See *S., Bozzolo's, Cardarelli's, Gerhardt's, Glasgow's, Hope's, Perez's, Sansom's.* **Angina pectoris.** See *S., Beaumè's.* **Aortic Insufficiency.** See *S., Müller's, Musset's, Traube's.* **Atony, Intestinal.** See *S., Boas'.* **S., Auenbrugger's,** bulging of the epigastric region in cases of extensive pericardial effusion. **S., Aufrecht's,** short and feeble breathing heard just above the jugular fossa on placing the stethoscope over the trachea; it is noted in tracheal stenosis. **S., Babinski's,** diminution or absence of the Achilles tendon reflex in true sciatica as distinguished from hysteric sciatica. **S., Baillarger's,** pupillary inequality in paralytic dementia. **S., Ballet's,** ophthalmoplegia externa, characterized by the loss of all voluntary movements of the eyeball, with preservation of the automatic movements and integrity of the movements of the pupil. It is seen in hysteria and exophthalmic goiter. **S., Bamberger's,** allochiria; perception of a stimulus applied to the skin of one extremity at the corresponding place on the other extremity. **S., Bard's,** to differentiate between organic and congenital nystagmus. In the former the oscillations of the eyeball increase when the patient follows the physician's finger moved before his eye alternately from right to left, and from left to right. In the latter the oscillations disappear under these conditions. **S., Bareggi's.** See *Reaction, Bareggi's.* **S., Beaumè's,** retrosternal pain in angina pectoris. **S., Beccaria's,** painful pulsating sensations in the occipital region during pregnancy. **S., Bechterew's.** See *Reaction, B.'s.* 2. Anesthesia of the popliteal space in tabes dorsalis. **S., Becker's,** spontaneous pulsation of the retinal arteries in exophthalmic goiter. **S., Béhier-Hardy's,** aphonia, an early symptom in pulmonary gangrene. **Bell's Phenomenon, Bell-Bernhardt's Phenomenon,** upward and outward rolling of the eyeball upon an attempt to close the eye of the affected side in peripheral facial paralysis. **S., Berger's,** an elliptic or irregular shape of the pupil sometimes seen in the early stage of tabes and paralytic dementia, and in paralysis of the third cranial nerve. **S., Bezold's,** the appearance of an inflammatory swelling a short distance below the apex of the mastoid process is evidence of mastoid suppuration. **Bieg's Entotic Test,** when words are audible only on being spoken into an ear-trumpet connected with a catheter placed in the eustachian tube, but not through the ear-trumpet as ordinarily applied, there is a probable lesion of the malleus or incus, which interferes with conduction. **S., Biernacki's,** analgesia of the ulnar nerve at the elbow; it is observed in tabes dorsalis and paretic dementia. **Bing's Test,** let a vibrating tuning-fork be held on the vertex until it has ceased to be audible; then close either ear, and the fork will be heard again for a certain period. If this period of secondary perception is shortened, there exists a lesion of the sound-conducting apparatus; if normal and yet deafness is present, the perceptive apparatus is involved. **S., Bird's,** a well-defined zone of dullness with absence of the respiratory sound in hydatid cyst of the lung. **S., Boas',** the presence of lactic acid in the gastric contents in cases of cancer of the stomach. **Boas' Test,** in cases of intestinal atony a splashing sound can be obtained on pressure upon the abdominal wall after the injection of a small quantity (200 to 300 c.c.) of water into the bowel. **S., Bolognini's,** on pressing with the tips of the fingers of both hands alternately upon the right and left of the abdomen of a patient who is lying on his back and whose abdominal muscles are relaxed by flexion of the thighs, a sensation of friction within the abdomen is perceived; it is noted in the early stages of measles. **S., Bordier-Frenkel's.** See *Bell's Phenomenon.* **Borsieri's Line,** in the early stages of scarlet fever, a line drawn on the skin with the finger-nail leaves a white mark which quickly turns red and becomes smaller in size. **Bouillaud's Metallic Tinkling,** a peculiar clink sometimes heard to the right of the apex-beat in cardiac hypertrophy. **S., Bouveret's,** in intestinal obstruction; this is applicable only to the larger gut. Great distention of the cecum and a large elevation in the right iliac fossa. **S., Bozzolo's,** visible pulsation of the arteries of the nares, said to occur in some cases of aneurysm of the thoracic aorta. **S., Braun-Fernwald's,** an early sign of pregnancy consisting in an increased thickness of one-half of the body of the uterus and in the presence of a longitudinal median groove, these changes being dependent upon an unequal consistence of that organ. **Beatty-Bright's Friction Sound, Bright's Friction Sound,** the friction sound produced by inflammation of the pleura. **S., Broadbent's,** a visible retraction, synchronous with the cardiac systole, of the left side and back in the region of the eleventh and twelfth ribs, in adherent pericardium. **S., Browne's (Crichton),** tremor of the labial commissures and outer angles of the eyes in the early stage of paralytic dementia. **S., Bryson's,** diminished power of expansion of the thorax during inspiration; occasionally observed in exophthalmic goiter and neurasthenia. **Callaway's Test,** in dislocation of the humerus the circumference of the affected shoulder, measured over the acromion and through the axilla, is greater than that of the sound side. **Cancer.** See *S., Boas', de Morgan's, Rommelaere's, Rust's, Spiegelberg's, Semon's.* **S., Cardarelli's,** the lateral movement of the trachea as an indication of aneurysm of the aorta. **Cardiac Hypertrophy.** See *S., Bouillaud's.* **S., Castellino's.** See *S., Cardarelli's.* **S., Cathélineau's.** See *S., Tourette's* (Gilles de la). **Cerebral Hemorrhage.** See *S., Prèvost's.* **S., Charcot's,** signe du sourcil. In facial paralysis the eyebrow is raised, in facial contracture it is lowered. **S., Charcot-Marie's.** See *S., Marie's.* **S., Charcot-Vigouroux's.** See *S., Vigouroux's.* **Chlorosis.** See *S., Golonboff's.* **Cleemann's Test,** in fracture of the femur with shortening there is a wrinkle above the ligamentum patellæ which disappears when the shortening is corrected by extension. **S., Cling** (Ger. Klebe). See *S., Gersuny's.* **S., Comby's,** a form of stomatitis involving the buccal mucosa, diagnostic of incipient measles. There is slight swelling and the mucous membrane becomes reddish, the superficial epithelial cells become whitish as if brushed over by a paint brush. It may occur evenly or in patches. Cf. *Koplik's spots.* **Coxalgia.** See *S., Erichsen's.* **S., Crichton Browne's.** See *S., Browne's.* **S., Dance's,** a depression about the right flank or iliac fossa, regarded by Dance as indicating invagination of the cecum. **S., Demarquay's,** immobility or lowering of the larynx during deglutition and phonation; it is characteristic of tracheal syphilis. **Dementia.** See *S., Baillarger's, Berger's, Biernacki's, Browne's.* **Diabetes.** See *S., Unschuld's.* **Diaphragm Phenomenon.** See *S., Litten's.* **Dislocation.** See *S., Dugas', Hamilton's.* **S., Doane's** (Wm. C.), deafness in one ear in typhoid fever presages death; deafness in both ears is a good prognosis. **S., Duchenne's,** sinking-in of the epigastrium during inspiration in cases of marked hydropericardium or impaired movement of the diaphragm from pressure or paralysis.

Duchenne's Attitude, in paralysis of the trapezium the shoulder droops; the shoulder-blade see-saws so that its internal edge instead of being parallel to the vertebral column becomes oblique from top to bottom and from without in. **Dugas' Test,** in dislocation of the shoulder-joint the elbow cannot be made to touch the side of the chest when the hand of the affected side is placed on the opposite shoulder. **S., Duncan Bird's.** See *S., Bird's.* **S., Dupuytren's Eggshell,** the sensation of a delicate crepitant shell (eggshell crackling) imparted on slight pressure in certain cases of sarcoma of long bones. **Echinococcous Cyst.** See *S., Lennhoff's.* **Eitelberg's Test,** if a large tuning-fork be held at intervals before the ear during fifteen or twenty minutes, the duration of the perception of the vibration, during these periods, increases in case the ear is normal, but decreases when a lesion of the sound-conducting apparatus exists. **S., Ellis'.** See *Line, Ellis'* (Illus. Dict.). **Enteroptosis.** See *S., Stiller's.* **Erben's Phenomenon,** a temporary slowing of the pulse on bending forward or attempting to sit down; it has been observed in neurasthenia. **S., Erb's:** (1) increase of the electric irritability of the motor nerves in tetany; (2) dulness on percussion over the manubrium sterni in akromegaly. **S., Erb-Westphal's.** See *S., Westphal's* (Illus. Dict.). **S., Erichsen's,** to differentiate coxalgia from sacroiliac diseases: compression of the two iliac bones causes pain in the latter but not in the former affection. **S., Ewart's,** in marked pericardial effusion the left clavicle is so raised that the upper border of the first rib can be felt with the finger as far as the sternum. **S., First Rib.** See *S., Ewart's.* **S., Fiske-Bryson's.** See *S., Bryson's.* **S., Flindt-Koplik's.** See *Koplik's Spots.* **Fracture.** See *S., Cleemann's, Hueter's, Morris'.* **S., Frederici's,** perception of the heart-sounds over the whole abdomen in cases of perforative peritonitis with escape of gas into the peritoneal cavity. **S., Frenkel's,** diminished tone (hypotonia) of the muscles of the lower extremities in tabes dorsalis. **S., Fuerbringer's,** a subphrenic abscess may be distinguished from a collection of pus above the diaphragm by the transmission, in case of the former, of the respiratory movements to a needle inserted into the abscess. **S., Gangolphe's,** in intestinal obstruction a serosanguineous effusion in the abdomen soon after strangulation has taken place. **Gangrene.** See *S., Bêhier-Hardy's.* **Gardiner-Brown's Test,** in labyrinthine disease the patient ceases to hear the sound of a tuning-fork placed upon the vertex from half a second to several seconds before the examiner ceases to feel its vibrations. **Garland's S-curve.** See *Line, Ellis'* (Illus. Dict.). **Gastrosucchorea.** See *S., Reichmann's.* **Gellé's Test,** the vibrations of a tuning-fork placed in contact with a rubber tube, the nozzle of which is inserted into the meatus, are distinctly perceived when the air is compressed by pressure upon the bulb attached to the tube. This does not occur when the chain of ossicles is diseased. **S., Gerhardt.** 1. A systolic bruit heard between the mastoid process and spinal column in cases of aneurysm of the vertebral artery. 2. Incomplete filling of the external jugular vein on the affected side, occasionally seen in thrombosis of the transverse sinus. 3. A band of dulness on percussion, superimposed upon the normal precordial dulness, about 3 cm. in width and extending toward the left clavicle; it is observed in cases of the persistence of the ductus arteriosus. 4. The absence of the movement of the larynx in dyspnea due to aneurysm of the aorta. In dyspnea from other causes, the excursions of the larynx are extensive. **S., Gersuny's,** a peculiar sensation of adhesion of the mucosa of the bowel to the fecal mass while pressure is made with the tips of the fingers in cases of coprostasis. Syn., *Cling Sign.* **Giraldès' "Bonnet à poil,"** widening of the cranium in the frontal region in chronic hydrocephalus. **S., Glasgow's,** a systolic sound in the bronchial artery, heard in latent aneurysm of the aorta. **S., Golonboff's,** of chlorosis, an acute pain located directly over the spleen, and pain on percussion over the ends of the long bones, especially the tibias. **Goiter, Exophthalmic.** See *S., Ballet's, Becker's, Bryson's, Joffroy's, Mann's, Möbius', Vigoroux's, Weiss'.* **Goodell's Law:** "When the cervix is as hard as one's nose, pregnancy does not exist; when it is as soft as one's lips, pregnancy is probable." **S., Gould's Bowedhead,** in retinitis pigmentosa or other disease destroying the peripheral portion of the retina, the patient often bows the head low to see the pavement, in order to bring the image upon the functional portion of the retina. **S.s, Gousset's,** of phrenic neuralgia, a painful point always present and well defined to the right of the fourth or fifth chondrosternal articulation; it must not be confounded with the retrosternal pain of chronic aortitis. **S., Gowers',** intermittent and abrupt oscillations of the iris under the influence of light, anterior probably to the total loss of the reflex; it is occasionally seen in tabes dorsalis. **v. Graefe's Spots,** certain spots near the supraorbital foramen, or over the vertebras, which, when pressed upon, caused a sudden relaxation of the spasm of the eyelids in cases of blepharofacial spasm. **Grancher's Triad,** the three symptoms characteristic of incipient pulmonary tuberculosis: weakened vesicular murmur, increased vocal fremitus, and skodaic resonance. **S., Graves',** an increase of the systolic impulse often noted in the beginning of pericarditis. **S., Greene's** (C. L.) **Percussion,** in percussion of the free cardiac border during full inspiration and again during forced inspiration, the patient either standing or sitting, it will be noted that the border is displaced outward by the expiratory movement in cases of pleuritic effusion. **S., Griesinger's.** 1. An edematous swelling behind the mastoid process in thrombosis of the transverse sinus. 2. In thrombosis of the basilar artery, compression of the carotids produces symptoms of cerebral anemia (pallor, syncope, convulsions). This is a sign of doubtful value, since it may also be caused by disturbances of the cerebral circulation resulting from cardiac and vascular lesions (especially arteriosclerosis). **S., Grisolle's,** the early eruption of smallpox is distinguished from that of measles by the fact that the papules remain distinct to the touch even when the skin is tightly stretched. **S., Guye's,** aprosexia occurring in childhood with adenoid vegetations of the nasopharynx. **S., Haab's.** See *Reflex, Haab's Pupil.* **Hall's (Marshall) Facies,** the prominent forehead and small features peculiar to hydrocephalus. **Hamilton's Test,** in dislocation of the shoulder-joint a ruler applied to the dislocated humerus may be made to touch the acromion and external condyle at the same time. **S., Hardy-Béheir's,** aphonia, an early symptom of pulmonary gangrene. **S., Heim-Kreyssig's.** See *S., Kreyssig's.* **S., Heim-Sanders'.** See *S., Sanders'.* **Hemiplegia.** See *S., Babinski's, Schäffer's.* **S., Heryng's,** an infraorbital shadow observed on introducing an electric light into the mouth in empyema of the antrum of Highmore. **S., Hochsinger's,** the existence of indicanuria in tuberculosis of childhood. **S., Hoffmann's,** increase of the mechanical irritability of the sensory nerves in tetany. **S., Hope's,** double cardiac beat noted in aneurysm of the aorta. **S., Howship-Romberg's.** See *S., Romberg's* (Illus. Dict.). **S.,**

Huchard's, the difference in the pulse between the standing and recumbent posture is less in persons with arterial hypertension and may even be the reverse of that of the normal condition. **S., Huebl's**, an early sign of pregnancy consisting in an abnormal thinness and compressibility of the lower segment of the uterus as compared with that part above the insertion of the sacrouterine ligaments, the bimanual examination being carried out with one finger in the rectum. **S., Hueter's**, absence of transmission of osseous vibration in cases of fracture with fibrous interposition between the fragments. **Hydatid Cyst.** See *S., Rovighi's*. **Hysteria.** See *S., Ballet's, Putnam's, Tourette's, Weiss'*. **Intestinal Obstruction.** See *S., Bouveret's, Cling, Gangolphe's, Schlange's, v. Wahl's*. **S., Jacquemier's**, blue coloration of the vaginal mucosa appearing about the twelfth week of pregnancy. **S., Jaffé's**, the flow of pus from a tube inserted into a subdiaphragmatic abscess is more abundant during inspiration than during expiration; if the collection is thoracic, the inverse holds true. Paralysis of the diaphragm prevents the manifestation of this sign. **S., Joffroy's.** 1. Absence of facial contraction when the patient suddenly turns his eyes upward; in exophthalmic goiter. 2. Phénomène de la hanche. Rhythmic twitching of the glutei on pressure upon the gluteal region in cases of spastic paraplegia and sciatica. **S., Josseraud's**, a peculiar loud, metallic sound, heard over the pulmonic area, and preceding the friction-sound in acute pericarditis. **Justus' Test**, transient reduction of hemoglobin following the administration of mercury by inunction or hypodermic injection in syphilis. **S., Kelley's**, of pleural effusion in children: A preference for lying upon the back or propped up high in bed and avoidance of bending toward or pressing upon the affected side. **S., Kellock's**, increased vibration of the ribs on sharply percussing them with the right hand, the left hand being placed flatly and firmly on the lower part of the thoracic wall, just below the nipple; it is elicited in pleural effusion. **S., Kennedy's**, of pregnancy, the umbilical or funic souffle. **S., Kernig's**, contracture or flexion of the knee and hip-joint, at times also of the elbow, when the patient is made to assume the sitting posture; it is noted in meningitis. **S., Klebe** (Ger.). See *S., Gersuny's*. **König's Symptom-complex.** 1. Alternation, for a long period, of constipation and diarrhea, and irregular attacks of colic which are generally of short duration and terminate suddenly. During these attacks the abdomen is distended, there exists frequently a visible peristalsis, and a loud gurgling is heard in the ileocecal region. These symptoms are characteristic of tuberculous stenosis of the cecum. 2. Blue-blindness in granular kidney. **Koplik's Spots**, minute bluish-white spots surrounded by a reddish areola, observed on the mucous membrane of the cheeks and lips during the prodromal stage of measles. **S., Kreyssig's**, retraction of the epigastrium and the contiguous portions of the false ribs with each systole, in adherent pericardium. **S., Krisowski's**, of congenital syphilis, radiating lines about the mouth and the union of the hard palate with the posterior pharyngeal wall by fibrous tissue. **S., Kussmaul's**, swelling of the cervical veins during inspiration in adherent pericardium and mediastinal tumor. **Labyrinthine Disease.** See *S., Gardiner-Brown's*. **S., Lancisi's**, very feeble heart-beats amounting to a trembling of the heart, perceived by palpation in grave myocarditis. **S., Landou's**, in diagnosis of malignant disease inability to grasp the uterus bimanually in the presence of slight ascites. **S., Laségue's**, (1) incapacity of the anesthetic hysteric individual to move the extremity which he is prevented from seeing; (2) to differentiate sciatica from hip-joint disease: in the case of the former, flexion of the thigh upon the hip is painless or easily accomplished when the knee is bent. **S., Lehman's**, in the administration of chloroform, to prognosticate as to a ready or difficult anesthesia, if the eyelids closed by the anesthetizer reopen at once, wholly or in part, the anesthesia will be difficult. The eyes will remain closed from the beginning in those who take chloroform well. **S., Lennhoff's**, in cases of echinococcous cyst on deep inspiration a furrow forms above the tumor between it and the edge of the ribs. **S., Leyden's**, in cases of subphrenic pyopneumothorax monometric observation shows that the pressure in the abscess cavity rises during expiration. The reverse was held by Leyden to occur in true pneumothorax. **S., Litten's**, "diaphragm phenomenon," retraction of the lateral portion of the thorax, where the diaphragm is inserted, the retracted portions being lowered during inspiration and rising during expiration. It is absent in pleuritic adhesions, effusion into the pleural cavity, emphysema, etc. **S., Lucas'**, distention of the abdomen, an early sign of rickets. **S., Macewen's**, increased resonance on combined percussion and auscultation of the skull in certain gross lesions of the intracranial contents—*e. g.*, in cerebral abscess or overdistended lateral ventricles. **S., Magnan's**, in chronic cocainism; hallucination of cutaneous sensibility characterized by a sensation of foreign bodies under the skin, which are described as inert and spherical, varying in size from a grain to a nut, or as living things, worms, bugs, etc. **S., Mann's**, diminished resistance of the scalp to the galvanic current in traumatic neuroses. **S., Mann's** (Dixon), a disturbance of the normal balance of the muscles in the two orbits so that one eye appears to be on a lower level than the other; it is seen in exophthalmic goiter and other affections characterized by tachycardia. **S., Marie's, S., Marie-Kahler's**, tremor of the extremities or the whole body in exophthalmic goiter. **S.s, Mayor's**, of pregnancy, the fetal heart-sounds. **Measles.** See *S., Bolognini's, Comby's, Koplik's, Meunier's*. **S., Meltzer's**, normally, on auscultation of the heart (at the side of the xiphoid appendix) there is heard, after swallowing, a first sound produced by the flowing of fine drops, and six or seven seconds after, a glou-glou. According to Meltzer, the second sound fails in the case of occlusion or pronounced contraction of the lower part of the esophagus. **Meningitis.** See *S., Kernig's, Roger's, Simon's, Squire's*. **S., Meunier's**, of measles, a daily loss of weight noticed four or five days after contagion. This may amount to 50 grams daily, commencing five or six days before the appearance of catarrhal or febrile symptoms. **S., Meyer's**, numbness of the hands or feet associated with formication. It is observed in the eruptive stage of scarlet fever. **Middle-ear Disease.** See *S., Politzer's, Schwabach's*. **S., Möbius'**, inability to retain the eyeballs in convergence in exophthalmic goiter. **Morgan's (de) Spots**, bright red nevoid spots frequently seen in the skin in cases of cancer. **Morris' Test**, a rod, graduated from the center and provided with sliding pointers, is placed across the abdomen, so that its center corresponds to the median line of the body, and the pointers are moved along it until they reach the outer surface of the greater trochanter. In cases of fracture of the neck of the femur a discrepancy will be found on comparing the measurements on the two sides of the body. **S., Müller's**, pulsation of the tonsils and soft palate in cases of aortic insufficiency.

S., Murat's, pulmonary tuberculosis; vibration of the affected part of the chest with a sense of discomfort while talking aloud. **S., Musset's** (named from the poet de Musset, who presented the phenomenon), rhythmic movements of the head synchronous with the radial pulse, observed in persons with an aortic affection; it is considered a pathognomonic sign of an affection of the circulatory system. **Mussey's (de) Point or Symptom,** "bouton diaphagmatique," a point intensely painful on pressure at the intersection of a line continuous with the left border of the sternum and of another forming a prolongation of the tenth rib. It is noted in diaphragmatic pleurisy. **Myocarditis.** See *S., Lancisi's.* **Myopia.** See *S., Weiss'.* **Nephrolithiasis.** See *S., Thornton's.* **Neuralgia.** See *S., Gousset's, Seelig-Müller's, Trousseau's.* **Neurasthenia.** See *S., Bryson's, Erben's, Rosenbach's, Stiller's, Weiss'.* **Neuroses, Traumatic.** See *S., Rumpf's.* **S., Nothnägel's,** paralysis of the facial muscles, which is less marked on voluntary movements than on movements connected with emotions. This symptom has been noted in cases of tumor of the optic thalamus. **Nystagmus.** See *S., Bard's.* **Occlusion.** See *S., Meltzer's.* **S., Oppolzer's,** on palpation the seat of the apex-beat is found to change with the alteration of the patient's posture in cases of serofibrinous pericarditis. **S., Osiander's,** of pregnancy, vaginal pulsation. **Palsy, Paralysis.** See *S., Bell's, Berger's, Bordier and Frenkel's, Duchenne's, Joffroy's, Revillioa's.* **S., Perez',** a loud friction murmur heard over the sternum when the patient raises his arms, especially the left, over his head and lets them fall again; it is noted in cases of aneurysm of the arch of the aorta and mediastinal tumors. **Pericardial Effusion.** See *S., Auenbrugger's, Ewart's, Rotch's, Sansom's, Sibson's.* **Pericarditis.** See *S., Graves', Josseraud's, Oppolzer's, Warthin's.* **Perigastritis.** See *S., Rosenheim's.* **Peritonitis.** See *S., Frederici's.* **S., Pfuhl's, S., P.-Jaffé's,** in subphrenic pyopneumothorax the liquid issues from the exploratory puncture or incision with considerable force during inspiration, while the contrary occurs in true pneumothorax. **S.s, Physical,** the symptoms derived from auscultation, percussion, etc. **S., Pinard's,** after the sixth month of pregnancy a sharp pain upon pressure over the fundus uteri is frequently a sign of breech presentation. **S., Pitres'.** 1. "Signe du cordeau." The angle formed by the axis of the sternum and the line represented by a cord dropped from the suprasternal notch to the symphysis pubis indicates the degree of deviation of the sternum in cases of pleuritic effusion. 2. Hypesthesia of the scrotum and testis in tabes dorsalis. **Pleural Effusion.** See *S., Kellock's, Litten's, Greene's, Pitres'* (1), *Przewalski's, Sieur's.* **Pleurisy.** See *S., Andral's, de Mussey's.* **S., Plumb-line.** See *S., Pitres'* (1). **Pneumothorax.** See *S., Leyden's, Pfuhl-Jaffé's.* **Politzer's Test,** in cases of unilateral middle-ear disease, associated with obstruction of the eustachian tube, the sound of a vibrating tuning-fork (C_2) held before the nares during deglutition is perceived by the normal ear only; if the tube be patulous, the sound sensation is frequently stronger in the affected ear. In unilateral disease of the labyrinth the tuning-fork is heard in the normal ear whether deglutition occur or not. **Pregnancy.** See *S., Ahlfeld's, Beccaria's, Goodell's, Huebl's, Jacquemier's, Kennedy's, Mayor's, Osiander's, Schäfer's, Rasch's, Reusner's, Rinmann's.* **S., Prévost's,** conjugate deviation of the eyes and head, which look away from the palsied extremities and toward the affected hemisphere; it is noted in cerebral hemorrhage. **S., Przewalski's** (B.), of pleurisy with effusion: narrowing of the intercostal spaces and increased rigidity of the intercostal muscles on the affected side. **S., Putnam's,** absolute increase of measurements from the anterior superior iliac spine to the internal malleolus; it is observed in hysteric hip disease. **S., Quinquaud's,** of chronic alcoholism: the subject for examination is directed to hold the tips of the outstretched fingers of one hand perpendicularly to the outspread palm of the examiner and to press upon it with only moderate firmness. In the course of two or three seconds if the person is addicted to alcohol, crepitation of the phalanges will be perceptible, as if the bones of each finger impinged roughly upon each other. The sound ranges in intensity from a slight grating to crashing. **S., Rasch's,** fluctuation obtained by applying two fingers of the right hand to the cervix, as in ballottement, and steadying the uterus through the abdomen with the left hand. It depends upon the presence of the liquor amnii, and is an early sign of pregnancy. **S., Reichmann's,** the presence in the stomach before eating in the morning, of an acid liquid mixed with alimentary residues; it is indicative of gastrosuccorrhea and pyloric stenosis. **S., Remak's,** the production, by the pricking of a needle, of a double sensation, the second being painful; it is noted in tabes dorsalis. **Retinitis.** See *S., Gould's, Roth's.* **S., Reusner's,** marked pulsation of the uterine uterus felt in the posterior culdesac during early pregnancy. **S., Revilliod's,** "signe de l'orbiculaire," inability of the patient to close the eye of the affected side only; it is observed in paralysis of the superior facial nerve. **Rickets.** See *S., Lucas'.* **S., Rinmann's,** of early pregnancy, slender cords radiating from the nipple; they are considered to be hypertrophic acini of the glands. **Rinné's Test,** if a vibrating tuning-fork be placed on the vertex, and then, before it has ceased to vibrate, held before a normal ear, the vibration is still distinctly perceived. The test is negative when a lesion exists. **S., Ripault's,** a change in the shape of the pupil on pressure upon the eye, transitory during life, but permanent after death. **S., Roger's,** subnormal temperature during the third stage of tuberculous meningitis, regarded by Roger as pathognomonic of the disease. **S., Romberg's.** 1. Swaying of the body and inability to stand when the eyes are closed and the feet placed together; it is seen in tabes dorsalis, hereditary cerebellar ataxia, etc. 2. Neuralgic pain in the course and distribution of the obturator nerve, pathognomonic of obturator hernia. **S., Rommelaere's,** diminution of the normal phosphates and chlorids of sodium in the urine is pathognomonic of cancerous cachexia. **S., Rosenbach's,** (1) loss of the abdominal reflex in inflammatory intestinal diseases; (2) tremor of the eyelids when the patient is asked to close them, often with insufficient closure of the lids. It is seen in neurasthenia. **S., Rosenheim's,** a friction sound heard on auscultation over the left hypochondrium in fibrous perigastritis. **S., Rosenthal's,** the application of a strong faradic current to the sides of the vertebral column causes burning and stabbing pains in cases of spondylitis. **S., Roser-Braun's,** absence of pulsations of the dura in cases of cerebral abscess, tumors, etc. **S., Rotch's,** dulness on percussion in the right fifth intercostal space in pericardial effusion. **Roth's Spots,** white spots, resembling those of albuminuric retinitis, seen in the region of the optic disc and the macula in cases of septic retinitis. **S., Roussel's,** a sharp pain caused on light percussion, in the subclavicular region between the clavicle and the third or fourth rib, originating 3 to 4 cm. from the median line and extending to and beyond the shoulder

and the supraspinal fossa; it is observed in incipient tuberculosis. **S., Roux's,** of suppurative appendicitis: if on palpation the empty cecum presents a special soft resistance comparable to that of a wet pasteboard tube. **S., Rovighi's,** hydatid fremitus; a thrill observed on combined palpation and percussion in cases of superficial hydatid cyst of the liver. **S., Rumpf's,** fibrillar twitching of muscles in traumatic neuroses. **S., Rust's,** at every change of position of the body, a patient suffering from caries or carcinoma of the upper cervical vertebras supports his head with the hand. **S., Sanders',** undulatory character of the cardiac impulse, most marked in the epigastric region, in adherent pericardium. **Sänger's Macula,** macula gonorrhoica, a bright red spot marking the orifice of the duct of Bartholin's gland in cases of gonorrheal vulvitis. **Sänger's Pupil Reaction,** for the differential diagnosis of cerebral syphilis and tabes: in amaurosis and optic atrophy of cerebral syphilis the pupil reflex to light may be preserved and even increased after a protracted stay in the dark, which is never the case in tabes dorsalis. **S., Sansom's.** 1. Considerable extension of dulness in the second and third intercostal spaces in pericardial effusion. 2. A rhythmic murmur transmitted through the air in the mouth when the lips of the patient are applied to the chestpiece of the stethoscope; it is heard in cases of aortic aneurysm. **S., Sarbo's,** analgesia of the peroneal nerve, occasionally observed in tabes dorsalis. **Scarlet Fever.** See *S., Borsieri's, Meyer's.* **S., Schäfer's,** of pregnancy, a characteristic discoloration in stripes, reddish on a livid background, which appears in the neighborhood of the urethra or on the vestibule of the vagina. The stripes run for the most part crosswise or oblique. The condition is regarded as due to a vasomotor reaction dependent upon the life of the child, as the stripes disappear as soon as the child within the womb is dead. **S., Schäffer's,** of hemiplegia. See *Reflex, Schäffer's.* **S., Schlange's,** in cases of intestinal obstruction the intestine is dilated above the seat of obstruction and peristaltic movements are absent below that point. **Schönlein's Triad,** purpuric exanthem, rheumatic phenomena, and gastrointestinal disorders in purpura rheumatica. **S., Schüle's,** vertical folds between the eyebrows, forming the Greek letter omega (omega melancholium), frequently seen in subjects of melancholia. **S., Schultze-Chvostek's.** See *S., Chvostek's* (Illus. Dict.). **Schwabach's Test,** the duration of the perception of a vibrating tuning-fork placed upon the cranium is prolonged beyond the normal in cases of middle-ear disease, but shortened when the deafness is due to a central cause. **Sciatica.** See *S., Babinski's, Joffroy's, Lasègue's.* **S., Seeligmüller,** mydriasis on the affected side in cases of neuralgia. **S., Semon's,** impaired mobility of the vocal cord in carcinoma of the larynx. **Sibson's Notch,** the inward curve of the upper left border of precordial dulness in acute pericardial effusion. **S., Sieur's,** "signe du sou," a clear, metallic sound sometimes heard in cases of pleural effusion on percussing the chest in front with two coins and auscultating behind. **S., Silex's,** radial furrows about the mouth, and coincidentally in other parts of the face; a pathognomonic sign of congenital syphilis. **S., Simon's,** immobility or retraction of the umbilicus during inspiration, sometimes seen in tuberculous meningitis. **Smallpox.** See *S., Grisolle's.* **S., Smith's** (Eustace), of bronchitis: a murmur audible over the sternum when the chin is drawn up. **S. of the Sou.** See *S., Sieur's.* **Spence's Test,** a tumor of the mammary gland can be distinguished from an inflammatory enlargement by the absence, in the latter case, of any tumefaction, there being only the lumpy and wormy sensation of the swollen acini and ducts. **S., Spiegelberg's,** a sensation like that of passing over wet india-rubber, imparted to the finger which presses on, and moves along, the affected part; it is noted in cancer of the cervix uteri. **Spondylitis.** See *S., Rosenthal's.* **S., Squires'** (G. W.), a rhythmic dilation and contraction of the pupil in basilar meningitis. **S., Steele's,** exaggerated pulsation over the whole area of the cardiac region; it is noted in intrathoracic tumor. **Stenosis.** See *S., Aufrecht's, Reichmann's, Traube's.* **S., Stiller's,** marked mobility or fluctuation of the tenth rib in neurasthenia and enteroptosis. Syn., *Costa fluctuans decima.* **S., Stokes'.** (See Illus. Dict.) 2. Marked feebleness of the first heart-sound, which calls for alcoholic stimulation, if it occurs during fevers. **S., Straus',** in facial paralysis from a central cause the hypodermic injection of pilocarpin causes no appreciable difference in the perspiration of the two sides, either as to time or quantity, whereas there is a marked retardation of the secretion on the affected side in severe peripheral paralysis. **S., Strauss',** the administration of fatty food by the mouth causes an increase in the amount of fatty constituents in the effusion of chylous ascites. **Syphilis.** See *S., Demarquay's, Justus', Krisowski's, Silex's, Wagner's.* **Tabes.** See *S., Bechterew's, Berger's, Biernacki's, Frenkel's, Gowers', Pitres'* (2), *Remak's, Romberg's, Sänger's, Sarbo's.* **S., Tchoudnovsky's,** in cases of pneumoperitonitis with intestinal perforation, a peculiar murmur heard on abdominal auscultation, at each respiratory movement, and in which the maximum intensity is situated at the surface of the perforation. **Tetany.** See *S., Bechterew's, Erb's, Hoffmann's, Weiss'.* **S., Thornton's,** violent pain in the flanks in nephrolithiasis. **S., Tourette** (Gilles de la), inversion of the ratio existing normally between the earthy phosphates and alkaline phosphates of the urine; it is found in paroxysms of hysteria. **Traube's Phenomenon,** a double sound, systolic and diastolic, heard over peripheral arteries, especially the femoral, in aortic insufficiency, occasionally also in mitral stenosis, lead-poisoning, etc. **S., Tresilian's,** of mumps: the opening of Stenson's duct on the inner surface of the cheek, outside the second upper molar, becomes a bright red papilla. **S., Troisier's,** enlargement of the left supraclavicular lymph-glands, an indication of malignant disease of the intraabdominal region. **Trousseau's Points apophysaires,** points sensitive to pressure over the dorsal and lumbar vertebras in intercostal and lumboabdominal neuralgias. **Tuberculosis.** See *S., Bareggi's, Grancher's, Hochsinger's, Murat's, Roussel's.* **Tumor.** See *S., Nothnägel's, Roser-Braun's, Spence's, Steel's.* **Typhoid.** See *S., Bareggi's, Doane's.* **S., Uhthoff's,** the nystagmus of multiple cerebrospinal sclerosis. **Ulnar Phenomenon,** a condition of analgesia of the trunk of the ulnar nerve on one side, absent in the majority of general paralytics and mostly present in other insane patients. **S., Unschuld's,** a tendency to cramps in the calf of the leg; it is an early sign in diabetes. **S., Vigoroux's,** the diminished resistance of the skin to the galvanic current in exophthalmic goiter. **S., Vincent.** See *Argyll-Robertson's Pupil* in *Table of Signs* (Illus. Dict.). **S., Vohsen-Davidsohn's.** See *S., Davidsohn's* (Illus. Dict.). **S., Voltolini-Heryng's.** See *S., Heryng's.* **S., Wahl's (von).** 1. Distention of the bowel (local meteorism) above the point at which there exists an obstruction. 2. A scraping or blowing sound, synchronous with the cardiac impulse, heard over an arterial trunk immediately after the partial division,

through injury, of the vessel. **S., Warthin's,** accentuation of the pulmonary sound in acute pericarditis. **S., Wegner's,** in fetal syphilis the dividing-line between the epiphysis and diaphysis of long bones, which under normal conditions is delicate and rectilinear, appears as a broad, irregular, yellowish line. **S., Weiss,** "facialis phenomenon," contraction of the facial muscles upon light percussion; it is noticed in tetany, neurasthenia, hysteria, and exophthalmic goiter. **S., Williams',** diminished inspiratory expansion on the left side in adherent pericardium. **Williams' Tracheal Sound,** a high-pitched tympanitic sound heard on percussion over the second and third ribs near the sternum, the mouth being open; it is noted in infiltration of the lung.

Signaletic (*sig-nal-et'-ik*). Relating to signalment.

Signalization, Signalment (*sig-nal-i-za'-shun, sig'-nal-ment*) [*signum*, a sign]. See *Bertillonage* (Illus. Dict.) and *Identification, Anthropometric.*

Siguatera. (See Illus. Dict.) [Sp. fish-poisoning.] 2. Poisoning from the ingestion of fresh food uninfected by bacteria but in which the toxin is a leukomain formed by the physiologic activity of the tissues.

Silberol (*sil'-bur-ol*). See *Silver Paraphenol-sulfonate.*

Silicon. (See Illus. Dict.) **S. Carbid,** a compound prepared by heating in an electric furnace silica and carbon in the presence of salt. Next to the diamond it is the hardest substance known. The pure salt forms colorless, transparent laminas of diamond-like luster. Its specific gravity is 3.22 and its index of hardness 9.5. **S. Tetracetate,** $Si(O.C_2H_3O)_4$, acetoorthosilicic anhydrid, a substance occurring in prismatic crystals.

Siliqua. (See Illus. Dict.) **S. olivæ, S. olivæ externa,** the nerve-fibers encircling the olive. **S. olivæ interna,** the dentoliva.

Silk. (See Illus. Dict.) **S. Gelatin,** a glutinous mass formed by boiling certain kinds of raw silk in water. It is used in bacteriology as a culture-medium for the majority of bacilli of water and air. **S., Tait's,** or cable twist; it differs from ordinary silk in containing the gums or animal matter imparted by the worm in the spinning process. [Truax.] **S.vine.** See *Periploca.*

Silphologic (*sil-fol-oj'-ik*) [σίλφη, an insect; λόγος, science]. Larval.

Silver. (See Illus. Dict.) **S. Arsenite,** Ag_3AsO_3, an alterative and antiseptic; used in skin-diseases. Dose, $\frac{1}{100}$–$\frac{1}{60}$ gr. (0.0005–0.0011 gm.). **S.-casein,** a fine white powder soluble in hot water, obtained from sodium casein by action of silver nitrate and alcohol. It is used in gonorrhea in 2%–10% solutions. **S. Chlorid,** AgCl, a white powder soluble in ammonium, potassium thiosulfate, or potassium cyanid. It is used as an antiseptic and a nerve sedative. Dose, $\frac{1}{3}$–$\frac{3}{4}$–1½ gr. (0.02–0.05–0.1 gm.). Syn., *Horn-silver; Luna cornea.* **S. Citrate,** $Ag_3C_6H_5O_7$, a fine dry powder soluble in 3800 parts of water, used as a surgical antiseptic and disinfectant. Application 1%–2% ointment or 1:4000 solution. Syn., *Itrol.* **S., Colloidal,** a form of metallic silver consisting of heavy greenish-black particles of metallic luster which when triturated with water form a greenish-black fluid. It is used in the treatment of septic diseases, applied in the form of an ointment. Syn., *Collargol; Argentum colloidale; Argentum Credé.* **S. Fluorid,** AgFl, a brown, glassy, elastic solid, very soluble in water, discovered by Paterno in 1901. It is used as an antiseptic. Syn., *Tachiol.* **S. Gelatose,** albargin. **S., German.** See *Argentan.* **S. Ichthyolate.** See *Ichthargan.* **S. Lactate,** $AgC_3H_5O_3 + H_2O$, a white soluble powder recommended as a surgical antiseptic. Injection in erysipelas, 0.3 gm. to 100 c.c. of water; as a wash, 1 teaspoonful of solution 1:50 in a glass of water. Syn., *Actol.* **S. Nucleate** or **Nucleid.** See *Nargol.* **S. Paraphenol Sulfonate,** an external antiseptic. Syn., *Silberol.* **S. and Potassium Cyanid,** $AgK(CN)_2$, very poisonous white crystals, soluble in 4 parts of water at 20° C. or 25 parts of 85% alcohol. It is antiseptic and bactericide. One part in 50,000 destroys anthrax bacilli. **S.-protalbin.** See *Largin.* **S. Sulfocarbolate, S. Sulfophenate,** a fine crystalline powder containing about 28% of metallic silver; it is a non-corrosive antiseptic used in eye diseases and wounds. **S. Thiohydrocarburosulfonate.** See *Ichthargan.* **S. Trinitrophenolate,** a compound containing 30% of silver used as an antiseptic on inflamed mucosas. Syn., *Picratol.* **S. Vitelline.** See *Argyrol.*

Silvestrene. See *Sylvestrene* (Illus. Dict.).

Simaba cedron, Planch. (See Illus. Dict.) The seeds are antiperiodic and tonic. Dose of fld. ext., 0.06–0.5 c.c. It contains, according to Tanret, the alkaloid cedronin and also cedrin.

Similia similibus curentur, Doctrine of. A sophism formulated by Hippocrates, later by Paracelsus ("simile similis cura, non contrarium"), and later, as one of the results of the reaction against the heroic measures of venesection and drastic medication, by Samuel Christian Friedrich Hahnemann, the apostle of homeopathy, whose doctrine that *like is to be cured by like* led naturally to the practice of isopathy (*q. v.*), according to which smallpox is to be treated by variolous pus, tapeworm by ingestion of proglottides, etc.

Simoon (*si-moon'*) [Pers. *Samm*, poisoning]. A hot suffocating wind of Africa and Arabia, that sometimes rushes across the desert with such violence as to raise clouds of sand and sweep them in whirling masses for miles [Weber]. Syn., *Samiel.* Cf. *Mistral, Sirocco, Solano, Harmattan, Khamsin, Foehn, Norther, Mumuku.*

Sinal (*si'-nal*). Relating to or situated within a sinus.

Sinapized (*sin'-ap-izd*). Mixed with mustard.

Sinapol (*sin'-ap-ol*). A mixture recommended as an application for neuralgia, rheumatism, etc., said to consist of spirit of rosemary (1:15), 780 gm.; castor oil, 120 gm.; menthol, 30 gm.; essence of mustard, 30 gm.; aconitin, 0.4 gm.

Sinapolin (*sin-ap'-ol-in*). Diallylurea, a substance obtained from mustard oil by heating with water and lead oxid.

Sinde Boil. See *Furunculus orientalis* (Illus. Dict.).

Singult (*sin'-gult*) [*singultus*, a sobbing]. A sob.

Singultient (*sin-gul'-she-ent*). Sobbing, sighing.

Singultous (*sin-gult'-us*). Relating to or affected with hiccough.

Sinistral. (See Illus. Dict.) 2. Showing preference for the left hand, eye, foot, etc., for certain acts or functions; the reverse of this is dextral.

Sinistrality (*sin-is-tral'-it-e*) [*sinister*, left]. The preference generally for the left hand, eye, foot, etc., in performing certain acts.

Sinistration (*sin-is-tra'-shun*). 1. A turning to the left. 2. Sinistrality.

Sinistraural (*sin-is-traw'-ral*) [*sinister*, left; *auris*, ear]. Left-eared; the reverse is dextraural.

Sinistrocardial (*sin-is-tro-kar'-de-al*) [*sinister*, left; καρδία, heart]. Having the heart to the left of the median line; the reverse is dextrocardial.

Sinistrocerebral (*sin-is-tro-ser'-e-bral*). 1. Located in the left cerebral hemisphere. 2. Functionating preferentially with the left side of the brain; the reverse is dextrocerebral.

Sinistrocular (*sin-is-trok′-u-lar*). Left-eyed; the reverse is dextrocular.

Sinistrogyric (*sin-is-tro-ji′-rik*). See *Sinistrorse* (Illus. Dict.).

Sinistrohepatal (*sin-is-tro-hep′-at-al*) [*sinister*, left; *ἧπαρ*, liver]. Having the liver to the left of the median line; the reverse is dextrohepatal.

Sinistromanual (*sin-is-tro-man′-u-al*) [*sinister*, left; *manus*, hand]. Left-handed; the reverse is dextromanual.

Sinistropedal (*sin-is-trop′-ed-al*) [*sinister*, left; *pes*, foot]. Left-footed; the reverse is dextropedal.

Sinistrosplenic (*sin-is-tro-splen′-ik*). Having the spleen to the left of the median line; the reverse is dextrosplenic.

Sinistrotorsion (*sin-is-tro-tor′-shun*) [*sinister*, left; *torquere*, to turn]. A twisting or turning toward the left; the reverse is dextrotorsion.

Sinistrous (*sin-is′-trus*). Awkward, unskilled; the reverse is dextrous, skilled, expert.

Sinkalin, Sinkolin (*sink′-al-in, -ol-in*). See *Cholin* (Illus. Dict.).

Sinuitis. See *Sinusitis*.

Sinus. (See Illus. Dict.) **S.s, Accessory, of the Nose,** the maxillary, frontal, ethmoid, and sphenoidal sinuses. **S., Arlt's,** a small depression, directed forward and outward, in the lower portion of the lacrimal sac; it is not constant. **S., Common, of the Vestibule.** See *Utricle* (2) (Illus. Dict.). **S., Duncan's,** the fifth ventricle. **S., Guérin's,** the lacuna magna, situated in the mesial line of the upper wall of the urethra, near the external meatus. **S. of the Heart,** the chief cavity of either of the auricles. **S., Lieutaud's,** the straight sinus. **S., Littre's,** the transverse sinus. **S., Maier's.** See *S. maieri* (Illus. Dict.). **S., Precaval.** See *Duct of Cuvier* (Illus. Dict.). **S., Sagittal, Inferior.** See *S., Inferior Longitudinal* (Illus. Dict.).

Sinusitis (*si-nus-i′-tis*). Inflammation of a sinus. **S., Serous, S., Chronic Catarrhal.** See *Mucocele* (Illus. Dict.).

Sinusoidal (*si-nus-oid′-al*). Pertaining to or derived from a sinusoid.

Sinusoids (*si′-nus-oids*) [*sinus*, a curve; *εἶδος*, likeness]. A system of relatively large spaces or tubes constituting the embryonic circulatory system in the suprarenal gland [Minot]; also in the liver and the pronephros and mesonephros; the endothelial walls are in close apposition to the cells of the parenchyma, without the intervention of connective tissue.

Sinusphlebitis (*si-nus-fleb-i′-tis*). Phlebitis of a cranial sinus.

Sinusthrombosis (*si-nus-throm-bo′-sis*). Thrombosis of a cranial sinus.

Sionagra (*si-on-ag′-rah*) [*σιαγών*, a jaw-bone; *ἄγρα*, a seizure]. Gout in the jaw-bone.

Sirocco (*si-rok′-o*) [It.]. A hot, moist, south or southeasterly wind of southern Europe, which raises a haze in the air and produces a sensation of extreme languor both in man and beast. It is much feared in Sicily and especially in Palermo [Weber]. Syn., *Solano*. Cf. *Mistral, Simoon, Harmattan, Khamsin, Foehn, Norther, Mumuku*.

Sirolin (*sur′-ol-in*). Thiocol, 10%, in a syrup of orange bark. It is used in tuberculosis, bronchitis, and intestinal catarrh. Dose, 3 or 4 teaspoonfuls (15–20 c.c.) daily.

Sisymbrium (*sis-im′-bre-um*) [*σισύμβριον*, from *σῦς*, a pig; *δμβριος*, rainy, wet; a plant growing in wet places where swine wallowed]. A genus of cruciferous plants. **S. officinale,** Scop., wild mustard, singer's herb, a European species, laxative, diuretic, and expectorant, and is employed in laryngeal catarrh and laryngitis. Dose, 3 cupfuls a day of a decoction of 30 grams of the leaves, sweetened with 60 grams of a syrup of the drug made in the usual way.

Sitieirgia (*sit-e-ir′-je-ah*) [*σιτίον*, food; *εἴργειν*, to shut out]. Sollier's term for hysteric anorexia.

Sitogen (*si′-to-jen*). A vegetable food product intended to replace meat extracts.

Sitotoxicon (*si-to-toks′-ik-on*) [*σῖτος*, food; *τοξικόν*, poison]. The active poisonous agent in sitotoxism; all sitotoxicons are not of bacterial origin.

Sitotoxin (*si-to-toks′-in*). Any basic poison generated in vegetable food by growth of bacteria or fungi.

Sitotoxism (*si-to-toks′-izm*) [*σῖτος*, food; *τοξικόν*, poison]. Poisoning with vegetable food infected with moulds and bacteria.

Skatemia, Skatæmia. See *Scatemia*.

Skeletal (*skel′-et-al*). Of, or pertaining to, or connected with the skeleton or supporting structures of a body.

Skeleteusis (*skel-et-u′-sis*). See *Sceletuma* (Illus. Dict.).

Skeletogenous (*skel-et-oj′-en-us*) [*skeleton*; *γεννᾶν*, to produce]. Giving rise to a skeleton.

Skeletonize (*skel′-et-on-īz*). To reduce to a skeleton.

Skeletopeia, Skeletopœia (*skel-et-o-pe′-i-ah*) [*σκελετόν*, skeleton; *ποιεῖν*, to do]. The branch of anatomy dealing with the construction of skeletons and the preliminary preparation of the bones.

Skeletotopic (*skel-et-o-top′-ik*). Applied by Waldeyer to such topographic description as refers a part or organ to its relation to the skeleton.

Skeletopy (*skel-et′-op-e*). See *Skeletotopy*.

Skeletotopy (*skel-et-ot′-o-pe*) [*σκελετόν*, skeleton; *τόπος*, a place]. Waldeyer's term for the relation of an organ or part to the osseous skeleton of the whole organism. Cf. *Holotopy, Idiotopy, Syntopy*.

Skérljevo. See *Scherlievo*.

Skiagram (*ski′-ag-ram*) [*σκία*, shadow; *γράμμα*, a writing]. The finished, printed *x*-ray picture. Syn., *Shadowgram; Inductogram*.

Skiagraph (*ski′-ag-raf*). See *Skiagram*.

Skiagrapher (*ski-ag′-raf-ur*). An adept in skiagraphy.

Skiagraphy (*ski-ag′-ra-fe*) [*σκία*, shadow; *γράφειν*, to write]. Photography by the *x*-rays; skotography, skiography, radiography, electrography, electroskiography, röntography, and the new photography are names that have been used to designate the method.

Skiameter (*ski-am′-et-ur*) [*σκία*, shadow; *μέτρον*, measure]. An apparatus devised by Biesalski for measuring the intensity of the Röntgen rays and for the recognition of fine differences in the density of *x*-ray shadows.

Skiametry (*ski-am′-et-re*). Shadow mensuration applied to a method of determining the density of *x*-ray shadows.

Skiaporescopy (*ski-ap-or-es′-ko-pe*). See *Retinoscopy* (Illus. Dict.).

Skiascope (*ski′-as-kōp*) [*σκία*, shadow; *σκοπεῖν*, to view]. An instrument employed in skiascopy. **S.-optometer,** an optometer designed for the determination of the refraction of the eye by skiascopy.

Skiascopia, Skiascopy (*ski-as-ko′-pe-ah, ski-as′-ko-pe*). See *Retinoscopy* (Illus. Dict.).

Skiatherapy (*ski-ah-ther′-ap-e*) [*σκία*, a shadow; *θεραπεία*, therapy]. The therapeutic application of *x*-rays.

Skimmetin (*skim′-et-in*). $C_9H_6O_3$. A dissociation product of skimmin by action of dilute mineral acid with heat; it is perhaps identical with umbelliferone.

Skimmia (*skim′-e-ah*) [*mijama-skimmi*, Japanese name]. A genus of the *Rutaceæ*. **S. japonica,**

Thunb., a species of Japan; the flowers are used to flavor tea, the leaves contain an ethereal oil, the bark contains the glucosid skimmin.

Skimmin (*skim'-in*). $C_{15}H_{16}O_8$. A glucosid similar to scopolin and esculin isolated from the bark of *Skimmia japonica*, Thunb., occurring in long, colorless needles soluble in hot water, alcohol, or alkalis, insoluble in chloroform or ether; melts at 210° C.

Skin. (See Illus. Dict.) **S., Atrophy of the,** a wasting-away or retrogressive change in the skin; dermatatrophia. **S., Congestion of the,** engorgement of the bloodvessels of the skin; dermathemia. **S., Edema of the,** effusion of serum into the areolar tissue of the skin; dermatochysis. **S.-grafting.** (1) *Auto-epidermic:* When the epithelial cells are taken from the patient, it includes, (*a*) scrapings from healthy skin, (*b*) corn shavings, (*c*) pellicles from blisters, (*d*) the Ollier-Thiersch method, in which one-half the skin thickness (epidermis, rete, and part of the cutis proper) is required, and (*e*) the Krause method, in which the whole thickness of the skin is used in grafting. (2) *Hetero-epidermic:* When the epithelial cells are furnished by another person. (3) *Zoodermic:* When the skin is removed from lower species, as the use of (*a*) small pieces of sponge, (*b*) frog skin, (*c*) inner membrane of hens' eggs, (*d*) inner surface of pullets' wings, (*e*) skin of pups, (*f*) skin of guineapigs, (*g*) skin of rabbits. (Billings.) **S., Hypertrophy of the,** excessive growth of the skin; dermathypertrophia. **S., Neuralgia of the.** See *Dermatalgia* (Illus. Dict.). **S., Pigmentation of the.** See *Dermatodyschroia*. **S.-shedding.** See *Keratolysis* (Illus. Dict.).

Skiography. See *Skiagraphy*.

Skirt. The diaphragm.

Sklerodactylia. See *Sclerodactylia* (Illus. Dict.).

Skolikoiditis (*sko-le-koid-i'-tis*) [σκωληκοειδής, worm-like]. Synonym of *Appendicitis*.

Skoliosis. See *Scoliosis* (Illus. Dict.).

Skookum Chuck [Amerind, good water]. A homeopathic remedy for skin-diseases consisting of a trituration of the salts of the spring of this name. Dose, 2 gr. in ½ glass of water; teaspoonful every 2 or 3 hours.

Skotograph (*sko'-to-graf*). See *Scotograph* (Illus. Dict.).

Skotography (*sko-tog'-raf-e*). Synonym of *Skiagraphy*.

Skull. (See Illus. Dict.) **Modes of Measuring the Capacity of: Broca's Method.** 1. The skull made impermeable is filled with water which can be weighed or measured. 2. The skull is packed with shot, which is then measured; but both the filling and measuring are aided by certain implements, and especially by a funnel of certain dimensions, which controls the flow of the shot, and every step of the procedure follows definite rules. **Method of Busk, Flower, or Tiedemann,** the skull is filled with small, rounded seeds, beads, shot or other substance, and the contents are then measured. The filling or the measuring (or both) is aided by certain manipulations (tilting, tapping, etc.). **Method of Schmidt or Matthews.** See *M. of Broca*. **Welcker's Method,** the mode of filling the skull, so long as efficient and uniform, is immaterial; all that is required is that each worker should, with the aid of a standard skull, find the exact size of the funnel necessary to give him, in measuring, the correct result with his particular method and substance used for the filling of the skull.

Slabber (*slab'-ur*). See *Slaver* (Illus. Dict.).

Slag-wool. A product of blowing a jet of steam into melted slag; it is noninflammable and a nonconductor of heat. Syn., *Mineral Wool*.

Slake (*slāk*) [AS. *sleccan*, to quench, extinguish]. 1. To quench or appease. 2. To disintegrate by the action of water.

Sleepy. (See Illus. Dict.) **S. Grass.** See *Stipa vaseyi*, Scribner.

Slobber (*slob'-ur*). See *Slaver* (Illus. Dict.).

Smesches (*sme'-chēz*). Puffs of arsenious acid gas which occasionally escape from the doors of the calcining furnaces in Cornish arsenic works and which give rise to pulmonary irritation among the workmen.

Smilacin. (See Illus. Dict.) 2. $C_{40}H_{70}O_8$ (Flückiger) or $C_{16}H_{30}O_6$ (Poggiale) or $C_{15}H_{26}O_5$ (Peterson). Folchi's name for a saponin-like glucosid found by Palotta, 1824, in sarsaparilla root (various species of *Smilax*) and named by him pariglin. It forms a yellowish-white powder, soluble in water and alcohol; alterative, expectorant, and emetic, and used in syphilis and colds. Dose, 1–3 gr. (0.065–0.2 gm.). Syn., *Parillin* (Batha), *Salseparin* (Thubeuf).

Smile (*smīl*) [ME. *smil*]. A joyful expression. **S., Levator, S., Nasal,** W. R. Gowers' name for a peculiarity of expression in patients affected with myasthenia gravis, consisting in absence of normal movement at the corner of the mouth.

Snaggle-teeth (*snag'-l*). Irregular and oblique dentition.

Sneezing. (See Illus. Dict.) **S., Pregnancy,** spasmodic fits of sneezing from hyperemia of the nasal mucosa, following a circulatory disturbance due to the condition of pregnancy.

Soap. (See Illus. Dict.) **S., Gray,** soap to which mercury and benzoinated fat are added. Syn., *Sapo cinereus*. **S., Spanish,** castile soap.

Sock. (See Illus. Dict.) 2. An insole. **S. Instep Arch,** a device to be worn inside the boot in cases of flat-foot.

Socordia (*so-kor'-de-ah*) [*socors*, silly]. Hallucination.

Sodium. (See Illus. Dict.) **S.-acetanilid Sulfonate,** a white crystalline mass, readily soluble in water, used as a substitute for antipyrin. **S. Acid Sulfosalicylate.** See *S. Sulfosalicylate, Acid*. **S. Anhydromethylenecitrate,** an antilithemic remedy depending in its action upon the liberation of formic aldehyd in the blood. Syn., *Citarin*. **S. Anisate,** $2NaC_8H_7O_3 + H_2O$, small colorless scales, soluble in water; antipyretic and antirheumatic. Dose, 5–15 gr. (0.32–1 gm.). **S. Arsenate,** $Na_2HAsO_4 + 7H_2O$, clear colorless poisonous prisms, with mild alkaline taste, soluble in 4 parts of water; alterative, tonic, antiseptic. Dose, $\frac{1}{64}$–$\frac{1}{20}$–⅛ gr. (0.001–0.003–0.008 gm.). Antidotes—emetics, stomach siphon, fresh ferric hydrate, dialyzed iron, ferric hydrate, and magnesia, demulcents, stimulants, warmth. **S. Arseniate.** See *S. Arsenate*. **S. Arsenotartrate,** a soluble arsenic salt recommended as a substitute for potassium arsenite and arsenous acid. **S. Aurochlorid,** $AuCl_3NaCl + 2H_2O$, a golden-yellow powder said to contain 30% of gold and freely soluble in water, sparingly so in alcohol. It is used in syphilis. Dose, 1/6–1 gr. (0.01–0.06 gm.). **S.-benzoyl-sulfonicimid.** See *Saccharin* (1) (Illus. Dict.). **S. Biborate.** See *S. Borate*. **S. Biiodosalicylate.** See *S. Diiodosalicylate* **S.-bismuth Citropyroborate,** lustrous leaflets soluble in water, insoluble in alcohol; used in gastralgia. **S. Bisulfate,** $NaHSO_4 + H_2O$; it is used as a means of rendering water infected by typhoid bacilli drinkable and harmless for troops in the field. **S. Bisulfite,** $NaHSO_3 + H_2O$, opaque prisms or granular powder of disagreeable taste, soluble in 4 parts of water, 72 parts of alcohol, or 2 parts of boiling water. It is antipyretic and antiseptic. Dose, 0.65–2

gm. Syn., *Leucogen.* **S. Biurate,** the deposit of this salt in or upon the tissues of the joints is held to be the etiologic factor in arthritic manifestations of gout. **S. Borate,** borax. See *Boron* (Illus. Dict.). **S. Borobenzoate,** a compound of borax, 3 parts, and sodium benzoate, 4 parts, dissolved in water and evaporated. **S. Borosalicylate,** a hard mass obtained by triturating 32 parts of sodium salicylate and 25 parts of boric acid with a little water; it is a soluble antiseptic. Syn., *Borsalicylate; Borsalyl; Borosalicyl.* **S. Borosulfate,** SO_2. OBO . Na, odorless, vitreous masses of faint, harsh, acidulous taste, soluble in 5 parts water. It is an internal and external antiseptic. Dose, 0.3–0.6 gm. 5 or 6 times daily in water. Application, 1%–2% solution. Syn., *Borol.* **S. Cacodylate, S. Methylarsenate.** See *Arrhenal* and *Neoarsycodil.* **S. Caffein Sulfate, S. Caffein Sulfonate, S. and Caffein Sulfonate,** $C_8H_9N_4O_2$. SO_3Na, soluble in 50 parts of water, in 7 parts of boiling water; used as a diuretic in obesity and dropsy. Syn., *Symphorol-sodium; Symphorol N.* **S. Cantharidinate,** a compound of cantharidin, 0.2 gm., and sodium hydrate, 0.3 gm., dissolved in 20 c.c. of water with heat; the solution is made up to 1000 c.c. It is used subcutaneously in tuberculosis of throat. Dose, 0.5 gm. **S. Carbolate.** See *S. Phenate.* **S. Cetrarate,** $Na_2C_{18}H_{14}O_8$, a microacicular powder soluble in water and used as a tonic. Dose, 0.13–1 gm. **S. Chloroborate,** a combination of boric acid, borax, sodium chlorid, and sodium sulfate used as an antiseptic in typhoid, etc. **S. Choleate,** dried purified ox-gall, a yellow powder soluble in water and used as a tonic and laxative in chronic constipation. Dose, 0.32–0.65 gm. **S. Cinnamate,** $NaC_9H_7O_2$, a white powder soluble in water; used intravenously in tuberculosis. Dose, $\frac{1}{12}$–$\frac{1}{7}$ gr. thrice weekly. Syn., *Hetol.* **S. Citrate, Neutral,** $2Na_3C_6H_6O_7 + 11H_2O$, white crystals soluble in water; used in diseases of genitourinary origin, fever, etc. Dose, 10–60 gr. (0.65–4 gm.). **S. Citrobenzoate,** a white bulky powder, soluble in water; diuretic, antiseptic, and antilithic. **S. Citrophosphate.** See *Melachol.* **S. Copaivate,** $NaC_{20}H_{19}O_2$, a yellow powdery mass, soluble in water, used as antiseptic and diuretic. Dose, 0.65–2 gm. **S. Corallinate.** See *S. Rosolate.* **S. Cresylate,** used as cresylic acid. **S.-diiodoparaphenol Sulfonate.** See *S. Sozoiodolate.* **S. Diiodosalicylate,** $2NaC_7H_5I_2O_3 + 5H_2O$, white needles or leaflets soluble in 50 parts of water at 20° C. It is analgesic and antiseptic and used externally on parasitic and syphilitic sores. **S. Dioxid,** Na_2O_2, a white powder soluble in water, used as a bleaching agent and disinfectant in dentistry. Syn., *S. Peroxid.* **S. Dithionate.** See *S. Hyposulfas* (Illus. Dict.). **S. α-Dithiosalicylate,** $Na_2C_{14}H_8O_6S_2$, a yellowish powder, soluble in water, used in foot and mouth disease. **S. β-Dithiosalicylate,** $Na_2C_{14}H_8O_6S_2$, a grayish powder more soluble in water than the alpha salt. It is used internally in rheumatism, gonorrhea, etc. Dose, 1–10 gr. (0.065–0.65 gm.). Wash in foot and mouth disease 2.5%–5% solution. **S.-ethoxyphenyl Succinamid.** See *S. Phenosuccinate.* **S. Ethylsulfate,** $NaC_2H_5SO_4 + H_2O$, flat aromatic crystals, soluble in water or alcohol; used in constipation. Dose, 60–300 gr. (4–20 gm.). **S. Fluorid,** NaF, shining crystals, soluble in water, used internally in malaria, epilepsy, etc. Dose, 0.005–0.01 gm. in solution with sodium bicarbonate. Externally as an antiseptic dressing for wounds. Syn., *Fluorol.* **S. Fluosilicate.** See *S. Silicofluorid.* **S. Glycerinoborate, S. Glyceroborate,** glycerite of borax obtained by heating 40 parts of borax with 60 parts of glycerin and forming a translucent brittle mass, soluble in water or alcohol; antiseptic. **S. Glycerophosphate, S. Glycerinophosphate,** $Na_2PO_4C_3H_5(OH)_2 + H_2O$, soluble in water; used in neurasthenia, Addison's disease, phosphaturia, etc. Injections, 3–4 gr. (0.2–0.26 gm.) daily in solution of sodium chlorid. **S. Glycholate,** $NaC_{26}H_{42}NO_6$, a white powder, soluble in water or alcohol; used in chronic constipation and tuberculosis, and as a remedy for gallstones. Dose, 5 gr. thrice daily. **S.-guaiacol-carbonate,** a white powder, soluble in water, similar to but milder than sodium salicylate in action. **S. Gynocardate,** $NaC_{14}H_{23}O_2$, a yellow-white powder soluble in water and alcohol; an antiseptic and alterative, used in leprosy. Dose, 5–15 gr. (0.32–1 gm.) twice daily in capsules containing 3 grains each. **S. Hippurate,** $NaC_9H_8NO_3$, a white powder soluble in boiling water; a solvent for uric acid. **S. Ichthyolsulfonate,** ichthyol sodium. **S. Indigosulfate,** indigo carmin. **S. Kussinate,** $NaC_{31}H_{27}O_{10}$, an intensely bitter, yellowish, amorphous mass soluble in hot water and alcohol; used as a vermifuge. **S. Lactate,** $NaC_3H_5O_3$, a thick syrup used as a hypnotic. Dose, 2–4 dr. (8–16 gm.) in sweetened water. **S. and Magnesium Borocitrate,** a white antiseptic powder used in lithiasis. Dose, 0.32–2 gm. **S.-mercurophenyldisulfonate.** See *Hermophenyl.* **S. Metavanadate,** an alterative and succedaneum for arsenic. Dose, 0.001–0.008 gm. **S.-methoxysalicylate.** See *S.-guaiacolcarbonate.* **S. Methylarsenite.** See *Neoarsycodil.* Cf. *Arrhenal.* **S. Methyltrihydroxyquinolin Carbamate.** See *Thermifugin* (Illus. Dict.). **S. β-Naphtholate, S.-beta-naphthol, S.-naphthol.** See *Microcidin* (Illus. Dict.). **S. Nitrite,** $NaNO_2$, colorless crystals soluble in water, used as a diuretic and antispasmodic. Dose, ½–2 gr (0.032–0.13 gm.). Recommended for lowering blood-pressure in doses of 2 or 3 gr. every 2 to 4 hours. **S. Nucleinate,** a white powder soluble in water, used in puerperal affections and pneumonia and as a diagnostic in tuberculosis. Dose, 2–3 gm. **S. Oleate,** a compound of $NaC_{18}H_{33}O_2$ with excess of oleic acid, a yellowish mass soluble in water. Syn., *Eunatrol.* **S. Orthodinitrocresylate.** See *Antinonnin.* **S. Ossalinate,** a substitute for cod-liver oil; the sodium compound of the acid of ox-marrow. **S. α-Oxynaphtholate,** $C_{10}H_6(OH)$. COONa, a white odorless powder, antiseptic and antithermic in action. **S. Paracresotate,** $NaC_8H_7O_3Na$, a fine, microcrystalline, bitter powder, soluble in 24 parts of warm water, used as an antipyretic and antiseptic. Dose, 1–20 gr. (0.065–1.3 gm.). **S. Parafluorobenzoate,** it is used in tuberculous processes. Dose, 8 gr. 3 times daily. **S. Peroxid.** See *S. Dioxid.* **S. Persulfate,** $Na_2S_2O_8$, a bactericide and vulnerary, used in 3%–10% solution. It is also used as an aperient, 30 gr. in 10 oz. of water, 1 tablespoonful daily before the principal meals. Syn., *Persodin.* **S.-phenacetinsulfonate,** a soluble succedaneum for phenacetin. **S. Phenate,** NaC_6H_5O, white crystals, soluble in water, used as an antiseptic. Dose, 2–10 gr. (0.13–0.65 gm.). **S.-phenolphthaleinate.** See *S. Sulphocarbolate* (Illus. Dict.). **S.-phenolsulforicinate.** See *Phenol and Sodium Sulforicinate.* **S. Phenosuccinate,** the sodium salt of phenosuccin, a white powder soluble in water. It is antipyretic and antineuralgic. Dose, 7½–16 gr. (0.5–3 gm.). **S. Phosphate,** disodium orthophosphate, $Na_2HPO_4 + 12H_2O$, it occurs in colorless, translucent, monoclinic prisms, of a saline taste. It is soluble in boiling water and melts at 35° C. It is a mild cathartic and antilithic. Dose, 5–40 gr. (0.32–2.6 gm.). **S. Polyborate.** See *S. Tetraborate.* **S. Pyrophosphate,** $Na_4P_2O_7 + 10H_2O$, white prisms,

soluble in boiling water; used in lithiasis. Dose, 2–20 gr. (0.13–1.3 gm.). **S.-rosanilinsulfonate**, $Na_2C_{20}H_{15}NO_{10}S_3$, crystals with green luster obtained from fuchsin by action of fuming sulfuric acid. Syn., *Fuchsin-S.; Acid fuchsin; Rubin; Magenta.* **S. Rosolate**, $NaC_{20}H_{15}O_3$, red masses with green luster used as a dye. Syn., *S. corallinate.* **S. Saccharinate**, the sodium salt of soluble saccharin; a white crystalline powder containing 90% of saccharin, soluble in water and having a sweetening capacity 450 times greater than cane-sugar. It is recommended as a valuable intestinal antiseptic. Dose, 1 gr. once or twice daily. Syn., *Crystallose.* **S. Salicylate**, $NaC_7H_5O_3$, shining white scales soluble in 0.9 parts of water or 6 parts of alcohol. It is antiseptic, antirheumatic, and antipyretic. Dose, 2–30 gr. (0.13–2 gm.). Max. dose, 60 gr. (4 gm.) single. **S. Santoninate**, $2NaC_{15}H_{19}O_4 + 7H_2O$, bitter acicular crystals in stellate groups, soluble in 3 parts of water; 12 parts of alcohol; 0.5 of boiling water; 3.4 of boiling alcohol. It is given for intestinal worms. Dose for adults, ¼–1 gr. (0.016–0.065 gm.). **S. Silicate**, Na_2SiO_3, whitish crystals occurring in flat pieces. Syn., *Soluble glass.* **S. Silicofluorid**, Na_2SiF_6, white crystals or granular powder soluble in 200 parts of water. It is used as a styptic, antiseptic, and germicide in aqueous solution 2 : 1000. **S. Sozoiodolate**, $NaOC_6H_2I_2OH\text{-}SO_3 + 2H_2O$, long crystals soluble in 14 parts of water, alcohol, or 20 parts of glycerin. It is alterative and antiseptic. Dose, 5–30 gr. (0.32–2 gm.) daily. In whooping-cough, 3 gr. blown into the nose. Externally in syphilis, etc., ointment 10%, or 1% aqueous solution. **S. Stearate, S. Stearinate**, $NaC_{18}H_{35}O_2$, soapy, acicular crystals or scales soluble in water; it is used in treatment of parasitic skin-diseases. **S. Succinate**, $Na_2C_4H_4O_4 + 6H_2O$, white crystals, freely soluble in water, recommended in catarrhal icterus. Dose, 3.0 gm. (grs. 45) daily. **S. Sulfanilate**, $C_6H_4\text{-}NH_2SO_3ONa \cdot 2H_2O$, white plates soluble in water, recommended in coryza. **S. Sulfantimonate**, $Na_3SbS_4 + 9H_2O$, large yellow or colorless crystals with alkaline reaction, soluble in water. Syn., *Schlippe's salt.* **S. Sulfite-benzoate**, a white powder soluble in water; it is used as a wound antiseptic in the form of a dusting-powder. **S. Sulfocaffeate**, bitter crystals slightly soluble in water; a nontoxic, nonirritating powerful diuretic. Dose, 1 gm. in capsules. Syn., *Symphorol; Nasrol.* **S. Sulforicinate**, a compound of sulforicinic acid and sodium hydrate. A brown syrupy liquid soluble in alcohol and water; used as a solvent for iodin, iodoform, etc. Syn., *Solvin; Polysolve.* **S. Sulforicinate, Phenolized.** See *Phenol and Sodium Sulforicinate.* **S. Sulfosalicylate, Acid**, $NaC_7H_5O_2SO_3$, white crystalline powder, soluble in water, used as an antiseptic and antipyretic. Dose, 10–30 gr. (0.65–2 gm.). **S. Sulfovinate.** See *S. Ethylsulfate.* **S. Sulfurosobenzoate**, a clear colorless liquid said to be a harmless antiseptic for wounds. **S. Tartrate**, $Na_2C_4H_4O_3 + 2H_2O$, white needles or prisms soluble in water. Cathartic and diuretic. Dose, 4–8 dr. (15–30 gm.) once per day. **S. Taurocholate**, $NaC_{26}H_{44}NSO_7$, a white powder obtained from bile of herbivora, soluble in water or alcohol. It is used in deficient biliary secretion. Dose. 2–6 gr. (0.13–0.4 gm.). **S. Tellurate**, $NaTeO_4 + 5H_2O$, a white powder soluble in water. Used as an antipyretic, antiseptic, and antihidrotic. Dose, ¼–¾ gr. (0.016–0.05 gm.) in elixirs. **S. Tetraborate**, a compound of equal parts of boric acid and sodium biborate forming an unctuous, insipid powder, neither toxic nor caustic. It is used in conjunctivitis and keratitis. Syn., *Antipyonin.* **S. Tetraiodophenophthaleinate.** See *Antinosin.* **S. Thioantimonate.** See *S. Sulfantimonate.* **S. Thiophenate**, $C_4H_3S \cdot SO_3Na$, a white powder slightly soluble in water; used on prurigo in 0.5%–1% ointment. **S. Thiophenesulfonate**, $NaC_4H_2S_2O_3 + H_2O$, white scaly powder containing 33% of sulfur; used as an antiseptic on prurigo and skin-diseases in 5%–10% ointment. **S. Thiosulfate.** See *S. Hyposulfas* (Illus. Dict.). Dose, 0.32–1.3 gm. **S. Trichlorocarbolate, S. Trichlorophenol**, $C_6H_2Cl_3 \cdot ONa$, white needles or crystalline powder soluble in hot water; antiseptic. **S.-tumenol Sulfonate**, a compound of sodium and sulfotumenolic acid. A dark-colored, dry powder, soluble in water. Syn., *Tumenol.* **S. Tungstate**, $Na_2WO_4 + 2H_2O$, colorless, rhombic, bitter crystals, soluble in 4 parts of water, 2 parts of boiling water. Syn., *S. Wolframite.* **S. Valerate.** See *S. valerianas* (Illus. Dict.). **S. Xanthogenate**, $NaC_3H_5OS_2$, a compound obtained by adding a saturated alcoholic solution of soda to carbon disulfid. It is antiseptic and germicide and used as an antiphylloxerin.

Sodor (*so'-dor*). The proprietary name for capsules of liquid carbonic acid for preparation of carbonated beverages.

Softening. (See Illus. Dict.) **S., Gray**, an inflammatory softening of the brain or cord with a gray discoloration. **S., Green**, a purulent softening of nervous matter.

Soil. (See Illus. Dict.) **S.-water.** See *Subsoil-water.* **S.-w. theory.** See *Pettenkofer.*

Soja Beans. The edible seeds of *Glycine soja*, Sieb., a leguminous plant of the East Indies. The meal of the soja beans is used in diabetes. They contain a diastatic ferment, casein, cholesterin, lecithin, asparagin, leucin, cholin, hypoxanthin bases, phenylamidoproprionic acid, oil (18%), sugar (12%).

Sokra [E. Ind. without flesh or blood, skeleton]. Vernacular for trypanosomiasis (*q. v.*).

Solanism (*so'-lan-ism*). Night-shade poisoning from ingestion of berries of *Solanum dulcamara*, L., or *S. nigrum*, or rarely through eating unripe potatoes; due partly to the contained glucosid, causing vomiting, pain, and diarrhea, partly to tropein, marked by symptoms of belladonna poisoning.

Solano (*so-lah'-no*). The Spanish name for sirocco.

Solanum. (See Illus. Dict.) **S. carolinense**, L., horse nettle, indigenous to the United States; a fluid extract from the fresh berries is recommended in epilepsy, tetanus, and convulsions of pregnancy. Dose, 0.6–1.8 c.c. It is also used as an abortifacient. **S. crispum**, R. et P., **S. gayanum**, Phil., and **S. tomatillo**, indigenous to Chili and Peru, are used under the name of natrix in inflammatory fevers, in typhus, etc. **S. dulcamara**, L., bitter-sweet, is indigenous to Europe and Asia, contains dulcamarin and solanin. An extract from the young branches is employed as an alterant and diuretic in dropsy, cutaneous diseases, and rheumatism. Dose, 5–20 gr. (0.32–1.3 gm.). **S. insidiosum**, Mart., and **S. paniculatum**, L., jurubeba, species of Brazil, are alterative and antiblennorrheic. Dose of fld. ex. in gonorrhea and syphilis, 15–30 ♏ (0.9–1.8 c.c.). **S. nigrum**, L., night-shade, found in Europe, Asia, and America, is used as a diuretic and emetic, and externally as a cataplasm. **S. tuberosum**, L., the potato, indigenous to Chili; it contains solanin, solanidin, and solanein and a small amount of tropein. The tubers contain the proteid tuberin.

Solarization (*so-lar-i-za'-shun*) [*sol*, the sun]. The application of solar or electric light for therapeutic purposes.

Solenoid (*so'-len-oid*) [σωλήν, a pipe; εἶδος, likeness].

A spiral of conducting wire wound into a cylindric shape so that it is almost equivalent to a number of equal and parallel circuits arranged upon a common axis; in therapeutics the name is applied to a large cage used for holding the patients in teslaization in such manner that they are not in direct communication with the current.

Solicictus (*so-lis-ik'-tus*). Synonym of *Heatstroke.*

Sollunar (*sol-lu'-nar*) [*sol*, sun; *luna*, moon]. Influenced by or relating to the sun and the moon.

Solphinol (*sol'-fe-nol*). A mixture of borax, boric acid, and sulfurous alkalis; a white, crystalline, odorless powder, soluble in 10 parts of water or in 20 parts of glycerin. It is used as an antiseptic.

Solpugidæ (*sol-pu'-je-de*) [*solpuga*, a venomous spider]. A group of spider-like arachnids having closer relationship to the scorpions than to the true spiders. Their bite is poisonous. See *Galeodes.*

Solutio. (See Illus. Dict.) **S. lithantracis acetonica**, a solution of coal-tar 10 parts, in benzole 20 parts, and acetone 77 parts. It is employed in skin-diseases. **S. retinæ**, detachment of the retina.

Solution. (See Illus. Dict.) **S., Burrow's**, consists of alum, 5 parts, lead acetate, 25 parts; in 500 parts of water; used to wash old ulcers. **S., Colloidal**, one obtained by dipping bars of metal into pure water and passing a heavy electric current from one bar to the other through the water. The metal under these conditions is torn off in a state of such fine division that it remains suspended in the water in the form of a solution. Syn., *Pseudosolution.* **S., Gowers'**, for use with the hemoglobinometer. Sodium sulfate, 104 grains; acetic acid, 1 dram; distilled water, 4 oz. **S., Grammolecular**, one in which each liter contains the weight of one atom or molecule of the active chemical expressed in grams. **S., Harris' (Thos.)**, for the preservation of organic urinary sediments; potassium acetate, 60 gm.; chloroform, 10 c.c.; distilled water, 1000 c.c. **S., Hayem's**, for use with the hemocytometer. See under *Stains, Examination of the Blood* (Illus. Dict.). **S., Hérard's**: sodium chlorate, 0.5 gm.; potassium chlorid, 0.25 gm.; sodium phosphate, 1.25 gm.; sodium chlorid, 4.5 gm.; distilled water, 1000 c.c. **S.s, Isotonic**, such as are equal in osmotic pressure. **S., Keyes'**, for use with the hemoglobinometer: "Take urine slightly phosphatic, easily obtainable after a meal, about 1020 sp. gr., and make of it a saturated solution with borax. Clouds of earthy phosphates are thrown down. Filtration yields a clear alkaline fluid of sp. gr. about 1030. One-half of water added will reduce the specific gravity to 1020 and the fluid is ready for use." **S., Löffler's**: menthol, 10 gm.; toluene, sufficient to make 35 c.c.; creolin, 2 c.c.; ferric chlorid solution, 4 c.c.; alcohol, sufficient to make 100 c.c. **S., Mandl's**, a gargle consisting of iodin, 6 gr.; potassium iodid, 20 gr.; glycerin, 6 dr.; water, 2 dr. **S., Potain's**, for use with the hemoglobinometer: A mixture of a solution of gum acacia, sp. gr. 1020, one volume; equal parts of sodium sulfate and sodium chlorid in solution of sp. gr. 1020 three volumes. **S., Potassium Silicate**, a colorless, slightly turbid, syrupy liquid with alkaline reaction, consisting of 10% of potassium silicate in water, K_2SiO_3 + aqua. **S., Sherrington's**, for use with the hemocytometer: methylene-blue, 0.1 gm.; sodium chlorid, 1.2 gm.; neutral potassium oxalate, 1.2 gm.; distilled water, 300 c.c. **S., Test**, a standard solution. **S., Thiersch's**, a valuable antiseptic wash for the nose, throat, or stomach, consisting of salicylic acid 2 parts, boric acid 12 parts, water 1000 parts. **S., Toisson's**, for use with the hemocytometer: Methyl-violet, 5 B, 0.025 gm.; sodium chlorid, 1.0 gm.; sodium sulfate, 8.0 gm.; neutral glycerin, 30.0 c.c.; distilled water, 160.0 c.c. **S., Töpfer's**, a solution of dimethylamidoazobenzol. **S., Trunecek's.** See *Serum, Trunecek's.* **S.s, Van't Hoff's Theory of:** "The osmotic pressure of a substance in solution is the same as the gas pressure which would be observed if the substance alone, in gaseous state, occupied the volume of the solution at the same temperature." **S., Water-glass.** See *S., Potassium Silicate.*

Solvosal-lithia (*sol-vo-sal-lith'-e-ah*). See *Lithium Salolophosphate.*

Somaticovisceral (*so-mat-ik-o-vis'-ur-al*) [σῶμα body; *viscera*]. Relating to the body and the viscera.

Somatochrome (*so-mat'-o-krōm*) [σῶμα body; χρῶμα, color]. Applied by Nissl to a group of nerve-cells possessing a well-defined cell-body completely surrounding the nucleus on all sides, the protoplasm having a distinct contour. This group is divided into arkyochrome, stichochrome, arkyostichochrome, and gyrochrome nerve-cells.

Somatodymia (*so-mat-o-dim'-e-ah*) [σῶμα, body; δύειν, to enter]. Twin monstrosity in which the trunks are united. There are several varieties: *ischiodymia*, union by the hips; *infraomphalodymia*, union in the inferior umbilical region; *omphalodymia*, union in the umbilical region; *supraomphalodymia*, union in the superior umbilical region; *sternodymia*, by the sternum; *sternoomphalodymia*, union by the sternal and the umbilical regions; *vertebrodymia*, union by the vertebras.

Somatose. (See Illus. Dict.) **S., Ferro-, S., Iron**, a preparation of somatose containing 2% of iron. Dose, 5–10 gm. daily. **S., Milk**, a tasteless, inodorous food in the form of a powder prepared from milk with 5% of tannic acid; used in chronic diseases of digestive tract. Dose for adults, 2–3 tablespoonfuls (30–45 c.c.) daily.

Somatosplanchnopleuric (*so-mat-o-splank-no-plu'-rik*). Relating to the somatopleura and the splanchnopleura.

Somesthetic, Somæsthetic (*so-mes-thet'-ik*) [σῶμα, body; αἴσθησις, sensation]. Pertaining to general sensory structures. **S. Area**, Munk's *Körperfühlsphäre*, the region of the cortex in which the axons of the general sensory conduction path terminate. **S. Path**, the general sensory conduction path leading to the cortex.

Somiology (*so-mi-ol'-o-je*) [σῶμα, body; λόγος, science]. A term proposed by Rafinesque, 1814, as a common name under which to consider the phenomena of organic nature, now covered by the term biology. Cf. *Organology; Organomy.*

Somnambulance (*som-nam'-bu-lanz*). Somnambulism.

Somnambulation (*som-nam-bu-la'-shun*). Somnambulism.

Somnambulator (*som-nam'-bu-la-tor*). A somnambulist, a sleep-walker.

Somnambulism. (See Illus. Dict.) **S. provoqué**, sleep-walking induced by mesmerism, hypnotism, or "electrobiology."

Somnambulist (*som-nam'-bu-list*). One who walks in his sleep.

Somnial (*som'-ne-al*) [*somniatio*, dreaming]. Relating to dreams.

Somniative, Somniatory (*som'-ne-at-iv, som'-ne-at-o-re*). Relating to dreaming, producing dreams.

Somniculous (*som-nik'-u-lus*) [*somnos*, sleep]. Drowsy, sleepy.

Somniloquist (*som-nil'-o-kwist*). One given to somniloquence.

Somnipathist, Somnipathy. See *Somnopathist, Somnopathy.*

Somnoform (*som'-no-form*). An anesthetic consisting of ethyl chlorid, 60%; methyl chlorid, 35%; ethyl bromid, 5%.

Somnol (*som'-nol*). A synthetic product of chlorethanal with a polyatomic alcohol radicle; used as a hypnotic and cerebral sedative. Dose, 2–4 fluidrams.

Somnolescent (*som-no-les'-ent*) [*somnus*, sleep]. 1. Drowsy. 2. Inducing drowsiness.

Somnone (*som'-nōn*). A proprietary hypnotic said to contain opium, lupulin, and lactucarium. Dose, 1–2 c.c.

Somnopathist (*som-nop'-ath-ist*) [*somnus*, sleep; πάθος, disease]. One subject to hypnotic trance.

Somnopathy (*som-nop'-ath-e*). Hypnotic somnambulism.

Soorangee. A dyestuff of India obtained from *Morinda citrifolia*, L. Cf. *Morindin* (Illus. Dict.).

Sootwart (*soot'-wart*). Chimney-sweeper's cancer.

Sophiology (*sof-e-ol'-o-je*) [σοφός, wise; λόγος, science]. The science of activities designed to give instruction (J. W. Powell).

Soporate (*so'-por-āt*) [*sopor*, sleep]. To stupefy, to render drowsy.

Sorbose (*sor'-bōz*). See *Sorbinose* (Illus. Dict.).

Sordes. (See Illus. Dict.) **S. gastricæ**, undigested gastric debris. Syn., *Saburra gastrica.*

Sordid (*sor'-did*) [*sordidus*, dirty, filthy]. In biology, of a dull or dirty color.

Sordidin (*sor'-did-in*). $C_{16}H_{12}O_7$ or $C_{13}H_{10}O_8$. A substance isolated from the lichen, *Zeora sordida*, Kb.

Sore. (See Illus. Dict.) **S., Delhi, S., Penjdeh, S., Natal.** See *Furunculus orientalis* (Illus. Dict.). **S.-feet of Coolies, S.s, Water.** See *Itch, Coolie.* **S.-mouth, Ceylon.** See *Aphthæ tropicæ.* **S.-throat of Fothergill**, ulcerative angina of severe scarlatina (scarlatina anginosa). **S., Veld.** See under *Veld.*

Sorghine (*sor'-gēn*). A red pigment found in the fruit of *Sorghum vulgare*, Pers.

Sorghotine (*sor'-go-tēn*). A red pigment obtained from the fruit of *Sorghum vulgare*, Pers.

Sorgothine (*sor'-go-thēn*). A red coloring-matter found in the chaff of *Sorghum vulgare*, Pers. Cf. *Sorghine.*

Sorrocco (*sor-ok'-o*). Puna. An affection resembling seasickness common in the high regions of South America. Cf. *Soroche.*

Soson (*so'-son*). Unaltered meat albumin, 98.5%, in powder. It is odorless and palatable.

Sostrum (*sos'-trum*) [*sostron*, a reward for saving life]. A physician's fee.

Soul. (See Illus. Dict.) **S.-deafness**, deprivation of all sensation of sound or reminiscence of it. **S., Stahl's**, according to the doctrine of George Ernst Stahl (1660–1734), the supreme, life-giving, life-preserving principle, distinct from the spirit: when hindered in its operation, disease resulted; it governed the organism chiefly by way of the circulation. His doctrine was called animism and was a reaction against the chemical and mechanical theories of the seventeenth century. [Park.] Cf. *Force, Animal.*

South African Horse-sickness. See *Horse-sickness* and *Edemamycosis.*

Southern Fever. Synonym of *Texas Fever.*

Soymida (*soi'-mid-ah*) [Indian name]. A genus of the *Meliaceæ.* **S. febrifuga**, A. Juss., an East Indian tree, furnishes rohun bark, introduced as a medicine in 1807 and used as a tonic and antiperiodic.

Sozalbumose (*so-zal'-bu-mōz*). See *Antiphthisin.*

Sozoborol (*so-zo-bo'-rol*). A mixture used in coryza said to consist of aristol, sozoiodolates, and borates.

Sozoiodol. (See Illus. Dict.) **S., Lead**, fine acicular crystals sparingly soluble in water. **S., Sodium.** See *Sodium Sozoiodolate.*

Space. (See Illus. Dict.) **S., Bogros'**, a space between the peritoneum above and the fascia transversalis below, in which the lower portion of the external iliac artery can be reached without wounding the peritoneum. **S., Böttcher-Cotugno's, S., Cotugno's**, the saccus endolymphaticus of the internal ear. **S., Colles'**, the space beneath the perineal fascia containing the ischiocavernosus, transversus perinei and bulbocavernosus, the bulbous portion of the urethra, the posterior scrotal (labial) vessels and nerves, and loose areolar tissue. **S., Complemental** (of pleura), the portion of the pleural cavity just above the attachments of the diaphragm which is not filled with lung during inspiration. **S.s, Czermak's Interglobular**, irregular branched spaces in the crusta petrosa and enamel of the teeth. **S., Henke's Retrovisceral**, the prevertebral space of the thorax which is continuous with the cervical space and is filled with areolar and fatty tissue. **S.s, His' Perivascular**, lymph-spaces surrounding the blood-vessels of the brain and spinal cord. **S., Hypoprostatic**, the space between the rectum and the prostate. **S.s, Interlamellar**, the spaces between the lamellæ of the cornea. **S., Interlobular.** See *Fissure, Interlobular* (Illus. Dict.). **S.s, Intermuscular**, in the popliteal region, the spaces between the quadriceps extensor and the posterior muscles of the thigh. **S., Interproximate**, in dentistry the V-shaped space between the proximate surfaces of the teeth and the alveolar septum which is filled by the gum. **S., Kiernan's**, an interlobular space of the liver. **S., Kretzschmann's**, a small pocket in the attic of the middle ear situated below Prussack's space. **S.s, Kuhnt's**, the recesses of the posterior chamber; a series of radial spaces which communicate anteriorly with the posterior chamber of the eye and contain aqueous humor. **S.s, Lange's**, the rhomboidal meshes of the reticular layer of the skin. **S.s, Larrey's**, spaces between the parts of the diaphragm attached to the sternum and those that are attached to the ribs. **S., Lesshaft's**, Lesshafti rhombus, a locus minoris resistentiæ existing in the region of the twelfth rib in some individuals, which allows the pointing of an abscess or the protrusion of a hernia. It is bounded, in front, by the external oblique; behind, by the latissimus dorsi; above, by the serratus posticus inferior, and below, by the internal oblique. Syn., *Grynfelt's triangle; Lumbocostoabdominal triangle; Spatium tendineum lumbale.* **S., Macewen's.** See *Triangle, M.'s.* **S.s, Magendie's**, imperfectly closed lymph-spaces formed by the separation of the arachnoid from the pia and corresponding to the cerebral sulci. **S., Malacarne's.** See *Tarinus' Space* (Illus. Dict.). **S., Meckel's**, a dural space in the gasserian ganglion. **S., Nuel's.** See *Nuel* (Illus. Dict.). **S., Perilenticular**, the space surrounding the crystalline lens holding the zonule of Zinn. **S., Pituitary**, the space between the two cranial trabeculæ wherein the hypophysis appears. **S., Prevesical.** See *S., Retzius'.* **S., Prussack's** (Alexander), the small space formed in the attic of the middle ear by the external ligament of the malleus above, the short process of the malleus below, the neck of the malleus internally, and Shrapnell's membrane externally. **S., Quadrilateral**, the anterior and posterior triangles of the neck taken together. **S., Quincke's**, the space between the third and fourth lumbar vertebras. **S., Rectovesical**, the space between the bladder and the rectum. **S., Retzius'.** See *Cavity, Preperitoneal* (Illus. Dict.). **S., Schwalbe's**, the subvaginal space of the optic nerve. **S., Supracho-**

roidal, the space between the velum interpositum and the fornix. **S.s, v. Troeltsch's,** two small pockets formed in the upper part of the attic of the middle ear by folds of mucous membrane. **S., Zang's,** the space between the two tendons of origin of the sternomastoid in the supraclavicular fossa.

Spanamenorrhea (*span-ah-men-or-e'-ah*). See *Spamenorrhea* (Illus. Dict.).

Spanemy (*span'-em-e*). See *Spanemia* (Illus. Dict.).

Spaniocardia (*span-e-o-kar'-de-ah*) [σπάνιος, seldom; καρδία, heart]. Landois' name for bradycardia.

Spanish Fever. Synonym of *Texas Fever.*

Spanopnea (*span-op'-ne-ah*) [σπάνις, scarcity; πνεῖν, to breathe]. Infrequency of respiratory action.

Spargin (*spar'-jin*). A yellowish-red coloring-matter found by Reinsch in the berries of *Asparagus officinalis*, L.

Spartein. (See Illus. Dict.) **S. Hydrochlorate,** $C_{15}H_{26}N_2$. 2HCl, colorless crystals, soluble in water or alcohol, used as the sulfate. **S. Hydroiodate,** $C_{15}H_{26}N_2$. HI, white needles, soluble in water or alcohol, usage and dose as the sulfate. **S. Sulfate,** $C_{15}H_{26}N_2$. $H_2SO_4 + 4H_2O$, bitter, colorless prisms, soluble in water or alcohol, boil at 136° C. It is a heart stimulant and diuretic. Dose, ·⅙–⅓ gr. (0.011–0.022 gm.). Max. dose, ½ gr. (0.032 gm.) single; ¾–2 gr. (0.05–0.13 gm.) daily. **S. Triiodid,** $C_{15}H_{26}N_2I_3$, a black powder obtained from an ethereal solution of iodin and spartein; soluble in alcohol. Usage and dosage as spartein sulfate.

Spartism (*spar'-tizm*). Poisoning from spartein; characterized by vomiting, somnolence, paralytic-like weakness, and accelerated pulse.

Spasm. (See Illus. Dict.) **S. of Accommodation,** spasm of the ciliary muscles, producing accommodation for objects near by. **S., Carpopedal,** a contraction causing flexion of the fingers and wrist, or ankles and toes. **S., Clonic, in the Area of the Nervus accessorius.** Synonym of *Wryneck, Spasmodic.* **S., Clonic, in the Area of the Portio dura.** Synonym of *Tic, Painless.* **S., Cynic.** See under *Cynic* (Illus. Dict.). **S.s, Deglutition,** a paroxysm of rapid swallowing, noted by Young (1901) as a symptom of whooping-cough. **S.s, Fatigue,** Poore's term for a group of affections characterized by spasmodic contractions, either clonic or tonic, brought about by voluntary movement; the exciting cause being limited to some particular action. Syn., *Functional spasms* (Weir Mitchell); *Movement spasms; Business spasms; Occupation spasms; Professional spasms; Coordinated business neuroses* (Benedict); *Handicraft spasms.* Ger. *Beschäftigungs Neurosen.* Cf. *Cramp* and *Palsy.* **S.s, Friedreich's.** Synonym of *Paramyoclonus multiplex.* **S.s, Function, S., Functional, S., Handicraft.** See *S., Fatigue.* **S., Hammer.** See *Palsy, Hammer.* **S., Idiopathic Muscular.** See *Tetanilla* (Illus. Dict.). **S., Laryngeal Congenital.** See *Croaking, Respiratory* (in babies). **S., Lock,** a form of writer's cramp in which the fingers become locked on the pen. **S., Masticatory** (of the face). See *Trismus* (Illus. Dict.). **S., Mimic,** facial neuralgia. **S.s, Movement.** See *S.s, Fatigue.* **S., Muscular, Idiopathic.** See *Tetanilla* (Illus. Dict.). **S., Myopathic,** one attending a disease of the muscles. **S., Nictitating, S., Nodding.** See *Eclampsia nutans* (Illus. Dict.). **S., Occupation, S., Professional.** See *S., Fatigue.* **S., Pantomimic.** Synonym of *Tic, Painless.* **S., Penman's.** Synonym of *Writer's Cramp.* **S., Retrocollic,** clonus of the deeper muscles of the back of the neck. **S., Romberg's,** masticatory spasm; affecting the muscles supplied by the motor fibers of the fifth nerve. **S., Saltatoric, S., Saltatory, S., Static Reflex.** See under *Saltatoric* (Illus. Dict.). **S., Telegraphist's,** an affection described first by Onimus, 1875. See *S., Fatigue.* **S., Tetanic.** See *S., Tonic* (Illus. Dict.).

Spasmodermic (*spas-mo-dur'-mik*). Relating to a spasmodic affection of the skin.

Spasmodism (*spas'-mod-izm*) [σπασμός, spasm]. Fleury's term for those nervous states that originate in medullary excitation.

Spasmoneme (*spas'-mo-nēm*) [σπασμός, a drawing; νῆμα, a thread]. The central reticulum or undulating bundle of fibrils excentrically located in the peduncle of a stalked infusorian (*Vorticella*) and derived from the myonemes of the body. Cf. *Myoneme, Spironeme.*

Spasmotin (*spas-mo'-tin*). See *Sphacelotoxin.*

Spasmotoxin. (See Illus. Dict.) 2. See *Sphacelotoxin.*

Spathologic (*spath-o-loj'-ik*) [σπαθᾶν, to go fast; λόγος, science]. Relating to rapid proliferation of leukocytes.

Spathulate. See *Spatulate* (Illus. Dict.).

Spatial (*spa'-shal*) [*spatium*, space]. Relating to space.

Specialism (*spesh'-al-izm*). See *Specialty* (Illus. Dict.).

Specimen. (See Illus. Dict.) **S.-cooler,** a small water cell immediately under the specimen in microprojection, to prevent injury from the heat of the radiant.

Spectrophone (*spek'-tro-fōn*) [*spectrum; φωνή*, sound]. An apparatus devised by Painter and Bell (1881) for the production of sound by the rays of the spectrum.

Spectrophotometer. (See Illus. Dict.) 2. Helmholtz's apparatus for mixing colors.

Spectrophotometry (*spek-tro-fo-tom'-et-re*) [*spectrum; φῶς*, light; μέτρον, measure]. The quantitative estimation of the coloring-matter in a substance by means of the spectroscope.

Spectrotherapy (*spek-tro-ther'-ap-e*) [*spectrum; therapy*]. Apéry's term for the therapeutic employment of prismatically decomposed rays.

Spectrum. (See Illus. Dict.) **S. of Consciousness,** in psychology, a comparison of man's range of consciousness or faculty, to the solar spectrum, as seen after passing through a prism or as examined in a spectroscope.

Speculum. (See Illus. Dict.) 3. A tendinous structure. **S. citrinum,** ointment. **S. Helmontii,** the central tendinous part of the diaphragm, the centrum nerveum. **S. indicum,** iron filings. **S. lucidum.** Same as *Septum lucidum.* **S. matricis,** womb-mirror, a vaginal speculum. **S. oris,** an oral speculum, or "mouth mirror." **S. rhomboideum,** a rhomboid area formed by the tendon of the trapezius muscles at the level of the upper dorsal and lower cervical spines.

Speech. (See Illus. Dict.) **S., Staccato.** See *Scanning* (Illus. Dict.).

Spell-bone. The fibula.

Sperm. (See Illus. Dict.) **S. Blastophore,** the residual mass of the sperm-mother cell. **S.-mother Cell,** Lankester's term for the spherical male germs of the malaria parasite as found in the mosquito. **S.-nucleus,** the nucleus of a spermatozoon.

Spermaduct (*spur'-ma-dukt*) [σπέρμα, seed; *ductus*, a duct]. A sperm-duct, the vas deferens.

Spermatise (*spur'-mat-īz*). To discharge semen.

Spermatocystectomy (*spur-mat-o-sist-ek'-to-me*) [σπέρμα, seed; κύστις, cyst; ἐκτομή, excision]. Excision of a spermatic cyst.

Spermatocystotomy (*spur-mat-o-sist-ot'-o-me*) [*spermatocyst; τομή*, a cutting]. Surgical incision of a seminal vesicle.

Spermatomerite (*spur-mat'-o-mer-īt*). See *Spermatomere* (Illus. Dict.).

Spermatozoic (*spur-mat-o-zo'-ik*). See *Spermatozoan* (Illus. Dict.).

Spermatozoicide (*spur-mat-o-zo'-is-īd*) [σπέρμα, seed; ζῶον, animal; *cædere*, to kill]. 1. Destructive to spermatozoa. 2. An agent destructive to spermatozoa.

Spermocenter (*spur-mo-sen'-ter*). The sperm-centrosomes during fertilization of the egg.

Spermolysin (*spur-mol'-is-in*) [σπέρμα, seed; λύειν, to loose]. Metchnikoff's name for a cytolysin produced by inoculation with spermatozoa. Syn., *Spermotoxin*.

Spermolysis (*spur-mol'-is-is*). Dissolution of spermatozoa.

Spermotoxin (*spur-mo-toks'-in*). See *Spermolysin*.

Sphacelotoxin (*sfas-el-o-toks'-in*) [*sphacelia*, a stage in the growth of ergot; *toxicum*, a poison]. $C_{20}H_{21}O_9$. A yellowish, pulverulent body obtained from ergot, insoluble in water, soluble in ether, chloroform, alcohol, and alkaline solutions. It is used as a tonic, astringent, and emenagog. Dose, ½–1½ gr. (0.032–0.1 gm.). Syn., *Spasmotin; Spasmotoxin*.

Sphærococcus (*sfe-ro-kok'-us*) [σπαῖρα, a ball; κόκκος, a berry]. A genus of marine *Algæ* of the order *Sphærococcaceæ*. **S. compressus**, Azardh., is said to furnish in part the Japanese isinglass or agar-agar of commerce.

Sphenoid. (See Illus. Dict.) 2. The sphenoid bone.

Sphenoidale (*sfe-noid-a'-le*) [neuter of *sphenoidalis*, sphenoidal]. The sphenoid bone. **S. basilare anterius**, the anterior portion of the body of the sphenoid. **S. basioposticum**, the lower portion of the body of the sphenoid. **S. laterale posterius**, the lateral portion of the sphenoid. **Sphenoidalia lateralia**, the greater wings of the sphenoid.

Sphenoiditis (*sfe-noid-i'-tis*). Inflammation of the sphenoidal sinus.

Sphenotripsy (*sfe-no-trip'-se*) [σφήν, wedge; τριβεῖν, to rub]. Crushing of the fetal skull.

Spherular. (See Illus. Dict.) **S. Theory.** See under *Theory*.

Sphincter. (See Illus. Dict.) **S. antri pylorici.** See under *Muscles*. **S. gulæ**, the constrictor of the pharynx. **S., Henle's**, the striated muscular fibers which encircle the prostatic and membranous portions of the urethra. **S., Hyrtl's.** See *S., Nélaton's*. **S. ilei**, the ileocecal valve. **S. intestinalis.** See *S. ani internal*, in *Table of Muscles* (Illus. Dict.). **S. labiorum**, the orbicularis oris muscle. **S. laryngis**, the aryepiglottic muscles of both sides surrounding the laryngeal opening. **S., Nélaton's**, a circular bundle of rectal muscular fibers situated from 8 to 10 cm. above the anus, on a level with the prostate. It is not constant, and when present it generally occupies only a part of the circumference of the bowel. **S., O'Beirne's**, a thickened, circular bundle of muscular fibers, situated in the rectum, just below its junction with the colon. **S. oculi, S. palpebrarum**, the orbicularis palpebrarum muscle. **S. œsophageus.** See *Foramen, Esophageal* (Illus. Dict.). **S., Oral**, the orbicularis oris. **S. pharyngolaryngeus**, the inferior constrictor of the pharynx, the anterior cricothyroid and the thyroid muscles considered as one. **S. pylori-cus.** See under *Muscles*.

Sphincteroscope (*sfingk-ter'-o-skōp*) [σφιγκτήρ, sphincter; σκοπεῖν, to examine]. An instrument for making visual inspection of a sphincter.

Sphincteroscopy (*sfingk-ter-os'-ko-pe*) [σφιγκτήρ, sphincter; σκοπεῖν, to examine]. Visual inspection of a sphincter by means of special instruments.

Sphinctrate (*sfingk'-trāt*). Contracted or constricted as if by a sphincter.

Sphygmochronography (*sfig-mo-kro-nog'-raf-e*) [σφυγμός, pulse; χρόνος, time; γράφειν, to write]. The registration of the extent and oscillations of the pulse-wave.

Sphygmogenin (*sfig-moj'-en-in*) [σφυγμός, pulse; γεννᾶν, to produce]. A substance isolated by Frānkél from the suprarenal capsule which causes increase of blood-pressure. It is used as an antidote in nicotin poisoning.

Sphygmopalpation (*sfig-mo-pal-pa'-shun*). The palpation of the pulse.

Sphyra (*sfi'-rah*) [σφῦρα, a hammer]. The malleus.

Sphyrectomy (*sfi-rek'-to-me*) [σφῦρα, a hammer; ἐκτομή, excision]. Excision of the malleus.

Sphyrotomy (*sfi-rot'-o-me*) [σφῦρα, a hammer; τομή, a cutting]. Surgical removal of part of the handle of the malleus.

Spider. (See Illus. Dict.) **S., Menarody**, a poisonous species of *Latrodectus* found in Madagascar. **S.s, Poisonous.** See *Clupione, Cteniza, Epeira, Galeodes, Latrodectus, Lycosa, Metropelma, Mygale, Nemesia, Phidippus, Rhax, Theraphosa, Trochosa*.

Spina. (See Illus. Dict.) **S. accessoria ischii**, an inconstant projection into the great sciatic notch at the junction of the ischium and ilium. **S. angularis**, the spine of the sphenoid bone. **S. ischiadica, S. ischiatici, S. ischii.** See *Spine of Ischium* (Illus. Dict.). **S. nodosa**, rachitis.

Spinalgia (*spi-nal'-je-ah*) [*spina*, a spine; ἄλγος, pain]. Tenderness of a vertebral spine to pressure.

Spinant (*spi'-nant*). An agent stimulating the spinal cord.

Spindle. (See Illus. Dict.) **S., Central**, the linin filaments spanning the interval between the centrosome at the completion of the prophase.

Spine. (See Illus. Dict.) **S., Angular**, curvature of the spine. **S., Civinini's**, a small spine on the outer border of the external pterygoid plate giving attachment to the pterygospinous ligament. **S., Henle's**, spina suprameatum. An inconstant small spine at the junction of the posterior and superior walls of the external auditory meatus. It serves as a landmark in trephining of the mastoid process. **S., Navicular**, a pointed projection on the inner edge of the navicular bone. **S., Spix's**, the bony spine at the inner border of the inferior dental foramen giving attachment to the sphenomaxillary ligament. **S., Trochlear**, a small projection on the upper ventral part of the inner wall of the orbit for the trochlea. **S., Zygomatic**, a projection from the zygomatic process.

Spinicerebrate (*spi-ni-ser'-e-brāt*). Furnished with a brain and spinal cord.

Spinideltoid (*spi-ni-del'-toid*). The part of the deltoid muscle arising from the spine of the scapula.

Spinifugal (*spi-nif'-u-gal*) [*spina*, spine; *fugere*, to flee]. Moving from the spinal cord.

Spinipetal (*spi-nip'-et-al*) [*spina*, spine; *petere*, to seek]. Moving toward the spinal cord.

Spinitrapezius (*spi-ni-tra-pe'-ze-us*). The spinal part of the trapezius as distinguished from the cranial part.

Spinogalvanization (*spi-no-gal-van-i-za'-shun*). Galvanization of the spinal cord.

Spinoglenoid (*spi-no-glen'-oid*). Relating to the spine of the scapula and the glenoid cavity.

Spinol (*spin'-ol*). An extract of young, fresh spinach (*Atriplex hortensis*, L.) leaves containing about 2.6% of iron and occurring both as a liquid and a powder. It is used in the spinach cure for children. Dose, 1–8 gr. several times daily.

Spinomuscular (*spi-no-mus'-ku-lar*). Relating to the spinal cord and the muscles.

Spinoneural (*spi-no-nu′-ral*). Pertaining to the spinal cord and the peripheral nerves.

Spinthariscope (*spin-thar′-is-kōp*) [σπινθήρ, a spark; σκοπεῖν, to view]. An instrument devised by Sir William Crookes for demonstrating the physical properties of radium. It consists of a fluorescent screen in front of which is placed a small quantity of radium bromid, with or without a lens for examining the scintillations.

Spintometer (*spin-tom′-et-ur*) [σπινθήρ, spark; μέτρον, measure]. An apparatus for measuring the length of sparks in the Röntgen tube.

Spiradenitis (*spi-rad-en-i′-tis*) [σπεῖρα, a coil; ἀδήν, a gland]. Unna's name for hydrosadenitis phlegmonosa (Illus. Dict.).

Spirasoma (*spi-rah-so′-mah*) [σπεῖρα, a coil; σῶμα, a body]. A genus of bacteria of the *Spirillaceæ* having rigid cells without flagella.

Spirema (*spi-re′-mah*) [*spira*, a coil]. See *Spirem* (Illus. Dict.).

Spirillosis (*spir-il-o′-sis*). 1. Any affection due to *Spirillum*. 2. A disease of cattle in the Transvaal. **S. of Fowls**, a disease of geese, ducks, guinea-fowls, turtle doves, pigeons, and sparrows. The affected fowls exhibit diarrhea, loss of appetite, pale combs, and in acute cases die suddenly of convulsions. It is due to a spirillum which is transmitted by *Argas persicus*. The serum of animals which have recovered from a first attack possesses strong immunizing properties.

Spirit. (See Illus. Dict.) **S., Adiaphorous**, a liquid obtained by the distillation of cream of tartar. **S., Ammonia.** See under *Ammonium* (Illus. Dict.). **S., Anise.** See under *Anisum* (Illus. Dict.). **S., Corn**, whisky distilled from Indian corn.

Spirofibrillæ (*spi-ro-fi-bril′-e*) [*spira*, a coil; *fibrilla*, a small fiber]. The term applied by Fayod in his theory of the structure of protoplasm to supposed long, twisted, hollow fibrils constituting the protoplasm and nuclei of vegetal cells and uniting to form the spirospartæ (*q. v.*). Fayod asserts also that the blood-plasma consists of spirofibrillæ and that they penetrate here and there into the hematoblasts. In this case Bütschli holds it clear that Fayod has mistaken coagulations of fibrin for spirofibrillæ.

Spirographidin (*spi-ro-graf′-id-in*) [σπεῖρα, a coil; γράφειν, to write]. The hyalin obtained from spirographin.

Spiromonas (*spi-ro-mo′-nas*) [σπεῖρα, a coil; μονάς, single]. A genus of biflagellate monads or free-swimming animalcules established by Perty (1852), now referred to *Bodo* (Ehrenberg), Stein.

Spironeme (*spi′-ro-nēm*) [σπεῖρα, a coil; νῆμα, a thread]. A helical thread of cytophanes wrapped about the axoneme of the peduncle of a stalked infusorian. Cf. *Spasmoneme; Myoneme.*

Spirospartæ (*spi-ro-spar′-te*) [σπεῖρα, a coil; σπάρτη, a rope]. The term applied by Fayod in his theory to twisted hollow strings the walls of which are formed by the twisting together of the fibrils or spirofibrillæ. The cavities of the spirospartæ and spirofibrillæ are said to be filled in the normal condition by "granular plasma"; spirospartæ pass from the protoplasm into the nucleus and vice versa, and also may be traced frequently from one cell into a neighboring one, so that "the cell loses its value as a morphological and physiological unit." These results were obtained in vegetal cells, chiefly by injection with quicksilver, by which method Fayod believes he filled the cavities of the spirospartæ and spirofibrillæ with metal. Cf. *Spirofibrillæ.*

Splanchnic. (See Illus. Dict.) 2. A remedy efficient in diseases of the bowels.

Splanchnomegaly (*splangk-no-meg′-al-e*) [σπλάγχνα, viscera; μέγας, large]. Giant growth of the viscera.

Splashing. (See Illus. Dict.) **S. in the Stomach**, a sign of atony of that organ.

Splenectomize (*splen-ek′-tom-īz*) [σπλήν, spleen; ἐκτομή, excision]. To excise the spleen.

Splenic. (See Illus. Dict.) 2. A remedy efficient in disorders of the spleen. 3. Affected with splenitis.

Spleniferrin (*splen-e-fer′-in*). An organic iron preparation said to be obtained from the spleen.

Splenin (*splen′-in*). An organotherapeutic preparation made from the spleen of animals.

Splenitic (*splen-it′-ik*). See *Splenic.*

Splenitis. (See Illus. Dict.) **S., Spodogenous**, that due to accumulation of waste matter.

Splenitive (*splen′-it-iv*). Capable of acting upon the spleen.

Splenocyte (*splen′-o-sīt*) [σπλήν, spleen; κύτος, cell]. The cell peculiar to splenic tissue.

Splenohepatomegaly (*splen-o-hep-at-o-meg′-al-e*) [σπλήν, spleen; ἧπαρ, liver; μέγας, great]. Enlargement of the liver and spleen.

Splenolaparotomy (*splen-o-lap-ar-ot′-o-me*). See *Laparosplenotomy* (Illus. Dict.).

Splenolymph (*splen′-o-limf*). Intermediate in character between the spleen and a lymph-gland. See *Gland, Splenolymph.*

Splenolymphatic (*splen-o-lim-fat′-ik*). Relating to the spleen and the lymph-glands.

Splenomedullary (*splen-o-med′-ul-a-re*). Relating to the spleen and the marrow of bones.

Splenoparectama (*splen-o-par-ek′-ta-mah*). See *Splenoparectasis* (Illus. Dict.).

Splenopexia, Splenopexis (*splen-o-peks′-e-ah, splen-o-peks′-is*). See *Splenopexy.*

Splenopexy (*splen-o-peks′-e*) [σπλήν, spleen; πῆξις, fixation]. Surgical fixation of a movable or displaced spleen.

Splenoptosis (*splen-o-to′-sis*) [σπλήν, spleen; πτῶσις, a falling]. Downward displacement of the spleen.

Splenorrhaphy (*splen-or′-af-e*) [σπλήν, spleen; ῥάφη, suture]. Suture of the spleen.

Splenoscirrhus (*splen-o-skir′-us*) [σπλήν, spleen; σκῖρος, hardness]. Cancer of the spleen.

Splenule (*splen′-ūl*). An accessory or rudimentary spleen.

Splint. (See Illus. Dict.) **S. Box.** See *Fracture-box* (Illus. Dict.). **S., Desault's**, one used in treating fracture of the thigh. **S., Interdental**, an appliance used in the treatment of fractured jaws. **S., Mason's**, one used in subsequent treatment of amputation at the elbow allowing pronation and supination movements during healing. **S., Poroplastic**, a splint which can be softened with hot water and moulded upon the limb, to harden and retain the shape when dried. **S., Stromeyer's**, one used to prevent stiffness of the joints in case of fracture. It consists of two hinged parts that can be fixed at any angle.

Splintage (*splint′-aj*). The application of splints.

Split-cloth. A bandage for the head with six or eight tails attached to a central part.

Spodophagous (*spo-dof′-ag-us*) [σποδός, ashes; φαγεῖν, to eat]. Destroying the waste material of the body.

Spodophorous (*spo-dof′-or-us*) [σποδός, ashes; φέρειν, to bear]. Carrying or conveying waste material.

Spokeshave (*spōk′-shāv*). A ring-knife devised by Carmalt Jones, for use in rhinologic operations.

Spondyle (*spon′-dil*) [σπόνδυλος]. A vertebra.

Spondylodidymia (*spon-dil-o-did-im′-e-ah*) [σπόνδυλος, vertebra; δίδυμος, twin]. A form of somatodymia in which the union is in the vertebras. Syn., *Vertebradymia.*

Spondylodymus (*spon-dil-od′-im-us*) [σπόνδυλος, vertebra; δῦειν, to enter]. A twin monster united by the vertebras.

Spondylosis (*spon-dil-o′-sis*) [σπόνδυλος, vertebra]. Vertebral ankylosis. **S., Rhizomelic,** spondylose rhizometique; Marie's term for a variety of arthritis deformans with ankylosis of the vertebras and arthritis of the hips and shoulders.

Sponge. (See Illus. Dict.) **S., Bernay's Aseptic,** small circular discs of prepared cotton fiber which has been subjected to great pressure; when placed in water, they increase in size twelve to fifteen times. They are recommended as controlling agents in nasal hemorrhage. **S.-gatherer's Disease,** a disease of divers due to a secretion of a species of *Actinia* found in waters where sponges grow. This viscid excretion causes at the point of contact upon the body a swelling and intense itching followed by a papule surrounded by a zone of redness which later becomes black and gangrenous and forms a deep ulcer. Cf. *Thalassin.* **S.work.** Synonym of *Spongioplasm.*

Spongioblast. (See Illus. Dict.) **S. of Inner Molecular Layer of Retina.** See *Cells, Amacrine.*

Spongiocyte (*spun′-je-o-sīt*) [σπόγγος, sponge; κύτος, a hollow]. Fish's term for the glia or neuroglia cell.

Spongiositis (*spun-je-o-si′-tis*). Inflammation of the corpus spongiosum.

Spoonful. A spoon is full when the contained liquid comes up to but does not show a curve above the upper edge or rim of the bowl. A teaspoonful equals 5 c.c.; a desertspoonful, 10 c.c.; a tablespoonful, 15 c.c.

Sporadin (*spo-rad′-in*) [σποράς, scattered]. The phase of a gregarine in which it consists of protomerite and deutomerite, having lost the epimerite in gaining its liberty. Cf. *Cephalont.*

Sporadoneure (*spor-ad′-o-nūr*) [σποράς, scattered; νεῦρον, nerve]. An isolated nerve-cell.

Sporangial (*spor-an′-je-al*). Relating to a sporangium.

Sporidium. (See Illus. Dict.) 2. A provisional genus of sporozoa. **S. vaccinale,** Funck, a species of sporozoa occurring as: (1) small, spherical, highly refractive bodies (2–10 μ) of green color and slow movement; (2) small refracting spheres enclosed in capsules; (3) morula masses or spore casts. They can be cultivated and the culture produces typical vaccinia when inoculated in calves.

Sporification (*spor-if-ik-a′-shun*). The formation of spores.

Sporocyst. (See Illus. Dict.) 4. That stage of a sporozoan resulting from the development of a sporoblast and in its turn giving rise to two sporozoits.

Sporogony. (See Illus. Dict.) 2. A form of exogenous sporulation; an oocyst containing a sporont divides into four sporoblasts, which ripen into sporocysts and in turn divide into a crescentic nucleated body, the sporozoit. It occurs among coccidia. Cf. *Schizogony.*

Sporont. (See Illus. Dict.) 2. Schaudinn's term for the single-celled contents of the coccidial oocyst. Cf. *Schizont.*

Sporoplasm (*spor′-o-plazm*) [σπόρος, seed; πλάσσειν, to form]. The cytoplasm of the asexual reproductive cell.

Sporotheca (*spor-o-thē′-kah*) [σπόρος, seed; θήκη, a case]. 1. See *Sporangium* (Illus. Dict.). 2. The envelope of the sporulating cell.

Sporozoit (*spor-o-zo′-it*) [σπόρος, seed; ζῶον, an animal]. The sickle-shaped, nucleated organism which results from the division of a sporocyst among the sporozoa. Syn., *Germinal rod* (Ross, 1878); *Zygotoblast* (Ross, 1899); *Gametoblast* (Lankester, 1900). Cf. *Merozoit.*

Spot. (See Illus. Dict.) **S.s, Bitot's,** xerosis conjunctivæ. Silver gray, shiny, triangular spots on both sides of the cornea, within the region of the palpebral aperture, consisting of dried epithelium, flaky masses and microorganisms. Observed in some cases of hemeralopia. **S., Blue** (of the integument), a tegumentary spot over the sacral region characteristic of the Mongolian race; due to aggregations of long, spindle-shaped, and stellate cells in the cutis containing pigment. It appears in the fourth month of fetal life and persists sometimes to the seventh year. **S.s, Genital,** nasal parts which show increased sensitiveness during menstruation. **S.s, Koplik's.** See under *Sign.* **S.s, de Morgan's.** See under *Sign.* **S.s, Rose,** a red papulous eruption forming spots the size of a small lentil, effaced by pressure of the finger and occurring mostly on the abdomen and loins during the first seven days of typhoid fever. They are due to inflammation of the papillary layer of the skin from invasion of typhoid bacilli. Syn., *Typhoid spots; Typhoid roseola.* Fr. *Tache rosées lenticulaires.* Cf. *Taches bleuâtres.* **S.s, Roth's.** See under *Sign.* **S.s, Soldiers'.** Same as *Macula lutea.* **S.s, Typhoid.** See *S.s, Rose.* **S.s, White,** grayish or yellowish-white elevated spots from the size of a pin-head to that of a one-cent piece, of varying shape and distinctness of outline, often occurring on the ventricular surface of the anterior leaflet of the mitral valve.

Spotted Fever. (See Illus. Dict.) 2. See under *Fever.*

Spray. (See Illus. Dict.) **S.-cure,** a form of douche applied by means of a spraying apparatus.

Sprew (*sprū*). See *Thrush* (Illus. Dict.).

Spring. (See Illus. Dict.) **S.-knee,** a condition of the knee similar in general features to the condition known as spring-finger. Just before full extension of the joint is reached there is a slight hitch, and then the limb straightens itself with a sharp, rather painful jerk.

Sprit. The commercial name for pure alcohol, 96%.

Sprouw. See *Sprue* (2).

Sprue. (See Illus. Dict.) 2. The name given by the Dutch in Java to aphthæ tropicæ (*q. v.*); a chronic catarrhal inflammation of the entire alimentary tract, especially prevalent in Malaya. It is also called tropical sprue, diarrhœa alba, or Ceylon sore mouth, sprouw.

Spud [Dan. *Spyd*, a spear]. 1. An instrument used in the detachment of the mucosa in flaps in operations necessitating the removal of bone. 2. A short flattened blade used to dislodge a foreign substance.

Spur. (See Illus. Dict.) 3. Ergot. **S.-blind,** myopic. **S. of the Septum,** an outgrowth of the nasal septum.

Sputum. (See Illus. Dict.) **S., Aeruginous.** See *S., Green* (Illus. Dict.). **S., Hailstone,** spheric masses of sputum of the later stages of bronchitis. **Sputa margaritacea.** See *S., Pearly.* **S., Mucopurulent,** small lumps or pellets in a viscid mucoserous fluid, seen in bronchitis. **S., Pearly,** sputum consisting of small gray translucent pellets.

Squama. (See Illus. Dict.) **S. frontalis,** the vertical portion of the frontal bone. **S. occipitalis,** the supraoccipital bone. **S. temporalis,** the squamosa.

Squamomandibular (*skwa-mo-man-dib′-u-lar*). Relating to the squamous and maxillary bones.

Squamosa (*skwa-mo′-sah*). The squamous portion of the temporal bone.

Squamosal. (See Illus. Dict.) 2. See *Squamosa.*

Squarious (*skwa′-re-us*) [*squariosus*, scurfy]. Scurfy.

Stachydrin (*sta-kid′-rin*). $C_7H_{13}NO_2$. An alkaloid from the bulb of *Stachys palustris*, L., forming colorless crystals which liquefy on exposure; soluble in water and alcohol, melt at 210° C.

Stachyose (*stah'-ke-ōz*). $C_{18}H_{32}O_{16}$. A trisaccharid yielded by *Stachys palustris*, L.

Stadium. (See Illus. Dict.) **S. amphiboles** [*ἀμφίβολος*, equivocal, uncertain]. See *Stage, Ampibolic* (Illus. Dict.). **S. annihilationis**, the convalescent stage. **S. floritionis**, the stage of an eruptive disease during which the exanthem is at its height. **S. frigoris**, the cold stage of a fever. See *Stage, Algid* (Illus. Dict.). **S. incrementi**, the stage of increase of a fever or disease. **S. staseos.** See *S. acmes* (Illus. Dict.).

Staffa (*staf'-ah*). 1. Stapes. 2. A figure-of-eight bandage.

Stagium (*sta'-je-um*). The sixth part of an ounce.

Stagnum chyli [*stagnum*, a pond]. Same as *Receptaculum chyli.*

Stahlian (*stah'-le-an*). An animist, a follower of the doctrine of George Ernst Stahl, German chemist, 1660–1734. See *Animism* (Illus. Dict.).

Stains, Staining Reagents, Methods, Etc. Abba's Method for isolating the colon bacillus from water: Cook for a half-hour at 100° C., in a steam apparatus, milk-sugar 200 gm., dry peptone 100 gm., sodium chlorid 50 gm., water 1000 c.c.; filter; preserve in glass containers of 100 c.c. capacity each. Pour 100 c.c. of the culture-fluid into one liter of the water to be examined; add 2 or 3 c.c. of 1% alcoholic phenolphthalein and cold saturated solution of sodium carbonate until the water is and stays rose-red; fill into 5 or 6 Erlenmeyer flasks and place in an oven at 37° C. Prepare 10 c.c. of agar solution in a sterilized petri-dish and place it in the oven at 37° C. If bacilli are present, the water in the Erlenmeyer flasks will be decolored in from 12 to 24 hours. By means of a platinum loop take a small drop from the surface of the water and make hieroglyphics on the agar in the petri-dish; return to the oven at 37° C. and in from 12 to 18 hours the colonies will be seen. **Acetic-acid Alcohol**, a mixture of equal parts of absolute alcohol and glacial acetic acid; used for fixing ova. Cf. the fluids of Carnoy and of Zacharias. **Acid-violet**, a plasma stain. For its use see *Light-green.* **Adami's Method.** 1. For obtaining tubercle bacilli from milk, urine, and other secretions: Add to the suspected liquid 5% of pure carbolic acid; centrifugate 30 c.c. in a machine giving 2000 revolutions a minute. Decant the supernatant fluid, add a little 3% sodium hydroxid to the sediment, and after a few minutes fill the tube to the 15 c.c. mark and centrifugate. Repeat the process if necessary. 2. For staining the diplobacillus in the fibrous tissue of the liver and the lymph-glands in atrophic cirrhosis: Place the sections in weak acetic acid, then in absolute alcohol, and then for one hour in a half saturated solution of methylene-blue in anilin; xylol; balsam. Examine with a $\frac{1}{18}$-inch oil-immersion lens. The bacteria are of a brownish color. **Adjective Staining**, that obtained by treating the tissue first with a mordant. **Albrecht-Stark's Method:** Place the sections on a slide made moist by breathing upon it; then add a drop of warm water, and by repeated breathing upon them the sections will spread out. Moisten a piece of filter-paper with 5 drops of absolute alcohol, place it over the sections, and press them down. Remove the paraffin with xylol, the xylol with absolute alcohol, and pour over the slide a layer of very thin celloidin solution; drain; wash with 95% alcohol. **Alfieri's Method** for celloidin sections of tissue containing pigment: Place them for from 8 to 24 hours in a 1 : 2000 solution of potassium permanganate and then wash for several hours in a 1 : 300 solution of oxalic acid. **Alkali-alcohol**, a solution of 1 gm. of caustic potash in 100 c.c. of alcohol, allowed to stand for 24 hours and then filtered. **Altmann's Method.** 1. For histologic preparations: Freeze the fresh object and dry in the frozen state at —30° C., over sulfuric acid in a vacuum. The drying takes 2 days. Then infiltrate in a vacuum with melted paraffin. By this method the volume of the object remains unaltered, and, it is said, the reaction power of the tissues is preserved. 2. For attaching sections to the slide: Dissolve one part of guttapercha in 6 parts of chloroform and for use dilute with 25 volumes of chloroform; pour the liquid over the slide, drain, and when the chloroform has evaporated heat the slide over a gas-flame. On slides prepared in this way paraffin sections are placed and fixed by means of 4% solution of gun-cotton in acetone, diluted with 3 volumes of alcohol; press the sections against the slide by means of filter-paper, and then melt the paraffin. **Ammonium Sulfate Reaction**, the green or black-green color produced when tissues containing iron are treated with solution of ammonium sulfate. Cf. the methods of Hall, Quincke, and Zalewski. **Amyloid Reaction** in tissues having undergone amyloid degeneration. 1. With iodin: Dilute Lugol's solution with distilled water until it has the color of port-wine and add 25% of glycerol; in this stain the sections for 3 minutes, wash in water, and mount in glycerol. The amyloid substance is brown-red, the remaining tissues are light-yellow. For permanent preparations, see the method of Langhans for glycogen. 2. With iodin green: Stain for 24 hours in iodin-green (0.5 gm. dissolved in 150 c.c. of distilled water) and wash in water. The amyloid masses are red-violet, the remaining tissues green. 3. With iodin and sulfuric acid: Place sections that have been treated with Lugol's solution (see *Iodin Reaction*) in 1% sulfuric acid. The brown of the amyloid substance becomes intensified or it changes to a violet or blue to green color. 4. With methyl-green: Stain for from 3 to 5 minutes in 1% solution of the dye and wash in distilled water containing 1% of hydrochloric acid. Amyloid substance violet, nuclei green. 5. With methyl-violet: The process of staining is the same as with methyl-green. The amyloid is purple-red, the remaining tissue blue. See further the methods of Birch-Hirschfeld, Harris, Kantorowicz, Morse, and Van Gieson. **Andriezen-Golgi Method:** Suspend thin slices of brain with the pia intact in 95 c.c. of 2% solution of potassium bichromate, to which after 10 or 15 minutes add 5 c.c. of 1% osmic acid and place in the dark for 24 hours; transfer to a mixture of 90 c.c. of 2.5% potassium bichromate and 10 c.c. of 1% osmic acid; after 2 days transfer to a mixture of 80 c.c. of 3% potassium bichromate and 20 c.c. of 1% osmic acid; after 3½ days nerve-cells and glia-cells will be impregnated, after 6 days axons and collaterals. Quickly rinse the tissue in distilled water, place it in 0.75% solution of silver nitrate (in the dark), and after 15 minutes in 100 c.c. of the silver solution plus one drop of formic acid; the tissue should remain in this solution (which should be renewed after 24 hours) from 3 to 5 days, in an incubator at 25° C. Rinse in 90% alcohol for 15 minutes; dehydrate in absolute alcohol for 15 minutes; place in thin celloidin for a half-hour and mount on cork. Wash the sections in distilled water until free from alcohol; place them in 0.75 silver nitrate solution for from 30 to 60 minutes; dehydrate in alcohol, clear in xylol-pyridin, and mount in xylol-damar without a cover-glass. **Anilin Blue.** See *Victoria Blue* under *Staining Reagents* (Illus. Dict.). **Anjeszky's Method** for the spores of bacteria: Dry the films in air; cover with 0.05% hydrochlo-

ric acid and heat until it boils; then place the cover-glass in Klug's fluid (pepsin, 0.1%, and hydrochloric acid, 0.5%); after 3 or 4 minutes wash in water, dry, fix in the flame, cover with carbol-fuchsin, and heat until it steams; when cool, decolor in 4.5% sulfuric acid, wash in water, and counterstain with malachite green for 2 or 3 minutes. **Apáthy's Gum-syrup,** dissolve 50 gm. each of picked gum arabic, cane-sugar (uncandied), and distilled water over a water-bath and add 0.05 gm. of thymol. **Apáthy's Hematein.** (*a*) Alum 9 parts, glacial acetic acid 3 parts, salicylic acid 0.1 part, water 100 parts. (*b*) Hematoxylin 1 part, 70% alcohol 100 parts, and preserve for six weeks. Mix equal parts of *a* and *b* and glycerol. This is the hematein mixture I A. **Apáthy's Method.** 1. For neurofibrils: Fix the tissue in a sublimate fluid and preserve in 90% alcohol. Stain in bulk for 48 hours in Apáthy's hematein mixture I A; wash up to 24 hours in absolutely pure distilled water, transfer to spring-water, and after from 3 to 5 hours return to distilled water for 2 hours; dehydrate rapidly in absolute alcohol and embed in paraffin, celloidin, or glycerin jelly. Protect from light while in chloroform or celloidin. Mount in a resin or in neutral glycerol. 2. For nerve-endings: *Foregilding.* The tissue must be so thin that light can stream through it, hence a membrane or section. Place in 1% gold chlorid solution for several hours, in the dark; transfer to 1% formic acid and expose for from 6 to 8 hours to diffuse daylight in summer, to direct sunlight in winter. The temperature of the acid must not be allowed to rise above 20° C. *Aftergilding.* Fix the tissue in sublimate or in a mixture of equal parts of saturated solution of sublimate in 0.5% salt solution and 1% osmic acid. Embed in paraffin or celloidin, fix the sections to slides, and treat them with iodin-alcohol. Place in the gold bath (1% or weaker) overnight, rinse in water or dry with filter-paper, and reduce in formic acid, as in foregilding. Stand the slides on end in a slanting position, with the sections looking downward. The sections may be counterstained and mounted in any medium. 3. For objects saturated with water: Infiltrate with thin glycerin-gelatin; evaporate in a desiccator kept at the melting temperature of the mass. Embed in a tray and harden and cut in absolute alcohol. **Apáthy's Mixture.** 1. Equal parts of 1% osmic acid and saturated solution of mercuric chlorid in 0.5% salt solution. 2. Mercuric chlorid, 3 gm.; sodium chlorid, 0.5 gm.; 50% alcohol, 100 c.c. **Argutinsky's Method** for attaching celloidin sections to the slide: Spread a thin layer of albumin fixative on the slide; warm it; on this arrange the sections, and keep them moist with 70% alcohol; absorb the alcohol with filter-paper, cover the sections with 8 or 10 layers of filter-paper, and with the finger on the paper press the sections on to the slide. Stain at once or preserve in distilled water or 70% alcohol. **Arnold's Method.** 1. Sterilize a thin microtome section of elder-pith in boiling 0.6% salt solution; place it on a cover-glass (the edges of which are coated with vaselin), charge it with a drop of blood, and place the preparation on a slide with a ground cell. The blood on the section of elder-pith can be fixed with any of the usual reagents or films on slides can be prepared in the usual way. 2. Fix blood in any suitable medium, spread it on a plate and let it dry; then pass over it a thin layer of thin celloidin, drain off the excess and let it dry. The celloidin with the blood can then be stripped off as a thin membrane and stained. **Arnstein's Method** for tactile corpuscles: Macerate pieces of skin for 24 hours in lime-water; remove the horny stratum and treat for 5 minutes with 0.25% solution of gold chlorid; place for 24 hours in distilled water; the precipitate formed is removed by putting the skin in a 0.25% solution of potassium cyanid and brushing with a camel's-hair pencil. Mount in balsam. **Aronson-Phillipp Mixture,** for staining the granules of leukocytes: Prepare saturated aqueous solutions of orange G, acid-rubin extra, and crystalline methyl-green; clear by sedimentation. Mix 55 c.c. of orange G, 50 c.c. of acid rubin, 100 c.c. of distilled water, and 50 c.c. of alcohol; to this mixture add 65 c.c. of methyl-green plus 50 c.c. of distilled water and 12 c.c. of alcohol. Let the solution stand several weeks before using. **Ascites-agar.** See *Kiefer's Medium* and *Kanthack's Medium.* **Assheton's Method** for mammalian embryos less than 10 days old: From 1 to 3 hours after the death of the animal inject into the upper end of the uterus enough of 0.25% to 0.5% solution of chromic acid to distend the organ and smooth out the folds of the mucosas so that the ova will float free in the liquid. Ligate the lower end of the uterus and place it for 2 days in 0.5% chromic acid. Empty the contents in a watch-glass and search for the ova with the microscope. Stain in toto with carmine or hematoxylin and embed in paraffin. **Auburtin's Method** for celloidin sections: Transfer the sections from the knife to the slide and arrange before the alcohol evaporates. Press over them a strip of filter-paper and before the sections are quite dry pour over them carefully several times a mixture of equal parts of absolute alcohol and ether. When the alcohol-ether has evaporated, the sections will be fastened by a thin even membrane of adherent celloidin. **Azoulay's Method** for medullated nerve-fibers: Harden in Müller's fluid and embed in celloidin. Place the sections for 5 minutes in osmic acid solution (1 : 500 or 1000), wash in water and transfer into 5% or 10% tannin solution and heat for from 2 to 5 minutes or until it steams; wash; stain with carmine or eosin, and mount in balsam. The medullary sheaths are gray to blue-black. **Bacterial Suspensions** for testing disinfectants: Mix fresh cultures from 3 or 4 tubes with 10 c.c. of sterilized distilled water; filter through glasswool and place in a water-bath at 37.5° C. and frequently agitate, until on microscopic examination bacteria in clusters cannot be detected. Transfer 3 c.c. each into several sterilized test-tubes and add an equal volume of the germicide, of double the strength to be tested. At intervals of 2, 5, 10, 20, 30, and 60 minutes inoculate bouillon or agar tubes and put them in the incubator for one week. **Balzer's Method** for the demonstration of dermatophytes: Treat the fungus and attached scales and hairs with alcohol and ether; stain for a few seconds in alcoholic solution of eosin; dehydrate, clear, and mount in balsam. **Barfurth's Method** for the egg-cells of amphibia: Fix the eggs in water heated to 80° C. or in chromic-acetic acid heated to the same degree. For the removal of the envelopes treat with javelle water diluted threefold. Eggs fixed in hot water may be preserved in their envelopes in a mixture of alcohol 125 parts, glycerol 25 parts, water 350 parts. **Barker's Method** for the detection of iron in the granules of eosinophil leukocytes: Heat a cover-glass film on a copper bar at 120° C. for 1 or 2 hours. Put a drop of a fresh solution of ammonium sulfid on the film and immediately place the cover on a slide with a drop of glycerol, so that the latter and the sulfid will mix. Put the preparation in the oven at 60° C. After from 24 to 48 hours the yellow-green iron reaction of the granules and the greenish-black reaction of the nuclei of the eosinophil leukocytes can be seen. **Baumgarten and Jacoby's**

Anilin-blue, used in a 0.2% alcoholic solution as a counterstain with carmin or safranin as the nuclear stain, it is recommended for the differentiation of nerve tissue and of cartilage. See *Carmin* and *Anilin-blue*. **Bencke's Method.** 1. A modification of Weigert's method for fibrin, which consists in diminishing the bleaching power of the anilin-xylol by increasing the proportion of xylol. By using a mixture of 2 volumes of anilin and 3 volumes of xylol the following structural elements can be demonstrated: mitotic figures; connective-tissue fibers; elastic fibers; Sharpey's fibers and the fibrils of osseous tissue; striated muscle; neuroglia; nuclei of ganglion cells; the reticulum of squamous epithelium. **Benda's Copper-hematoxylin.** Treat paraffin sections of tissue fixed in Flemming's mixture for 24 hours with concentrated solution of copper acetate at 40° C., or for 48 hours at normal temperature; wash well in water and stain until dark gray or black in 1% aqueous solution of hematoxylin. Decolor in 0.2% hydrochloric acid until the sections are light yellow; neutralize in the solution of copper acetate until bluish-gray. **Benda's Iron-hematoxylin,** mordant sections for 24 hours in a mixture of iron sulfate 80 parts, sulfuric acid 15 parts, nitric acid 18 parts, and water 200 parts (or liquor ferri sulfurici oxidati, P. G., diluted with one or two volumes of water); wash in distilled water and stain until black in 1% aqueous solution of hematoxylin; differentiate in 30% or weaker acetic acid or in the iron-sulfate solution diluted to a pale straw color. **Benda's Method.** 1. (*a*) For kinetic nuclei. Stain sections for 24 hours in anilin-water safranin solution (see safranin formula b of Babes, *Staining Reagents*), and then for a half minute in a solution of light green or acid violet, 0.5 gm. in 200 c.c. of alcohol. Chromatin red; archoplasm green (or violet); centrosomes of spermatozoa sometimes red, sometimes green. (*b*) Stain with iron hematoxylin and afterstain with safranin. Chromosomes and centrosomes black; linin fibrils and nuclear spindle red. 2. For frozen sections of organs of the central nervous system. Treat small pieces of tissue for one or more hours with 2.5% formalin; wash and freeze in distilled water. The sections are not brittle and have a consistency like soap. **Benda's Method.** For neuroglia: Fix in 10% formalin. Mordant in Weigert's chromium alum and copper acetate mordant and then in 0.5% chromic acid. Wash in water. Embed in paraffin. Mordant the sections for 24 hours in 4% iron alum, wash in water and stain in a weak solution of sodium sulfalizarinate and then in 1% toluidin blue; wash in 1% acetic acid, dry, dehydrate, and differentiate in creasote. **Benda's Reaction,** a macro-chemic and micro-chemic reaction of fatty tissue necrosis. Harden the tissue in 10% formalin and treat with Weigert's copper acetate mordant for neuroglia (see *Weigert's Method*); after 24 hours in the incubator the necrotic areas are covered with green flakes. Microscopically the necrotic tissue is blue-green, the fatty acid crystals being most intensely colored. The normal fat-cells show no trace of the blue or blue-green hue. **Bensley's Method** for the study of the mammalian gastric glands: Fix the gastric mucosa in Foà's mixture; after from a half to 2 hours wash in 70% alcohol until all the bichromate is removed; transfer to 95% alcohol. Embed in paraffin and stain with nuclear and granule dyes. **Benzoazurin,** a plasma or nuclear stain according to the progressive or regressive methods respectively. It is recommended by Bonnet, in particular for the nuclear staining of preparations that are difficult to stain. **Berkley's Method,** a modification of Golgi's silver method. Harden in osmium-bichromate and impregnate in a freshly prepared solution of 2 drops of 10% phosphomolybdic acid to 60 c.c. of 1% silver nitrate, in winter to be kept at 25° C. **Bernard's Method** for the demonstration of the centrosome in plant cells: Fix in alcohol or Flemming's reagent and stain in a mixture of 2 parts each of 1% aqueous solution of fuchsin and iodin green and 40 parts of water. **Bethe's Anilin-black** for staining chitin: Fix the sections to the slide and treat them for 3 or 4 minutes with freshly prepared 10% solution of anilin hydrochlorid containing 1 drop of hydrochloric acid to each 10 c.c. Rinse in water and treat with 10% solution of potassium bichromate. Rinse and repeat the process until the stain has the desired intensity. The stain is at first green, but becomes blue on washing in tap-water or in alcohol containing ammonia. **Bethe's Fluid.** 1. Dissolve 1 gm. of ammonium molybdate (or sodium phosphomolybdate) in 20 c.c. of water. 2. Ammonium molybdate (or sodium phosphomolybdate) 1 gm., water 100 c.c., and 0.5% osmic acid (or 2% chromic acid) 10 c.c. To each solution add 1 drop of hydrochloric acid, and if desired 1 gm. of hydrogen dioxid. 3. (*a*) For vertebrates: Ammonium molybdate 1 gm., distilled water 10 c.c., hydrochloric acid 1 drop, hydrogen dioxid 1 c.c. (*b*) For invertebrates: Ammonium molybdate 1 gm., distilled water 10 c.c., hydrogen dioxid 0.5 c.c. The tissue should remain in the ice-cold fluid from 2 to 4 hours; wash for 2 hours in cold water; harden for 15 minutes in each of the ascending series of alcohol up to absolute—all ice-cold; transfer for 2 hours to fresh absolute alcohol at freezing temperature. Stain in any alcoholic solution, at room-temperature, dehydrate, clear for from 12 to 24 hours in xylol several times renewed, and embedded in paraffin. **Bethe's Method.** 1. For tissue stained in methylene-blue: Treat very small pieces for from 10 to 15 minutes with concentrated aqueous solution of ammonium picrate and then place them for one hour in *Bethe's Fluid*, No. 1 or 2,—for 5 hours if the solution contains osmic acid. Wash in water and dehydrate in alcohol—cooled to 15° C. if the solution containing the sodium salt was used. 2. For demonstrating the primitive fibrils of nerves: Fix in osmic acid for 24 hours, wash 6 hours, harden in 90% alcohol 10 hours; then treat with water 4 hours and transfer into a mixture of hydrochloric acid and 2% sodium sulfate solution (5:2); after from 6 to 12 hours, wash, dehydrate, clear, and embed in paraffin. Cut very thin sections, attach them to the slide with albumin fixative, stain for 10 minutes in 0.1% solution of ammonium molybdate, and mount in balsam. **Betz's Method** for hardening the brain and spinal cord: (*a*) Divide the cerebrum along the median line and place it in iodin alcohol; after a few hours remove the pia from the callosum and the sylvian fissure, also remove the choroid plexus, and return to the iodin-alcohol; after 24 or 48 hours remove the pia from the fissures and gyri and place in fresh iodin-alcohol; renew the liquid again in 2 or 3 days and after 10 or 24 days transfer the cerebrum into 4% potassium bichromate. (*b*) Remove the membranes and vessels from the cerebellum and place it in the iodin-alcohol; on a support of cotton-wool; frequently renew the solution and after about 14 days transfer into 5% potassium bichromate. (*c*) Remove the dura from the cord and suspend it in a cylinder containing iodin-alcohol; after 2 or 3 days remove the pia and return into the alcohol; when the alcohol no longer fades (after about 6 days) the preliminary hardening is completed; then place in 3% potassium bichromate. The color of the iodin-alcohol must be restored as often as it fades by the addition of fresh tincture of iodin and the

preparations must be kept in a cool place. When the hardening is completed the organs, after washing in water, are preserved in 1% bichromate solution. The method is particularly recommended for the hardening of organs in a state of postmortem softening. **Biebrich Scarlet** (*Biebricher Scharlach*), a plasma stain. **Bielschowsky-Plien Method** for staining Nissl bodies: Harden the tissue in alcohol or formalin, embed in paraffin celloidin, and stain for 24 hours in very dilute kresyl-violet R R (10 drops of a saturated aqueous solution to 50 c.c. of water); rinse, dehydrate in the series of ascending alcohols, clear in oil of cajeput; xylol and balsam. **Bignami's Method** for the study of the malarial parasite in tissue sections: Fix the tissue for several hours in a solution of sublimate 1 gm., sodium chlorid 0.75 gm., acetic acid 1 c.c., and water 100 c.c. Transfer to alcohol containing tincture of iodin and then to absolute alcohol. Stain in magenta (Grübler) dissolved to saturation in water or in 5% carbolic acid and transfer to absolute alcohol. The sections may be double stained in a mixture of magenta and aurantia in saturated alcoholic solution. **Birch-Hirschfeld Method** for amyloid tissues: Stain the sections for 5 minutes in 2% solution of bismarck-brown in 40% alcohol; rinse in absolute alcohol; wash for 10 minutes in distilled water; stain for 5 or 10 minutes in 2% gentian-violet solution; wash in water acidulated with acetic acid (10 drops to a watch-glassful of water); mount in levulose. **Bleu Lumière, B. de Lyon, B. de Nuit.** See *Spirit-blue* under *Pigments* (Illus. Dict.). **Boeck's Method** for preparations of epiphytic bacteria: Extract the oil by alcohol and ether; stain for from 30 to 60 seconds with Sahli's methylene-blue; transfer to water containing a fragment of resorcin, and after a minute to alcohol for an hour; decolor in a weak solution of hydrogen dioxid (if necessary), and dehydrate, clear, and mount in the usual way. **Böhm's Method.** 1. For the demonstration of excretory capillaries. Treat very small cubes of tissue for 3 days in a mixture of 4 volumes of 3% potassium bichromate and 1 volume of 1% osmic acid; then for from 24 to 48 hours in 0.75% silver nitrate; wash in distilled water and harden in alcohol; embed in celloidin. The capillaries are brown-black on a pale yellow ground. 2. For demonstration of lattice fibers: Harden for 2 days in 0.5% chromic acid, treat for 3 days with 0.75% silver nitrate, and further as for secretory capillaries. The fibers are black. 3. For demonstration of cell boundaries in the blastoderm of the bird. Fix for 2 or 3 hours in 3% nitric acid, to which 1% solution of silver nitrate has been added. **Bolton's Method** for nerve tissue. Harden in 5% formalin and mordant with osmic acid, iron alum, or ammonium molybdate. See further Pal's modification of Weigert's method, *Table of Stains* (Illus. Dict.). **Bordeaux R,** a general stain, acting on cytoplasm and chromatin. It is used in 1% solution. **Born's Method** for smooth muscle: Isolate in potash lye, transfer to glycerol, and add repeatedly 2 or 3 drops of glycerol acidified with hydrochloric acid and of tincture of iodin, until the brown color imparted by the latter reagent does not fade. The iodin, which eventually fades, may be replaced by a carmin stain. **Boston's Mixture** for the preservation of casts in urine: Liquid acidii arseniosi (U. S. P.), 1 fluidounce; salicylic acid, ½ grain; glycerin, 2 fluidrams. Dissolve by warming gently and add "whole tears" of acacia to saturation. Let the mixture settle, decant the supernatant liquid, and add a drop of formalin. Place a drop of urine containing casts on a slide, evaporate nearly to dryness, add a drop of the preservative, mix the two with a delicate needle, apply a cover-glass, and when the mount has hardened seal with cement. **Bostroem's Method** for staining actinomyces in tissue sections: Stain for from 1 to 3 hours in anilin-gentian-violet and without washing transfer to Weigert's picrocarmin (see *Staining Reagents*); wash in water and extract in alcohol until the sections are red-yellow. **Böttcher's Method** for preparation of sperm crystals: Evaporate a drop of spermatic fluid on a slide and stain with a strong solution of iodin in solution of potassium iodid. The crystals will be brown or violet. Charcot-Leyden crystals stain yellow with iodin. **Bouin's Liquid** for fixing tissues: 1. Seventy-five volumes of a saturated solution of picric acid, 25 volumes of formol, 5 volumes of glacial acetic acid. 2. Ten parts each of formol and 1% solution of platinum chlorid. 3. Twenty parts each of 1% solution of platinum chlorid and saturated solution of sublimate, 10 parts of formol, and 3 parts of acetic or formic acid. **Bowhill's Method** for the flagella of bacteria: Treat the preparation for 15 minutes with a mixture of 15 c.c. of a saturated alcoholic solution of orcein, 10 c.c. of a 20% solution of tannin, and 30 c.c. of distilled water. Wash and examine in water. **Braddon's Method** for making blood-films: Accurately appose two cover-glasses and seal three edges with vaselin or cement, leaving open a very little of the edge opposite the unsealed one. Place the unsealed edge in contact with a drop of blood, which will diffuse in a thin even film between the covers, and complete the sealing. **Brass's Formula,** chromic acid and acetic acid each 1 part, water 400 parts. **Bremer's Method** for diabetic blood: Fix the films for 6 minutes in the oven at 135° C. Stain for 3 minutes with 1% solution of methyl-blue, or with the Ehrlich-Biondi mixture. The yellow-green reaction of the erythrocytes may also be obtained by using eosin, congo red or biebrich scarlet in 1% solution. **Bristol's Method** for the regeneration of reduced solutions of osmic acid (OsO_4): Contact with organic matter reduces the tetroxid to the dioxid (OsO_2), which is regenerated by oxidizing with hydrogen dioxid. The reaction that takes place is expressed in the following equation: $OsO_2 + 2H_2O_2 = OsO_4 + 2H_2O$. **Buchner's Method.** 1. for the cultivation of anaerobic bacteria: Place the inoculated tubes, with the cotton plug loosely inserted, in a vessel with a capsule containing a mixture of pyrogallol and liquor potassi, each 1 part, and water 10 parts; the vessel should be closed with an air-tight cover. 2. For staining spores: Treat the preparation for a half-minute with concentrated sulfuric acid; rinse in water and stain in carbol-fuchsin. **Bunge's Method** for the flagella of bacteria: Fix the film in the flame and treat it with a mixture of tannin solution, 3 volumes, and diluted liquor ferri sesquichlorate (1:20), one volume, containing carbol-fuchsin in the proportion of 1:10. **Bunge-Trantenroth Method** for smegma bacilli: Place the fresh cover-glass film for 3 hours in absolute alcohol, then for 15 minutes in chromic acid; carefully wash in water frequently changed. Stain for 2 minutes in boiling carbol-fuchsin; decolor for 3 minutes in dilute sulfuric acid or for 2 minutes in pure nitric acid. Counterstain in concentrated alcoholic solution of methylene-blue, for about 5 minutes. The smegma bacilli are blue, the tubercle bacilli red. **Busch's Method.** 1. For the myelin of nerves: Place formalin material for 5 days in a solution of one part osmic acid, 3 parts sodium iodate, 300 parts water. 2. For tissues that have undergone fatty degeneration: Fix for 2 days in 5% formalin and then in Flemming's liquid in the usual way. Treat the sections with 0.5% chromic acid for 3 hours, then with

1% osmic acid for 24 hours, stain with hematoxylin and differentiate in saturated solution of picric acid. The "granule cells" are blue, everything else green. **Busch's Mixture,** sodium iodid 3 parts, 1% osmic acid 100 parts. The iodid is said to enhance the penetration of the osmic acid. **Bütschli's Method** for the demonstration of the foam or alveolar structure of protoplasm: Fix the object with picric acid solution or with iodin-alcohol; stain by Heidenhain's iron-hematoxylin method and cut sections from one-half to one micron in thickness. Mount in a medium of low refractive power and examine with high magnification. **Bütschli-Delafield Hematoxylin,** Bütschli recommends that to a very dilute solution of Delafield's hematoxylin enough acetic acid be added to give it a red tinge. This will make it a more precise nuclear stain. **Cajal's Method** for staining by diffusion or propagation: Expose the brain of a rabbit and cut sections of the cortex 2 mm. thick. Cover the sections on both sides with finely powdered methylene-blue or with a saturated solution of the dye. Restore the sections to the places from which they were cut and close the skull for a half-hour. Remove the sections and fix them in Bethe's ammonium molybdate for 2 hours; wash, harden for 3 or 5 hours in a mixture of one part 1% platinum chlorid, 40 parts formalin, and 60 parts water, and embed in paraffin. Treat the sections with alcohol containing 0.3% platinum chlorid. **Cajal's Picroindigo-carmin,** dissolve 0.25 gm. indigo-carmine in 100 gm. saturated aqueous solution of picric acid. Stain sections (previously stained in carmine) for from 5 to 10 minutes, wash in dilute acetic acid, then in water, then in absolute alcohol. **Carazzi's Mixture.** Dissolve 20 gm. of sublimate in 100 c.c. of 70% alcohol, 15 c.c. of strong nitric acid, and 5 c.c. of glacial acetic acid. Of this add 12 c.c. to 100 c.c. of 1% sodium chlorid solution. Fix for from 1 to 6 hours, according to the size of the object. Wash in iodin-alcohol (Zenker's fluid). **Carbol-kresyl Violet.** See *Morse's Method.* **Carmin Blue,** a cytoplasmic stain; used in acidulated alcoholic solution (Janssen). **Carnoy's Method** for the study of the structure of cytoplasm: Fix and stain with methyl-green dissolved in 2% or 3% acetic acid; after a half-hour wash with acetic acid of the same percentage and then substitute glycerol for the acid. **Celli's Method** for the cultivation of protozoa: Cultivate the ameba material in a petri-dish on *Fucus crispus* prepared with 5% of water (with or without bouillon), and strongly alkalinized by adding 4 or 5 c.c. of saturated solution of sodium carbonate to 10 c.c. of the dissolved Irish-moss. When the cysts are ripe make cultures in hanging-drops in filtered fucus and isolate the different species of amebas. **Celli-Guarnieri Method** for staining the parasite of malaria: Treat the fresh film with a very dilute solution of methylene-blue in sterile blood serum or ascitic fluid. For double staining a little eosin may be added. **Chenzinsky's Stain** for blood: Concentrated aqueous solution of methylene-blue and distilled water equal parts. To this is added an equal quantity of 0.5% solution of eosin in 60% alcohol. Stain blood-films 4 to 5 minutes. Red blood corpuscles stain a rose-red, nuclei of leukocytes blue, and malarial parasites blue. **Chilesotti's Carmin Stain** for axis-cylinders: Mix 1 gm. sodium acid carmin (Grübler) with ½ grain uranium nitrate and boil 12 hours with 100 c.c. water. Filter, and before using add 1% hydrochloric acid. Sections from Müller's fluid will stain in 5 to 10 minutes; those from formalin, freezing paraffin, and celloidin in 15 to 20 minutes; from Weigert's neuroglia fluid in ½ to 1 hour; from Marchi in 2 to 4 hours. Then treat with water, alcohol, carbolxylol. **Cholera Red Reaction.** See *Nitrosoindol Reaction.* **Chromogen,** a naphthalene compound prepared at the Höchst dye-works. Used by Weigert for staining neuroglia. See *Weigert's Method.* **Ciaglinski's Method,** the same as Ströbe's method, with fore-staining in safranin and differentiating in water instead of alkali-alcohol. **Claudius' Method** for bacteria: Stain in gentian or methyl-violet, after Gram (see *Gram's Method*), differentiate in a saturated aqueous solution of picric acid diluted with an equal volume of water, decolor in chloroform. **Cleavage.** Methods of study. 1. *Total equal or adequal cleavage.* Use a slide with a cell. Put a filament of sea-alga with a very little sea-water in the cell and over it a cover-glass with a drop of water containing fertilized eggs of echinoderms suspended in it. Fix with osmic acid or liquid of Flemming. 2. *Total unequal or inequal cleavage.* Fix the eggs of the leech or the snail in Flemming's solution, stain in borax-carmin, and embed in paraffin. 3. *Superficial cleavage.* Suitable objects are the eggs of the viviparous plant-louse. Eggs and embryos in different stages of cleavage are obtained by teasing the insect in physiologic salt solution; or the insect entire may be killed in hot water, hardened in alcohol, and embedded in paraffin. 4. *Discoidal cleavage.* Fix the eggs of the cuttle-fish in picrosulfuric acid and dissect off the germinal disc. 5. *Influence of pressure.* Place a bristle of medium size on a slide and beside it the fertilized egg of an echinoderm, in a drop of water. Apply a cover-glass. All gradations of pressure-effects can be observed between the bristles and the far edge of the cover. For larger eggs—for example, frogs' eggs—the procedure is as follows: Cement 2 strips of glass about 1.4 mm. thick on the edges of a slide. Place the eggs on the slide, cover with another slide, and tie the two slides together. The eggs may be fertilized before (Hertwig) or after (Born) compression. Place some of the eggs in a vertical, others in a horizontal position and observe the deviating course of cleavage. Cf. *Driesch's Method.* **Coles' Method** for staining the diphtheria bacillus: Fix the films by heat or in absolute alcohol and ether and stain in Neisser's methylene-blue (see *Neisser's Method*); wash, and treat with the 1 : 2 : 300 solution of iodin and potassium iodid; wash, and stain in vesuvin. Time in each solution a half-minute. **Conklin's Stain** for the embryo chick: Mix equal parts of Delafield's hematoxylin and distilled water and add 1 drop of picric acid solution to each cubic centimeter of the dilution. For use dilute with 4 volumes of water and stain for from 10 to 20 minutes. **Conn's Method** for preserving cultures of bacteria as museum specimens: Inoculate 2% agar slants and seal the tubes with paraffin and plaster of Paris. In a few days the cultures cease growing and remain indefinitely unaltered. **Cook-Zimmerman Method** for histologic sections of the cochlea: Decalcify the petrous bone of a kitten of about 2 weeks in 5% nitric acid; wash for 8 hours in water, for 3 hours in 35% alcohol, for 6 hours in 50% alcohol. Cut thin slices, parallel to the auditory nerve and the modiolus, and treat them for 4 hours with 70% alcohol, with borax carmin for 12 hours, and destain in acid alcohol. Dehydrate, and embed in paraffin by the cedar oil process. Attach the sections to the slide with albumen fixative and treat them with xylol for 5 minutes (without dissolving the paraffin); with absolute alcohol and 95% alcohol each for 2 minutes, with 95% alcoholic solution of picric acid for 1 minute, with 95% alcohol and absolute alcohol each for 2 minutes, with xylol for 5 minutes, and mount in balsam. **Corning's**

Method. (A modification of Krohnthal's.) Harden the tissue in 10% formalin before treating with the formalin-formate mixture. Cut sections without previously embedding and clear in olive oil. **Cover-glass Test,** split the cover-glasses in two and proceed as in the silk-thread test. **Cox's Method.** 1. For neurokeratin: Fix the nerves in 1 or 2% osmic acid; wash; dehydrate; clear in bergamot oil, up to 48 hours; mount in balsam. The bergamot oil dissolves out the myelin and leaves the neurokeratin. 2. For ganglion-cells: Fix for 2 or 3 days in the following mixture: saturated sublimate solution and 5% platinum-chlorid solution 15 volumes each, 1% osmic acid 10 volumes, acetic acid 5 volumes; harden in alcohol and embed in paraffin. Place the sections for 8 hours in 25% tannin solution, wash, place then for from 5 to 10 minutes in 2.5% ferric ammonium sulfate solution, after which wash for 10 minutes; then stain for from 12 to 18 hours in Cox's methylene-blue. **Cox's Methylene-blue,** dissolve 1 part each of methylene-blue and potassium carbonate in 100 parts of water, and shortly before using add 2% phenol solution in the proportion 1:15. **Cox-Golgi Method:** Treat the tissue for six weeks with Cox's sublimate solution, changing after 24 hours and subsequently once a week. Transfer to 95% alcohol for one hour; to equal parts of alcohol and ether for a half-hour; to thin celloidin for one hour; mount in thick celloidin and harden in 80% alcohol for one or at the most two hours. Place the sections in carbol-xylol and mount in balsam under a cover-glass. **Craig's Method** for obtaining the flagellated malarial plasmodium: Cleanse the ear or finger, also the slide and cover-glass with alcohol. Make a puncture with a sterile needle and wipe away the first drops of blood. Gently breathe upon the slide and take up on it the blood from the summit of the second drop and immediately apply the cover-glass. The brief exposure to air and the moisture on the slide are said to hasten flagellation. **Cresyl-violet.** See *Kresyl-violet* R R. **Czaplewski's Stain** for bacteria that have been decolored after Gram: Rub up 1 gm. of fuchsin with 5 c.c. of carbolic acid, and while triturating add 50 c.c. of glycerol and 100 c.c. of water. **Darkschewitsch's Method** for celloidin serial sections: Fill a beaker of suitable diameter with alcohol; cut discs of filter-paper of the same diameter, number them, arrange serially, and saturate with alcohol. Gently press a dish against the microtome knife, then strip it off; the sections will adhere to the paper. Preserve the disks, sections uppermost, one above the other in the beaker with alcohol. **Deetjen's Method** for the investigation of blood platelets: For the study of the vital phenomena mount the platelets in a solution of agar containing sodium chlorid, sodium phosphate, and potassium acid phosphate. For the study of their structure stain with hematoxylin. **Diamond's Method** for staining *Amœba coli:* Fix the material in Heidenhain's sublimate salt solution and stain the sections for from 10 minutes to several hours in a mixture of equal parts of carbol-fuchsin and saturated aqueous solution of toluidin blue; wash in alcohol. **Differentiation,** the process of extracting the dye from overstained tissues in the method of indirect or regressive staining. Extraction with pure alcohol is termed neutral differentiation; extraction with acidulated alcohol is called acid differentiation. **Dimmer's Method** for serial celloidin sections: Dissolve 16 gm. of gelatin in 300 c.c. of warm water; paint a thin coat of this solution on warmed glass plates. Transfer the sections by tissue paper to the plates and wash them with 70% alcohol. Absorb the alcohol with bibulous paper and press the sections down on the plates. Pour over a photoxylin solution (6 gm. to 100 c.c. of equal parts of absolute alcohol and ether) and when partially dry place the plates in water of from 50° to 55° C. Cut the photoxylin from the edge of the plate, and when the water has dissolved the gelatin the sections, held together by the photoxylin, can be readily separated from the plates and transferred to stains by tissue paper. **Dodge's Method** for staining starch: Fix in alcohol and (if necessary) bleach the chlorophyl bodies with javelle water. Stain with iodin potassium iodid solution (1:2:300), wash with distilled water, and treat with 1% solution of silver nitrate in a bright light for a few minutes. Reduce in hydrochinone 2 gm., sodium sulfite 10 gm., water 100 c.c., and 1 drop of 10% solution of potassium carbonate to each 1 c.c. **Döllken's Method** for staining very young brains. Cut sections from 30 μ to 50 μ thick, attach them to the slide after Obregia (see *Fixatives, Table of Stains* [Illus. Dict.]), and stain for 4 or 5 days in cold hematoxylin, then at 37° C. for 2 hours; when cool treat with spring-water for 5 hours, then for 15 minutes with distilled water containing 2 or 3 drops of potash solution to the liter; differentiate in 0.5% solution of potassium permanganate; when the gray tissue becomes transparent wash in distilled water and treat with 1% solution of oxalic acid until the gray tissue turns light brown. The material should be fixed in chromic acid or in 5% formaldehyd. **Doutrelepont's Method** for the bacilli of syphilis: Stain for 24 hours in 1% solution of methyl-violet, decolor for a few seconds in dilute nitric acid, and transfer to 60% alcohol for 10 minutes; stain for a few minutes in aqueous solution of safranin and wash in 60% alcohol. **Driesch's Method** for the study of pressure phenomena in the dividing eggs of sea-urchins. Three minutes after fertilization shake the eggs in a test-tube with water, for a few seconds, to rupture and detach the fertilization membrane. Transfer the eggs to a slide. **Ehrlich's Iodin Method:** Stain the fixed film in a syrupy solution of gum arabic containing 1% of Lugol's solution: Leukocytes stained brown indicate a suppurative process. **Ehrlich's Stains** for the granules of leukocytes: 1. *Acidophilous* or *eosinophilous mixture.* Two parts each of indulin, aurantia, and eosin; glycerol, 30 parts. Suitable for staining sections and cover-glass preparations. This is also known as "Mixture C." 2. *"Triacid" mixture.* Dissolve (*a*) 1 gm. of orange-yellow (extra) in 50 c.c. of distilled water; (*b*) 1 gm. of acid fuchsin extra in 50 c.c. of distilled water; (*c*) 1 gm. of crystalline methyl-green in 50 c.c. of distilled water. Let the solutions settle. Then mix 11 c.c. of solution *a* with 10 c.c. of solution *b;* add 20 c.c. of distilled water and 10 c.c. of absolute alcohol; to this mixture add a mixture of 13 c.c. of solution *c,* 10 c.c. of distilled water, and 3 c.c. of absolute alcohol. Let the stain stand for one or two weeks before using. **Ehrlich-Lazarus Method** for the basophil granules of mast-cells: Use kresyl-violet. See the method of Bielschowsky and Plien. **Ehrlich-Weigert Method** for staining tubercle bacilli: Prepare a mixture of 1.1 parts of a saturated alcoholic solution of methyl violet, 1 part of absolute alcohol, and 10 parts of anilin water. In this stain the film for from 2 to 5 minutes, heating until it steams; decolor for a few seconds in nitric acid diluted with 3 volumes of water. Wash in 60% alcohol, then in water. Counterstain for 5 minutes in a saturated aqueous solution of vesuvin. **Eisen's Method.** 1. For attaching sections to the slide. Flood the slide with 80% alcohol, place the sections on the liquid, and put them in the oven, at 55° C.

The sections will spread out in a few seconds. Drain off the superfluous alcohol and arrange the sections. Moisten in 80% alcohol a strip of smooth, thick blotting-paper, place it on the sections, and over this another dry strip. Pass a smooth metal roller several times over the paper and the sections will adhere to the slide. Dry in the oven. They can be stained at once or kept indefinitely unstained. 2. For the demonstration of the filaments of human blood-platelets: Prepare the films on cover-glass chemically clean; dry in air for 12 hours and fix in absolute alcohol; stain for 24 hours in a 1% aqueous solution of toluidin blue, wash in water, dry by means of a bellows, and mount in balsam. Eosin stains the filaments red. A strong solution of hemalum stains the centrosomes. 3. For the study of spermatogenesis in amphibia: Fix the testes from 3 to 12 hours in 0.5 to 0.1% solution of osmium chlorid, wash for an hour in water, treat successively with alcohol, bergamot oil, xylol, again bergamot oil, and embed in paraffin. Cut 4 μ to 6 μ sections and stain in Benda's iron-hematoxylin, adding 10% of alcohol to the dye and staining for from 48 to 72 hours and differentiating in 10% acetic acid containing a very little of the iron sulfate. After-stain with congo red. A triple stain can be obtained by treating the sections for a few seconds with a weak aqueous solution of congo red, then for 10 minutes with an aqueous solution of thionin, and differentiating in a very weak aqueous solution of ruthenium red. 4. For the preservation of corks and paper labels: When the ink is dry dip the label for a minute into melted paraffin; drain, and when the paraffin is hard put the label inside the bottle with the specimen. Put the new, dry cork into the melted paraffin for a few minutes. Place a string on one side when inserting the cork in the bottle. Pin a label to the cork and then dip cork and neck of bottle into the paraffin. Not only label and cork are preserved, but the alcohol does not evaporate. **Eosinate of Methylene-blue.** See *Rosin's Stains*. **Eosin-iodin,** iodin 1 gm., potassium iodid 2 gm., 2 c.c. of saturated solution of eosin in 90% alcohol, and 200 c.c. of distilled water. **Ewald's Method:** Mix 3 or 4 drops of blood with 10 c.c. of a 0.5% solution of osmic acid in 0.6% salt solution. After 24 hours siphon off the supernatant liquid with Ewald's capillary siphon, add water, withdraw it and add alum-carmin, and so on, finally treating with 50% alcohol. **Eyclesheimer's Method** for orientation of celloidin objects: 1. Use metal embedding frames with the sides and ends perforated with small holes; pass silk thread through the opposite holes, allowing a length of about 2 inches to hang loose at each end. The net of threads is made taut by gluing each thread with a drop of celloidin to the outside of the frame. Place the object on the net and pour in the celloidin. Soak one loose end of each thread in thin celloidin containing lampblack, and when the mass is hard, dissolve the celloidin fastening the threads to the frame by means of ether. Finally, pull the threads out of the box so that the blocked ends will mark the bottom of the mass and form orientation points. 2. Arrange the sections on a slide with enough alcohol to keep them moist; cover them with a strip of tissue-paper and secure it by thread passing between, not over, the sections. Stain in any preferred way; after clearing, cut the thread and strip off the paper. **Feinberg's Method** for the study of the structural relations of bacteria: Prepare Romanowsky-Ziemann's stain with 1.5% to 2% solution of methylene-blue that has been subjected to a temperature of 86° C. for several hours. Stain for 3 or 4 hours and finally for several minutes in the warmed fluid. **Fertilization, Artificial:** Shake the ripe ovary of an echinoderm recently caught in a dish containing an abundance of sea-water. The eggs appear as little white dots. Remove fragment of tissue. In the same way empty a ripe testicle in a separate dish of sea-water; distribute evenly in the water and add a very small quantity of this sperm-containing water to the water containing the eggs. The spermatozoa penetrate the ripe eggs in 5 or 10 minutes and the first cleavage is complete in about an hour and a half. Every 5 or 10 minutes place a large quantity of the eggs in picric-acetic acid and subsequently stain in borax-carmin. **F., Polyspermous:** Place the fresh eggs of the sea-urchin for from 5 to 60 minutes in a 0.5% solution of chloral in sea-water. Transfer to fresh sea-water and fertilize (see *Fertilization, Artificial*). Fix in picric-acetic acid and stain in borax-carmin. The numerous astrospheres and the early abnormal cleavage can be studied in the living object. Cf. the method of Hertwig. **Fich-Schultze Method** for the ova of amphibia: Treat the eggs in their envelopes for 24 hours with chromic-acetic acid; remove the envelopes and wash the eggs for 24 hours in running water; harden in 60% and 80% alcohols, for 24 hours each, and stain for 24 hours in borax-carmin. Embed in paraffin. **Ficker's Medium** for the culture of tubercle bacilli: Grind the brain of a cow, calf, or horse in a meat machine, add an equal volume of water, and slowly heat to boiling, stirring meanwhile. After cooking for 15 minutes, strain through cloth and sterilize for 2 hours in steam. Add equal volumes of serum and 3% glycerin, pour into test-tubes, and coagulate in the serum oven; or, mix with equal volumes of 2.5% solution of agar and 3% glycerol, and sterilize for 2 hours by steam. **Field-Martin Method** of celloidin-paraffin embedding: Place the thoroughly dehydrated object for several hours in a mixture of equal parts of absolute alcohol and toluol, then for several hours in a celloidin-paraffin mixture prepared as follows: dissolve celloidin in equal parts of absolute alcohol and toluol until the mixture has the consistence of clove-oil, then saturate with paraffin at a temperature of 25° C. From this transfer the object to chloroform saturated with paraffin and then to the usual paraffin solution. **Finotti's Method** for the myelin of nerves: Fix in Müller's fluid for one month. Place the sections for 10 hours in a freshly prepared mixture of equal parts of 1% osmic acid and concentrated solution of picric acid in one-third alcohol, protecting meanwhile from the light. **Fischer's Method** for the flagella of bacteria: Treat the cover-glass films for one minute in the steaming hot mordant, prepared as follows: dissolve 2 gm. of desiccated tannin in 20 c.c. of hot water and add 4 c.c. of a 1 : 2 green ferrous sulfate solution and 1 c.c. of a concentrated alcoholic solution of fuchsin, and filter. Wash the films on water and stain in heated saturated aqueous solution of fuchsin. **Fisher's Eosin:** Make a saturated solution of water-soluble eosin (Grübler), add hydrochloric acid, in slight excess, and collect the precipitate on a filter; wash with water until the filtrate begins to be tinged with the eosin; let the precipitate dry, powder, and for use dissolve in alcohol. **Flormann's Method** for coloring actinomyces in tissue sections: Stain 5 minutes in a mixture of concentrated alcoholic solution of methyl-violet, 1 volume, 1% aqueous solution of ammonium carbonate, 2 volumes, and water, 2 volumes; wash for 10 minutes in an abundance of water and treat for 5 minutes with 1 : 2 : 300 iodin-potassium iodid solution; wash and extract for 20 minutes in 1 : 50 fluorescein-alcohol, renewed once; wash in 95% alcohol, treat with

anilin for a few minutes, then with oil of lavender and xylol, and mount in balsam. **Fluorescein,** an acid dye used in alcoholic solution as a differentiating and bleaching medium and as a stain in the following procedure: Dissolve 5 gm. each of fluorescein and sodium carbonate in 30 c.c. distilled water. Inject 1 c.c. under the skin of a narcotized animal; when the skin plainly shows the color, kill the animal. The dye appears first in the bloodvessels, later in the lymphatics. **Foá's Mixture:** Dissolve 2 gm. of sublimate in 100 c.c. of Müller's fluid heated nearly to boiling. Fix hematopoietic tissue from 2 to 24 hours. Wash in alcohol. **Fränkel's Method** for the demonstration of moulds: Tease the material in 50% alcohol containing a few drops of ammonia and mount in glycerol; or stain with vesuvin or methylene-blue and mount in balsam. **Fränkel-Gabbet Method** for tubercle bacilli: The dried and fixed preparation is placed for 10 minutes in a solution consisting of fuchsin 1 part, alcohol 10 parts, carbolic acid 5 parts, distilled water 100 parts, then dried with filter-paper and placed for 5 minutes in a second solution of methylene-blue 2 parts, sulfuric acid 25 parts, distilled water 100 parts; it is then washed and dried. If the stain has been successful, the preparation will have a faint blue color. **Freeborn's Mixture** for clearing tissues: Mix 1 part of oil of origanum cretici and 3 parts of oil of thyme and add a large quantity of powdered chalk; after 24 hours filter. **Fuchs' Method** for the study of sputum: Fix by heat, stain for 2 minutes in 0.5% alcoholic solution of eosin, and decolor in 50% alcohol. Counterstain with methylene-blue. **Futcher-Lazear Method** for the malarial parasite: Fix the film for one minute in a mixture of 10 c.c. of 95% alcohol and 2 drops of formalin; wash, dry, and stain for 15 seconds in carbol-thionin, prepared by mixing 20 c.c. of a saturated solution of the dye in 50% alcohol and 100 c.c. of 2% aqueous solution of carbolic acid. **Gad's Method** for nerve-endings in striped muscle and bloodvessels: Place small muscle-bundles for 18 hours in a mixture of acetic acid 1 part, glycerol 1 part, 1% aqueous solution of chloral 6 parts; tease in glycerol and stain for from 3 to 10 days in Ehrlich's hematoxylin 1 part, glycerol 1 part, 1% aqueous solution of chloral 6 parts; mount in acidulated glycerol. **Galli's Method** for neurokeratin: Fix a sciatic nerve for 20 minutes in Müller's fluid; tease it and place it for 2 days in Müller's fluid diluted with 2 parts of water; transfer into glycerol (containing a drop of glacial acetic acid to each cubic centimeter) for 15 minutes and, without washing, stain for 20 minutes in aqueous solution of china blue. Wash in alcohol; turpentine; balsam. **Garcia Rigo's Method** of rapid double staining for blood examination: A drop of blood on a cover-glass is diluted with a drop of simple bouillon (kept sterile with a little formol) and the two stirred with a sterile platinum wire until mixed. The cover-glass resting on the end of a slide is then warmed over an alcohol flame for less than a minute. Eosin stain is next used and washed with water; then methylene-blue and washed again. The specimen is then dried and mounted in Canada balsam, the whole process occupying 5 minutes. **Gatehouse's Method** for staining embryonic tissues and for restoring faded slides: Saturate filtered turpentine with picric acid and cautiously add crystals of iodin until the yellow color has a brown tint. **Gautier's** for blood. Followed Romanowsky's technic. Employed for the methylene-blue solution: Methylen-blau (Badische Soda-anilin fabrik), Marke C or BGN; For the eosin solution: eosin (Badische Soda-anilin fabrik), Marke A. **Gelpke-Weigert Method** for pathologic nerves: For transverse sections of atrophied nerves dilute the differentiating fluid with 50 volumes of water and immerse for 12 hours. For longitudinal sections, dilute with 10 volumes of water. The process is applicable to tissue hardened in alcohol or other fluid, provided it is treated with a solution of a chromic salt until it becomes brown, before mordanting in the copper or cyanid solution. See further *Weigert's Method, Table of Stains* (Illus. Dict.). **Gilson's Method.** A rapid celloidin process. Dehydrate the object, soak it in ether, and put it into a test-tube with thin celloidin solution. Place the tube in melted paraffin and boil until the cellodin is of a syrupy consistence. Mount on a block of hardened celloidin and harden in chloroform or in a mixture of chloroform and cedar-oil. In cutting use cedar-oil to wet the knife and the object. **Gilson's Mixture:** Nitric acid (sp. gr. 1.456) 78 c.c., glacial acetic acid 22 c.c., mercuric chlorid 95 to 100 gm., 60% alcohol 500 c.c., distilled water 4400 c.c. A generally useful fixing medium. When used for marine animals, add a few crystals of iodin. **Glycerin-ether.** See *Unna's Method* (7). **Glychemalum,** hematein 0.4 gm. (rubbed with a few drops of glycerol until it dissolves), alum 5 gm., glycerol 30 c.c., distilled water 70 c.c. (Mayer). **Godlewski's Method** for the study of developing striped muscle-fibers: Fix salamander larvæ and the extremities of infant mice or guineapigs in saturated aqueous solution of sublimate containing 2% of acetic acid and harden in alcohol. Embed in paraffin and cut longitudinal, transverse, and oblique 5 μ sections; stain in thionin or hematoxylin and afterstain in eosin. **S., Goldhorn's,** for blood. Preparation of the solution of polychrome methylene-blue. Solution A.—(Merck's medicinal methylene-blue: Grübler's methylene-blue rectified, and methylene-blue [Koch]). Dissolve 2 gm. methylene-blue in 300 c.c. warm water. Add to this 4 gm. lithium carbonate, shaking constantly. Heat in an evaporating dish on a water-bath, the water touching the dish. Stir the solution occasionally. Remove in 15 to 20 minutes. Do not filter. Set aside for several days. Then add dilute acetic acid (5%) until the solution is only *faintly* alkaline. Solution B.—A 0.1% *aqueous* solution of eosin. Fix blood-films in *methyl* alcohol for 15 seconds. Wash in running water. Stain in Solution B for 7 to 30 seconds. Wash. Stain in Solution A for 30 seconds to 2 minutes. Wash *thoroughly* in running water. Dry by agitating in air, *not* between filter-paper. The eosin may be added to the methyl alcohol (enough to make a 0.1% solution); or Solution B may be added to Solution A (1:4), but this easily produces a precipitate (the neutral stain). These give good results. Mixtures of methyl alcohol, eosin, and polychrome methylene-blue give poor results. The depth of the chromatin stain depends on the length of staining. To stain the chromatin of half-grown malarial parasites, 1½ to 2 minutes are necessary, while the chromatin of the hyaline forms stains in 10 seconds. Repeated staining may improve the chromatin violet. To do this the blood-film may be stained with Solution B 5 seconds, with Solution A 10 seconds. **Golgi's Method** for the restoration of overhardened tissue: Wash in a half-saturated solution of copper acetate until it yields no precipitate and return for 5 or 6 days to the osmium-bichromate mixture. The tissue will then take the silver and the sections can be mounted in thickened cedar oil under a cover-glass. **Golgi's Mixture:** Potassium bichromate (3.5% solution) 54 c.c., osmic acid (2%) 6 c.c. **Goodall's Method** for the spinal cord: Cut the fresh tissue on a freezing microtome; float the sections on water; as soon as possible, drain and float them on

pyridin. After 15 minutes wash in water, stain with 0.25% aqueous solution of anilin blue-black, and then with picrocarmin; dehydrate, clear in pyridin, mount in balsam diluted with pyridin. **Gothard's Method** for ganglion-cells: Stain celloidin sections for 24 hours in polychrome methylene-blue and differentiate in a mixture of creasote 5 parts, cajeput oil 4 parts, xylol 5 parts, absolute alcohol 16 parts. **Gram's Method.** See *Staining of Microorganisms, Table of Stains* (Illus. Dict.). 1. Günther's modification: Transfer from the iodin-potassium-iodid solution to alcohol, then to a mixture of alcohol, 1 volume, and nitric acid, 3 volumes, and from this again into alcohol. 2. Nicolle's modification: Decolor in a mixture of alcohol, 2 volumes, and acetone, 1 volume. 3. Ribbert's modification: Decolor in alcohol containing 10% of acetic acid. Cf. *Claudius' Method.* **Greppin's Method** for the treatment of Golgi preparations that they may be mounted under a cover: After silvering, cut the sections on a freezing microtome, treat them for 30 or 40 seconds with 10% hydrobromic acid, wash in water, and mount in the usual way. **Grimbert's Medium** for the bacillus of Eberth: Make a solution of 2 parts each of amidin, asparagin, neutral potassium phosphate, potassium sulfate, magnesium sulfate, ammonium bimalate, 1 part each of maltose and magnesium carbonate, in 100 parts of water; add 15% of gelatin, dissolve in a water-bath, cool to 55° C.; add the white of an egg beaten in a little water. Add 5 c.c. of lime-water to each 10 c.c. of the medium, heat in the autoclave at 110° C. for 15 minutes and filter. Before using add to each tube 1 c.c. of a fresh 10% solution of potassium iodid. **Gruber and Durham's Method** for the agglutination of typhus and cholera bacilli: Place a drop of immunization serum on a cover-glass and beside it a drop of equal size of the culture, as finely divided as possible. Mix and examine on a slide with a ground cell. In doubtful cases put the preparation in the oven for from 15 to 30 minutes. **Gudden-Weigert Method** for medullated nerves: Fix in 10% formalin and harden in alcohol. Treat the sections for 10 hours at room-temperature with 0.5% chromic acid or with 1% chromic acid heated until it steams; wash and stain in heated Weigert's hematoxylin acidulated with nitric or hydrochloric acid. **Gulland's Method.** 1. For attaching sections to the slide: Pour a layer of water on a slide and place the sections on the water; heat to 45° or 50° C. and the sections will flatten. Remove the excess of water and dry for 24 hours in a thermostat at 35° C., finally heating for a moment above the melting-point of the paraffin. Cf. the method of Gaule. 2. For staining blood-cells: Place the fresh cover-glass preparation for from 3 to 4 minutes in a solution composed of 25 c.c. of a saturated solution of eosin in absolute alcohol, 25 c.c. of ether, and 5 drops of mercuric chlorid in absolute alcohol (2 gm. in 10 c.c.); wash in water; stain 1 minute in saturated aqueous methylene-blue solution; wash in water; absolute alcohol, xylol, balsam. **Gum-glycerin:** Heat glycerin to boiling and stir in as much powdered gum arabic as will dissolve. Wash the object, to remove blood or alcohol, as the case may be, and put it in the gum-glycerin. Keep the object submerged and after 24 hours transfer it to 85% alcohol and shake vigorously at frequent intervals. In a few hours the object will be ready for sectioning. Before staining, wash the sections in water to dissolve out the gum precipitated by the alcohol. This is a rapid method suitable for investigations in which histologic differentiation is not important. **Gunther's Method** of staining bacteria in blood: Immerse specimen 10 seconds in 5% aqueous solution of acetic acid until tint of hemoglobin has faded away; blow off excess of acid and hold specimen over strong ammonia water to neutralize. Stain in Ehrlich-Weigert fluid for 24 hours. Decolorize in 1:14 aqueous solution of nitric acid till color fades to light green. Rinse in alcohol, dry. Mount in balsam. **Hache's Hematoxylin:** Dissolve separately by heat 20 gm. of ammonia alum in 200 c.c. of distilled water, and 4 gm. of hematoxylin in 500 c.c. of distilled water; mix and add a warm saturated solution of sodium bicarbonate; filter and wash the precipitate for several days, then let it dry at room-temperature. The blue powder thus obtained is soluble in dilute mineral acids, in organic acids, and in a solution of alum. A saturated solution in distilled water containing 1% of glacial acetic acid is recommended for staining nuclei. Let the solution stand for 36 or 48 hours before using. Stain sections for from 12 to 24 hours and differentiate in distilled water. **Haffkine's Bouillon** for the culture of the bacilli of bubonic plague: Chop a kilo of goat's flesh and heat it at a pressure of 3 atmospheres for 6 hours in dilute hydrochloric acid. Filter, neutralize, dilute with water to 3 liters, and sterilize. **Haffkine's Prophylactic:** Inoculate a flask containing 3 liters of Haffkine's bouillon with a pure culture of pest bacilli; when the stalactite growth develops shake the flask until the colony sinks to the bottom, and when the growth reappears shake again; when the stalactite culture forms the third time, heat to 60° C. for 3 hours. Decant the clear fluid and preserve in hermetically sealed tubes. Dose, 1 or 2 c.c. injected beneath the skin. **Hall's Method** for the demonstration of iron in tissue cells: Fix the material for 24 hours in a mixture of absolute alcohol 70 c.c., water 25 c.c., solution of ammonium sulfate 5 c.c., and harden in graded alcohols from 70% to absolute. See further *Zalewski's Method*, No. 1. **Hammar's Method** for the study of cleavage in the ova of echinoderms: Fix the ova in a saturated solution of mercuric chlorid in sea-water and stain the sections in Heidenhain's iron hematoxylin. **Hankin's Method** for differentiating pest bacilli: Add 2.5% of salt to an agar culture. Within 24 hours the bacilli exhibit the involution forms that occur in old cultures growing under unfavorable conditions. **Hansen's Fuchsin.** See *Hansen's Method.* **Hansen's Hematoxylin:** (*a*) Crystalline hematoxylin, 1 gm., absolute alcohol, 10 c.c. (*b*) Potassium alum, 20 gm., distilled water, 200 c.c. Dissolve by heat and filter when cold. (*c*) Potassium permanganate, 1 gm., distilled water, 16 c.c. After 24 hours mix *a* and *b*, add 3 c.c. of *c*, and with constant stirring boil one minute. Cool quickly and filter. **Hansen's Method** for elastin: Add 5 c.c. of 2% solution of acid fuchsin to 100 c.c. of saturated solution of picric acid; to 9 c.c. of this mixture add one drop of 2% acetic acid. Stain for several minutes or hours; wash in water, each 3 c.c. of which contains 2 drops of the acidified stain. Connective tissue, red; elastin and other elements, yellow. **Hanz's Stain** for gonorrheal secretions: Mix one part of a saturated solution of fuchsin with 4 parts of a saturated solution of thionin in 2% solution of carbolic acid. **Hardesty's Method** for counting nerve-fibers: Fix the spinal cord and nerves of the frog *in situ* with osmic acid; wash and treat for an hour with 5% solution of pyrogallic acid. Make transverse sections and photograph them. **Harris' Carbol-toluidin:** Dissolve 1 or 2 gm. of toluidin blue in a saturated solution of carbolic acid. Before staining treat the sections with water; stain for from 5 minutes to 24 hours, wash and differentiate in glycerin-ether (Grübler) diluted 15 times with water, or in acidulated alcohol; after from 5

to 15 minutes wash in alcohol. Eosin in alcohol may be used as a counterstain. In this case omit the differentiation and stain for from a half to 2 minutes and wash in alcohol. **Harris' Hematoxylin**: Dissolve 1 gm. of hematoxylin in 10 c.c. of alcohol and add to 200 c.c. of a saturated aqueous solution of alum; heat to boiling and add 0.5 gm. of mercuric oxid; when the solution turns a dark purple, remove from the flame and cool quickly. For use dilute to the color of port-wine with aqueous solution of alum. **Harris' Method.** 1. For staining pest bacilli in tissue sections: Stain for 48 hours in Harris' carbol-toluidin and differentiate in glycerin-ether. 2. For amyloid substance: Stain the sections of material fixed in alcohol material for 24 hours in carbol-toluidin blue; wash in water; mordant for 2 hours in saturated solution of red or yellow prussiate of potash or ammonium molybdate. Mount in balsam. Amyloid, red; remaining tissue, various shades of blue. 3. For tissues stained in methylene-blue: Wash in water and place the object in a saturated solution of potassium ferrocyanid (or ferricyanid) cooled nearly to zero, adding a trace of osmic acid to prevent maceration; after from 3 to 24 hours wash for one hour in distilled water, dehydrate in ice-cold absolute alcohol, clear-xylol or cedar oil, and embed in paraffin. 4. For elastin: Stain sections from 5 to 10 minutes in Harris' hematoxylin and wash for a minute in 1% nitric acid in alcohol. **Haug's Method** for fixing and decalcifying very delicate objects. Prepare a mixture of 1% osmic acid 10 c.c., 1% chromic acid 25 c.c., distilled water 65 c.c. Subsequently wash in water and harden in 70% alcohol. **Hauser's Method** for sections of gelatin cultures of bacteria: Moisten the cotton-wool plug of the thrust-culture or the fiber-paper of the plate-culture with a few drops of formalin and place the whole in a covered vessel with a watch-glass containing a wad of cotton moistened with 10 or 15 drops of formalin. The gelatin attains the consistence of celloidin that has been hardened in alcohol and can be cut on the microtome. **Hayer's Method** for infusoria: The entire process is carried out in a glass cylinder (5 cm. long and 7 mm. wide) open at both ends, with a piece of parchment paper tied over one of the openings. By removing the parchment the paraffin can be pushed out in the form of a cylinder with the embedded objects at that end of it. **Heidenhain's Fluid**: Saturate hot 0.5% sodium chlorid solution with mercuric chlorid. **Held's Fluid**: Mercuric chlorid 1 gm., 4% acetone 100 c.c. After fixation wash in acetone gradually increased in strength. **Held's Method** for ganglion cells: Stain sections for 1 or 2 minutes in a warm solution of erythrosin, 1 gm., in 150 c.c. of water and 2 drops of glacial acetic acid; wash in water and stain in a mixture of equal parts of Nissl's methylene-blue and 5% acetone, warming until the odor of acetone disappears. When cool differentiate in 0.1% solution of alum, wash in water, and dehydrate in alcohol. **Helianthin.** The same as *Water Blue.* **Heller's Method.** 1. For the osmication of medullated nerve-fibers: Harden the tissue in Müller's fluid. Stain the sections in 1% osmic acid, in the oven for 10 minutes, at room-temperature for a half-hour; wash in water; reduce in 5% pyrogallic acid for a half-hour, oxidize in 2.5% potassium permanganate for from 3 to 5 minutes, decolor in 2% oxalic acid for from 3 to 5 minutes. 2. For mounting objects for sectioning: Pin a piece of paper about the cork or block so that it projects and forms a trough into which the celloidin can be poured around the object. Harden in the vapor of alcohol by suspension in a closed cylinder containing a few centimeters of alcohol. **Hemosiderin**, amorphous yellow to black-brown iron-containing fragments occurring in thrombi or hemorrhagic infarcts. In sections of material hardened in alcohol or formalin, treated for a few minutes with a 2% aqueous solution of potassium ferrocyanid and examined in glycerol containing 0.5% of hydrochloric acid the pigment appears in the form of dark blue granules. **Henking's Dahlia and Osmic Acid**: Dahlia 0.04 gm., 1% osmic acid 1 c.c., formic acid 3 c.c., glycerol 16 c.c., distilled water 80 c.c. For its use see *Henking's Method.* **Henking's Method** for the ova of insects: Tease them in a drop of Henking's dahlia and osmium mixture and examine. To preserve the preparation simply lute the cover-glass. **Henneguy's Method.** 1. For the study of mitosis: Treat sections for 5 minutes with 1% potassium permanganate solution; wash in water and stain in safranin; wash in alcohol. Karyoplasm and achromatin, spindle gray; chromosomes and nuclear membrane, brilliant red; astrophere and centrosome, less intensely stained. 2. For fixing sections to the slide: Spread a film of Mayer's albumen on the slide and over the albumen a drop of water; on this arrange the sections and warm, but not to the melting-point of the paraffin; when the sections are flat, evaporate the water at 40° C. **Hermann's Method** for the study of mitosis: Stain tests of proteus 12 to 18 hours in the dark with the following solution: hematoxylin 1 gm., water 30 c.c., absolute alcohol 70 c.c.; treat for the same time, in the dark, with 70% alcohol. Embed and treat the sections with pale rose-colored solution of potassium permanganate until they become ochre-color; rinse in water and decolor in Pal's oxalic-acid mixture (see *Table of Stains*) diluted with 5 volumes of water; stain 3 to 5 minutes with safranin. **Herrick's Method** for embedding tissue impregnated with methylene-blue: Treat the object with glycerin and then place it for a day in a mixture of glycerin and gum arabic. Transfer to a paper tray and leave it exposed to the air until by evaporation it has attained a consistency suitable for sectioning. **Hertwig's Method** for determining the influence of temperature on the fertilization of the ova of the chick, frog, and sea-urchin: Cool the eggs for a half-hour or heat them above 31° C. and over-fertilization takes place. In further cooling or heating no fertilization occurs. Cf. *Fertilization, Polyspermous.* **His' Medium** for the differential culture of the typhoid bacillus. 1. The tube culture-medium: triturate 5 gm. of agar, 80 gm. of gelatin, 5 gm. of beef extract, and 5 gm. of salt; add a liter of water and enough hydrochloric acid or soda solution to produce a reaction of 1.5% of normal acid, using phenolphthaleid as the indicator. Clear with 1 or 2 eggs beaten in 25 c.c. of water, add 10 gm. of glucose, boil for 25 minutes, and filter through absorbent cotton. 2. For the plate culture use 10 gm. of agar, 25 gm. of gelatin, 5 gm. each of beef extract and salt, and 10 gm. of glucose. The medium must contain not less than 2% of normal acid. The typhoid bacillus alone has the power of clouding these media. **Hodenpyl's Method** for attaching sections to the slide or cover-glass: Add to 150 c.c. of distilled water 50 c.c. of white of egg and 50 c.c. of a solution of salicylic acid that has been slightly alkalized by lithium carbonate. Soak the sections in this for 2 or 3 minutes and then place them on a cover-glass. **Hofbauer's Method** for staining the iodinophil granules of leukocytes: Dry the film and stain 1 minute in a solution of iodin, 1 part, potassium iodid, 3 parts, and water, 100 parts, brought to a syrupy consistence by the addition of gum arabic. Remove the excess of the stain with filter-paper, to prevent diffuse coloring. Cf. *Ehrlich's Method.* **Hoffman's Method.** 1. For the demon-

stration of iron in hematopoietic tissues: Fix the bone-marrow of iron-fed rabbits for 24 hours in 70% alcohol containing 5% of a solution of ammonium sulfate; transfer to absolute alcohol containing a few drops of ammonium sulfate. Stain the paraffin sections after Stieda (see *Stieda's Method*). 2. Fix in absolute alcohol, treat the sections for an hour with solution of ammonium sulfate, wash in distilled water, and mount in glycerol. Cf. the methods of Hall and Zalewski. **Hoffmann's Method.** 1. For the blastoderm of the chick: Fix in 10% nitric acid for 10 minutes and wash in a 2% solution of alum. Fixation in nitric acid facilitates the isolation of the blastoderm; in order to prevent the curling of the edge during hardening it is advised to spread the object on the convex surface of a watch-glass. 2. For the orientation of small, opaque objects in celloidin: After embedding, and hardening in 80% alcohol, treat for a time with 90% alcohol. The consistency of the mass will then be such that the object can be placed in the desired position. Treat with xylol until hard and clear. **Homberger's Method** for staining gonococci: Stain in the hanging drop with a very dilute (1:10,000) aqueous solution of kresyl violet. The gonococci take a reddish-violet hue, while other microorganisms are faint blue or unstained. **Honsell's Method** for smegma bacilli: Stain films for 2 minutes in boiling carbol-fuchsin; wash, dry, and treat for 10 minutes with a mixture of hydrochloric acid and absolute alcohol in the proportion of 3:100. Wash, and stain in concentrated alcoholic solution of methylene-blue diluted with an equal volume of water. **Huber's Method** for the nerves of the intracranial bloodvessels: Anesthetize the animal and inject through the carotid, cerebralward, enough 1% methylene-blue in normal salt solution to tinge the eye and ear of the same side. After a half-hour remove the brain and cervical cord and expose to the air until stained. Cut out bits of the cortex with curved scissors and crush under a cover-glass until the gray substance is pressed away from the pia. **Ikeda's Method.** See *Japanese Method.* **Intravitam Stain,** one that will act upon living material. **Inversion,** of Rawitz, a process in which, under the influence of a mordant, a basic anilin dye behaves as a plasma or acid dye. **Iodin-alcohol:** Alcohol 90%; to which enough tincture of iodin is added to impart the color of port-wine. Cf. *Zenker's Fluid.* **Iodin Reaction.** See the method of *Ehrlich* and of *Hofbauer.* **Iron Carmin Method:** Stain in sections in carmin for several hours, wash in dilute acetic acid, and treat with 1% ammoniated iron citrate until the tissue becomes black; wash for several hours in distilled water. Cf. *von Wellheim's Stain.* **Israel's Method** for coloring actinomyces in sections: Stain for several hours in a saturated solution of orcein in water acidified with acetic acid. **Jacottet-Sadowsky Method** for ganglion-cells: Harden pieces of the spinal cord for from 2 to 4 days in 10% formalin; transfer to 95% alcohol, and after 48 hours to absolute alcohol. Cut without embedding and stain 1 or 2 minutes in carbol-fuchsin; treat with acetic acid and then with absolute alcohol. Sadowsky used a 5% solution of methylene-blue instead of fuchsin. **Jander's Method** for removing pigment from tissues. Fix in any suitable medium, wash in water (if the object has been in alcohol), and treat for from 12 to 48 hours in a mixture of 70 parts of 1% solution of chromic acid, 3 parts of potassium nitrate and 200 parts of water. The tissue may be treated in bulk or in sections. **Jaos' Medium** for the culture of diphtheria bacilli: Mix 50 c.c. of normal sodium hydroxid solution, 150 c.c. of distilled water, and 300 c.c. of blood-serum and heat over a water-bath for 2 or 3 hours at from 60° to 70° C. and then sterilize in steam for 45 minutes. Add 500 c.c. of peptonized bouillon and 20 gm. of agar; filter while hot and sterilize for 15 minutes at 100° or 110° C. and pour into petri dishes. The bacilli develop in from 5 to 12 hours and, the medium being transparent, the culture can be examined under the microscope with a magnification of 60 to 70 diameters. **Japanese Method** for mounting serial sections: Spread on a slide as thin a film as possible of Mayer's albumen and over this a little water; arrange the sections on the slide and cautiously warm over a spirit-lamp. When the sections have spread out mop up the water and dry at 35° C. Cf. *Henneguy's Method* (2). **Jelinek's Method** for washing objects fixed in picric acid: Use alcohol to which a few drops of a saturated aqueous solution of lithium carbonate have been added. This makes the alcohol turbid, which becomes clear and yellow in proportion to the extraction of the picric acid. Add the carbonate from time to time, until the object is entirely decolored. **Jenner's Stain** for blood. Preparation of the neutral stain: In an open beaker mix *equal parts* of 1.2 or 1.25% aqueous solution of eosin (Grübler), 1% aqueous solution of methylene-blue med. (Grübler). Let stand for 24 hours. Filter. Dry the precipitate obtained. Wash the precipitate with distilled water and dry again. The staining solution: For use dissolve 0.5 gm. of the precipitate in 100 c.c. pure methyl alcohol (Merck "for analysis"). Jenner gives no particular method of fixation. Staining: Stain in the solution for 1 to 3 minutes, covering with a watch-crystal. Pour off stain quickly and rinse in water till film is pink (5 to 10 seconds). Staining reaction: Leukocytes—nuclei stain blue; granules, neutrophil stain red; granules, basophil stain dark violet; granules, eosinophil brilliant crimson. Malarial parasites, bacteria, and filaria, blue. **Jensen's Medium** for the study of living infusoria: Dissolve 3 gm. of gelatin in 100 c.c. of water, by heat. Mix a drop of this with a drop of the water containing the organisms. The addition of a drop of very dilute solution of hematoxylin or of methyl green or other anilin dyes will stain *intra vitam.* **Joannovics' Method** for the study of plasma cells in pathologic processes. Harden the tissue in formalin or in graded alcohols. Stain the sections for 20 minutes in polychrome methylene-blue and wash in water for 24 hours. Treat with glycerin-ether (Grübler) until a cloud of color appears. Dehydrate in 95% and absolute alcohol and clear in origanum oil and then in xylol. **Johne's Method** for staining the capsules of bacteria: Stain the cover-glass preparations in a warmed 2% solution of gentian-violet, rinse, and differentiate for from 10 to 20 seconds in 2% acetic acid; wash and mount in water. **Jolly's Method** of staining bone-marrow: Place a slide gently on the fresh marrow; fix the film so obtained in the vapor of osmic acid or by treating with strong liquid of Flemming for 15 minutes; wash in water for 15 minutes and bleach for a second in iodin and alcohol (1:100); wash in alcohol, then in water and overstain in a solution of eosin 1 part, alcohol 20 parts, glycerol and water each 50 parts; decolor in alcohol and stain in hematein 1 part, alcohol 25 parts, 5% solution of ammonia alum 200 parts; water, alcohol, carbol-xylol, balsam. **Julinsburger's Method** for ganglion-cells: Stain sections of formalin material for from a half to three-fourths of a minute in warm 1% solution of neutral red. **Kaiser's Bismarck Brown** for staining kinetic nuclei: Prepare a saturated solution of bismarck brown in 60% boiling alcohol and in this stain for 48 hours at 60° C. Extract in 60% alcohol containing 2% of hydrochloric acid or

3% of nitric acid, until everything except the mitotic figure is decolored. **Kaiser's Method.** A modification of Weigert's method for medullated nerves: Harden in Müller's fluid for 2 days; divide the tissue into slices 2 or 4 mm. thick and put it into Müller's fluid for 5 or 6 days; then transfer it into Marchi's fluid (2 parts of Müller's fluid and 1% osmic acid). Wash in water, dehydrate, and embed in celloidin. Treat the sections for 5 minutes with liquor ferri sesquichlorid and distilled water each 1 part and 85% alcohol 3 parts. Wash in Weigert's hematoxylin, then stain in fresh hematoxylin for a few minutes; wash in water, differentiate in Pal's fluid, and neutralize in water containing a little ammonia. **Kanthack's Medium.** 1. For the cultivation of gonococci: Collect ascitic fluid in a sterilized jar and place it on ice for 24 hours; transfer the supernatant fluid into test-tubes and place in an incubator at 66° C. for 4 hours; inoculate the test-tubes and put them into a beaker half full of distilled water; cover with a glass plate and solidify in the incubator at 30° C. The cultures appear in from 24 to 48 hours. 2. For the cultivation of diphtheria bacilli: Add 2 c.c. of 10% potassium hydroxid to 100 c.c. of albuminous exudate (of pleurisy, ascites, etc.); boil and add 1.5% of agar-agar previously softened in acidulated water; cook in a steam sterilizer until the agar is dissolved; filter in a hot-water funnel and add 4 or 5% of glycerol to the filtrate; fill into test-tubes and sterilize. **Kantorowicz's Method** for staining amyloid substance: Place the sections for 5 minutes in saturated aqueous solution of thionin, wash in distilled water, dehydrate and clear in anilin-xylol (or carbol-xylol), wash in xylol, and mount in xylol-balsam. The amyloid masses are pale blue to lilac, the remaining tissues bluish to violet. **Kemp's Method** for blood-platelets: Place a large drop of blood on a slide and quickly wash it with a small stream of normal salt solution. The platelets will adhere to the glass. The preparation will be permanent if, after Eberth and Schimmelbusch, the finger is pricked through a drop of osmic acid. **Kiefer's Medium** for the cultivation of gonococci: *a*. Filter acetic fluid, fill into test-tubes, and sterilize fractionally at 62° C. *b*. Prepare a mixture of agar 3.5%, peptone 5%, glycerol 2%, sodium chlorid 0.5%. Liquefy and cool to 50° C.; mix with an equal volume of *a* and pour into petri dishes. **Kionka's Method** for the orientation of avian embryos: Open the egg in salt solution, detach the shell and albumen, and locate the poles by thrusting in at a centimeter from the blastoderm two hedgehog spines, marking that at the obtuse end with a red thread. Place in water at 90° C. for 10 minutes, then in 70% alcohol. After 24 hours dissect out the blastoderm with a little of the yolk in the form of an isosceles triangle the base of which marks the cephalic end of the blastoderm. **Kionka's Stain** for avian embryos: Dissect a little of the yolk out with the blastoderm. Stain the sections with borax-carmin and wash in acid-alcohol of which each 5 c.c. contains one drop of concentrated solution of orange G, which stains the yolk. **Kizer's Method** for preserving and staining blood: Mix 1 volume of blood with 3 volumes of 2% formalin and after an hour pipet a drop of the sediment to a cover-glass; dry, fix by heat, and dip once or twice into a 5% solution of acetic acid; wash in water and stain in any of the usual hematologic dyes. **Klein's Method** for the spores of bacteria: Prepare an emulsion of the spore-containing material in 0.6% salt solution, add an equal volume of filtered carbol-fuchsin and warm gently for 6 minutes. Diffuse the mass, dry by evaporation in the air, fix in the flame and decolor for 1 or 2 hours in 1% sulfuric acid. Wash in water and stain in diluted aqueous-alcoholic solution of methylene-blue. **Koch's Test.** See *Silk Thread Test*. **Kochel's Method** for fibrin: Treat sections of tissue hardened in any preferred way for 10 minutes with 1% chromic acid; wash for a few seconds and then stain for 15 minutes in Weigert's hematoxylin; wash and treat for a minute with 10% aqueous solution of alum; rinse and differentiate for about 5 minutes in Weigert's borax-potassium-ferricyanid diluted with 3 volumes of water; rinse and treat for from a quarter to one hour with 10% alum solution; rinse and counterstain with carmin or safranin. **Kolster's Stain** for the differentiation of the gland cells of the stomach: Overstain sections (of material fixed in any medium except osmic acid) in hematoxylin, decolor in 1% hydrochloric acid to a faint rose hue, neutralize in 1% ammonia alcohol until a delicate blue color appears; wash in distilled water and stain for 5 minutes in weak aqueous solution of acid fuchsin; distilled water; alcohol; oil; balsam. Chief cells pale blue with dark blue nuclei, parietal cells pure fuchsin color with dark nuclei. **Kopsch-Golgi Method** for ganglion-cells: Place the tissue in freshly prepared mixture of 3.5% potassium bichromate, 4 parts, and formalin, 1 part. Renew in 12 hours and after 24 hours transfer to 3.5% bichromate minus the formalin, and from this to the silver solution. **Korolko's** for blood: Solution A. A saturated aqueous solution of methylene-blue, 3 months old and filtered before use. Solution B. A 1% aqueous solution of eosin. To make up the stain add to 2 c.c. or 3 c.c. of solution A, from 3 c c. to 5 c.c. of solution B until a violet color is obtained, and a fine granular precipitate is formed. Mix the solutions in a narrow cylinder, and stir with a glass rod. Stain in this mixture 15 to 24 hours, if possible, at a temperature of 30° C. Fix blood-films by heating for 1 hour at 105° to 110° C. Staining reactions: Red blood-corpuscles stain blue. Leukocytes—nuclei stain dark violet; cytoplasm stains blue. Blood-platelets stain light violet. Malarial parasites—nuclei, chromatin portion stains deep violet; cytoplasm stains light blue. **Kresofuchsin,** an amorphous powder of gray-blue color, readily soluble in acetic acid and acetone, less readily in alcohol, and only slightly in water; insoluble in benzene. The alcoholic solution is blue and stains elastin blue; mucin, cartilage, and horny tissue, reddish; the aqueous solution is red and stains mucin, cartilage, keratin, and nuclei deep red, but does not stain elastin. Cf. *Rothig's Stain*. **Kresylviolet R R,** an anilin pigment that may be used as a substitute for the pigments of the methylene-blue group. It has a strong affinity for the chromophilic masses of nerve-cells and gives a metachromic reaction with amyloid substance and with the basophile granules of mast-cells. Cf. the method of Bielschowsky and Plien. **Krohnthal's Method** for ganglion-cells: Prepare lead formate by slowly dropping formic acid into solution of lead acetate; filter and make an aqueous saturated solution of the white crystals of lead formate; mix with an equal volume of 10% formalin and into this mixture put pieces of brain and spinal cord. After 5 days transfer the pieces into a mixture of equal parts of 10% formalin and hydrogen sulfid. After 5 days dehydrate in alcohol, embed in celloidin, and mount the sections in xylol-balsam under a cover-glass. **Kromayer's Method.** 1. For fibrin: This is the same as Weigert's method (see *Examination of the Blood*) except that acetone-xylol (1:5) is used instead of anilin-xylol. 2. For bacteria in sections of epidermis: Apply Weigert's method for fibrin and bleach in acetone-xylol. **Krompecher's Method.** 1. For piasma cells in pathologic tissues: Fix in sublimate or alcohol. Stain the sections for from 15 minutes to 12

hours in polychrome methylene-blue or thionin, and after rinsing in water differentiate in glycerin-ether for 15 minutes; wash in water; alcohol, bergamot oil, balsam. Cf. *Unna's Method.* 2. For the granules of mast-cells: Stain sections for 24 hours in fuchsin-anilin-water, decolor to a light red in 50% alcoholic solution of fluorescein, and afterstain in alcoholic solution of methylene-blue. **Kostanecki-Siedlecki Mixture:** Equal volumes of saturated sublimate solution and 3% nitric acid. Absolute alcohol in the same proportion may be added. Fix for 24 hours and wash in iodin-alcohol. See *Zenker's Fluid.* **Kukenthal's Method** for paraffin sections: Dissolve the dye in absolute alcohol and add it dropwise to turpentine until the desired color is produced. Overstaining is corrected by treatment with a mixture of equal parts of alcohol and turpentine. Use olive-oil collodion fixative. **Kultschitzky's Hematoxylin.** 1. Hematoxylin (with enough absolute alcohol to dissolve it) 1 part, saturated solution of boric acid 20 parts, distilled water 80 parts. Let the fluid stand for 2 or 3 weeks—until the yellow color changes to red. Just before using add to a watchglassful of the stain a few drops of acetic acid. 2. Dissolve 1 gm. of hematoxylin in a little alcohol and add 100 c.c. of 2% acetic acid. **Kultschitzky's Method** for neuroglia: Stain paraffin sections for from 5 to 10 seconds in rulein S prepared as follows: Rulein S 1 gm., 2% acetic acid 400 c.c., saturated solution of picric acid 400 c.c. Wash in alcohol. **Land's Method** for mitosis in plant cells: Fix the ovules in chromic-acetic acid for 2 hours at a temperature of 100° C. Stain prefertilization stages in Flemming's safranin-gentian-violet-orange-mixture or in Heidenhain's iron-hematoxylin; for the stage of fertilization use cyanin and erythrosin, after treatment with acetic acid and chloroform. **Lang's Method** for gonococci: Stain the film for from 15 to 30 minutes in a mixture of 4 volumes of saturated solution of thionin and one volume of saturated solution of fuchsin in 2% carbolic acid. **Langhan's Method** for the demonstration of glycogen in tissue cells: Harden perfectly fresh tissue (*e. g.*, the kidneys of a diabetic subject) in absolute alcohol; stain in Lugol's solution; dehydrate in a mixture of tincture of iodin 1 part and absolute alcohol 4 parts; clear and mount in oil of origanum. **Laurent's Stain:** The exact proportional relations of the eosin-methylene-blue mixture are obtained by pouring together 1000 c.c. of 1% solution of eosin and 882 c.c. of 1% methylene-blue. After 48 hours the neutral pigment precipitates. Immediately before using shake the mixture, add 4 volumes of water, and boil. Then stain for from a half to 6 hours. Transfer without washing to absolute alcohol; xylol; balsam. **Lavdowsky's Fluid.** 1. Distilled water 20 parts, 95% alcohol 10 parts, formalin 3 parts, glacial acetic acid 0.5 part. 2. Distilled water 30 parts, 95% alcohol 15 parts, formalin 5 parts, glacial acetic acid 1 part. **Lavdowsky's Method** for staining nerve tissue by immersion in methylene-blue: Mix the white of an egg with an equal volume of 0.25% solution of ammonium chlorid and in this dissolve from 0.1% to 0.2% of methylene-blue. Immerse the tissue while it is still warm. **Laveran's Stain** for blood: In a 150 c.c. flask dissolve "some" $AgNO_3$ in 50 c.c. or 60 c.c. of water. When dissolved fill the flask with a solution of NaOH (percentage not given). Wash the precipitate of AgO with distilled water to remove the excess of NaOH and the $NaON_3$ formed. Then add a saturated aqueous solution of methylene-blue medicinale (Höchst) and let the mixture stand for 7 or 8 days, shaking it occasionally. Decant. The product so obtained Laveran terms "bleu Borrel." To stain, Laveran mixes methylene-blue (bleu Borrel), 1 c.c.; eosin 0.1% aqueous solution, 4 c.c.; distilled water, 6 c.c. Stain 12 to 24 hours. Rinse in water. Wash in 5% aqueous solution of tannin for 1 to 2 minutes. Wash in water. Dry. Films are previously fixed in absolute alcohol for 20 minutes. **Lazear's Execution of Nocht's Modification:** Solution A. The polychrome methylene-blue solution. To a 1% aqueous solution of methylene-blue add 1% of NaOH. Heat in a water-bath for several hours. Cool, then filter. To neutralize this solution, add dilute acetic acid until blue litmus paper is turned red above the line which the methylene-blue stains. Then add more alkaline polychrome methylene-blue until the solution just fails to turn blue litmus red. To this neutralized solution add an equal volume of distilled water; then a saturated solution of ordinary methylene-blue until the polychrome methylene-blue has lost its red color—about 1 part of the former to 10 parts of the latter. Solution B. A 0.2% aqueous solution of eosin. With burets determine the proportions of the two solutions, on mixing which, a fine slack precipitate is obtained, and a scum forms on the surface of the mixture. This may require 1 part of Solution A to 3 parts of Solution B, or the reverse. Once determined, the proportion remains constant. Blood-films are fixed for 1 to 2 minutes in a 0.25% solution of formalin in 95% alcohol. To stain: Remove scum from the surface of the stain with filter-paper. Place the films face down in the stain. Stain for 3 to 24 hours. **Lee's Method:** A "dry" celloidin process. Infiltrate after Gilson or in the usual way; embed in a paper tray and harden in vapor of chloroform for from an hour to overnight; turn the object from time to time. Clear in a mixture of equal parts of chloroform and cedar oil; add oil from time to time and gradually convert the mixture tc nearly pure cedar oil. When clear, expose the mass to air and the chloroform will evaporate. Preserve in a stoppered bottle. Cut with the block and the knife dry. **Leishman's Stain** for blood: Preparation of the neutral stain. Solution A. The solution of polychrome methylene-blue. A 1% aqueous solution of methylene-blue med. (Grübler) is made alkaline with 0.5% Na_2CO_3. This is heated for 12 hours at 65° C., and then allowed to stand for 10 days before use. Solution B. A 0.1% aqueous solution of eosin (extra BA Grübler). Equal parts of Solutions A and B are mixed in an open vessel and allowed to stand for 5 or 6 hours, with occasional stirring. The precipitate formed is collected on a filter, washed with water, dried, and powdered. The staining solution: Dissolve 0.1 gm. of the dry precipitate in 100 c.c. pure methyl alcohol (Merck "for analysis"). To stain: Four drops of the solution are poured on the blood-film, and allowed to stain for ½ minute. Without pouring off the stain, 6 drops to 8 drops of distilled water are added and the mixture is allowed to stain for 5 minutes. Wash gently. Put few drops of water on the blood-film for 1 minute. Then dry, and mount. Staining reactions: Red blood-corpuscles stain pale pink or greenish. Lymphocytes—nuclei stain dark ruby red; protoplasm stains pale blue. Mononuclears—nuclei stain ruby red; protoplasm stains pale blue. Polymorphonuclear neutrophils—nuclei stain ruby red; granules stain red. "Coarse-grained eosinophils"—nuclei stain ruby red; granules stain pale pink. Basophils—nuclei stain red; granules stain purplish black. Blood-platelets stain deep ruby red. Malarial parasites—nuclei, chromatin portion stains ruby red; cytoplasm stains blue. v. **Lenhossek's Method** for ganglion-cells: 1. Stain sections of formalin material for 5 minutes in concentrated aqueous solution of thionin, wash in water, differentiate in a mixture of anilin 1 part and absolute

alcohol 9 parts, and clear in cajeput oil. 2. Stain overnight in concentrated solution of toluidin blue, wash in water, differentiate in alcohol. Erythrosin may be used after the thionin and the toluidin blue. **Lepkowsky's Method** for the study of the blood-supply of the teeth: Inject with Berlin blue, harden in 5% formalin, decalcify in 10% nitric acid, frequently renewed, and make celloidin sections. **Lewinson's Method** for staining adipose tissue: Fix in Müller's fluid and embed in celloidin. Stain the sections for 12 hours in hematoxylin (1 gm., in enough absolute alcohol to dissolve it, and 50 c.c. of 2% acetic acid); wash in water and treat for 15 minutes with 1% solution of potassium permanganate; wash, and treat for 5 minutes with 2% oxalic acid; wash, and counter-stain for 24 hours in an ammonia solution of carmin; differentiate for 2 minutes in acid alcohol and stain for 1 minute in a saturated alcoholic solution of picric acid. **Lewis's Method** for tracing medullated nerves: Place a small piece of brain tissue in 10 times its volume of 1% osmic acid. Renew the solution after 2 days and 4 days. In 5 or 10 days wash in water and harden in alcohol. Treat the sections with a drop of ammonia. Mount in soluble glass. **Lightfoot's Anilin Black**, a preparation similar to anilin blue-black. Cf. *Noir colin*. **Loeb's Method** for producing artificial parthenogenesis: Place the unfertilized eggs of sea-urchins in sea-water containing magnesium chlorid in the proportion of 5000 ($\frac{1}{8}$n MgCl) to 5000 c.c. of water. After 2 hours restore them to normal sea-water. The eggs form normal gastrulæ and plutei. **Löffler's Stain** for flagella: Mix 10 c.c. of 20% solution of tannin, 5 c.c. of saturated solution of ferrous sulfate, and 1 c.c. of aqueous or alcoholic solution of fuchsin, methyl-violet, or "Wollschwarz." For typhoid bacilli add 1 c.c. of 1% solution of soda; for *Bacillus subtilis* add 30 drops; for bacilli of malignant edema 36 drops. For cholera bacilli add one drop of sulfuric acid to the soda solution; for *Spirillum rubrum* 9 drops. **Löwit's Method** for fibrin: In a fresh cover-glass film let the blood coagulate, then wash off the erythrocytes with 0.6% salt solution, and apply Weigert's method (*q. v.*). See *Examination of the Blood, Table of Stains* (Illus. Dict.). **Lubarsch's Method.** 1. For glycogen in tissue cells: Apply Weigert's method for fibrin, allowing the iodin solution to act but for a very short time. See *Examination of the Blood, Table of Stains* (Illus. Dict.). 2. For tumors: Harden very small cubes of the tissue for from a half to three-fourths of an hour in alcohol several times renewed. Place in anilin at 50° C. for a half to one hour and for the same time in xylol, renewed until it does not become yellow. Infiltrate with paraffin once renewed for from 1 to 2 hours; then embed. By this method stained sections can be made in a few hours. **Luithlen and Sorgo's Method** for ganglion-cells: Stain celloidin sections of material hardened in alcohol or in Orth's or Müller's fluid for 24 hours in polychrome methylene-blue heated until it steams; wash for 24 hours in distilled water several times renewed, differentiate in Unna's glycerin-ether mixture (Grübler); absolute alcohol, origanum oil, balsam. Granules and nucleoli of ganglion-cells and nuclei of glia-cells violet; connective tissue and axis-cylinders blue to colorless; medullary sheaths sometimes red-violet. **Lutschke's Stain**: Ten c.c. of a 20% solution of tannin, 5 c.c. of a cold saturated solution of ferrous acetate, 1 c.c. of a saturated alcoholic solution of fuchsin. **Lysol** for the examination of fresh tissues: It may be used in 10% solution or in the following mixtures: (*a*) lysol 10 parts, alcohol 30 parts, water 60 parts; (*b*) lysol 10 parts, water 50 parts; glycerol 10 parts, alcohol 30 parts. **McCrorie's Method** for flagella: Stain the cover-glass preparation in warmed mixture of equal parts of a saturated solution of night blue, a 10% solution of tannin, and a 10% solution of alum. **Magdala Red**, a chromatin stain. See *Naphthalene Red* under *Pigments* (Illus. Dict.). **Malachowski's Stain** for blood: Stain in an aqueous solution of eosin (percentage not stated, time not stated). Then stain in "a very dilute aqueous solution of borax-methylene-blue" (percentage not stated, no time stated). Staining is performed rapidly by applying heat; this, however, gives very uneven results. When carried on in the cold, the stain is uniform, but may require 24 hours. Blood-films are fixed in absolute alcohol (time not stated). **Malassez's Method** for staining bacteria in the blood: Prepare films on cover-glasses and dry them without heat; wash in distilled water or Ranvier's alcohol and fix in chromic or in osmic acid; wash and stain. **Mall's Method.** 1. For the demonstration of noncollagenous reticulated tissue, in the spleen, lymph-glands, mucous membranes, liver, kidneys, and lungs: Digest sections with pancreatin, shake in a test-tube with water, spread on a slide and dry by evaporation; then treat with a drop of picric acid (10 gm., dissolved in alcohol, 150 c.c., and water, 300 c.c.) and again dry by evaporation. Stain for a half-hour with acid fuchsin (10 gm., dissolve in absolute alcohol, 33 c.c. and water, 66 c.c.), treat for a few seconds with the picric acid solution; dehydrate in alcohol. 2. For the demonstration of the "membranes" of elastic fibers: Heat to boiling in strong hydrochloric acid and pour acid and fibers into cold water. The "membranes" may be isolated by boiling in 5% or 10% potash lye, also by treatment with pepsin, which destroys everything but the sheath. **Mallory's Hematoxylin**: Dissolve 0.1 gm. hematoxylin in a little hot water and when cool add to 100 c.c. of 1% phosphotungstic acid. **Mallory's Method.** 1. For neuroglia: Fix for 4 days in 10% formalin, then for 4 days in a saturated solution of picric acid; after this mordant for 4 days in 5% solution of ammonium bichromate at 37° C. Stain the sections for 2 minutes in 1% aqueous solution of acid fuchsin, rinse, and treat for 2 minutes with 1% aqueous solution of phosphomolybdic acid; wash in 2 changes of water and stain for 2 minutes in a mixture of water-soluble anilin blue 0.5 gm., orange G 2 gm., oxalic acid 2 gm., and water 100 c.c.; wash in water and dehydrate in alcohol. Result: connective tissue blue; neuroglia deep red; ganglion-cells and axis-cylinders light red. 2. For neuroglia: Fix the tissues after the method given in No. 1, and treat the sections for 15 minutes with a 0.5 aqueous solution of potassium permanganate and after washing for the same time with 1% solution of oxalic acid; wash, and stain in hematoxylin prepared by dissolving 0.1 gm. of the dye in a little hot water and when cool adding water up to 80 c.c., 20 c.c. of 10% aqueous solution of phosphotungstic acid, and last 0.2% of hydrogen dioxid. Wash in water, dehydrate in alcohol, clear in oil of origanum, and mount in balsam. Nuclei, neuroglia, and fibrin blue; axis-cylinders and ganglia-cells pale-pink; connective tissue deep-pink. 3. For connective tissue: Fix in Zenker's fluid or sublimate and stain the sections for 2 minutes in 0.1% aqueous solution of acid fuchsin. For further treatment see No. 1. Result: fibrous tissue, mucus, amyloid and hyaline substances, blue; nuclei, cytoplasm, elastin, fibrin, neuroglia, and axis-cylinders, red; erythrocytes and myelin sheaths, yellow. 4. For nuclei and fibrin: Stain sections of tissue fixed in any medium except formaldehyd for 3 minutes in 10%

aqueous solution of ferric chlorid; drain and dry and stain for 3 minutes in a 1% aqueous solution of hematoxylin; wash and differentiate in a 0.25% solution of ferric chlorid. Result: nuclei, dark blue; fibrin, gray to dark blue. In sublimate preparations the erythrocytes are greenish gray; connective tissue, pale yellow. 5. For staining *Amœbæ coli* in tissues: Use alcohol material and treat the sections for from 5 to 20 minutes with saturated aqueous solution of thionin; wash, and differentiate for from 30 to 60 seconds in 2% aqueous solution of oxalic acid; wash, dehydrate, clear, and mount in the usual way. **Mallory-Wright Method** for staining tubercle bacilli: Stain lightly in alum-hematoxylin, then for 2 or 3 minutes in steaming hot carbol-fuchsin; decolor for 30 seconds in acid alcohol. **Manchot's Method** for elastin: Stain sections of alcohol or Müller's fluid material for a half-minute in saturated solution of fuchsin; wash, and decolor in acidulated syrup (10 c.c. of aqueous solution of sugar of the consistence of glycerol plus 3 drops of sulfuric acid). Mount in the nonacidulated syrup. Celloidin sections must be fresh from the celloidin. **Mannaberg's Method** for staining the malarial parasite: Treat the air-dried film for 24 hours with a saturated aqueous solution of picric acid diluted with an equal volume of water and containing 3% of glacial acetic acid; transfer to absolute alcohol; stain with alum hematoxylin; transfer to alcohol containing 25% of hydrochloric acid and from this to alcohol containing a little ammonia. **Mann's Liquid.** 1. For fixing tissues: Ten parts each of saturated solutions of picric acid and mercuric chlorid and 5 parts of formol. 2. Equal parts of 1% osmic acid and 5% mercuric chlorid in normal salt solution. Recommended for fixing the tissue of the central nervous system. **Mann's Method** for attaching sections to the slide: Shake 1 part of white of egg with 10 parts of distilled water and filter twice through the same paper. Apply to slides by means of a glass rod; let them drain and dry. Float the sections on water warmed to 40° C.; pass a slide beneath them, arrange, lift them out, and subject them for 5 minutes to 35° C. **Manson's Method** for malarial blood: Take up a very small drop of blood on a slip ($1\frac{1}{2} \times \frac{5}{8}$ in.) of thin tissue-paper, about a half inch from the end. When the blood has diffused in a film, place the paper in contact with the slide or cover-glass and draw it over the surface. For the detection of crescents prepare a thick film; dry; fix in absolute alcohol and dissolve out the hemoglobin in very dilute acetic acid (2 or 3 drops in 30 c.c. of water). **Marchi's Method** for the granules of tissue cells undergoing fatty degeneration. See *Staining of Nerve Tissue, Table of Stains* (Illus. Dict.). **Marchoux's Stain** for the parasite of malaria: Add 20 c.c. of a saturated solution of thionin in 50% alcohol to 100 c.c. of 2% carbolic acid, and let the mixture stand for a few days before using. **Marina's Fluid**: Chromic acid 10 gm., formalin 5 c.c., 95% alcohol 100 c.c. Stir until the acid is dissolved and let the solution stand several hours before using. **Marina's Method.** 1. For ganglion-cells: A modification of Held's counterstain. Mix 3 c.c. of Nissl's methylene-blue, 3 c.c. of 5% aqueous solution of acetone, and 30 drops of 1% aqueous solution of erythrosin. Stain the sections for 2 days and differentiate after Nissl. 2. For ganglion-cells and medullated nerve-fibers: Fix in Marina's fluid for 24 hours or longer, according to the size of the object. Glue the tissue with syndeticon on cork, treat for 2 hours with 95% alcohol, and cut sections; stain for 24 hours in Nissl's methylene-blue, for 2 hours in erythrosin (see *Held's Method*), and treat for from 12 to 24 hours with a mixture of equal parts of saturated solution of copper acetate and of 1% lithium carbonate, plus enough ammonium hydroxid to dissolve the precipitate; wash with distilled water and stain for 24 hours in lithiated Weigert's hematoxylin at 35° C.; differentiate after Weigert. **Marschalko's Method** for plasma cells: Stain sections of alcohol material in borax-methylene-blue or thionin and differentiate in acidulated water or in 70% alcohol and dehydrate in absolute alcohol. **Marzinowsky's Method** for the differential staining of human and avian tubercle bacilli and lepra and smegma bacilli: Stain films or sections from 3 to 8 minutes in carbol-fuchsin diluted with 2 volumes of water; wash, and stain from 3 to 5 minutes in Löffler's methylene-blue. The avian tubercle bacillus stains red and is not decolorized by alcohol. The human tubercle bacillus cannot be stained by this method. The lepra bacillus stains red and is decolorized by alcohol. The smegma bacillus stains red and with prolonged staining in methylene-blue turns violet and finally blue. **Maupas' Method** for the study of infusoria: Cultivate *Paramecium caudatum* or *P. aurelia* in a solution of boiled flour frequently renewed. Place several individuals on a slide in a moist chamber. Conjugation soon begins and continues for about 12 hours. Fix in sublimate solution and stain in methyl-green. **Maurer's Stain** for blood: Solution A.—To a 1% aqueous solution of methylene-blue (med. puriss., Höchst, or Anilin-blau, Merck) add 0.5% Na_2CO_3. Expose to the sun for 2 or 3 days, or keep at room-temperature for 8 days. Add ¼% formalin to prevent formation of mold. Solution B.—A 0.1% aqueous solution of eosin (Grübler, w. g.). Maurer gives two methods of procedure: (1) With rapid; (2) with slow staining. He also indicates grades of intensity of staining. I.—Rapid staining. The blood-film is placed at an angle face down on a glass slide, one edge being elevated. Solutions A and B are used in their full strength. 1. Grade of intensity of staining is obtained by mixing 2 parts of Solution A with 20–12 parts Solution B. 2. Grade of intensity of staining is obtained by mixing 2 parts of solution A with 10–4 parts Solution B. 3. Grade of intensity of staining is obtained by mixing 2 parts of Solution A with 3–2 parts Solution B. 4. Grade of intensity of staining is obtained by mixing 2 parts of Solution A with 2–1 parts Solution B. As the period of most intense staining lasts only a few seconds after the mixture is made up, it is necessary to stain immediately, and the staining need not be carried on for more than a few minutes. II.—Slow staining. 1 c.c. Solution A is mixed with 25 c.c. water. 1 c.c. Solution B is mixed with 25 c.c water. These solutions are then mixed in a beaker. Films to be stained are immersed in the stain immediately. 1. Grade of intensity of staining is obtained in 10 minutes. 2. Grade of intensity of staining is obtained in 20 minutes. 3 and 4. Grades of intensity of staining are obtained in ½ hour to 1 hour at the longest. In Grade 1 the nuclei of leukocytes stain blue or bluish violet. Blood-platelets stain pale blue. Malarial parasites—cytoplasm stains pale blue; chromatin stains ruby red. In Grade 2 nuclei of leukocytes stain violet red. Chromatin of malarial parasite stains brilliant red. In Grade 3, Grade 2, with Schüffner's mottling of infected red blood-corpuscles, in addition. In Grade 4, Grade 3, and in addition in malarial parasites the achromatic area about the chromatin stains faintly red. **Mayer's Carmalum and Indigo-carmin**: Disssolve 0.1 gm. of indigo-carmin in 50 c.c. of distilled water or of 5% alum solution; add one volume of indigo-carmin solution to 4 volumes of carmalum. **Mayer's Hemalum and Indigo-carmin**: Add

one volume of a 0.05% aqueous solution of indigo-carmin to 4 volumes of hemalum. **Meek's Method** for elastin: Stain sections of alcohol material in a solution of orcein, 3 gm., in 100 c.c. of absolute alcohol and 40 c.c. of hydrogen dioxid; after 3 or 4 minutes differentiate in absolute alcohol and hydrogen dioxid 100:40. **Melnikow-Raswedenkow's Fluid.** 1. For the preservation of macroscopic objects: Fix the object for from 1 to 4 days in the following mixture: sodium acetate 3 parts, potassium chlorid 0.5 parts, formalin 10 parts, water 100 parts; transfer it into strong alcohol and from this into a solution of potassium acetate 30 parts, glycerol 60 parts, water 100 parts. 2. For the preservation of bile pigment: 10% solution of formalin containing 1% of hydrochinone. **Melnikow-Raswedenkow's Method** for the study of the "echinococcus" of tyrolean jaundice: Fix the organ for 24 hours in 4% formaldehyd, harden in alcohol, and embed in celloidin. Stain for 30 minutes in Weigert's resorcin fuchsin; wash; differentiate in 90% alcohol for 2 minutes; dip into weak solution of lithium carbonate; rinse and stain in alum hematoxylin and van Gieson's picrofuchsin. **Mercier's Method** for blood in tissue sections: Fix in Zenker's fluid; after 24 hours harden in alcohol and subsequently treat with iodin alcohol. **Metachromatic Stain**, one which imparts different colors to different tissues. **Methyl Blue, Methyl Water Blue.** See *Water Blue.* **Meyer's Method** for staining nerve-tissue with methylene-blue: At intervals of 15 minutes inject subcutaneously 2 c.c. of a saturated aqueous solution of methylene-blue BX at body-temperature. Fix the tissue for 24 hours in Bethe's fluid. **Michaelis' Method.** 1. For staining fat: Treat frozen sections, hardened in formalin, with a saturated solution of scharlach R in 70% alcohol, for 15 or 30 minutes, and mount in glycerol or levulose. 2. For the nuclei of leukocytes: Prepare 1% solution of pure methylene-blue and eosin in fresh, nonalkaline, distilled water; (*a*) mix 20 c.c. of the methylene-blue solution with 20 c.c. of alcohol and (*b*) 12 c.c. of the eosin solution with 28 c.c. of acetone. At the time of using mix 1 c.c. each of *a* and *b* and keep the mixture covered. Fix the film of blood for 24 hours in absolute alcohol and submerge it, film side down, in the stain. The time for staining is from one-half to 10 minutes and must be tested for each preparation. The action of the dye should be stopped when the film turns from blue to red. **Michaelis' Stain** for blood: Solution A.—The polychrome methylene-blue solution. To 200 c.c. of a 1% aqueous solution of methylene-blue, add 10 c.c. $\frac{N}{10}$ NaOH solution. Boil the mixture for 15 minutes. After cooling neutralize with 10 c.c. $\frac{N}{10}$ H_2SO_4 solution. Solution B.—A 0.1% aqueous solution of eosin. To 2 c.c. of Solution A, add 10 c.c. of Solution B. Stain blood-films in this mixture for 15 minutes. Wash rapidly in running water. Blood-films must be thin; those in which the cells remain spherical do not take the violet chromatin stain. Fix blood-films for 1 hour in absolute alcohol. **Minot's Method** for embryonic epidermis and developing hairs: Macerate the embryo for several days in 0.6% salt solution containing 0.1% of thymol. **Miquel's Medium** for the cultivation of bacteria: Prepare a solution of 10 parts of sodium chlorid and 1 part of potassium carbonate in 1000 c.c. of water and add 4 parts of gelatin. **Mitrophanow's Method.** A modification of Weigert's for medullated fibers: 1. Mordant photoxylin sections for 24 hours at 40° C. in a mixture of equal parts of saturated aqueous solution of copper acetate and 90% alcohol, stain for 10 minutes in Kultschitzky's hematoxylin and differentiate with Weigert's ferricyanid. 2. Or, after the copper bath stain for 10 minutes in acid hematoxylin (1 gm. in 400 c.c. of absolute alcohol plus 4 c.c. of acetic acid), differentiate in 0.25% potassium cyanid in 45% alcohol, and when the photoxylin is decolored put into the same with the addition of 1% solution of red prussiate of potash. **Moll's Method** for the study of embryonic cartilage: Fix in alcohol and stain thin celloidin sections for from 6 to 24 hours in Tänzer's orcein, wash in 90% alcohol until the celloidin is nearly bleached, dehydrate in absolute alcohol, and clear in oil of origanum. Result: preformed hyaline cartilage blue-violet, all else brownish-red. **Möller's Liquid** for fixing vegetal organisms: A saturated solution of iodin in 1% solution of potassium iodid. **Money's Method** for bacteria in tissues: Stain the sections in picrocarmin; then in gentian-violet or methylene-blue, adding a few drops of formalin and heating until it steams. Wash in water and decolorize in 90% alcohol. **Morgan's Method** for producing abnormal cleavage in the eggs of sea-urchins: Place them in sea-water to which 2% or less of sodium or magnesium chlorid has been added and after a short time restore them to normal sea-water. Cleavage occurs in unfertilized eggs and spindles, centrosomes, and chromosomes appear in abnormal positions. **Morse's Method** for pathologic tissues: Fix in any medium, preferably in formalin or sublimate. Dissolve 1 gm. of kresylviolet (Leonhard) in a mixture of 80 c.c. of 5% aqueous solution of phenol and 20 c.c. of 95% ethyl alcohol, and filter. Stain the sections for from 1 to 5 minutes, wash in distilled water, dehydrate in anilin-xylol (2:1), clear in xylol and mount in balsam. Result: nuclei, blood-platelets, and basophil granules violet or rose-pink; cytoplasm pale blue or pale green; intercellular substance of connective tissue dull rose pink; cartilage reddish violet; elastic fibers sky blue; axis-cylinders and cell-body of nerve-cells purple; plasmodium malariæ dull pink; colloid substance deep indigo blue; amyloid substance ruby red; mucin bright rose pink; the so-called cancer parasite rose pink; the granules of mast-cells (staining 10 seconds and differentiating in alcohol) fuchsin red. **Muchematein,** a specific stain for mucin. 1. Pulverize 0.2 gm. of hematin with a few drops of glycerol and then add 0.1 gm. of aluminum chlorid, 40 c.c. of glycerol, 60 c.c. of water. 2. Dissolve 0.2 gm. of hematin and 0.1 gm. of aluminum chlorid in 100 c.c. of 70% alcohol. Two drops of nitric acid may be added. **Mucicarmin,** a specific stain for mucin. Rub 1 gm. of carmin in a mortar with 0.5 gm. of aluminum chlorid and 2 c.c. of distilled water; heat for 2 minutes, until the light red color has become dark; stir and add a little 50% alcohol; when dissolved make up to 100 c.c. with 50% alcohol and after 24 hours filter. For use dilute tenfold with water or with 50% alcohol. **Müller's Method.** 1. For blood in "sections": Float the dry cover-glass preparation for one minute on a very thin solution of celloidin; drain; when dry strip off the "section" of blood in celloidin and stain. 2. For staining tubercle bacilli: Stain with carbol-fuchsin in the usual way and decolor with potassium permanganate and oxalic acid after Pal's modification of Weigert's method for medullated nerves. See *Table of Stains* (Illus. Dict.). 3. For the study of secretory capillaries in the gastric glands: Treat the tissue for 24 hours in a mixture of 3.5% potassium bichromate, 40 parts, and formalin, 10 parts; then for 1 or 2 days with the bichromate alone. Wash in water and

harden in alcohol. Stain with Heidenhain's iron-hematoxylin. 4. For spores and tubercle bacilli: Stain the cover-glass preparation with carbol-fuchsin, wash in 60% alcohol, then in water. Treat for 15 minutes with a 5% or 10% solution of potassium carbonate (or for a shorter time with the hydrogen dioxid) and counterstain with methylene-blue. **Murbach's Method** for preserving the transparency of the lens: Open the eyeball, detach the lens and expose it to the vapor of formalin. It will become hard and dry without losing its clearness. **Nakanishi's Method** for staining bacteria and the plasmodium malariæ: Dissolve methylene-blue to saturation in hot water. Spread a few drops on a slide, by means of a piece of filter-paper, and then wash off the dye, so that only enough remains to give the glass a sky-blue color. Put a drop of blood or of a bacterial suspension on the slide and apply a cover-glass. This method of staining is said to demonstrate the finer structural details of the organism. **Neelsen-Johne Method** for staining tubercle bacilli: Dry the films at room-temperature or for 5 minutes in the oven at 75° C. and spray them for 2 or 3 minutes with equal parts of alcohol and ether; then stain with steaming hot carbol-fuchsin and decolor for 2 minutes with 2.5% sulfuric acid or for one minute with 20% picro-sulfuric acid; wash in water and stain one minute in dilute aqueous solution of malachite green. Place the slide in the oven at 60° C. for a few minutes and while still warm put a few drops of cedar oil on the film. When cold, examine without a cover-glass. **Neisser's Method.** 1. For microtome sections of gelatin or agar cultures of bacteria: Fix for from 1 to 8 days, according to the size of the object, in 1% potassium bichromate, exposing meanwhile to the light. Wash in water and harden in alcohol. Stain with any of the usual anilin dyes. Alcohol or anilin will extract the color from the gelatin and the agar. 2. For the pole granules of the bacilli of diphtheria: Stain for 3 seconds in a mixture of methylene-blue 1 gm., 90% alcohol 20 c.c., glacial acetic acid 50 c.c., distilled water 350 c.c.; wash in water and stain for 5 seconds in filtered aqueous solution of bismarck brown 2 : 1000, prepared by boiling. Wash, dry, and mount in balsam. **Neusser-Ehrlich Stain:** Prepare concentrated aqueous solutions of methyl green, orange G, and acid fuchsin (extra) and daily add more of the dye until an undissolved residue remains. Then mix 50 c.c. of the acid fuchsin, 70 c.c. of the orange G, and 80 c.c. of the methyl green and add 150 c.c. of distilled water, 80 c.c. of absolute alcohol, and 20 c.c. of glycerol. Keep in the dark 3 weeks before using. **Neutral Red,** a metachromatic basic dye. The term "neutral" refers to the tint of its solution. It is used for *intra vitam* staining, in the same way as methylene-blue, and in 1% or stronger aqueous solution for sections of fixed tissues. Its neutral hue is turned bright red by acids, yellow by alkalis. It stains mucin and cytoplasmic granules. **Nicholl-Rieder Method.** See *Rieder's Method.* **Nicolas' Method** for hygroscopic material: Soak the object for 2 days in a 4% aqueous solution of gelatin at 25° C.; for 2 days in a 10% solution; then for 2 days in a 25% solution containing 10% of glycerin and kept at 35° C. Embed in the same mass in a paper tray and when the gelatin sets harden in 5% formalin. Preserve in weak formalin, dilute alcohol or glycerin, or water. The curling of the sections in alcohol is corrected by cresylol. **Nicolle's Method.** 1. For bacteria: Stain for a minute in a mixture of 10 volumes of a saturated solution of thionin in 50% alcohol, and 100 volumes of 1% carbolic acid. 2. For the capsules of Friedländer's bacillus: Stain for a few seconds in carbol-gentian-violet and immediately transfer to a mixture of alcohol, 2 parts, and acetone, 1 part. 3. For bacteria that have been decolored by the method of Gram. Counterstain in Löffler's methylene-blue, decolor. in acidulated water, wash, and treat for an instant with 10% solution of tannin. Five c.c. of a saturated alcoholic solution of fuchsin diluted with 100 c.c. of water may be used. 4. See *Gram's Method.* **Niessing's Fluid** for fixing mitotic figures: 1. Platinum chlorid, 10% solution, 25 parts, 2% osmic acid 20 parts, glacial acetic acid 5 parts, distilled water 50 parts. 2. The same with saturated aqueous solution of mercuric chlorid instead of water. **Night Blue,** so named because it shows as well in artificial light as in sunlight. The following formula is recommended for staining flagella: Ten c.c. of concentrated alcoholic solution of night blue, 10 c.c. of 10% solution of alum, and 10 c.c. of 10% solution of tannin. **Nigranilin,** the same as the anilin black of Lightfoot. **Nikiforoff's Method** for spirilla of recurrent fever: Fix for 24 hours in a mixture of equal parts of 5% potassium bichromate solution and saturated solution of mercuric chlorid in 0.6% sodium chlorid solution; harden in the oven in 70%, 80%, and 95% alcohols; embed in paraffin; stain for 24 hours in a mixture of 1% alcoholic tropæolin solution 5 c.c., saturated aqueous solution of methylene-blue 10 c.c., caustic potash (1 : 1000) 2 drops; wash in water; dip 2 or 3 times in a mixture of equal parts of alcohol and ether; bergamot oil, xylol, balsam. **Nissl's Method** for ganglion-cells: 1. Stain sections of tissue hardened in 10% formalin or in graded alcohols in hot concentrated aqueous fuchsin solution. 2. Stain in hot 0.5% methylene-blue; when cool transfer to a mixture of anilin (20 parts) and 90% alcohol (200 parts); then treat with origanum oil, then with benzine, and mount in solution of colophonium in benzine. 3. Mount the hardened tissue on cork (without embedding), cut sections and stain them in hot Nissl's methylene-blue (see *Staining Reagents*); treat with the anilin alcohol mixture, then with cajeput oil, then as in 2. **Nissl's Methylene-blue:** Methylene-blue (B patent) 3.75 parts, Venice soap 1.75 parts, distilled water 1000 parts. **Nitrosoindol Reaction:** Add to a bouillon culture of cholera bacilli of 24 hours a few drops of pure concentrated sulfuric acid. The reaction is indicated by a rose or purple-red color, of progressive intensity, the older the culture. **Nocht's Method** for staining the malarial parasite, and structural chromatin in other microorganisms: Fix the film by heat or in alcohol and stain for from 2 to 24 hours in Nocht's stain (*q. v.*). Result: cytoplasm blue, chromatin deep red, erythrocytes light pink. **Nocht's Stain** for blood: Original method: Unna's polychrome methylene-blue is neutralized with dilute acetic acid. Solution A.—1 c.c. of this neutralized polychrome methylene-blue is mixed in a watch-crystal with a saturated aqueous solution of ordinary methylene-blue until its red color disappears, and the solution becomes blue. Solution B.—Dilute 3 drops to 4 drops of 1% aqueous solution of eosin with 1 c.c. or 2 c.c. water. Add solution A drop by drop to solution B until B is dark blue; a precipitate has then been formed. In this mixture blood-films are to be stained for several hours up to 24 hours. Fix films in alcohol or by heat. Subsequent modification: Solution A.—The polychrome methylene-blue solution. To a 1% aqueous solution of methylene-blue add 1.0% or 0.5% Na_2CO_3. Heat at 50° C. to 60° C. for several days. Solution B.—Dilute 2 or 3 drops of 1% aqueous solution of eosin with 1 c.c. or 2 c.c. water. To solution B add

solution A drop by drop until the mixture is dark blue and has lost its eosin tint. To stain, float blood-films face down on this mixture for 5 to 10 minutes. **Noetzel's Method** for capsules of coccidia: Treat the coccidia with a 1% solution of potassium hydroxid, stain with gentian-violet, and decolorize in acetic acid. **Noir colin**, the anilin black of Lightfoot; recommended by Luys for the central tissues. Stain for 3 or 4 minutes in a 0.1% solution. **Nöoske Stain** for eosinophile granules: (*a*) Add one drop of caustic potash to 20 c.c. of a 1% aqueous solution of Lyons blue, boil for 5 minutes, and dilute with 20 parts of alcohol. (*b*) In the same way prepare a solution of bismarck brown. Mix 30 c.c. of *a* with 5 c.c. of *b*, add 25 c.c. of alcohol, and make up to 100 c.c. with distilled water. Stain in the warmed mixture, wash in acid alcohol, differentiate in a mixture of equal parts of anilin, alcohol, and distilled water; alcohol, xylol, balsam. **Obersteiner's Method** for the demonstration of degenerative changes in the axis-cylinder: This is the same as Platner's method for neurokeratin. See *Staining of Nerve Tissue*, *Table of Stains* (Illus. Dict.). **Ohlmacher's Formalin Solutions.** 1. *Formalin-fuchsin.* Dissolve 1 gm. of fuchsin in 10 c.c. of absolute alcohol and add 100 c.c. of 4% formalin 2. *Formalin-gentian-violet.* Saturated alcoholic solution of gentian and 4% formalin in the proportion of 1 : 10. 3. *Formalin methylene-blue.* One gm. of the pigment to 100 c.c. of 4% formalin. 4. *Formalin methyl-violet 5 B.* Prepare like formalin gentian-violet. 5. *Formalin-safranin O.* Saturated solution of the pigment in 4% formalin. This gives a plasma stain like eosin. Sections are said to stain in these solutions in 30 seconds. **Ohlmacher's Liquid:** Absolute alcohol 80 parts, chloroform 15 parts, glacial acetic acid 5 parts, sublimate to saturation (about 20%). A medium of high penetration and rapid action. Small objects are fixed in from 15 to 30 minutes; large objects—as a human cerebral hemisphere—in 24 hours. Wash in iodin-alcohol. See *Zenker's Fluid.* **Ohlmacher's Picrofuchsin:** Dilute a saturated solution of picric acid with an equal volume of water and add 0.5% of acid-fuchsin. Used as an alterative with gentian-violet. **Opal Blue**, a rosanilin derivative, similar to anilin blue. **Oppel's Method** for the demonstration of lattice fibers in alcohol material: Transfer the object from the alcohol to a 10% solution of yellow potassium chromate; after 24 hours to silver nitrate solution. See, further, the method of Böhm. **Osmication Reaction** of the fatty granules within the cells of tissues undergoing fatty degeneration: This reaction is obtained by fixing the tissue in the liquid of Flemming and staining the sections in safranin; avoid using turpentine, xylol, ether, and creasote, for these reagents dissolve osmicated fat, which is not affected by alcohol, chloroform, and clove oil. Cf. *Sudan III* and *Michaelis' Method.* **Osmond's Method** for polishing and etching metal sections: Polish on parchment with calcium sulfate dissolved in an infusion of licorice root; etch with an alcoholic solution of iodin containing 1.25% each of iodin, potassium iodid, and water. When the color of the iodin has faded, wash in water, then in alcohol, and dry in a blast of hot air. The etching may also be done with nitric acid. To preserve the section cover it with a solution of paraffin in benzene; the coating of paraffin left by evaporation of the solvent may at any time be dissolved off with benzene. **Overton's Method.** 1. For fixing with iodin: Heat crystals of iodin in a test-tube and pour the vapor over the objects, arranged on a slide; warm the slide to 40° C. to evaporate the iodin. 2. For attaching small, unembedded objects to the slide or cover-glass: Pour over the object a drop of a very thin solution of celloidin; tilt to drain off the excess and harden in 80% alcohol. **Pappenheim's Method.** 1. For medullated colored blood-cells: Put traces of crystal cement on a slide, at points corresponding to the middle and the corners of a cover-glass, and by means of a delicate sable brush add the merest trace of neutral-red; over this place the cover-glass charged with blood; seal the edges. The pigment is distributed by means of the blood-plasma. 2. For smegma bacillus: The method is the same as Czaplewski's for tubercle bacilli, except that corallin is used instead of fluorescein. See *Staining of Microorganisms*, *Table of Stains* (Illus. Dict.). **Parker-Floyd Mixture**, a fixing medium for the central nervous system. Six volumes of 95% alcohol and 4 volumes of 0.025% formalin (2 c.c. of 40% formalin to 98 c.c. of water). A sheep's brain will harden in a week or ten days. **Parker-Howard Method** for sterilizing slides and cover-glasses: Drop them one by one in an enameled iron pan containing 10% solution of chromic acid and boil for 20 minutes. Wash in water, then in 85% alcohol, then in absolute alcohol. **Patten's Method** for orientation of small objects: Cut a strip from paper ruled with two sets of raised lines at right angles to each other. Place small drops of a mixture of celloidin and clove oil, having the consistence of honey, at suitable intervals on one of the lengthwise lines. Clear the objects in clove oil and place one on each drop, so that the cross-lines are parallel to the planes in which sections are to be cut. Put the paper with the objects in turpentine, which washes out the oil and leaves the objects firmly attached to the paper. Infiltrate with paraffin and embed in the usual way. Cool, trim, and strip off the paper. This surface will be marked by the embossed orienting lines. **Peirce's Method** for labeling slides: Paint the end of the slide with a coat of thin balsam; use preferably a drawing ink for writing on the balsam. When dry this label may be made permanent by a second coat of thin balsam. A white background makes the writing appear more distinct. **Perl's Reaction**, a test for the presence of iron in pigmentary degeneration. Treat the fresh tissue or that fixed in 4% formalin for from 2 to 5 minutes with 2% solution of potassium ferrocyanid, then for the same time with 1% hydrochloric acid, and wash in distilled water. If Müller's fluid is used, the test must be made with hot hydrochloric acid. **Petroff's Method** for staining erythrocytes in tissue section: Fix in Müller's or Orth's medium or in formalin; embed in paraffin and cut very thin sections. Dissolve out the paraffin with xylol and wash in alcohol and then in water. Stain 10 or 15 minutes in bismarck brown (saturated solution in 1% acetic acid) or 30 minutes in borax or lithium carmin, following borax-carmin with acid alcohol. Wash in water and stain for 10 or 15 minutes in 20% malachite green (dissolved in alcohol and diluted with 5 volumes of water); wash, and stain in Van Gilson's picrofuchsin or in saturated aqueous solution of picric acid diluted with 4 or 5 volumes of water. **Petrone's Method** for staining the nuclei of erythroblasts: Treat the film with Lugol's solution, then with gold chlorid or silver nitrate. The reaction is supposed to depend on the iron in the nuclei and is said to demonstrate that they contain less iron in anemia than in health. **Pfaundler's Method** for numeration of bacteria: Mix 3 loopfuls of a 24-hour culture with a half test-tubeful of bouillon; fill the pipet of the white blood-cell counter of the Thoma-Zeiss apparatus up to the 1.0 mark with blood and dilute up to the 11.0 mark with the emulsion of bacilli; agitate and blow the

contents of the pipet into a sterile test-tube. Prepare another dilution in which the blood is drawn to the 0.5, 0.3, or 0.1 mark. Centrifugate the test-tubes. A drop of the serum of each is then examined by the hanging-drop method. As 100-volume parts of blood contain 67.762 parts of serum, the volume of serum is practically equal to two-thirds that of the blood. When the blood is drawn to the mark 0.1, the dilution is 1 : 150; when to the mark 0.5, 1 : 30, and when to the mark 1.0, 1 : 15. **Pfeiffer's Method** for bacteria in tissue sections: Harden in alcohol and stain for a half hour in carbol-fuchsin solution and distilled water 1 : 20. Wash in distilled water acidified with acetic acid. **La Phénicienne.** See *Bismarck-brown* under *Staining Reagents* (Illus. Dict.). **Pick's Method** of preserving tissues: 1. Place specimen for one or two days in Pick's formalin salt solution, consisting of distilled water, 100 parts; sal carolin factit, 5 parts; formalin, 6 parts. Sal carolin factit is composed of potassium sulfate, 2 parts; sodium chlorid, 15 parts; sodium bicarbonate, 33 parts; sodium sulfate, 44 parts. 2. Place the specimen for 24 hours in 80% to 90% alcohol. 3. Place the specimen promptly in Kaiserling's solution: acetate of potash, 5 parts; glycerin, 10 parts; distilled water, 100 parts. This solution may be varied in strength even up to the concentrated form used by Melnikow-Raswedenkow, which is acetate of potash, 30 parts; glycerin, 60 parts; distilled water, 100 parts. **Pick-Jacobson Method** for bacteria: Stain from 4 to 10 seconds in a mixture of carbol-fuchsin 15 drops, concentrated alcoholic solution of methylene-blue 8 drops, distilled water 20 c.c. Bacteria dark blue, nuclei light blue, protoplasm and mucin red. **Picric-acetic Acid** for fixing tissues: Saturated solution of picric acid 100 c.c. and glacial acetic acid 1 or 2 c.c. Place the tissue in this for from 6 to 12 hours, then in 70% alcohol for one day, and then in 80% alcohol, renewed as often as it becomes yellow. **Picric Alcohol,** a saturated solution of picric acid in 50% alcohol. **Picronigrosin,** a solution of 1 gm. of picric acid in 100 c.c. of distilled water with the addition of 1 gm. of nigrosin. **Pierce's Method** for sealing cultures of organisms that grow on potatoes: Thrust loose cotton to the bottom of the tube to the depth of an inch and pour in distilled water to the depth of a half inch. Drop a potato plug on the cotton and close the tube with a cotton plug, in the usual way. Steam for an hour. Inoculate, and when the cultures are satisfactory trim the cotton plug, flame it, and then push it into the tube for a distance of one-eighth inch. Pour a little melted paraffin on the cotton, and when this has hardened fill the space above the cotton with paraffin. **Piorkowski's Medium.** 1. For the cultivation of bacilli belonging to the colon group: Add 0.5% of peptone and 3.3% of gelatin to urine that has acquired the alkaline reaction, and cook for one hour in a water-bath. Filter, and sterilize in test-tubes for 15 minutes in a steam bath, and again for 10 minutes on the following day. 2. For differential staining of diphtheria bacilli: Make dry cover-glass preparations of a culture on Löffler's blood-serum, at a temperature of 37° C. for 20 hours and stain 30 seconds in methylene-blue; decolor in 3% hydrochloric acid for 5 seconds and counterstain in 1% aqueous solution of eosin for 5 seconds. **Pitfield's Method** for staining spores: Fix the film in flame and stain in boiling carbol-fuchsin or in Ehrlich anilin gentian-violet; wash, and decolor with a drop of a solution of ammonium persulfate 5 gm., in 50 c.c. of 95% alcohol and 10 c.c. of water; after a half minute wash and counterstain. **Plato's Method** for staining gonococci in living leukocytes: Add 1 c.c. of a cold saturated aqueous solution of neutral red to 100 c.c. of physiologic salt solution. Mix a small drop of the fresh gonorrheal pus with the stain and examine in a hanging drop. **Plaut's Method** for the bacilli of diphtheria: Stain in dilute carbol-fuchsin or in a mixture of 5 parts of concentrated alcoholic gentian-violet solution and 95 parts of anilin water; decolor in alcohol, or better in anilin. **Plehn's Method.** 1. For the study of the living malarial parasite: Place a drop of fluid paraffin on a slide and a drop on a cover-glass; take up the drop of blood on the latter and so place it on the slide that the blood is between the drops of paraffin. Examine on a warm stage. The addition of a drop of methylene-blue will stain the living organisms. 2. For malarial films fixed in absolute alcohol: Stain for 5 minutes in a mixture of concentrated aqueous solution of methylene-blue, 60 c.c., 0.5% solution of eosin in 75% alcohol, 20 c.c., distilled water, 20 c.c., and 20% potash lye, 12 drops. **Plehn's Stain** for blood. (This is a modification of Chenzinsky's stain.) Concentrated aqueous solution of methylene-blue, distilled water, equal parts. To this add one-half the equal volume of a 0.5% solution of eosin in 60% alcohol. Filter before use. Fix blood-films in absolute alcohol for 7 to 10 minutes. Stain from a few minutes to 24 hours. Red blood-corpuscles and eosinophil granules stain a rose-red. The nuclei of leukocytes stain a dark-blue, and malarial parasites a light-blue. **Polychrome Methylene-blue,** a reddish-violet dye sometimes present as an impurity in commercial methylene-blue, or that develops in old, ripened or alkaline solutions of methylene-blue. It is used for staining cell granules. See *Unna's Method.* **Pommer's Method** for the study of the deposition of calcareous substances in bone and for the detection of nonnucleated areas: Treat the bone with Müller's fluid until it can be cut with a razor. In the sections the previously calcareous areas are recognized by their homogeneous appearance, the noncalcified portions by their fibrillar structure. It is of advantage to stain these sections with carmin. For the staining of bone that has been decalcified by an acid 0.04% solution of dahlia, or 0.1% solution of safranin, or 0.3% solution of methyl green may be used. From 12 to 18 hours are necessary for sections. The areas that previous to decalcification were calcareous will be intensely colored, the areas previously noncalcified will be colorless. **Primrose Soluble,** a phthalein dye resembling eosin. It is not wholly identical in properties, but varies according to the mode of manufacture. **Prince's Stain:** Prepare a mixture of 2 parts of 2% solution of eosin, one part of saturated solution of acid fuchsin, and 24 parts of saturated solution of toluidin blue; agitate and decant. In the fresh solution films stain in a few seconds; in a few minutes after it is several weeks old. **Progressive staining** of Heidenhain, a method in which the pigment used is one that will stain some tissue elements or one structural part of a cell more rapidly than others and in which the process of staining is arrested before the remaining elements become colored. It is the same as the "direct" method of Flemming. Cf. *Regressive Staining.* **Pyronin-methyl Green,** a stain consisting of 1% solutions of pyronin and methyl green in distilled water made separately and mixed; 4 parts of the former to 1 of the latter. **Quincke's Method** for obtaining the ammonium sulfate reaction in ferruginous tissues: The author advises instead of fresh solution of ammonium sulfate that which has become yellow with age. Concentration of the solution or the addition of a little ammonia sometimes accelerates the initiation of the reaction. Cf. the methods of Hall and Zalewski.

Rabl's Mixture for fixing embryos: One volume each of saturated solutions of sublimate and picric acid and 2 volumes of distilled water. After 12 hours' fixing wash in water and transfer to dilute alcohol. **Ranvier's Method** for the study of the clasmatocytes of amphibia and mammals: Stretch the mesentery, fix with osmic acid, stain with violet 5 B, and mount in glycerol. Result: nuclei, blue; cytoplasm, violet. **Ravenel's Medium** for bacterial cultures: 1. (*a*) Add 10 gm. of dried peptone, 5 gm. each of salt and Liebig's extract, to 500 c.c. of water; boil for 3 minutes and neutralize. (*b*) Add 12 gm. of chopped agar-agar to 500 c.c. of water and place in the autoclave. Run autoclave up to two atmospheres of pressure, giving 121.4° C. of heat. As soon as this pressure is reached, turn out the flame and allow the autoclave to cool until below 100° C. before opening. Mix *a* and *b*, cool to 60° C., add the white of 2 eggs beaten in 50 c.c. of water, boil, and filter through paper. Blood-serum may be added instead of the egg albumin. 2. (*a*) To make a clear and permanent agar medium chop 500 gm. of fresh meat, add 500 c.c. of water, stand in a cool place overnight, and strain through a towel. (*b*) The same as *b* in No. 1. When cooled to 75° C. mix *a* and *b*, add 10 gm. of dried peptone, 5 gm. of salt, boil for 3 minutes, neutralize, and filter. **Rawitz's Aqueous Carmin**: Dissolve 2 gm. carminic acid and 20 gm. ammonia alum in 150 c.c. each of water and glycerol. **Rawitz's Artificial Alizarin**, a process by means of which a double stain is obtained, staining cytoplasm and chromatin different colors. Prepare a 2.5% suspension of alizarin RX in distilled water and add a few drops of 1% calcium acetate. Stain for 24 hours at a temperature of 40° C. The sections, which should be of material fixed in chromic acid or in Flemming's mixture, must be treated with chrombeize G A I before they are put into the stain. **Rawitz's Fluid**: 1. Four parts of 1% chromic acid and one part of picronitric acid. 2. One part of 2% osmic acid and 6 parts of picronitric acid. Wash in 70% alcohol. **Rawitz's Inversion Stain**: Put sections fixed in Flemming's or in Hermann's fluid for 24 hours into 20% aqueous solution of tannin (prepared cold); wash and put them for 2 or 3 hours into a 1 or 2% solution of tartar emetic, at a temperature of 37° C., or for 24 hours at room-temperature; wash and stain for 24 hours with safranin, fuchsin, methyl-violet, gentian-violet, or emerald green; differentiate with alcohol (or with 2.5% solution of tannin); clear and mount in the usual way. Successful preparations show nuclei colorless, cytoplasm and intercellular substance stained. In sections of testicle, centrosome and astrosphere are intensely stained. By this method an inversion of nuclear stains is obtained and they behave as plasmatic stains. **Rawitz's Mucicarminic Acid**: Dissolve 1 gm. of carminic acid and 2 gm. of aluminum chlorid in 100 c.c. of 50% alcohol; evaporate to dryness on a sand-bath and dissolve the residue in 100 c.c. of 50% alcohol. For application and technic see mucicarmin. **Red from Methylene-blue.** According to Nochte, a red pigment can be isolated by chloroform from old alcoholic solution of methylene-blue. This pigment makes a red-violet solution in water and is not identical with methylene-red or methylene-violet. Nochte names it "Roth aus Methylenblau." It is said to be a specific stain for the young forms of the malarial parasite. It can also be isolated from solutions of borax-methylene-blue that have been kept for several days at 50° to 60° C. **Rees' Method** for the preservation of mosquitos: Narcotize or kill the insect and place it ventral side up on a slide; cover it with a large drop of thick xylol-balsam, arrange the legs and wings, and pour on some thin balsam, which will straighten the proboscis and antennæ. When the balsam is hard, cut off the excess, make a cell with a glass ring, so fill with balsam that the surface is convex, and apply a cover-glass. **Regaud's Method** for the study of the cells of Sertoli: Fix the testicle in the liquid of Tellyesniczky. Stain the sections deeply in alum hematoxylin, decolor in an aqueous solution of formic acid 1 : 100, wash in water and stain in safranin; treat with very dilute acid alcohol, then with neutral 90% alcohol, absolute alcohol and xylol, and mount in balsam. Result: cytoplasm, pale rose-violet; chromatin, purple-violet to red-purple. **Regressive Staining** of Heidenhain: A method of overstaining followed by partial decolorization. It is the same as the indirect method of Flemming. Cf. *Progressive Staining*. **Rehm-Nissl Method** for the connective-tissue elements of the central nervous system: Fix in absolute alcohol and stain the celloidin sections for one minute in hot aqueous solution of methylene-blue; wash in 95% alcohol and stain for from 15 to 30 minutes in 0.1% solution of magenta in 95% alcohol; wash in alcohol and clear in clove oil. Nerve-cells reddish blue with colorless nuclei and blue nucleoli; nuclei of connective-tissue elements red. **Reid's Method** for mounting mosquitos: Paralyze in a drop of glycerin and then arrange with dissecting needles. **Reinbach-Ehrlich Stain**: Mix 120, 80, and 100 volumes respectively of saturated aqueous solutions of orange G, acid fuchsin, and methyl green and add 300 volumes of distilled water, 180 volumes of absolute alcohol, and 50 volumes of glycerol. Do not stir. α-, ε-, and β- granules stain in mixture. **Reinke-Flemming Method** for kinetic nuclei: Treat sections of tissue fixed in Hermann's mixture for 24 hours with saturated solution of potassium sulfite; wash; stain for 1 to 2 hours in saturated alcoholic solution of safranin diluted with anilin-water; wash; stain for 24 hours in Reinke's gentian-orange. **Reinke's Gentian-orange**: Add a few drops of a saturated aqueous solution of orange G to a saturated solution of gentian-violet. A drop on blotting-paper should make a violet or brown spot with a narrow orange border. For the application of this mixture see *Reinke-Flemming Method*. **Reinke's Method** for dissociating the cortical cells of hairs, the epithelial cells of salamandra, and the spermatozoa of the rat: Treat the object with a 10% solution of lysol in distilled water, to which alcohol and glycerol may be added. Its action is said to be instantaneous and to be destructive to chromatin. **Renaut's Method** for nerve-fibers: To 4 c.c. of a mixture of equal parts of 1% osmic acid and saturated solution of picric acid add 1 c.c. of 1% silver nitrate and inject with a gold or platinum needle into the still warm tissue. Harden in alcohol and stain. **Retterer's Method** for the study of developing cartilage in reticular connective tissue: Fix the object in aqueous solution of platinum chlorid 1 : 1000 and without decalcifying embed in paraffin and stain in safranin in anilin-water; wash in water and stain in alum hematoxylin; wash in alcohol containing a very little picric acid. **Reuter's Stain** for blood: Preparation of the solution of polychrome methylene-blue: To 100 c.c. of 1% aqueous solution of methylene-blue—blue med. puriss. (Höchst) add 0.5 gm. Na_2CO_3. Keep this solution for 2 or 3 days at 40° to 60° C. Filter. Preparation of the neutral stain: Without previously neutralizing the polychrome methylene-blue, add to it a saturated aqueous solution of eosin (Höchst). Filter off the precipitate formed, and wash it with distilled water.

Then dry it. Preparation of the staining solution. Dissolve the dry precipitate in hot absolute alcohol (ethyl), using 0.2 gm. precipitate to 100 c.c. alcohol. Filter. Add 2 c.c. anilin oil to 100 c.c. staining solution. Of this solution add 1 or 2 drops to 1 c.c. distilled water (or 30 drops to 20 c.c. water). In this mixture stain fresh films for 20 minutes to ½ hour; older films from 3 to 4 hours. Fix blood-films for 1 hour in a mixture of equal parts of absolute alcohol and ether. Staining reactions: Red blood-corpuscles stain pale orange. Malarial parasites—nuclei, chromatin stains violet; cytoplasm stains blue. **Ribbert's Method.** See *Gram's Method.* **Rieder's Method** for the selective staining of fat. See *Sudan III.* **Rindfleisch's Method** for blood sections: This is the same as Arnold's, except that after fixation the blood is mixed with glycerol. **Robertson's Method** for a "black reaction" in tissue elements of the central nervous system: Place the object in a large quantity of a 1% solution of platinum chlorid containing 5% of formalin and so close the bottle as not to exclude the air entirely. The reaction appears in from 1 to 3 months and should be continued for several weeks more, fresh platinum solution being added if necessary. Transfer the tissue to a solution of dextrin and cut on a freezing microtome. Dehydrate, clear, and mount in the usual way. **Robin's Method** for preserving sputum for microscopic examination: Add to the sputum an equal volume of 5% solution of carbolic acid, 5% formalin, or 2% trikresol, and mix by shaking. **Romanowsky's Stain** for blood: 1. The concentrated stain. To a saturated aqueous solution of methylene-blue 1 part, add a 1% aqueous solution of eosin 2 parts. Mix these in a watch-crystal, stirring with a glass rod. Prepare the stain only 1 to 2 minutes before use. Float blood-films on the surface of the stain. One-half to one hour is sufficient to give the violet chromatin stain. Two to three hours are necessary to give the most intense stain. 2. A more dilute form of the stain. A saturated aqueous solution of methylene-blue, distilled water, equal parts. To this add an equal volume of 0.5% aqueous solution of eosin. Mix in watch-crystal as in 1. Stain for 24 hours. Wash in distilled water. Dry. Romanowsky used a solution of methylene-blue over the surface of which mold had formed. Fixing of blood-films: Heat for 30 minutes at 105° to 110° C. Staining reactions: Red blood-corpuscles stain rose-red. Leukocytes—nuclei, stain dark violet; those of eosinophils a reddish-violet; eosinophil granules stain intense red; neutrophil granules stain dark violet; protoplasm lymphocytes stain dark blue; mastzellen stain dark blue. Blood-platelets stain dark, reddish-violet. Malarial parasites—body stains blue; center of achromatic area stains carmin violet. **Romanowsky-Ziemann's Stain:** Prepare a 0.1% solution of eosin and a 1% solution of methylene-blue; when the latter is entirely dissolved mix the two solutions in the proportion of 5 : 1. Stain sections for a half-hour and wash in a stream of water. Mount in xylol-balsam. **Rose de Naphthaline.** The same as *Magdala red.* **Rosenberger's Method.** 1. For staining blood: Fix the films by heat or in absolute alcohol or alcohol and ether and stain in a mixture of 10 c.c. of a saturated aqueous solution of methylene-blue, 4 c.c. of a saturated aqueous solution of phloxin, 6 c.c. of 95% alcohol, and 12 c.c. of distilled water. 2. For staining the tubercle bacillus: The essential point in this process is the use of sweet spirit of niter for bleaching; it is also mixed with alcoholic solutions of methylene-blue, malachite green, bismarck brown, and gentian-violet. **Rosin's Method.** 1. For the central nervous system: Stain sections for 5 minutes in Rosin's mixture, wash for 2 minutes in distilled water, and transfer for 5 or 10 seconds into acetic acid 1 : 2000; wash one minute in water, dehydrate in absolute alcohol, clear in xylol, mount in balsam. Result: colored blood-cells and medullary sheaths are orange (only in chromium preparations); blood-vessel walls and sclerosed neuroglia are purple; axis-cylinders, ganglion-cells, leukocytes, nuclei and nucleoli of some ganglion-cells and cytoplasm of glia-cells are red; nuclei of glia-cells, bloodvessel walls, the connective tissue and the leukocytes are blue-green. 2. For ganglion-cells: Stain in saturated aqueous solution of neutral red, wash in water and dehydrate in alcohol that is free from acid. Granules of Nissl red, nucleoli red, all else yellow. 3. For pigment in ganglion-cells: Treat the tissue with formalin, cut on the freezing microtome, place the sections for 24 hours in a saturated solution of sudan III in 80% alcohol, and mount in glycerol. **Rosin's Stain:** 1. Ehrlich's triple-stain mixture 0.4 part, distilled water 100 parts, 0.5 acid fuchsin solution 7 parts. 2. Prepare concentrated aqueous solutions of acid eosin and basic methylene-blue and mix them. The combination produces a new dye, the eosinate of methylene-blue, which stains acid substances blue, alkaline substances red, and neutral substances violet. Nerve-cells are an exception; in them the cytoplasm takes the red, the Nissl bodies the blue color, while the nuclei are not blue. **Rossolimow and Murawiew** for nerve-fibers: Harden in 2% formalin for 2 days, then in 4% for 2 days; tease or section, and stain in heated methylene-blue; differentiate in anilin-alcohol after Nissl and clear in cajeput oil. **Rothberger Reaction,** a test for *Bacterium coli commune.* Add 3 or 4 drops of concentrated solution of neutral red to 10 c.c. of liquid agar and 0.5 c.c. of a 24-hour culture of *Bacterium coli.* In about 24 hours the culture becomes strongly fluorescent. This reaction is said to be specific. **Rothig's Stain.** (*a*) Dissolve 0.5 gm. of kresofuchsin in 100 c.c. of 95% alcohol and 3 c.c. of hydrochloric acid. (*b*) Dilute a saturated solution of picric acid with 2 volumes of water. Mix 40 c.c. of *a* and 32 drops of *b* and stain in this for from 2 to 24 hours; wash in 95% alcohol; absolute alcohol, xylol, balsam. Orange G may be used as a counter-stain. Hematoxylin may be used to forestain. Rothig used material fixed in sublimate solution. **Rousseau's Method.** 1. For decalcifying very delicate objects: Embed fixed material in celloidin; treat it with 85% alcohol; decalcify in a mixture of from 15% to 40% of nitric acid in alcohol; wash in alcohol containing precipitated calcium carbonate, and cut sections. 2. For decalcifying: Place an object embedded in celloidin in a covered caoutchouc dish containing a mixture of alcohol 50 c.c. and 20 to 30 drops of hydrofluoric acid; wash in alcohol containing powdered lithium carbonate. **Roux's Method** for the destruction of cleavage spheres: Fertilize the eggs of a frog (see *Artificial Fertilization*) and 20 minutes after the first cleavage begins, heat a needle with a guard and intrpduce the point into the eggs, above the equator and parallel to the cleavage. A half-hour after the operation cover the dish, and after another half-hour pour water over the eggs. They may be examined in a few hours and on the next day. Fix at successive stages of cleavage in chromic acetic acid. **Ruge's Stain** for blood. Preparation of the solution of polychrome methylene-blue. To a 1% aqueous solution of methylene-blue add 0.1% NaOH. Heat this solution—short of boiling—3 or 4 times. Add 0.2% NaOH, and repeat the heating. To make

up the stain: Titrate a 1% aqueous solution of eosin against the solution of polychrome methylene-blue until a precipitate just appears; 1 c.c. of the polychrome methylene-blue usually requires from 0.3 to 0.6 eosin solution. Then dilute both solutions to make 0.02% solutions. The best violet stain is obtained when a quantity of eosin is added to the methylene-blue equal to one-half that required to produce a precipitate. This, however, must be determined for each individual solution. Staining: Blood may be stained on either cover-slips or slides. Cover-slips: Place blood-films in a watch-crystal with the stain. Heat until the fluid steams, and a metallic scum forms on its surface. This requires 1 to 1½ minutes. Alternately heat and cool for 6 minutes. Wash in water. Dry. Slides: Cover the blood-film with the stain. Heat for 2 minutes. Cool for 2 minutes. Heat again for 2 minutes. Wash in water. Dry. **Ruprecht's Method** for the demonstration of canaliculi of bone: File a section of bone, thoroughly deprived of oil, to 0.3 mm. Place it in ether for a minute, heat it quickly on a glass plate, and while still hot return it to the ether. Transfer to hot saturated alcoholic solution of "diamant" fuchsin and cook for 5 minutes. Cool to below 34° C. and then evaporate to dryness, at 70°. Scrape off the superfluous dye and file between ground-glass plates, with powdered pumice kept moist with a mixture of benzine and vaselin (10:1). Smooth on the whetstone, in the same mixture, with the fingers. Wash in benzine, dry, and polish with writing-paper. Mount in colophonium dissolved in warm, water-free benzol. **Sacharoff's Method** for blood. Solution A.—Saturated aqueous solution of methylene-blue diluted one-half with water. Solution B.—A 1% aqueous solution of eosin (Grübler, w. g.). To solution A add solution B, stirring until a granular precipitate begins to form. (If no precipitate forms the methylene-blue employed is not suitable for this stain.) After the precipitate begins to form solution B is added drop by drop. After each drop a blood-film is covered with a portion of the mixture, and the series of films so obtained is placed in a moist chamber and allowed to stain for 24 hours. Of these usually one or two will be found to be good. The films are fixed "according to Ehrlich" by heat. **Sadowsky's Method.** See *Jacottet-Sadowsky Method.* **Saint-Remy's Method** for the eggs of tapeworms: Expel the eggs from the worm by compression or laceration, from the last proglottid forward as far as they can be found to secure successive stages of development and arrange in sequence on slides. Fix with Carnoy's fluid stain in alum carmin or toluidin blue, and mount *in toto* in balsam. **Salge-Stöltzer Method** for the study of rachitic bone: Place the sections for 3 minutes in a 0.5% solution of silver nitrate, wash in distilled water, place for one minute in a 5% solution of sodium bromid, again wash in distilled water, and develop in a neutral solution of amidol. The sections may be counterstained with lithium carmin. **Sand's Method** for protozoa: Fix in 2% osmic acid, wash in water, containing a trace of ammonia, and mount in a drop of the following solution: methylene-green 0.5 gm., glacial acetic acid 2 c.c., glycerin 10 c.c., alcohol (9.4°) 10 c.c., distilled water 80 c.c. Make up the loss by evaporation with a drop of 10% glycerin. **Sayce's Medium** for the preservation of crustacea: Glycerol 375 c.c., 90% alcohol 250 c.c., water 250 c.c., corrosive sublimate 0.5 gm. **Scarlet R.** (Ger. *Scharlach R.*), one of the azo-bodies which possess no salt-combining group and which are characterized by their selective staining of fat. Cf. *Michaelis' Method.* **Schaffner's Method.** 1. For the artificial production of the sickle stage of the nucleolus: Treat root-tips of the onion in a mixture of absolute alcohol 95 c.c., chloroform 5 c.c., glacial acetic acid 1 c.c., 1% aqueous solution of chromic acid 1 c.c. The cells of the peripheral layers, where the action of the medium is most violent, show the distortion of the nucleolus. 2. For the study of mitosis: Fix root tips in chromic-acetic acid and stain the sections first in anilin-safranin and then in picronigrosin. 3. For making permanent mounts of pollen: Spread a drop of albumen fixative on a slide, on this sprinkle the fresh pollen, and stain with safranin and gentian-violet (0.1 gm. of each to 100 c.c. of absolute alcohol). After 5 minutes clear in xylol and mount in balsam. 4. A permanent stain for starch: Stain for from 2 to 4 hours in a mixture of equal parts of anilin water and saturated solution of safranin in 95% alcohol and for from 2 to 8 minutes in 2% aqueous solution of gentian-violet. Paraffin sections of the young corms of *Erythronium* give particularly favorable results. **Schardinger's Medium** for the cultivation of protozoa: Boil 30 or 40 gm. of hay or straw in one liter of water; filter and add 1% or 1.5% of agar-agar; cook until the latter dissolves, add sodium carbonate until the reaction is alkaline to litmus and, without filtering, fill into test-tubes. Cultivate the suspected material in this medium and isolate by the method of dilution. **Schmidt's Test** for bilirubin: Triturate particles of fresh feces in a saturated aqueous solution of mercuric chlorid and let the suspension settle for 24 hours. Bilirubin, if present, is colored green and may be detected microscopically, when the quantity is too small to be seen by the unaided eye. **Schmorl's Method** for demonstrating the lacunæ and canaliculi of bone: 1. Fix in any but the sublimate solutions, preferably in the liquid of Müller or Orth. Decalcify by any method, preferably a slow one, as that of Ebner or Thoma, or in Müller's fluid containing 3% of nitric acid. Embed in celloidin. Treat the section with water for 10 minutes and stain for from 5 to 10 minutes in thionin or in Nicolle's carbol-thionin (see *Nicolle's Method*); wash in water and treat for a minute with aqueous solution of picric acid (saturated by heat and filtered when cold); wash in water, then for 5 or 10 minutes in 70% alcohol; dehydrate in 95% alcohol and clear in oil of origanum. Hematoxylin may be used prior to the picric acid, to bring out the nuclei. The addition of a drop or two of ammonia to the thionin will cause the canaliculi in osteoid tissue to stain. Result: osseous matrix, yellow to yellow-brown; canaliculi and lacunæ, brown to black; cells, red; fat-cells (after fixation in Müller's fluid) reddish-violet. 2. For immature bone: Fix very thin pieces in Müller' fluid or in Orth's followed by Müller's, for from 6 to 8 weeks at room-temperature or for 3 or 4 days in the thermostat. Wash in water and decalcify after v. Ebner. Wash thoroughly, harden in alcohol, and embed in celloidin. Stain very thin sections for 3 minutes in ammoniated thionin, and treat for a few seconds with saturated aqueous solution of phosphotungstic or phosphomolybdic acid; wash in water for 5 minutes, or until the sections turn sky-blue, and treat for from 3 to 5 minutes with dilute ammonia (1:10). Dehydrate in alcohol, clear in carbol-xylol, and mount in balsam. Overstaining may be corrected by a few minutes' treatment with acid alcohol, followed by washing in water, before dehydrating. Result: matrix clear to greenish-blue, cells diffuse blue, borders of lacunæ and canaliculi bluish-black. In rachitic bone the canaliculi are brought out only in the osseous tissue. **Schottelius' Method**

for the cultivation of comma bacilli: Dilute the intestinal contents with an equal volume of alkaline bouillon and expose to air for 12 hours. The bacilli, owing to their necessity for oxygen, develop chiefly on the surface. **v. Schrotter's Method** of staining the medullary sheath: The sections, which are best hardened in Müller's fluid, are placed from 15 to 20 minutes in a freshly prepared cold solution of gallein (Grübler), which is prepared by boiling with well-water. Then differentiate in a 5% solution of soda or weak sodium hydroxid solution, then for a moment in a light violet permanganate solution. Wash with water, absolute alcohol, carbol-xylol. The medullary substance will have a violet appearance, likewise the red-blood-corpuscles; the gray substance and connective tissue will remain unchanged. **Schultze's (O.) Method** for the preparation and preservation of transparent embryos: Harden the embryo in alcohol and transfer directly to a 3% or 5% aqueous solution of caustic potash. In about a week the embryo becomes transparent and is then preserved in a mixture of glycerol 30 parts, formalin 2 parts, water 100 parts. Treatment with potash solution alone will make the tissues transparent and isolate the bones, but the preparation cannot be preserved. **Schultze's Method** for smooth muscle: Treat for 24 hours with 10% nitric acid, wash, and treat for a week (in the dark) with a mixture of equal volumes of 0.05% osmic acid and 0.2% acetic acid; tease and mount in glycerol. **Shaffer-Bouma Method** for cartilage: Stain for from 30 to 60 minutes in 0.05% aqueous solution of safranin; wash in water; treat for 2 or 3 hours with 0.1% solution of sublimate; transfer to alcohol, dry with filter-paper, and clear for a long time in clove or bergamot oil. This method is also applicable to bone that has been decalcified in nitric acid. See also *Zachariade's Method*. **Siemerling's Method** for histologic preparations of the brain: Harden in a mixture of Müller's fluid 100 parts and formalin 2 parts. Treat the sections with 0.55% solution of chromic acid and stain after Weigert's method. **Silk-thread Test:** Sterilize pieces of silk thread, 1 cm. long, and dip them into a suspension in sterilized water of the bacteria to be tested; after a few minutes transfer the threads to a sterilized petri dish, and when dry dip them into a solution of the disinfectant to be tested. Remove them one by one, at intervals of 5, 10, 15, 30, and 60 minutes, and transfer them to tubes of nutrient bouillon. **Sjöbring's Method** for fixing tissues with formaldehyd: It is important to use the formol of Meister, Lucius u. Brüning. Treat mammalian tissue for 2 days with formol diluted with 4 volumes of water and then transfer into 95% alcohol, in which the object should remain for 2 days. If the tissue contains much water, the hardening should be begun in dilute alcohol. Formol is not advised for fixing kinetic nuclei and is said to lessen the capacity of nerve-tissue for taking stains. **Smith's (Grieg) Method** for double-staining spores and bacilli: Distribute the bacteria in normal salt solution in a test-tube, add an equal volume of carbol-fuchsin, and place in boiling water for 15 minutes. Spread a loopful on a cover-glass, dry, and fix in flame; decolor in alcohol containing 1.5% hydrochloric acid, wash, and stain in methylene-blue. **Smith's (S.) Method** for staining sections before dissolving out the paraffin: Put the stain in a shallow, open dish. Float the ribbons of sections on the stain. Stand the dish in a warm place until the sections are flat, then cover it to prevent evaporation; after 24 hours pour off the stain, treat with other necessary reagents in the same manner, mount on the slide, and then clear and remove the paraffin with xylol or other clearing medium. In this way thinner sections can be handled and attaching to the slide is unnecessary. **Sodium Dioxid** for bleaching tissue: Prepare a 10% solution of tartaric or acetic acid; by means of a pipet introduce a little sodium dioxid (Na_2O_2) at the bottom of the container and then cautiously pour on to the surface of the liquid 70% alcohol. Suspend the objects to be bleached (previously saturated with alcohol) in the supernatant alcohol. **Solger's Method** for centrosomes: In the dermal pigment cells of the frontal and ethomoidal region of the pike the centrosome may be seen without staining. Fix in the liquid of Flemming. Heidenhain's iron-hematoxylin method will stain the centrosome. **Souza's Medium** for fixing and hardening tissues. See *Pyridin*. It also dehydrates and clears. **Sperm Crystals.** To obtain these crystals when they are present in pus, treat the exudate with salt solution for 2 days and then add neutral ammonium phosphate. Decant the supernatant liquid and examine the sediment. Cf. *Böttcher's Method*. **Stabilit**, a sort of vulcanite manufactured for electric insulation and recommended by Jelinek as blocks for mounting celloidin objects. **Steinschneider-Galewski Method** for gonococci: Stain for a half-hour in anilin-gentian-violet, rinse, and treat for 5 minutes with solution of potassium iodid, bleach in alcohol, rinse, dry, and stain in alkaline methylene-blue. **Stepanow's Method.** 1. For embedding in celloidin: Dissolve 1.5 gm. of celloidin in 5 c.c. of clove oil, 20 c.c. of ether, and 1 c.c. of absolute alcohol, added drop by drop. Infiltrate in a stoppered bottle for from 1 to 6 hours, according to the size of the object; uncork the bottle and let the solution evaporate from 4 to 6 hours, protected by a bell-jar; turn object and mass into a silk-paper filter freely suspended in a warm place. After from 4 to 6 hours cut out the object. Treat for from 2 to 6 hours with vapor of chloroform and cut with the knife dry. For dry sections preserve in cedar oil, for wet sections in 85% alcohol. The chief advantages of this method are the transparency of the mass and the rapidity of the process. 2. For the bacilli of rhinoscleroma in tissue sections: Stain for from 15 minutes to one hour in carbol-gentian violet or for 24 hours in Löffler's methylene-blue, and extract briefly in alcohol containing 0.2% acetic acid. **Stephen's Method** for flagella: This is the same as the method of Van Ermenghem, except that a 2% solution of largin is used instead of silver nitrate. **Stephens-Christopher Method** for preparing films of malarial blood: Prick the finger with a triangular surgical needle, touch the exuding drop with a slide, and with the shaft of the needle spread the blood in a broad, even streak, allowing time for the blood to run along the edge of the needle by capillarity. **Stieda's Method** for the detection of iron in tissue elements: Stain sections of material hardened in alcohol or formalin for several hours in lithium carmin; wash in water; treat for from 4 to 6 hours with 2% potassium ferrocyanid; treat from 6 to 12 hours with 1% hydrochloric acid; wash in water; dehydrate, clear, and mount in balsam. **Strasburger's Method** for facilitating the sedimentation of urine or other secretions containing bacteria: Mix one part of the secretion with two parts of 95% alcohol. The alcohol causes the bacteria to sink by diminishing the specific gravity of the liquid. The same method may be applied in the examination of feces for tubercle bacilli. **Ströbe's Method** for axis-cylinders: Harden in Müller's fluid. Stain the sections for from 30 to 60 minutes in saturated aqueous solution of anilin-blue, wash and transfer into filtered alkali-alcohol (caustic

potash 1 gm., alcohol 100 c.c.); when the sections become a transparent brown-red wash for 5 minutes in distilled water; counterstain for from 15 to 30 minutes in saturated solution of safranin diluted with an equal volume of water; wash and dehydrate in absolute alcohol. **Stroschein's Method** for the sedimentation of sputum: Agitate thoroughly in a test-tube 5 c.c. of sputum with from 5 to 15 c.c. (according to the consistence of the secretion) of a mixture of boraxboric acid solution and water in the proportion of 1:3. Sedimentation occurs in from 24 to 48 hours. **Substantive Staining**, a histologic stain obtained by direct absorption of the pigment from the solution in which the tissue is immersed. Dyes that combine directly with the substance acted on are called substantives dyes. Cf. *Adjective Staining*. **Subtractive Staining**, a so-called theory of Heidenhain's, based on the hypothesis that a general stain satisfies the affinities of some cell structures, that hold it in subsequent treatment with specific dyes, while the other structures give up the general stain and then take the specific stain. **Sudan III**, a selective stain for fat. Prepare a saturated solution in 95% alcohol, dilute two-thirds with 50% alcohol, and filter. Stain sections for from 5 to 10 minutes, wash for about the same time in 60 or 70% alcohol and mount in glycerol. Small oil drops yellow, large ones orange. For staining the fat granules in the elements of tissues undergoing fatty degeneration use the undiluted stain. The tissue may be fixed in Müller's fluid or cut fresh on the freezing microtome. **Symington's Method** for showing the relation of the skull to the external and internal parts of the brain: Harden the entire head by repeated injections of formalin, through the carotid and vertebral arteries. Inject a solution of gum, fix in a box filled with the gum solution, freeze, and make sections. **Tandler's Method** for celloidin sections: Transfer the sections from the knife to the slide, mop up the surplus alcohol, and cover the sections with a strip of paper having twice the length of the slide; turn the face end round against the under surface and against this place another slide. Put the prepared slides, one above the other, in a dish with water or alcohol. **Tänzer's Orcein.** Orcein 0.5 gm., absolute alcohol 40 c.c., distilled water 20 c.c., hydrochloric acid 10 drops. **Tellyesnicky's Fluid.** Potassium bichromate 3 gm., glacial acetic acid 5 c.c., water 100 c.c. The time for fixing is from one to two days, according to the size of the object. Wash in water and harden in alcohol. **Thalmann's Medium** for the cultivation of gonococci: Sterilize horse's brain in a steam sterilizer for one hour; divide it into thin slices, put them into petri dishes, and sterilize twice, a half-hour each time. **Thionin**, the uses and technic are the same as for methylene-blue. A saturated solution in 50% alcohol diluted with 5 volumes of water is used for staining. Cf. the methods of Lenhossek and Harris. **Thom's Method** for staining goblet cells: Harden the tissue in alcohol and stain the sections for 15 minutes in Mayer's hematin; wash in 70% alcohol and stain for a very short time in a solution of bismarck brown in 70% alcohol. The cells containing mucus are brown. **Thoma's Method** for the numeration of leukocytes: Dilute the blood in the proportion of 1:10 with water containing 0.3% anhydrous acetic acid. This dissolves the colored blood-cells. **Timberlake's Fluid** for fixing kinetic nuclei in plant cells: 1. Iridium chlorid 0.5 gm., water 100 c.c., glacial acetic acid 1 c.c. 2. A 1% solution of iridium chlorid with 3% of acetic acid. **Tinctorial Preoccupation**, a theory of staining formulated by Unna and identical with subtractive staining. **Toluidin Blue**, a regressive anilin dye resembling methylene-blue. See *Harris' Carbol-toluidin*. **Touton's Method** for gonococci in tissue sections: Stain in carbol-fuchsin and wash in alcohol. **Trambusti's Method** for blood in tissue sections: Fix the object in Flemming's mixture and place the sections for 24 hours in 1% solution of thionin in anilin water (4:100); treat with acid alcohol and stain in aqueous solution of eosin, then in alcoholic solution of eosin. Mount in xylol balsam. **Turner's Method** for the study of nerve-cells: Place a thin slice of gray nerve tissue in 0.5% solution of methylene-blue. After 12 hours transfer a very minute fragment to a slide, add a drop of Farrant's medium, and apply a cover-glass. Crush the tissue by careful pressure on the cover; this should be done under the microscope. Cf. *Vincenzi's Method*. **Unger's Method** for the study of mammary glands: Fix very small pieces from 2 to 5 days in Müller's fluid and then in a mixture of 2 parts of Müller's fluid and 1 part of 1% osmic acid, renewed daily; wash in water, harden for 3 days in absolute alcohol, and embed. The entire process should be done in the dark. The sections may be treated for a day with 20% formic acid and counterstained with safranin. Fixation in boiling water or alcohol also gives good results. Mount in colophonium benzine. **Unger's Methyl-green.** Methyl-green, from 0.15 gm. to 0.3 gm., water 100 c.c., hydrochloric acid 3 drops. This liquid is recommended in particular for the staining of spermatozoa. The dry cover-glass preparation should be treated with the stain for several hours. **Unna's Hematoxylin**, a constant half-ripe stock solution. Hematoxylin 1 gm., alum 10 gm., alcohol 100 c.c., water 200 c.c., sublimed sulfur 2 c.c. If the sulfur be added 2 or 3 days after preparing the hematoxylin solution, it will arrest oxidation and the stain will be ready for use at this stage. The oxidation of alum-hematoxylin solutions can be instantaneously accomplished by adding a little neutralized hydrogen dioxid. See *Harris' Hematoxylin*. **Unna's Method** for collagen: 1. Stain sections of alcohol material for 5 minutes in strong solution of polychrome methylene-blue, then for 15 minutes in neutral 1% solution of orcein in absolute alcohol; wash in alcohol; bergamot; balsam. Collagen dark red; nuclei blue; granules of mast-cells carmin red; cytoplasm of plasma-cells blue. 2. Stain sections for 20 seconds in 1% solution of water-blue (Wasserblau); wash, and stain for 5 minutes in neutral aqueous 1% solution of safranin; wash in water and then treat with absolute alcohol until the blue color reappears; collagen sky-blue; nuclei red; cytoplasm violet. 3. For collagen, elastin, and smooth muscle. Stain with hot orcein (see *Staining Reagents*) for 10 minutes, wash in dilute alcohol, stain with hematein for 10 minutes, and treat for a few seconds with acid alcohol; wash, and place in a 2% solution of acid fuchsin for 5 minutes, in saturated aqueous solution of picric acid for 2 minutes, then in saturated alcoholic solution of picric acid for 2 minutes; absolute alcohol; oil; balsam. Elastin brown-red; collagen red; muscle-fibers yellow with gray-violet nuclei. 4. For elastin and smooth muscle. Stain as in 3, substituting polychrome methylene-blue for hematein and 1% potassium permanganate for the acid alcohol. Elastin brown-red; collagen decolored; muscle-fibers violet. 5. For smooth muscle. Stain sections for 10 minutes in polychrome methylene-blue; wash, and fix in 1% red prussiate of potash; differentiate in acid alcohol for 10 minutes; absolute alcohol; oil; balsam. The collagen is decolored. 6. For keratohyalin. Overstain in hematoxylin, treat

for 10 seconds with 0.5% solution of potassium permanganate, and wash in alcohol; or, place the stained sections in 33% solution of iron sulfate for 10 seconds, or, in 10% solution of iron chlorid. 7. For epithelia. Stain sections for 10 minutes in neutral aqueous 1% solution of water blue; wash, and stain for 10 minutes in 1% solution of orcein. Or, overstain sections of alcohol material in polychrome methylene-blue and differentiate in Unna's glycerin-ether mixture (Grübler); or, in a mixture of alcohol 10 parts, xylol 15 parts, anilin 25 parts, and transfer to xylol; or, in a mixture of xylol 30 parts, alcohol 20 parts, then transfer to xylol and then to anilin containing alum to saturation (agitated and filtered before using). 8. For plasma-cells and mast-cells. Apply the methods for epithelia. For the demonstration of bacteria in epithelia see the methods for staining microorganisms. 9. For overcoming the decoloration of bacteria in the process of dehydrating in alcohol. Transfer the section from the decolorizing fluid to the slide, remove as much as possible of the water by means of filter-paper, and then heat the slide over flame until the section is dry; when cold mount in balsam. **Unna-Tänzer Stain.** See *Tänzer's Orcein*. **Van Beneden-Neyt Method** for the nuclear spindle and astrospheres of the ova of ascaris: Fix with acetic-acid alcohol and stain with malachite green prepared by dissolving a little of the dye in glycerol diluted with 2 volumes of water. **Van Ermenghem's Method** for the flagella of bacteria: Fix the film for a half-hour at room-temperature or for 5 minutes at 60° C., in a mixture of one part of 2% osmic acid, 2 parts of 20% tannic acid, and 5 drops of glacial acetic acid. Wash in water, then in alcohol, and treat with 0.5% silver nitrate solution for a few seconds. Transfer into a mixture of potassium acetate, 10 gm., tannin, 3 gm., gallic acid, 5 gm., distilled water, 350 c.c., and after a few seconds place again in the silver solution, until this begins to blacken. **Van Gieson's Method** for amyloid substance. See *Table of Stains*. Result: amyloid, rose to brown-red. **Vedeler's Method** for the "protozoon" of lipoma: Fix small cubes of the tissue in a 5% solution of mercuric chlorid; extract the fat with ether (frequently renewed for several weeks); harden in alcohol; stain with hematoxylin and eosin; embed in paraffin. Result: lying in the empty fat-capsules are oval vacuolated forms, resembling nuclei of endothelial cells undergoing hyaline degeneration, and dark violet circular bodies from 7 μ to 16 μ in size, with a blue-black limiting membrane and a nucleolated nucleus. **Vialleton's Method** for the blastoderm of the chick, before the appearance of the primitive streak: Open the egg in salt solution, cut the blastoderm from the yolk and put it on a slide; treat it with 1% silver nitrate solution, wash, and put into 70% alcohol for from 6 to 12 hours, in the dark. Stain with borax-carmin and mount in balsam. **Vincenzi's Method** for chromophilic granules: Tease fresh gray tissue of the brain or spinal cord in normal salt solution, place a drop of the emulsion on a slide, and stain with methylene-blue. Cf. *Turner's Method*. **Violet B**, a preparation of methyl-violet used in solution of 1 gm. in 300 c.c. of 0.5% salt solution for staining fresh tissues. It is a specific stain for the elements of the vascular system. Potassium acetate may be used as a mounting medium. **Violet of Lauth.** A name for thionin. **Vogel's Method** for the study of the origin and development of the connective tissue replacing the fibrinous exudate after acute pneumonia: Stain the sections for 24 hours in Tänzer's orcein, wash in water and differentiate in acid alcohol; wash, and stain for 15 minutes in Löffler's methylene-blue; bleach for a few minutes in 70% alcohol. **Von Rath's Mixture** for fixing tissues. 1. Cold saturated solution of picric acid 350 c.c., osmic acid 0.25 gm., and after several hours add 1 c.c. of acetic acid. Fixing requires from 15 minutes up to 48 hours, according to the size of the object. Transfer from the fixing fluid to 75% alcohol. 2. Mix 100 c.c. each of saturated aqueous solutions of picric acid and mercuric chlorid; add 20 c.c. of 2% osmic acid. These mixtures are recommended for fixing mitotic figures. 3. Cold saturated solution of picric acid 1 part, hot saturated solution of sublimate 1 part, and glacial acetic acid 1%. Fix in this mixture for several hours and transfer to alcohol. **Wager's Method** for staining the yeast plant: Fix for 12 hours in sublimate or for 24 hours in 1:2:300 iodin potassium iodid solution; wash in water, in 30%, 70%, and in methyl-alcohol. Place a drop containing yeast cells on a slide, let the alcohol evaporate and add a drop of water. When the cells settle, drain and dry by evaporation. Add another drop of water and stain with fuchsin and methyl-green. **Waldeyer's Method** for the fixing and decalcification of bone: Fix the fresh object in chromic acid (1:600); decalcify in a mixture of chromic acid (1:200) 100 c.c. and nitric acid 2 c.c. Wash thoroughly and harden in alcohol. **Washburn's Medium** for preserving fresh-water sponges and other museum specimens: Mix 2 volumes of pure glycerin and 1 volume of 3% formalin. This mixture is valuable because it does not extract color and permanently retains its transparency. **Water Blue**, an acid dye resembling methyl blue and used in a concentrated aqueous solution, by Mann in conjunction with eosin for staining ganglion-cells; by Mitrophanow as a double stain with safranin. Stain chromosmium tissue first in water-blue, for from 12 to 24 hours, then in safranin for from 4 to 5 hours. **Weigert's Method.** 1. For neuroglia: Fix for 8 days in the following mixture: dissolve 2.5 gm. chrome alum in 100 c.c. water, by heat, and while hot add 5 parts each of acetic acid and pulverized copper acetate, when cold 10 parts of formalin. Embed in celloidin. Treat the sections for 10 minutes with 0.3% solution of potassium permanganate, wash in water and reduce in the following: 5 parts each of chromogen and formic acid in 100 parts of water, to which after filtering add 10 parts of a 10% solution of sodium sulfite. After 3 hours transfer to 5% chromogen and after 24 hours stain in the following: saturate hot 75% alcohol with methyl violot, decant when cold and to each 100 c.c. add 5 c.c. of 5% aqueous solution of oxalic acid; differentiate in a saturated solution of iodin in 5% solution of potassium iodid; decolor in a mixture of equal volumes of anilin and xylol, wash in xylol and mount in balsam. 2. For elastin, see *Weigert's Resorcin-fuchsin*. **Weigert's Picrofuchsin.** Warm saturated picric acid solution, 150 c.c., saturated acid fuchsin solution, 3 c.c. **Weigert's Resorcin-fuchsin.** Dissolve 1 gm. of basic fuchsin and 2 gm. of resorcin in 200 c.c. water; heat to the boiling-point and add 25 c.c. of liquor ferri sesquichlorati, P. G., and boil for from 2 to 5 minutes, stirring meanwhile. Filter when cool, restore the precipitate on the filter to the capsule, add 200 c.c. of 95% alcohol, and boil. When cold, filter, bring the filtrate up to 200 c.c. with alcohol and add 4 c.c. of hydrochloric acid. Stain sections for from 20 minutes to an hour and wash in alcohol. (Avoid essential oils.) This is a specific stain for elastin. The elastic fibers are dark blue on a light ground. Nuclei may be afterstained in carmin. **Welcke's Method** for flagella: Prepare a film from

an aqueous suspension of a 24-hour culture of bacteria; dry in air, fix in flame, and treat with a mordant for 20 minutes; wash, and treat with ammoniated solution of silver oxid heated until it steams; wash, and treat for a few seconds with 1% mercuric chlorid solution; wash, and treat with the silver solution until the film is light brown; wash, and develop for a few seconds in methyl alcohol. **v. Wellheim's Stain.** Mordant the sections for from 6 to 11 hours in a very dilute solution of ferric chlorid in 50% alcohol, wash in 50% alcohol, and stain for several hours in a weak solution of carminic acid in 50% alcohol. **Whitney's Fluid** for fixing blood for differential staining: This is a modification of Zenker's fluid, in which nitric acid is substituted for acetic acid. **Willcox's Method** for making permanent mounts of amebas: Put a drop of water containing amebas on a cover-glass and carefully absorb the excess of water with filter-paper. Fix with a drop of picric alcohol, wash with 50% alcohol, and dehydrate with absolute amyl alcohol. Attach to the cover-glass by Overton's method, and stain. In mounting, if supports are required, use strips of paper soaked in xylol. **Willebrand's Stain** for double staining the blood: Mix 25 c.c. each of concentrated aqueous solution of methylene-blue and 0.5% alcoholic solution of eosin and add from 10 to 15 drops of 1% acetic acid. **Winternitz's Method** for tubercle bacilli: Stain films or sections in 2% solution of fuchsin in anilin water. Decolorize in 50% alcoholic solution of fluorescein to a light rose color. Counterstain in methylene-blue. **Wolkowitsch's Method.** *a.* For bacilli of rhinoscleroma in sections: Stain for from 24 to 48 hours in anilin-water gentian-violet; wash, and treat for 3 or 4 minutes with iodin-potassium iodid solution or for a few seconds with aqueous-alcoholic solution of picric acid. Dehydrate in alcohol and clear in clove oil. The capsules stain best in sections of alcohol material. *b.* For cover-glass films of cultures of the bacilli of rhinoscleroma: Dry and treat for a few seconds with acetic acid; dry and stain one minute in strong anilin-gentian-violet; rinse and stain for a few seconds in 1 or 2% eosin solution; transfer to 60% alcohol; wash in water; dry and mount in balsam. **Woodworth's Method** for graphic reconstruction of embryos: Draw an axial line the length of the object, multiply by the magnification. With a micrometer take the greatest diameter of each section and plot them down transversely to the axial line, at distances equivalent to the thickness of the section multiplied by the magnification. Connect the extremities of these diameters and thus obtain an outline of the object. Measure on each section the nearest and farthest boundary of the organs to be represented, plot them on the transverse lines and connect the points, from section to section, and thus obtain the outline of the organs. **Wright's Stain** for blood. Preparation of the neutral stain. Solution A.—Make a 0.5% aqueous solution of the $NaHCO_3$, being careful to bring all of the salt into solution before going on to the next step. Then add 1% of methylene-blue (Grübler's methylene-blue, "Bx," "Koch," or "Ehrlich's Rectified"). Steam this in an Arnold sterilizer for 1 hour after steam is up. Cool. Solution B.—0.1% aqueous solution of eosin (Grübler, "yellowish, soluble in water"). Add solution B to solution A until the mixture becomes purple, a metallic scum forms on the surface, and a finely granular black precipitate appears in suspension. (About 500 c.c. of solution B to 100 c.c. of solution A.) Filter off the precipitate. Do not wash it. Dry. Preparation of the staining solution. Make a saturated solution of the precipitate in pure methyl alcohol (0.3 gm. in 100 c.c. methyl alcohol). Filter, and add an additional 25% of the original volume of methyl alcohol used. This prevents precipitation of the stain on the film. Cover the film with the stain for 1 minute. Without pouring off the stain, add water drop by drop until the mixture is translucent at the edges, and a yellowish metallic scum forms on the surface. Stain in this diluted stain for 2 to 3 minutes. Wash in distilled water until the film becomes pink. Dry between filter-papers. Staining reactions: Lymphocytes, nuclei dark purplish-blue; cytoplasm, robin's egg blue. Large mononuclears, nuclei blue; cytoplasm pale blue. Polymorphonuclear neutrophils, nuclei blue; granules reddish-lilac. Eosinophils, nuclei blue; granules blue. Mastzellen, nuclei blue to purplish; granules dark blue or purple. Myelocytes, nuclei dark blue or lilac; granules dark or reddish-lilac. Blood-platelets stain blue or purplish. Malarial parasites, nuclei, chromatin portion, lilac-red to a black; cytoplasm blue. **Würdemann's Method** for embedding the eyeball: Harden in 5% formalin, freeze in ice and salt, divide, and place for 2 days in glycerol and water. Dissolve 1 oz. of gelatin in 8 oz. of water, add the shells and whites of 2 eggs, filter, and add an equal volume of glycerol to the filtrate. Embed the eye in this mass and harden by exposure to the vapor of formalin. **Yamagiwa's Method** for neuroglia: Fix in Müller's fluid and without washing harden for a week in absolute alcohol renewed daily. Embed in celloidin and stain the sections for 12 hours in a saturated alcoholic solution of eosin, for from 4 to 5 hours in a saturated aqueous solution of anilin blue and differentiate in alkali-alcohol (see *Ströbe's Method*); distilled water, dilute alcohol, absolute alcohol, origanum oil, balsam. Axis-cylinders deep blue, connective-tissue fibers pale blue to green, glia cells black-violet, glia fibers red. **Yasuda's Medium** for the culture of infusoria: Mix 1 gm. of meat extract, 20 gm. of cane-sugar, 250 c.c. of cooked concentrated infusion of *Porphyra vulgaris*, and 729 c.c. of distilled water; sterilize, and introduce the infusoria by means of a capillary tube. A pure culture may be obtained by examining the tube under the microscrope and emptying only that part of it containing the desired species. **Yersin's Medium** for the culture of plague bacilli. A mixture of a 2% alkalized solution of peptone and a 2% solution of gelatin. **Zachariadès' Method** for the demonstration of the ramifying bone-cells and their membrane: Decalcify by picric acid; wash out all the acid. Treat the sections for a few seconds with 1% osmic acid; stain for 24 hours in weak aqueous solution of quinolein blue or for a few minutes in saturated solution of safranin; treat with a drop of 40% solution of caustic potash warmed over a flame until they flatten. After washing in water the sections may be mounted in glycerol. **Zacharias' Fluid.** Glacial acetic acid 1 part, absolute alcohol 4 parts, osmic acid a few drops. An excellent medium for fixing kinetic nuclei and the central nervous tissue. Wash in alcohol. **Zalewski's Method.** 1. Harden the tissue for 24 hours each in 65% alcohol and 95% alcohol, adding to the latter a few drops of a strong solution of ammonium sulfate and shaking it from time to time; complete the hardening in absolute alcohol with a few drops of ammonium sulfate. The alcohol must fill the vessel to the brim; cork stoppers must not be used. 2. Harden the tissue for 24 hours in 65% alcohol; transfer into 1% solution of potassium ferrocyanid in 95% alcohol; after 2 or 3 days transfer to a 1% solution of potassium ferrocyanid in 65% alcohol; place in 95% alcohol containing 1% or 2% of hydrochloric acid. After-

staining in carmin is successful. Steel instruments or any apparatus containing iron must be avoided. Potassium ferricyanid may be used instead of potassium ferrocyanid and will give a blue stain. **Zenker's Fluid.** Dissolve 25 gm. potassium bichromate, 10 gm. sodium sulfate, and 50 gm. mercuric chlorid in 1000 c.c. warm distilled water. At the time of using add to each 20 c.c. 1 c.c. of glacial acetic acid. Fix the tissue from 24 to 48 hours, wash for 24 hours in running water. Harden in the dark in the ascending series of alcohols. For the removal of the precipitate add to the 90% alcohol enough tincture of iodin to impart the color of port-wine and repeat the addition daily until the color does not fade. Preserve in 90% alcohol. **Ziemann's Stain** for blood. Original modification: Solution A.—1% aqueous solution of methylene-blue med. puriss. (Höchst), at least 24 hours old, and containing no undissolved particles. Solution B.—0.1% aqueous solution of eosin—freshly prepared from an aqueous 1% stock solution of eosin. To determine the proportion of the two solutions, and the length of time which gives the best results, make mixtures of solutions A and B in proportions ranging from 1 : 4 to 1 : 7. For each such mixture prepare three watch-crystals each containing a blood-film placed face down. Pour a portion of the mixture into each of the three watch-crystals, and remove one film every 10 minutes. Ziemann obtained the best results from mixtures having the proportion of 1 : 5 or 1 : 6, in which he stained for from 20 to 40 minutes. It is important to measure out the solutions with the greatest possible accuracy. According to Ziemann, the finding of the correct proportion between the two solutions and the proper staining period requires about 1 hour. Wash the films in distilled water. They may be decolorized in a 0.5% or 1% solution of acetic acid or HCl; or in a 1% aqueous solution of methylene-blue. Subsequent modification: Solution A.—Methylene-blue med. puriss. (Höchst), 1 gm.; borax, 2 to 4 gm. (usually, 2.5 gm.); distilled water, 100 c.c. Solution B.—0.1% aqueous solution of eosin ("A G" Höchst). To make up the stain mix: solution A, 1 part; solution B, 4 parts. Stain blood-films for 5 minutes; 8 to 10 minutes stains the chromatin almost black. Fix films either by passing through the flame or in absolute alcohol for 20 minutes to 30 minutes. **Zimmerman's Method** for the demonstration of the canaliculi of bone: Treat thin ground sections with xylol, dry, and boil for several minutes in saturated alcoholic solution of fuchsin; cover both sides with the stain and dry by evaporation; scrape off the superfluous dye, moisten with xylol, file, and mount in xylol balsam. **Zollikofer's Method** for the study of leukocytes: Prepare 0.05% aqueous solutions of eosin and methylene-blue and add to each 1% of formalin. Filter and keep in the dark. For staining mix equal parts of the solutions and with a dark glass pipet fill a Thoma-Zeiss pipet, containing blood up to 0.5, to 1.20, and after 5 minutes fill the counting chamber with the stained blood. By this method crushing of the cells is avoided and the erythrocytes are decolored.

Stammering. (See Illus. Dict.) **S.-bladder.** See under *Bladder*.

Stamper (*stamp'-ur*). A name for one affected with locomotor ataxia, from the stamping gait incident to it.

Stannate (*stan'-āt*). A salt of stannic acid.

Stannic. (See Illus. Dict.) 2. Containing tin as a tetrad radicle.

Stanniferous (*stan-if'-ur-us*) [*stannum*, tin; *ferre*, to bear]. Yielding or containing tin.

Stannite (*stan-īt*). Sulfid of tin, bell-metal.

Stannous (*stan'-us*). Containing tin as a bivalent element.

Stapedial (*sta-pē'-de-al*) [*stapes*, a stirrup]. 1. Shaped like a stirrup. 2. Relating to the stapes.

Staphyloangina (*staf-il-o-an-jī'-nah*). Walsh's term for pseudomembranous inflammations of the throat due to infection by staphylococci.

Staphylococcemia (*staf-il-o-kok-sē'-me-ah*) [*Staphylococcus*; αἷμα, blood]. A morbid condition due to the presence of staphylococci in the blood.

Staphylococcia (*staf-il-o-kok'-se-ah*). General infection with staphylococci.

Staphylocosis (*staf-il-o-kō'-sis*). Infection by staphylococci.

Staphylohemia (*staf-il-o-hē'-me-ah*) [*Staphylococcus*, αἷμα, blood]. See *Staphylococcemia*.

Staphylolysin (*staf-il-ol'-is-in*) [*Staphylococcus*; λύειν, to loose]. Neisser and Wechsberg's name for a hemolysin produced by *Staphylococcus aureus* and *S. alba*.

Staphyloma. (See Illus. Dict.) **S. æquatoriale, S. æquatoris, S., Equatorial**, staphyloma of the sclera in the equatorial region. **S., Scarpa's**, posterior staphyloma; staphyloma of the posterior segment of the sclera. **S. uveale.** See *Iridoncosis* (Illus. Dict.).

Staphylomycosis (*staf-il-o-mi-kō'-sis*) [*Staphylococcus*; μύκης, fungus]. A morbid condition due to staphylococci.

Staphyloplasmin (*staf-il-o-plaz'-min*) [*Staphylococcus*; πλάσσειν, to form]. Staphylococcus-toxin.

Staphylostreptococcia (*staf-il-o-strep-to-kok'-se-ah*). Infection by both staphylococci and streptococci.

Staphylotoxin (*staf-il-o-toks'-in*). See *Staphylolysin*.

Staphysina (*staf-is-ī'-nah*) [σταφίς, a dried grape]. A product obtained by Thompson from the seeds of *Delphinium staphisagria*, L.

Star. (See Illus. Dict.) **S.-blind** [AS. *Staer-blind*], purblind, winking. **S.s, Winslow's**, capillary whorls which form the beginning of the vorticose veins of the choroid. Syn., *Stellæ vasculosæ winslowii*.

Starch. (See Illus. Dict.) **S., Animal.** (See Illus. Dict.) 2. See *Bodies, Amylaceous*. **S., Iodized**, iodid of starch, a dark powder containing 2% of iodin; a disinfectant and internal and external antiseptic. Dose, 3–10 gr. (0.2–0.65 gm.). **S., Soluble**, a white powder obtained by heating starch and glycerin and adding strong alcohol during the cooling; it is used as an emulsifier. Syn., *Amylodextrin*.

Starter (*start'-ur*) [ME. *starten*, to start]. A pure culture of bacteria employed to start some particular fermentation, as in the ripening of cream.

Stasimetry (*stas-im'-et-re*) [στάσις, a standing; μέτρον, a measure]. Bitot's term for the estimation of the consistency of soft organic bodies.

Stasimorphy (*stas'-e-mor-fe*) [στάσις, a standing; μορφή, form]. Deviation from the normal from arrest of development.

Stasophobia (*stas-o-fō'-be-ah*) [στάσις, standing; φόβος, fear]. Fear of standing upright.

Statice (*stat'-is-e*) [στατική, an astringent herb]. A genus of plants of the order *Plumbaginaceæ*. **S. antarctica** and **S. brasiliensis**, Bois., baycuru or guaycuru, South American species, are used to produce uterine contractions. **S. gmelini**, W., a species indigenous to southern Russia, is used as a gargle and in diarrhea. **S. limonium**, L., grows upon the coasts of Europe and North America; the plant seed and root is used as an astringent.

Statocyst (*stat'-o-sist*) [στατός, standing; κύστις, cyst]. One of the vestibular sacs of the labyrinth which is supposed to act as the nervous mechanism on which static equilibrium depends.

Status. (See Illus. Dict.) **S. cribrosus**, a scarcely macroscopic sieve-like condition of the brain or nerve-substance due to absorption of minute vessels, observed

in autopsies. Fr. *Etat criblé*. **S. gastricus**, gastritis. **S. lymphaticus**, Paltauf's name for a condition of unstable equilibrium, coma, convulsions, and vomiting accompanying hyperplasia of the persisting thymus. Syn., *Lymphotoxemia ; Lymphatism ; Status thymicus*. **S. thymicus.** See *S. lymphaticus*. **S. verminosus.** See *Helminthiasis* (Illus. Dict.).

Staxis (*staks'-is*) [στάζειν, to drop]. See *Stillicidium* (Illus. Dict.).

Steatitis (*ste-at-i'-tis*) [στέαρ, fat]. Inflammation of fatty tissue.

Steatoma. (See Illus. Dict.) **S., Müller's,** a lipofibroma.

Steatorrhea. (See Illus. Dict.) 2. Fatty stools.

Stechiometry, Stœchiometry, Stoichiometry (*stek-e-om'-et-re, ste-ke-om'-et-re, stoi-ke-om'-et-re*) [στοιχεῖον, a first principle ; μέτρον, measure]. The estimation of the proportions in which elements combine to form compounds.

Steep. A name for rennet.

Stegomyia (*steg-o-mi'-e-ah*) [στεγανός, covered ; μυία, a fly]. A genus of *Culicidæ* founded by Theobald, represented in most tropical and subtropical countries ; one species occurring in the warmer parts of southern Europe. The adults are usually very vicious biters, both by day and night. According to the experiments of the American Commission on Yellow Fever, *S. fasciata* is the agent which spreads the germs of this disease. **S. fasciata,** Fabricius (1805), a very distinct and common species, easily distinguished by the thoracic ornamentation and by the last hind tarsal joint being white. It is almost cosmopolitan, but does not appear to occur in cold regions. It is one of the most troublesome and annoying mosquitos ; the bite is very irritating. Both male and female bite. It is the intermediate host of the hematozoon *Filaria Bancroftii*, which also occurs in *Culex fatigans*, Widemann, and in *Anopheles*. The yellow fever parasite is disseminated by this gnat. (Theobald.) Syn., *Brindled* or *Tiger mosquito*.

Stella. (See Illus. Dict.) **Stellæ vasculosæ winslowii.** See *Stars, Winslow's*.

Stelochitis (*stel-o-ki'-tis*). See *Osteocolla* (Illus. Dict.).

Stemma. (See Illus. Dict.) 2. One of certain tablets at the University of Padua, erected in the cloisters or in the hall or "Aula Magna" to commemorate the residence in Padua of many doctors, professors and students. They are sometimes armorial and sometimes symbolic.

Stenion (*sten'-e-on*) [στενός, narrow]. A craniometrical point at the extremity of the smallest transverse diameter in the temporal fossa.

Stenocephaly (*sten-o-sef'-al-e*) [στενός, narrow; κεφαλή, head]. A condition marked by abnormal shortness of one of the diameters of the head.

Stenochasmus (*sten-o-kas'-mus*) [στενός, narrow ; χάσμα, a chasm]. Lissauer's term applied to a skull in which a line drawn from the punctum alæ vomeris to the punctum spinæ nasalis posterioris and to the punctum foraminis magni anterius intersects with an angle of 74° to 94°.

Stenodont (*sten'-o-dont*) [στενός, narrow; ὀδόυς, tooth]. Provided with narrow teeth.

Stenonian, Stenonine (*sten-o'-ne-an, sten'-o-nēn*). Named for Nicolas Stenon, a Danish anatomist, 1638–1686.

Stenopaic (*sten-o-pa'-ik*). See *Stenopeic* (Illus. Dict.).

Stenosine (*sten'-o-sēn*). $AsCH_3O_3Na_22H_2O$, di-sodic methylarsinate, discovered by Baeyer; said to be a nontoxic arsenical salt. Dose, 1 cg. 1 to 5 times daily.

Stenosis. (See Illus. Dict.) See *Signs, Duroziez's, Aufrecht's, König's Symptom-complex*. **S., Dittrich's,** stenosis of the conus arteriosus.

Stentorophonous (*sten-tor-of'-on-us*) [Στέντωρ, a loud-voiced Greek in the Trojan war ; φωνή, sound]. Having a loud voice.

Stercorary (*stur'-ko-re*) [*stercus*, dung]. Fecal.

Stereoagnosis (*ster-e-o-ag-no'-sis*). See *Astereognosis*.

Stereognosis (*ster-e-og-no'-sis*) [στερεός, solid ; γνώσις, knowledge]. The faculty of recognizing the nature and use of objects by contact and handling them. Cf. *Astereoagnosis*.

Stereograph (*ster'-e-o-graf*) [στερεός, solid ; γράφειν, to write]. Of Broca, an instrument used to make outline drawings of parts of the cranium.

Stereometer (*ster-e-om'-et-ur*) [στερεός, solid ; μέτρον, measure]. An apparatus for the determination of the specific gravity of liquids, porous substances, powders, etc., as well as solids.

Stereometry (*ster-e-om'-et-re*) [στερέος, solid ; μέτρον, measure]. 1. The determination of the specific gravity of substances. 2. The measurement of volume.

Stereoradioscopy. See *Radiostereoscopy*.

Stereostroboscope (*ster-e-o-stro'-bo-skōp*) [στερέος, solid ; στρόβος, a twisting ; σκοπεῖν, to view]. An apparatus for the experimental study of points moving in three dimensions.

Stereotics (*ster-e-ot'-iks*). Lesions or deformities affecting the harder portions of the body.

Stereotypy (*ster-e-ot'-o-pe*) [στερέος, solid ; τύπος, a type]. Morbid persistence of a volitional impulse when once started.

Steresol (*ster'-e-sol*). A liquid said to be an alcoholic solution of gum lac, benzoin, tolu balsam, phenol, oil of ginger, and saccharin. It is used in diphtheria and skin-diseases.

Steriform (*ster'-e-form*). An almost tasteless and odorless powder consisting essentially of sugar of milk and 5% of formic aldehyd. **S. (Chlorid),** a mixture of formic aldehyd, 5 parts; ammonium chlorid, 10 parts; pepsin, 20 parts ; and milk-sugar, 65 parts. **S. (Iodid),** formic aldehyd, 5 parts ; ammonium iodid, 10 parts ; pepsin, 20 parts ; and milk-sugar, 65 parts.

Sterility, Facultative. (See Illus. Dict.) 2. A term suggested by Koch, of the University of Bonn, to designate a procedure which he has devised for preventing the possibility of conception for any length of time, without permanently depriving the subject of procreative power. He forms two folds of mucous membrane, one at the anterior, the other at the posterior lip of the external orifice of the uterus. These act as valves permitting the outflow of the menstrual fluid and preventing the entrance of the spermatozoa. By removing the folds fertility may be restored. 3. Ludwig Pineus' term for sterility in women induced artificially by destroying the capacity of the endometrium as an organ of nidation by means of uterine atmocausis.

Sterisol (*ster'-is-ol*). A preparation containing sugar of milk, 2.98 parts ; sodium chlorid, 0.672 parts ; potassium phosphate, 0.322 parts ; formic aldehyd, 0.520 parts ; water, 95.506 parts. Used as antiseptic in infectious diseases.

Sternochondroscapularis (*stur-no-kon-dro-skap-u-la'-ris*) [στέρνον, sternum ; χόνδρος, cartilage ; *scapula*]. An inconstant muscle arising from the sternum and the first costal cartilage and extending to the upper border of the scapula.

Sternoclidal (*stur-no-kli'-dal*). Same as *Sternoclavicular* (Illus. Dict.).

Sternocleidomastoid. Relating to the sternum, clavicle, and mastoid process.

Sternocoracoid (*stur-no-kor'-ak-oid*). Relating to the sternum and the coracoid.

Sternodymia (*stur-no-dim'-e-ah*) [στέρνον, sternum ;

δύειν, to enter]. A form of somatodymia in which the union is in the sternums.

Sternodynia (*stur-no-din′-e-ah*) [στέρνον, sternum; ὀδύνη, pain]. Sternalgia, pain in the sternum.

Sternomastoid (*stur-no-mas′-toid*). Relating to the sternum and the mastoid process of the temporal bone.

Sternoomphalodymia (*stur-no-om-fal-o-dim′-e-ah*) [στέρνον, sternum; ὀμφαλός, a navel; δύειν, to enter]. A form of somatodymia in which the union is in both the sternal and umbilical regions.

Sternopericardiac (*stur-no-per-e-kar′-de-ak*). Relating to the sternum and the pericardium.

Sternotrypesis (*stur-no-tri-pe′-sis*) [στέρνον, sternum; τρύπησις, a boring]. Perforation of the sternum.

Sternoxiphoid (*stur-no-zi′-foid*). Relating to or connecting the sternum and the xiphoid process.

Sterochemistry (*ste-ro-kem′-is-tre*). See *Stereochemistry* (Illus. Dict.).

Stethemia, Stethæmia (*steth-e′-me-ah*) [στῆθος, chest; αἷμα, blood]. An accumulation of blood in the pulmonary vessels.

Stethocyrtograph. See *Stethokyrtograph* (Illus. Dict.).

Stethomitis. See *Stethomyitis* (Illus. Dict.).

Stethonoscope (*steth-on′-o-skōp*) [στῆθος, chest; σκοπεῖν, to view]. An apparatus for use in auscultation which may be attached to a binaural stethoscope.

Stethoparalysis (*steth-o-par-al′-is-is*). Paralysis of the muscles of the chest.

Stethophonometry (*steth-o-fo-nom′-et-re*) [στῆθος, chest; φωνή, sound; μέτρον, measure]. The determination of the intensity of the acoustic phenomena associated with the lungs and heart.

Stethoscope. (See Illus. Dict.) **S., Differential,** one determining the time rather than the quality of the sounds heard, so that murmurs at two localities may be compared.

Stibiated (*stib′-e-ā-ted*) [*stibium*, antimony]. Containing antimony.

Stibiation (*stib-e-a′-shun*). Excessive use of antimonials.

Stibine (*stib′-ēn*). Antimony trisulfid.

Stibogram (*stib′-o-gram*) [στίβος, a beaten path; γράμμα, a writing]. A record of footsteps.

Stichochrome (*stik′-o-krōm*) [στίχος, a row; χρῶμα, color]. Applied by Nissl to a somatochrome nerve-cell in which the chromophilic substance is arranged in strias running in the same direction and usually parallel with the contour of the cell-body, partly also with the surface of the nucleus. (Barker.)

Stigma. (See Illus. Dict.) **Stigmata, Cohn's,** minute gaps in the interalveolar walls of the normal lung. **S., Giuffrida-Rugieri's, of Degeneration,** the absence or incompleteness of the glenoid fossa. **S. of Graafian Follicle,** the point where the bloodvessels of the walls are absent and where it finally ruptures. **Stigmata, Malpighi's,** the orifices of the capillary veins that join the branches of the splenic vein at right angles. **Stigmata ovariorum,** small cicatrices seen in the ovaries after the escape of the ova.

Stigmonose. (See Illus. Dict.) 2. A disease of carnation and other pinks due to punctures made by aphides and thrips, or by red spiders.

Stilling's Fleece. The meshwork of fibers formed around the dentate nucleus of the cerebellum. **S.'s Scissors of the Brain,** the supposed resemblance to the outline of a pair of scissors seen in a horizontal section of the brain through the thalamus, nucleus ruber, and the nucleus dentatus cerebelli.

Stimatosis. See *Stymatosis* (Illus. Dict.).

Stimolo (*stim′-o-lo*). Term used by Rasori (1762–1837) of Milan in his theory of disease, for the sthenic diathesis of Brown, whose theories he plagiarized. Cf. *Contrastimolo*.

Stimulator (*stim′-u-la-tor*) [*stimulare*, to stimulate]. A stimulating drug or agent.

Stimulin (*stim′-u-lin*). Metchnikoff's name for a substance supposed to stimulate the phagocytes to destroy germs.

Stimulus. (See Illus. Dict.) **S.-difference,** the difference in activity between two stimuli. **S., Subminimal,** one too weak to produce any obvious effect.

Stipa (*sti′-pah*) [στύπη, tow]. A genus of grasses. **S. vaseyi,** Scribner, sleepy grass, a species found in New Mexico in the Sacramento Mountains, the ingestion of which causes in horses a stupor which endures for several days.

Stipate (*sti′-pāt*) [*stipare*, to press together]. Packed, crowded.

Stipatio (*sti-pa′-she-o*) [L.]. An aggregation forming an obstruction. **S. telæ cellulosæ infantum,** sclerema neonatorum.

Stitch. (See Illus. Dict.) **S., Sclerocorneal, S. Kalt,** a peculiar stitch devised by Kalt to secure rapid union of the wound and to prevent prolapse of the iris after simple extraction of cataract. **S., Marcy's Cobbler.** See *Suture, Cobbler's* (Illus. Dict.). **S. in the Side,** intercostal neuralgia.

Stoichiometry. See *Stechiometry* (Illus. Dict.).

Stolonization (*sto-lon-iz-a′-shun*) [*stolo*, a shoot]. The process of transforming, in certain organisms, one organ into another through external influences, such as gravitation, contact, light, etc.

Stomach. (See Illus. Dict.) **S.-bed,** the shelf-like support upon which that organ rests, formed by the portion of the pancreas situated to the left of the median line. This is quite thick anteroposteriorly and its upper surface (anterior surface of His) makes a large portion of the shelf. **S.-reefing.** Syn. of *Gastrorrhaphy*. **S.-worm Disease,** a disease of cattle due to species of *Strongylus—S. contortus, S. ostertagi, S. Curticei, S. Parkeri, S. retortæformis, S. filicollis, S. oncophorus*.

Stomachic. (See Illus. Dict). One of a class of substances which have an influence upon the work of the digestive organs. According to Weiss, some act by substitution in that they replace the natural juices (hydrochloric acid, pepsin, and other ferments); others arrest abnormal fermentation processes (salicylic acid, menthol, creasote); others produce hyperemia and in that way influence the digestive function (cloves, cinnamon, peppermint); others stimulate the lymphoid tissue, producing lymphofluxion, lymphostasis, and leukocytosis (the bitters and the proteids).

Stomatol (*sto′-mat-ol*). An antiseptic compound said to consist of terpineol, 4 parts; soap, 2 parts; alcohol, 45 parts; aromatics, 2 parts; glycerin, 5 parts; water, 42 parts.

Stomatomy (*sto-mat′-o-me*) [στόμα, mouth; τομή, a cutting]. Incision of the os uteri.

Stomatosyrinx (*sto-mat-o-sir′-ingks*) [στόμα, mouth; σῦριγξ, a tube]. The eustachian tube.

Stomorrhagia. See *Stomatorrhagia* (Illus. Dict.).

Stomoxys (*sto-moks′-is*). See *Parasites, Table of* (Illus. Dict.).

Stool. (See Illus. Dict.) **S.s, Acholic.** (*a*) Light gray or clay-colored stools having the consistency of putty which follow stoppage of the flow of bile into the duodenum. The color is due to the presence of the normal urobilin. The stools show, under the microscope, an abnormal amount of fat. This form of acholic stool is accompanied by icterus and choluria.

(*b*) Stools of the same color may occur in the absence of interference with the flow of bile, but when the stool contains an excessively large amount of fat and fatty acids. **S.s, Lead-pencil,** fecal discharges of a very small caliber. They occur independent of any general nervousness or local intestinal spasm and cannot be regarded as evidence of stricture or stenosis of the colon. [Hemmeter.] **S.s, Schafkoth.** See *S.s, Sheep-dung.* **S.s, Sheep-dung,** the small round fecal masses (similar to the dung of sheep) due to atony of the intestines; this form of passage may occur in the so-called "starvation" or "hunger" evacuation which is found in cases of inanition, *e. g.*, after carcinomatous cachexia, when the intestine becomes very much contracted. [Hemmeter.] **S.-sieve of Boas,** an apparatus by means of which feces may be thoroughly and conveniently washed, so that undigested remains of food, bits of mucus, concretions, and parasites are readily brought to view and isolated.

Strabismus, Strabism. (See Illus. Dict.) **S., Hirschberg's Test for,** a rough estimate of the amount of strabismus is made by observing the position of the corneal reflection of a candle-flame held one foot in front of the eye to be tested, the examiner placing his own eye near the candle and looking just over it.

Strabometry (*stra-bom'-et-re*) [σταβός, squinting; μέτρον, measure]. The determination of the degree of ocular deviation in strabismus.

Strabotome (*stra'-bo-tōm*) [σταβός, crooked; τέμνειν, to cut]. A knife used in strabotomy.

Strace (*strās*) [*strain; race*]. A word suggested by H. J. Webber for those plants which are propagated vegetatively by buds, grafts, cuttings, suckers, runners, slips, bulbs, tubers, etc.

Strain. (See Illus. Dict.) 3. A subvariety of any domestic animal, often locally called breed.

Stratum. (See Illus. Dict.) **S. reticulatum, Arnold's,** the network formed by the fibers connecting the occipital lobe with the thalamus before they enter the latter. **S. bacillatum, S. bacillosum, S. bacillorum,** the bacillary layer, the layer of rods and cones of the retina. **S. choriocapillare.** See *Tunica Ruyschiana* (Illus. Dict.). **S. corticale.** See *Cortex* (2). **S. cutaneum,** the outer dermic layer of the tympanic membrane. **S. cylindrorum,** the bacillary layer of the retina. **S. episclerata,** the part of Tenon's capsule on the sclerotic coat. **S. epitrichiale.** See *Epitrichium* (Illus. Dict.). **S. gelatinosum,** the fourth layer in the olfactory bulb, composed of large ganglion-cells with branched processes. Syn., *Ganglion-cell layer.* **S. glomerulorum,** the layer of the olfactory lobe (the second from the ventral side) containing the olfactory glomerules. **S. granulosum,** a layer of minute cells or one of cells containing many granules. (1) See *External granular layer* under *Retina* (Illus. Dict.). (2) See *Formation, Granular.* (3) The layer of the olfactory lobe lying between the medullary ring and the stratum gelatinosum. (4) The layer of the epidermis covering the rete mucosum. (5) A histologic appearance in that portion of the dentin immediately underlying the enamel and cementum of a tooth. **S. griseum centrale.** See *Entocinerea* (Illus. Dict.). **S. griseum colliculi superioris.** See *Cappa* (Illus. Dict.). **S. lacunosum,** the inner portion of the fifth or outer layer of the hippocamp. **S. moleculare.** See *Layer, Molecular.* **S. mucosum.** See *Rete mucosum* (Illus. Dict.). **S. nerveum of Henle,** the layers of the retina exclusive of the rods and cones. Syn., *Brücke's tunica nervea.* **S. oriens,** the third layer, counting from within outward, of the hippocamp. **S. proligerum,** the discus proligerus and cumulus proligerus regarded as one. Syn., *Membrana cumuli.* **S. spinosum.** See *Prickle-layer* (Illus. Dict.). Consecutive hypertrophy of this layer constitutes acanthosis. **S. vasculosum.** See *Tunica vasculosa* (Illus. Dict.). **S. vasculosum cutis,** the subpapillary layer of the derma; the part of the corium immediately below the papillæ. **S. zonale,** the superficial portion of the fifth or outer layer of the hippocamp.

Streak. (See Illus. Dict.) **S.s, Knapp's Angioid,** pigment streaks appearing occasionally in the retina after hemorrhage. **S., Meningitic.** See *Tâche cérébrale* (Illus. Dict.).

Stream (*strēm*) [ME. *streem*]. To flow; applied to movement in protoplasm and in blood-corpuscles.

Streptoangina (*strep-to-an-ji'-nah*). A pseudomembranous deposit in the throat due to streptococci (J. E. Walsh). Cf. *Diphtheroid* (2).

Streptobacillus (*strep-to-bas-il'-us*). A bacillus forming twisted chains.

Streptococcal, Streptococcic, Streptococcous (*strep-to-kok'-al,-ik,-us*). Relating to or due to streptococci.

Streptococcemia (*strep-to-kok-se'-me-ah*) [*Streptococcus; αἷμα,* blood]. The presence of streptococci in the blood.

Streptococchemia (*strep-to-kok-ke'-me-ah*). See *Streptococcemia.*

Streptococcus. (See Illus. Dict.) **S.-curve,** the remitting temperature-curve in hectic fever, supposed to depend upon the streptococcus (Petruschky).

Streptocolysin (*strep-to-kol'-is-in*) [*Streptococcus; λύειν,* to loose]. A hemolysin produced in cultures of streptococci.

Streptocosis (*strep-to-ko'-sis*). Infection by streptococci.

Streptocyte (*strep'-to-sīt*) [στρεπτός, twisted; κύτος, cell]. A cell presenting a twisted appearance or occurring with others in twisted chains; a streptococcus.

Streptomycosis (*strep-to-mi-ko'-sis*) [*Streptococcus; μύκης,* fungus]. Infection with streptococci.

Streptopus (*strep'-to-pus*) [στρεπτός, twisted; ποῦς, foot]. Twisted stalk, a genus of liliaceous plants. **S. distortus,** Michx., indigenous to Europe and America, is used in infusion as a gargle.

Streptosepticemia (*strep-to-sep-tis-e'-me-ah*). Septicemia due to invasion of streptococci.

Streptothrical (*strep-to-thrik'-al*). Relating to or due to members of the genus *Streptothrix.*

Stria. (See Illus. Dict.) **S., Hensen's.** See *Engelmann's Middle Disc* (Illus. Dict.). **S., Lancisi's.** See *Lancisi, Nerves of* (Illus. Dict.). **Striæ longitudinales, Striæ longitudinales mediales.** See *Lancisi, Nerves of* (Illus. Dict.). **Striæ medullares.** See *S., Acoustic* (Illus. Dict.). **S. medullaris,** a band of white matter adjacent to the tænia thalami (Barker). **S. medullaris thalami,** an oblique furrow on the superior aspect of the thalamus. **Striæ musculares,** the transverse markings of striated muscle. **Striæ, Schreger's.** See *Lines, Schreger's* (Illus. Dict.). **S. terminalis.** See *Tænia semicircularis* (Illus. Dict.).

Striation. (See Illus. Dict.) **S., Tabbycat.** See under *Tabbycat* (Illus. Dict.).

Striatum. (See Illus. Dict.) **S. oriens.** See *Stratum oriens.*

Stridor. (See Illus. Dict.) **S., Laryngeal, Congenital.** See *Croaking, Respiratory* (in babies).

Stringent (*strin'-jent*) [*stringere,* to bind]. Binding.

Striocellular (*stri-o-sel'-u-lar*). Relating to or composed of striated muscle fiber and cells.

Stripe. (See Illus. Dict.) **S., Bergmann's,** the conductor sonorus, one of the striæ medullares often seen running obliquely forward and to the side. Ger.,

Klangstabe. **S., Gennari's.** See *Line, Gennari's* (Illus. Dict.). **S., Vicq d'Azyr's.** See *Layer, Baillarger's.*

Stroboscope (*stro-bo-skōp*) [στρόβος, a twisting; σκοπεῖν, to view]. An instrument by which a series of slightly different pictures presented rapidly in succession is made to appear as a continuous object in motion. **S., Direct,** one in which the figures and slits revolve in the same direction; a phænakistoscope. **S., Reverse,** one in which the figures and slits revolve in opposite directions; a dædalum or dedalum.

Strobostereoscope (*stro-bo-ster'-e-o-skōp*). See *Stereostroboscope.*

Stroma. (See Illus. Dict.) **S., Cancer,** the fibroustissue element of a cancer. **S., His',** the trabecular framework of the mammary gland. **S. of Rollet,** an insoluble, spongy network forming the structure of an erythrocyte, within the interstices of which is embedded a soluble, finely granular substance, the hemoglobin. [DaCosta.]

Strombodes jenneri (*strom-bo'-dēz jen'-ur-i*). A name proposed by Sjöbring for the microorganism of vaccinia.

Strontia (*stron'-she-ah*). Strontium oxid.

Strontium. (See Illus. Dict.) **S. Acetate,** $2Sr(C_2H_3O_2)_2 + H_2O$, a white, crystalline powder, soluble in water, used as an anthelmintic. Dose, ¼–¾ gr. (0.016–0.05 gm.). **S. Arsenite,** $Sr(AsO_3)_2 + 4H_2O$, a white powder soluble in water, used as an alterative and tonic in skin-diseases and malarial conditions. Dose, $\frac{1}{30}$–$\frac{1}{15}$ gr. (0.0022–0.0044 gm.). **S. and Caffein Sulfonate,** $(C_8H_9N_4O_2 . SO_3)_2Sr$, soluble in water, used as a diuretic. Syn., *Symphorol S.* **S. Glycerinophosphate,** a white powder, soluble in water, containing 26–27% of phosphoric acid. **S. Loretinate** (basic), Sr . I . O . $C_9H_4N . SO_3$, fine, bright needles, slightly soluble in water, decomposed at 300° C. **S. Loretinate** (normal), $Sr(I . OH . C_9H_4N . SO_3)_2 . H_2O$, orange-red, prismatic crystals, sparingly soluble in water. **S. Phosphate,** $Sr_3(PO_4)_2$, a white powder, devoid of taste, soluble in acids; used as a nutritive and tonic. Dose, 10–30 gr. (0.65–2 gm.). **S. Salicylate,** $Sr(C_7H_5O_3)_2 2H_2O$, white crystals soluble in water; used in gout, chorea, etc. Dose, 10–40 gr. (0.65–2.6 gm.).

Strophanthin. (See Illus. Dict.) **S. Tannate,** a yellowish amorphous powder containing 59% of strophanthin, soluble in water; used as a heart tonic. Dose, $\frac{1}{100}$–$\frac{1}{60}$ gr. (0.00043–0.0011 gm.).

Strophantism (*stro-fan'-tizm*). Poisoning from strophanthin; the symptoms resemble those of digitalism.

Struma. (See Illus. Dict.) **Strumæ lipomatodes aberratæ renis,** Grawitz's term for a group of newgrowths of the kidney, usually benign; but, at times, serving as the foci of origin of malignant tumors. Regarded by some pathologists as endotheliomata, by others as adrenal rests (Cf. under *Rest*). Grawitz includes here: Renal adenoma (Klebs, Sabourin); Alveolar renal adenoma (Weichselbaum and Greenish); Adenoma carcinomatodes renis (Klebs); Angioma cavernosum renis; Myxolipoma telangiectodes incapsulatum renis utrisque; Myxoma lipomatodes renis; Myxoma renis; Strumæ suprarenales (Virchow).

Strumiprival, Strumiprivous (*stru-mi-pri'-val, -vus*) [*struma; privare,* to deprive]. Deprived of the thyroid; due to removal of the thyroid; thyroprival.

Strychnin. (See Illus. Dict.) Dose, $\frac{1}{60}$–$\frac{1}{30}$ gr. (0.0011–0.0033 gm.). Dose, hypodermically in chronic alcoholism, 0.003–0.006 gm. **S. Acetate,** $C_{21}H_{22}N_2O_2 . C_2H_4O_2$, small white crystals soluble in 96 parts of water. Use and doses as the alkaloid. **S. Arsenate,** $C_{21}H_{22}N_2O_2 . As_2O_5$, a white crystalline powder with bitter taste, soluble in 14 parts of cold water, 5 parts of hot water. It is used as a tonic and alterative in tuberculosis, malaria, etc. Dose, $\frac{1}{64}$–$\frac{1}{16}$ gr. (0.001–0.004 gm.). Hypodermically, 0.5% in liquid paraffin; of this, 0.25–0.9 c.c. daily. **S. Arsenite,** $(C_{21}H_{22}N_2O_2)_2As_2O_3$, a white crystalline powder, soluble in 10 parts of boiling water. It is tonic, alterative, and antiperiodic. Dose, 0.001–0.004 gm.; subcutaneous dose, 4–15 drops of a 0.5% solution in liquid paraffin. **S. Bisaccharinate, S.-diorthosulfamin-benzoate,** used as the arsenite. **S. Camphorate,** $C_{21}H_{22}N_2O_2 . C_{10}H_{16}O_4$, small white crystals or crystalline powder soluble in water, used as the alkaloid. **S. Citrate,** $C_{21}H_{22}N_2O_2 . C_6H_8O_7$, white crystals, soluble in water; usage and dosage as the alkaloid. **S. Ferricitrate,** iron and strychnin citrate. See *Ferrum et Strychnæ citras* (Illus. Dict.). **S. Hydrid,** obtained by the action of metallic sodium on strychnin in a boiling alcoholic solution and differing in physiologic action from strychnin; it may, therefore, be used as a physiologic antidote in strychnin poisoning. **S. Hydrobromate,** $C_{21}H_{22}N_2O_2 . HBr$, white acicular crystals, soluble in 32 parts of water, used as a tonic and sedative. Dose, $\frac{1}{32}$–$\frac{1}{12}$ gr. (0.002–0.005 gm.). **S. Hydrochlorate,** $C_{21} . H_{22}N_2O_2 . HCl + 3H_2O$, white needles soluble in 50 parts of water at 22° C. Usage and doses as the alkaloid. **S. Hydroiodate,** $C_{21}H_{22}N_2O_2 . HIO_3$, white crystals soluble in water. Used as the alkaloid. **S. Hypophosphite,** a white powder, used as a tonic in tuberculosis. Dose, $\frac{1}{32}$–$\frac{1}{12}$ gr. (0.002–0.005 gm.). **S. with Iron and Quinin Citrate,** iron and quinin citrate with strychnin; greenish-brown transparent scales, soluble in water, and containing 3.4% of pure strychnin. It is tonic and antiperiodic. Dose, 3–7 gr. (0.2–0.45 gm.). **S. Lactate,** $C_{21}H_{22}N_2O_2 . C_3H_6O_3$, white crystalline powder, soluble in water. Usage and dosage as the alkaloid. **S. Nitrate,** $C_{21}H_{22}N_2O_2 . NHO_3$, silky needles, soluble in 50 parts of water, 60 parts of alcohol, or 2 parts of boiling water or alcohol. Usage and dosage as the alkaloid. **S. Oleate,** a mixture of strychnin in oleic acid, soluble in ether and oleic acid; it is used in the external administration of strychnin. **S.-orthosulfaminbenzoate.** See *S. Saccharinate.* **S. Phenolsulfate.** See *S. Sulfocarbolate.* **S. Phosphate,** $(C_{21}H_{22}N_2O_2)_3H_3PO_4 + 9H_2O$, a white crystalline powder, soluble in water. Usage and dosage as the alkaloid. **S. Saccharinate,** $C_{21}H_{22}N_2O_2 . C_6H_4(SO_2)(CO)NH$, a true salt of strychnin and saccharin; a white sweet powder, used in all cases where the alkaloid is indicated in doses one-third larger. **S. Salicylate,** $C_{21}H_{22}N_2O_2 . C_7H_6O_3$, white powder soluble in water, recommended in rheumatism and chorea. Dose, about the same as the alkaloid. **S. Sulfate,** $(C_{21}H_{22}N_2O_2)_2 . H_2SO_4 + 5H_2O$, white, odorless, very bitter prisms, which effloresce in dry air; soluble in 50 parts of water, 109 parts of alcohol, 2 parts of boiling water, or 8.5 parts of boiling alcohol; melt at 200° C. The action differs but slightly from the alkaloid. Dose, 0.002–0.005 gm. **S. Sulfocarbolate, S. Sulfophenate,** a white crystalline powder, soluble in water or alcohol. **S. and Zinc Hydroiodate,** $C_{21}H_{22}N_2O_2 . HI . ZnI_2$, small white crystals, soluble in water.

Strychnize (*strik'-nīz*). To bring under the influence of strychnin.

Strychnos (*strik'-nos*) [στρύχνος, the nightshade]. A genus of the *Loganiaceæ.* **S. icaja,** Baill., found in the Gaboon region, contains strychnin in the bark, leaves, and root. From the stem the arrow-poison, tarfa, toomba, M'boundou, n'caza, icaja, or akanga, is

prepared. **S. ignatii**, Berg., of the Philippines; the seeds, Ignatius' beans, act as nux vomica, but contain more strychnin and less brucin than it. **S. potatorum**, L., is indigenous to the East Indies. The seeds, nirmali, chillij, chilbing, are used largely to clear muddy water. They contain no strychnin nor brucin and are used as a remedy in diabetes and gonorrhea. The fruit is employed in dysentery. **S. pseudoquina**, St. Hil., of South America; the bark contains no poisonous alkaloid, but a bitter substance, and is used as a substitute for quinin. **S. tieuté**, Lesch., a species of Java; from the root-bark the Javanese arrow-poison, upas radju or tschetsik, containing 1.5% strychnin and a little brucin, is prepared. The seed and leaves contain 1.4% of strychnin and only traces of brucin. **S. toxifera**, Schomb., of Guiana, furnishes curare (wourari, urari).

Stub-thumb. Abbreviation and clubbing of the phalanx of the thumb.

Sturm's Focal Interval. The interval between the principal focal lines of a cylindric lens.

Stylohyoid, Stylohyoidean. (See Illus. Dict.) 2. Relating to the styloid process of the temporal bone and to the hyoid bone.

Styphage, Stypage. (See Illus. Dict.) **S., Bailly's,** a revulsive by application of cotton pledgets wet with methyl chlorid.

Stypticin (*stip'-tis-in*). See *Cotarnin Hydrochlorate.*

Styrone. (See Illus. Dict.) **S. Crystals, S., Crystallized,** cinnamyllic alcohol.

Subacidity (*sub-as-id'-it-e*) [*sub*, under; *acidum*, acid]. A condition of moderate acidity.

Subagitatrix (*sub-aj-it-a'-triks*) [L.]. One who practises tribadism.

Subancestral (*sub-an-sest'-ral*). Not in the direct line of descent.

Subatloidean (*sub-at-loid'-e-an*). Located beneath the axis.

Subatomic (*sub-at-om'-ik*). Underlying atoms.

Subaudition (*sub-awo-dish'-on*) [*sub*, beneath; *audire*, to hear]. The act or ability of comprehending what is not expressed.

Subbrachycephalic (*sub-bra-ke-sef-a'-lik*). Having a cephalic index from 80° to 84°.

Subcatabolism (*sub-kat-ab'-ol-izm*). Catabolic stasis, a condition marked by inactivity, devitalization, and premature senility of the cells due to suboxygenation, excessive strain, fatigue, etc.

Subclavicula (*sub-kla-vik'-u-lah*). The first rib.

Subconscious (*sub-kon'-shus*). Below the threshold of consciousness.

Subcrepitation (*sub-krep-it-a'-shun*). An indistinctly crepitant sound.

Subcutine (*sub-ku'-tēn*). Paraphenolsulfonate of paraamidobenzoic ethyl ester; small acicular crystals melting at 195.6° C., soluble in 100 times its weight in water. Its solutions can be sterilized. It is recommended as a local anesthetic.

Subdicrotic (*sub-di-krot'-ik*). Obscurely dicrotic.

Subduction (*sub-duk'-shun*) [*sub*, under; *ducere*, to lead]. Maddox's term for deorsumduction.

Subendothelium (*sub-en-do-the'-le-um*). The layer of connective-tissue cells between the mucosa and the epithelium of the bladder, intestines, and bronchi.

Subendymal (*sub-en'-dim-al*). Beneath the endyma.

Subese (*sub'-ēz*) [*sub*, below; *edere*, to eat]. Underfed, thin; the opposite of obese.

Subfalciform (*sub-fal'-se-form*) [*sub*, under; *falca*, a sickle]. Somewhat sickle-shaped.

Subflavor (*sub-fla'-vor*). A secondary or subordinate flavor.

Subgallate (*sub-gal'-āt*). A basic salt of gallic acid.

Subgemmal (*sub-jem'-al*). Beneath a taste-bud.

Subgeneric (*sub-jen-er'-ik*). Relating to a subgenus.

Subgeniculate (*sub-jen-ik'-u-lāt*). Incompletely geniculate.

Subgenus (*sub-je'-nus*). A subordinate genus, a subdivision of a genus higher than a species.

Subglossal (*sub-glos'-al*). See *Infraglottic* (Illus. Dict.).

Subhyaloid (*sub-hi'-al-oid*). Beneath the hyaloid membrane of the eye.

Subhyoidean (*sub-hi-oid'-e-an*). See *Subhyoid* or *Infrahyoid* (Illus. Dict.).

Subigitatrix. See *Subagitatrix.*

Subintrance (*sub-in'-trans*) [*subintrare*, to enter secretly]. Anticipation of recurrence.

Subiodid (*sub-i'-o-did*). That iodid of a series having the least iodin.

Subjectivity (*sub-jek-tiv'-it-e*) [*subjicere*, to throw under]. Illusiveness.

Subjectoscope (*sub-jek'-to-skōp*). An instrument for examining subjective visual sensations.

Sublamin (*sub'-lam-in*). A soluble compound of mercury sulfate and ethylenediamine containing 43% of mercury. It is used as a disinfectant and intramuscularly in syphilis. Dose, 2–6 dr. of 1% solution in normal salt solution.

Submarine (*sub'-mar-ēn*) [*sub*, under; *mare*, sea]. A dental term applied to conditions and materials in the treatment and management of which the parts are filled with the fluids of the mouth.

Submaxillitis (*sub-maks-il-i'-tis*). Inflammation of the submaxillary gland.

Submeningeal (*sub-men-in'-je-al*). Beneath the meninges.

Submesaticephalic (*sub-mes-at-e-sef-a'-lik*). Having a cephalic index of 75 to 76.

Submorphous (*sub-mor'-fus*) [*sub*, under; *μορφή*, form]. Having the characters both of a crystalline and an amorphous body; applied to calculi.

Subnotochordal (*sub-no-to-kord'-al*). Below the notochord.

Suboxidation (*sub-oks-id-a'-shun*). Deficient oxidation.

Subpapular (*sub-pap'-u-lar*). Indistinctly papular.

Subpericranial (*sub-per-e-kra'-ne-al*). Beneath the pericranium.

Subperitoneoabdominal (*sub-per-it-on-e-o-ab-dom'-in-al*). Beneath the abdominal peritoneum.

Subperitoneopelvic (*sub-per-it-on-e-o-pel'-vik*). Beneath the peritoneum of the pelvis.

Subpersonal (*sub-pur'-son-al*). Having individuality in a very slight degree.

Subpetrosal (*sub-pet-ro'-sal*). Below the petrosa.

Subplacenta (*sub-pla-sent'-ah*). The decidua vera.

Subplantigrade (*sub-plant'-e-grād*). Incompletely plantigrade, walking with the heel slightly elevated.

Subsaturation (*sub-sat-u-ra'-shun*). Incomplete saturation.

Subscleral (*sub-skle'-ral*). Beneath the sclera.

Subsensation (*sub-sen-sa'-shun*). A subordinate sensation.

Subseptal (*sub-sep'-tal*). Situated below a septum.

Subseptate (*sub-sep'-tāt*) [*sub*, under; *septum*, a hedge]. Partially divided.

Subserrate (*sub-ser'-āt*). Slightly serrate.

Subsibilant (*sub-sib'-il-ant*). Having a sound like muffled whistling.

Substance, Substantia. (See Illus. Dict.) **S. alba.** See *Alba* (Illus. Dict.). **S. gelatinosa posterior.** See *S. gelatinosa Rolandi* (Illus. Dict.). **S. glomerulosa,** the cortical substance of the kidney. **S., Gray,** the cinerea. **S. grisea centralis.** See *Ento-*

cinerea (Illus. Dict.). **S., Haptophorous,** a toxoid. **S., Immune,** the immune body. **S., Interfilar.** See *Enchylema* (Illus. Dict.). **S., Intervertebral.** See *Intervertebral Discs* (Illus. Dict.). **S. perforata lateralis,** the precribrum. **S. p. posterior,** the postcribrum. **S. reticularis alba.** See *Alba, Reticular.* **S., Rollet's Secondary.** See *Discs, Interstitial.* **S., Rovidas' Hyaline,** a nucleoproteid insoluble in water, forming a large proportion of the constituents of pus-corpuscles. It expands into a tough, slimy mass when treated with a 10% common salt solution. It is soluble in alkalis, but quickly changed by them. **S., Sarcous,** the substance of a sarcous element. **S. sensibilisatrice,** Bordet's name (1899) for the intermediary body. **S., Stilling's Gelatinous,** the gelatinous substance surrounding the central canal of the spinal cord. **S., White Reticular.** See *Alba, Reticular.*

Substandard (*sub-stand'-ard*). Below the standard requirements.

Subsultory (*sub-sul'-tor-e*) [*sub*, under; *saltire*, to leap]. Leaping, twitching.

Subsultus. (See Illus. Dict.) **S. clonus.** See *S. tendinum* (Illus. Dict.).

Subsylvian (*sub-sil'-ve-an*). Beneath the sylvian fissure.

Subtarsal (*sub-tar'-sal*). Below the tarsus.

Subtenial (*sub-te'-ne-al*). Situated beneath the tenia.

Subtep (*sub'-tep*). Abbreviation of *subtepidus*, lukewarm.

Subternatural (*sub-tur-nat'-u-ral*) [*subter*, below; *natura*, nature]. Below what is natural.

Subthalamus (*sub-thal'-am-us*). See *Hypothalamus.*

Subthyroideus (*sub-thi-roid'-e-us*). An anomalous bundle of fibers uniting the inferior and lateral thyroarytenoid muscles.

Subtrapezial (*sub-tra-pe'-ze-al*). Beneath the trapezium.

Subtuberal (*sub-tu'-bur-al*). Situated beneath a tuber.

Subtympanitic (*sub-tim-pan-it'-ik*). See *Hypotympanic.*

Suburethral (*sub-u-re'-thral*). Beneath the urethra.

Subvitrinal (*sub-vit'-rin-al*). Beneath the vitreous humor.

Succagog, Succagogue (*suk'-ag-og*) [*succus*, juice; ἀγωγός, a leading]. A drug which stimulates the secretory function.

Succedaneous (*suk-se-da'-ne-us*) [*succedere*, to take the place of]. Relating to or acting as a succedaneum.

Succinonitril (*suk-sin-o-ni'-tril*). Ethylene cyanid.

Succinylchinin (*suk-sin-il-kin'-in*).

$C_2H_4<^{COO\,.\,C_{20}H_{23}N_2O}_{COO\,.\,C_{20}H_{23}N_2O}$ A quinin ester, crystallizing in white needles, readily soluble in alcohol and ether. Melts at 97° C.; taste unpleasant and bitter.

Succorrhea, Succorrhœa (*suk-or-e'-ah*) [*succus*, juice; ῥεῖν, to flow]. An excessive flow of a secretion. **S. pancreatica,** a pathologic increase of the pancreatic juice when the secretory innervation of the gland is exaggerated. [Hemmeter.]

Succory (*suk'-or-e*). See *Cichorium intybus*, L.

Succus. (See Illus. Dict.) **S. anisi ozonatus.** See *Manol.* **S. olutkombul,** the glutinous sap of the bark of *Abroma angusta*, L. (*q. v.*). **S. pancreaticus,** the pancreatic juice.

Sucholoalbumin (*su-ko-lo-al'-bu-min*) [σύς, swine; χολή, bile; *albumin*]. A poisonous proteid classed among the albumoses obtained from cultures of the bacillus of hog cholera.

Sucholotoxin (*su-ko-lo-toks'-in*) [σῦς, swine; χολή, bile; τοξικόν, poison]. A feebly toxic base obtained by de Schweinitz from cultures of swine plague bacillus. Cf. *Susotoxin.*

Suckling (*suk'-ling*) [*sugere*, to suck]. A suckling child, a nursling.

Sucramin (*su-kram'-in*). The ammoniacal salt of saccharin. A sweetening agent differing from saccharin in its insolubility in the solvents of that substance.

Sucrate (*su'-krāt*). A chemic combination containing sucrose.

Sucrol (*su'-krol*). See *Dulcitol* (Illus. Dict.).

Suction. (See Illus. Dict.) **S.-plate,** in dentistry a plate constructed so as to be held in place by atmospheric pressure.

Sudan (*su-dan'*). $C_{20}H_{14}N_2O$. A diazo-compound from *α*-naphthalamin with *α*-naphthol, a brown powder used as a stain, soluble in alcohol, ether, fats, and oils. Syn., *Pigment brown.* **S. III,** $C_{22}H_{16}N_4O$, a diazo-compound from amidoazobenzene and *β*-naphthol; a brown powder soluble in alcohol, ether, benzene, petroleum ether, oils, and fats. **S. Yellow G,** $C_{12}H_{10}N_2O_2$, a diazo-compound from anilin and resorcinol; a brown powder used as a stain, soluble in alcohol, fats, and oils.

Sudol (*su'-dol*). A preparation used to check excessive sweating, said to consist of wool-fat and glycerin with 30% of formic aldehyd and oil of wintergreen.

Sudoresis (*su-dor-e'-sis*). Excessive sweating.

Sugar. (See Illus. Dict.) **S., Acorn,** quercit. **S., Date,** sugar from the fruit of *Phœnix dactylifera*, L. **S. of Lead,** lead acetate. **S., Left-rotating,** levulose. **S., Leo's.** See *Laiose.* **S. of Malt,** maltose. **S., Meat,** inosit. **S., Mucin,** fructose.

Sugarine (*shoog'-ar-ēn*). Methylbenzolsulfinid, a compound said to have 500 times greater sweetening power than sugar.

Sugent (*su'-jent*) [*sugere*, to suck]. Sucking, absorbent.

Suggescent (*sug-jes'-ent*). Fitted for sucking.

Suggestion. (See Illus. Dict.) **S., Self-,** a suggestion conveyed by the subject from one stratum of his personality to another without external intervention.

Sujee (*su'-je*) [Indian]. Fine flour from the inner part of the wheat grains, made in India.

Sukal (*su'-kal*) [East Indian, drying up]. Vernacular for trypanosomiasis.

Sulcus. (See Illus. Dict.) 2. A furrow on the mesal or ventricular surface of the brain. **S. ad aquæductum vestibuli.** See *Fossa, Sulciform.* **S., Cacuminal,** in comparative neurology one beginning at the laterocephalic angle of the flocculus and curving around in a direction caudodorsomesad usually fuses with its opposite from the other pileum. (Stroud.) **S. centralis.** See *Fissure, Central* (Illus. Dict.). **S. centralis insulæ.** See *Fissure, Transinsular* (Illus. Dict.). **S. circularis.** See *Fissure, Circuminsular* (Illus. Dict.). **S., Culminal,** in comparative neurology one dividing the culmen from the central lobe and extending laterad to the mesal border of the medipeduncle. (Stroud.) **S., Ecker's,** the anterior or transverse occipital sulcus, usually joined to the horizontal part of the interparietal sulcus. **S., Floccular,** in comparative neurology a sulcus separating the flocculus from the pileum and from the surface of the medipeduncle. It arises just dorsad of the auditory nerve and extends dorsocaudoventrad in the form of a loop to the caudal limit of the flocculus. (Stroud.) **S. frontalis inferior.** See *Fissure, Subfrontal* (Illus. Dict.). **S. frontalis superior.** See *Fissure, Superfrontal* (Illus. Dict.). **S., Furcal,** in comparative neurology a sulcus just caudad of the culmen forming a landmark of division between the preramus and postramus. (Stroud.) **S. habenæ,** the furrow along the dorso-

mesal angle of the thalamus just dorsad of the habena. **S. horizontalis cerebelli.** See *S., Peduncular.* **S. hypothalamicus.** See *Aulix* (Illus. Dict.). **S., Interfloccular,** in lower mammals a deep sulcus dividing the parafloccului into two lobes, the suprafloccului dorsad and the mediflocculus ventrad. **S. limitans,** the fissure between the striatum and the thalamus. **S., Monroe's.** See *Aulix* (Illus. Dict.). **S., Nodular,** in comparative neurology one apparently representing the central fissure and separating the nodulus from the uvula. **S., Parafloccular,** in comparative neurology the line of demarcation between the pileum and the parafloccului. **S., Peduncular,** of Wilder, a groove on the inner edge of the crus cerebri lodging the third nerve. Syn., *Oculomotor furrow.* **S. præclivalis.** See *S., Furcal.* **S., Pyramidal,** in comparative neurology, one arising just caudad of the peduncular sulcus and extending caudodorsomesad in the form of a crescent; it divides the tuberal and pyramidal lobes. **S., Reil's,** the sulcus in the bottom of the sylvian fissure separating the insula from the remainder of the hemisphere. **S., Subparietal.** See *Fissure, Precuneal* (Illus. Dict.). **Sulci temporales transversi.** See *Fissure, Transtemporal* (Illus. Dict.). **S. temporalis inferior.** See *Fissure, Subtemporal* (Illus. Dict.). **S. temporalis medius.** See *Fissure, Meditemporal* (Illus. Dict.). **S. temporalis superior.** See *Fissure, Supertemporal* (Illus. Dict.). **S., Triradiate,** the orbital fissure. **S. tubæ Eustachii, S. tubarius,** a depression on the petrosa for the cartilaginous part of the eustachian tube. Syn., *Semicanalis tubæ Eustachii; Groove for the eustachian tube.* **S. tympanicus,** a furrow on the concave surface of the tympanic plate for attachment of the membrana tympani. **S., Uvular,** in comparative neurology one marking the boundary of the pyramidal lobe, arising at the caudal angle of the flocculus and extending caudoventromesad. **S., Waldeyer's,** the sulcus spiralis of the cochlea.

Sulfin (*sul'-fin*). See *Aureolin.*

Sulfoazotized (*sul-fo-az'-o-tizd*). Containing sulfur and nitrogen.

Sulfobenzid (*sul-fo-ben'-zid*). $C_{12}H_{10}SO_2$. A crystalline substance obtained from benzene by action of fuming sulfuric acid; soluble in ether, melts at 129° C.; boils at 376° C. Syn., *Diphenylsulfone.*

Sulfocarbol (*sul-fo-kar'-bol*). See *Aseptol* (Illus. Dict.).

Sulfocarbonated (*sul-fo-kar'-bon-a-ted*). Containing sulfur and carbonic acid.

Sulfocarbonilid (*sul-fo-kar-bon-il'-id*). $C_{13}H_{12}N_2S$. A crystalline substance obtained from anilin by action of alcohol and carbon disulfid with heat; soluble in alcohol and ether, melts at 153° C. Syn., *Thiocarbonilid.*

Sulfocarbonism (*sul-fo-kar'-bon-izm*). Poisoning by carbon disulfid through ingestion of some substance containing it or through inhalation of the fumes in manufactures (caoutchouc, etc.); marked by narcosis, with fall of temperature, convulsive chills, odor of radish on the breath, and in severe cases with peripheral paralysis, general anesthesia, and muscular atrophy.

Sulfofon (*sul'-fo-fon*). A mixture of zinc sulfid and calcium sulfate.

Sulfonate (*sul'-fon-āt*). A salt of sulfonic acid.

Sulfonation (*sul-fon-a'-shun*). In chemistry the introduction of a sulfo-group in place of aromatic hydrogen atoms.

Sulfoparaldehyd (*sul-fo-par-al'-de-hid*). $(C_4H_4S_2)_3$. A crystalline substance soluble in alcohol, insoluble in water; recommended as a hypnotic. Syn., *Trithialdehyd.*

Sulfophenate, Sulfophenylate (*sul-fo-fe'-nāt, sul-fo-fen-il-āt*). See *Sulphocarbolate* (Illus. Dict.).

Sulfophenol (*sul-fo-fe'-nol*). Sulfocarbolic acid.

Sulforicinate (*sul-fo-ris'-in-āt*). A salt of sulforicinic acid.

Sulfosot (*sul'-fo-sot*). Potassium-creasote sulfonate. It is antituberculous. Dose, 0.3–1.3 gm. several times daily.

Sulfourea (*sul-fo-u'-re-ah*). See *Thiourea* (Illus. Dict.).

Sulfoxism (*sul-foks'-izm*). Poisoning with sulfuric acid.

Sulfur. (See Illus. Dict.) **S.-alcohol,** mercaptan. **S., Balsam of,** a solution of sulfur in linseed oil. **S., Milk of.** See *S. præcipitatum* (Illus. Dict.). **S., Ruby.** See *Arsenic Disulfid.* **S., Spirit of,** sulfuric acid. **S., Vegetable.** See *Lycopodium* (Illus. Dict.).

Sulfuraria (*sul-fu-ra'-re-ah*). A sediment of the San Filippo Springs, used in skin-diseases. A yellow powder, containing 32.96% of sulfur, calcium sulfid 36.55%, organic substances 13.44%, silica and strontium sulfate 1.07%.

Sulfuret (*sul'-fu-ret*). A sulfid. **S., Golden,** a sulfuret of antimony obtained by precipitating antimonic acid by sulfuretted hydrogen.

Sulfureus (*sul-fu'-re-us*). 1. Used by Mayon (1679) and early chemists in the sense of combustible, as those substances capable of burning were supposed to contain a "sulfur" which gave them that property. 2. See *Sulphurous* (Illus. Dict.).

Sulfuricity (*sul-fu-ris'-it-e*). The state of being sulfureous.

Sulfurize (*sul'-fu-rīz*). To impregnate with sulfur.

Sulphaminol. (See Illus. Dict.) **S.-creasote,** an 8% solution of sulphaminol in creasote, soluble in alcohol; used as an antiseptic in rhinolaryngology. **S.-eucalyptol,** an 8% solution of sulphaminol in eucalyptol, soluble in alcohol; used as sulphaminol-creasote. **S.-guaiacol,** an 8% solution of sulphaminol in guaiacol, soluble in alcohol; used as sulphaminol-creasote. **S.-menthol,** an 8% solution of sulphaminol in menthol, soluble in alcohol; used as sulphaminol-creasote. **S. Salicylate,** 8% of sulphaminol with salicylic acid, used in rheumatism. Dose, 3–6 gr. (0.2–0.4 gm.).

Sulphocalcine (*sul-fo-kal'-sēn*). A proprietary antiseptic and solvent said to contain calcium oxid, washed sulfur, benzoboracic acid, extract of pancreas, and oils of wintergreen and eucalyptus; used as a gargle or spray in diphtheria.

Sulphogen (*sul'-fo-jen*). A proprietary antiferment said to consist of sulfur, magnesia, aromatics, and the active principle of *Genista.* It is indicated in gastritis, dyspepsia, etc.

Sulphonalism (*sul-fon'-al-izm*). A group of symptoms said to be occasioned by the prolonged administration of sulphonal.

Sulphume (*sul'-fūm*). A proprietary preparation of liquid sulfur.

Sulphurine (*sul'-fu-rēn*). A preparation of some of the higher sulfids of sodium and potassium with sulfur.

Superalbal (*su-pur-al'-bal*). Situated in the upper part of the alba.

Superatrophy (*su-pur-at'-ro-fe*). Excessive atrophy.

Supercarbonate (*su-pur-kar'-bon-āt*). A bicarbonate.

Supercentral (*su-pur-sen'-tral*). Lying above the center.

Supercerebral (*su-pur-ser'-e-bral*). In the superior part of the cerebrum.

Superduct (*su'-pur-dukt*). To elevate, to lead upward.

Superduction (*su-pur-duk'-shun*). Maddox's term for sursumduction.

Superdural (*su-pur-du'-ral*). Lying in the upper part of the dura.

Superevacuation (*su-pur-e-vak-u-a'-shun*). Excessive evacuation.

Superexcitation (*su-pur-ek-si-ta'-shun*). Excessive excitement.

Superficialis (*su-pur-fish-e-a'-lis*). A superficial artery or muscle.

Superfunction (*su-pur-funk'-shun*). Excessive action of an organ or structure.

Superhumeral (*su-pur-hu'-mur-al*). Borne upon the shoulders; situated above the shoulders.

Superhumerale (*su-pur-hu-mur-a'-le*). The acromion.

Superimpregnation. (See Illus. Dict.) 2. Polyspermy, the piercing of the ovum by several sperm cells.

Superincumbent (*su-pur-in-kum'-bent*) [*super*, over; *incumbere*, to lie upon]. Lying or resting upon something else.

Superlabia (*su-pur-la'-be-ah*) [*super*, above; *labium*, a lip]. The clitoris.

Superligamen (*su-pur-lig'-am-en*) [*super*, above; *ligamen*, a bandage]. An outer bandage to hold a surgical dressing in place.

Supermedial (*su-pur-me'-de-al*). Above the middle.

Supermotility (*su-pur-mo-til'-it-e*). Excessive motility.

Supernormal (*su-pur-nor'-mal*). Pertaining to a faculty or phenomenon which is beyond the level of ordinary experience; pertaining to a transcendental world.

Superolateral (*su-pur-o-lat'-ur-al*). Located in the upper part of the side of a structure.

Superoxygenation (*su-pur-oks-e-jen-a'-shun*). Excessive oxygenation.

Superpetrosal (*su-pur-pet-ro'-sal*). Situated on the upper part of the petrosa.

Superphosphate (*su-pur-fos'-fāt*). An acid phosphate.

Supersensitive (*su-pur-sen'-sit-iv*). See *Hypersensitive.*

Superspinatus (*su-pur-spi-na'-tus*) [*super*, above; *spina*, spine]. In veterinary anatomy an extensor of the humerus which has no exact analog in man. It arises from the cartilaginous prolongation of the scapula and the subscapular fossa, and is attached by two heads, one going to the external tubercle and the other to the internal tuberosity of the humerus.

Supertension (*su-pur-ten'-shun*). See *Hypertension.*

Superversion (*su-pur-vur'-shun*). See *Sursumversion.*

Suplagalbumin (*su-plag-al'-bu-min*). See *Sucholoalbumin.*

Suplagotoxin (*su-plag-o-toks'-in*). See *Sucholotoxin.*

Supraacromial (*su-prah-ak-ro'-me-al*). See *Superacromial* (Illus. Dict.).

Suprachoroidea (*su-prah-ko-roid'-e-ah*). The choroid layer next to the sclera.

Supracotyloid (*su-prah-kot'-il-oid*). Above the cotyloid fossa.

Supradin (*su-prad'-in*). A powdered preparation of the suprarenal capsules, containing 0.015% of iodin.

Supraepicondylar (*su-prah-ep-e-kon'-dil-ar*). Situated above the epicondyle.

Suprafloccculus (*su-prah-flok'-u-lus*). The dorsal lobe of the paraflocculus in the lower mammals.

Supragenual. See *Supergenual* (Illus. Dict.).

Supraglenoid (*su-prah-glen'-oid*). Above the glenoid cavity.

Suprahepatic (*su-prah-hep-at'-ik*). Above the liver. **S. Veins,** the hepatic veins.

Suprainguinal (*su-prah-in'-gwin-al*). Above the groin.

Supralabialis (*su-prah-la-be-a'-lis*). See *Levator labii superior* in *Table of Muscles* (Illus. Dict.).

Supraliminal (*su-prah-lim'-in-al*) [*supra*, above; *limen*, threshold]. Lying above the threshold. **S. Consciousness,** the empiric self of common experience.

Supralumbar (*su-prah-lum'-bar*). Above the loin.

Supramandibular (*su-prah-man-dib'-u-lar*). Situated above the mandible.

Supramastoid (*su-prah-mas'-toid*). Above the mastoid part of the temporal bone.

Supramental (*su-prah-ment'-al*) [*supra*, above; *mentum*, chin]. Above the chin.

Supranuclear (*su-prah-nu'-kle-ar*). Above the nucleus.

Supraobliquus (*su-prah-ob-li'-ku-us*) [*supra*, above; *obliquus*, slanting]. Coues' name for the obliquus superior muscle of the eye.

Supraomphalodymia (*su-prah-om-fal-o-dim'-e-ah*) [*supra*, above; ὀμφαλός, navel; δύειν, to enter]. A form of somatodymia in which the union is in the superior umbilical region.

Supraorbitar, Supraorbitary (*su-prah-or'-bit-ar, -e*). See *Supraorbital* (Illus. Dict.).

Suprapelvic (*su-prah-pel'-vik*). See *Hyperpelvic.*

Suprapineal (*su-prah-pin'-e-al*). Above the pineal gland.

Suprarenaden (*su-prah-ren'-ad-en*). A preparation made from the suprarenal capsules; used in Addison's disease, neurasthenia, etc. Dose, 1–1.5 gm. daily.

Suprarenal. (See Illus. Dict.) **S., Epithelioma.** See *Hypernephroma.* **S. Rests.** See under *Rest.*

Suprarene (*su'-prah-rēn*). A suprarenal capsule.

Suprarennin (v. Fürth) (*su-prah-ren'-in*). A synonym of *Epinephrin.*

Suprasylvian (*su-prah-sil'-ve-an*). Above the sylvian fissure.

Supraturbinal (*su-prah-tur'-bin-al*). The superior turbinal bone.

Sura. A form of toddy made in Western Africa from the sap of the oil palm, *Elaeis guineensis*, Jacq.

Supraverge (*su'-prah-vurj*) [*supra*, above; *vergere*, to incline]. To diverge in a vertical plane.

Supravergence (*su-prah-vur'-jenz*). The ability of the two eyes to diverge in a vertical plane; an ability measured by a prism of 2°–3°. (Duane.) Syn., *Sursumvergence.* **S., Right,** the ability to overcome prisms, base down, before the right eye, or base up before the left eye. (Duane.)

Surculus. (See Illus. Dict.) **Surculi fellei,** the ductules conveying the bile to the hepatic ducts.

Surexcitation (*sur-eks-i-ta'-shun*) [*super*, over; *excitatio*, a rousing]. Excessive excitement.

Surface. (See Illus. Dict.) **S., Fixation,** a curved surface the points of which occupy in the two monocular fields, positions which are identical horizontally, regardless of vertical disparity. (Scripture.) **S., Labial,** the surface of a tooth crown which is toward the lips.

Surgeonry (*sur'-jun-re*). The practice of a surgeon.

Surgeonship (*sur'-jun-ship*). The office of a surgeon.

Surgery. (See Illus. Dict.) **S., Major,** surgery concerned with the more important and serious operations.

Surinam Bark (*su'-rin-am*). The bark of *Andira retusa*, H. B. K., used as an anthelmintic.

Surinamin (*su-rin-am'-in*). An alkaloid found by Hüttenschmid, 1824, in the bark of *Andira retusa*, Kunth. It forms fine, gleaming needles, without taste or odor and of neutral reaction, soluble in water, and with anthelmintic action. It is identical with methyltyrosin or ratanhin, and is also called andirin and geoffroyin.

Surons (*su'-rons*). Skins which have served the purpose of carrying drugs, especially from South America.

Surrenal (*sur-re'-nal*) [*supra*, above; *ren*, the kidney]. 1. Suprarenal. 2. A suprarenal gland.

Sursumduction. (See Illus. Dict.) 2. See *Supravergence.* 3. A movement of either eye alone upward. (Duane.) **S., Right,** the absolute power that the right eye has to rotate upward. (Duane.)

Sursumvergence (*sur-sum-vur'-jenz*) [*sursum*, upon; *vergere*, to bend]. The turning of the eyes upward, supravergence.

Sursumversion (*sur-sum-vur'-shun*) [*sursum*, upon; *vertere*, to turn]. The movement of both eyes up. (Duane.)

Surumpe. The name in the Andes for hyperesthesia of the retina observed at great altitudes.

Survivorship (*sur-vi'-vor-ship*) [*super*, over; *vivere*, to live]. In medical jurisprudence the probability of a certain individual having survived others when all concerned were in the same accident and all were killed.

Susceptivity (*sus-sep-tiv'-it-e*) [*suscipere*, to undertake]. The state or quality of being susceptible.

Suscitability (*sus-si-ta-bil'-it-e*) [*suscitare*, to lift up]. The quality of being easily roused or excited.

Suscitation (*sus-si-ta'-shun*). The act of exciting.

Susotoxin (*su-so-toks'-in*). See under *Ptomains, Table of* (Illus. Dict.).

Suspensory. (See Illus. Dict.) 2. A device for suspending a part.

Sustoxin. See *Susotoxin.*

Suture. (See Illus. Dict.) **S., Arcuate.** See *S., Basilar* (Illus. Dict.). **S., Billroth's,** the buttonhole stitch. **S., Biparietal.** See *S., Sagittal* (Illus. Dict.). **S., Blatin's,** a modification of Gely's in which one needle and two threads of different colors are used. **S., Chainstitch,** the sewing-machine stitch. **S., Cross,** the application of two single stitches to a T-wound. **S., Ford's Friction-knot,** a square knot is tied for the first stitch, then the needle is passed as for a single-knot stitch, turning the thread twice around the needle instead of once. The last stitch is a square knot. **S., Ford's Single-knot,** the needle is passed through the divided tissues and, without cutting the thread, a square knot is tied. For the second stitch the thread is held or thrown so that the needle will emerge in a loop, and when it is drawn through a single knot will be formed. **S., Ford's Square-knot,** the same steps are taken as for the single-knot, and for the second stitch pass the needle under the thread connecting the knots in the opposite direction from which the needle was inserted into the tissues. **S., The Four Masters',** a suture of the intestine used in the thirteenth century in which the trachea of a goose was used as a means of support and the ends of the severed intestine brought into position on it and sutured with four interrupted stitches which did not include the trachea. **S., Grad's Method of,** in suturing a wound it consists in placing in each turn of the knot a releasing pull thread. **S., Granny-knot,** a single-knot stitch is formed and the needle is passed in the opposite direction from which it was inserted under the thread in forming a square knot. **S., Grieg Smith's,** a modification of Appolito's method which removes the necessity of the insertion of a foreign substance in the lumen of the gut. **S., Imperfect, of Weber, S., Longitudinal Imperfect.** See *S., Weber's.* **S., Kalt.** See under *Stitch.* **S., Larry's,** a double glover's stitch, with threads of a different color. **S., Lewis',** a modification of the right-angle stitch. **S., Marcey's,** the cobbler-stitch used for hernia. **S., Mitchell-Hunner's,** the application of a quilted stitch to the mesenteric border of the gut. **S., Parallel,** a continuous subcuticular suture. **S., Rabdoid.** See *S., Sagittal* (Illus. Dict.). **S., Sclerocorneal, of Kalt.** See *Stitch, Sclerocorneal.* **S., Sphenopalatine,** a cranial suture between the sphenoid and palatine bones. **S., Du Verger's,** a modification of the four masters'; he used only two stitches, both of which included the foreign support. **S., Watson's,** a glover's stitch uniting the gut over a cannula of fish glue. **S., Weber's,** a fine groove or suture on the inner surface of the nasal process of the superior maxilla. **S., Wormian, Anterior,** the upper part of the lambdoid suture.

Sweat. (See Illus. Dict.) **S., English.** See *Sweating-sickness.* **S., Picardy.** See *Fever, Miliary* (Illus. Dict.).

Sweating-sickness. An infective, febrile epidemic disorder, characterized by a rapid course and profuse perspiration. It was prevalent in England at the end of the fifteenth and first half of the sixteenth century. Payne and others regard it as closely related to miliary fever. Syn., *English sweat, Sudor Anglicus, Picardy sweat;* Fr., *suette miliaire;* Ger., *Schweissfreisel.*

Swelling. (See Illus. Dict.) **S., Sömmerring's Crystalline,** an annular swelling formed in the lowet part of the capsule, behind the iris, after extraction of the crystalline lens.

Syaladenitis. See *Sialadenitis* (Illus. Dict.).

Sycoceryl (*si-ko-ser'-il*). Applied to an alcohol the acetate of which is a constituent of sycoretin. **S. Hydrate,** sycoceryl aldehyd.

Sycoretin (*si-ko-re'-tin*) [σῦκον, fig; κηρός, wax]. A resin found in 1855 in *Ficus rubiginosa*, Desf., of New South Wales.

Sycose (*si'-kōz*). Saccharin.

Sycosiform (*si-ko'-se-form*). Resembling sycosis.

Syderant. See *Siderant.*

Sylviduct (*sil'-ve-dukt*). The aqueduct of Sylvius.

Symbiote (*sim'-bi-ōt*). See *Symbion* (Illus. Dict.).

Symblepharopterygium (*sim-blef-ar-o-ter-ij'-e-um*). A variety of symblepharon in which a cicatricial band resembling a pterygium connects the lid and the eyeball.

Symmer's Theory of Electricity. See under *Theory.*

Sympathectomy, Sympathicectomy (*sim-path-ek'-to-me, sim-path-is-ek'-to-me*). Excision of part of the sympathetic nerve.

Sympatheticism (*sim-path-et'-is-izm*). See *Sympathism.*

Sympatheticoparalytic (*sim-path-et-ik-o-par-al-it'-ik*). Due to paralysis of the sympathetic nerve.

Sympatheticotonic (*sim-path-et-ik-o-ton'-ik*). Applied to migraine caused by tonic contraction of the arteries due to overaction of the sympathetic.

Sympathiconeuritis (*sim-path-ik-o-nu-ri'-tis*). See *Sympatheoneuritis* (Illus. Dict.).

Sympathicotripsy (*sim-path-ik-o-trip'-se*) [συμπάθεια, sympathy; τρίβειν, to crush]. In treatment of mental diseases, crushing of the superior cervical ganglion.

Sympathism (*sim'-path-izm*). Susceptibility to hypnotic suggestion.

Sympathist (*sim'-path-ist*). One who is susceptible to hypnotic suggestion.

Symperitoneal (*sim-per-it-on-e'-al*) [σύν, together; *peritoneum*]. Connecting artificially two parts of the peritoneum.

Sympexia (*sim-peks'-e-ah*). See *Sympexis* (Illus. Dict.).

Symphiocephalus (*sim-fi-o-sef'-al-us*) [σύν, together; φύειν, to grow; κεφαλή, the head]. A twin monster with the union in the head.

Symphorol (*sim'-for-ol*) [σύν, together; φορά, that which is brought forth]. A generic name for the caffein sulfates or sulfocaffeinates. *Symphorol L.*, lithium and

caffein sulfonate. *Symphorol N.*, sodium and caffein sulfate. *Symphorol S.*, strontium and caffein sulfonate.

Symphysal (*sim'-fiz-al*). See *Symphyseal* (Illus. Dict.).

Symphyseorrhaphy, Symphysiorrhaphy (*sim-fiz-e-or'-af-e*) [συμφύειν, to grow together; ῥαφή, a seam]. Suture of a divided symphysis.

Symphysis. (See Illus. Dict.) **S. cartilaginosa,** synchondrosis. **S. ligamentosa,** syndesmosis. **S. mandibulæ, S. menti,** the central vertical ridge upon the outer aspect of the lower jaw, showing the line of union of the two halves. **S. ossium muscularis.** See *Syssorcosis* (Illus. Dict.).

Sympiesometer (*sim-pe-es-om'-et-ur*) [σύν, together; πίεσις, a squeezing; μέτρον, measure]. An apparatus for estimating pressure.

Symplocos (*sim'-plo-kos*) [σύμπλοκος, twined]. A genus of the *Styraceæ*. **S. alstonia,** L'Her., a tree of South America. The leaves are used as maté and also as a digestive and diaphoretic. **S. platyphylla,** Benth., sweet leaf, is indigenous to the southern United States and South America; the root bark is used in intermittent fever. **S. racemosa,** Roxb., indigenous to India, furnishes a red coloring-matter and lotur bark, used in plasters. It contains lotourin, colloturin, and lotouridin. **S. tinctoria,** L'Her., sweet leaf of South Carolina, contains in its sweet leaves a yellow coloring-matter. The root is used as a digestive.

Symptom, Symptoma. (See Illus. Dict.) **S., Accessory, S., Assident,** a minor symptom. **S., Accidental,** one intervening in the course of a disease without having any connection with it. **S.s, Concomitant,** accessory phenomena occurring in connection with the essential phenomena of a disease. **S., Constitutional,** or **General,** one produced by the effect of the disease on the whole body. **S., Delayed.** See *Shock, Deferred* (Illus. Dict.). **S., Equivocal,** one of doubtful significance. **S., Local,** one indicating the concentration of a disease in a certain part of the body. **S., Rational,** a subjective symptom. **S., Signal,** the first disturbance of sensation preceding a more extensive convulsion, as the aura heralding an attack of epilepsy. **S. turpitudinis,** nymphomania.

Symptom-complex. (See Illus. Dict.) See also *Syndrome.* **S.-c., Avellis',** paralysis of one-half of the soft palate, associated with a recurrent paralysis on the same side. **S.-c., Benedikt's,** tremor of one side of the body, in part or wholly, and oculomotor paralysis of the other side. **S.-c., Bernhardt-Roth's.** See *Paresthesia, Bernhardt's.* **S.-c., Erb-Goldflam's.** See *Disease, Erb's* (Illus Dict.). **S.-c., Escherich's.** See *Pseudotetanus.* **S.-c., Friedmann's Vasomotor,** a train of symptoms following injury to the head, consisting of headache, vertigo, nausea, and intolerance of mental and physical exertions and of galvanic excitation; it is occasionally associated with ophthalmoplegia and mydriasis. These phenomena may subside and recur with greater intensity, with fever, unconsciousness, and paralysis of the cranial nerves, ending in fatal coma. They are probably due to an encephalitis of slow development with acute exacerbations. **S.-c., Hoppe-Goldflam's.** See *Disease, Erb's* (Illus. Dict.). **S.-c., Putnam-Dana's,** combined sclerosis of the lateral and posterior columns of the spinal cord. **S.-c., Roth's.** See *Paresthesia, Bernhardt's.* **S.-c., Wilk's.** See *Disease, Erb's* (Illus. Dict.).

Synæsion. See *Synetion.*

Synantherin (*sin-an'-thur-in*). See *Inulin* (Illus. Dict.).

Synanthrose (*sin-an'-thrōz*). See *Levulose* (Illus. Dict.).

Synapse (*sin-ap'-se*). See *Synapsis.*

Synapsis (*sin-ap'-sis*) [σύν, together; ἅπτειν, to clasp]. The anatomic relation of one neuron with another. The intertwining of the terminal arborizations of the neurons by means of which nerve impulses may pass from one to another. Syn., *Synapase.*

Synarthroisis. See *Synarthrœsis* (Illus. Dict.).

Synarthrophysis (*sin-ar-thro-fi'-sis*) [σύν, together; ἄρθρον, a joint; φύειν, to grow]. Progressive ankylosis of the joints.

Syncaryosis (*sin-kar-e-o'-sis*) [σύν, together; κάρυον, a nut]. A term proposed by His for syncytial formation or the growth of the multinuclear giant-cells.

Syncheiral. See *Syncheiral* (Illus. Dict.).

Synciput. See *Sinciput* (Illus. Dict.).

Synclonesis. See *Synclonus* (Illus. Dict.).

Syncopexia, Syncopexy (*sin-ko-peks'-e-ah, sin-ko-peks'-e*). See *Tachycardia* (Illus. Dict.).

Syncyanin (*sin-si'-an-in*). A blue pigment elaborated by *Bacillus syncyanus.*

Syncytioma (*sin-sit-e-o'-mah*) [σύν, together; κύτος, cell]. A tumor composed of syncytial tissue. **S. malignum,** malignant degeneration of the villi of the chorion. See *Deciduoma malignum.*

Syncytium. (See Illus. Dict.) 2. The collection of epithelial cells forming the outermost covering of the chorionic villi.

Syndeticon (*sin-det'-ik-on*). A proprietary varnish said to consist of fish glue, 100 parts; acetic acid (glacial), 125 parts; gelatin, 20 parts in 125 parts of water; concentrated alcoholic solution of shellac, 20 parts.

Syndrome. (See Illus. Dict.) See *Symptom-complex.* **S., Basedow's,** tachycardia, flashes of heat, sweating crises. **S., Brissaud-Marie's,** hysteric glossolabial hemispasm. **S. of Brown-Séquard.** See *Brown-Séquard's Paralysis* in *Table of Signs* (Illus. Dict.). **S., Charcot's,** intermittent claudication, an affection connected with arteriosclerosis of the lower extremities. **S., Cotard's,** "délire chronique des négations." A form of paranoia characterized by delusions of negation, with sensory disturbances and a tendency to suicide. **S., Dercum's,** adiposus dolorosus. **S., Duchenne's,** labioglossolaryngeal paralysis. **S., Duckworth's,** complete stoppage of respiration several hours before that of the heart in certain cerebral diseases attended by intracranial pressure. **S., Dupré's,** meningism; pseudomeningitis. **S., Erb's.** Synonym of *Asthenic bulbar paralysis.* **S., Gaston's,** anesthetic prurigo sometimes observed in cases of alcoholism. **S., Jackson's,** associated paralysis of the soft palate and larynx, accompanied by paralysis of the trapezius, sternomastoid, and one-half of the tongue. **S., Levulosuric.** See *S., Marie-Robinson's.* **S., Marie-Robinson's,** a variety of diabetes with melancholia, insomnia, impotence, and the presence in the urine of a levulose that disappears rapidly on the suppression of carbohydrates. **S., Millard-Gubler's.** See *Hemiplegia, Gubler's.* **S. of Pierre Marie,** hypertrophant osteoarthropathy. **S., Potain's,** dyspepsia and dilation of the right ventricle with accentuation of the pulmonary sound, observed during the digestive process in cases of gastrectasis. **S., Riegel's,** the association of tachycardia with troubles simulating asthma. **S., Rosenbach's,** a variety of paroxysmal tachycardia consisting in the association of cardiac, respiratory, and gastric troubles. **S., Stokes'.** See *Disease, Adams-Stokes.* **S. temporanea di Gubler.** See *Hemiplegia, Gubler's.* **S., Tuffier's,** a congenital state of general tissue debility, resulting in relaxation and displacement of various organs, such as splanchnoptosis, varicocele, uterine displacements, etc. **S., Weil's,** unilateral hyperesthesia of the muscles, nerve-

trunks, and bones, sometimes seen in cases of pulmonary tuberculosis.

Synechia. (See Illus. Dict.) **S., Annular, S., Circular,** exclusion of the pupil. **S., Anterior,** adhesion between the iris and transparent cornea. **S., Posterior,** adhesion between the iris and crystalline lens. Syn., *Ptosis diplopia.* **S., Total,** adhesion of the entire surface of the iris to the lens.

Synechiotomy (*sin-ek-e-ot'-o-me*). See *Synechotomy* (Illus. Dict.).

Synectenterotomy (*sin-ek-ten-tur-ot'-o-me*) [συνέχειν, to hold together; ἔντερον, bowel; τομή, a cutting]. The division of an intestinal adhesion.

Synergistic. See *Synergetic* (Illus. Dict.).

Synesis (*sin'-e-sis*) [σύνεσις, a coming together]. Faculty of comprehension, intelligence, sagacity.

Synetion, Synætion (*sin-e'-shun*) [σύν, together; αἰτία, cause]. A cause which cooperates with another to produce disease.

Syngenetic (*sin-jen-et'-ik*) [σύν, together; γεννᾶν, to produce]. Propagated by means of both parents.

Synicesis. See *Synizesis* (Illus. Dict.).

Synimensis (*sin-im-en'-sis*). See *Syndesmosis* (Illus. Dict.).

Synosteophyte (*sin-os'-te-o-fīt*) [σύν, together; ὀστέον, a bone; φυτόν, a growth]. Congenital bony ankylosis. Syn., *Synostosis congenita.*

Synosteotome (*sin-os'-te-o-tōm*). A knife for the dissection of joints.

Synostology (*sin-os-tol'-o-je*). See *Synosteology* (Illus. Dict.).

Synostosis. (See Illus. Dict.) **S. congenita.** See *Synosteophyte.* **S., Tribasilar,** shortening of the base of the skull and consequent curvature of the basal parts of the brain; a cause of imbecility.

Synovialis (*sin-o-ve-a'-lis*). See *Membrane, Synovial* (Illus. Dict.).

Synovitis. (See Illus. Dict.) **S., Acute Suppurative,** a very acute purulent form of rheumatic or traumatic origin, leading to ankylosis. Syn., *Pyarthrosis; Arthropyosis empyema articuli.* **S. hyperplastica, S. hyperplastica granulosa, S. hyperplastica lævis or pannosa,** fungous arthritis.

Synsarcosis. See *Syssarcosis* (Illus. Dict.).

Synteretics (*sin-tur-et'-iks*) [συντηρεῖν, to watch closely]. Hygiene.

Synthetism (*sin'-thet-izm*) [σύνθεσις, a putting together]. The um of operations and means necessary for reducing a fracture and holding the parts in position.

Synthol (*sin'-thol*). A chemically pure synthetic substitute for alcohol. It is colorless and nonirritant.

Syntopic (*sin-to'-pik*) [σύν, together; τόπος, place]. Applied by Waldeyer to a topographic description which points out the relation of a part or organ to the viscera or soft parts of the organism.

Syntopy (*sin'-to-pe*). The relation of an organ or part to the viscera of the organism. Cf. *Holotopy; Skelelotopy; Idiotopy.*

Syntoxoid (*sin-toks'-oid*) [σύν, together; τοξικόν, poison; εἶδος, likeness]. A toxoid having the same affinity as toxin for antitoxin.

Syntrophus (*sin'-tro-fus*) [σύν, together; τροφός, a nurse]. A congenital disease.

Synulodynia (*sin-u-lo-din'-e-ah*) [συνούλωσις, a scarring over; ὀδύνη, pain]. Pain in a cicatrix.

Syphilicoma (*sif-il-ik-o'-mah*) [*syphilis*; κομεῖν, to take care of]. A hospital for syphilitics.

Syphilidologist. See *Syphilologist.*

Syphilin (*sif'-il-in*). See *Syphilitoxin.*

Syphilis. (See Illus. Dict.) See *Law, Colles'* (Illus. Dict.). See *Signs, Demarquay's, Hutchinson's* (Illus. Dict.), *Krisowski's, Silex's, Wegner's.* **S. d'emblée,** the invasion of syphilis without a local lesion. **S. insontium,** syphilis of the innocent. **S., Justus' Blood-test in,** this reaction depends upon the presumption that in untreated cases of congenital secondary and tertiary syphilis, a single dose of mercury, administered either by inunction or by subcutaneous or intravenous injection, causes a hemoglobin loss of from 10% to 20% within about 24 hours; this abrupt decline being followed within a few days by a rise in the hemoglobin value to a somewhat higher figure than that first observed before the drug was given. [DaCosta.] **S., Pulmonary,** a rare disease which is either hereditary or follows the initial attack after from 10 to 20 years or longer. Two forms may be differentiated—a chronic interstitial indurative process and a growth of gummas. [Lerch.]

Syphilitoxin (*sif-il-e-toks'-in*) [*syphilis*; τοξικόν, poison]. The supposed specific virus of syphilis.

Syphilocerebrosis (*sif-il-o-ser-e-bro'-sis*). Syphilis affecting the brain.

Syphilogenesis, Syphilogeny (*sif-il-o-jen'-e-sis, sif-il-oj'-en-e*) [*syphilis*; γεννᾶν, to produce]. The origin or development of syphilis.

Syphiloid. (See Illus. Dict.) 2. Resembling syphilis.

Syphilologist (*sif-il-ol'-o-jist*) [*syphilis*; λόγος, science]. A specialist in the treatment of syphilis.

Syphiloma (*sif-il-o'-mah*). A term introduced by Ernst Wagner as a substitute for gumma.

Syphilonthus (*sif-il-on'-thus*). See *Syphionthus* (Illus. Dict.).

Syringenin (*sir-in'-jen-in*) [*syringa*, a genus of shrubs]. $C_{13}H_{28}O_5 + H_2O$. A dissociation product of syringin by action of dilute acids; a clear, rose-red, amorphous mass, soluble in alcohol, insoluble in water and ether.

Syringin. (See Illus. Dict.) $C_{17}H_{24}O_9 + H_2O$, white, tasteless, acicular crystals, soluble in alcohol and hot water, boils at 191° C. It is antipyretic and antiperiodic; used in malaria. Syn., *Lilacin; Ligustrin.*

Syringious (*sir-in-je'-us*) [σῦριγξ, a tube]. Fistulous.

Syringomelia. See *Syringomyelia.*

Syringomyelia. (See Illus. Dict.) Syn., *Myelosyringosis.* **S., Grasset-Rauzier's Type of,** a form with marked sudoral and vasomotor symptoms. **S., Schlesinger's Type of,** the dorsolumbar type.

Syrup. (See Illus. Dict.) **S., Dusart's,** a preparation having for its chief ingredient ferric phosphate; the dose is ½ to 2 fl. dr. (2 to 8 c.c.).

Syssomus (*sis-o'-mus*) [σύν, together; σῶμα, body]. A twin monster with separate heads but united trunks.

System. (See Illus. Dict.) **S., Centimeter-gram-second,** the system based upon the use of the centimeter, gram, and second as units of length, mass, and time respectively. **S., Dowsing.** See under *Treatment.* **S., Havers',** the concentric arrangement of the bony lamellas, usually eight or ten in number, around a Haversian canal. **S. of Medicine, Dogmatic.** See under *Medicine.* **S., Pedal,** a ganglionic system of the brain. **S., Portal.** See under *Portal* (Illus. Dict.).

T

Tabefy (*ta'-be-fi*) [*tabefacere*, to melt]. To emaciate.

Tabernæmontana (*tab-ur-ne-mon-tah'-nah*) [*Jacob Theodore Tabernæmontanus*, German physician and botanist, d. 1590]. A genus of apocynaceous trees and shrubs a species of which, growing in the Cameroon region, furnishes yohimbe bark, used as an aphrodisiac. **T. citrifolia**, L., of the West Indies; the bark is used as a tonic, febrifuge, and anthelmintic. **T. coronaria**, Willd., Adam's apple, wax-flower plant, East Indian rose-bay, a species of the East Indies. The milky juice is used in inflammation of the eyes and in skin-diseases. **T. crispa**, Roxb., a species of the East Indies, where the root bark is used in diarrhea, dysentery, and upon abscesses. **T. dichotoma**, Roxb., of Malabar and Ceylon, has edible fruit (apple of Eve). **T. iboga** (?), boccaroot, of the lower Congo region, is used as an antipyretic. **T. utilis**, W. et Arn., the cow or hya-hya tree of South America; the milky sap is used as milk.

Tabes. (See Illus. Dict.) See *Signs, Bechterew's, Berger's, Biernacki's, Frenkel's, Gowers', Pitres'* (2), *Remak's, Romberg's, Sänger's, Sarbo's*. **T., Diabetic**, a peripheral neuritis affecting diabetics. **T. diuretica.** Same as *Diabetes mellitus*. **T. dolorosa**, a form in which pain is the dominating feature. Syn., *Ataxia, Abortive locomotor*. **T., Early, with Nystagmus Occurring in Families.** Synonym of *Friedreich's disease*. **T., Spasmodic.** See *Disease, Little's* (Illus. Dict.). **T., Spinal.** Synonym of *Tabes*.

Tabophobia (*ta-bo-fo'-be-ah*) [*tabes; φόβος*, fear]. A morbid fear of becoming affected with tabes; a frequent symptom of neurasthenia.

Tac. (See Illus. Dict.) 2. Rot; scabies in the sheep.

Tacamahac. (See Illus. Dict.) **T., Bourbon**, obtained from *Calophyllum tacamahaca*, Willd., of Madagascar; used as a vulnerary. Syn., *Calaba balsam*. **T., Brazilian**, obtained from *Rheedia madrunno*, Pl. et Tr. **T. incolore, T. jaune**, the aromatic resin of *Protium guianense*, March. **T., Indian**, obtained from *Calophyllum apetalum*, Willd. **T., Mauritius**, furnished by *Protium heptaphyllum*, March. **T., Mexican**, or **West Indian**, that furnished by *Bursera tomentosa*, Trian. and Planch. It is used as a tonic, astringent, and antispasmodic, and also in rheumatism and gout. **T., Yellow.** See *T. incolore*.

Tachardia (*tak-ar'-de-ah*). A genus of the hymenopterous order *Coccidæ*. **T. lacca**, R. Blanch., the lac insect. Syn., *Carteria lacca*, Sign.; *Coccus lacca*, Kerr.

Tachetic (*tak-et'-ik*) [Fr. *tache*, spot]. Relating to the formation of reddish-blue or purple patches (taches).

Tachia (*tak'-e-ah*) [*tachi* (an ant), the name among the Galibis for trees of this genus because they harbor ants]. A genus of shrubs and trees of the *Gentianaceæ*. **T. guianensis**, Aub., a species of Brazil and Guiana; the very bitter root, radix quassiæ paraensis, raiz de jucareara or caferana, is used as gentian and also as an antipyretic and prophylactic against malaria. Dose of tincture, 1 or 2 drops.

Tachiol (*tak'-e-ol*). A modification of silver fluorid; employed as a surgical antiseptic in solution 1 : 1000 to 1 : 100 and in ophthalmic practice.

Tachography (*tak-og'-raf-e*) [*ταχύς*, swift; *γράφειν*, to write]. The estimation of the rate of flow of arterial blood by means of the tachygraph.

Tachyiater (*tak-e-i'-at-ur*) [*ταχύς*, swift; *ἰατρεία*, healing]. A physician who effects a speedy cure.

Tachyphrenia (*tak-e-fre'-ne-ah*) [*ταχύς*, swift; *φρήν*, mind]. Morbid mental activity.

Tachypnea. (See Illus. Dict.) **T., Nervous**, respiration of 40 or more to the minute accompanying neurotic disorders, particularly hysteria and neurasthenia.

Taction (*tak'-shun*) [*tactio*, a touch]. A touch, a touching, the tactile sense.

Tactometer (*tak-tom'-et-ur*) [*tangere*, to touch; *metare*, to measure]. An instrument for estimating tactile sensibility; an esthesiometer.

Tactor (*tak'-tor*) [*tactus*, touch]. A tactile organ.

Tactual (*tak'-chu-al*) [*tactus*, touch]. Relating to the sense of touch.

Tænia (*te'-ne-ah*) [*ταινία*, a band]. A genus of parasitic platode worms of the class *Cestoda*. See *Table of Parasites* (Illus. Dict.). **T.-toxin**, the toxin produced by tapeworms and to which the pathologic changes wrought in the intestines are partly due.

Tagetes (*ta-jet'-ēz*) [*Tages*, an Etrurian divinity]. A genus of composite plants, marigold. **T. erecta**, L., African marigold, and **T. patula**, L., are indigenous to Mexico and used as a purgative. They contain an ethereal oil and a yellow coloring-matter. **T. minuta**, L., a South American species, the leaves of which are used as a diuretic, diaphoretic, anthelmintic, stimulant, emmenagog, and antihysteric remedy. It contains an ethereal oil.

Tagud Nuts. See *Phytelephas macrocarpa*.

Tagulawaya. See *Parameria vulneraria*; also under *Balsam*.

Tail. (See Illus. Dict.) **T. of the Pancreas.** See under *Pancreas*.

Tailor's Ankle. See under *Ankle*.

Takadiastase (*tak-ah-di'-as-tāz*). A diastatic ferment obtained by Takamini from wheat bran by action of the spores of the fungus *Eurotium oryzæ* (Taka-moy-ash). A yellowish-white, hygroscopic powder used in digestive disorders, especially those resulting from deficient secretion of saliva and hyperacidity of the stomach. Dose, 0.1–0.3 gm.

Take (*tāk*) [AS. *tacan*]. To become infected, as by vaccine virus.

Taking [colloquial]. Contagious, catching.

Takosis (*ta-ko'-sis*) [*τήκειν*, to waste]. A highly contagious fatal disease of goats characterized by great emaciation and weakness with symptoms of diarrhea and pneumonia, the animal dying of inanition in from eight days to six weeks. It is due to a microorganism for which the name *Micrococcus caprinus*, sp. nov., has been proposed.

Talipes. (See Illus. Dict.) **T. percavus**, excessive plantar curvature. **T. valgus**, foot distorted outward, throwing the ankle inside of normal line. **T. varus**, foot distorted inward, throwing the ankle outside of normal line.

Talma's Disease. See *Myotonia acquisita*.

Talocalcanean (*ta-lo-kal-ka'-ne-an*) [*talus*, ankle; *calcaneum*, heel-bone]. See *Astragalocalcaneal*.

Talocrural (*ta-lo-kru'-ral*) [*talus*, astragalus; *crus*, leg]. Relating to the astragalus and the bones of the leg.

Talofibular (*ta-lo-fib'-u-lar*). Relating to the astragalus and the fibula.

Talonavicular (*ta-lo-nav-ik'-u-lar*). See *Astragaloscaphoid* (Illus. Dict.).

Talonid (*ta'-lon-id*) [*talus*, heel]. The heel or posterior portion of the lower molar crown. (Osborn.)

Taloscaphoid (*ta-lo-skaf'-oid*). See *Astragaloscaphoid* (Illus. Dict.).

Talose (*tal'-ōz*). A sugar prepared artificially by the reduction of talonic acid. It is a hexose.

Talotibial (*ta-lo-tib'-e-al*). See *Astragalotibial* (Illus. Dict.).

Talpiform (*tal'-pe-form*) [*talpa*, a wen; *forma*, form]. Wen-shaped.

Tampicin (*tam'-pis-in*). A resin, $C_{34}H_{54}O_{14}$, very similar to convolvulin, obtained from the root of Tampico jalap, *Ipomœa simulans*, Hanb. It is a colorless or yellowish, transparent, amorphous, tasteless mass, without odor, soluble in alcohol and ether; it melts at 130° C. It is said to have a purgative action.

Tampon. (See Illus. Dict.) **2.** To plug a natural aperture or wound.

Tanghinin (*tan'-gin-in*). $C_{10}H_{18}$. A glucosid isolated by Arnaud from *Cerbera tanghin*, Hook., isomeric with cerberin and closely allied to thevetin and thevetosin. A crystalline body, soluble in alcohol and ether or in 100 parts of water. It resembles strophanthin in physiologic action.

Tangkong [bicol. dial. Island of Luzon]. **1.** A process of stretching the skin on the nape of the neck, practised by the natives of the Philippines as a counter-irritation. It is used as a general panacea, but its greatest virtue lies in the relief it affords in severe headache. **2.** The protuberances or tumors produced by such skin-stretching.

Tang-Kui, Tang Kwei. The Chinese name for *Aralia cordata*, Thunb., furnishing eumenol.

Tannal. (See Illus. Dict.) **T., Soluble.** See *Aluminium Tannotartrate.*

Tannalbin (*tan-al'-bin*). Tannin albuminate; a brown, tasteless powder, insoluble in water, and containing 50% of tannin. An intestinal astringent. Dose, 1 gm. 2 to 4 times daily. **T., Veterinary,** a tannalbin specially prepared for a veterinary intestinal astringent. Dose, 20–24 gm.

Tannigen (*tan'-ij-en*). See *Acetyltannin.*

Tannocasum (*tan-o-ka'-sum*). A compound of tannin and casein; it is used as an intestinal astringent.

Tannochloral (*tan-o-klo'-ral*). See *Captol.*

Tannocol (*tan'-o-kol*). An odorless, tasteless combination of equal parts of gelatin and tannic acid, forming an almost insoluble grayish-white powder. Dose as intestinal astringent, 7.5 to 15 gm. several times daily.

Tannocreosoform (*tan-o-kre-o'-so-form*). A compound of tannin, creasote, and formic aldehyd.

Tannoform (*tan'-o-form*). $CH_2(C_{14}H_9O_9)_2$. A condensation product of gallotannic acid and formic aldehyd. It forms a pale rose-colored, bulky powder, insoluble in water, soluble in alkaline solutions. Used internally in chronic intestinal catarrh. Dose, 0.25–0.5 gm.; externally in skin-diseases, burns, etc., in 10% ointment, or dusting-powder with 2 to 4 parts of starch. Syn., *Methylenditannin; Tannin-formaldehyd.*

Tannone (*tan'-ōn*). $(CH_2)_6N_4(C_{14}H_{10}O_9)_2$. A condensation product of tannin and urotropin occurring as an odorless, tasteless, fine, light-brown powder, insoluble in water, weak acids, or ether, but slowly soluble in dilute alkaline solutions. It is used in acute catarrh and subacute and chronic enteritis. Dose, 1 gm. 3 or 4 times daily.

Tannopin (*tan'-o-pin*). See *Tannon.*

Tannopumilin (*tan-o-pu'-mil-in*). A proprietary remedy for skin-diseases said to consist of digallic acid and oil of *Pinus pumilio*, Häncke.

Tannosal (*tan'-o-sal*). Tannic acid ester of creasote, containing 60% of creasote. Antitubercular. Dose, 1 to 2 gm. 3 times a day, in aqueous solution.

Tap [D. *tap*]. **1.** To withdraw fluid from a cavity by cannula or trocar. **2.** A slight blow.

Táp [East Indian, fever]. Vernacular for trypanosomiasis.

Tap-dik, Tapé-dik [East Indian]. Vernacular for trypanosomiasis.

Taphosote (*taf'-o-sōt*). Creasote tannophosphate.

Tapopote. The Amerind name for *Ephedra nevadensis*, S. Wats.

Tar. (See Illus. Dict.) **T., Barbadoes,** a black petroleum of Barbadoes of the consistency of molasses and with bituminous taste. **T., Birch,** crude oil of birch. **T.-camphor,** naphthalene. **T., Mineral.** See *Maltha* (Illus. Dict.).

Taracanin (*tar-ak'-an-in*). See *Antihydropin* (Illus. Dict.).

Tarai [East Indian wet, moist]. Vernacular for trypanosomiasis.

Tarantella (*tar-an-tel'-ah*) [*Tarento*, a town of Italy]. A dance supposed to be a cure for the nervous excitation falsely attributed to the bite of *Lycosa tarantula.*

Tarantula. (See Illus. Dict.) **2.** The Italian form of dancing mania; tarantism.

Tarfa. An African name for the arrow poison from *Strychnos icaja*, Baill.

Tarnier's Hatching-cradle. See under *Incubator* (Illus. Dict.).

Taro (*tar'-o*) [Polynesian]. *Colocasia antiquorum*, Schott (*q. v.*). See also *Poi.*

Tarsadenitis meibomica (*tar-sad-en-i'-tis*) [ταρσός, a frame of wicker work; ἀδήν, a gland]. M. F. Weyman's name for subacute or chronic inflammation of the meibomian glands and tarsal cartilage.

Tarsale (*tar-sa'-le*). Any bone of the tarsus, but especially one in the distal row.

Tarsalia (*tar-sa'-le-ah*). The tarsal bones.

Tarsocheiloplasty (*tar-so-ki'-lo-plas-te*) [ταρσός, tarsus; χείλος, edge; πλάσσειν, to form]. Plastic surgery of the edge of the eyelid.

Tarsoorbital (*tar-so-or'-bit-al*). Relating to the framework of the eyelids and the walls of the orbit.

Tartar. (See Illus. Dict.) **T., Alkali of,** potassium carbonate. **T., Borated,** potassium and sodium borotartrate. **T., Vitriolated,** potassium sulfate.

Tartarization (*tar-tar-iz-a'-shun*). The treatment of syphilis with antimonium and potassium tartrate.

Tartarlithin (*tar-tar-lith'-in*). See *Lithium bitartrate.*

Tartronyl (*tar'-tron-il*). The bivalent radicle of tartronic acid. **T.-urea.** See *Acid, Dialuric.*

Tartrophen (*tar'-tro-fen*). A combination of phenetidin and tartaric acid.

Tashkent Ulcer. See *Paschachurda.*

Tasi, Tasi-plant. A vernacular term in Argentine for plants possessing galactagogic properties.

Tasillo (*tah-sēl'-yo*). Same as *Tasi* or *Tasi-plant.*

Tassago. See *Tasajos* (Illus. Dict.).

Tatalbumin (*tat-al'-bu-min*). Tarchanobf's name for the white of egg during incubation; it becomes transparent on boiling and acts as an alkali albumin.

Tattooage (*tat-too'-āj*). The practice of tattooing.

Tattooing. (See Illus. Dict.) **T., Electrolytic,** the electrolytic treatment of angioma or nevus by means of a negative electrode carrying from ten to twenty needles.

Tautomeric. (See Illus. Dict.) **2.** Applied by v. Gehuchten to neurons of the cinerea of the spinal cord, the axons of which pass into the white matter of the cord on the same side in which they are located.

Tautomerism. (See Illus. Dict.) **T., Virtual,** v. Pechmann's term for phasotrophy (*q. v.*).

Taxis. (See Illus. Dict.) **T., Bipolar,** the replacement of a retroverted uterus by upward pressure through the rectum and drawing the cervix down in the vagina.

Taxology. See *Taxiology* (Illus. Dict.).

Tayuyin (*ta-u'-yin*). A bitter principle found by Peckolt in *Cayaponia martiana*, D. C.

Tea. (See Illus. Dict.) 2. Any vegetable infusion used as a beverage. **T., James',** **T., Labrador,** the leaves of *Ledum latifolium*, L., used as a substitute for tea.

Tebersa [East Indian, three years' duration]. Vernacular for trypanosomiasis.

Tebetosa (*teb-et-o'-sah*). The toxic principle of *Thebetia iccotli*, D. C.

Tecnogonia (*tek-no-go'-ne-ah*) [τέκνον, child; γονή, generation]. Child-bearing.

Tectocephalia, Tectocephaly (*tek-to-sef-a'-le-ah*, *tek-to-sef'-al-e*) [*tectum*, a roof; κεφαλή, head]. The condition of having a roof-shaped skull.

Teeth. (See Illus. Dict.) **T., Chiaie** [Prof. Stephano Chiaie, of Naples, first to describe the condition]. A peculiar deterioration of the dental enamel among the inhabitants of the Italian littoral; characterized by the teeth becoming black and destitute of enamel (*denti neri*), though apparently strong and serviceable; or the teeth remain white and finely formed but marred by a line of fine black, script-like marks (*denti scritti*). The theory generally received is that the condition is due to drinking water containing volcanic gases and other products. **T., Corti's.** See *T., Auditory* (Illus. Dict.). **T., Horner's,** incisor teeth presenting horizontal grooves that are due to a deficiency of enamel. **T., Huschke's.** See under *Huschke* (Illus. Dict.). **T., Hutchinson's,** **T., Notched,** **T., Pegged.** See in *Table of Signs* (Illus. Dict.). **T., Master,** a name given by early writers to the venom fangs of serpents. **T., Permanent,** those of the second dentition. **T., Pivot.** See under *Pivot* (Illus. Dict.). Cf. *Pivot, Clack.* **T., Sectorial,** the cutting teeth of the carnivora. **T., Springing,** a name given by early writers to the venom fangs of serpents. **T., Succedaneous,** the permanent teeth which take the places of the temporary teeth. **T., Test-,** the central upper incisors of the permanent teeth, which are observed as a test, being "notched" or "pegged" in cases of congenital lues. **T., Wall,** molars.

Tegmen. (See Illus. Dict.) **T. mastoideum,** the roof of the mastoid cells.

Tegment (*teg'-ment*). Of Wilder, the tegmentum.

Tegmental (*teg-men'-tal*) [*tegmen*, a roof]. Relating to the dorsal portion of the crus cerebri.

Tegmentum. (See Illus. Dict.) **T. auris,** the membrana tympani. **T. ventriculorum.** See *Centrum ovale majus* (Illus. Dict.).

Tegmin (*teg'-min*). A white, aseptic, adhesive substance which is a substitute for collodion in sealing small wounds that do not require drainage, said to consist of an emulsion of wax, 1 part; acacia, 2 parts; water, 3 parts, and containing besides 5% of zinc oxid and a small quantity of lanolin.

Tegone (*teg'-ōn*). A proprietary medicated plaster similar to a gelone (*q. v.*).

Tegumentary (*teg-u-ment'-a-re*) [*tegere*, to cover]. Relating to the skin or tegument.

Tehuino. A Mexican drink made from cooked corn.

Teinophlogosis (*te-in-o-flo-go'-sis*, *tīn-o-flo-go'-sis*) [τείνειν, to stretch; φλόγωσις, inflammation]. Inflammation of the tendons.

Telangiectoma (*tel-an-ji-ek-to'-mah*) [τέλος, the end; ἀγγεῖον, vessel]. Birthmark, simple nevus.

Teledendrite (*tel-e-den'-drīt*) [τέλος, end; δένδρον, tree]. The termination of a dendrite.

Telediastolic (*tel-e-di-as-tol'-ik*) [τέλος, end; *diastole*]. Relating to the last phase of a diastole.

Telegonous (*tel-eg'-on-us*) [τῆλε, afar; γονή, offspring]. Pertaining to telegony or resemblance of subsequent offspring to the offspring of a previous sire.

Telelectrotherapeutics (*tel-e-lek-tro-ther-ap-u'-tiks*) [τῆλε, afar; *electrotherapeutics*]. The treatment of hysteric paralysis by a series of electric discharges near the patient without actual contact.

Teleneurite (*tel-e-nu'-rīt*) [τέλος, end; νεῦρον, nerve]. One of the terminal filaments of the main stem of an axis-cylinder process.

Teleneuron (*tel-e-nu'-ron*) [τέλος, end; νεῦρον, nerve]. The neuron forming the terminus of an impulse in a physiologic act involving the nervous system.

Teleologic (*tel-e-o-loj'-ik*) [τέλεος, complete; λόγος, science]. Relating to the final cause of things.

Teleophobia (*tel-e-o-fo'-be-ah*) [τέλος, end; φόβος, fear]. An unwilling disposition of mind to admit anything dealing with final causes or definite ends.

Teleorganic (*tel-e-or-gan'-ik*) [τέλεος, complete; ὄργανον, organ]. Necessary to organic life.

Teleotherapeutics (*tel-e-o-ther-ap-u'-tiks*) [τῆλε, far; θεραπευτικός, inclined to take care of]. Suggestive therapeutics.

Telephic (*tel-ef'-ik*). Malignant, incurable, relating to a telephium. Ger. *Telephisch.*

Telephium (*tel-ef'-e-um*) [*Telephus*, son of Hercules, whose wound received from Achilles did not heal]. An old inveterate ulcer. Syn., *Achilleum.*

Telephone Paralysis. See under *Paralysis.*

Telescin, Telæscin (*tel-es'-in*). $C_{18}H_{30}O_5$. A dissociation product of escinic acid, very similar in action to quinovin.

Telesphoresis (*tel-es-for-e'-sis*) [τέλος, the end; φορεῖν, to bear]. Complete maturing of the fetus.

Telesthesia, Telæsthesia (*tel-es-the'-ze-ah*) [τῆλε, afar; αἰσθησις, sensibility]. Distant perception, a perception of objects or conditions independently of the recognized channels of sense. Cf. *Clairvoyance.*

Telethermometer (*tel-e-thur-mom'-et-ur*) [τῆλε, afar; *thermometer*]. A thermometer which records temperature at a distance.

Teleuodont (*tel-u'-o-dont*) [τελεῖν, to bring to an end; ὀδούς, tooth]. A tooth when lengthened anteroposteriorly.

Telini-fly. See *Mylabris cichorii.*

Tellicherri Bark. The bark of *Wrightia zeylanica*, R. Br.; it is used in dysentery.

Telodendrion, Telodendron (*tel-o-den'-dre-on*, *tel-o-den'-dron*) [τέλος, end; δένδρον, tree]. One of the minute bulbous expansions terminating the aborization of an axon.

Telokinesis (*tel-o-kin-e'-sis*). See *Telophase.*

Telophase (*tel'-o-fāz*) [τέλος, end; φάσις, an appearance]. The final phase of any process, as that of mitosis.

Temporalis (*tem-po-ra'-lis*) [L. relating to the temples]. The temporal muscle.

Temporozygomatic (*tem-po-ro-si-go-mat'-ik*). Relating to a temple and a zygoma.

Temulent (*tem'-u-lent*) [*temulentia*, inebriety]. Intoxicated.

Temulin (*tem'-u-lin*). The narcotic principle of *Lolium temulentum*, L.

Tenalgia. (See Illus. Dict.) **T. crepitans.** See *Tendosynovitis* (Illus. Dict.).

Tenalin (*ten'-al-in*). A mixture of alkaloids from areca nut; used as a vermifuge for animals.

Tendaraman (*ten-dar-am'-an*). A poisonous spider of Morocco. See *Latrodectus tredecimguttatus*.

Tendinitis (*ten-din-i'-tis*). See *Tenonitis* (Illus. Dict.).

Tendinoplasty (*ten-din-o-plas'-te*) [*tendo*, a tendon; *πλάσσειν*, to form]. Plastic surgery of tendons.

Tendinosuture (*ten-din-o-su'-chur*). See *Tenorrhaphy* (Illus. Dict.).

Tendo. (See Illus. Dict.) **T. calcaneus**, the Achilles tendon. **T. oculi**, **T. palpebræ.** See *Ligament*, *Palpebral Internal* (Illus. Dict.).

Tendomucoid (*ten-do-mu'-koid*). $C_{47\cdot47}H_{6\cdot68}N_{12\cdot58}S_{2\cdot20}O_{31\cdot07}$. A mucin found in tendons. Cf. *Chondromucoid*; *Osseomucoid*.

Tendon. (See Illus. Dict.) **T., Reindeer**, tendons obtained from the neck of the reindeer killed in late autumn and prepared for use as ligatures. **T., Zinn's.** See *Ring*, *Zinn's*.

Tendophone (*ten'-do-fōn*). See *Dermatophone*.

Tendovaginal (*ten-do-vaj'-in-al*) [*tendo*, tendon; *vagina*, a sheath]. Relating to a tendon and its sheath.

Tendovaginitis. (See Illus. Dict.) **T. crepitans.** See *Tenalgia crepitans*.

Tenectomy (*ten-ek'-to-me*). See *Tenonectomy*.

Tenia, Tænia. (See Illus. Dict.) **T. acusticæ.** See *Stria*, *Acoustic* (Illus. Dict.). **T. coli**, the longitudinal muscle-fibers of the colon. **T. cornea**, **T. corporis striati**, **T. fibrosa striati**, **T. striata**, **T. terminalis**, **T. thalami optici.** See *Stria cornea* or *Tænia semicircularis* (Illus. Dict.). **T. foveæ rhomboidalis**, **Tæniæ longitudinales.** See *Striæ longitudinales* (Illus. Dict.). **T. medullæ oblongatæ.** See *Ligula* (Illus. Dict.). **Tæniæ medullares.** See *Stria*, *Acoustic* (Illus Dict.). **T. nervosa Hallerii**, the gasserian ganglion. **T. of Tarinus.** See *Stria cornea* (Illus. Dict.). **T. of Valsalva.** See *T. coli*. **T. ventriculi quarti**, the ligula.

Tenomyotomy (*ten-o-mi-ot'-o-me*) [*τένων*, a tendon; *μῦς*, muscle; *τομή*, a cutting]. Abadie's operation to enfeeble one of the recti muscles, consisting of incising the lateral parts of its tendon near its sclerotic insertion and removing a small portion of the muscle on each side.

Tenonectomy (*ten-on-ek'-to-me*) [*τένων*, tendon; *ἐκτομή*, excision]. Excision of a portion of a tendon.

Tenonometer (*ten-on-om'-et-ur*) [*τένων*, a tendon; *μέτρον*, measure]. An instrument for measuring the tension of the eyeball.

Tenonostosis. See *Tenostosis* (Illus. Dict.).

Tenontitis (*ten-on-ti'-tis*). See *Tenositis* (Illus. Dict.).

Tenontolemmitis (*ten-on-to-lem-i'-tis*) [*τένων*, tendon; *λέμμα*, a husk or limiting membrane]. See *Tenosynovitis* (Illus. Dict.).

Tenontothecitis (*ten-on-to-the-si'-tis*). See *Tenosynovitis* (Illus. Dict.). **T. prolifera calcarea**, a condition of necrobiosis of the tendons in their sheaths accompanied by calcareous deposit.

Tenophony (*ten-of'-on-e*) [*τένων*, tendon; *φωνή*, sound]. A sound elicited by auscultation supposed to be produced by the chordæ tendinæ.

Tenoplasty (*ten-o-plast'-e*) [*τένων*, tendon; *πλάσσειν*, to form]. Plastic surgery of a tendon.

Tenosynovitis. (See Illus. Dict.) **T., Ping-pong**, painful condition of the wrist and ankle joints due to playing the game of ping-pong.

Tenotomania (*ten-ot-o-ma'-ne-ah*). See *Tenotomomania* (Illus. Dict.).

Tenotomist (*ten-ot'-o-mist*). One skilled in tenotomy.

Tensity (*ten'-sit-e*) [*tendere*, to stretch]. Tenseness, the condition of being stretched.

Tensive (*ten'-siv*). Giving the sensation of stretching or contraction.

Tensure (*ten'-shur*). Tension, a stretching or straining.

Tensus (*ten'-sus*). The penis.

Tentative (*ten'-ta-tiv*) [*tentare*, to try, to prove]. Empiric, experimental.

Tentiginous (*ten-tij'-in-us*) [*tentigo*, lust]. Characterized by insane lust.

Tentum (*ten'-tum*) [*tendere*, to stretch]. The penis.

Tenuate (*ten'-u-āt*) [*tenuis*, thin]. To make thin.

Tenuity (*ten-u'-it-e*). Thinness, the condition of being thin.

Tenuous (*ten'-u-us*). Thin, minute.

Ter in die [L.]. Three times daily.

Teramorphous (*ter-ah-mor'-fus*) [*τέρας*, a monster; *μορφή*, form]. Of the nature of a monstrosity.

Teratoblastomata (*ter-at-o-blast-o'-mat-ah*). Klebs' term for the teratomata as contrasted with blastomata proper.

Teratogenesis (*ter-at-o-jen'-e-sis*). See *Teratogeny* (Illus. Dict.).

Terebene. (See Illus. Dict.) **T. Glycerin**, a mixture of terebene, 4 parts; glycerin, 7 parts, and water, 1 part, shaken together and exposed until the separated glycerin remains turbid when allowed to stand. It is used as an application on purulent wounds.

Terebinthinism (*ter-e-bin'-thin-izm*). Poisoning with oil of turpentine.

Terebinthinize (*ter-e-bin'-thin-īz*). To charge with turpentine.

Terebrant, Terebrating (*ter'-e-brant*, *ter-e-brat'-ting*) [*terebrare*, to bore]. Piercing, boring, said of pain.

Teremorrhu (*ter-e-mor'-u*) [*terrebene; morrhua*, the cod]. A proprietary palatable preparation of pure terebene and cod-liver oil. Dose, ʒj-ij three or four times daily.

Terendjebin (*ter-end'-je-bin*). See *Manna*, *Alhagi*.

Terminad (*tur'-min-ad'*) [*terminus*, a limit]. Situated in or toward the terminus.

Terminalia. (See Illus. Dict.) **T. angustifolia**, Jacq., a species of Malaya, furnishes an aromatic resin. **T. belerica**, Roxb., of India, yields a gum, and the fruit, beleric myrobalan, is used as an astringent or tonic. **T. catappa**, L., country, Indian or Malabar almond tree, a species indigenous to tropical Asia and cultivated in the West Indies, furnishes a gum. The seeds are used as almonds, the leaves as a purgative, the bark in diarrhea and catarrh. **T. chebula**, Retz., a species of tropical Asia. The unripe fruit, known as myrobalani nigræ, and the ripe fruit, myrobalani chebulæ, are used as a mild purgative, but also in diarrhea, dysentery, and in bilious disorders. The galls formed on the leaves are used as an astringent. **T. citrina**, Roxb., hara-nut tree, of Bengal; the fruit, yellow myrobalan, is used as that of *T. chebula*, which it resembles, but is more bitter. **T. fagifolia**, Mart., of Brazil, furnishes a drastic gum resin.

Terne-plate (*turn'-plāt*). Sheet-iron coated with an alloy of tin and lead.

Ternitrate (*tur'-ni-trāt*). See *Trinitrate* (Illus. Dict.).

Terpene. (See Illus. Dict.) **T., Aliphatic**, a term applied by Semmler to certain hydrocarbons ($C_{10}H_{16}$) found in volatile oils. **T. Hydrochlorate**, artificial camphor, $C_{10}H_{16}\cdot HCl$), a white crystalline mass with a turpentine and camphor odor obtained from dry pinene by the action of dry chlorin in the cold. It melts at about 125° C. and boils at about 208° C. It is antiseptic and is used internally in tuberculosis and to check the flow of saliva. Externally it is used with carbolic acid in skin-diseases. Dose, 15–30 grains. **T. Iodid.** See *Iodoterpin*.

Terpenism (*tur'-pen-izm*). Poisoning by terpene from internal use or inhalation; marked by abdominal pain,

vomiting, inflammation of bladder and kidneys, bronchitis, paroxysms of asphyxia, and collapse. The urine has the odor of violets.

Terpilene (*tur'-pil-ēn*). $C_{10}H_{16}$. A clear liquid obtained from terpene dihydrochlorid heated with water and treated with dilute sulfuric acid; boils at 178° C.; sp. gr. 0.852 at 15° C. Syn., *Terpinylene*. **T. Dihydrochlorate.** Same as *Eucalypteol*.

Terpilenol. See *Terpineol* (Illus. Dict.).

Terpin. (See Illus. Dict.) **T. Dihydrochlorate,** $C_{10}H_{18}Cl_2$, rhombic crystals soluble in alcohol, ether, chloroform, or benzene; melts at 49°–50° C.; obtained from terpin hydrate by action of gaseous hydrochloric acid. Syn., *Dipentene dihydrochlorid*. **T. Hydrate,** $C_{10}H_{18}(OH)_2 + H_2O$, colorless inodorous crystals obtained from oil of turpentine with alcohol by action of dilute nitric acid; soluble in hot water, 32 parts; cold water, 250 parts; alcohol, 10 parts; boiling alcohol, 2 parts; ether, 100 parts; chloroform, 200 parts; or boiling glacial acetic acid, 1 part; melts at 117° C.; boils at 258° C. Dose as expectorant, 0.2–0.4 gm.; as diuretic, 0.65–1 gm. several times daily. Max. dose, 1 gm. single, 3 gm. daily. Syn., *Dipentene-glycol*. **T. Hydroiodate,** $C_{10}H_{18}HI$, a red-brown liquid. Syn., *Dipentene hydroiodid*.

Terpinol. (See Illus. Dict.) 2. An oily liquid obtained by the action of dilute mineral acids on terpin hydrate with heat; sp. gr., 0.852 at 15° C.; soluble in alcohol or ether. It is used as a bronchial stimulant, antiseptic, and diuretic. Dose, 8–15 ♏ (0.5–1 c.c.).

Terpinylene. See *Terpilene*.

Terra. (See Illus. Dict.) **T. adamica,** any red bole, as Armenian bole. **T. livonica,** a very astringent sealed earth from Livonia. **T. miraculosa Saxoniæ,** Saxony earth, a mottled and variegated lithomarge or marrow stone. **T. oriana, T. orleana,** annotto. **T. sigillata,** a sealed earth; any bole so highly valued as to be formed into a small mass and stamped with a seal. The Armenian, Lemnian, French, and red and white boles were terræ sigillatæ. **T. tripolitana.** See *Tripoli* (Illus. Dict.). **T. umbra,** umber.

Terralin (*ter'-al-in*). An ointment vehicle introduced by Tschkoff, consisting of calcined magnesia, kaolin, silica, glycerin, and an antiseptic. It can be readily removed from the skin by water.

Terrol (*ter'-ol*). A residue from petroleum; it is used as a substitute for cod-liver oil.

Terroline (*ter'-ol-ēn*). A name for a special brand of petroleum jelly.

Tertipara (*tur-tip'-a-rah*) [*ter*, three times; *parere*, to bear]. A woman who has been in labor three times.

Tescalama (*tes-kal-am'-ah*). The milky juice of *Ficus nymphæifolia*, Mill., a tree of Mexico and South America. It is used in plasters.

Tesla Currents (*tes'-lah*) [*Nikola Tesla*, electrician, b. in Hungary, 1857]. Rapidly alternating electric currents of high tension; they were applied therapeutically by d'Arsonval.

Teslaization (*tes-la-iz-a'-shun*). Cohn's term for the therapeutic application of Tesla currents. See *Arsonvalization*.

Test. (See Illus. Dict.) **T., Abba's, for Arsenic,** consists in allowing *Penicillium brevicaule* to act upon the substance to be examined, and in the presence of arsenic noting the garlic-like odor produced. From 0.005 to 0.002 mgm. of arsenic may thus be detected. Urine should first be deodorized with animal charcoal. **Acetanilid.** See *Rudolf-Fischer, Schröder*. **Acetone.** See *Gunning, Malerba, Oppenheimer*. **Agostini's Reaction for Glucose.** To five drops of the urine add five drops of 0.5% solution of gold chlorid and three drops of 20% potassa solution, and heat gently. If glucose is present, a red color will be produced. **Albumin.** See *Barral, Berzelius, Bychowski, Cohen, Fuh, Johnson, Oxyphenyl Sulfonic Acid, Parnum, Posner, Raspail, Reichl-Mikosch, Riegler, Rose, Schultze, Silbermann, Tretrop*. **Albumoses.** See *Boston, Riegler*. **Alcohol.** See *Puscher, Tscheppe, Udransky*. **Aldehyds.** See *Riegler*. **Alkalis.** See *Schweissinger*. **Alkaloids.** See *Robin, Rossbach, Scheibler, Schlagdenhauffen, Stas-Otto, Trotarelli*. **T., Allen's (Charles W.) Iodin.** See under *Pityriasis versicolor*. **Allen's Reaction for Vegetable Fats.** Shake together for one-half minute equal volumes of fat and nitric acid of specific gravity 1.4 and then set aside for 15 minutes. The presence of vegetable fats (cottonseed oil) will cause the formation of a coffee-brown coloration. **Aluminium.** See *Thénard*. ***p*-Amidophenetol.** See *Reuter*. **Ammonium.** See *Zellner*. **Anderson's Reaction for Distinguishing between Quinolin and Pyridin Salts.** The chloroplatinates of the latter, when boiled with water, are changed into insoluble double salts with the elimination of hydrogen chlorid, whereas the former remain in solution. **Andreasch's Reaction for Cystein.** To the hydrochloric acid solution add a few drops of dilute ferric chlorid solution and then ammonia. The liquid will become a dark purplish red. **Anilin.** See *Beissenhirtz*. **Antipyrin.** See *Fieux*. **Antiserum Method of Differentiating Human from Other Blood.** Modified Uhlenhuth's antiserum method. Human blood-serum is injected into the peritoneal cavity of rabbits in doses of 10 c.c. every 8 or 10 days. After 6 injections their blood is collected and preserved on ice; the serum is pipetted off after 24 hours. Some rabbits, as control animals, are not injected. The blood to be tested is, if dried, first dissolved, and then, as is fluid blood, diluted with ordinary water and salt solution. Several drops of the test serum are added and the tubes placed at a temperature of 35°. If the blood to be tested is human, a turbidity appears invariably; if not human, it remains clear. **T., Arata's, for Artificial Dyestuffs in Urine** depends upon the observation that these dyestuffs are abstracted from the urine by means of wool. The fiber is then subjected to special reactions. **T., Arloing and Courmont's.** See under *Tuberculosis*. **Arnold's Reaction for Narcein.** Upon heating the substance containing narcein with concentrated sulfuric acid and a trace of phenol a reddish coloration results. **Arsenic.** See *Abba, Reichardt, Schlickum, Schneider*. **Aymonier's Reaction for *α*-Naphthol.** The 15% alcoholic solution of *α*-naphthol is colored violet upon the addition of cane-sugar and mixing with 2 volumes of sulfuric acid. Upon the addition of 1 drop of a mixture of 1 part potassium bichromate, 10 parts of water, and 1 part concentrated nitric acid the same *α*-naphthol solution yields a black precipitate. *β*-naphthol does not produce either of these reactions. **Bach's Reagent for Hydrogen Peroxid.** This consists of two solutions: (*a*) 0.03 potassium bichromate and 5 drops of anilin in 1 liter of water; (*b*) 5% oxalic acid solution. Shake 5 c.c. of the solution to be tested with 5 c.c. of solution *a* and 1 drop of solution *b*; in the presence of hydrogen peroxid a violet-red color results. **Baeyer's Reaction for Glucose.** Indigo is formed on boiling a glucose solution with orthonitrophenylpropiolic acid and sodium carbonate. When the glucose is in excess, this blue is converted into indigo white. **B.'s Reaction for Indol.** A watery solution of indol to which has been added two or three drops of fuming nitric acid and then a 2% solution of potassium nitrite drop by drop, yields a red liquid and then a red precipitate of nitrosoindol nitrate, $C_{16}H_{13}(NO)N_{21}HNO_3$. **Bar-**

bot's Reagent for Fatty Oils is fuming nitric acid. Different oils when mixed with this reagent show different behavior with regard to coloration and solidification. Olive oil, *e. g.*, yields a white (not red nor brown) mixture which solidifies after one or two hours. **Barral's Test for Bile Pigments and Albumin in Urine.** Cover the urine in a test-tube with a stratum of a 20% solution of aseptol (orthophenosulfonic acid) and in the presence of albumin a white ring will form at the zone of contact of the two fluids. It is possible by this method to trace ⅛ of a grain of albumin in 1 liter of urine. Mucin causes a similar precipitate, but this disappears on boiling. The presence of bile-pigments will be indicated by the formation of a green ring. This is much more sensitive than the color test made with fuming nitric acid. **Basoletto's Reagent for Sesame Oil.** A mixture of equal parts by volume of sesame oil and a 2% solution of cane-sugar in hydrochloric acid of specific gravity 1.124 is colored red in the cold, but more rapidly upon heating. With glucose and lactose the coloration is formed only when the mixture is boiled with the hydrochloric acid and allowed to cool. **Baudouin's Test for Sesame Oil.** With 2 volumes of the oil to be tested shake 1 volume of a solution consisting of 0.1 gram of sugar dissolved in 10 c.c. of hydrochloric acid, specific gravity 1.18. In the presence of sesame oil, the oil, upon separation, will be cherry-red. According to Lewin, the reaction is carried out as follows: cover in a test-tube 0.5 gm. of finely pulverized sugar with 2 c.c. of the oil, then pour very carefully down the sides of the tube 1 c.c. of hydrochloric acid, sp. gr. 1.18. In the presence of sesame oil a rose-red zone is formed within 1 to 5 minutes. According to Millian, this test is more delicate when carried out with the well dried free fatty acids, which have been obtained from the oil. Villavecchia and Fabris replace sugar and hydrochloric acid by fulfurol. **T., Baumann and Goldmann's, for Cystin.** If a solution of cystin be shaken in caustic soda with benzoyl chlorid, a voluminous precipitate of benzoyl cystin will be produced. The sodium salt occurs as silky plates, readily soluble in water, but nearly insoluble in an excess of caustic soda. **T., Bechi's, for Cottonseed Oil.** Upon heating with an alcoholic-ethereal silver nitrate solution cottonseed oil (eventually upon addition of colza oil) yields a reddish-brown color; olive oils and other oils remain uncolored. **Becker's Reaction for Picrotoxin.** The alkaloid reduces Fehling's solution upon the application of gentle heat. **T., Behren's, for Fatty Oils.** When treated with a mixture of equal parts of sulfuric acid of sp. gr. 1.835 to 1.84, and nitric acid of sp. gr. 1.3, different oils show different results. Sesame oil yields a green color. **Beissenhirtz's Reaction for Anilin.** On the addition of a grain of potassium bichromate to a solution of anilin in concentrated sulfuric acid, the solution becomes first red, then blue, the color gradually disappearing. **T., Benedict's, for HCl** in the stomach, consists in auscultation over the stomach after the patient has swallowed a small quantity of saturated solution of sodium bicarbonate. Normal hydrochloric acidity is indicated by a fine crepitation, superacidity by an earlier and louder sound, and in anacidity the crepitation is absent. **Benzoic Acid.** See *Schacht.* **T., Berthelot's, for Phenol.** An ammoniacal solution of phenol treated with sodium hypochlorite produces a beautiful blue coloration. **T., Berzelius', for Albumin.** All albuminous substances (except peptone) are precipitated from their aqueous solutions by metaphosphoric acid in freshly prepared concentrated solution. **Bieber's Reagent.** Equal volumes concentrated sulfuric acid, red nitric acid, and water. **T., Biel's, for Cocain.** On heating a solution of 0.1 gm. of cocain salt in 1 c.c. of concentrated sulfuric acid for several minutes on a water-bath the addition of several c.c. of water causes the formation of a white crystalline precipitate of benzoic acid. **T., Biffi's, for Bile.** Acidify 150 c.c. to 200 c.c. of urine with sulfuric acid; add drop by drop a 5% barium chlorid solution, using about 30 drops to every 100 c.c. of urine. Pour off the liquid and collect the soft precipitate on absorbent cotton and spread evenly. Place a crystal of potassium bichromate upon the surface of the precipitate, and in the presence of bile a green ring will form around the crystal, changing to blue and then to red. A small amount of albumin will not interfere with the test, but if much is present the use of a saturated solution of sodium sulfate is recommended instead of the sulfuric acid. **Bile.** See *Biffi.* **B. Acids.** See *Mylius.* **B. Pigments.** See *Barral, Capranica, Dragendorff, Dumontpallier, Fleischl, Gluzinske, Grinbert, Jolles, Rasmussen, Riegler, Roman-Delluc, Schlesinger, Schmidt, Stokvis.* **Bischoff's Reaction for Gallic Acid.** A red coloration results upon heating gallic acid with dilute sulfuric acid and cane-sugar. **Biuret Reaction for Urea.** Melt urea completely in a dry test-tube; continue the heat for some time. When cold, dissolve in water, add abundant caustic soda and a dilute solution of copper sulfate drop by drop. The solution becomes first pink, then reddish-violet, and finally bluish-violet, according to the amount of copper sulfate added. **Blood.** See *Antiserum, Bremer, Crystalographic, Kobert, Ladendorff, Selmi, Struve.* **Boas' Reagent.** A solution of tropæolin or paper saturated with such a solution. **Bodde's Reaction** for the distinction between resorcin and phenol, benzoic acid and salicylic acid. A solution of resorcin yields a violet color with sodium hypochlorite, which fades to yellow; on the addition of more hypochlorite solution and application of heat a yellowish-red or brown color is produced. If ammonia is added before the addition of the hypochlorite, a violet color first results, which changes to yellow, and on heating passes into dark green. Phenol, salicylic acid, and benzoic acid yield a slight color with hypochlorite only upon heating. Upon previous addition of ammonia the acids are not colored. **T., Boernstein's, for Saccharin.** Extract the substance to be tested with ether; remove the ether and heat with resorcin and sulfuric acid and next add an excess of soda solution. In the presence of saccharin a strong fluorescence is produced. According to Hooker, other substances, *e. g.*, succinic acid, also produce this reaction. **Boston's Reaction for Bence-Jones' Albumose.** It depends upon the presence in the albumose of loosely combined sulfur: (1) 15 to 20 c.c. of filtered urine are placed in a test-tube and to it an equal quantity of saturated solution of sodium chlorid is added, and the whole shaken; (2) 2 c.c. to 3 c.c. of a 30% solution of caustic soda are now added and shaken vigorously; (3) the upper one-fourth of the column of liquid is gradually heated over the flame of a Bunsen burner to the boiling-point, whereupon a solution of lead acetate (10%) is added, drop by drop, boiling the upper previously heated stratum of liquid after each additional drop; (4) when the drop of lead acetate comes in contact with the liquid a copious pearly or cream-colored cloud appears at the surface, which becomes less dense as the boiling-point is reached; and when boiling is prolonged for one-half to one minute, the upper stratum shows a slight browning, which deepens to a dull black. This lessens in intensity toward the bottom of the tube. After standing the reaction be-

comes intensified, and a black precipitate falls through the clear liquid and collects at the bottom of the tube. **T., Böttger's, for Dextrose.** Take 5 gm. of basic nitrate of bismuth, 5 gm. of tartaric acid, 30 c.c. of distilled water. Add to this slowly a strong solution of sodium hydrate, stirring continually until a clear solution is obtained. To a small quantity of this add some solution of dextrose, and boil. A black precipitate of metallic bismuth is formed. Or the test may be performed in this way: add some solid bismuth subnitrate to the liquid already rendered alkaline with carbonate of soda or potash, and boil. The existence of dextrose will be evinced by the darkening of the bismuth salt or a black precipitate. **T., Böttger's, for the Red Color of Wine.** Add 1 volume of concentrated copper sulfate solution to 3 volumes of wine diluted to ten times its volume. Pure red wine will be discolored thereby. Unfermented wine, as well as the coloring-matter of bilberry, malva, cherries, also fuchsin, remains unchanged or is colored violet. **T., Böttger's, for Sugar in Glycerin.** Heat to boiling 5 drops of glycerin with 100 drops of water, 1 drop of nitric acid, sp. gr. 1.3, and 0.03 to 0.04 gm. ammonium molybdate. In the presence of sugar the solution is colored intensely blue. **Bremer's Reaction for Diabetic Blood.** The blood is prepared as in ordinary staining methods, and, after drying in a hot-air sterilizer, stained with methylene-blue and eosin. The red blood-corpuscles of diabetic blood are stained greenish-yellow, whereas in normal blood they assume a brownish color. **T., Brun's, for uric acid in minute particles.** Examine the particle in monobromid of naphthalin, the index of refraction of which is 1.66. Compare this with indices of refraction of uric acid, 1.73; calcium oxalate, 1.60; calcium phosphate, 1.63. If on raising the tube of the microscope the crystal becomes brilliant, the substance under the microscope has a higher index than the fluid in which it is immersed; it becomes darker if the substance has a lower index than the fluid. **T., Bychowski's (Z.), for Albumin.** Put a drop or two of the urine into a test-tube filled with hot water and shake it; in the presence of albumin a whitish cloud is formed and is diffused through the liquid. Phosphates give the same result, but the cloud disappears on addition of a drop of acetic acid. **Caffein.** See *Stenhouse.* **Capranica's Reaction for Bile Pigments.** Add to the solution chloroform containing some bromin, and shake; it becomes first green, blue violet, yellowish-red, and finally colorless. If the green or blue solution is shaken with HCl, the color is destroyed by the acid. **Carbon Monoxid.** See *Gautier, Hoppe-Seyler, Preyer, Salkowski.* **Cholesterin.** See *Obermüller, Schultze.* **Cinchonidin.** See *Schäfer.* **T., Cliamician and Magnanini's, for Skatol.** Skatol warmed with sulfuric acid produces a purple-red color. **Cocain.** See *Biel, Schell.* **T., Cohen's, for Albumin.** To the acid solution of albumin add a solution of potassium bismuthic iodid and potassium iodid. The albumin and the alkaloid are precipitated. **Copper.** See *Sabatier, Sabatin.* **T. for Cotton-seed Oil** suggested by the Swiss Society of Analytical Chemists. The reagent is made by dissolving in 5 c.c. of water 1 gm. of silver nitrate and adding 200 c.c. of alcohol, 20 c.c. of ether, and 1 c.c. of nitric acid of sp. gr. 1.4. Mix 10 c.c. of the fat to be tested with 3 c.c. of the reagent and heat on a boiling water-bath for ten minutes. In the presence of cotton-seed oil the mixture becomes brown or even black. **Creatinin.** See *Kerner, v. Maschke, Salkowski.* **T., Crystallographic, for Blood.** The use of sodium iodid as a reagent forming characteristic blood-crystals. Its use depends on the formation of iodin-hematin. **Cystein.** See *Andreasch.* **Cystin.** See *Baumann and Goldmann, Liebig, Müller.* **Dahlia or Georgina Paper,** paper charged with the coloring-matter from the florets of *Dahlia variabilis*, Desf., used in testing for alkalis and acids. **T., Denigè's, for Formic Aldehyd in Milk.** Make a solution of 40 c.c. of 0.5% solution of fuchsin; 250 c.c. distilled water; 10 c.c. of sodium bisulfite, sp. gr. 1.375; 10 c.c. pure sulfuric acid. To 1 c.c. of this solution add 10 c.c. of the suspected milk and let it stand 5 minutes. Then add 2 c.c. of pure hydrochloric acid and shake. In the presence of formic aldehyd a violet color will appear; a yellowish-white color in its absence. **T., Denigè's, for Uric Acid.** Convert uric acid into alloxan by the action of nitric acid; expel the excess of nitric acid by gentle heat, and treat with a few drops of sulfuric acid and a few drops of commercial benzol (containing thiophen); a blue coloration will result. **Dextrose.** See *Glucose.* **Diacetic Acid.** See *Lipliawsky.* **Dietrich's Reaction for Uric Acid.** A red coloration results from the addition of a solution of sodium hypochlorite or hypobromite to the uric acid solution. The color vanishes on adding caustic alkali. **T., Dragendorff's, for Bile Pigments.** Spread a few drops of the urine on an unglazed porcelain surface, and after absorption has taken place, add a drop or two of nitric acid. If bile be present, several rings of color will be produced, the green ring, which is characteristic of bile pigments, being chief among them. **T., Dumontpallier's, for Bile Pigments.** See *Test, Smith's* (Illus. Dict.). **Dyestuffs in Wine.** See *Arata, Böttger, Pradine, Schuster.* **T., Eastes', for Sugar.** Place 60 c.c. of filtered urine in a beaker of 100 c.c. capacity, add 1 gm. of sodium acetate, and a little less of phenylhydrazin hydrochlorate. Stir with a glass rod, which is to remain in the beaker. Evaporate on a water-bath to 10 or 15 c.c., scraping the sediment from the sides of the beaker, if it collects there; cool, and examine under the microscope. If there is 1 part to 1000 of sugar in the urine, osazone crystals will be found. **T., Eijkman's, for Phenol.** Add to the phenol solution a few drops of an alcoholic solution of nitrous acid, ethyl ether, and an equal amount of concentrated sulfuric acid. A red coloration is produced. **Eiselt's Reaction for Melanin in Urine.** Concentrated nitric acid, sulfuric acid, potassium dichromate or other oxidizing agents render urine containing melanin dark colored. **T., Elliott's, for Sugar.** Make re agents: (1) Copper sulfate, c. p., 27 gr.; glycerin, c. p., 3 drams; distilled water, 2½ drams; liquor potassa, q. s. ad 4 oz.; (2) a saturated solution of tartaric acid in water. Boil 1 dram of No. 1 and add 3 drops of No. 2; drop by drop add 8 drops of urine. **T., Elsner's Typhoid.** See under *Typhoid.* **Emetin.** See *Podwyssotzki.* **Eserin.** See *Saul.* **Fats.** See *Allen, Barbot, Schönwogel, Valenti.* **T., Fieux's, for Antipyrin.** Add 2.5 gm. of sodii metaphosphoric acid and 12 drops of sulfuric acid to the suspected fluid, filter, and to the clear filtrate add a few drops of sodium nitrate. If antipyrin is present, a clear green color will develop. **Fleischl's Reaction for Bile Pigments.** Add concentrated sulfuric acid by means of a pipet to urine already treated with a concentrated solution of nitrate of soda. The sulfuric acid sinks to the bottom of the test-tube and produces color layers, as in Gmelin's test. **Florence Reaction.** A test for the detection of semen. A solution of potassium iodid 1.65 gm., iodin 2.54 gm., distilled water 20 c.c., is added to fresh semen or to a watery extract of the stains, and then examined micro-

scopically, when numerous dark brown crystals of various sizes and forms will be visible. This is not an absolute test, but only corroborative, since substances other than semen give positive results. **Formic Aldehyd.** See *Denigé, Hehner, Hydrochloric Acid, Jorissen, Kentmann, Lebbin, Phenylhydrazin, Ramini.* **Frohn's Reagent.** Add 7 gm. of potassium iodid and 10 c.c. of hydrochloric acid to 1.5 gm. of freshly precipitated bismuth subnitrate which has been treated with 20 c.c. of water and heated to the boiling-point. **Fuchsin.** See *Valentine.* **T., Fuh's, for Albumin.** Equal volumes of nonalbuminous urine and a mixture composed of equal parts of carbolic acid and glycerin form an emulsion which clears up on agitation, leaving a transparent and highly refractive liquid. Equal volumes of albuminous urine and this solution when mixed produce a white turbidity which remains in spite of agitation and does not precipitate. The test will show 0.1% of albumin. **Furfurol Reaction for Proteids.** Furfurol is produced on heating proteids with sulfuric acid. **Fusel Oil.** See *Savalle.* **T., Gage's (De M.), for Bacterium coli in water.** Dissolve 100 gm. of dextrose and 50 gm. of peptone in a liter of boiling water; when cool, filter through paper until clear and add 0.25% of phenol. To 100 c.c. of the water to be tested add 10 c.c. of the dextrose broth and place in an incubator at 38° C. for 20 hours, when, if *Bacterium coli* is present, there will be a bead on the surface. Give the bottle one vigorous shake and place it before a window. The gas will separate from liquid and can be seen rising to the surface. **Gallic Acid.** See *Bischoff.* **T., Garrod's, for Hematoporphyrin in Urine.** Add to 100 c.c. of urine 20 c.c. of a 10% solution of caustic soda, and filter. Add to the filtrate thoroughly washed in water absolute alcohol, and enough hydrochloric acid to dissolve perfectly the precipitate. Spectroscopic examination may now be made of the solution for the two absorption bands characteristic of hematoporphyrin. **T., Gautier's, for Carbonic Oxids.** Carbon monoxid has the power of decomposing iodic anhydrid and forming CO_2, the iodin being liberated aud absorbed by copper. It is employed by Niclaux to show normal presence of carbon monoxid in blood. **T., v. Gebhart's, for Glucose.** To 10 or 15 drops of urine add 10 c.c. of water and a tablet containing sodium carbonate and orthonitrophenylpropiolic acid; warm carefully for 2 or 4 minutes, and if sugar is present the mixture becomes greenish and then dark indigo blue. **T., v. Gerhardt's.** See *T., Nitropropiol.* **Gerhardt's Reaction for Acetoacetic Acid, G.'s Bordeaux Reaction.** See *Test, Gerhardt's, for Diacetic Acid* (Illus. Dict.). **T., Gerrard's, for Glucose.** To a 5% solution of potassium cyanid add Fehling's solution until the blue color just commences to disappear. On heating this solution to boiling with one containing glucose, no precipitation of cuprous oxid results, but the solution will be more or less decolorized. **Globulin.** See *Hammarsten.* **Glucose.** See *Baeyer, Eastes, Elliott, Gebhart, Gerrard, Hassall, Kowarski, Löwenthal, Nickel, Nitropropiol, Riegler, Saccharimeter, Wender.* **T., Gluzinske's, for Bile Pigments.** Boil the solution for a few minutes with formalin, and an emerald-green coloration will result, changing to an amethyst violet on the addition of a few drops of hydrochloric acid. **Glycerin.** See *Ritsert.* **T., Grahe's.** A test for distinguishing genuine from spurious cinchona barks, made by heating a piece of bark in a test-tube and augmenting the heat to redness. If the bark contains one or more of the cinchona alkaloids, the product formed, condensing as an oily liquid on the sides of the tube, will be red. **Griess' Red Paper,** paper charged with sulfanilic acid and naphthylamin sulfate, used in testing for nitrous acid, nitrites, bilirubin, and aldehyds. **Griess' Yellow Paper,** paper charged with sulfanilic acid and metadiamido benzene; used as a sensitive test for nitrites. **T., Grigg's, for Proteids.** A precipitate is formed with all proteids except peptones on the addition of a solution of metaphosphoric acid. **T., Grinbert's, for Urobilin.** Boil together equal parts of urine and hydrochloric acid and shake with ether. In the presence of urobilin the ether assumes a brownish-red color with a greenish fluorescence. **T., Gunning's, for Acetone.** Add to the liquid to be tested an alcoholic solution and then ammonia. When allowed to stand, a precipitate of iodoform and a black precipitate of iodid of nitrogen are formed; the latter gradually disappears, when the iodoform is visible. **T., Hammarsten's, for Globulin.** To the neutral solution add powdered sulfate of magnesia until no more of the salt dissolves. Separate the globulin thus precipitated by filtration, and wash with a saturated solution of sulfate of magnesia. **T., Hassall's.** The growth of *Saccharomyces cerevisiæ,* observed under the microscope, is indicative of the presence of sugar in the urine. **T., Hehner's, for Formic Aldehyd in Milk.** Place 5 c.c. of the milk in a test-tube and dilute with an equal volume of water. Carefully pour down the sides of the test-tube strong sulfuric acid containing a trace of ferric chlorid, so as to form a layer of acid below the milk. In the presence of formic aldehyd a violet ring is formed at the junction of the two liquids; 1 part in 100,000 may be detected. The acid should be of 1.81 to 1.83 sp. gr. and must contain a trace of ferric salt. The charring due to the action of the acid on the milk must not be mistaken for color reaction. **Helianthin Paper, Methyl Orange Paper, Tropæolin D. Paper,** paper charged with methyl orange used in testing for acids and alkalis. **Hematoporphyrin.** See *Garrod.* **Hemoglobin.** See *Kobert.* **T., Hering's.** See under *Vision, Binocular.* **T., Hill's.** Wrap cotton about one end of a glass rod and so insert it in a test-tube that the cotton forms a stopper. Sterilize by dry heat, dip the rod in the material to be tested, return it to the test-tube or put it in a culture-medium. Cf. *T., Silk Thread.* **T., Hofmeister's, for Leucin.** A deposit of metallic mercury is formed on warming a solution of leucin with mercurous nitrate. **T., Hoppe-Seyler's, for Carbon Monoxid in Blood.** Add to the blood twice its volume of caustic soda solution of 1.3 specific gravity. Ordinary blood thus treated is a dingy brown mass which, when spread out on porcelain, has a shade of green. Blood containing carbon monoxid, under the same conditions, appears as a red mass which, if spread on porcelain, shows a beautiful red color. **T., Hydrochloric Acid,** for formic aldehyd in milk. Heat in a test-tube 1 c.c. of milk with 4 c.c. of strong hydrochloric acid containing a trace of ferric chlorid. In the presence of formic aldehyd a purple color appears, varying from a delicate tint to a deep violet. If a yellow color appears, repeat the test, using milk that has been diluted, 1 to 10, with water. **Hydrochloric Acid in Contents of Stomach.** See *Benedict, Szabo, Villier and Fayolle, Winkler.* **Hydrocyanic Acid.** See *Payer.* **Hydrogen Peroxid.** See *Bach, Wurster.* **Indican.** See *Obermeyer.* **Indigo-carmin Paper,** paper charged with indigo carmin and sodium carbonate used as a test for sugar in urine. **Indigo Red.** See *Rosin.* **Indol.** See *Baeyer, Neucki.* **Iodin.** See *Sabrazes-Denigé, Sandlund.* **T., v. Jaksch's, for Uric Acid.** Allow the powder

to heat gently on a watch-glass with a drop or two of chlorin or bromin water. A red residue is formed which, when cold, turns a purple red when ammonia is added. **T., Johnson's, for Albumin in Urine.** A concentrated solution of picric acid is poured upon the surface of the urine in a test-tube. A ring of white precipitate occurs at the junction of the two liquids; this increases on heating. Peptones and albumoses are precipitated by this reagent, but the precipitate redissolves on heating. **T., Jolles', for Bile Pigments in Urine.** Put in a stopper cylinder 50 c.c. of urine, and add a few drops of 10% hydrochloric acid and an excess of a barium chlorid solution with 5 c.c. chloroform, and shake for several minutes. Then by means of a pipet remove the chloroform and the precipitate, place in a test-tube, and heat on the water-bath to about 80° C. When the chloroform has evaporated, decant the liquid from the precipitate carefully and let 3 drops of concentrated sulfuric acid, containing one-third fuming nitric acid, flow down the sides of the test-tube. If bile pigments be present, the characteristic coloration results. **Jolles' Solution** for the detection of albumin in the urine. Corrosive sublimate, 10 parts; sodium chlorid, 10 parts; succinic acid, 20 parts; distilled water, 500 parts. **T., Jorissen's, for Formic Aldehyd in Milk.** To several drops of a 10% aqueous solution of phloroglucinol add 10 c.c. of the suspected milk in a test-tube, shake well, and add a few drops of caustic soda (or caustic potash). In the presence of formic aldehyd a delicate red color appears. **T., Justus.** See under *Syphilis*. **T., Kentmann's, for Formic Aldehyd.** Dissolve in a test-tube 0.1 gm. of morphin hydrochlorid in 1 c.c. of strong sulfuric acid and add an equal volume of the solution to be examined without mixing; in the presence of formic aldehyd the aqueous solution will be clear red violet in color after the lapse of a few minutes. The reaction is sensitive to 1 : 5000 to 1 : 6000. **Kerner's Reaction for Creatinin.** Add to a solution of creatinin acidified with a mineral acid a solution of phosphotungstic or phosphomolybdic acid; a crystalline precipitate will be formed. **T., Kobert's, for Hemoglobin.** Treat the solution with one of zinc sulfate or shake it with zinc powder, when a precipitate of zinc hemoglobin is formed. Alkalis color this precipitate red. **T., Kowarski's,** for sugar in the urine. Shake in a test-tube 5 drops of phenylhydrazin with 10 drops of strong acetic acid, add 1 c.c. of saturated sodium chlorid solution and 2 c.c. or 3 c.c. of urine, and heat for 2 minutes; then cool slowly. If the amount of sugar present is as high as 0.2%, characteristic crystals will form in a few minutes; if less, the formation of crystals will require a longer time—5 to 30 minutes. **T., Ladendorff's, for Blood.** Treat the liquid with tincture of guaiacum, and then with oil of eucalyptus; in the presence of blood the upper layer becomes violet and the lower layer blue. **T., Landolt's, for Phenol.** Treat the solution with bromin water; a white crystalline precipitate of tribromphenol is produced. **Lang's Reaction for Taurin.** A white combination appearing as a precipitate occurs on boiling a solution of taurin with freshly precipitated mercuric oxid. **T., Lebbin's, for Formic Aldehyd.** Boil a few c.c. of the suspected milk with 0.05 gm. resorcinol, to which half, or an equal volume, of a 50% solution of sodium hydroxid is added. In the presence of formic aldehyd the yellow solution changes to a fine red color, which becomes more apparent on standing. **T., Lieben's, for Acetone in Urine, Modified by Ralfe.** Dissolve 20 grains of potassium iodid in a dram of liquor potassæ, and boil; then carefully float the urine on its surface in a test-tube. A precipitation of phosphates occurs at the point of contact which, in the presence of acetone, will become yellow and studded with yellow points of iodoform. **T., Liebig's, for Cystin.** Boil the substance with caustic alkali containing lead oxid. In the presence of cystin a precipitate of black lead sulfid is formed. **T., Lipliawsky,** for diacetic acid in the urine. Two solutions are needed: (*a*) a 1% solution of paramidoacetophenon with addition of 2 c.c. of concentrated HCl shaken thoroughly; (*b*) a 1% aqueous solution of potassium nitrite; 6 c.c. of the first is mixed with 3 c.c. of the second, an equal volume of urine added, and a drop of ammonia. To 10 drops to 2 c.c. of this mixture add 15 to 20 c.c. of concentrated HCl, 3 c.c. of chloroform, and 2 to 4 drops of iron chlorid solution. If the test-tube is corked and gently but repeatedly inverted, in the presence of diacetic acid the chloroform will show a characteristic violet color—the deepness of the color depending upon the amount present. **Löwenthal's Reaction,** the agglutination of *Spirochæta obermeieri*, Cohn, by the blood-serum of an individual affected with relapsing fever. **T., Löwenthal's, for Glucose.** A glucose solution boiled with a solution of ferric chlorid, dissolved in tartaric acid and carbonate of soda, becomes dark and deposits an abundant precipitate of iron oxid. This test is not applicable to urine. **T., Malerba's, for Acetone.** Add to the acetone a solution of dimethylparaphenylendiamin; a red coloration results. **T., Mallein,** the experimental injection of the toxin (mallein) into the tissues of an animal for the purpose of diagnosis in suspected cases of glanders. **T., Mandel's, for Proteids.** Add to the proteid solution a 5% solution of chromic acid, and a precipitate will be formed. **T., Marme's.** Cadmium iodid is added to saturation to a boiling concentrated solution of potassium iodid, and then mixed with an equal quantity of cold saturated solution of potassium iodid. It gives a whitish or yellowish precipitate, with an alkaloid in a weak sulfuric solution. **v. Maschke's Reaction for Creatinin.** Add a few drops of Fehling's solution to the creatinin dissolved in a cold saturated solution of carbonate of soda. An amorphous, flocculent precipitate is formed in the cold, but better on warming to 50° to 60° C. **Mucin.** See *Salkowski-Leubes*. **T., Mulder's, for Proteids.** See *Xanthoproteic Reaction* in *Table of Tests* (Illus. Dict.). **T., Müller's, for Cystin.** Boil the cystin with potassium hydrate, to dissolve it; when cold, dilute with water and add a solution of sodium nitroprussid. This produces a violet coloration which changes rapidly to yellow. **T., Mylius' Modification of Pettenkofer's, for Bile Acids.** Add 1 drop of furfurol solution and 1 c.c. of concentrated sulfuric acid to each cubic centimeter of the alcoholic solution of bile acids; cool, if necessary, so that the test does not become too warm. A red coloration is produced, which changes to bluish-violet in course of the day. **α-Naphthol.** See *Aymonier*, *Richardson*. **N. Yellow.** See *Schäfer*. **Narcein.** See *Arnold*. **T., Nencki's, for Indol.** Treat with nitric acid containing nitrous acid; a red coloration results, and in concentrated solution a red precipitate may form. **T., Nickel's Sugar,** for distinguishing glucose from cane-sugar; add tetrachlorid of carbon to the sugar and heat it for some time to 100° C. (212° F.). Cane-sugar is turned black by the process and glucose is not. **T., Nitropropiol,** for sugar in urine. Place 10 to 15 drops of urine in test-tube, add 10 c.c. (℥ 160) distilled water and a nitropropiol tablet, and heat 2 to 4 minutes. In the presence of sugar there is first a green coloration, followed by an intensely blue

color. This will indicate 0.3% of sugar, and only takes place if grape-sugar is actually present. If much albumin is present, first eliminate it by shaking with salt or chloroform. **Nitrous Acid or Nitrites.** See *Sabatier*, *Schäfer*, *Schmidt*. **T., Nothnägel's,** a crystal of sodium chlorid placed upon the serous surface of any portion of the intestine of the rabbit causes ascending peristalsis. This test has been applied to ascertain the direction of the bowel in operations upon man, but has not been found wholly reliable. **T., Obermeyer's, for Indican in Urine.** With a lead acetate solution (1 : 5) precipitate the urine; care must be taken not to add an excess of lead solution. Filter, and shake the filtrate for one or two minutes with an equal quantity of fuming hydrochloric acid, which contains 1 or 2 parts of ferric chlorid solution to 500 parts of the acid. Add some chloroform, which becomes blue from the generation of indigo-blue. **T., Obermüller's, for Cholesterin.** Place the cholesterin in a test-tube, and fuse with two or three drops of propionic acid anhydrid over a small, naked flame. The fused mass on cooling is violet, changing to blue, green, orange, carmin, and, finally, to copper-red. **Oils.** See *Barbot*, *Basoletto*, *Baudouin*, *Becki*, *Behren*, *Poutet*, *Renard*, *Royere*, *Schönwogel*, *Schneider*, *Souchère*, *Storch*, *Tocher*, *Tuchen*, *Villavecchia*. **T., Oppenheimer's, for Acetone.** Make a reagent by diluting 20 c.c. of concentrated sulfuric acid by the addition of a liter of water; to this add 50 gm. of yellow oxid of mercury and set aside for 24 hours. To 3 c.c. of unfiltered urine add a few drops of the reagent. In the presence of albumin a precipitate occurs at once; in its absence the precipitate is seen some time later. **Orcin Reaction for Xylose in the Urine.** Heat the urine with an equal volume of hydrochloric acid and a trace of orcin. As soon as a green color is apparent, cool the solution and shake with amyl alcohol. The amyl alcohol takes on a green color and in the spectroscope shows the characteristic band between C and D, and, in addition, a more uncertain band, more toward the red. **T., Oxyphenyl Sulfonic Acid, for Albumin.** Make a solution of 3 parts of oxyphenyl sulfonic acid, 1 part salicylsulfonic acid, water 20 parts. To one drop of this add 1 c.c. of urine, and in the presence of albumin a white, transparent precipitate will be formed. **Ozone.** See *Schönbein*. **T., Pain's, for Santonin.** A small crystal of the alkaloid treated in a test-tube with 2 or 3 c.c. of ethyl nitrite and a few drops of a solution of potassium hydrate gives a rose-red color. **T., Parnum's, for Albumin.** Add to the filtered urine one-sixth of its volume of a concentrated solution of sulfate of magnesium or sodium. On acidulating with acetic acid and boiling the albumin is precipitated. **Payer's Reaction for Hydrocyanic Acid.** The reagent employed is a very dilute alcoholic tincture of guaiac resin, containing a trace of copper sulfate solution. Upon approaching this mixture, held in a porcelain capsule, with a glass rod moistened with hydrocyanic acid, blue lines are formed in the liquid; upon stirring, the whole solution turns blue. **T., Penzoldt and Fischer's, for Phenol.** Treat a strongly alkaline solution of phenol with a solution of diazobenzol sulfonic acid; a deep red coloration is produced. **Peptones.** See *Posner*, *Riegler*, *Salkowski*. **Persoz's Solution for Distinguishing Textile Fibers.** A solution of 10 gm. of zinc chlorid in 10 gm. of water, shaken with 2 gm. of zinc oxid. Upon digesting any fabric in this basic zinc chlorid solution at 30° to 40°, the silk contained in it will be dissolved. **Phenacetin.** See *Ritsert*. **Phenol.** See *Berthelot*, *Bodde*, *Eijkmann*, *Landolt*, *Penzoldt and Fischer*, *Plugge*, *Pollaci*. **T., Phenylhydrazin, for Dextrose.** See *T., v. Jaksch's* (Illus. Dict.). **T., Phenylhydrazin** (of Neumann), consists in the use of a solution of sodium acetate in acetic acid of from 50% to 75% strength or in glacial acetic acid. A special test-tube is employed, the urine is introduced, the sodium acetate solution and 2 or 3 drops of pure phenylhydrazin are added, and the whole boiled down to a certain point indicated on the tube, cooled rapidly in running water, boiled one minute more, and cooled. In the presence of sugar, phenylhydrazin crystals appear. **T., Phenylhydrazin** (of Riegler). To 0.1 gm. of phenylhydrazin hydrochlorid placed in an evaporating dish to which has been added 0.5 gm. of sodium acetate, add 20 drops of the urine. Heat to boiling and add 20 or 30 drops of caustic soda. In the presence of so little as 0.005% of sugar a reddish-violet coloration will be given. **T., Phenylhydrazin,** proposed by Vitali as a test for formic aldehyd. A mixture of the two gives rise to a milky discoloration; eventually a yellowish deposit is precipitated upon the sides of the test-tube. In concentrated solutions the turbidity appears immediately. In solutions of a strength of 1 : 100 the reaction occurs after a few seconds; in those of 1 : 1000, in 1 minute; in those of 1 : 10,000, in 5 minutes; in those of 1 : 100,000, in 2 to 3 hours. **Picric Acid.** See *Rupeau*. **Picrotoxin.** See *Becker*. **Plugge's Phenol Reaction.** A dilute phenol solution is rendered intensely red on boiling with a solution of mercuric nitrate containing a trace of nitrous acid. Metallic mercury separates out at the same time and an odor of salicylol is developed. **Plugge's Reagent for Gum Ammoniac.** Thirty grams of caustic soda are dissolved in water, the solution kept cool during the addition of 20 gm. of bromin and then diluted to one liter. On the addition of one drop of this solution to an aqueous or alcoholic solution of gum ammoniac prepared with the addition of dilute soda lye an immediate but rapidly vanishing violet coloration is caused. **Podwyssotzki's Reaction for Emetin.** On the addition of a drop of a saturated solution of sodium phosphouranate, emetin produces a brown coloration which changes to blue if a drop of hydrochloric acid be added. **T., Politzer's.** See under *Signs*. **Pollaci's Reaction for Phenol.** Phenol turns brown when treated with chromic acid mixture. **Posner's Reaction for Peptones and Albumins.** Alkalinize the urine, pour it into a test-tube, and overlay it very carefully with a very dilute, almost colorless solution of copper sulfate. In the presence of peptone there will be the formation of a violet zone even in the cold; the same reaction is yielded by albumin upon warming. **Potassium Cyanate.** See *Schneider*. **Poutet's Reaction for Fatty Oils.** The elaidin reaction. Pour into a test-tube 10 gm. of oil, 5 gm. nitric acid (40°–42° Be′), and 1 gm. of mercury, dissolve the mercury by shaking for 3 minutes, allow the mixture to stand 20 minutes, and again shake for a minute. Various fats show differences in color, and in the ease with which they solidify. Olive oil and peanut oil harden most rapidly. According to other authorities, 50 c.c. of the oil are mixed with 12 gm. of mercury and 15 gm. of nitric acid, sp. gr. 1.35, by which treatment only olive oil and oil of almonds are solidified, all other oils remaining liquid. **Pradine's Reagent for Dyestuffs in Wine.** Upon shaking wine with a saturated solution of ammonia gas in ether the foreign coloring-matters are dissolved. **T., Preyer's, for Carbon Monoxid in the Blood.** Warm three or four drops of the suspected blood for 5 minutes at 30° C. with 10 c.c. of water and 5 c.c. of potassium

cyanid solution (1 : 2). The spectrum of normal blood, when treated as above, loses the absorption line of oxyhemoglobin and in its place shows a broad absorption band, while the spectrum of carbon monoxid blood remains unchanged. **Prollius' Solution** for extracting cinchona bark for the determination of alkaloids. A mixture of 88 parts of ether, 8 parts absolute alcohol, and 4 parts ammonia water. **Protein.** See *Ritthausen.* **T., Puscher's, for Alcohol in Ethereal Oils.** Introduce a few drops of the ethereal oil into the bottom of a test-tube and dust the upper portion of the tube with powdered fuchsin or introduce the latter by means of a swab of cotton. On boiling, the alcohol evaporates first and dissolves the fuchsin to a red solution. **T., Ramini's, for Formic Aldehyd.** Add 1 c.c of a 1% solution phenylhydrazin hydrochlorate and 3 or 4 drops freshly prepared sodium-nitroprussiate solution to 15 c.c. liquid, then make alkaline with concentrated NaOH, and warm; if formic aldehyd is present, a marked blue color develops, changing to deep red. Milk thus tested turns blue to ash-gray, changing after 15 minutes to red. (Merck.) **T., Rasmussen's, for Urobilin.** Shake together thoroughly equal parts of urine and ether to which has been added six or seven drops of tincture of iodin. Allow it to stand until the solution separates into an upper layer of ether and iodin and a lower one of urine. In the presence of bile the lower layer turns green if biliverdin also exists. **Raspail's Reaction for Albumins.** These are colored red by sugar and concentrated sulfuric acid. **T., Reach's,** for testing the secretory functions of the stomach without the use of the stomach-tube. It consists in administration of capsules of barium iodid and bismuth oxyiodid from which iodin is set free only through the action of HCl; then test the sputum for iodin. If the reaction occurs in 80 minutes, the individual is normal; earlier action indicates hyperacidity; later occurrence, hypoacidity. **Reich's Reaction for Cane-sugar.** Solutions of cane-sugar when treated with cobalt nitrate solution yield a violet coloration upon the addition of soda lye. According to Dupont, this reaction is not interfered with by glycerin, milk-sugar, glucose, or invert sugar; dextrin and gum should, however, be removed by precipitation with lead acetate or baryta water. **T., Reichardt's, for Arsenic in the Urine.** Concentrate 200 c.c. of urine with about 2 gm. of caustic soda, dissolve the residue in a little water acidulated with hydrochloric acid, and then test in a Marsh's apparatus. **Reichert-Meissl's Number** indicates the number of cubic centimeters of decinormal sodium or potassium hydroxid solution necessary to neutralize the volatile fatty acids obtained from 5 gm. of a fat, when operating according to a definite special method. The Reichert numbers formerly in vogue gave the figures for 2.5 gm. of fat, and are therefore only half as large as the Reichert-Meissl numbers. **T., Reichl's, for Proteids.** To the proteid solution add 2 or 3 drops of an alcoholic solution of benzaldehyd, and then considerable sulfuric acid previously diluted with an equal bulk of water. Finally, add a few drops of a ferric sulfate solution, and a deep blue coloration will be produced in the cold after some time, or at once on warming. Solid proteids are stained blue by this reaction. **Reichl-Mikosch's Reagent for Albumins.** Benzaldehyd and sulfuric acid containing ferric sulfate. **T., Renard's, for Peanut-oil.** This depends upon the isolation of arachic acid (melting-point 74°–75°), by means of the lead salt, which can be separated from lead oleate by extraction with ether. **T., Reoch's, for Albumin.** See *T., Macwilliams'* (Illus. Dict.). **T., R.'s, for HCl in Contents of Stomach.** On the addition of a mixture of citrate of iron and quinin and potassium sulfocyanid to the gastric juice or contents of the stomach, containing free hydrochloric acid, a red coloration will be produced. **Resorcin.** See *Bodde.* **T., Reuter's, for *p*-Amidophenetol in Phenacetin.** Melt the phenacetin with pure chloral hydrate; in the presence of amidophenetol a violet coloration is produced (even the purest commercial specimens exhibit a slight rose tint). **Richardson's Reaction for *a*-Naphthol.** Dissolve 0.04 gm. of naphthol and 0.5 c.c. of normal sodium hydroxid solution in 1 or 2 c.c. of water; then add a mixture of 0.05 gm. sulfanilic acid dissolved in 5 c.c. of normal sodium hydroxid solution, and 0.02 gm. of sodium nitrite dissolved in 5 c.c. of normal sulfuric acid. Under these conditions *a*-naphthol yields a dark blood-red color changing to brown on the addition of dilute sulfuric acid; *β*-naphthol yields only a reddish-yellow color. **T., Ridenour's, for Salicylic Acid.** H_2O_2 in the presence of an ammoniacal solution of ammonium carbonate affords a red varying in intensity according to quantity of salicylic acid present. (Merck.) **T., Riegler's, for Albumin.** (1) Asaprol (calcium naphtholsulfonate), 8; citric acid, 8; dissolve in distilled water, 200; 10 c.c. of urine are mixed with 10 to 20 drops of the reagent. Traces of albumin are indicated by a turbidity; larger quantities by a ppt. Quantitative determination may be made with an albuminometer. (2) Ten gm. *β*-naphthalinsulfonic acid are well shaken with 200 c.c. water and filtered. A turbidity or ppt. on adding 20 to 30 drops of reagent to 5 to 6 c.c. of fluid indicates presence of albumin. Sensitiveness 1 : 40,000. Albumoses and peptones react in a similar manner, but the ppt. disappears on warming and reappears on cooling. (Merck.) **T., R.'s, for Albumoses and Peptones.** Dissolve 5 gm. paranitranilin in 25 c.c. water and 6 c.c. concentrated H_2SO_4, add 100 c.c. water, then a solution of sodium nitrite 3 gm. in 25 c.c. water, and make up to 500 c.c. with water. Filter and preserve in the dark. Mix 10 c.c. reagent with 10 c.c. fluid to be tested, then add 30 drops 10% solution NaOH—if very small quantities of albumoses or peptones are present a yellowish orange color develops; with notable quantities a blood-red, even the froth on shaking being red. On now adding excess of H_2SO_4 an orange or brownish ppt. forms. (Merck.) **T., R.'s, for Aldehyds and Glucose.** Heat 0.1 gm. phenylhydrazin hydrochlorate; 0.5 gm. crystal sodium acetate, and 1 c.c. sugar solution until dissolved. When near boiling-point add 20 to 30 drops 10% NaOH without shaking—in from a few seconds to 5 minutes, liquid becomes violet-red, even if not more than 0.005% sugar present. If no sugar present, color will be a slight pink. For sugar in urine, color must develop within 1 minute to afford physiologic significance. Reaction also occurs with aldehyds, hence absence of these must be assured. According to Jolles, absence of albumin must also be assured. Reaction uninfluenced by uric acid, and creatinin. (Merck.) **T., R.'s, for Bile Pigments.** On adding an excess of para-diazonitranilin solution to an alkaline solution of bilirubin or biliverdin, intensely colored reddish-violet flocks are precipitated, soluble in chloroform, alcohol, or benzin, and affording reddish-violet or violet solution. (Merck.) **T., R.'s, for Nitrites.** (1) Fifteen c.c. of the fluid to be examined are mixed in a test-tube with 0.02 to 0.03 gm. of the naphthol reagent (equal parts naphthionic acid and pure beta-naphthol) and 2 to 3 drops concentrated HCl, shaken, and 1 c.c. strong NH_3 poured down the side of the tube, while held in a slanting position; presence of nitrites is indicated by

appearance of a red zone, and on shaking the whole solution turns red. (2) Naphthylamin sulfonic acid (naphthionic acid), 1 gm.; beta-naphthol, 1 gm.; sodium hydrate, 0.5 gm.; water, 200 c.c. Ten drops of the solution are used. (Merck.) **T., R.'s, for Sugar in Urine.** To 20 drops of urine in a test-tube add about 0.1 gm. of pure hydrochlorid of phenylhydrazin, about 0.5 gm. of crystallized sodium acetate, and 2 c.c. of water. Heat until it boils, then add 10 c.c. of a 10% solution of sodium hydrate, inverting the tube 5 or 6 times. Set aside. In the presence of sugar within 5 minutes the whole fluid will take a reddish-violet hue. **T., R.'s, for Uric Acid.** Para-nitranilin 0.5 gm., water 10 c.c., pure concentrated H_2SO_4, 15 drops. Put into a glass flask of 150 c.c. capacity, and heat with agitation until dissolved. Water 20 c.c. is now added, the mixture cooled quickly, 2.5%, $NaNO_2$ solution 10 c.c. is added, and diluted, after 15 minutes, with water 60 c.c. The mixture is shaken up repeatedly and filtered. The formation of a blue or green color on adding the reagent and 10% NaOH solution indicates presence of uric acid. (Merck.) **T., Rinnmann's, for Zinc.** Zinc oxid moistened with cobalt nitrate solution and strongly heated on charcoal yields a green color. **T., Ritsert's, for Glycerin.** Heat 1 c.c. glycerin to boiling with 1 c.c. NH_3 then add 3 drops 5% $AgNO_3$ solution—no change should occur in the liquid within 5 minutes. Test intended to show presence of arsenous acid, as well as of acrolein and formic acid; recent investigations, however, seem to have proved the test to be fallacious. (Merck.) **T., R.'s, for Phenacetin.** Boil 0.1 gm. phenacetin 1 minute with 1 c.c. concentrated HCl, then dilute with 10 c.c. water, filter after cooling, and treat filtrate with 3 drops 3% chromic-acid solution—liquid gradually assumes a ruby-red color. (Merck.) **Ritsert's Reaction for Sulphonal.** Upon heating sulfonal with gallic or pyrogallic acid, the odor of mercaptan appears. **T., Ritthausen's, for Protein.** A violet color develops on dissolving protein in dilute H_2SO_4, adding excess of KOH, and then a few drops saturated solution $CuSO_4$. (Merck.) **T., Roberts-Stolnikoff's, for Albumin in Urine.** Depends on employment of Heller's test (see Illus. Dict.). (Merck.) **T., Robin's, for Alkaloids.** Mix 1 part of substance with 2 parts cane-sugar and add 1 or 2 drops H_2SO_4, stirring with a glass rod. Alkaloids give colors as follows: *Atropin*—violet, changing to brown; *codein*—cherry-red, changing to violet; *morphin*—rose, rapidly changing to violet; *narcotin*—persistent mahogany color; *quinin*—greenish, bright-yellow, changing to dark coffee color with yellow margin; *salicin*—bright-red; *strychnin*, reddish, changing to dark coffee color; *veratrin*—dark green. (Merck.) **T., Robinet's, for Morphin.** See *T., Robiquet's* (Illus. Dict.). **T., R.'s, for Salicylic Acid in Urine.** Precipitate urine with neutral lead acetate, remove excess of lead with dilute H_2SO_4, and at once add Fe_2Cl_6. If liquid has a red color (due to iron acetate) add H_2SO_4 until colorless or the purple salicylic-acid color appears. (Merck.) **T., Roger's, for Tin.** Ammonium molybdate affords a blue color with stannous chlorid, still visible in solution of 1 : 250,000. (Merck.) **T., Roman-Delluc's, for Urobilin in Urine.** Shake out 100 c.c. urine with 20 c.c. chloroform, after acidulating with 8 to 10 drops acetic acid. Overlay 2 c.c. of clear chloroformic solution with 4 c.c. of 1 : 1000 solution zinc acetate in 95% alcohol. At line of separation a characteristic green fluorescence appears if urobilin be present, more easily recognized against a black background. On shaking, fluorescence is more marked, and the mixture acquires a pink tint. (Merck.) **Rose's Biuret Reaction for Albumins.** Alkalinize the albumin solution with soda lye and add drop by drop, with constant shaking, a dilute copper sulfate solution (17 or 18 gm. crystallized cupric sulfate in 1 liter of water). The solution will assume first a rose-red, then a violet, and finally a blue color, which latter appears of a decided reddish tint when compared with a normal alkaline copper solution. **T., Rosenbach's Modification of Gmelin's, for Bile Pigments.** When the liquid has all been filtered through a very small filter, apply to the inside of the filter a drop of nitric acid containing only a very little nitrous acid, when a pale yellow spot will form, surrounded by colored rings, which are yellow-red, violet, blue, and green. **Rosenstiel's Anilin Reaction.** See *T., Runge's* (Illus. Dict.). **T., Rosin's, for Indigo Red.** Render the liquid alkaline with sodium carbonate and extract with ether, which is colored red by the indigo red. **T., Rossbach's, for Poisonous Alkaloids.** Action of alkaloids upon infusoria is tested, and the degree of toxicity estimated from intensity of action. (Merck.) **Roussin's Crystals.** Nicotin in ethereal solution yields with an ethereal iodin solution an oily mass, from which ruby colored crystals, reflecting dark blue, gradually separate. **T., Royere's, De la, for Fixed Oils.** A red color develops on treating a few drops of oil with 2 drops fuchsin solution to which just enough alkali has been added to decolorize it. The color is produced by the free acids in the oils, and according to Halphen the value of the test is limited by the fact that mineral oils may also contain acids. The acids in oils used as lubricators may also be neutralized by alkaline soaps, though the presence of the latter can be easily detected by the red color formed on adding a solution of congo red just colored violet by HCl. (Merck.) **T., Rubner's, for Carbon Monoxid in Blood.** Agitate the blood with 4 or 5 volumes of solution of lead acetate for one minute. If the blood contains CO, it will retain its bright color; if it does not, it will turn chocolate-brown. **T., R.'s, for Glucose.** Add to the liquid an excess of lead acetate; filter, and add to the filtrate ammonium hydrate until no further precipitate is produced. Warm gently, when the precipitate formed will gradually become pink; this color decreases on standing. **T., Rudolf-Fischer's, for Acetanilid.** Heat 5 gm. acetanilid for some time with 5 gm. dry $ZnCl_2$—a yellow coloring-matter with moss-green fluorescence forms, which may be dissolved by heating with very dilute HCl. Product formed is flavanilin, $C_{16}H_{14}N_2$. (Merck.) **T., Rupeau's, for Picric Acid in Beer.** Ferrous sulfate, 5 gm. tartaric acid, 5 gm., water, 200 gm. Mix solution with an equal volume of saturated solution NaCl. Overlay 1 to 2 c.c. reagent on 0.5 c.c. beer and add 2 drops NH_3. Presence of picric acid is shown by a red color. (Merck.) **T., Sabatier's, for Copper.** Add 1 drop solution of a copper salt to 1 c.c. concentrated HBr—if much copper is present, a purple-red color at once develops; if little, color is lilac. A 0.0001% solution of a copper salt still gives the reaction. A mixture of KI and H_3PO_4 also gives the reaction, which develops on first carefully warming, then cooling. (Merck.) **T., S.'s, for Nitrites.** On dissolving a few fragments cuprous oxid in concentrated H_2SO_4, containing a little nitrite, the solution is colored intensely violet to purple. All cuprous compounds, and cuproso-cupric derivatives afford the color. Cupric compounds do not react. (Merck.) **T., Sabatin's, for Copper.** Trace of a copper salt dissolved in concentrated hydrobromic acid develops an intense purple color. One drop of a

1 : 30,000 copper-salt solution added to 1 c.c. colorless concentrated acid still affords the reaction. Reagent may be replaced by a solution of KBr in orthophosphoric acid. Delicacy of reaction somewhat impaired by presence of free bromin; on driving off latter by heat, however, the color is observed. (Merck.) **Sabrazes-Deniges' Test-paper for Iodin.** Boil 1 gm. starch with 40 c.c. water, cool, and add 0.5 gm. sodium nitrite. Apply paste to both sides of heavy unsized paper. The dry paper is moistened with liquid to be tested, and moistened spot wetted with 1 drop 10% H_2SO_4—if iodin (iodid) is present, a blue color develops. (Merck.) **T., Saccharimeter.** A solution of dextrose rotates the plane of polarized light to the right. **Saccharin.** See *Börnstein, Schmitt.* **Salicylic Acid.** See *Ridenour, Robinet, Spicca.* **T., Salkowski's, for Creatinin.** See *T., Weyl's* (Illus. Dict.). **T., S.'s, for Indol.** To the indol solution add a few drops of nitric acid, and then, drop by drop, a 2% solution of potassium nitrite. The presence of indol is evinced by a red color, and finally by a red precipitate of nitrosoindol nitrate. **T., S.'s Modification of Hoppe-Seyler's, for CO in Blood.** Add to the blood to be tested 20 volumes of water and an equal quantity of a sodium hydrate solution of specific gravity 1.34. In the presence of carbon monoxid the mixture will soon become milky, changing to bright red. On standing, red flakes collect on the surface. Normal blood treated in this way gives a dirty brown coloration. **T., S.'s, for Peptone in Urine.** Acidulate 50 c.c. urine with HCl, and precipitate with phosphotungstic or phosphomolybdic acid. Wash the precipitate, warm on water-bath, dissolve with a little NaOH, and add a few drops 1% to 2% $CuSO_4$ solution. In presence of peptone, a red color appears. The author amends this test, since he finds that the presence of urobilin may occasion a precipitate and give the biuret reaction like albumose; if, therefore, urobilin is present, it may first be removed from the phosphomolybdic precipitate before the biuret reaction is applied. (Merck.) **T., Salkowski-Leubes', for Mucin in Urine.** Treat urine with 2 volumes absolute alcohol, collect precipitate and re-dissolve in water. The solution gives a cloud with acetic acid insoluble in excess, but soluble in HCl or HNO_3. (Merck.) **T., Sandlund's, for Iodin in the Urine.** Treat 5 c.c. of urine with 1 c.c. of sulfuric acid (1 : 5) and 2 or 3 drops of sodium nitrate solution (1.0 gm. in 500 c.c.), and shake with carbon bisulfid. In the presence of iodin (up to 0.001%) the carbon bisulfid becomes colored. **Santonin.** See *Pain.* **T., Saul's, for Eserin.** If a solution of eserin, or one of its salts, be heated to boiling, and a few drops of strong HNO_3, added, an orange-colored liquid is obtained, which, on adding NaOH in excess, yields an intensely violet solution. The violet color is changed to pale-orange by acids, and restored by alkalis. (Merck.) **T., Saul's, for Tannin.** To about 0.015 gm. tannin in 3 c.c. water add 3 drops of 20% alcoholic solution thymol, and then 3 c.c. strong H_2SO_4—gallotannic acid yields a turbid rose-colored solution; gallic acid remains practically uncolored. (Merck.) **T., Savalle's, for Fusel Oil in Alcohol.** Heat alcohol with an equal volume of concentrated H_2SO_4 until boiling commences—fusel oil is indicated by the formation of a brown color; all aldehyds and even higher alcohols give this reaction. If the latter are to be tested for, the aldehyds may be removed by heating for half an hour with a little metaphenylenediamin hydrochlorate and subsequent distillation; the distillate thus freed from aldehyds is tested with H_2SO_4. If the quantity of fusel oil is slight, 10 to 20 drops of a 1 : 1000 solution furfurol may be added, and then a pink color is developed, if higher alcohols be present, on heating with H_2SO_4. Test may be employed quantitatively for the colorimetric determination of fusel oil. (Merck.) **T., Scent,** for plumbing. It is made by putting into the pipes a quantity of some pungent chemical, such as peppermint oil, the odor of which will escape from the defects in the pipes if there are any [Price]. Cf. *Drain-tester, Hudson's.* **T., Schacht's, for Benzoic Acid.** The acid from Siam benzoin decolorizes an alkaline solution $KMnO_4$, but that from other sources merely alters the color to green. (Merck.) **T., Schaer's, for Blood.** See *T., Hühnefeld's* (Illus. Dict.). **T., Schäfer's, for Cinchonidin in Quinin Sulfate.** The tetrasulfate test: it is dependent upon the slight solubility of cinchonidin tetrasulfate in alcohol. Dissolve 1 gm. of quinin sulfate in 9 gm. of absolute alcohol and 3 gm. of 5% sulfuric acid. Allow this to stand for a day with occasional shaking, when any cinchonidin present will have separated out as tetrasulfate. If this precipitate is dissolved in water and precipitated with a caustic soda solution, pure cinchonidin of melting-point 199° C. may be obtained. **T., S.'s, for Naphthol-yellow in Cakes, Pastry, etc.** Break up into crumbs 10 to 20 gm. of the material to be tested and warm with 40 c.c. of alcohol (50 to 60% by vol.). Naphthol-yellow colors the alcohol yellow; upon the addition of hydrochloric acid this color disappears; but if the color were produced by saffron, it would remain. **T., S.'s Quinin.** Dissolve in 35 c.c. of boiling water, 1.0 gm. crystallized or 0.85 gm. anhydrous quinin sulfate and add a solution of 0.3 gm. of crystallized neutral potassium oxalate in 5 c.c. of water; then make up the whole with distilled water to 41.3 gm. Now place the vessel for half an hour in a water-bath of 20° C., shaking occasionally, and lastly filter through glass-wool. The freedom of the quinin from an allied alcohol is evinced by the absence of any turbidity on the addition of a drop of a caustic soda solution to 10 c.c. of the filtrate. **S.'s Reaction for Identifying Nitrites in the Urine.** Decolorize 3 or 4 c.c. of urine with animal charcoal and then treat with an equal volume of dilute acetic acid (1 : 10) and 2 drops of 5% potassium ferrocyanid solution. In the presence of nitrites the solution is colored yellow. **Scheele's Reagent** for arsenous acid. A solution of copper sulfate in an excess of ammonia water; this yields a light green precipitate with arsenites. **Scheibler's Reagent for Alkaloids in Phosphotungstic Acid.** Prepare the solution by dissolving 100 gm. of sodium tungstate and 60 to 86 gm. sodium phosphate in 500 c.c. of water acidulated with nitric acid; or, according to Otto, by simply adding phosphoric acid to a solution of sodium tungstate. It produces precipitates similar to those caused by phosphomolybdic acid. **Schell's Reagent for Cocain.** Upon mixing cocain hydrochlorate with calomel and moistening with a little water (even breathing upon the powder is sufficient), the mixture will be blackened by partial reduction of the mercury salt. **Schlagdenhauffen's Reagent for Distinguishing Alkaloids from Glucosids.** A mixture of equal parts of a 3% solution of guaiac resin and a saturated mercuric chlorid solution. Only alkaloids give a precipitate with this reagent in the cold or at 60° to 79° C. **T., Schlesinger's, for Urobilin.** Equal parts of the urine and a 10% solution of zinc acetate in absolute alcohol are mixed and then filtered; if urobilin is present, the filtrate shows a beautiful fluorescence with distinct absorption bands. Other pigments in the urine do not disturb the reaction, except

bilirubin in large quantity. **T., Schlickum's, for Arsenic.** Make a solution of 0.02 gm. of sodium sulfate and 0.4 gm. of stannous chlorid in 3 to 4 gm. of concentrated hydrochloric acid and overlay it with the suspected solution; in the presence of arsenic a yellow zone will appear. **Schlossberger's Reagent for Distinguishing Textile Fibers.** This consists of a concentrated solution of freshly precipitated (still moist) nickelous hydroxid in ammonia. This solution dissolves silk, but neither wool nor cotton. **T., Schmidt's, for Bilirubin and Urobilin in Feces.** A small portion of the stool is thoroughly mixed with a strong solution of mercuric chlorid. After a time, varying from one quarter of an hour to several hours, the presence of hydrobilirubin is shown by the mixture becoming pink, while the bilirubin is green. A little is placed upon the slide and examined microscopically. If any unaltered bile is present, minute particles of greenish bile-stained mucus, epithelial cells, and muscle-fibers stained with bile may be seen. [Hemmeter.] **Schmidt's Nitric Acid Reaction.** Mix the solution to be tested with an equal volume of a solution of 20 drops of anilin and 10 gm. of dilute sulfuric acid in 90 gm. of water, and pour this mixture in a layer upon concentrated sulfuric acid. In the presence of nitric acid, a light to dark-red zone will appear. **Schmitt's Test for Saccharin in Liquids.** The strongly acidulated liquid is shaken out three times with a mixture of equal volumes of ether and petroleum ether, these extracts treated with caustic soda solution, evaporated to dryness, and the residue heated for half an hour to 250° C. The solid mass is then dissolved in water, acidulated with sulfuric acid, and shaken out with ether. The saccharin, if present, will be found in the ethereal extract as salicylic acid, which after evaporation of the ether can be identified by means of ferric chlorid. **T., Schneider's, for Arsenic.** Separate as arsenous chlorid any arsenic that may be present in the suspected substance, by distillation with hydrochloric acid and ferric chlorid and then identify by Marsh's test. **T., Schneider's, for Foreign Oils** (from *Cruciferæ*) in olive oil. Dissolve the oil in two parts of ether and add 5 c.c. of a saturated alcoholic silver nitrate solution and allow the mixture to stand for 12 hours in a dark place. In the presence of any oils containing sulfur the mixture will be darkened. **T., Schneider's, for Potassium Cyanate in Potassium Cyanid,** depends upon the formation of the sky-blue cobalt cyanate. From the highly concentrated potassium cyanid solution, the hydrocyanic acid is removed by means of carbonic acid, the potassium carbonate removed by the addition of alcohol, and the filtrate tested with cobalt acetate solution. **Schönbein's Test-paper for Ozone.** Filter-paper saturated with potassium iodid starch-paste (10 parts starch, 200 parts water, 1 part potassium iodid). This paper turns blue in an atmosphere containing ozone. **T., Schönvogel's, for Foreign Fats in Butter.** Shake together 6 c.c. of a saturated borax solution and 5 drops of butter, at room-temperature or warm to the melting-point of the fat. Butter, beef-tallow, Provence oil, and mutton tallow are said not to emulsify when so treated; all other fats do. **Schönvogel's Reaction** for distinguishing animal from vegetable oils. Upon shaking with a concentrated borax solution, the latter, olive oil excepted, are said to form emulsions, while the former separate out sharply upon standing. **N. Schoorl's Microchemic Reaction for Atropin.** A little of the alkaloid or alkaloidal salt is placed on the object-glass, touched with a drop of 30% soda-lye, and slightly heated. As soon as the alkaloid has melted to an oily drop, it is thoroughly mixed with the lye by stirring with a platinum wire. Heat again and allow the alkaline vapor evolved to condense on an object-glass held over it, add to the condensate a small drop of hydrochloric acid, and allow to crystallize while rubbing with a platinum wire until dry. The residue is dissolved in a very little water and a particle of potassium iodid added, when the hydriodid may be immediately observed to deposit in the form of sharply defined needles and rhomboids. **Schott's White-lead Paper.** Polka paper, a sized paper, coated with white-lead, used as an external indicator in titrating solutions of metallic salts with sodium sulfid. **T., Schröder's, for Urea.** Add to the urea crystal a solution of bromin in chloroform. The urea will decompose, with the formation of gas. **T., Schröder's, for Acetanilid in Phenacetin.** Boil 0.5 gm. of phenacetin with 6 to 8 c.c. of water; when cool, filter out the crystallized phenacetin and add to the filtrate potassium nitrite and dilute nitric acid and boil; add a few drops of Plugge's reagent and boil again. In the presence of acetanilid a red coloration is produced. **Schuchardt's Reagent.** Concentrated tropæolin solution used for the detection of hydrochloric acid in the gastric juice. **T., Schultze's, for Cholesterin.** Evaporate to dryness with nitric acid, using a porcelain dish on the water-bath. In the presence of cholesterin a yellow residue is obtained, which changes to yellowish-red on the addition of ammonia. **T., S.'s, for Proteids.** To a solution of the proteid add a few drops of a dilute cane-sugar solution and then concentrated sulfuric acid. On warming and keeping the temperature at 60° C., a beautiful bluish-red color is produced. **Schultze's Furfurol Reaction for Albumins.** On the addition of a trace of sugar to a solution of albumins in moderately concentrated sulfuric acid and heating to 60° C. a beautiful bluish-red coloration appears. **Schumpelitz's Reaction for Veratrin.** Upon evaporating to dryness with veratrin a few drops of a solution of fused zinc chlorid in dilute hydrochloric acid, a red color results. **T., Schuster's, for Coloring-matter in Beer.** Pure beer is said to be decolorized by tannin solutions, while the color produced by caramel is not destroyed under these conditions. **Schwarz's Sulphonal Reaction.** The odor of mercaptan is developed upon heating sulphonal with charcoal. **Schwarzenbach-Delf's Alkaloid Reaction.** See *T., Schwarzenberg's* (Illus. Dict.). **Schweissinger's Reagent for Alkalis.** A solution of equal parts of iodin and tannin in absolute alcohol. Even in very dilute aqueous solutions of alkalis (also carbonates) this reagent produces a red coloration. **Schweitzer's Reagent for Identifying Soaps in Lubricating Oils.** A saturated solution of metaphosphoric acid in absolute alcohol. In the presence of soap the ethereal solution of the oil yields a white precipitate when treated with this reagent. **T., Seegen's, for Grape Sugar.** See *T., Trommer's* (Illus. Dict.). **T., Selmi's, for Blood.** Extract the (blood-stained) object to be tested with ammonia, precipitate the filtrate with sodium tungstate and acetic acid, then wash the precipitate and treat it with a mixture of one volume of ammonia and eight volumes of absolute alcohol; filter, remove the alcohol by evaporation, and treat the residue with sodium chlorid and acetic acid. If blood be present, hemin crystals may be found by microscopic examination. **T. for Sewer Gas.** "Saturate a piece of unglazed paper with a solution of acetate of lead in rain or boiled water, in the proportion of 1 to 8; allow the paper to dry and hang up in the room where the escape of sewer gas is suspected; if sewer gas is present, the paper will be completely

blackened" [Price]. **Silbermann's Reaction for Albumin.** Albumin freed from fats yields a violet coloration when heated with fuming hydrochloric acid. **Skatol.** See *Cliamician* and *Magnanini*. **Skraup's Reaction for Thallin.** On the treatment of this substance with oxidizing agents, as chromic acid, bromin, iodin, mercuric nitrate, or ferric chlorid, an emerald-green color results. **T., Smoke, for Plumbing.** "By means of bellows, or some smoke-producing rocket, smoke is forced into the system of pipes, the ends plugged up, and the escape of the smoke watched for, as wherever there are defects in the pipes the smoke will appear" [Price]. **Soap.** See *Schweitzer*. **T., Souchère's, for Peanut Oil.** Dissolve in boiling alcohol the free fatty acids separated from the suspected oil. In the presence of peanut oil arachic acid separates out upon cooling in characteristic shining crystals. **T., Spectroscopic, for Blood in Feces.** The hematin is extracted with ether and a little acetic acid. This extract is examined for a dark stripe in the red portion of the spectrum, between Frauenhofer's lines, C and D. **T., Spicca's, for Salicylic Acid in Wine.** Extract the wine with ether; warm the residue left after evaporation of the ether with concentrated nitric acid, then add ammonia in excess. In the presence of salicylic acid it will be converted into picric acid; this can be identified by the yellow color which a woolen fiber assumes when dipped into the solution. **T., Stas-Otto's Extraction, for Alkaloids.** The alkaloids are divided into three groups depending upon their property (1) of being taken up by ether from acid solutions; (2) of being taken up by ether from alkaline solutions; (3) of not being taken up by ether under either conditions. **Stenhouse's Reaction for Caffein.** Heat the caffein for a few minutes with fuming nitric acid; evaporate the yellow solution to dryness. On moistening the residue with ammonia water a purple coloration results, similar to that of murexid, but which disappears on the addition of caustic potash (while the murexid color is thereby changed to blue). **Stokes' Reagent for Reducing Oxyhemoglobin.** Add some citric or tartaric acid to a solution of ferrous sulfate and ammonia enough to make it alkaline. **T., Stokvis', for Bile Pigments.** To 20–30 c.c. of urine add 5–10 c.c. of a zinc acetate solution (1 : 5). Wash the precipitate on a small filter with water, and dissolve in a little ammonia. When filtered, the filtrate will give, after standing in the air, a brownish-green color, and show the absorption bands of bilicyanin, one between C and D, the second at D, and the third between D and E. **T., Storch's, for Rosin Oil in Oil Mixtures.** Shake 1 to 2 c.c. of the oil with 1 c.c. of acetic anhydrid; allow it to stand, then separate the acetic anhydrid by means of a pipet, and treat with a drop of concentrated sulfuric acid (Morawski recommends instead of concentrated sulfuric acid that having a sp. gr. of 1.53). In the presence of rosin oil a violet-red color appears. **T., Struve's, for Blood in Urine.** To the urine, previously treated with ammonia or caustic potash, add tannin and acetic acid until the mixture has an acid reaction. In the presence of blood a dark precipitate is formed. When this is filtered and dried, the hemin crystals may be obtained from the dry residue by adding chlorid of ammonia and glacial acetic acid. **Sulfocyanates.** See *Urgens*. **Sulphonal.** See *Ritsert, Schwarz*. **T., Szabo's, for Hydrochloric Acid in Contents of Stomach.** Mix together equal parts of 0.5 per cent. solutions of ammonium sulfocyanid and sodic-ferric tartrate. This makes a pale yellow liquid, which changes to brownish-red on the addition of a solution containing HCl. **Tannin.** See *Saul*. **Textile Fibers.** See *Persoz, Schlossberger*. **Thallin.** See *Skraup*. **T., Thénard's, for Aluminium Compounds.** Aluminium oxid (separated from compounds by igniting on charcoal, with the addition of sodium carbonates if necessary) yields Thénard's blue upon igniting with cobalt salts. **T., Thompson's,** the collection of the morning urine in two glasses to determine whether the gonorrheal process is localized in the anterior portion of the urethra, or whether it has extended into the posterior portion. **Tin.** See *Roger*. **Tocher's Modification of Baudouin's Reaction for Benné Oil.** Dissolve 2 gm. of pyrogallol in 30 c.c. of hydrochloric acid, specific gravity 1.19; shake 15 gm. of this solution with an equal volume of oil. Allow it to stand until two layers form; then remove the acid solution by means of a pipet and warm for 5 minutes. In the presence of oil of benné a bluish coloration appears. **T., Tretrop's, for Albumin in Urine.** Four or 5 c.c. of fresh urine are heated in a test-tube nearly to boiling-point, and a few drops of 40% formalin are added after it is removed from the flame. If there is any albumin in the urine, it coagulates like the white of an egg, and accumulates on the surface of the urine and also settles on the walls of the tube. After pouring off the fluid, the proportion of albumin can be determined by weighing or by the size of the coagulum left. **Trotarelli's Reaction for Alkaloids.** On evaporation with concentrated nitric acid, and subsequent treatment of the residue with alcoholic potash solution, various alkaloids give characteristic color reactions. **Tscheppe's Reaction for Alcohol.** Overlay the liquor to be tested with 70% nitric acid. In the presence of alcohol a green color will appear at the line of contact; after some time bubbles of gas will appear and the odor of ethyl nitrite become apparent. **Tuchen's Reaction for Ethereal Oils.** Fulmination occurs with many ethereal oils if 4 to 6 drops are brought in contact with 0.1 gm. of iodin. **T., Udransky-Baumann's, for Polyacid Alcohols** (glycerin, carbohydrates) depends upon Baumann's reaction with benzoyl chlorid and sodium hydroxid. Diamins also give this reaction, therefore the presence of the first-mentioned compounds must first be confirmed by means of the furfurol reaction. **Urea.** See *Biuret, Schroeder*. **Urgens' Reaction for Sulfocyanates in Saliva.** To the collected saliva is added a saturated solution of hydriodic acid 1 part and starch paste 5 parts; if the sulfocyanates are present, a blue tint appears. The sulfocyanates of potassium or sodium, normally present in the saliva, are usually absent in chronic suppurative conditions of the middle ear, and the progress of the disease can be estimated by the presence and extent of the reaction. **Uric Acid.** See *Brun, Denigè, Dietrich, Jaksch, Riegler*. **T., Valenta's, for Fats.** Mix thoroughly in a test-tube equal volumes of fat and glacial acetic acid sp. gr. 1.0562; apply heat if the oil does not dissolve in the cold. Three classes of oils are distinguished, according as solution takes place at ordinary temperatures, at temperatures up to the boiling-point of glacial acetic acid, or whether even then solution is incomplete. In the case of oils dissolving upon application of heat, the temperature is observed at which upon cooling turbidity appears. **Valentine's Reaction for Fuchsin.** Upon shaking ether with a solution containing fuchsin, the ether does not dissolve the coloring-matter, but upon adding ferrous iodid the ether is colored violet. **Veratrin.** See *Schumpelitz*. **Villavecchia and Fabri's Modification of Baudouin's Test for Benné Oil.** Make a solution of 2 gm. furfurol in 100 c.c. of alco-

hol. Shake 10 c.c. of oil for half a minute with 0.1 c.c. of the furfurol solution and 10 c.c. hydrochloric acid, specific gravity 1.19. A red coloration will result. **Villier and Fayolle's Reagent for Hydrochloric Acid and Chlorin.** In acid anilin solution, consisting of 400 c.c. saturated aqueous anilin solution and 100 c.c. glacial acetic acid, even traces of chlorin cause brownish to black precipitates; with a solution of 100 c.c. saturated aqueous anilin solution, 200 c.c. saturated aqueous orthotoluidine solution, and 30 c.c. of glacial acetic acid a blue coloration results. Bromin and iodin cause no color reactions with these solutions, although bromin yields white precipitates. For the application of this test to the halogen hydracids the halogens are liberated from their combinations by heating with dilute sulfuric acid and potassium permanganate. **T., Vitali's, for Formic Aldehyd.** See *T., Phenylhydrazin.* **T., Water-pressure, for New Plumbing.** The end of the house-drain is plugged up with a proper air-tight plug. The pipes are then filled with water to a certain level, which is carefully noted. The water is allowed to stand in the pipes for half an hour, at the expiration of which time, if the joints show no sign of leakage and are not sweating, and if the level of the water in the pipes has not fallen, the pipes are air-tight. [Price.] **T., Weber's.** See *Weber* (Illus. Dict.). 2. For sensation: Determination of the smallest distance at which the two points of a pair of compasses, applied simultaneously and lightly to the skin, can be recognized as two separate objects. **T., Weiland's,** for the determination of binocular fixation: A vertical bar is interposed between the eyes and the letters to be read. **T., Wender's, for Glucose.** Make a solution of 1 part methylene-blue in 3000 parts of distilled water. On rendering this solution alkaline with potassium hydrate and heating with a glucose-solution it becomes decolorized. **T., Wetzel's, for CO in Blood.** Add to the blood 4 volumes of water, and treat with 3 volumes of a 1% tannic solution. In the presence of carbon monoxid the blood becomes carmin red; normal blood gradually becomes gray. **Williamson's Blood-test for Diabetes.** Place in a narrow test-tube 40 c.c. of water and 20 c.c. of blood; add 1 c.c. of an aqueous solution of methylene-blue (1:6000) and 40 c.c. of liquor potassæ. Place the tube in a water-pot, which is kept boiling. From the blood of a diabetic patient the blue color disappears in 4 minutes and the blood becomes yellow. In blood that is not diabetic the blue color remains. **T., Winkler's, for Free HCl in Gastric Juice.** Mix a few drops of the filtered gastric juice in a porcelain capsule with a few drops of a 5% alcoholic solution of *a*-naphthol to which 0.5% to 1% of glucose has been added. On heating gently, a bluish-violet zone appears, which darkens rapidly. **T., Wurster's, for Hydrogen Peroxid.** Paper saturated with a solution of tetramethylparaphenylendiamin turns blue-violet with hydrogen peroxid. **Xylose.** See *Orcin.* **T., v. Zaleski's, for CO in Blood.** Add to 2 c.c. of the blood to be tested an equal volume of water and 3 drops of a one-third saturated copper sulfate solution. In the presence of carbon monoxid a brick-red precipitate is obtained, while normal blood gives a greenish-brown precipitate. **Zellner's (H.) Test-paper,** by which ammonia can be detected even in a dilution of 1:1,000,000. The method of preparing the new test-paper consists in applying the coloring-matter employed as indicator, say fluorescein in solution, upon a suitably colored under-ground, for which latter a neutral black coloring-matter is used. The fluorescein shows the minutest traces of alkali by a greenish color.

Zinc. See *Rinnmann.* **T., Zwenger's, for Cholesterin.** See *T., Liebermann's* (Illus. Dict.).

Testaden (*tes'-tad-en*). A preparation from the testes of the bull. Used in affections of the spinal cord and in nervous troubles. Dose, 6–8 gm. daily.

Testicle. (See Illus. Dict.) **T., Cooper's Irritable,** neuralgia of the testis.

Testidin (*tes'-tid-in*). An alcoholic extract prepared from the testes of the bull.

Testine (*tes'-tēn*). A sterilized extract of the testes of the ram; used in nervous debility, impairment, etc.

Test-meal. (See Illus. Dict.) **T. of Germain Sée,** from 60 to 80 gm. of chopped beef, free from fat and fibrous tissue, from 100 to 150 gm. of white bread, and a glass of water. The contents of the stomach are removed after an interval of two hours. **T., Jaworski's,** the patient ingests 1 or 2 hard-boiled eggs with 100 c.c. of distilled water at room-temperature. After 45 minutes of quiet he drinks 100 c.c. of distilled water, and 5 minutes later the contents of the stomach are aspirated. **T. of Riegel,** a plate of soup, from 150 to 200 gm. of beefsteak, 50 gm. of potato-purée and a small roll; or 300 c.c. of clear broth, 150 gm. of beefsteak (fillet), 50 gm. of mashed potatoes, and 35 gm. of white bread.

Tetanolysin (*tet-an-ol'-is-in*) [τέτανος, tetanus; λύειν, to loose]. The hemolytic toxin of tetanus.

Tetanospasmin (*tet-an-o-spaz'-min*). A toxin produced by the tetanus bacillus to which tetanic convulsions are due. Cf. *Spasmotoxin.*

Tetanus. (See Illus. Dict.) See *Sign, Erb's.* **T.-antitoxin.** See under *Antitoxin.* **T., Artificial,** that produced by a drug. **T., Idiopathic,** tetanus in which there is no history of injury. **T. neonatorum.** See *Trismus neonatorum* (Illus. Dict.). **T., Remittent.** See *Tetanilla* (Illus. Dict.). **T., Wundt's,** a prolonged tetanic contraction induced in a frog's muscle by injury or the passage of a strong current.

Tetartocone (*tet-ar'-to-kōn*) [τέταρτος, fourth; κῶνος, cone]. Posterointernal cone; the fourth cusp of the fourth upper premolar.

Tetartoconid (*tet-ar-to-kon'-id*) [τέταρτος, fourth; κῶνος, cone]. Posterointernal cone of the lower premolars.

Tetartophyia (*tet-art-of-i'-e-ah*) [τέταρτος, fourth; φύειν, to produce]. Sauvages' name for a quartan fever with short remissions.

Tetmil (*tet'-mil*). Ten millimeters.

Tetraallyammonium-alum (*tet-rah-al-e-am-o-ni-um-al'-um*). $N(C_3H_5)_4 . Al_5(SO_4)_3 + 12\ A_2O$. A uric-acid solvent.

Tetrabromophenolphthalein (*tet-rah-brom-o-fe-nol-thal'-e-in*). $C_{20}H_{10}Br_4O_4$. Colorless needles obtained from an alcoholic solution of phenolphthalein by action of bromin in acetic acid; soluble in ether, melt at 220°–230° C.

Tetracetate (*tet-ras'-et-āt*). A combination of a base with four molecules of acetic acid.

Tetrachloroethane (*tet-rah-klor-o-eth'-ān*). Carbon bichlorid.

Tetrachloromethane (*tet-rah-klor-o-meth'-ān*). Carbon tetrachlorid.

Tetrachloroquinon (*tet-rah-klor-o-kwin'-ōn*). See *Chloranil* (Illus. Dict.).

Tetraethylammonium. (See Illus. Dict.) **T. Hydroxid,** a solution of $N(C_2H_5)_4OH$, a colorless alkaline bitter liquid. It is a uric acid solvent. Dose, 0.6–1.2 c.c. 3 times daily well diluted.

Tetragon, Tetragonum (*tet'-rag-on, tet-rah-go'-num*). A four-sided figure. **T. lumbale,** an irregular, rhomboid space in the lumbar region beneath the aponeurosis of the latissimus dorsi, bounded externally by the

dorsal margin of origin of the external oblique muscle, internally by the margin of the sacrospinalis, above by the serratus posticus inferior, and below by the upper margin of the internal oblique.

Tetrahydro-β-naphthalamin (*tet-rah-hi-dro-ba-tah-naf-thal-am'-in*). See *Thermin.*

Tetrahydroparachinanisol (*tet-rah-hi-dro-par-ah-kin-an'-is-ol*). See *Thallin* (Illus. Dict.).

Tetraiodoethylene (*tet-rah-i-o-do-eth'-il-ēn*). C_2I_4. Nonvolatile crystals melting at 187° C. obtained by action of calcium carbid on a solution of iodin in potassium iodid kept at 0° C. It is a substitute for iodoform.

Tetraiodophenolphthalein (*tet-rah-i-o-do-fe-nol-thal'-e-in*). Nosophen.

Tetraiodopyrrol (*tet-rah-i-o-do-pir'-ol*). See *Iodol* (Illus. Dict.).

Tetramethylbenzene (*tet-rah-meth-il-ben'-zēn*). See *Durene* (Illus. Dict.).

Tetramethyldiamidobenzophenone (*tet-rah-meth-il-di-am-id-o-ben-zo-fe'-nōn*). $C_{17}H_{20}N_2O$. A crystalline substance obtained by action of carbonyl chlorid on dimethylanilin, soluble in alcohol and ether, melts above 360° C., with decomposition.

Tetramethylputrescin (*tet-rah-meth-il-pu-tres'-in*). $C_4H_8(CH_3)_4N_2$. An excessively poisonous tetramethyl derivative of putrescin with action similar to muscarin or neurin.

Tetramethylthionin Chlorid (*tet-rah-meth-il-thi'-on-in*). Same as *Methylene-blue.*

Tetranitrin (*tet-rah-ni'-trin*). Erythrol tetranitrate.

Tetranitroanthraquinone (*tet-rah-ni-tro-an-thra-kwin'-ōn*). See *Acid, Aloetic.*

Tetranitrol (*tet-rah-ni'-trol*). See *Erythrol Tetranitrate.*

Tetraotus (*tet-rah-o'-tus*). See *Diprosopus* (Illus. Dict.).

Tetrapus (*tet'-rap-us*) [τέτρα, four; πούς, foot]. A monstrosity having four feet.

Tetrodonin (*tet-ro-do'-nin*) [τέτρα, four; ὀδούς, tooth]. A highly poisonous crystalline base isolated by Tahara from the roe of fish of the genus *Tetrodon.*

Tetroxid (*tet-roks'-id*). A compound of a radicle with four atoms of oxygen.

Tetryl (*tet'-ril*). See *Butyl.* **T. Formate,** butyl formate.

Teucrin (*tu'-krin*). 1. $C_{21}H_{24}O_{11}$ or $C_{21}H_{26}O_{11}$. A crystalline glucosid from *Teucrium fruticans,* L.; melts at 230° C. 2. A purified, sterilized aqueous extract of *Teucrium Scordium,* L.; a pungent brown liquid used in treatment of tuberculous abscesses to arrest development. Hypodermic dose, 50 ♏; locally 10 gr. with lanolin once daily.

Tewfikose (*tu'-fik-ōz*). A sugar obtained by Pappel and Richmond from the milk of the Egyptian buffalo.

Tĕxis (*teks'-is*) [τέξις]. Child-bearing.

Textiform (*teks'-te-form*) [*textum,* a web; *forma,* form]. Reticular, forming a mesh.

T-fiber. See under *Fiber.*

Tfol. Arabian soapstone, a natural product, closely related to steatite, proposed by Lahache as a vehicle for antiseptic emulsion: 20 parts of finely powdered tfol in 100 parts of heavy tar oil.

Thalamocortical (*thal-am-o-kor'-tik-l*). Relating to the thalamus and cortex.

Thalamolenticular (*thal-am-o-len-tik'-u-lar*). Pertaining to the thalamus and lenticular nucleus.

Thalamotegmental (*thal-am-o-teg-ment'-al*). Relating to the thalamus and tegmentum.

Thalassin (*thal-as'-in*) [θάλασσα, the sea]. A poison isolated by Charles Richet from the tentacles of the species of *Actinium* which produces sponge-fishers' disease. It is crystalline and produces violent irritation.

Thalassophobia (*thal-as-o-fo'-be-ah*) [θάλασσα, sea; φόβος, fear]. A morbid fear of the sea.

Thallein (*thal'-e-in*). A combination of thallin with a compound ether or alcoholic radicle.

Thallin. (See Illus. Dict.) **T. Acetate,** used by Combemale for night-sweats of tuberculosis. Daily dose, 1½ gr. (0.1 gm.). It has the peculiar property of causing rapid falling of the hair. **T.-alopecia,** falling of the hair following the ingestion of thallin-acetate. **T. Periodate,** $C_{10}H_{13}NO.HIO_4$, used as the sulfate. **T. Salicylate,** $C_{10}H_{13}NO.C_7H_6O_3$, an antiseptic, antipyretic, and antirheumatic. Dose, 3–8 gr. (0.2–0.52 gm.). Syn., *Tetrahydroparaquinanisol Salicylate.* **T. Sulfate,** $(C_{10}H_{13}NO_3).H_2SO_4$, white needles or crystalline powder turning brown on exposure; soluble in water, 5 parts; alcohol, 100 parts; boiling water, 0.5 part; melts above 100° C. It is antiseptic, antipyretic, and hemostatic. Dose, 3–8 gr. (0.2–0.52 gm.); max. dose 0.52 gm. single; 1.6 gm. daily. Injection in chronic gonorrhea, 5% solution in oil. **T. Tannate,** used as the sulfate. **T. Tartrate,** $C_{10}H_{13}NO\text{-}C_4H_6O_6$, crystalline powder soluble in 10 parts of water or 300 parts of alcohol; used as the sulfate.

Thallinization (*thal-in-iz-a'-shun*). Continuous influence of thallin by hourly repetition of the dose.

Thanatol (*than'-at-ol*). Same as *Guaethol.*

Thaumatrope (*thaw'-mah-trōp*) [θαῦμα, wonder; τροπή, change]. A device containing figures, on opposite sides of a rotating board, which blend when in motion. It shows the duration of visual impressions.

Thaumaturgic (*thau-mat-ur'-jik*) [θαῦμα (τ), a wonder; ἔργειν, work]. Of or pertaining to some supernatural act or work, magical, miraculous. Cf. *Theomaturgic.*

Theaism (*the'-ah-izm*). See *Theism* (Illus. Dict.).

Theatrin (*the'-at-rin*). An ointment vehicle said to consist of wax, oil, and water.

Thebain. (See Illus. Dict.) **T. Hydrochlorate,** $C_{19}H_{21}NO_3.HCl + H_2O$, clear cubic crystals, soluble in 15.4 parts of water at 10° C. It is a spinal convulsant. **T. Tartrate, Acid,** $C_{19}H_{21}NO_3.C_4H_6O_6$, a white crystalline powder soluble in water and hot alcohol; a spinal convulsant. Syn., *T. bitartrate.*

Thebesian (*the-be'-se-an*). Named for Christopher Adam Thébésius, a German physician. Cf. *Veins of Thebesius.*

Theinism (*the'-in-izm*). See *Theism* (Illus. Dict.).

Thelorrhagia (*the-lor-aj'-e-ah*) [θηλή, nipple; ῥεῖν, to flow]. Hemorrhage from the nipple.

Thelygonia. (See Illus. Dict.) 2. The procreation of female offspring.

Theobromin. (See Illus. Dict.) **T. and Lithium Benzoate,** $LiC_7H_7N_4O_2 + LiC_6H_5CO_2$, a fine white powder containing 50% of theobromin, soluble in 5 parts of water. It is used as a diuretic and nerve stimulant. Dose, 5–15 gr. (0.32–1 gm.); max. daily dose, 60 gr. (4 gm.). Syn., *Uropherin B.* **T. and Lithium-salicylate,** $LiC_7H_7N_4O_2 + LiC_7H_5O_3$, a white powder soluble in 5 parts of water. Dose, 5–15 gr. (0.32–1 gm.) daily. Syn., *Uropherin S.* **T. Salicylate,** $C_7H_8N_4O_2C_7H_6O_3$, small white acicular crystals, slightly soluble in water. A stable diuretic recommended as a substitute for diuretin in the same doses. **T. Sodio-sodic-acetate,** a white hygroscopic powder freely soluble in water and possessing alkaline properties; it is analogous in composition to diuretin and uropherin. Destrée (Brussels) was the first to apply it to therapeutic use. Dose, 23 gr. (1.5 gm.). Syn., *Agurin.* **T. and Sodium Ben-**

zoate, $NaC_7H_7N_4O_3 + NaC_6H_5CO_2$, fine white powder containing 50% of theobromin, decomposes on exposure; used as diuretic and nerve stimulant. Daily dose, 75–90 gr. (5–6 gm.). **T.-sodium Iodid.** See *Iodotheobromin*. **T. and Sodium Iodosalicylate**, a compound of theobromin, 40%; sodium iodid, 21.6%, and sodium salicylate, 38.4%; a white powder, soluble in hot water; used in aortic insufficiency. Dose, 4–8 gr. (0.26–0.52 gm.) 2 to 6 times daily in capsule. **T. and Sodium Salicylate**, $C_{14}H_{12}N_4O_5Na_2$, a compound of theobromin 49.7% and salicylic acid 38.1%, a fine white powder decomposing on exposure; soluble in hot water, in dilute alcohol or soda solutions. Dose, 15 gr. (0.97 gm.) 5 or 6 times daily.

Theocin (*the'-o-sin*). Synthetically prepared theophyllin, isomeric with theobromin, constructed from cyanacetic acid by Schweitzer (1901). A diuretic. Dose, 4 gr. (0.25 gm.) 2 or 3 times daily.

Theomaturgic (*the-o-mat-ur'-jik*) [θεός, god; ἐργειν, work]. Of or pertaining to an act or work of God, supernatural. Cf. *Thaumaturgic*.

Theophobia (*the-o-fo'-be-ah*) [θεός, a god; φόβος, fear]. Morbid fear of the deity.

Theoplegia (*the-o-ple'-je-ah*) [θεός, a god; πληγή, a stroke]. Apoplexy.

Theoplexia (*the-o-pleks'-e-ah*) [θεός, a god; πλήσσειν, to strike]. Apoplexy.

Theopsychotherapy (*the-o-si-ko-ther'-ap-e*) [θεός, a god; ψυχή, mind; θεραπεία, therapy]. A name given by a German charlatan named Wallfisch (1901) to a form of faith cure.

Theory. (See Illus. Dict.) Cf. *Doctrine*. **T. of Accommodation, Helmholtz's.** See under *Accommodation*. **T. of Accommodation, Schoen's.** See under *Accommodation*. **T. of Accommodation, Tscherning's.** See under *Accommodation*. **T., Arloing's, Babes', Buchner's,** etc., of tuberculin reaction. See under *Tuberculin*. **T., Barthez's, of Disease.** See under *Disease*. **T. of Blood-coagulation, Lilienfeld's.** See under *Blood*. **T. of Blood-coagulation, Pekelharing's.** See under *Blood*. **T. of Blood-Coagulation, Schmidt's.** See under *Blood*. **T., Brown's, of Disease.** See *Brunonian Theory* (Illus. Dict.). **T., Cabalistic.** See under *Cabalistic*. **T., Chemicoradical,** according to which the object of organic chemistry was the investigation and isolation of radicles in the sense of the dualistic theory, as the more intimate components of the organic compounds, by which means it was sought to explain the constitution of the latter. This theory flourished in Germany simultaneously with the electrochemic theory (*q. v.*) (Richter). **T., Clark's,** of the pathology of asthma: That the asthma is caused by a swelling of the bronchial mucous membrane, due to relaxation of the vessels from vasomotor nerve causes. The swelling, according to Clark, has the character of urticaria wheals and is in a sense similar to that occurring in the erectile tissue of the nasal mucosa in hay-asthma. **T. of Color, Franklin.** See under *Color*. **T. of Color, Hering.** See under *Color-sensation* (Illus. Dict.). **T., Coronary,** Jenner's theory that angina pectoris is due to disease of the coronary arteries. **T., Darwin's.** See under *Evolution* (Illus. Dict.). **T. of Disease, Hoffmann's Humoral.** See *Disease, Humoral, Theory of*. **T., Dualistic,** of Berzelius. See *T., Electrochemic*. **T., Early-Type,** of Dumas, according to which substances were considered to have the same chemic type, to be of the same species when they possessed like fundamental properties, *e. g.*, acetic and chloracetic acids; or, as held by Regnault, they were regarded as of the same mechanical type, belonging to the same natural family, when they were related in structure, but manifested different chemical characters; alcohol and acetic acid. (Richter.) **T., Ehrlich's Side-chain.** See under *Immunity* and *Lateral Chain*. **T., Electrochemic,** according to which every chemic compound is composed of two groups, electrically different, and these are further made up of two different groups of elements. Thus salts were regarded as combinations of electropositive bases (metallic oxid) with electronegative acids (acid anhydrids), and these in turn were held to be binary compounds of oxygen with metals and nonmetals. This theory prevailed in Germany until about 1860, but was superseded by the unitary theory. (Richter.) Syn., *Dualistic theory of Berzelius*. **T., Franklin's One Fluid.** See under *Electricity*. **T., Jacquet's Dental,** maintains that baldness is not a specific ailment but a symptom, and that nerve disturbances precede these alopecias. **T., Jenner's.** See *T., Coronary*. **T., Lateral-chain, of Ehrlich.** See *Lateral-chain*. **T., Leyden's,** of the pathology of asthma: That the asthma is due to the presence of the crystals discovered by Leyden, the sharp ends of which are supposed to stimulate the terminations of the vagus. **T. of Life, Roeschlaub's Excitement.** See *Life, Excitement Theory of*. **T. of HCl in Gastric Juice, Maly's.** See under *Gastric Juice*. **T., Nucleus,** of Laurent. See *Theory, Unitary*. **T. of the Origin of Lymph, Heidenhain's.** See under *Lymph*. **T. of the Origin of Lymph, Ludwig's.** See under *Lymph*. **T., Pettenkofer and Buhl's.** See *Pettenkofer's Theory* (Illus. Dict.). **T. of Phagocytosis, Metchnikoff's.** See *Phagocytosis*. **T., Powell's,** that the displacement of the heart and other organs in pleural effusion is due to the traction of the elastic lung on the healthy side. **T., Ribbert's.** See *Ribbert* and under *Tuberculosis*. **T., Schapringer's,** that traumatic enophthalmos may have its origin in the paralysis of Müller's orbital muscle due to some lesion of the sympathetic. **T., Schenk's,** that it is possible to govern the process of gestation so as to determine the sex of human offspring: "When no sugar is secreted, not even the smallest quantity, then the ovum will be developed which is qualified to become a male child." **T., Spherular, of Künstler,** according to which the protoplasm of the flagellatæ is built up as cells build up cellular tissue by numerous protoplasmic spherules ("sphérules protoplasmiques") placed in close apposition to one another. Every such protoplasmic spherule is supposed to consist of an external dense and firm wall with fluid contents; therefore properly speaking a vesicle. In consequence of this structure, protoplasm frequently appears to be composed of closely packed vacuoles of the minutest size, separated *inter se* by very delicate partitions of a denser nature. **T., Symmer's, of Electricity,** it assumes the existence of two electric fluids and explains all electric phenomena by the assumption that an attraction takes place between the molecules of these electric fluids and the molecules of matter, similar electric molecules repelling each other, dissimilar ones attracting each other, but in both cases dragging away with them the molecules of matter. It has been abandoned by electricians, though retained by writers on medical electricity. [Jacoby.] **T., Type,** of Gerhardt (1853), the culmination of the "type" idea, an amalgamation of the early type or substitution theory of Dumas and Laurent with the radical theory of Berzelius and Liebig. The molecule was its basis, and to it was attached a more extended grouping of the atoms in the molecule. The types of Gerhardt were chemic types. He included the type

$\left.\begin{matrix}H\\Cl\end{matrix}\right\}$ with that of $\left.\begin{matrix}H\\H\end{matrix}\right\}$. (Richter.) **T., Unitary,** the idea of the constitution of chemic compounds which superseded the dualistic or electrochemic theory; it regarded chemic compounds as constituted in accordance with definite mechanic ground-form-types, in which the individual elements could be replaced by others. (Richter.) Syn., *Type-theory of Dumas; Nucleus theory of Laurent.* **T., de Vries' Tonoplast,** a theory of cell vacuoles, holding that the vacuoles are just as much independent organs of the cell as the cell nucleus, the chromoplasts, and other things. **T. of Color, Young-Helmholtz's.** See under *Color-sensation* (Illus. Dict.).

Theotherapy (*the-o-ther'-ap-e*). The treatment of disease by prayer and religious exercises.

Therapeusis (*ther-ap-u'-sis*) [θεραπεύειν, to cure]. See *Therapeutics* (Illus. Dict.).

Theraphosa (*ther-af-o'-sah*) [θήρ, a wild beast; ἀφοσιοῦν, to turn away with horror]. A genus of spiders of the family *Theraphosidæ.* **T. blondii,** Latreille, a poisonous species of the West Indies and tropical America.

Theraphosidæ (*ther-af-o'-sid-e*). A family of spiders containing the giant, trap-door, bird, mason, or mining spiders, many of which are venomous. Cf. *Aviculariа, Cteniza, Mygale, Metropelma, Nemesia, Theraphosa.*

Therapy. (See Illus. Dict.) **T., Mechanoneural,** a term applied by the organizers of an "Institute" at Trenton, New Jersey, to their method of treatment. **T., Psychic,** treatment of disease by influence of the mind.

Therencephalous (*ther-en-sef'-al-us*) [θήρ, a wild beast; ἐγκέφαλος, the brain]. Applied by Lissauer to a skull in which the radius fixus makes an angle of from 116° to 129° with a line uniting the punctum nasofrontale and the punctum alæ vomeris.

Thereobroma (*ther-e-o-bro'-mah*) [θέρειος, relating to the summer; βρῶμα, food]. Diet for the summer; a kind of chocolate.

Theridiidæ (*ther-id-i'-id-e*) [θήρ, a beast of prey]. The largest family of spiders; at least one genus of which contains many poisonous species. Cf. *Latrodectus.*

Theriomimicry (*ther-e-o-mim'-ik-re*) [θερίον, a beast; μίμος, an imitator]. Imitation of the acts of animals.

Theriotherapy (*ther-e-o-ther'-ap-e*) [θήρ, a wild animal; *therapy*]. Veterinary therapy.

Thermaerotherapy (*thur-mah-e-ro-ther'-ap-e*). The therapeutic application of hot air.

Thermalgesia (*thur-mal-je'-se-ah*) [θέρμη, heat; ἄλγος, pain]. The condition in which heat causes pain.

Thermanalgesia. See *Thermoanalgesia.*

Thermin (*thur'-min*). $C_{10}H_{11}.NH_2HCl$. A colorless liquid obtained from a solution of β-naphthylamin in amyl alcohol by action of metallic sodium. Syn., *Tetrahydro-β-naphthylamin.* **T. Hydrochlorate,** $C_{10}H_{11}NH_2.HCl$, a white crystalline powder soluble in water and alcohol; melts at 237° C. It is used to increase body-temperature.

Thermoaerophore (*thur-mo-a-e'-ro-fōr*) [θέρμη, heat; ἀήρ, air; φέρειν, to bear]. An apparatus for the therapeutic local application of hot air.

Thermoanalgesia (*thur-mo-an-al-je'-se-ah*) [θέρμη, heat; *a*, priv.; ἄλγος, pain]. Loss of the perception of pain due to cerebral lesion.

Thermobarometer (*thur-mo-bar-om'-et-ur*). See *Barometer, Boiling-point.*

Thermocauterectomy (*thur-mo-kaw-ter-ek'-to-me*) [θερμή, heat; καύτηρ, a burner; ἐκτομή, a cutting out]. See *Igniextirpation.*

Thermochroism (*thur-mo-kro'-izm*) [θερμός, hot; χρῶσις, a coloring]. The property possessed by certain substances of transmitting some thermal radiations while they absorb or change others.

Thermochrosis. See *Thermochroism.*

Thermoesthesia (*thur-mo-es-the'-ze-ah*). A sensation of heat. See *Thermesthesia* (Illus. Dict.).

Thermoesthesiometer. See *Thermesthesiometer* (Illus. Dict.).

Thermofuge (*thur'-mo-fūj*). An external antiseptic, emollient, and detergent, said to be a compound of aluminium silicate, glycerin, boric acid, menthol, thymol, oil of eucalyptus, and ammonium iodid.

Thermogen (*thur'-mo-jen*) [θέρμη, heat; γεννᾶν, to produce]. An appliance for keeping up the temperature of patients during an operation. It consists of a quilted cushion through which pass wires the temperature of which can be raised by the passage of an electric current.

Thermohyperalgesia (*thur-mo-hi-pur-al-je'-se-ah*) [θέρμη, heat; ὑπέρ, over; ἄλγος, pain]. Painful sensation felt on contact with a hot or cold body.

Thermohyperesthesia (*thur-mo-hi-pur-es-the'-ze-ah*) [θέρμη, heat; ὑπέρ, over; ἄλγος, pain]. Abnormal sensitiveness to temperature.

Thermohypesthesia (*thur-mo-hi-pes-the'-se-ah*) [θέρμη, heat; ὑπό, under; αἴσθησις, sensation]. Abnormal indifference or insensibility to heat, or to contact with heated objects.

Thermohypoesthesia. See *Thermohypesthesia.*

Thermol (*thur'-mol*). $C_{14}H_{15}NO_3$. A coal-tar derivative forming as white, odorless, tasteless crystals soluble in water and alcohol. It is analgesic, antipyretic, and antiseptic. Dose, 3 gr. (0.2 gm.) every 3 hours.

Thermolabile (*thur-mo-la'-bil*) [θέρμη, heat; *labsus*, a gliding or falling]. Destroyed or changed by heat.

Thermolusia (*thur-mo-lu'-se-ah*) [θερμός, hot; λύειν, to wash]. A hot bath.

Thermomassage (*thur'-mo-mas-ahzh*). Massage with application of heat.

Thermometer. (See Illus. Dict.) **T., Air,** one in which the expansive substance is air; invented by Drebbel (1572–1634). **T., Celsius',** **T., Centesimal.** See *T., Centigrade* (Illus. Dict.). **T., Differential,** one for determining slight variations of temperature. **T., Maximum,** one that registers the maximum heat to which it has been exposed. **T., Mercurial,** one in which the expansive substance is mercury; invented by Roemer (1644–1710). **T., Minimum,** one that registers the lowest temperature to which it has been exposed. **T., Self-registering,** one that by means of an index shows the highest or lowest temperature to which it has been exposed. **T., Spirit,** one in which alcohol or ether is employed; invented by Galileo (1574–1642).

Thermon (*thur'-mon*) [θερμός, hot]. One of the names applied to the *vis vitæ,* or vital principle. Cf. *Physis, Pneuma, Psyche.*

Thermonosus (*thur-mon-o'-sus*) [θέρμη, heat; νόσος, disease]. Disease caused by heat.

Thermophilic (*thur-mo-fil'-ik*) [θέρμη, heat; φιλεῖν, to love]. Applied to those microorganisms which develop best at relatively high temperatures, 50°–55° C. or above. Cf. *Psychrophilic, Mesophylic.*

Thermophore (*thur'-mo-fōr*) [θέρμη, heat; φορεῖν, to bear]. 1. Any appliance adapted to hold heat; as used in local treatment, a receptacle for hot water, a water-bag. 2. A receptacle containing chemicals which absorb a large amount of heat in the process of fusing and which give it off gradually as recrystallization takes place. Used as hand or foot warmers and in local treatment.

Thermopile (*thur'-mo-pil*) [θέρμη, heat; *pila*, a ball]. A thermoelectric pile.

Thermoplegia (*thur-mo-ple'-je-ah*). Heat-stroke.

Thermostabile (*thur-mo-sta'-bil*) [θέρμη, heat; *stabilis*, firm, steadfast]. Not destroyed nor changed by heat.

Thermosystaltism (*thur-mo-sis-tal'-tizm*) [θέρμη, heat; συστέλλειν, to contract]. Muscular contraction caused by heat.

Thermotics (*thur-mot'-iks*). The science of heat.

Thermotonometer (*thur-mo-ton-om'-et-ur*) [θέρμη, heat; τόνος, a stretching; μέτρον, a measure]. An apparatus invented by Grugenhagen for determining the amount of muscular contraction induced by thermic stimuli.

Thermotracheotomy (*thur-mo-tra-ke-ot'-o-me*). Tracheotomy by means of the actual cautery.

Theroid (*ther'-oid*) [θηριον, a wild beast]. Like a beast, bestial.

Theromorph (*ther'-o-morf*) [θήρ, a wild beast; μορφή, form]. A monstrosity resembling an animal.

Thesiopnea (*the-se-op'-ne-ah*) [θεσις, reclining; πνοή, breathing]. The respiration induced in cases of asphyxia, as treated by the Marshall Hall method, viz., by turning the body alternately upon the side or face to compress the chest and then upon the back to allow the lungs to expand.

Theveresin (*thev-e-res'-in*). $C_{48}H_{70}O_{17} + 2H_2O$. A dissociation product of thevetin by action of sulfuric acid with heat; a very poisonous white powder soluble in alcohol, slightly soluble in ether; melts at 140° C.

Thevesin (*thev'-es-in*). See *Theveresin*.

Thevetia. (See Illus. Dict.) **T. ahouai**, D. C., serpent's bane, Ger. Ahouaibaum, of Brazil, furnishes poisonous seeds used to stupefy fish. **T. cuneifolia**, D. C., and its variety, **T. auchieuxi**, narcissos amarillos, yoyotli, are used as *T. yccotli*. **T. nereifolia**, Juss., indigenous to the West Indies, cultivated in the East Indies, contains the glucosid thevetin; the bark is used in malarial fever, in snake-bites, and as a fish poison. **T. yccotli**, D. C., the yoyotli, narcisso amarillo, muela de frayle, a tree of Mexico. The milky juice, which contains a glucosid, cerberid (not identical with cerberin), and a toxic principle, thevetosin (tebetosa, Farmec. Mex.), is used as a folk-medicine for the treatment of deafness, the leaves and fruit as an emollient, and the seeds (huecos de frayle, friar's elbow bones) in cases of hemorrhoids.

Thevetosin (*thev-et'-os-in*). A crystalline poisonous principle contained in seeds of *Thevetia yccotli*, D. C.

Thew (*thu*) [AS *theáw*, manner]. A muscle, a sinew.

Thewless (*thu'-les*). Nerveless, weak.

Thialdin (*thi-al'-din*). $C_6H_{13}NS_2$. A crystalline substance obtained from a watery solution of aldehyd ammonium by action of sulfuretted hydrogen; soluble in water, alcohol, ether, or acids; used as a heart stimulant.

Thigenol (*thi'-jen-ol*). The soda salt of a sulfur acid extracted from a synthetic sulfur oil. It is easily soluble in water, alcohol, dilute alcohol, and slightly alkaline solutions. It is used in the treatment of skin-diseases in the form of pomades containing 20 parts per 100.

Thioacetaldehyd (*thi-o-as-et-al'-de-hid*). See *Sulphaldehyd* (Illus. Dict.).

Thiocapsa (*thi-o-kap'-sah*) [θειον, sulfur; *capsa*, a case]. A genus of the *Rhodobacteriaceæ*; subfamily *Thiocapsaceæ*.

Thiocarbomid (*thi-o-kar'-bam-id*). See *Thiourea* (Illus. Dict.).

Thiocarbonilid (*thi-o-kar-bon'-il-id*). See *Sulfocarbonilid*.

Thiochromogen (*thi-o-kro'-mo-jen*). See *Aureolin*.

Thiocol (*thi'-o-kol*). See *Potassium-guaiacol Sulfonate*. Cf. *Sirolin*.

Thiocystis (*thi-o-sis'-tis*) [θειον, sulfur; κύστις, a bladder]. A genus of the *Rhodobacteriaceæ*; subfamily *Thiocapsaceæ*.

Thiodictyon (*thi-o-dik'-te-on*) [θειον, sulfur; δίκτυον, a net]. A genus of *Rhodobacteriaceæ*; subfamily *Amebobacteriaceæ*.

Thiodinaphthyloxid (*thi-o-di-naf-thil-oks'-id*). An orange-colored powder, easily soluble in hot alcohol, ether, acetone, and chloroform, insoluble in water; used in treatment of skin-diseases.

Thioform (*thi'-o-form*). See *Bismuth Dithiosalicylate*.

Thiogenic (*thi-o-jen'-ik*) [θειον, sulfur; γεννᾶν, to produce]. Applied to bacteria able to convert sulfuretted hydrogen into higher sulfur compounds.

Thiolin (*thi'-ol-in*). See *Acid, Thiolinic*.

Thiophene. (See Illus. Dict.) **T. Tetrabromid**, C_4Br_4S, crystals soluble in alcohol; melt at 112° C.; boil at 326° C.; antiseptic.

Thiophil (*thi'-o-fil*) [θειον, sulfur; φιλειν, to love]. Loving sulfur; applied to microorganisms.

Thiopolycoccus (*thi-o-pol-e-kok'-us*) [θειον, sulfur; πολύς, many; κόκκος, berry]. A genus of *Rhodobacteriaceæ*, subfamily *Amebobacteriaceæ*.

Thiopyrin (*thi-o-pi'-rin*). A derivative of antipyrin.

Thiosapol (*thi-o-sa'-pol*). A sulfuretted soap containing 10% of sulfur.

Thiosarcina (*thi-o-sar'-sin-ah*) [θειον, sulfur; *sarcina*, a bundle]. A genus of the *Rhodobacteriaceæ*, subfamily *Thiocapsaceæ*.

Thiosavonals (*thi-o-sav'-on-als*). Potash sulfur soaps that contain sulfur in a chemically combined state.

Thiosebate (*thi-o-se'-bat*). A salt of thiosebic acid.

Thiospirillum (*thi-o-spi-ril'-um*) [θειον, sulfur; *spirillum*]. A genus of *Rhodobacteriaceæ*, subfamily *Chromatiaceæ*.

Thiothece (*thi-o-the'-ke*) [θειον, sulfur; θήκη, a case]. A genus of *Rhodobacteriaceæ*, subfamily *Amebobacteriaceæ*.

Thiothrix (*thi'-o-thriks*) [θειον, sulfur; θρίξ, hair]. A genus of the family *Beggiatoaceæ*; filaments nonmotile; surrounded by a delicate sheath; sulfur granules in cell contents; at ends of filaments rod-shaped gonidia; filaments unequal in diameter.

Thliptol (*thlip'-tol*). A proprietary antiseptic and deodorant liquid, said to consist of benzoboric acid combined with oil of eucalyptus, thyme, etc.

Thoracabdominal. See *Thoracico-abdominal* (Illus. Dict.).

Thoracalgia (*tho-rak-al'-je-ah*) [θώραξ, chest; ἄλγος, pain]. Pain in the thorax.

Thoracicoacromialis (*tho-ras-ik-o-ak-ro-mi-a'-lis*). See *Artery, Acromiothoracic* (Illus. Dict.).

Thoracicohumeral (*tho-ras-ik-o-hu'-mer-al*). Relating to the chest and upper arm.

Thoracoacromial (*tho-rak-o-ak-ro'-me-al*). Acromiothoracic, relating to the chest and the shoulder; applied to a group of muscles.

Thoracoceloschisis (*tho-rak-o-se-los'-kis-is*) [θώραξ, thorax; κοιλία, belly; σχίσις, a cleaving]. Congenital fissure of the chest and abdomen.

Thoracocyrtosis (*tho-rak-o-sur-to'-sis*) [θώραξ, thorax; κυρτός, curved]. Excessive curvature of the thorax.

Thoracodelphus. See *Thoradelphus* (Illus. Dict.).

Thoracogastrodidymus (*tho-rak-o-gas-tro-did'-im-us*) [θώραξ, thorax; γαστήρ, belly; δίδυμος, double]. A twin monstrosity united by the thorax and abdomen.

Thoracogastroschisis. (*tho-rak-o-gas-tros'-kis-is*). See *Thoracoceloschisis*.

Thoracometry (*thō-rak-om'-et-re*) [*θώραξ*, thorax; *μέτρον*, measure]. Measurement of the movement of the walls of the chest.

Thoracoschisis (*thō-rak-os'-kis-is*) [*θώραξ*, thorax; *σχίσις*, a cleaving]. Congenital fissure of the thorax.

Thoracoscope (*thō-rak'-o-skōp*) [*θώραξ*, thorax; *σκοπεῖν*, to view]. A stethoscope.

Thornwaldtitis (*torn-valt-i'-tis*). Thornwaldt's disease. See *Table of Eponymic Diseases* (Illus. Dict.).

Thread. (See Illus. Dict.) **T.-formation**, filamentation. See *Reaction, Thread.* **Threads, Simonart's.** See *Bands, Amniotic.*

Threshold. (See Illus. Dict.) Syn., *Limen.* **T., Auditory**, the minimum perceptible sound. **T., Neuron.** See under *Neuron.*

Throe (*thro*) [AS. *thrēa*, affliction]. A violent pang, agony, anguish.

Thromballosis (*throm-bal-o'-sis*) [*θρόμβος*, thrombus; *ἀλλοίωσις*, a change]. The changed condition caused by coagulation of the venous blood.

Thrombase (*throm'-bāz*) [*θρόμβος*, a clot]. The fibrinferment, the animal enzyme that causes the coagulation of shed blood. It bears a closer resemblance to rennet than any of the other enzymes known. Syn., *Thrombin.*

Thrombocystis (*throm-bo-sis'-tis*) [*thrombus*; *κύστις*, a bladder]. The sac sometimes enveloping a thrombus.

Thrombogen. (See Illus. Dict.) A generic name for the rennets proposed by H. E. Armstrong. Syn., *Trombogenic enzyme.*

Thrombosed (*throm'-bōst*). Affected with thrombosis.

Thrombosin (*throm'-bo-sin*). Lilienfeld's term for one of the products of the cleavage of fibrinogen by acetic acid. It is a proteid body which passes into fibrin in the presence of soluble calcium salts.

Thrombosis. (See Illus. Dict.) See *Signs, Griesinger's.* **T., Dilation**, that which results from a slowing of the blood-current next to the vessel walls, as the result of dilation of a vessel (as in aneurysms, varices) or of the heart. **T., Lancereaux's Law of**, marantic thromboses always occur at the points where there is the greatest tendency to stasis; that is, where the influence of the cardiac propulsion and of thoracic aspiration is least. **T., Plate.** See *Thrombus, Autochthonous.*

Thrombostasis (*throm-bo-sta'-sis*). Stasis of blood leading to formation of a thrombus.

Thrombus. (See Illus. Dict.) **T., Annular**, one that involves the whole circumference of the vessel but does not entirely occlude it. **T., Autochthonous, T., Blood-plate**, that ascribed by Eberth to agglutination of blood-plates. **T., Laennec's**, a globular thrombus formed in the heart, especially in cases where the latter is the seat of fatty degeneration. **T. neonatorum.** Same as *Cephalhematoma.* **T., Parietal**, or **Valvular**, one adherent to the wall of a vessel or the heart and not entirely occluding the vessel. **T. vulvæ, T. vaginæ**, hematoma of the labium pudendi majus.

Throw (*thro*) [ME. *throwen*]. To give birth to; to bear a foal.

Throwback (*thro'-bak*). 1. To show reversion in characters to those of the offspring of a previous sire or to those of the first sire. Cf. *Infection* (2), *Telegony, Reversion.* 2. To reduce in class or rank.

Thrypsis (*thrip'-sis*) [*θρίψις*, a crushing]. A comminuted fracture.

Thujetin (*thu'-jet-in*). $C_{14}H_{14}O_8$. A dissociation-product of thujin by prolonged heating with sulfuric acid. A yellow crystalline powder similar to quercitrin, soluble in alcohol and ether.

Thujigenin (*thu-jij'-en-in*). $C_{14}H_{12}O_7$. A crystalline substance soluble in alcohol obtained from *Thuja occidentalis*, L.

Thujin (*thu'-jin*). $C_{20}H_{22}O_{12}$ (?). A glucosid similar to quercitrin found by Kawalier (1858) in arbor vitæ, *Thuja occidentalis*, L. It forms citron-yellow, microscopic, four-sided crystals, soluble in alcohol or boiling water. Its alcoholic solution gives intense yellow coloration with alkalis, and green with ferric chlorid.

Thulium (*thu'-le-um*) [*Thule*, northland]. An element occurring in rare minerals, as gadolinite, discovered by P. Th. Cléve, professor of chemistry at Upsala (1879). Symbol Tu; atomic weight 170.7; valency III.

Thumb. (See Illus. Dict.) **T.-exercise.** See under *Exercise.* **T.-marks**, an impression made by the thumb. See under *Identification.* **T., Stub-.** See *Stub-thumb.*

Thylacitis, Thylaciitis (*thi-las-i'-tis, thi-las-e-i'-tis*) [*θυλάκιον*, a little bag]. Acne rosacea.

Thyma (*thi'-mah*). A corruption of ecthyma and also of thymion.

Thymectomy (*thi-mek'-to-me*) [*θύμος*, thymus; *ἐκτομή*, a cutting out]. Excision of the thymus.

Thymegol (*thi'-me-gol*). An antiseptic and emetic forming a red-brown powder, said to be a parasulfonic derivative of potassium, thymol, and mercury.

Thymelæa (*thi-me-le'-ah*) [*θύμος*, thyme; *ἐλαία*, olive tree]. A genus of plants of the order *Thymelæaceæ.* **T. tartonraira**, All., a low shrub indigenous to southern Europe. The leaves are used as a purgative. **T. sonamunda**, All., a small shrub indigenous to Europe. The fruit, the seed, and the root are used as a purgative in dropsy. The bark serves as a substitute for mezereon.

Thymhydroquinone (*thim-hi-dro-kwin'-ōn*). $C_6H_2 \cdot CH_3(C_3H_7)(OH)_2$. A reduction-product of thymoquinone.

Thymiatechny (*thi-mi-at-ek'-ne*) [*θυμίαμα*, incense; *τέχνη*, art]. The art of perfuming medicine.

Thymin (*thi'-min*). $C_5H_6N_2O_2$. A crystalline body obtained by Kossel and Neumann (1893) by boiling nucleinic acid from the thymus gland of the calf with dilute sulfuric acid. Miescher's nucleosin from spermatozoa of salmon is identical with it. It forms four-sided colorless plates, doubly refractive.

Thyminol (*thi'-min-ol*). An antiseptic liquid said to be a solution of thymol, eucalyptol, menthol, *Baptisia tinctoria*, P. Br., benzoic, boric, and salicylic acids.

Thymion (*thi'-me-on*) [*θύμιον*]. A wart; a condyloma.

Thymoform (*thi'-mo-form*). A reaction-product of thymol and formic aldehyd; a yellowish, tasteless powder, readily soluble in ether, alcohol, chloroform, or olive oil, insoluble in water, petroleum, ether, or glycerin. It is used as iodoform and dermatol.

Thymohydroquinone. See *Thymhydroquinone.*

Thymol. (See Illus. Dict.) Syn., *Metacymophenol; Thyme-camphor; Thymic acid; Methylnormalpropylphenol.* **T. Camphor.** See under *Camphor.* **T. Carbonate**, a white tasteless, crystalline substance, showing a neutral reaction; fuses at 49° C. It is recommended as preferable to thymol in uncinariasis. Dose, 30 gr. (2.0 gm.). Syn., *Thymotol.* **T. Chlormethylsalicylate**, a condensation-product of thymol and chlormethylsalicylic acid. Antiseptic. **T. Salicylate**, $C_{10}H_{13}O \cdot C_7H_5O_3$, a reaction-product of sodium salicylate with sodium thymolate and phosphorus trichlorid, forming a white crystalline powder; soluble in alcohol and ether. It is an intestinal antiseptic. Syn., *Salithymol.* **T.-urethane**, a compound of thymol and thymol carbonic ester forming colorless crystals insoluble in water; used as an anthelmintic.

Thymopathy (*thi-mop'-ath-e*). 1. See *Thymopathia* (Illus. Dict.). 2. [θύμος, thymus.] Any disease affecting the thymus.

Thymotol (*thi'-mo-tol*). Thymol carbonate.

Thymoxalme (*thi-moks-al'-me*) [θυμος, thyme; ὀξύς, sharp; ἅλς, salt]. A mixture of thyme, vinegar, and salt.

Thymozone (*thi'-mo-zōn*). A combination of *Eucalyptus globulus*, Lab., *Thymus vulgaris*, L., and *Pinus sylvestris*, L., with benzoic, boric, and salicylic acids. It is fragrant, colorless, and nonirritating. It is used as an internal antiseptic and externally as carbolic acid. Cf. *Thyminol.*

Thymus. (See Illus. Dict.) **T. Death**, sudden death assumed to be due to enlargement of the thymus gland. Cf. *Status lymphaticus.*

Thymyl (*thi'-mil*). A compound in which thymol, $C_{10}H_{14}O$, forms the fundamental part. **T. Acetate**, acetylthymol, $C_{10}H_{13}OC_2H_2O$; boils at 244.7° C. **T. Benzoate**, $C_{10}H_{13}OC_7H_5O$, a compound of thymol acting as a phenol and benzoic acid. It melts at 32° C. **T. Carbonate**, $CO(C_{10}H_{13}O)_2$, formed by passing a current of carbon oxychlorid through a soda solution of thymol. **T. Ethylether**, $C_{10}H_{13}OC_2H_5$; boils at 222° C. **T. Methyl-ether**, $C_{10}H_{13}OCH_3$; boils at 216.7° C.

Thyol. See *Thiol* (Illus. Dict.).

Thyraden (*thi'-ra-den*). A proprietary lactose trituration of dried extract of thyroid gland; one part represents two parts of fresh gland. It is an alterative used in myxedema, struma, and psoriasis. Dose, 1–1.5 gm. daily. Syn., *Thyreoidin.*

Thyrein (*thi'-re-in*). See *Iodothyrin.*

Thyreoantitoxin. See *Thyroantitoxin.*

Thyreoprivus. See *Thyroprival.*

Thyroantitoxin (*thi-ro-an-te-tok'-sin*) [θυρεός, shield; ἀντι, against; τοξικόν, poison]. 1. $C_6H_{11}N_3O_5$. A proteid constituent of the thyroid gland. 2. A preparation of the thyroid gland used in exophthalmic goiter, bronchocele, etc. Dose, 2 gr. daily.

Thyrochondrotomy (*thi-ro-kon-drot'-o-me*) [*thyroid*; χόνδρος, cartilage; τέμνειν, to cut]. Incision of the thyroid cartilage.

Thyrocolloid (*thi-ro-kol'-oid*). A proprietary preparation of the thyroid glands of sheep.

Thyroepiglottic (*thi-ro-ep-e-glot'-ik*). Relating to the epiglottis and the thyroid cartilages.

Thyrogenous (*thi-roj'-en-us*) [*thyroid*; γεννᾶν, to produce]. Originating in the thyroid gland.

Thyroglandin (*thi-ro-gland'-in*). A compound of two principles of thyroid gland, iodoglobulin and thyroidin, in the form and proportion in which they exist in the gland. Dose of 3 to 5 gr. for myxedema and obesity.

Thyroglobulin (*thi-ro-glob'-u-lin*). The iodin-proteid of the thyroid secreted by it and lodged in the colloid substance.

Thyrohyal (*thi-ro-hi'-al*). See *Thyreohyoid* (Illus. Dict.).

Thyroidectomized (*thi-roid-ek'-tom-izd*). See *Thyroprival.*

Thyroidine (*thi-roid'-in*). See *Thyradin.*

Thyroidism (*thi'-roid-izm*). 1. Disturbances produced by hyperthyrosis. 2. A series of phenomena due to continued used of thyroid preparations. 3. Disturbances due to removal of the thyroid.

Thyroidotoxin (*thi-roid-o-toks'-in*). A substance specifically toxic for the cells of the thyroid gland.

Thyroigenous (*thi-roi'-jen-us*). Originating in disturbances of the thyroid gland. Cf. *Thyrogenous.*

Thyroiodin (*thi-ro-i'-od-in*). A substance found principally combined with a proteid, but also free in the thyroid gland. Also called *Iodothyrin.*

Thyrolaryngeal (*thi-ro-lar-in'-je-al*). Relating to the larynx and the thyroid body.

Thyrolingual (*thi-ro-lin'-gwal*). Relating to the thyroid and the tongue, thyroglossal.

Thyroprival (*thi-ro-pri'-val*) [*thyroid*; *privare*, to deprive]. Deprived of the thyroid gland, strumiprivus, thyroidectomized.

Thyroproteid (*thi-ro-pro'-te-id*). See *Thyreoprotein* (Illus. Dict.).

Thyroptosis (*thi-ro-to'-sis*) [*thyroid*; πτῶσις, a falling]. Displacement of a goitrous thyroid so as to be concealed in the thorax.

Thyrotomy (*thi-rot'-o-me*) [*thyroid*; τομή, a cutting]. Division of the thyroid cartilage.

Thyrsus (*thur'-sus*) [θύρσος, a stalk]. The penis.

Tibarsa [East Indian]. Vernacular for trypanosomiasis.

Tibi. A ferment of the nature of kephir, used in Mexico in the preparation of a fermented beverage from species of *Opuntia.*

Tibia. (See Illus. Dict.) **T., Lannelongue's**, the deformed tibia of inherited syphilis.

Tibialis (*tib-e-a'-lis*). A muscle connected with the tibia. See *Muscles, Table of* (Illus. Dict.).

Tibian (*tib'-e-an*). Relating to the tibia.

Tibionavicular (*tib-e-o-nav-ik'-u-lar*) [*tibia*; *navicula*, a boat]. Relating to the tibia and the scaphoid bone.

Tic. (See Illus. Dict.) **T., Painless**, the occurrence, at longer or shorter intervals, of a sudden and rapid involuntary contraction in a single muscle or group of muscles (Fagge and Pye-Smith). Syn., *Facial spasm; Spasmodic tic; Habit spasm; Histrionic or Pantomimic spasm; Clonic spasm in the area of the portio dura; Habit chorea* (a misleading term). Fr. *Tic convulsif; Tic nondouloureux faciale; Tic simple.* Ger. *Mimischer Gesichtskrampf.* **T. rotatoire**, spasmodic wryneck. **T., Simple, T., Spasmodic.** Synonym of *Tic, Painless.*

Tick Fever. Synonym of *Texas fever.*

Ticuma, Tikuma (*ti-ku'-mah*) [South American]. An arrow-poison obtained from *Cocculus amazonum*, Mart.

Tigering (*ti'-gur-ing*). The yellowish mottling of muscular tissue undergoing fatty degeneration.

Tigretier (*te-gra-te-a*) [Fr.]. A form of tarentism due to the bite of a poisonous spider. Ger. *Tanzes von Tigré.*

Tigroid (*ti-groid'*) [τιγροειδής, spotted]. Lenhossék's term for chromophil corpuscles. See *Bodies, Nissl's.*

Tiliacin (*til-e-as'-in*). A glucosid found in the leaves of the linden tree (*Tilia*).

Tillers, Tillering (*til'-urz, til'-ur-ing*). Extra stalks which develop as outgrowths from near the base of the main stem of the cereals.

Timbo (*tim'-bo*). A South American word signifying fish-poison and applied to numerous species of *Serjania* of the order *Sapindaceæ.*

Timboin (*tim'-bo-in*). An alkaloid obtained by Stanislaus from the root of *Serjania curassavica*, Radlk.

Time. (See Illus. Dict.) **T., Persistence.** See under *Persistence.*

Tin. (See Illus. Dict.) **T. Bisulfid or Disulfid**, SnS_2, golden scales or six-sided crystals. Syn., *Mosaic gold.* **T., Butter of**, tin chlorid. **T., Flowers of.** See *T. Oxid, Stannic.* **T. Monoxid or Protoxid.** See *T. Oxid, Stannous.* **T. Oxid, Stannic**, SnO_2, white amorphous powder. Syn., *Tin peroxid; T. dioxid; Flowers of tin; Stannic anhydrid.* **T. Oxid, Stannous**, SnO, dark powder. Syn., *Tin monoxid; T. protoxid.* **T., Precipitated** (galvanically), is recommended as a vermifuge against tapeworm. Dose, 9 gr. every 15 minutes until 5 or 6 doses have been taken.

Tina. See *Carate* (Illus. Dict.).

Tinctable (*tink'-tab-l*). Tingible.

Tinctura, Tincture. (See Illus. Dict.) **T., Balsamic,** compound tincture of benzoin. **T., Denzel's Hemostatic,** a mixture of powdered ergot, 10 gm.; alcohol, 20 gm.; and sulfuric acid, 2 gm.; mixed, and 500 c.c. of hot water added. This is evaporated to 200 gm., and 2 gm. of calcium carbonate added. The insoluble matter is removed by pressure, the liquid filtered, evaporated to 70 gm., and 30 gm. of alcohol and 3 drops of a concentrated tincture of ginger added. **T., Domestic Spice,** a rubefacient prepared from 2 oz. of unground ginger, 1 oz. each of cloves, cinnamon, and chillies, placed in a bottle, and 1 pt. of whisky added; after standing for some days use the supernatant fluid. **T. moringæ,** a tincture from the roots of *Moringa pterygosperma*, Gärt., of the order *Capparidaceæ*, and growing in the East Indies and West Indies. It is recommended in catarrhal icterus. Dose, 10 drops to 4 gm. at intervals of 3 hours.

Tinea. (See Illus. Dict.) **T. capitis,** porrigo. **T. erythrasma,** a slight inflammation of the skin due to the fungus *Microsporon minutissimum*. **T. furfuracea,** dry seborrhea. **T. granulata,** achor granulatus, that forming a crust having a granulated appearance. **T. of the Nails,** a disease common in Iceland, where it is contracted from sheep, under the name "Kartnegluer" (*kart*, cord; *negluer*, nail). **T. unguis.** See *T. of Nails*.

Tinospora (*tin-os'-po-rah*) [τίνειν, to receive a price for; σπορά, a seed]. A genus of the order *Menispermaceæ*. **T. cordifolia,** Miers., a species of Eastern Asia; the roots and stems are used as a tonic, stomachic, antiperiodic, and antipyretic. **T. crispa,** Miers., a species of the East Indies, where it is used in fever, colic, and as a vermifuge.

Tintometer (*tint-om'-et-ur*) [*tingere*, to tinge; *metare*, to measure]. An instrument to measure the amount of coloring-matter in a liquid.

Tip. (See Illus. Dict.) The term used in England for the place of deposit of city refuse. **T., Woolner's,** the apex of the helix of the ear.

Tiquer (*te-kur*) [Fr.]. One exhibiting the clonic or tonic movements designated as tics.

Tire. (See Illus. Dict.) 2. To pass a wire, as a tire around a wheel, around a fractured patella.

Tire-tete [Fr., a head-drawer]. An early form of obstetric forceps devised by Palfyn of Ghent, 1721.

Titer, Titre (*te'-ter*). A standard of fineness or strength.

Tithonic (*tith-on'-ik*) [Τιθωνός, a brother of Priam]. Actinic.

Tobaccoism (*to-bak'-o-izm*). A morbid condition due to the use of tobacco.

Tocomania (*to-ko-ma'-ne-ah*) [τόκος, childbirth; μανία, mania]. Puerperal insanity.

Tocus (*to'-kus*) [τόκος]. Childbirth.

Toe. (See Illus. Dict.) **T. Brace,** an appliance for correction of flat-foot and deformed toes. **T.-clonus,** contraction of the great toe on sudden extension of the first phalanx. **T., Flexed, T., Hammer,** a claw-like permanent distortion of a toe in which it is abnormally flexed at the last joint, allowing the tip to rest on the ground while the first joint is raised above the proper level. **T., Morton's.** See *Morton's Foot* (Illus. Dict.). **T.-phenomenon.** See *Reflex, Babinski's*. **T.-post,** an appliance devised by Sampson (1901) for correcting abduction of the foot. It is fastened to an insole, and being placed between the first and second toes, maintains abduction.

Tokai, Tokay. The Japanese name for *Ligusticum acutilobum*, Sieb.

Tokay (*to'-ka*) [Hungarian]. A wine made in Hungary.

Tolokno (*to-lok'-no*). A food prepared chiefly from oats. Used in Russia for superalimentation in tuberculosis.

Toluidin. (See Illus. Dict.) **T. Blue,** $C_{15}H_{16}N_3SCl$-ZnCl, the double salt of chlorid of zinc and dimethyltoluthionin. It occurs as a black powder dissolving in water and alcohol with a fine blue coloration. It acts upon lower organisms as a powerful poison and may be employed as methylene-blue in infectious conjunctivitis, and also as a substitute for fluorescein in fixing the limits of corneal lesion.

Tolylacetamid (*tol-il-as-set-am'-id*). $C_6H_4(CH_3)NH.(C_2H_3O)$. A derivative of coal-tar; used as an antiseptic. Dose, 2–10 gr. (00.32–0.65 gm.). Syn., *Acetoluid; Aceltoluid; Acetotoluid*.

Tolylantipyrin. See *Tolypyrin*.

Tolypyrin (*tol-e-pi'-rin*). *p*-tolyldimethylpyrazolon. $C_{12}H_{14}N_2O$. Colorless crystals of an intensely bitter taste, soluble in water and alcohol; used as antipyrin, to which it is closely allied, but unlike antipyrin in that it does not destroy the irritability of muscle, but paralyzes the central nervous system. **T. Salicylate.** See *Tolysal* (Illus. Dict.). Dose, in rheumatism, etc., 1–2 gm.

Tomotocia (*to-mo-to'-se-ah*) [τομή, a cutting; τόκυ, childbirth]. Cesarean section.

Tonca (*ton'-kah*). A remedy made from vanilla root, *Trilisia odoratissima*, Cass., the leaves of which contain coumarin.

Tone. (See Illus. Dict.) **T.-deafness,** sensory amusia.

Tonga. (See Illus. Dict.) **T.-drink,** a narcotic drink prepared in South America from *Datura sanguinea*, R. et P., and used in religious ceremonies. **T. Wood,** the wood of *Alyxia buxifolia*, R. Br., a seaside shrub of Australia, rich in coumarin.

Tongaline (*ton'-gal-ēn*). A fluid preparation, each dram containing tonga (bark of *Premna taitensis*, Shau.), 30 gr.; extract of *Cimicifuga racemosa*, Bart., 2 gr.; sodium salicylate, 10 gr.; pilocarpin salicylate, $\frac{1}{100}$ gr.; colchicine salicylate, $\frac{1}{300}$ gr. It is recommended in gouty diathesis.

Tongue. (See Illus. Dict.) **T., Clarke's,** the hard, fissured, and nodular tongue of syphilitic glossitis sclerosa. **T., Senile Pruritus of.** See under *Pruritus*. **T., Stamp-licker's,** an infectious process in those employed in industries where small packets are labeled. It gives rise to ulcers of the tongue and mouth. **T.-swallowing,** drawing the tongue backward with its tip folded on itself; observed in infants with nasal obstruction.

Tonicize (*ton'-is-īz*) [τόνος, tone]. To give tone or tension to anything.

Toninervin (*ton-e-nur'-vin*). A water-soluble salt of quinin said to contain 4.5% of iron. Dose as antipyretic, 0.1–0.3 gm. every 3 hours; as tonic, 0.05 gm. twice daily.

Tonitruphobia (*ton-it-ru-fo'-be-ah*) [*tonitru*, thunder; φόβος, fear]. Morbid dread of thunder.

Tonometer. (See Illus. Dict.) **T., Gärtner's,** one for estimating blood-pressure. **T., Musken's,** an instrument for measuring the tonicity of the Achilles tendon.

Tonometry (*ton-om'-et-re*). The measurement of tonicity.

Tonophant (*ton'-of-ant*) [τόνος, tone; φαίνειν, to make apparent]. An apparatus to render visible the vibrations of sound.

Tonoplasts (*ton'-o-plasts*) [τόνος, tension; πλάσμα, a thing molded]. De Vries' term for certain small

intracellular bodies which build up strongly osmotic substances within themselves and in this way swell up to small vacuoles. Cf. *Theory of de Vries.*

Tonoscope (*tōn'-o-skōp*) [τόνος, tone; σκοπεῖν, to view]. An instrument for examination of the interior of the cranium by means of sound.

Tonquinol (*ton'-kwin-ol*). $C_6H(CH_3)(C_4H_9)(NO_2)_3$. Yellowish crystals which melt at 97° C., and possess a strong odor of musk. Syn., *"Artificial musk"; Trinitroisobutyltoluol.*

Tonsil. (See Illus. Dict.) **2.** A small lobe of the cerebellar hemispheres situated on the inferior mesal aspect. **T., Epipharyngeal, T., Third.** See *T., Pharyngeal* (Illus. Dict.). **T., Gerlach's Tubal,** a mass of adenoid tissue in the lower part of the eustachian tube, particularly along its median wall and about the pharyngeal orifice.

Tonsillith. See *Tonsillolith.*

Tonsillolith (*ton-sil'-o-lith*) [*tonsilla*, tonsil; λίθος, stone]. A concretion within the tonsil.

Tonsillotomy Rash. See under *Rash.*

Tonsillotyphoid (*ton-sil-o-ti'-foid*). See *Pharyngotyphus* (Illus. Dict.).

Tonsilsector (*ton-sil-sek'-tor*). A tonsillotome consisting of a pair of circular scissor-blades moving inside a circular guarding ring.

Tonus. (See Illus. Dict.) **T., Chemic,** Zuntz and Röhrig's term for the condition of the muscles when at rest and undergoing no mechanical exertion.

Topasol (*top'-as-ol*). See *Anticoroin, Anticornutin, Antimucorin, Antiperinosporin.*

Topesthesia (*top-es-the'-se-ah*) [τόπος, place; αἰσθησις, sensation]. Local tactile sensibility.

Tophus. (See Illus. Dict.) Syn., *Chalk-stone.* **T. arthriticus.** See *Arthrolith.*

Toponym (*top'-on-im*) [τόπος, place; ὄνυμα, a name]. A term relating to position and direction. See *Table of Posture and Position* (Illus. Dict.).

Top-plate. See under *Plate.*

Toril (*tor'-il*). An extract of meat containing its albuminoids prepared with the addition of savory herbs.

Tormina. (See Illus. Dict.) **T. intestinorum nervosa, T. ventriculi nervosa.** See *Hyperperistalsis.*

Torosity (*to-ros'-it-e*) [*torosus*, brawny, muscular]. Muscular strength.

Torpescence (*tor-pes'-ens*) [*torpere*, to be numb]. Numbness, torpidity.

Torpescent (*tor-pes'-ent*). Numb, torpid.

Torpify (*tor'-pe-fi*). To make numb or torpid, to stupefy.

Torpitude (*tor'-pe-tūd*). Torpidity, numbness.

Torsiometer (*tor-se-om'-et-ur*) [*torquere*, to turn; *metare*, to measure]. An instrument for measuring ocular torsion. Syn., *Clinoscope.*

Torsion. (See Illus. Dict.) **2.** The tilting of the vertical meridian of the eye. (Duane.) Syn., *Declination* (Stevens), *Wheel-rotation.* Ger. *Raddrehung.* (Helmholtz.) **Contorsion,** the tilting of the top ends of the vertical meridians toward each other. (Duane.) Syn., *Conclination.* **Dextrotorsion,** a rotation of the vertical meridian of the eye to the right. Syn., *Positive wheel-rotation* (Helmholtz), *Positive declination* (Stevens). **Distorsion,** the tilting of the top ends of the vertical meridians away from each other. (Duane.) Syn., *Disclination.* **Extorsion,** rotation of the vertical meridian of the eye outward. **Intorsion,** rotation of the vertical meridian inward. **Levotorsion,** a rotation of the vertical meridian of the eye to the left.

Tort [*torquere*, to turn]. To tilt the vertical meridian of the eye (Duane). **Extort,** to tilt the vertical meridian outward. **Intort,** to tilt the vertical meridian inward. **Intorter,** the muscle tilting the vertical meridian of the eye inward.

Torticollis. (See Illus. Dict.) **T. clonica.** Synonym of *Wryneck, spasmodic.*

Tortoine (*tor'-to-en*). A product of cotoin by action of formic aldehyd; small, yellow, tasteless crystals, having a faint cinnamon odor; insoluble in water, sparingly soluble in alcohol and ether, but readily dissolved by chloroform, acetone, glacial acetic acid, and alkalis. Dose, 25 cg. 3 times in 24 hours.

Torula. (See Illus. Dict.) **T. amara,** Harrison (1902), causes a bitter flavor in milk and cheese.

Torus. (See Illus. Dict.) **T. manus,** metacarpus. **T. occipitalis,** an inconstant elevation on the upper part of the occipital bone. **T. palatinus,** an inconstant prominence on the hard palate at the junction of the intermaxillary and palatomaxillary sutures. **T. spiralis,** stria acustica.

Tourniquet. (See Illus. Dict.) **T., Screw,** that invented by the French surgeon, John Lewis Petit (1674–1750). See *Tourniquet* (1) (Illus. Dict.).

Toux-qui-houpe [Fr.]. Whence "hooping" cough, rationalized into whooping-cough (*q. v.*).

Toxalbumose (*toks-al'-bu-mōs*). A toxic albumose.

Toxenzyme (*toks'-en-zīm*). A toxic enzyme.

Toxicarin (*toks-ik-a'-rin*). An active toxic principle isolated with oepain from *Antiaris toxicaria*, Lesch., by H. W. Bettink.

Toxichemitosis (*toks-ik-em-it-o'-sis*) [τοξικόν, poison; αἷμα, blood]. Blood-poisoning.

Toxicodendrol (*toks-ik-o-den'-drol*). A toxic nonvolatile oil from the poison ivy, *Rhus toxicodendron*, L., and from poison sumach, *Rhus venenata*, D. C.

Toxicomucin (*toks-ik-o-mu'-sin*). See *Toxomucin.*

Toxicopathy (*toks-ik-op'-a-the*) [τοξικόν, poison; πάθος, disease]. Disease of toxic origin.

Toxicophobia (*toks-ik-o-fo'-be-ah*) [τοξικόν, poison; φόβος, fear]. Fear of poisons.

Toxicophylaxin (*toks-ik-o-fi-laks'-in*). See *Toxophylaxin* (Illus. Dict.).

Toxidermitis (*toks-e-dur-mit'-tis*). See *Toxicoderma* (Illus. Dict.).

Toximucin (*toks-e-mu'-sin*). See *Toxomucin.*

Toxin [τοξικόν, poison]. **1.** Any poisonous nitrogenous compound produced by animal or vegetable cells. **2.** Any poisonous substance, proteid in nature, produced by animal or vegetable cells by immunization with which specific antitoxins may be obtained, also called toxalbumin. The true nature of the latter is unknown; although most of them give the reactions of albumoses or other proteid bodies, they have never been isolated in a free state. They are uncrystallizable, are soluble in water, are dialyzable, and are destroyed by heat. Some of them behave as if they were of a ferment or enzyme nature. **T., Animal,** one produced by the metabolic activity of animal cells, as snake-venom. **T., Bacterial,** one produced by the metabolic activity of bacteria, as diphtheria-toxin. **T., Extracellular,** a bacterial toxin elaborated by a microorganism and thrown off into the surrounding medium. The majority of the best-known toxins are extracellular. **T., Intracellular,** a bacterial toxin contained in the bodies of the bacteria themselves. **T.s, Ponogenic,** toxins such as are characteristic of nerve-tissue waste. **T.-unit,** consists of two parts, a haptophore complex which unites it with the cell receptor (or lateral chain) and the toxophore complex which is the poisonous element. **T., Vegetable. 1.** Any toxin produced by vegetable cells. **2.** Specifically, one produced by higher plants, as ricin (produced by the castor-oil plant), abrin (produced by the jequirity plant).

Toxine (*toks'-ēn*). See *Toxin.*

Toxinemia (*toks-in-e'-me-ah*) [τοξικόν, poison; αἷμα, blood]. See *Toxemia* (Illus. Dict.).

Toxinose du Sommeil. Fr. synonym of *Sleeping Sickness.*

Toxinosis (*toks-in-o'-sis*). See *Toxicosis* (Illus. Dict.).

Toxintuberculid (*toks-in-tu-bur'-ku-lid*). See *Tuberculid.*

Toxipeptone. See *Toxopeptone.*

Toxiphoric (*toks-if-or'-ik*). See *Toxiferous* (Illus. Dict.). **T. Side-chain,** applied by Ehrlich to atom groups which combine with the toxin of any particular disease germ.

Toxis (*toks'-is*). See *Toxicosis* (Illus. Dict.).

Toxitherapy (*toks-e-ther'-ap-e*). The therapeutic use of antitoxins.

Toxoalexin (*toks-o-al-eks'-in*). See *Toxophylaxin* (Illus. Dict.).

Toxoid (*toks'-oid*) [τοξικόν, poison; εἶδος, likeness]. An altered toxin possessing only the haptophore group, and destitute therefore of toxic effect.

Toxomucin (*toks-o-mu'-sin*) [τοξικόν, poison; *mucus*]. A toxic substance obtained from cultures of tubercle bacilli.

Toxon (*toks'-on*) [τοξικόν, poison]. Ehrlich's name for any one of several substances which appear in fresh toxins; they neutralize antitoxin and are feebly poisonous.

Toxonosis (*toks-on-o'-sis*) [τοξικόν, poison; νόσος, disease]. An affection resulting from the action of a poison. Syn., *Toxosis.* Cf. *Intoxication.*

Toxopeptone (*toks-o-pep'-tōn*). Petri's name for a poisonous proteid resembling peptone in its behavior to heat and reagents, produced in peptone cultures by the comma bacillus.

Toxophore (*toks'-o-fōr*) [τοξικόν, poison; φορεῖν, to bear]. That complex of atoms of a toxin-unit which is the poisonous element of a toxin.

Toxophorous (*toks-of'-or-us*). See *Toxiphoric.*

Toxorhynchites (*toks-o-rin'-kit-ēz*) [τοξικόν, poison; ῥύγχος, snout]. A genus of *Culicidæ,* subfamily *Megarhinina,* founded by Theobald.

Toxosis (*toks-o'-sis*). See *Toxonosis.*

Trabecula, Trabecule. (See Illus. Dict.) **T. cerebri,** the callosum. **Trabeculæ cranii,** H. Rathke's name for two curved cartilaginous bars in front of the notochord discovered by him to develop in the embryo simultaneously with the development of cartilaginous tissue in the occipital skeleton. These cartilages by their fusion and expansion form the whole of the prechordal chondrocranium (Minot). Syn., *Rathke's trabecula; First visceral bars; Trabecular bars.*

Trabs. (See Illus. Dict.) **Trabes carneæ, Trabes cordis,** columnæ carneæ.

Tracheaectasy, Tracheaectasis. (See Illus. Dict.) **T., Cystic.** See *Pouches, Tracheal.*

Tracheliasm (*tra-ke'-le-azm*). See *Trachelismus* (Illus. Dict.).

Tracheloacromial (*tra-kel-o-ah-kro'-me-al*) [τράχηλος, neck; ἀκρώμιον, acromion]. Connecting the shoulder-blade and vertebras.

Tracheloacromialis (*tra-kel-o-ah-kro-me-a'-lis*). In veterinary anatomy the dorsal part of the mastoidohumeralis muscle. It takes origin from the transverse processes of the first four cervical vertebras.

Trachelobregmatic (*tra-kel-o-breg-mat'-ik*). Pertaining to the neck and the bregma.

Tracheloclavicular (*tra-kel-o-kla-vik'-u-lar*). Relating to the neck and the collar-bone.

Trachelologist (*tra-kel-ol'-o-jist*). An expert in diseases of the neck.

Trachelology (*tra-kel-ol'-o-je*) [τράχηλος, neck; λόγος, science]. The science of the neck and its diseases.

Tracheolooccipital (*tra-kel-o-ok-sip'-it-al*). Relating to or common to the nape of the neck and the occiput.

Trachelosyringorrhaphy (*tra-kel-o-sir-ing-gor'-af-e*) [τράχηλος, neck; σῦριγξ, a pipe; ῥάφη, a seam]. Sänger's operation (analogous to Emmet's trachelorrhaphy) for vaginal fistula with stitching of the cervix.

Tracheoesophageal (*tra-ke-o-e-sof-aj-e'-al*). Relating to the trachea and esophagus.

Tracheoplasty (*tra-ke-o-plast'-e*). Plastic surgery of the trachea.

Tracheoschisis (*tra-ke-os'-kis-is*) [τραχεῖα, trachea; σχίζειν, to split]. Fissure of the trachea.

Tracheotomist (*tra-ke-ot'-om-ist*). One skilled in tracheotomy.

Tracheotomize (*tra-ke-ot'-om-īz*). To perform tracheotomy upon.

Tracheotomy. (See Illus. Dict.) **T., Plunge,** operation in one incision for urgent emergencies.

Trachielcosis (*tra-ke-el-ko'-sis*) [τραχεῖα, trachea; ἕλκος, an ulcer]. Ulceration of the trachea.

Trachielcus (*tra-ke-el'-kus*). An ulcer of the trachea.

Trachoma. (See Illus. Dict.) **T. deformans,** a name given to a form of vulvitis at the stage when it results in diffuse scar-tissue. **T., Türck's,** laryngitis sicca; granular laryngitis affecting the posterointernal wall of the larynx.

Tract. (See Illus. Dict.) Cf. *Law, Flateau's.* **T., Acusticocerebellar.** See *T., Direct Cerebellar* (Illus. Dict.). **T., Alimentary,** the whole digestive tube, from the mouth to the anus. See *Canal, Alimentary.* **T., Anterolateral Descending,** a few long fibers in the anterior and lateral ground-bundles of the spinal cord. Syn., *Löwenthal's tract; Marchi's tract.* **T., Ciaglinski's,** a long sensory tract of fibers in the gray commissure between the ventral border of the posterior columns and the central canal, and believed to spring from the posterior nerve-roots and to conduct sensations of heat and pain. **T., Cornucommissural,** a tract of fibers in the anterior part of the posterior column in close relationship to the posterior commissure and extending throughout the sacral and lumbar regions of the cord. (Gowers.) **T., Foville's,** the direct cerebellar tract of the spinal cord. **T., Habenulointerpeduncular.** See *Meynert's Fasciculus* (Illus. Dict.). **T., Krause's Respiratory,** the solitary fascicle of the oblongata. **T., Löwenthal's,** the descending anterolateral tract of the spinal cord. **T., Marchi's.** See *T., Löwenthal's.* **T., Schultze's Comma-shaped,** a small tract of descending fibers in the posteroexternal column of the spinal cord near the gray commissure. **T., Septomarginal,** a narrow strip of fibers in the posterior columns, close to the septum as high as the eleventh dorsal segment. In the sacral regions it extends as far forward as the cornu-commissural tract, with which its fibers combine, and runs backward to the periphery of the cord, where it expands into an oval area (the oval field of Flechsig). **T., Solitary.** See *Solitary Bundle* (Illus. Dict.). **T., Spitzka-Lissauer's.** See *T., Lissauer's* (Illus. Dict.).

Tractograph (*trak'-to-graf*) [*trahere,* to draw; γράφειν, to write]. An apparatus used to make traction tests.

Trajector (*tra-jek'-tor*) [L. a piercer]. An instrument used to determine the approximate location of a bullet in the cranium.

Trama, Trame, Tramis (*trah'-mah, trah'-me, trah'-mis*) [τράμη, the perineum]. 1. The perineum. 2. Any connective tissue forming the framework of a part. 3. See *Raphe* (Illus. Dict.).

Trance. (See Illus. Dict.) **T., Ecstatic,** catalepsy.

Transaudient (*trans-aw'-de-ent*) [*trans*, across; *audire*, to hear]. Allowing the transmission of sound.

Transcortical (*trans-kor'-tik-al*) [*trans*, across; *cortex*]. Across the cortex.

Transfer, Transference. (See Illus. Dict.) 2. The passage of a symptom from one side of the body to the other.

Transforator (*trans'-for-a-tor*) [*trans*, across; *forare*, to pierce]. An instrument for transforation of the fetal head.

Transfuser, Transfusionist (*trans-fu'-zur, trans-fu'-shun-ist*). One skilled in the transfusion of blood.

Transic (*trans'-ik*) [*transitus*, a passing]. Relating to a trance.

Transkeian Scab (*trans-ke'-e-an*). See *Furunculus orientalis* (Illus. Dict.).

Translation (*trans-la'-shun*) [*trans*, across; *ferre*, *latum*, to carry]. Metastasis.

Transmission. (See Illus. Dict.) **T., Placental,** the conveyance of certain drugs and bacteria and their products through the fetoplacental circulation.

Transmitting Power. The faculty which an individual organism has of transmitting its individual peculiarities to its progeny. Cf. *Prepotency*.

Transonance (*tran'-so-nans*) [*trans*, across; *sonare*, to sound]. Transmitted resonance, the transmission of sound through an organ, as of the cardiac sounds through the lungs and chest-wall.

Transperitoneal (*trans-per-it-on-e'-al*). Across the peritoneal cavity.

Transplantation. (See Illus. Dict.) **T. of Teeth,** the insertion of a natural tooth from a foreign source in a natural alveolus.

Transsection (*trans-sek'-shun*). A cross-section.

Transsegmental (*trans-seg-ment'-al*). Across a segment of a limb or organ.

Transthalamic (*trans-thal'-am-ik*). Across the thalamus.

Transthoracic (*trans-tho-ras'-ik*) [*trans*, across; θώραξ, thorax]. Extending across the thorax.

Transthoracotomy (*trans-tho-rak-ot'-o-me*) [*trans*, across; θώραξ, thorax; τομή, a cutting]. The operation of cutting across the thorax.

Transvaginal (*trans-vaj'-in-al*). Across the vagina.

Transversectomy (*trans-ver-sek'-to-me*) [*trans*, across; *vertere*, to turn; ἐκτομή, excision]. Removal of the transverse process of a vertebra.

Trapeziometacarpal (*trap-e-ze-o-met-ah-kar'-pal*). Relating to or uniting the trapezium and metacarpus.

Traumatol (*trau'-mat-ol*). See *Iodocresol*.

Traumosis (*trau-mo'-sis*) [τραῦμα, a wound]. The action in the system of poisons due to wounds.

Travel-ration. See *Ration, Emergency*.

Treacle. (See Illus. Dict.) **T. of Andromachus.** See *T., Venice*. **T., Venice,** a complex electuary of the Middle Ages. Its proportions were, at most, word for word those recommended by Galen in his treatise περὶ Ἀνδρόμαχον. It was also known as the treacle of Andromachus.

Treatment. (See Illus. Dict.) **Albertini's Method,** repose and complete abstinence from food in aneurysm of the aorta. **Baccelli's Method in Echinococcus Cysts of the Liver,** aspiration is made for several consecutive days, and washings made with a 1 : 1000 solution of bichlorid of mercury and a 1 : 100 salt solution. **Baccelli's Method** in the treatment of tetanus, hypodermic injection of a solution of carbolic acid. **Bechterew's Method** of treating epilepsy consists in dosage with a combination of potassium bromid, *Adonis vernalis*, and codein. **Bellingham's Method** of treating aneurysm. Prolonged horizontal decubitus, a moderate but nutritive diet, and almost total abstinence from liquids (not more than 250 c.c. per day). **Bier's Method** of treating tuberculous joints consists in combined active and passive hyperemia. **Binswanger's Cure** for neurasthenia consists in rest and suralimentation. **Blaschko's Mercurial,** by means of mercolint, a proprietary article consisting of cotton flannel impregnated with metallic mercury so finely divided as to be readily vaporized when applied. **Bouchard's Method** of treating obesity: A daily diet of 1250 gm. of milk and 5 eggs divided into 5 meals. **Brehmer's Method** of treating pulmonary tuberculosis. It comprises repose, the air cure, hydrotherapy, suralimentation, and respiratory gymnastics. **Calot's Method of Forcible Reduction of Angular Deformity of the Spine.** The patient is anesthetized and laid upon his face. One assistant grasps the hands, another the feet, and strong traction is made. The pelvis and lower abdomen are supported by one assistant, the upper abdomen and chest by another. It is frequently necessary to resect the spines of the projecting vertebras and remove the thickened skin above these spines. After this operation the surgeon can apply needed pressure. In instances where the deformity is maintained by bone-deposit, Calot resects the spines and laminas and performs cuneiform osteotomy of the ankylosed bodies of the vertebras. A plaster-jacket for the head, neck, trunk, and pelvis is applied and worn for 3 months, followed by a fresh one, which is also worn for 3 months. The patient then has a poroplastic jacket placed upon him and is allowed to walk about. **T., Chewing-gum,** the use of chewing gum in obesity and dropsy to occasion loss of water through expectorated saliva. **Coley's Method** in the treatment of cancer and lupus consists in the employment of inoculations of *Streptococcus erysipelatis* and *Bacillus prodigiosus*. **T., Crotte's, of Tuberculosis,** that practised by Francisque Crotte of Paris. It consists in (1) inhalations of vapors of formol; (2) in transfusion and transport of antiseptics by static currents of electricity of high and medium tension. **Czerney-Trunecek's Method** of treating cutaneous epitheliomas; by cauterization, or by the application, with a brush, of arsenious acid after scarification; the solution employed consists of arsenious acid. 1 gm.; ethyl alcohol and distilled water, each, 40–50 c.c. **Debove's Method** of treating typhoid fever consists essentially in the administration of 6 or 7 liters of liquid in 24 hours, in order to favor diuresis. **Denisensko's Method,** the subcutaneous injection of a watery extract of *Chelidonium majus* in the treatment of cancer. **Donkin's Method,** a skimmed-milk diet in diabetes. **Dowsing System,** the treatment of neuritis and other sequels of Mediterranean fever by luminous heat baths. **Dührssen's Method** in puerperal eclampsia consists in emptying the uterus as soon as possible. **T., Edlefsen's,** for chronic eczema, consists in an application every evening of pure iodin 0.1 gm., iodid of potassium 0.25 gm., glycerin 12.0 c.c. **T., Electric-light,** the therapeutic application of electric light by means of cabinets in which the patient sits with the light directed upon the affected part. It is used in rheumatism, neuralgia, etc. **Ercole's Method** of treating bone cavities after the removal of sequestra consists in making the upper and lower walls an inclined plane, the lateral walls having been broken down. The periosteum is preserved and sutured. The posterior portion of the bone only remains to give support. **T., Felt, of Sciatica,** subcutaneous injection of 2 mg. ($\frac{1}{33}$ gr.) of atropin, followed in 48 hours by a second dose of 2.6 mg. ($\frac{1}{25}$ gr.), 48 hours after 3 mg. ($\frac{1}{20}$ gr.). **T.,**

Flechsig's Opium-bromid, of epilepsy, the administration of a grain of opium, given in 3 doses daily and steadily increased until 4 or 5 gr. daily are administered. After a period of 6 weeks the opium is discontinued and bromids are given in large doses, 75–100 gr. daily for at least two months. This applies only to chronic intractable cases in which the use of bromids alone has failed. **Fleiner's Method** of treating round ulcers of the stomach consists in the administration of large doses of bismuth subnitrate by means of an esophageal sound. **Fochier's Method**, the production of an aseptic abscess, called a fixation, by subcutaneous injection of essence of terebinthin in cases of general infection, as pneumonia, puerperal fever, etc. **T., Fränkel's Exercise, of Ataxia**, a system of progressively graded muscular exercises, performed in bed and out, for a half-hour twice a day with frequent rests. The limbs are flexed and extended, abducted and adducted, and this is followed by training in sitting and rising, and in stepping forward and backward. **T., Goldman's**, of pulmonary tuberculosis, consists in employing creasote carbonate and ammonium sulfichthyolate, each 15 gm.; glycerin, 30 gm.; peppermint water, 10 gm. Dose, 10 to 30 drops 3 times daily. **Haberkorn's Method**, the treatment of erysipelas by the internal administration of sodium benzoate in daily doses of 15 to 20 gm. **T., Harvey-Banting.** See *T., Banting* (Illus. Dict.). **Hildebrandt's Method**, the absorption of tubercles from the peritoneum, following celiotomy, by reactive hyperemia. **T., Hot-air**, the local application of superheated dry air, the affected part being introduced into a cylinder or chamber. Syn., *Aërothermotherapy; Tallerman treatment.* **T., Hüter's**, of erysipelas, consists in hypodermic injections of carbolic acid. **T., Ice-bag, of Typhoid.** See *T., Lockard's.* **Jaboulay's Method** of treating inoperable uterine cancer consists in endovenous injection of quinin hydrochlorate. Dose, 4 gr. gradually increased to 8 gr. **Janet's Method** of treating gonorrhea in its first stage: A urethral and vesical irrigation with 1 : 1000 to 1 : 2000 solution of potassium permanganate is used daily for 10 days to 2 weeks, in a quantity of one or more liters. **T., Kolisch's**, of gout: Every influence in diet and drink which irritates the kidneys is interdicted; shellfish, carbohydrates, and fats are allowed, also milk and eggs. Salads and greens, except such as asparagus, are useful. Undue exercise to be avoided on account of alloxin productions. **T., Krull's**, of pulmonary tuberculosis, consists in the inhalation of warm damp air at a constant temperature. **Lalande's Method** in syphilis: The keratin treatment; the hypodermic injection of a salt solution of pulverized calves' horns in the proportion of 60 gm. of powdered horn, 10 gm. of sodium chlorid, 1000 c.c. of distilled water. **T., Lancereaux's**, in aneurysm of the aorta, consists in subcutaneous injections of serum gelatin. **Levaschoff's Method in Exudative Pleurisy**, injection of and replacement of the exudate by normal salt solution. **Libby's Method** of treating otitis media consists in insufflations of acetanilid. **Linossier and Lannois' Method** of treating rheumatism consists in cleansing the affected part thoroughly and placing under it a sheet of gutta-percha paper. Methyl salicylate is then applied drop by drop upon the skin of the joint and the latter is immediately enveloped in the paper to prevent the evaporation of the preparation; this is covered by a layer of wadding and the whole held together by a flannel bandage; 50 to 120 drops of methyl salicylate are sufficient for one dressing, but if necessary 12 or even 24 gm. may be used. If the pain is very acute, it may be repeated within 24 hours. **T., Lockard's Ice-bag**, of typhoid: continuous application of ice-bags to the axillas, popliteal spaces, back of neck, wrist, and ankle to reduce temperature. **T., Nauheim.** See *T., Schott's* (Illus. Dict.). **Neuber's Method** of treating joint and bone tuberculosis: An incision is made and all fragments and tubercular foci are removed and the cavity filled with an emulsion of iodoform and glycerol of the strength of 10%. It is then sewed up with buried sutures without drainage. **v. Noorden Method.** See *T., Oat.* **T., Oat**, of v. Noorden, in diabetes mellitus consists in daily régime of 250 gm. of oat flakes or meal cooked for a long time in water, 100 gm. of albumen, 300 gm. of butter. **O'Dwyer's Method** of treating intubation ulcers. This consists in the employment of tubes provided with a narrow neck and coated with a layer of gelatin and alum. In all cases in which intubation has lasted over 100 hours, ulceration is liable to occur, and the employment of these tubes is then to be recommended. The gelatinized tube is left in the larynx for 5 days, at the end of which time it is removed and replaced by a similar tube. This process is repeated 3 times, at the end of which the ulcer will usually be found to be completely healed. **T., Open-air**, of tuberculosis: Life out-of-doors in that climate which restricts least the daily duration of the stay in the open air, combined with comfort, intelligent medical supervision, proper food, and amusement. **Pellizari's Method** of treating onychomycosis consists in smearing the nail and surrounding tissue twice each day with ointment composed of equal parts of olive oil and pyrogallic acid until acute inflammation has raised up the epidermis around the nail with pus; then discontinue the ointment and dress with antiseptic remedies twice daily. **T., Petresco's**, of pneumonia, consists in the administration of very large doses of digitalis. **T., Potato**, in diabetes, a daily diet of 1–2¼ pounds of potatoes, to the exclusion of bread. **Rasori's Method** in pneumonia, administration of fractional doses of emetics. **Renoy's Method**, abortive treatment of erysipelas by means of traumaticin with ichthyol. **T., Robin's**, of typhoid fever, consists in oxidation and elimination of incompletely oxidized organic waste. **Roman Method** of administering phenocoll to pregnant women suffering from malaria. Give a dose 5, 4, 3, and 2 hours before a febrile paroxysm is due. **Rosen's Method** for nevus: Thread through the growth a strand of silk previously soaked in alcohol and iron perchlorid and allow it to remain for a week. **Rosenthal's Method**, the treatment of erysipelas by administering 15 cgm. of camphor every other day at alternate hours in hot fluids. **Rosner's Method** in treatment of cholera: intravenous injections of sodium-chlorid solution. **T., Routh's**, treatment of pernicious vomiting of pregnancy by painting the cervix uteri with tincture of iodin. **Schede's Method**, treatment of necrosis of bone by removal of the dead bone and filling the cavity with an aseptic clot. **Schetelig's Method** of treating acute pulmonary tuberculosis: pure guaiacol is given in 3 hypodermic doses, one of 15 ♏ and two of 10 ♏ at 4-hour intervals. **T., Schwartze's**, of acute mastoiditis: All cariously softened bone is removed with the chisel from the aditus and antrum, great care being taken to preserve the auditory ossicles from injury. The opening of the bone varies from 5 to 8 mm. **T., Sehrwald's**, of pulmonary tuberculosis, consists in direct injection of antiseptics into the trachea. **T., Seiler-Garcin's.** See *T., Seiler's* (Illus. Dict.). **Smellie's Method** of extraction by the breech. See *Mauriceau's Method* (Illus. Dict.). **T., Tarnier's,**

in obesity, exclusive milk diet. **Tison's Method,** treatment of erysipelas by the internal administration of azotate of aconitin in doses of 1 mgm. daily. **Trunecek's Method** in arteriosclerosis. See under *Serum, Trunecek's.* **Tuffnell's Method,** a treatment for aneurysm, consisting in absolute rest, dry diet, and the administration of potassium iodid. **T., Unna's,** of ulcers, the application of zinc-glycerin glue. **Veit's Method** of extraction by the breech. See *Mauriceau's Method* (Illus. Dict.). **T., Weigert's,** in tuberculosis, the inhalation of hot air. **Wolff (Julius) Method,** the systematic employment of massage and gymnastics in the treatment of occupation-neuroses. **Woodbridge's Method** of abortive treatment of typhoid fever by administration of podophyllum, calomel, guaiacol, eucalyptol, and menthol according to a definite formula. **T., Yeast-, of Gonorrhea,** the local application of yeast by means of injections or suppositories. The yeast is employed alone or in combination with asparagin (Otto Abraham). Yeast therapy, practised by Hippocrates and Dioscorides, was rediscovered by Landau (1899).

Trefusia (*tre-fu'-ze-ah*). A red-brown, soluble powder, obtained by drying defibrinated blood. It is used in chlorosis.

Tremolo (*trem'-o-lo*). An apparatus for performing massage; a vibrator.

Tremor. (See Illus. Dict.) **T. artuum,** paralysis agitans. **T. cordis,** a sudden rapid fluttering of the heart, and the ordinary full pulse of health suddenly drops to a mere tremulous thread. A symptom often met in neurotic persons. **T. metallicus.** See *T., Mercurial* (Illus. Dict.). **T. potatorum,** delirium tremens. **T., Rendu's Type of,** a hysteric tremor provoked or increased by volitional movements. **T.s from Zinc-poisoning.** Synonym of *Brass-founder's Ague* (*q. v.* under *Ague*) (Illus. Dict.).

Trephination (*tref-in-a'-shun*). See *Trephining* (Illus. Dict.).

Trephine. (See Illus. Dict.) 2. To operate with the trephine.

Triangle. (See Illus. Dict.) **T., Extravesical.** See *T., Pawlik's.* **T., Gombault-Philippe's,** the triangular area formed in the conus medullaris by the fibers which higher up compose Flechsig's oval field. **T., Grymfelt's,** a triangular space bounded above by the twelfth rib and the lower border of the serratus posticus inferior, behind by the anterior border of the quadratus lumborum, and anteriorly by the posterior border of the internal oblique. Lumbar hernia may occur in this space. **T., Henke's,** the inguinal triangle, formed by the lateral border of the rectus muscle and the descending portion of the inguinal fold. **T., Hypoglossohyoid,** a triangular space in the lateral subhyoid region limited above by the hypoglossal nerve, in front by the posterior border of the mylohyoid muscle, behind and below by the tendon of the digastric muscle. The area is occupied by the hyoglossal muscle which covers the lingual artery. Syn., *Pinaud's triangle; Pirogoff's triangle.* **T., Inguinal.** See *T., Henke's.* **T., Interdeferential.** See *Trigone* (2). **T., Lieutaud's,** the trigonum vesicæ. **T., Macewen's,** the suprameatal triangle; the triangular space bounded by the upper half of the posterior wall of the external auditory meatus, by the supramastoid crest and an imaginary line dropped from the latter at the level of the posteroinferior wall of the external meatus. It is the space selected for trephining in cases of otitic abscess of the temporosphenoid lobe. Syn., *Macewen's space.* **T., Malgaigne's,** the superior carotid triangle. **T., Pawlik's,** extravesical or vaginal triangle. The triangular space formed by the two divergent columns of the vagina and the transverse ridge below the external orifice of the neck of the bladder. It corresponds line for line to the trigonum vesicæ. **T., Pingaud's, T., Pirogoff's.** See *T., Hypoglossohyoid.* **T., Supramental.** See *T., Macewen's.* **T., Vaginal.** See *T., Pawlik's.* **T., Wernicke's,** triangular area formed by the decussation, at various angles, of the radiating fibers of Gratiolet with the fibers proceeding from the external geniculate body and pulvinar; it occupies the extreme posterior segment of the capsula. **T., Wilde's Luminous.** See *Politzer's Luminous Cone.*

Trianospermin (*tri-an-o-spurm'-in*). An alkaloid found by Peckolt in *Cayaponia martiana,* D. C. Cf. *Tayuyin.*

Trianospermitin (*tri-an-o-spurm'-it-in*). An alkaloid found by Peckolt in *Cayaponia martiana,* D. C.

Tribenzylidenediamin (*tri-ben-zil-id-en-di-am'-in*). Same as *Hydrobenzamid* (Illus. Dict.).

Tribromacetaldehyd (*tri-bro-mas-et-al'-de-hid*). Bromal.

Tribromaldehyd (*tri-bro-mal'-de-hid*). Bromal.

Tribromaloin (*tri-bro-mal-o'-in*). $C_{17}H_{15}Br_3O_7$. A yellow crystalline compound of bromin and barbaloin.

Tribromanilin (*tri-bro-man'-il-in*). $C_6H_4Br_3N$. Colorless needles obtained from anilin by action of bromin; melt at 119° C.; boil, 300° C. **T. Hydrobromid.** See *Bromamid* (Illus. Dict.).

Tribromhydrin (*tri-brom-hi'-drin*). See *Allyl Tribromid* (Illus. Dict.).

Tribrommethane (*tri-brōm-meth'-ān*). See *Bromoform* (Illus. Dict.).

Tribromobenzol (*tri-bro-mo-ben'-zol*). $C_6H_3Br_3$. A bromin substitution-product of benzene. **T., Asymmetric.** Same as *Benzene, Tribromated.*

Tribromosalol, Tribromsalol (*tri-bro-mo-sal'-lol, tri-brom-sal'-lol*). $C_6H_2Br_3.C_7H_2Br_3O_3$. Long acicular crystals, insoluble in water, sparingly soluble in chloroform, acetone, and glacial acetic acid, insoluble in water, melt at 195° C. An intestinal antiseptic. Dose, 8–30 gr. (0.5–2 gm.). Hypnotic in doses of 20–30 gr. (1.5–2 gm.). Syn., *Cordoltribromphenyl salicylate.*

Tribrompropane (*tri-brom-pro'-pān*). See *Allyl Tribromid* (Illus. Dict.).

Tribrompropenyl (*tri-brom-pro'-pen-il*). See *Allyl Tribromid* (Illus. Dict.).

Tribulus. (See Illus. Dict.) **T. terrestris,** L., ikshugandha, burra gookero, a species found in southern Europe, in Asia, and in Africa. The leaves are used as a galactagog, tonic astringent, and diuretic. Tincture recommended in spermatorrhea. Daily dose, 5–20 ♏ (0.33–1.33 c.c.). Dose fl. ext., 20 ♏.

Tricalcic (*tri-kal'-sik*). Containing three atoms of calcium.

Tricarbamid (*tri-kar'-bam-id*). See *Acid, Tricyanic* (Illus. Dict.).

Trichesthesia (*trik-es-the'-ze-ah*) [θριξ, hair; αἰσθησις, sensibility]. A name given by N. Vaschide and P. Rousseau (1902) to a peculiar form of tactile sensibility in regions covered with hairs. 2. See *Trichoesthesia.*

Trichiniphobia (*trik-i-ne-fo'-be-ah*) [θριξ, hair; φόβος, fear]. Morbid fear of trichinosis.

Trichinoscope (*trik-i'-ne-skōp*). A microscope for the detection of *Trichina spiralis.*

Trichlorbenzene (*tri-klōr-ben'-zēn*). $C_6H_3Cl_3$. A substitution product of benzene. **T., Asymmetric.** Same as *Benzene, Trichlorated.*

Trichlorethane (*tri-klōr-eth'-ān*). See *Methyl-chloroform.*

Trichlorhydrin (*tri-klor-hi'-drin*). $C_3H_5Cl_3$. A colorless oily liquid with odor of alcohol. Syn., *Glyceryl trichlorid; Propenyl trichlorid; Allyl trichlorid.*

Trichlorid (*tri-klo'-rid*). A compound of an element or radicle with three atoms of chlorin.

Trichloroquinone (*tri-klo-ro-kwin'-ōn*). $C_6HCl_3O_2$. Yellow, flat crystals, soluble in ether and hot alcohol; melt at 166° C.; obtained from a sulfuric acid solution of phenol by action of potassium chlorate with HCl.

Trichobacteria (*trik-o-bak-te'-re-ah*). 1. Flagellate bacteria. 2. Filamentous bacteria.

Trichobezoar (*trik-o-be'-zo-ar*) [θρίξ, hair; *bezoar*]. See *Ægagropilus* (Illus. Dict.).

Trichoclasis. See *Trichoclasia* (Illus. Dict.).

Trichodectes (*trik-o-dek'-tēz*) [θρίξ, hair; δήκτης, a biter]. See *Parasites, Table of* (Illus. Dict.).

Trichoepithelioma (*trik-o-ep-e-the-le-o'-mah*) [θρίξ, hair; *epithelioma*]. A skin-tumor originating in the hair-follicles.

Trichoesthesia (*trik-o-es-the'-ze-ah*) [θρίξ, hair; αἴσθεσις, sensibility]. The sensation perceived when a hair is touched; supposed to be distinct from ordinary tactile sensation. (v. Bechterew.)

Trichoesthesiometer (*trik-o-es-the-ze-om'-et-ur*) [θρίξ, hair; αἰσθησις, sensibility; μέτρον, measure]. An electric appliance for determining the sensibility of the hair.

Trichomania. See *Trichotillomania.*

Trichophagy, Trichophagia (*trik-of'-aj-e, trik-o-fa'-je-ah*). The eating of hair.

Trichophobia (*trik-o-fo'-be-ah*) [θρίξ, hair; φόβος, fear]. Morbid fear of hair.

Trichophytic (*trik-of-it'-ik*). 1. Relating to the genus *Trichophyton.* 2. [φύειν, to grow.] Promoting the growth of hair. 3. An agent promoting the growth of hair.

Trichosporium (*trik-o-spo'-ri-um*) [θρίξ, hair; σπόρος, seed]. A genus of the *Oomycetes.* **T. beigeli,** Vuillemin, a species described as producing nodosities of the beard in some parts of France (Nancy), a disease analogous to, if not identical with, that of Colombia known as "piedra."

Trichotillomania (*trik-o-til-o-ma'-ne-ah*) [θρίξ, hair; τίλλειν, to pluck out; μανία, mania]. A morbid state described by Hallopeau and characterized by pruriginous sensations referred to the hairy parts of the body and intensified in paroxysms, accompanied by a determination to pluck out all the hairs so that artificial baldness results.

Trichotoxicon (*trik-o-toks'-i-kon*) [θρίξ, hair; τοξικόν, poison]. D. L. Parker's term for a supposed toxin elaborated by decomposition of the organic matter which exists in respired air, which when introduced into the blood exerts a selective poisonous action upon the hair or tissues analogous to hair. Alopecia is held to be due to autointoxication with this substance.

Trichotoxin (*trik-o-toks'-in*). A cytotoxin obtained by E. Metchnikoff from the capillary epithelia. Cf. *Hematoxin, Hepatotoxin, Leukotoxin, Nephrotoxin, Neurotoxin, Spermatoxin.*

Triconodont (*tri-kon'-o-dont*) [τρεῖς, three; κῶνος, cone; ὀδόυς, tooth]. Applied to a tooth having three conical cusps; also to the mammals having such molars.

Tricresol, Trikresol (*tri-kre'-sol*). A refined mixture of metacresol, 40%; paracresol, 33%; orthocresol, 27%; soluble in 40 parts of water. It has three times the germicidal value of carbolic acid.

Tricresolamin (*tri-kres-ol-am'-in*). A solution containing 2% each of ethylenediamin and tricresol; it is a clear, colorless, alkaline liquid turning yellow on exposure. It is used as tricresol, but is stronger and less irritating.

Trichromat (*tri-kro'-mat*) [τρεῖς, three; χρῶμα, color]. Persons for whom the end regions of the spectrum are of a constant hue and differ only in intensity. Just inside of each end region there is an intermediate region in which any color can be produced by mixtures of the end color with the color of the intermediate region. Between these intermediate regions lies the middle region, which requires the presence of some third color in addition to colors from the end regions. Most all women and about 96% of men belong to this class. [Scripture.] Cf. *Dichromat, Monochromat.*

Triethylcarbinol (*tri-eth-il-kar'-bin-ol*). $(C_2H_5)_3 : C(OH - C_2H_5$. One of the tertiary heptyl alcohols; in which the radicle hydrogen of methylalcohol is substituted by 3 molecules of the radicle C_2H_5. Syn., *Triethylated methylic alcohol.*

Triferrin (*tri-fer'-in*). See *Iron Paranucleinate.*

Triformal (*tri-form'-al*). See *Formalin* (Illus. Dict.).

Trigemin (*tri-jem'-in*). A substance obtained from pyramidon by action of butyl chloral hydrate, forming white needles soluble in water; antineuralgic. Dose, 0.5–1.2 gm.

Trigocephalus (*tri-go-sef'-al-us*). See *Trigonocephalus* (Illus. Dict.).

Trigone. (See Illus. Dict.) 2. The triangular area, bounded by lines about 1¾ inches long, joining the urethral and ureteral orifices of the bladder. 3. The first three cones of an upper molar.

Trigonellin (*tri-go-nel'-in*). $C_7H_7NO_2$. An alkaloid obtained by E. Jahns from fenugreek, *Trigonella fœnum-græcum,* L.

Trigonid (*tri'-go-nid*) [τρεῖς, three; γωνία, an angle]. The first three cones of a lower molar.

Trigonodont (*tri-gon'-o-dont*) [τρεῖς, three; γωνία, an angle; ὀδόυς, tooth]. A tooth with three cones in a triangle.

Trigonum. (See Illus. Dict.) **T. lemnisci,** the fillet. **T. lumbale.** See *Triangle, Petit's* (Illus. Dict.). **T. olfactorium.** See *Area, Broca's Olfactory.*

Triimid (*tri-im'-id*). See *Paramid* (Illus. Dict.).

Triiodocresol (*tri-i-o-do-kre'-sol*). See *Losophan* (Illus. Dict.).

Trikresol. See *Tricresol.*

Trilateral (*tri-lat'-ur-al*) [*tres,* three; *latus,* a side]. Having three sides.

Trilinolein (*tri-lin-o'-le-in*). $C_3H_5(OC_{18}H_3O_3)_3$. A glycerid contained in linseed oil, hempseed oil, sunflower oil, etc.

Trimethylanthraquinone (*tri-meth-il-an-thra-kwin'-ōn*). $C_{17}H_{14}O_2$. A crystalline substance melting at 161° C. obtained from pseudo-cuminoylbenzoic acid by action of concentrated sulfuric acid with heat.

Trimethylcarbinol (*tri-meth-il-kar'-bin-ol*). $C_4H_{10}O$. Tertiary butylic alcohol obtained from liquid isobutylene by action of sulfuric acid with water, occurring in fragrant needles with odor of camphor, soluble in alcohol; melt about 25° C.; boil 82.5° C. Syn., *Trimethylated methylic alcohol.*

Trimethylethylene (*tri-meth-il-eth'-il-ēn*). See *Pental* (Illus. Dict.).

Trimethylglycol (*tri-meth-il-gli'-kol*). See *Betain* (Illus. Dict.).

Trineuric (*tri-nu'-rik*) [τρεῖς, three; νεῦρον, nerve]. Applied to a nerve-cell provided with three neuraxons.

Trinitrocresol (*tri-ni-tro-kre'-sol*). $C_7H_5N_3O_7$. Long yellow crystals, slightly soluble in water, melt at 102° C., obtained from nitration of coal-tar cresol; antiseptic.

Trinitroisobutyltoluol (*tri-ni-tro-is-o-bu-til-tol'-u-ol*). See *Tonquinol.*

Trinitrophenol (*tri-ni-tro-fe'-nol*). Picric acid.

Trinophenon (*tri-no-fe'-non*). A remedy for burns said to be an aqueous solution of picric acid.

Trioxyacetophenone (*tri-oks-e-as-et-o-fe'-nōn*). See *Gallacetophenone* (Illus. Dict.).

Trioxyanthroquinone (*tri-oks-e-an-thro-kwin'-ōn*). See *Anthragallol.*

Trioxybenzene (*tri-oks-e-ben'-zēn*). See *Phloroglucin* (Illus. Dict.).

Tripara (*trip'-ar-ah*) [*tres*, three; *parĕre*, to bear]. A woman who has borne three children.

Tripartition (*tri-par-tish'-on*) [*tres*, three; *partire*, to divide]. A division into three parts or groups.

Triphasic (*tri-fa'-sik*). Having three phases or variations.

Triphenamin (*tri-fen'-am-in*). An antirheumatic remedy said to be a mixture of phenocoll, 2.6 gm., phenocoll salicylate, 1 gm., and phenocoll acetate, 0.4 gm. Recommended for rheumatic complaints.

Triphenetolguanidin Hydrochlorate (*tri-fen-et-ol-gwan'-id-in*). A local anesthetic in 0.1% solution in treatment of eyes.

Triphenin (*tri-fe'-nin*). Propionyl-phenetidin, $C_6H_4OC_2H_5NHC_2H_5CO$, obtained by boiling paraphenetidin with propionic acid. It occurs as a white, lustrous, crystalline powder without odor and having a slightly bitter taste; soluble in 2000 parts of water. It is used as an antipyretic and sedative. Daily dose, 3.0 gm.; single dose, 0.5–1 gm. Syn., *Methylphenacetin.*

Triphenyl. (See Illus. Dict.) **T. Albumin**, a culture-medium made by heating dry egg albumin with phenol. It is odorless, tasteless, insoluble in water, alcohol, and potassa solution, but soluble in phenol. **T.-guanidin**, $C_{19}H_{17}N_3$, an amorphous powder or hexagonal prisms, soluble in alcohol, melt at 143° C., obtained from a boiling alcoholic solution of anilin and thiocarbanilid by action of lead oxid. It is antiseptic. The hydrochlorate is soluble in water and melts at 241°–242° C. **T.-methane**, $C_{19}H_{16}$, crystalline substance obtained from a mixture of chloroform and benzene by action of aluminium chlorid. It is soluble in alcohol, ether, chloroform, and benzene, melts at 92° C., boils at 358°–359° C.

Tripod. (See Illus. Dict.) **T., Haller's**, tripus Halleri; the celiac axis. **T. of Life, T., Vital**, a name for the brain, heart, and lungs, as being the mainstay of vitality.

Triradius (*tri-ra'-de-us*) [*tres*, three; *radius*, ray; pl. *triradii*]. In the impression of the palmar surface in the Galton system a triangular area composed of transverse ridges at the base of each of the four fingers; used in the classification of palmar impressions. Syn., *Digital triadii, Galton's deltas.*

Trismic (*triz'-mik*). Relating to trismus.

Tristeza. The name used in Argentina for Texas fever.

Trithialdehyd (*tri-thi-al'-de-hid*). See *Sulfoparaldehyd.*

Trithiodoformaldehyd (*tri-thi-o-do-form-al'-de-hid*). A substance obtained by Auger by interaction of formic acid, lead formiate, and hydrogen sulfid. It occurs in crystals which melt at 216° C.

Triticonucleic Acid (*trit-ik-o-nu-kle'-ik*) [*triticum*, wheat; *nucleus*]. The name given by Osborne and Harris to the nucleic acid isolated by them from the embryo of wheat. It has the formula $C_{41}H_{61}N_{16}P_4O_{31}$, and is dextrorotatory and closely allied to neucleic acid from yeast.

Tritipalm (*trit'-e-pahm*). A proprietary genitourinary tonic said to consist of the fluid extract of fresh saw palmetto, *Serenoa serrulata*, Benth. et Hook, and couch grass, *Agropyron repens*, Beaur. Dose, 1 oz. three times daily.

Tritocone (*trit'-o-kōn*) [τρίτος, third; κῶνος, cone]. The posterior external cone of the upper premolars.

Tritol (*tri'-tol*). Any emulsion of oil, 4 parts, and diastasic extract of malt, 1 part.

Tritorium, Triturium (*tri-to'-re-um, tri-tu'-re-um*) [*tritus*, a rubbing]. A vessel used in separating liquids of different density.

Tritotoxin (*tri-to-toks'-in*) [τρίτος, third; τοξικόν, poison]. One of the third group into which Ehrlich classifies toxins, according to the avidity with which they combine with antitoxins, tritotoxin combining least readily. Cf. *Prototoxin, Deuterotoxin.*

Triture (*trit'-ūr*). See *Tritorium.*

Trochanter. (See Illus. Dict.) **T., Third.** See *T. tertius* (Illus. Dict.).

Trochosa (*tro-ko'-sah*) [τροχᾶν, to revolve or to be round]. A genus of spiders of the family *Lycosidæ.* **T. singoriensis**, Laxmann, a Russian tarantula the bite of which is regarded as poisonous.

Troglodytism (*trog'-lo-dīt-izm*) [τρώγλη, a cave; δύειν, to enter]. Insufficient habitation, the condition of cave-dwellers.

Trolley-eye. See *Chalkitis.*

Trombidium (*trom-bid'-e-um*). See *Parasites, Table of* (Illus. Dict.).

Tropacocain. (See Illus. Dict.) **T. Hydrochlorid**, $C_8H_{14}NO \cdot C_6H_5CO \cdot HCl$, used as a local anesthetic instead of cocain hydrochlorate in 2% to 3% solutions as less toxic and more reliable.

Tropate (*tro-pāt*). A salt of tropic acid.

Tropein (*tro'-pe-in*). One of several ester-like derivative of tropin by combination of the latter with acids, thus: atropin, daturin, duboisin, and hyoscyamin, isomeric or identical compounds, are derivatives of tropin and tropic or *a*-phenylhydracrylic acid, phenylglycolyl-tropein, or homatropin from tropin and mandelic acid; benzilotropein from tropin and benzilic acid, lactyl tropein from tropin and lactyllactic acid. When the acid radicle contains alcoholic hydroxyl, the derived tropeins possess mydriatic action.

Tropeinism (*tro'-pe-in-izm*). Poisoning by any of the tropeins (*q. v.*) or by plants (*Solanaceæ*) containing tropeins (*Atropa belladonna*, L., *Datura stramonium*, L., *Hyoscyamus niger*, L., *Duboisia myriopoides*, R. Br.). It is characterized in light cases by dryness of the mouth, dysphagia, and acceleration of the pulse; in severer cases by dilation of the pupils, ataxia, clonic spasms, psychic disturbances with excessive excitement; the severest cases are marked by loss of consciousness, anesthesia, paralysis of the sphincters, and cardiac and respiratory paralysis.

Tropesis (*tro-pe'-sis*) [τροπή, a turn]. Inclination.

Trophesic (*trof'-es-ik*). See *Trophesial* (Illus. Dict.).

Trophoedema (*trof-o-e-de'-mah*) [τροφή, nourishment; *edema*]. A condition marked by localized permanent edemas, described by H. Meige. **T., Chronic**, a condition frequently hereditary and of family distribution, marked by hard, white, painless swellings on the legs, lasting through life without material injury to health.

Trophonine (*trof'-on-ēn*). A proprietary food said to consist of beef, nucleoalbumin, gluten of wheat, and enzymes of the digestive gland.

Trophoplasm. (See Illus. Dict.) 2. Strasburger's term for the nutritive cytoplasm.

Trophotonos (*trof-ot'-on-os*) [τροφή, nourishment; τόνος, tension]. Rigidity of contractile tissue due to trophic disturbances.

Tropic (*tro'-pik*). Relating to tropin, containing tropin.

Tropism (*tro'-pizm*) [τροπή, a turn]. The striving of living cells after light and darkness, heat or cold, etc.

Tropococain. See *Tropacocain* (Illus. Dict.).

Tropometer (*trop-om'-e-ter*) [τροπή, a turn; μέτρον, measure]. 1. An achromatic telescope in which the inverted image of the examined eye is found at the eyepiece, where, either as an aerial image or as an image upon the ground glass, its movements can be accurately observed. (Stevens.) 2. An apparatus for estimating the amount of torsion in long bones.

Tropon (*trop'-on*). A mixture of animal albumin, 33%, and vegetable albumin, obtained chiefly from buckwheat; a light brown powder used as a nutrient for the sick and convalescent; 5–15 gm. with each meal in soup, cocoa, wine, etc.

Trypanosoma (*tri-pan-o-so'-mah*) [τρύπανον, a borer; σῶμα, body]. A genus of *Hematozoa*. See *Parasites, Table of Animal* (Illus. Dict.).

Trypanosomatic (*tri-pan-o-so-mat'-ik*). Pertaining to or dependent upon parasites of the genus *Trypanosoma*.

Trypanosomatosis (*tri-pan-o-so-mat-o'-sis*). See *Trypanosomiasis*.

Trypanosomiasis (*tri-pan-o-so-mi-a'-sis*) [τρύπανον, a borer; σῶμα, body]. Any of the several diseases due to infection with the various species of *Trypanosoma* (*q. v.*).

Trypanosomose. See *Trypanosomiasis*.

Trypsase (*trip'-sāz*). See *Trypsin* (Illus. Dict.).

Tryptolytic (*trip-tol-it'-ik*) [*trypsin*; λύειν, to loose]. Of or pertaining to the peculiar cleavage properties of trypsin.

Tscherning's Theory of Accommodation. See under *Accommodation*.

Tschetsik. The Javanese arrow-poison prepared from the root bark of *Strychnos tieuté*, Lesch. Syn., *Upas radju*.

Tsetse-fly Disease. See under *Disease*.

Tsuga (*tsu'-gah*) [Japanese word signifying yew-leaved or evergreen]. A genus of coniferous trees including the hemlock, **T. canadensis**, Carr., indigenous to North America. It furnishes Canada pitch, Canada balsam, pinene, an ethereal oil, cadinene, and bornyl acetate.

Tua-tua. See *Jatropha gossypifolia*, L.

Tuba. The name in the Philippines for a beer made from the sap of the cocoanut palm.

Tubbing (*tub'-ing*) [D. *tobbe*, tub]. The employment of the cold bath in the treatment of fever.

Tube. (See Illus. Dict.) **T., Alimentary**, the alimentary canal. **T., Auditory**, the external auditory canal. **T., Auricular**, the external auditory meatus. **T.s, Bochdalek's**, round or tubular cavities opening into the posterior portion of the thyroglossal duct; like the latter, they are inconstant after birth. **T.s, Bouchut's**, a variety of tubes for intubation of the larynx. **T., Capillary**, a tube with minute lumen. **T., Cardiac**, the embryonic heart. **T., Crookes'**, a highly exhausted vacuum-tube used in producing *x*-rays. **T.s, Fusion**, Priestley Smith's name for a miniature stereoscope by which the two images formed by a straight and a squinting eye may be fused together and seen simultaneously. Cf. *Heteroscope*. **T., Hepatic**, in the embryo, the bile-tubules. **T., Hyaline.** See *Tube-cast, Hyaline* (Illus. Dict.). **T., Intubation**, a breathing tube used after laryngotomy. See *Intubation* (Illus. Dict.). **T., Kuhn's Duodenal** or **Intubation**, a flexible tube composed of a spiral (S-shaped on cross-section) metal band covered with rubber. Within the metal spiral tube there runs a smoothly polished spiral of thick steel wire; this moves freely within the metal elastic tube, and terminates in a knob. **T., Mucous**, a mucous tube-cast. **T.s of Rainey**, a name given to sporozoa of the genus *Sarcocystis* for the zoologist Rainey, who discovered them in 1858. **T., Ruysch's**, a minute tubular cavity in the nasal septum, opening by a small, round orifice a little below and in front of the nasopalatine foramen. It is best seen in the fetus and represents the rudimentary homolog of Jacobson's organ. **T., Schachowa's Spinal**, the section of a uriniferous tubule that lies between a convoluted and a looped tubule. **T., Sediment**, a glass cylinder constricted to a fine point at one end and both ends open; it is used in precipitating urine. **T., Tracheotomy.** See *T., Intubation* (Illus. Dict.). **T., Vacuum**, a sealed glass tube out of which the air has been pumped and which has at each end a piece of platinum wire passed through the glass and entering the tube.

Tuber. (See Illus. Dict.) 2. The same as *T. cinereum* (Illus. Dict.).

Tubercle. (See Illus. Dict.) **T., Acoustic**, the nucleus of the dorsal cochlear nerve, a leaf-like mass of cinerea wrapped about the dorsolateral surface of the restis. **T. of Arantius.** See *Corpora Arantii* (Illus. Dict.). **T., Chassaignac's**, the carotid tubercle on the transverse process of the sixth cervical vertebra. **T. of the Clavicle.** See *T., Conoid* (Illus. Dict.). **T.-corpuscle**, Lebert's term for the specific cell of tubercle, which he thought that he had found in the yellow cheesy material, which was at that time taken for the typical form of the morbid product. [Fagge and Pye-Smith.] **T., Darwin's.** See *Darwinian Tubercle* (Illus. Dict.). **T., Dissection**, verruca necrogenica, or anatomic tubercle. **T. of the Epiglottis.** See *Cushion of the Epiglottis*. **T.s, Farre's**, cancerous masses on the surface of the liver. **T. of the Fibula**, the styloid process of the fibula. **T., Gerdy's**, a more or less pronounced elevation situated anteroexternally to the tubercle of the tibia, to which it is joined by a short ridge; it serves for the attachment of the tibialis anticus. **T., Lemurian.** See *Process, Lemurian*. **T., Lisfranc's**, the scalenus tubercle of the first rib. **T., Lower's**, a slight prominence existing between the openings of the superior and the inferior vena cava in the right auricle. **T.s, Morgagni's.** See *Tubercles, Montgomery's* (Illus. Dict.). **T. of the Navicular Bone**, a prominence on the palmar surface of the scaphoid bone. **T.s, Pisiform.** See *Corpora albicantia* (Illus. Dict.). **T., Posterior.** See *Tubercle, Greater* (Illus. Dict.). **T., Posterior Superior** (of second lumbar vertebra). See *Metapophysis* (Illus. Dict.). **T., Prostatic**, the middle lobe of the prostate. **T. of the Vagina**, a prominence on the anterior wall of the vagina. **T., Yellow.** See *Tubercle* (3) and *Tyroma* (2) (Illus. Dict.).

Tuberculide (*tu-bur'-ku-lid*). Any cutaneous manifestation due to the toxins of the tubercle bacilli.

Tuberculin. (See Illus. Dict.) **T. A**, the result of extracting the bacilli with a 10% normal caustic soda solution and filtering and neutralizing the product. **T., New** ("T. R."), an unsterilized, unfiltered, glycerin-water semisolution of living, dried, pulverized, and washed bacilli. **T., Original** (T. O.). See *Tuberculin* (Illus. Dict.). **T., Purified** (T. Pur.), the resultant redissolved precipitate of the tuberculin original with 60% of alcohol. **T.-reaction, Arloing's Theory of**, ascribes it to weakening of the tubercle and increase of the secretion by the bacilli. **Babes' Theory**, that it is a fermentative process or enzyme activity excited by tuberculin. **Buchner's and Charrin's Theory**, ascribes it to latent inflammation and susceptibility to fever. **Eber's Theory**, ascribes it to heightened cell energy. **Hertwig's Theory**, ascribes it to chemotaxis. **Klein's Theory**,

that it is due solely to mixed infections. **Koch's Theory** is that it assumes a direct necrotizing action on tuberculous nodules. **Liebmann's Theory,** that it may be ascribed to increase in potency of the bacilli. **Proca's Theory.** See *Babes' Theory.* **Ribbert's Theory.** Same as *Liebmann's Theory.* **Rosenbach's Theory.** See *Buchner's Theory.*

Tuberculoderma (*tu-bur-ku-lo-dur'-mah*). A cutaneous manifestation of the action of tubercle bacilli, a tuberculocide.

Tuberculofibroid (*tu-bur-ku-lo-fi'-broid*). Relating to a tubercle that has undergone fibroid degeneration.

Tuberculoma (*tu-ber-ku-lo'-mah*). A tuberculous tumor.

Tuberculoplasmin (*tu-bur-ku-lo-plaz'-min*). The filtered watery solution of the protoplasm of moist living bacilli, extracted by crushing with hydraulic pressure.

Tuberculosamin (*tu-bur-ku-los-am'-in*). A protamin isolated by Ruppel from tubercle bacilli.

Tuberculosis. (See Illus. Dict.) Cf. *Acid, Tuberculinic.* **T., Arloing's and Courmont's Serum Test in,** glycerin peptone bouillon inoculated with an old attenuated culture of the tubercle bacillus and thoroughly agitated each day to insure homogeneity of the culture finally develops a growth in which the bacilli are uniformly disseminated and actively motile. Blood-serum from the suspected case is mixed in small test-tubes with the culture thus prepared, in proportions of 1 to 5, 1 to 10, 1 to 20, and the tubes inclined at an angle of 45 degrees, being examined at intervals of 2, 10, and 24 hours. A positive reaction is indicated by a clarification of the mixture and the deposition of small flakes or granules in the bottom of the tube, while microscopically it may be seen that the bacilli are clumped and motionless. Reactions occurring after the lapse of 24 hours are without clinical significance. With normal serum in a dilution of 1 to 5 positive reactions do not occur, and they occur but rarely with tuberculous serum in a dilution higher than 1 to 20. [DaCosta.] **T., Arthritic,** tubercle of joints. **T., Bovine,** a chronic infectious disease of cattle, which may run for years without symptoms. It is transferrable to man, pigs, calves, rabbits, and guinea-pigs by infected milk and otherwise. Syn., "*The grapes*"; *Pearl disease;* Ger. *Perlsucht.* **T., Cystic,** tuberculosis of the bladder. **T., Enteric,** marasmus. **T., Fallopian,** tuberculous salpingitis. **T., Hepatic,** tuberculous hepatitis. **T., Ribbert's Theory of:** pulmonary tuberculosis is practically always secondary to involvement of the bronchial glands.

Tuberculotoxin (*tu-bur-ku-lo-toks'-in*). A toxin generated by the tubercle bacillus.

Tuberculum. (See Illus. Dict.) 2. The product of a specific bacillus (*B. tuberculosis,* Koch) first described in the modern sense of the word by Bayle in 1810. Originally applied to any small tumor, as a gumma of the skin, or a large wart, or a granulation tumor, or a "hobnail" on a cirrhotic liver. [Fagge and Pye-Smith.] **T. acusticum.** See *Tubercle, Acoustic,* and *Ganglion, Auditory.* **T. annulare,** the pons. **Tubercula areolæ,** the mamma. **Tubercula cerebri,** the tubercles of the brain. **Tubercula dolorosa,** the painful enlargement of the subcutaneous extremities of sensory nerves into minute tumors. **T. externum humeri.** See *Tubercle, Greater* (Illus. Dict.). **Tubercula hypoglossi.** See *Trigonum hypoglossi* (Illus. Dict.). **T. iliopectineum, T. iliopubicum.** See *Eminence, Iliopectineal* (Illus. Dict.). **T. impar,** His' name for the first distinct trace of the tongue in the embryo; a small tubercle which appears in the middle line on the floor of the pharynx between the ends of the first and second (*i. e.,* mandibular and hyoid) arches. (Minot.) **T. majus.** See *Tubercle, Greater* (Illus. Dict.). **T. minus.** See *Tubercle, Lesser* (Illus. Dict.). **T. olfactorium,** a small eminence of cinerea ventrad of the anterior perforated space from which the roots of the olfactory nerve take origin. Syn., *Caruncula nervi olfactorii.* **T. posticum inferius** or **laterale.** See *Pregeniculum* (Illus. Dict.). **T. posticum medium.** See *Postgeniculum* (Illus. Dict.). **Tubercula syphilitica.** Synonym of *Gumma.*

Tuberin (*tu'-bur-in*). A globulin found in potatoes.

Tübingen Heart. A disease of the heart, first observed at Tübingen, marked by cardiac dilation and hypertrophy and believed to be associated with overindulgence in alcoholic drinks. Syn., *Beer heart; Munich heart.*

Tuboadnopexy, Tuboadnopexie (*tu-bo-ad-no-peks'-e*). Surgical fixation of the adnexa. Cf. *Adnexopexy.*

Tuboligamentous (*tu-bo-lig-ah-ment'-us*). Relating to the oviduct and the broad ligament.

Tuboperitoneal (*tu-bo-per-it-on-e'-al*). Relating to the oviduct and the peritoneum.

Tubule. (See Illus. Dict.) **T.s, Segmental, T.s, Wolffian.** See under *Wolffian Body* (Illus. Dict.).

Tubulus. (See Illus. Dict.) **Tubuli biliferi.** See *Canals, Intralobular Biliary* (Illus. Dict.). **Tubuli contorti,** the convoluted tubules of the kidney. See under *Tubuli uriniferi* (Illus. Dict.).

Tumenol. (See Illus. Dict.) **T.-oil.** See *T.-sulphone* (Illus. Dict.). **T.-powder.** See *T.-sulphonic acid* (Illus. Dict.).

Tumor. (See Illus. Dict.) 3. A mass of cells, tissues, or organs, resembling those normally present in the body, but arranged atypically, which grows at the expense of the body without at the same time subserving any useful purpose therein. (C. P. White.) See *Signs, Cling, Nothnägel, Perez, Roser-Braun, Spence, Steel, Troisier.* **T., Cavernous,** one loosely reticular in structure, resembling that of the corpora cavernosa. **T.s, Cohnheim's Theory Concerning.** See under *Cancer.* **T.s, Courvoisier's Law Concerning.** See *Law, Courvoisier's* (2). **Freund's Law:** In the progress of their growth ovarian tumors undergo changes of position: (1) While pelvic, they show a tendency to grow downward behind the uterus; (2) when they have risen out of the pelvis, they tend to fall forward toward the abdominal wall. **Kuestner's Law:** Torsion of the pedicle of an ovarian tumor takes place toward the right if the tumor is left-sided, and toward the left if it is right-sided. **T.s, Müller's Law Concerning.** See under *Law.* **T., Rokitansky's,** an ovarian tumor made up of a large number of cysts. **T., Sand,** a psammoma. **T., Tarsal,** a chalazion. **T., Telangiectatic.** Same as *T., Cavernous.* **T.s, Thiersch's Theory of Formation of** (1865), is based on the fact that in old age the connective tissue of the body undergoes atrophy and in consequence becomes unable to withstand the ingrowth of the more active cutaneous epithelium. **T.s, Vanishing,** true swellings, visible and recognizable to the touch, usually benign but sometimes malignant, which disappear after a slight surgical operation, as incision or puncture. **T.s, Virchow's Law Concerning:** The cellular elements of a tumor are derived from the preexisting cells of the organism.

Tumultus. (See Illus. Dict.) **T. cordis,** irregular heart action.

Tun-belly. A protuberant belly, physconia.

Tung Tree. See *Aleurites cordata.*

Tunic (*tu'-nik*) [*tunica,* a coat]. The English form

of *tunica*, commonly used for the coats of the eyeball. **T., External Elastic** (of Henle). See *Lamina, External Elastic.* **T., Ruysch's Cellular.** See *Tunica ruyshiana* (Illus. Dict.).

Tunica. (See Illus. Dict.) **T. acinalis, T. aciniformis, T. acinosa,** the uvea. **T. nervea of Brücke,** the layers of the retina, exclusive of the rods and cones. **T. nervorum,** neurilemma. **T. perforata.** Same as *Uvea.* **T. vasculosa, Haller's,** the lamina vasculosa of the choroid.

Tuno Gum. See *Balata* (Illus. Dict.).

Turanose (*tu'-ran-ōz*). $C_{12}H_{22}O_{11}$. A saccharobiose obtained by the partial hydrolysis of melezitose.

Turbinectomy (*tur-bin-ek'-to-me*) [*turbo*, a top; ἐκτομή, a cutting out]. Excision of a turbinal.

Turbinotome (*tur-bin'-ot-ōm*). An instrument used in turbinotomy.

Turbinotomy (*tur-bin-ot'-o-me*) [*turbo*, a top; τομή, a cutting]. Incision into a turbinated bone.

Turgometer (*tur-gom'-et-ur*) [*turgor*, swelling; *metare*, to measure]. An apparatus to determine the degree or amount of turgescence.

Turgor (*tur'-gor*) [L., a swelling]. Active hyperemia; turgescence.

Turnera (*tur'-nur-ah*) [*Wm. Turner*, English physician, 1520(?)–1568]. A genus of the *Turneraceæ.* **T. diffusa,** Willd., an herb indigenous to Mexico and Brazil; the leaves afford in part the damiana of commerce introduced into medicine in 1874. Dose of fl. ext., 0.32–1.3 gm.

Turpentine. (See Illus. Dict.) **T.-camphor,** terpene hydrochlorate. **T., Canada.** See *Balsam, Canada* (Illus. Dict.). **T., Chian,** an oleoresin from *Pistacia terebinthus*, L.; a thick, greenish-yellow liquid used as an antiseptic on cancerous growths. **T.-ether.** See *Ether, Terebinthinated.* **T., Larch,** Venice turpentine. **T., Venice,** a pale-yellow turbid fluid obtained from the larch, *Larix europæa*, L.

Turpethin (*tur'-peth-in*). $C_{34}H_{56}O_{13}$. A glucosid isomeric with jalapin obtained by Spirgatis from the root of *Ipomœa turpethum*, R. Br.; a brownish-yellow amorphous mass, soluble in alcohol, insoluble in water, ether, chloroform, or carbon disulfid.

Tussedo (*tus-e'-do*). Tussis.

Tussicular (*tus-ik'-u-lar*) [*tussicula*, a slight cough]. Characterized by a slight cough.

Tussiculation (*tus-ik-u-la'-shun*). A hacking cough.

Tussis. (See Illus. Dict.) **T. clangosa** (Glisson), whooping-cough. **T. epidemica** (Sydenham), influenza. **T. infantum** (Sydenham), whooping-cough. **T. puerorum convulsiva** (Sydenham), whooping-cough. **T. sicca** (βήξ κενή), dry cough; when the most violent efforts of coughing bring away nothing.

Tussol (*tus'-ol*). See *Antipyrin Mandelate.*

Tuthia, Tutia. See *Tutty.*

Tutores (*tu-tor'-ēz*) [*tutor*, a protector]. Certain persons who in the reign of William I of England had custody of the lands of lunatics.

Tutty (*tut'-e*) [Tamul word *tutum*]. Impure oxid of zinc deposited as an incrustation on the chimneys of furnaces during the smelting of lead ores containing zinc; used as an external desiccant when pulverized.

Tyle (*ti'-le*) [τύλος, a knob]. A callus.

Tylion (*til'-e-on*) [τυλεῖον, a small knot or lump]. A craniometric point on the anterior border of the optic groove in the mesal line.

Tylophorin (*ti-lof'-or-in*). An alkaloid isolated by D. Hooper, 1891, from the root and leaves of *Tylophora asthmatica*, Wight. et Arn.

Tympanectomy (*tim-pan-ek'-to-me*) [τύμπανον, a drum; ἐκτομή, a cutting out]. Excision of the tympanic membrane.

Tympanites. (See Illus. Dict.) Syn., *Affectio tympanitica; Meteorism.* See *Sign, Clark's.* **T., Peritoneal,** that due to an accumulation of air in the peritoneal cavity. **T. uteri, T., Uterine,** physometra.

Tympanomastoiditis (*tim-pan-o-mas-toid-i'-tis*). Inflammation of the tympanum and mastoid.

Tympanophony (*tim-pan-of'-o-ne*). See *Autophony* (2).

Tympanosis (*tim-pan-o'-sis*). Tympanites.

Tympanotomy (*tim-pan-ot'-o-me*) [τύμπανον, a drum; τομή, a cutting]. Incision of the membrana tympani.

Tympanous (*tim'-pan-us*). Distended with gas, relating to tympanism.

Tympanum. (See Illus. Dict.) **Valsalva's Test,** inflation of the tympanic cavity with air by means of forcible expiratory efforts made while the nose and mouth are tightly closed. Perforation of the tympanic membrane may be detected by this test.

Tympany. (See Illus. Dict.) **2.** A tympanic percussion note. **T., Skoda's.** See *Skoda's Resonance* under *Signs* (Illus. Dict.).

Tyndalization (*tin-dal-iz-a'-shun*). See *Sterilization, Intermittent* (Illus. Dict.).

Typewriter's Cramp. See *Spasm, Fatigue.*

Typhase (*ti'-fāz*). The special bacteriolytic enzyme of *Bacillus typhi abdominalis*, Eberth. Cf. *Cholerase, Pyocyanase.*

Typhfever (*tīf-fe'-ver*). Typhoid or typhus fever.

Typhlenteritis (*tif-len-ter-i'-tis*) [τυφλός, cecum; ἔντερον, bowel]. A substitute for the word appendicitis proposed by Gouley.

Typhlitis. (See Illus. Dict.) **T. stercoralis,** typhlo-enteritis.

Typhlocele (*tif'-lo-sēl*). See *Cecocele.*

Typhlodicliditis (*tif-lo-di-kli-di'-tis*) [τυφλόν, cecum; δικλίς, a folding door]. Inflammation of the ileocecal valve.

Typhloempyema (*tif-lo-em-pi-e'-mah*) [τυφλόν, cecum; *empyema*]. Abscess attending typhlitis.

Typhloid (*tif'-loid*) [τυφλός, blind; εἶδος, likeness]. Having defective vision.

Typhlolithiasis (*tif-lo-lith-i'-as-is*) [τυφλόν, cecum; λίθος, stone]. The formation of calculi in the cecum.

Typhlology (*tif-lol'-o-je*) [τυφλός, blind; λόγος, science]. The science of blindness.

Typhlosis (*tif-lo'-sis*) [τυφλός, blind]. Blindness.

Typhlostenosis (*tif-lo-sten-o'-sis*) [τυφλόν, cecum; *stenosis*]. Stenosis of the cecum.

Typhloteritis (*tif-lo-ter-i'-tis*). See *Typhloenteritis* (Illus. Dict.).

Typhobacillosis (*ti-fo-bas-il-o'-sis*) [τῦφος, smoke; *bacillum*, a small rod]. The systematic poisoning produced by the toxins formed by the typhoid bacillus.

Typhoid. (See Illus. Dict.) See *Sign, Baruch's, Filipovitch's.* **T., Abenteric,** typhoid fever involving other organs than those of the intestinal tract. Cf. *Arthrotyphoid, Pleurotyphoid, Pneumotyphoid, Splenotyphoid.* **T., Afebrile,** a form of typhoid with the usual symptoms, positive diazo and Widal reaction, presence of rose-spots, but absence of increased temperature. **Elsner's Method of Diagnosing Typhoid Fever** consists in making cultures from water, food, or from the stools of patients suffering from typhoid fever, upon a special culture-medium, composed of Holz's acid potato-gelatin with 1% of potassium iodid. Only a few forms of bacteria will grow upon this medium, and among these are *Bacterium coli* and the typhoid bacillus; these latter are slow in growth and in 24 hours are scarcely visible with low power, whereas the coli colonies have attained considerable growth. After 48 hours the typhoid cultures appear in shining

aggregations as drops of water with finely moulded structure, and the coli colonies are larger, more granular, and brown in color. **T. Spots.** See *Spot*. **T., Walking.** See *Ambulatory Typhoid* (Illus. Dict.).

Typhoin (*ti'-fo-in*). A preparation of dead typhoid bacilli used by injection in the treatment of typhoid fever.

Typhopaludism (*ti-fo-pal'-u-dizm*) [*typhoid; paluda*, a marsh]. Fever of malarial origin accompanied by symptoms of typhoid.

Typhopneumonia (*ti-fo-nu-mo'-ne-ah*) [τῦφος, stupor; πνευμων, lung]. Pneumonia occurring in the course of typhoid fever.

Typhosepsis (*ti-fo-sep'-sis*) [τύφος, stupor; σῆψις, sepsis]. See *Typhemia* (Illus. Dict.).

Typhosis (*ti-fo'-sis*). See *Typhoid State* (Illus. Dict.). **T., Syphilitic,** Fournier's name for a form of intestinal neuralgia associated with secondary syphilis.

Typhpoison (*tif-poi'-son*). See *Typhotoxin* (Illus. Dict.).

Typhus (*ti'-fus*) [τῦφος, smoke, mist, cloud, confusion, and cloudiness of ideas, akin to Latin *stupeo*, stupor]. A specific contagious fever with characteristic exanthem, which runs a course of about two weeks. Materies morbi not yet detected. Syn., *Contagious fever, Epidemic fever, Putrid fever, Spotted fever, Ochlatic fever, Typhus fever, Brain fever, Jail fever, Ship fever, Camp fever, Military fever, Fourteen-day fever, Irish fever, Parish infection, Morbus pulicaris, Febris Hungarica, Febris petechialis, Morbus castrensis, Leaguer sickness, Typhus exanthematicus, Fièvre typhus* (Fr.), *Flecktyphus* (Ger.). **T., Carbuncular,** typhus with formation of carbuncles. **T. convulsivo-cerebralis.** Synonym of *Dubini's disease*. **T. icterodes.** Synonym of *Yellow fever*. **T., Surgical,** pyemia.

Typoscope (*ti'-po-skop*) [τύπος, a stamp; σκοπειν, to look]. A small device to exclude extraneous light invented by Prentice for the use of cataract patients and amblyopes in reading. It consists of a rectangular plate of hard rubber, or black cardboard, 7 by 2¼ inches, provided with an aperture 4¼ by ⅜ inches, centrally located, though laterally displaced so as to leave sufficient of the plate, two inches, to be conveniently held between the thumb and fingers, when it is placed upon the book or paper, and while it is being slid down over the column in reading.

Tyrein (*ti'-re-in*) [τυρός, cheese]. Coagulated casein.

Tyroid (*ti'-roid*) [τυρός, cheese]. Cheesy.

Tyrosal (*ti'-ro-sal*). See *Salipyrin* (Illus. Dict.).

Tyrosinase (*ti-ro'-sin-āz*). An oxidizing ferment discovered by Bertrand (1901) in mushrooms, beet-roots, dahlias, etc. Its oxidizing power is limited to a specific action tyrosin. It has been isolated by v. Fürth and Schneider from the hemolymph of insects.

Tyrotoxicon. (See Illus. Dict.) 2. A general term for the active agent in poisoning by infected cheese.

Tyrotoxin (*ti-ro-toks'-in*) [τύρός, cheese; τοξικόν, poison]. A curare-like poison obtained by Dokkum from poisonous cheese which when injected into frogs in doses of 5 mg. caused paralysis and death in 30 minutes. It is not identical with tyrotoxicon.

Tyrotoxism (*ti-ro-toks'-izm*). Husemann's name for cheese-poisoning.

Tysonian (*ti-so'-ne-an*). Named for the American anatomist, James Tyson, b. 1841.

U

Uabain. See *Ouabin* (Illus. Dict.).

Uarthritis (*u-ar-thri'-tis*). See *Arthritis uritica* (Illus. Dict.).

Uber (*u'-bur*) [L. *udder;* gen. *uberis*]. The mamma. **Uberis apex,** the nipple.

Uberty (*u'-bur-te*) [*uber*, udder]. Fertility, productiveness.

Udometer (*u-dom'-et-ur*) [*udus*, moist; *metare*, to measure]. A rain-gauge.

Ula (*u'-lah*) [οὖλον, gum]. The gums.

Ulcer. (See Illus. Dict.) **U., Aleppo.** See *Phagadæna tropica* (Illus. Dict.). **U., Allingham's Painful,** fissure of the anus. **U., Amyloid Intestinal,** that due to amyloid degeneration. **U., Catarrhal,** a form of intestinal ulcer due to a superficial loss of epithelial cells. **U., Clarke's Corroding,** progressive ulcer of the cervix uteri. **U., Cruveilhier's,** simple ulcer of the stomach. **U., Decubital** [Grawitz]. See *U., Stercoral* (Illus. Dict.). **U., Delhi.** See *Furunculus orientalis* (Illus. Dict.). **U., Gaboon,** an ulcer occurring on the limbs, common among the natives of the Gaboon region and showing analogs to syphilitic manifestations. **U., Gonorrheal Rectal.** Synonym of *Gonorrheal Proctitis*. **U., Heryng's Benign,** a solitary ulcer situated on the anterior pillar of the fauces and resembling a large herpetic vesicle. **U.s, Intubation, Treatment of, by O'Dwyer's Method.** See under *Treatment* **U., Jacob's,** rodent ulcer of the face occurring most commonly near the inner canthus. **U.s, Parrot's,** the whitish or yellowish patches of thrush. **U., Peptic,** an ulcer of the gastric or duodenal mucosa, enterohelcus. **U., Peptic Duodenal,** a form almost always found on the upper horizontal branch of the duodenum, between the pylorus and the mouth of the common gall and pancreatic duct, and only exceptionally on the lower section of the duodenum. More frequent in men than in women. [Hemmeter.] **U., Perforating Duodenal, U., Round Duodenal.** See *U., Peptic Duodenal*. **U., Serpent,** a creeping ulcer of the cornea. **U., Tashkent.** See *Paschachurda*.

Ulceration. (See Illus. Dict.) **U., Amyloid,** that due to amyloid degeneration. **U., Follicular,** that involving the solitary follicles of the intestine.

Ulcus, pl. **Ulcera.** (See Illus. Dict.) **U. induratum syphiliticum,** syphilitic chancre. **U. pepticum duodenale.** See *Ulcer, Peptic Duodenal*. **Ulcera pestifera in tonsillis** [Paulus Ægineta, *c.* 680 A. D.], a disease known to the ancients, probably diphtheria. **Ulcera Syriaca** [Aretæus, *c.* 70 A. D.], a disease known to the ancients, probably diphtheria.

Ule (*u'-le*) [οὐλή, a scar]. A cicatrix.

-ule, -yle. In chemistry, a termination given to indicate that the compound enters into combination as the radicle of the series, *e. g.*, benzyl, salicyl, ethyl.

Ulegyria (*u-le-ji'-re-ah*) [οὐλή, scar; γῦρος, a circle]. Convolutions in the cortex of the brain, made irregular by scar formation.

Ulemorrhagia (*u-le-mor-aj'-e-ah*) [*οὐλή*, scar; *αἷμα*, blood; *ῥεῖν*, to flow]. Hemorrhage from a cicatrix.

Ulmarene (*ul'-mar-ēn*). A mixture discovered by Bourcet of definite quantities of salicylic ether and aliphatic alcohols; an orange-colored refractive fluid containing about 75% of salicylic acid. It boils at 237°–240° C. and is soluble in alcohol. Recommended as external application in gout, rheumatism, etc.

Ulodermitis (*u-lo-dur-mi'-tis*) [*οὐλή*, scar; *δέρμα*, skin]. Inflammation of the skin with formation of cicatrices.

Uloid (*u'-loid*) [*οὐλή*, a scar; *εἶδος*, likeness]. Resembling a cicatrix.

Ultramicroscope (*ul-tra-mi'-kro-skōp*) [*ultra*, beyond; *microscope*]. A microscope having an objective so arranged as to transmit only those light rays which are reflected by the object, whereby it is possible to recognize objects measuring but the millionth part of a millimeter in diameter.

Ultramicroscopy (*ul-trah-mi-kros'-ko-pe*). The scientific use of the ultramicroscope.

Ultratoxon (*ul-trah-toks'-on*) [*ultra*, beyond; *toxon*]. A toxin of a low degree of avidity.

Ulyptol (*u-lip'-tol*). See *Eulyptol* (Illus. Dict.).

Umbellularia (*um-bel-u-la'-re-ah*) [*umbellula*, a little umbel]. A genus of the *Laurineæ*. **U. Californica**, Nutt, California laurel, spice tree, bay laurel, an evergreen tree of the western United States, contains in its seeds umbellulinic acid ($C_{12}H_{22}O_3$), cineol, and a pungent volatile oil recommended for inhalation in nasal catarrh. The leaves are used in neuralgic headache, colic, and atonic diarrhea. Dose of fl. ext., 0.616–1.84 c.c.

Umbonation (*um-bon-a'-shun*) [*umbo*, the boss of a shield]. The formation of a low rounded projection.

Umbrascopy (*um-bras'-ko-pe*) [*umbra*, shadow; *σκοπεῖν*, to examine]. See *Retinoscopy* (Illus. Dict.).

Unazotised (*un-az'-o-tīzd*) [*un*, not; *azotum*, nitrogen]. Deprived of nitrogen.

Unbalance. See *Imbalance* (Illus. Dict.).

Unciform (*un'-se-form*) [*uncus*, a hook; *forma*, form]. Hook-shaped.

Unciforme (*un'-se-form-e*). See *Unciform Bone* (Illus. Dict.).

Uncinal. (See Illus. Dict.) 2. Furnished with hooks.

Uncinaria (*un-sin-a'-re-ah*) [*uncinus*, a hook]. A genus of parasitic nematode worms. See *Parasites, Table of Animal* (Illus. Dict.).

Uncinariasis, Uncinariosis (*un-sin-a-re-a'-sis, -o'-sis*). Disease produced by parasites of the genus *Uncinaria*. Syn., *Hookworm Disease; Anchylostomiasis; Dochmiasis.*

Uncture (*unk'-chur*) [*unctio*, an anointing]. An unguent.

Under. (See Illus. Dict.) **U.-cut**, in dentistry, a depression made beyond a general surface for the purpose of retaining a filling. **U.-hung**, applied to a projecting lower jaw. Cf. *Bite, Underhung.*

Undulant (*un'-du-lant*) [*unda*, a wave]. Characterized by fluctuations. **U. Fever.** See *Fever, Mediterranean* (Illus. Dict.).

Unguentine (*un'-gwen-tēn*). An alum and petroleum ointment containing also 2% of carbolic acid and 5% of ichthyol.

Unguentum. (See Illus. Dict.) **U. Credé**, an ointment consisting of soluble silver, 15%, incorporated in lard and 10% of wax added. It is flavored with benzoinated ether; used in treatment of septic diseases. Syn., *Credé's ointment.* **U. durum**, an ointment base consisting of paraffin (solid), 4 parts; wool-fat, 1 part; liquid paraffin, 5 parts; used for ointments containing liquid antiseptics. **U. molle**, an ointment base, consisting of solid paraffin, 11 parts; lanolin, 5 parts; and liquid paraffin, 34 parts. **U. psoriaticum**, an ointment composed of chrysarobin, ichthyol, and zymoidin ointment.

Unicamerate (*u-ne-kam'-ur-āt*) [*unus*, one; *camera*, chamber]. Having but one cavity, unilocular.

Uniceptor (*u-ne-sep'-tor*) [*unus*, one; *capere*, to receive]. An antitoxin or receptor which has only one uniting arm (viz., the haptophore group). Cf. *Amboceptor; Body, Immune.*

Unifilar (*u-ne-fe'-lar*) [*unus*, one; *filum*, a thread]. Connected by one thread, furnished with one filament.

Uniforate (*u-nif'-o-rāt*) [*unus*, one; *foratus*, pierced]. Having one opening.

Unilaminar, Unilaminate (*u-ne-lam'-in-ar, -āt*) [*unus*, one; *lamina*, a layer]. Occurring in a single layer.

Unilobar, Unilobed (*u-ne-lo'-bar, u-ne-lobd'*). Furnished with one lobe.

Unit. (See Illus. Dict.) **U., Antitoxin.** See under *Antitoxin.* **U., Toxin.** See under *Toxin.*

Unitise (*u'-nit-īz*) [*unus*, one]. To form into a unit.

Unsex (*un-seks'*). To spay.

Upas. (See Illus. Dict.) **U. radju, U. tieuté.** See under *Strychnos tieuté.*

Uracil. See *Uracyl* (Illus. Dict.).

Uracrasia (*u-rah-kra'-ze-ah*). See *Enuresis* (Illus. Dict.).

Uralin (*u'-ral-in*). See *Uralium* (Illus. Dict.).

Uralite (*u'-ral-īt*) [*Ural Mountains*]. A mineral with the crystalline form of augite and the physical properties, cleavage, and specific gravity of hornblende.

Uramin (*u-ra'-min*). See *Guanidin.*

Uranate (*u'-ran-āt*). A compound of uranic oxid with a metallic oxid.

Uranè (*u'-rān*). Uranium oxid.

Uranic (*u-ran'-ik*). Containing uranium as a hexad radicle.

Uranin (*u'-ran-in*). See *Fluorescein sodium.*

Uraninite (*u-ran'-in-īt*). Pitchblende.

Uranism (*u'-ran-izm*) [Οὐρανός, the Greek personification of heaven]. A sexual perversion in which the desire is for individuals of the same sex. Syn., *Urning.*

Uranist (*u'-ran-ist*). A sexual pervert having a passion for one of his own sex.

Uranium. (See Illus. Dict.) **U. Acetate**, $(UO_2)(C_2H_3O_2)_2 + 2H_2O$, small, yellow, violently poisonous crystals, soluble in water and alcohol, recommended in coryza in solution as nasal douche. Syn., *Uranyl acetate.* **U. Ammonium Fluorid**, $UO_2 . F_2 4NH_4 . H_2O$, a greenish-yellow crystalline powder, used for the detection of Röntgen-rays. Syn., *Uranyl ammonium fluorid.* **U. Nitrate**, $(HNO_3)_2UO_2 . 6H_2O$, light yellow crystals, soluble in water, alcohol, and ether; used in diabetes. Dose, 0.01–0.02 gm. twice daily in aqueous solution with saccharin. **U. Oxid, Red, U. Trioxid**, UO_3, a reddish powder. Syn., *Uranic acid.* **U. X**, name given by Sir William Crookes (1900) to a radio-active precipitate obtained from uranium nitrate by means of ammonium carbonate. **U. Yellow**, sodium uranate.

Uranoschism (*u-ran'-o-skism*) [*οὐρανός*, vault; *σχίσμα*, a cleft]. Cleft-palate.

Uranostaphyloplasty (*u-ran-o-staf'-il-o-plas-te*). See *Uraniscoplasty* (Illus. Dict.).

Uranyl (*u'-ran-il*). See *Uranium* (Illus. Dict.). **U.-ammonium Fluorid.** See *Uranium-ammonium Fluorid.*

Urarize (*u'-ra-rīz*). To bring under the influence of urare, curarize.

Urase (*u'-rās*). An insoluble enzyme found by Beijerinck associated with the bacteria which ferment urea; it is very plentiful in urine of patients affected with catarrh of the bladder.

Urasol (*u'-rah-sol*). Acetylmethylene-di-salicylic acid; an antiseptic, diaphoretic, and uric acid solvent.

Uratolytic (*u-rat-o-lit'-ik*) [*urate; λύειν*, to loose]. Capable of dissolving urates.

Urea. (See Illus. Dict.) Syn., *Carbamid.* **U. Quinate,** a combination of two molecules of urea and one molecule of quinic acid; freely soluble in water and dilute alcohol; valuable in treatment of gout and uric concrements in the kidneys. Daily dose, 2–5 gm. in 400 c.c. of hot water. Syn., *Urol.* **U. Salicylate,** recommended as a substitute for sodium salicylate. Dose, 7 gr. one to four times daily. Syn., *Ursal.*

Ureameter, Ureametry. See *Ureometer, Ureometry* (Illus. Dict.).

Urease (*u'-re-āz*). See *Urase.*

Urecidin (*u-re-si'-din*). A proprietary preparation of lemon juice and citrate of lithia. It is used in gout and uric acid diathesis. Dose, 25 gr.

Ureine (*u'-re-in*). Name given by W. O. Moor (1900) to a compound isolated by him from urine; a pale-yellow oily liquid believed by others to be a strong aqueous solution of known urinary solids and chemicals used in treating the urine.

Urerythrin. See *Uroerythrin* (Illus. Dict.).

Uresin (*u'-re-sin*). A citrourotropindilithic salt, elaborated in 1898 by Spassky, and useful as a uric acid solvent.

Ureterocervical (*u-re-tur-o-sur'-vik-al*). Relating to or connecting the ureter and the cervix uteri.

Ureterocystoneostomy (*u-re-tur-o-sist-o-ne-os'-to-me*). See *Ureteroneocystostomy* (Illus. Dict.).

Ureterocystoscope (*u-re-tur-o-sist'-o-skōp*). An electric cystoscope holding in its grooved wall a catheter for insertion into the ureter.

Ureteroenterostomy (*u-re-tur-o-en-ter-os'-to-me*) [*οὐρητήρ*, ureter; *ἔντερον*, bowel; *στόμα*, mouth]. Formation of an artificial passage from the ureter to the intestine.

Ureterolithotomy (*u-re-tur-o-lith-ot'-o-me*). Incision of the ureter for removal of a calculus.

Ureteroneocystostomy (*u-re-tur-o-ne-o-sist-os'-to-me*). See *Ureterocystostomy* (Illus. Dict.).

Ureteroneopyelostomy (*u-re-tur-o-ne-o-pi-el-os'-to-me*) [*οὐρητήρ*, ureter; *νέος*, new; *πύελος*, trough; *στόμα*, mouth]. The operation of excision of portion of a ureter and inoculating into a new aperture made into the pelvis of the kidney, the corresponding orifice of the ureteral end. (Bazy.)

Ureteronephrectomy (*u-re-tur-o-nef-rek'-to-me*) [*οὐρητήρ*, ureter; *νεφρός*, kidney; *τομή*, cutting]. Removal of the kidney and its ureter.

Ureteroproctostomy (*u-re-tur-o-prok-tos'-to-me*) [*οὐρητήρ*, ureter; *πρωκτός*, anus; *στόμα*, mouth]. The surgical formation of a passage from the ureter to the anus.

Ureteropyelitis (*u-re-tur-o-pi-el-i'-tis*) [*οὐρητήρ*, ureter; *πύελος*, pelvis]. Inflammation of a ureter and the pelvis of a kidney.

Ureteropyeloneostomy (*u-re-tur-o-pi-el-o-ne-os'-to-me*). See *Ureteroneopyelostomy.*

Ureteropyelonephritis (*u-re-tur-o-pi-el-o-nef-ri'-tis*). Nephritis combined with inflammation of the pelvis of the kidney and of the ureter.

Ureterostenosis (*u-re-tur-o-sten-o'-sis*) [*οὐρητήρ*, ureter; *στένος*, narrow]. Stricture of a ureter.

Ureterostomatic (*u-re-tur-o-sto-mat'-ik*). Relating to the ureteral orifice.

Ureteroureteral (*u-re'-tur-o-u-re'-tur-al*) [*οὐρητήρ*, ureter]. Pertaining to both ureters, or to two parts of one ureter. **U. Anastomosis.** See *Ureteroureterostomy.*

Urethalan (*u-reth'-al-an*). See *Urethylane.*

Urethane. (See Illus. Dict.) **U.-chloral.** See *Uralium* (Illus. Dict.). **U., Ethylidene,** $C_5H_{10}N_2O_4$, a crystalline substance obtained from a solution of urethane in aldehyd by action of dilute HCl; soluble in alcohol, ether, and hot water; melts at 165° C. **U., Phenyl.** See *Euphorin* (Illus. Dict.).

Urethrascope. See *Urethroscope* (Illus. Dict.).

Urethrectomy (*u-re-threk'-to-me*) [*οὐρήθρα*, urethra; *ἐκτομή*, excision]. Excision of a urethra or a portion of it.

Urethremphraxis. See *Urethrophraxis* (Illus. Dict.).

Urethreurynter (*u-re-thru-rin'-ter*) [*οὐρήθρα*, urethra; *εὐρύνειν*, to dilate]. An appliance for dilating the urethra. Cf. *Metreurynter, Colpeurynter.*

Urethritis. (See Illus. Dict.) **U., Gonorrheal,** that due to infection with gonococcus. **U., Gouty,** that associated with gout.

Urethrobulbar (*u-re-thro-bul'-bar*). Relating to the urethra and the bulb of the corpus spongiosum.

Urethrohemorrhagia. See *Urethremorrhagia* (Illus. Dict.).

Urethropenile (*u-re-thro-pē'-nīl*). Relating to the urethra and the penis.

Urethroperineal (*u-re-thro-per-in'-e-al*). Relating to the urethra and the perineum.

Urethroperineoscrotal (*u-re-thro-per-in-e-o-skrō'-tal*). Relating to the urethra, perineum, and scrotum.

Urethrorectal (*u-re-thro-rek'-tal*). Relating to the urethra and the rectum.

Urethroureteral (*u-re-thro-u-re'-tur-al*) [*οὐρήθρα*, urethra; *οὐρητήρ*, ureter]. Relating to the urethra and the ureter.

Urethylane (*u-re'-thil-ān*). $CO.NH_2.OCH_3$. Colorless crystals, soluble in water and alcohol; melt 52° C.; boil 177° C. Syn., *Methyl carbamid; Methyl-urethane.*

Uriasis (*u-rī'-a-sis*). See *Lithiasis* (Illus. Dict.).

Uric Acid. (See Illus. Dict.) **Hopkins-Folin Method** of quantitative determination of. The following reagents are necessary: (1) A solution of 1 liter volume containing 500 gm. of ammonium sulfate; 5 gm. of uranium acetate; 60 c.c. of 10% acetic acid; and distilled water to bring the bulk up to 1 liter. (2) A one-twentieth normal solution of potassium permanganate. Place 300 c.c. of urine in a beaker, add 75 c.c. of the ammonium sulfate reagent, and mix thoroughly. After the precipitate has settled sufficiently filter through a double-folded filter. When 250 c.c. of the filtrate has passed through, this volume is divided into two portions of 125 c.c. each, to serve as a duplicate. To each portion add 5 c.c. of concentrated water of ammonia, mix thoroughly, and allow to stand overnight. The precipitated ammonium urate is then transferred to a filter and washed with a 10% solution of ammonium sulfate. Then wash the precipitate with about 100 c.c. of water into the same beaker, add 15 c.c. of concentrated sulfuric acid, and immediately titrate with N/20 solution of potassium permanganate until the first permanent tinge of pink color appears. One c.c. of potassium permanganate solution equals 3.75 mgm. of uric acid. From this calculate the amount in 24 hours.

Uricometer (*u-rik-om'-et-ur*) [*uric acid; μέτρον*, measure]. An apparatus devised by Ruhemann for the quick quantitative estimation of uric acid in urine.

Urinalist (*u'-rin-al-ist*). One who diagnoses disease by inspection of the urine.

Urinary. (See Illus. Dict.) **U. Stammering.** See *Bladder, Stammering.*

Urinocryoscopy (*u-rin-o-kri-os′-ko-pe*) [*οὖρον*, urine: *κρύος*, cold; *σκοπειν*, to examine]. Cryoscopy applied to urine. See *Cryoscopy*.

Urinoglucosometer (*u-rin-o-glu-ko-som′-et-ur*). An apparatus for quantitative estimation of glucose in the urine.

Urinologist (*u-rin-ol′-o-jist*). One skilled in urinology.

Urinovaginal (*u-rin-o-vaj′-in-al*). See *Vesicovaginal* (Illus. Dict.).

Urisolvin (*u-re-sol′-vin*). A compound of urea and lithium citrate, a uric acid solvent and diuretic. Dose, 0.1 gm. every 3 hours in carbonated water.

Urnism (*urn′-izm*). See *Uranism*.

Uroammoniac (*u-ro-am-o′-ne-ak*). Relating to or containing uric acid and ammonia.

Uroazotometer (*u-ro-az-ot-om′-et-ur*). An apparatus for quantitative estimation of the nitrogenous substances in urine.

Urobilinicterus (*u-ro-bi-lin-ik′-tur-us*). Pigmentation of the skin, cornea, etc., from absorption of extravasated blood and contained urobilin.

Urobilinogen (*u-ro-bi-lin′-o-jen*). The mother-substance of urobilin, from which it is gradually formed by oxidation when urine is allowed to stand.

Urobromohematin (*u-ro-bro-mo-hem′-at-in*). $C_{68}H_{94}N_8Fe_2O_{26}$. A coloring-matter found by Baumstark in the urine of leprous patients; it is closely allied to the coloring-matter of blood.

Urocrisia. See *Urocrisis* (Illus. Dict.).

Urocriterion (*u-ro-kri-te′-re-on*). In diagnosis by inspection of urine, the indication which determines the diagnosis.

Urocyanin (*u-ro-si′-an-in*). See *Uroglaucin* (Illus. Dict.).

Urocyanogen (*u-ro-si-an′-o-jen*) [*οὖρον*, urine; *κύανος*, blue; *γεννᾶν*, to produce]. A blue sediment found in the urine of cholera patients.

Urocyanose (*u-ro-si′-an-ōs*). See *Urocyanogen*.

Uroglycosis (*u-ro-gli-ko′-sis*) [*οὖρον*, urine; *γλυκύς*, sweet]. Diabetes mellitus.

Urol (*u′-rol*). See *Urea Quinate*

Urolithology (*u-ro-lith-ol′-o-je*) [*οὖρον*, urine; *λίθος*, a stone]. The science of urinary calculi.

Urolutein (*u-ro-lu′-te-in*). See *Acid*, *Uroleucic* (Illus. Dict.).

Urolytic (*u-ro-lit′-ik*) [*οὖρον*, urine; *λύειν*, to loose]. Capable of dissolving urinary calculi.

Uromphalus (*u-rom′-fal-us*) [*urachus*; *ὀμφαλός*, navel]. A monstrosity with the urachus protruding at the navel.

Uronology (*u-ron-ol′-o-je*) [*οὖρον*, urine; *λόγος*, science]. See *Urology* (Illus. Dict.).

Urophan (*u′-ro-fan*) [*οὖρον*, urine; *φαίνειν*, to appear]. A generic name for substances which taken into the body appear again unchanged chemically in the urine.

Urophanic (*u-ro-fan′-ik*) [*φαίνειν*, to show forth]. Appearing in the urine.

Uropherin (*u-rof′-ur-in*). Lithiotheobromin salicylate; a white powder soluble in water used as a diuretic. Dose, 1 gm. Syn.; *Lithium-diuretin*. **U. Benzoate.** See *Theobromin* and *Lithium Benzoate*. **U. Salicylate.** See *Theobromin* and *Lithium Salicylate*.

Urorrhodinogen (*u-ror-o-din′-o-jen*) [*οὖρον*, urine; *ῥόδον*, a rose; *φεννᾶν*, to produce]. The chromogen which by decomposition produces urorhodin.

Urosacin (*u-ro-sas′-in*). See *Urorhodin* (Illus. Dict.).

Urosepsin (*u-ro-sep′-sin*). The toxin concerned in urosepsis.

Urosin (*u′-ro-sin*). Lithium quinate, a uric acid solvent. Dose, 7½ gr. 6 to 10 times daily.

Urospectrin (*u-ro-spek′-trin*). A pigment similar to hematoporphyrin obtained from normal urine by shaking the urine with acetic ether.

Urosteatoma (*u-ro-ste-at-o′-mah*). See *Urostealith* (Illus. Dict.).

Urostenosis. See *Urethrostenosis* (Illus. Dict.).

Urotoxic. (See Illus. Dict.) **U. Coefficient**, the number of urotoxies which 1 kilogram of man forms in 24 hours. The average coefficient is 0.464. It varies in healthy individuals according to cerebral activity, sleep, diet, labor, etc.

Urotoxicity (*u-ro-toks-is′-it-e*). The toxic quality of urine.

Urotoxin (*u-ro-toks′-in*). The poison of urine.

Urotropin (*u ro′-ro-pin*). $(CH_2)_6N_4$, hexamethylenetetramine; obtained by action of formic aldehyd on ammonia. A uric acid solvent. Daily dose, 0.5–2 gm. Syn., *Aminoform*; *Ammonioformaldehyd*; *Cystogen*; *Formin*. **U. Quinate**, useful in gout and as a uric acid solvent. Syn., *Chinotropin*; *Quinotropin*. **U. Salicylate.** See *Saliformin*.

Uroxin (*u-roks′-in*). Same as *Alloxanthin*.

Urozemia, Urozæmia (*u-ro-ze′-me-ah*) [*οὖρον*, urine; *ζημία*, loss]. Diabetes. **U. albuminosa**, Bright's disease. **U. mellita**, diabetes mellitus.

Ursal (*ur′-sal*). See *Urea Salicylate*.

Ursin (*ur′-sin*). See *Arbutin* (Illus. Dict.).

Urticaria. (See Illus. Dict.) **U., Edematous**, angioneurotic edema. **U. evanida**, a form marked by sudden vanishing and reappearance of the symptoms. Syn., *Aphanocnidosis*.

Uskow's Theory as to Origin of Leukocytes. See under *Leukocytes*.

Usure (*u′-zhur*) [*uti*, to use]. The circumscribed atrophy of a part or organ through the pressure of neoplasms which have developed from it, of aneurysms or through primary fatty degeneration. [Roth.] **U. des cartilages articulaires** [Cruveilhier], osteoarthritis.

Uta. Peruvian vernacular term for a dermatophytic process analogous to Biskra button.

Utend. (*u′-tend*). Abbreviation of *utendus*, to be used.

Uteralgia (*u-tur-al′-je-ah*) [*uterus*; *ἄλγος*, pain]. Pain in the uterus.

Uterism (*u′-tur-izm*). See *Uteralgia*.

Uterocervical (*u-ter-o-sur′-vik-al*). Relating to the uterus and the cervix of the uterus.

Uterocolic (*u-tur-o-kol′-ik*). Relating to the uterus and the colon.

Uterogastric (*u-tur-o-gas′-trik*). Relating to the uterus and the stomach.

Uterointestinal (*u-tur-o-in-tes′-tin-al*). Relating to the uterus and the intestine.

Uteroplacental (*u-tur-o-plas-en′-tal*). Relating to the uterus and the placenta. **U. Vacuum**, the vacuum caused by traction upon the funis of a detached placenta, causing it to cling to the uterine walls.

Uterorectal (*u-tur-o-rek′-tal*). Relating to the uterus and the rectum.

Uterosacral (*u-tur-o-sa′-kral*). Relating to the uterus and the sacrum.

Uterotonic (*u-tur-o-ton′-ik*). Supplying muscular tone to the uterus.

Uterotractor (*u-tur-o-trak′-tor*) [*uterus*; *trahere*, to draw]. A variety of forceps having several teeth on each blade employed in making traction on the cervix uteri.

Uterovaginal (*u-tur-o-vaj′-in-al*). Relating to the uterus and vagina.

Uteroventral (*u-tur-o-vent′-ral*) [*uterus*; *venter*, the belly]. Relating to the uterus and the abdomen.

Uterovesical (*u-tur-o-ves'-ik-al*). Relating to the uterus and the bladder.

Uterus. (See Illus. Dict.) **U. acollis.** See *U. parvicollis.* **U. arcuatus,** a subvariety of uterus bicornis in which there is merely a vertical depression in the middle of the fundus uteri. [Roberts.] **U. bicornis unicollis,** a variety of double uterus in which the cervix is large and single. [Roberts.] **U., Bifid.** See *U. septus.* **U. biforis,** one in which the external os is divided anteroposteriorly by a septum. **U. bilocularis.** See *U. septus.* **U., Bipartite.** See *U septus.* **U. bipartitus unicollis,** one in which the cervix is simple and only the body of the uterus is double. **U., Deviation of,** any change in the normal direction of the uterus. **U. didelphys,** a malformation in which there are two distinct uteri, viscera sometimes lying between them. It is due to nonunion of the two primitive Müllerian ducts, which should fuse during the third month of fetal life. [Roberts.] **U., Fetal,** one of defective development, in which the length of the cervical canal exceeds the length of the cavity of the body. **U. parvicollis,** a malformation described by Herman in which the vaginal portion is small but the body normal; also called uterus acollis. [Roberts.] **Uteri pronatio,** anterior obliquity of the uterus. **Uteri pruritus,** nymphomania. **Uteri reflexis completa,** posterior obliquity of the uterus. **Uteri rheuma,** leukorrhea. **U., Sacciform, U., Sacculated,** a sacculation of the retroverted pregnant uterus at term. **U., Semiduplex,** one in which the two horns join at the os internum, and below the point of junction there is no division at all, or a division not reaching to the os externum. **U. semi-partitus.** See *U. subseptus.* **U. septus,** one which externally shows no sign of division, but is divided internally by a septum into two halves, more or less complete, anteroposteriorly. Also called uterus bilocularis. [Roberts.] **U. subseptus,** one divided internally by an incomplete septum; it may start from the fundus and reach all the way, or be present in the cervix only. Also called uterus semipartitus. [Roberts.] **U. unicornis,** a malformation in which but one uterine horn alone is well formed. There are two varieties: (*a*) That in which the second horn is altogether absent; (*b*) that in which there is a solid or hollow rudiment of the second horn. There is really no fundus. [Roberts.]

Utricle. (See Illus. Dict.) **U. of the Vestibule.** See *Utricle* (2) (Illus. Dict.).

Utriculitis (*u-trik-u-li'-tis*). Inflammation of the sinus pocularis.

Utriform (*u'-tre-form*) [*uter,* bag; *forme,* form]. Bladder-shaped.

Uvuloptosis (*u-vu-lo-to'-sis*). See *Uvulaptosis* (Illus. Dict.).

V

Vaccine. (See Illus. Dict.) **2.** Any substance used for preventive inoculation. **3.** Relating to vaccinia or vaccination. **4.** Relating to a cow. **V.-bodies.** See *Cytoryctes.* **V.-rash.** See *V. Lichen* (Illus. Dict.).

Vaccinin (*vak'-sin-in*). See *Arbutin* (Illus. Dict.).

Vaccinism (*vak'-sin-izm*). The theory of the efficacy of vaccination. Cf. *Antivaccinism.*

Vaccinostyle (*vak-sin'-o-stil*) [*vaccinare,* to vaccinate; *stylus,* a pointed instrument]. A small metallic lance for use in vaccinatng.

Vaccinium. (See Illus. Dict.) **V. myrtillus,** L., billberry, indigenous to Europe, yields edible fruits which are dried for use in decoction for diarrhea and leukoplakia. The leaves are used in diabetes. It contains ericolin and quinic acid. **Extractum myrtilli winternitzi,** a specific for stomatitis and prominent remedy for affections of the mouth and tongue. Paint the affected parts every hour. **V. vitis idæa,** cowberry, mountain cranberry, red huckleberry, Ger. Preisselbeere, a low shrub indigenous to Europe and North America; the fruit is used as cranberries and for making a cooling drink, the leaves in lithiasis. The fruit contains citric and malic acid, invert sugar, arbutin, and benzoic acid. The leaves contain ericolin, tannin, wax, ceryl- and melyl-alcohol, cholesterin, and myristinic, palmitinic, cerotinic, and melissinic acids.

Vacuole. (See Illus. Dict.) **2.** A small globular space filled with air, gas, or liquid.

Vadum. (See Illus. Dict.) In the pl., **Vada,** the gyri profundi.

Vagabondism (*vag-ah-bond'-izm*). See *Vagabond's Disease* and *Vagrant's Disease* (Illus. Dict.).

Vagadasastir. The book which contained the collection of medical knowledge of the ancient Brahmins; their "Organon" of medicine.

Vaginalectomy (*vaj-in-al-ek'-to-me*). See *Vaginectomy* (2).

Vaginectomy (*vaj-in-ek'-to-me*) [*vagina; ἐκτομή,* excision]. **1.** Excision of the vagina. **2.** Excision of the tunica vaginalis.

Vaginitis. (See Illus. Dict.) **V., Emphysematous,** a rare disease which resembles granular vaginitis, but the papules contain gas cysts. These look grayish or purple, and if punctured under water a bubble of gas floats up. It affects the higher parts of the vagina and the gas is said to be trimethylamin. [Roberts.] **V., Gonorrheal,** that due to infection by the gonococcus. **V., Membranous,** a rare condition in which shreds or actual casts of the vagina have been passed; it has occurred after strong caustics or douches. In some cases the exfoliation is periodic and associated with dysmenorrhea, or it is due to fungi. Cf. *Colpitis mycotica.* **V., Puerperal,** that due to the bruising and laceration of childbirth. **V., Purulent,** that in which there is an abundant secretion of pus for long periods, and not gonorrheal or due to an abscess discharging into the vagina. **V., Pustular,** a rare condition marked by the occurrence of pustules, like those of smallpox, in the vagina. **V., Senile,** a not uncommon condition in old women, or women past the menopause.

Vaginomycosis (*vaj-in-o-mi-ko'-sis*). Mycosis affecting the vagina.

Vaginoperitoneal (*vaj-in-o-per-it-on-e'-al*). Relating to the vagina and the peritoneum.

Vaginopexy (*vaj-in-o-pek'-se*) [*vagina,* a sheath; πῆξις, a fixing]. Longuet's term for the preservation of the

tunica vaginalis which results from the extraserous transplantation of the testicle in cases of varicocele. Cf. *Orchidopexy; Phlebopexy; Scrotopexy; Operation, Longuet's.*

Vaginoscope (*vaj'-in-o-skōp*) [*vagina; σκοπεῖν*, to view]. A vaginal speculum.

Vaginoscopy (*vaj-in-os'-ko-pe*). Inspection of the vagina.

Vaginovulvar. See *Vulvovaginal* (Illus. Dict.).

Vagoaccessorius (*va-go-ak-ses-o'-re-us*). The vagus and accessorius nerves considered as one.

Vagosympathicus (*va-go-sim-path'-ik-us*). In comparative anatomy the conjoined vagus and sympathetic nerves.

Vagotomized (*va-got'-om-īzd*). Applied to the condition of an animal in which the vagi nerves have been severed intentionally.

Vagrants' Glycosuria. See under *Glycosuria.*

Vajuolo [Ital.]. Smallpox.

Valeral (*val'-ur-al*). $(CH_3)_2=CH-CH_2-CH=O$. Isovaleric aldehyd, an isomer of amylidene oxid or valeric aldehyd.

Valeraldin (*val-ur-al'-din*). $C_{15}H_{31}NS_2$. A synthetic alkaloid formed from valeral ammonia by action of hydrosulfuric acid.

Valerianic-acid. (See Illus. Dict.) **V.-diethylamid,** $CH_3.CH_2.CH_2N(C_2H_5)_2$, a colorless limpid fluid, with peculiar odor and sharp burning taste, boiling at 210° C.; used in nervous diseases. Dose, 2 or 3 capsules, each containing 0.125 gm., 3 times daily. Syn., *Valyl.*

Valeridin (*val-ur'-id-in*). See *Valerylphenetidin.*

Valeryl (*val'-ur-il*). The compound C_5H_9O. **V.-phenetidin,** $C_6H_4(OC_2H_5)NH.C_5H_9O$, a white crystalline body obtained from paraamidophenetol by action of valeric acid; melts at 129° C.; soluble in ether, alcohol, or chloroform; insoluble in water. It is sedative and antineuralgic. Dose, 0.5–1 gm. Syn., *Sedatin; Valeridin; Isovaleryl-p-phenetidin.*

Valerylene (*val'-ur-il-ēn*). C_5H_8. A liquid boiling at 44° C. Syn., *Methylethylacetylene.* **V. Hydroiodid.** See *Iodoamylene.*

Valgoid (*val'-goid*) [*valgus; εἶδος*, likeness]. Resembling valgus.

Validol (*val'-id-ol*). A chemic combination of menthol and valerianic acid, containing 30% of free menthol. Introduced by Schwersenzki in 1897. It is employed as an antispasmodic; in migraine; as a specific in alcoholic intoxication; as a prophylactic against seasickness, etc. Dose, 10–15 drops daily on sugar. **V., Camphorated,** containing 10% of camphor, used in scotoma scintillans. Dose, 10–15 drops.

Vallis (*val'-is*) [L., a valley]. Vallecula cerebelli. See *Valley of the Cerebellum* (Illus. Dict.).

Valsalvan (*val-sal'-van*). Named for the Italian anatomist, Antoine Marie Valsalva, 1666–1723.

Valsol (*val'-sol*). An ointment vehicle consisting of a mixture of oxygenized hydrocarbons which forms an emulsionized mass with water and readily dissolves iodin, iodoform, ichthyol, etc.

Valve. (See Illus. Dict.) **V.s, Amussat's.** See *V.s, Heister's* (Illus. Dict.). **V.s, Atrioventricular, V.s, Auriculoventricular,** the mitral and tricuspid valves. **V., Béraud's,** a fold of mucous membrane found occasionally in the lacrimal sac, which it separates from the nasal duct. Syn., *Arnold's fold.* **V., Bochdalek's,** a small fold of the lining membrane of the lacrimal duct, near the punctum lacrimale. **V., Fallopian.** See *Ileocecal Valve* (Illus. Dict.). **V. of the Gallbladder,** the ileocecal valve. **V., Gerlach's,** a circular valve sometimes existing at the orifice of the vermiform appendix in the cecum. **V., Guérin's,** a fold of mucous membrane bounding G.'s sinus (*q. v.*). **V.-hematoma.** See under *Hematoma.* **V., Huschke's.** See *V., Rosenmüller's.* **V.s, Hoboken's,** the secondary windings of the vessels of the umbilical cord that form grooves externally and valve-like projections internally. **V., Ileocecal.** See under *Ileocecal* (Illus. Dict.). Syn., *Valvula cæci; V. coli; V. ilei; V. Bauhini; V. Fallopii; V. Tulpii; V. Varolii; Operculum ilei; Krause's valve.* **V., Krause's,** the ileocecal valve. **V.s, Laryngeal,** a term applied to the superior or false vocal bands because of their supposed use in holding the breath. **V., Mercier's,** a valvular projection that may be formed at the vesicourethral orifice by the hypertrophied internal sphincter vesicæ. **V.s, Morgagni's,** small pouches, opening upward, formed by the rectal mucosa, just above the anus. **V., Rosenmüller's,** a semilunar fold of the mucosa seen occasionally in the lacrimal duct above its junction with the lacrimal sac. **V.s, Sigmoid.** See *V.s, Semilunar* (Illus. Dict.). **V., Taillefer's,** a valvular fold of mucosa about the middle of the nasal duct. **V. of Tarinus,** the posterior medullary velum. **V., Willis'.** See *V., Vieussens'* (Illus. Dict.).

Valvula. (See Illus. Dict.) **V. anterior.** See *Valve of Vieussens* (Illus. Dict.). **V. cæci,** the ileocecal valve. **V. cerebelli.** See *Valvula* (Illus. Dict.). **V. coli,** the ileocecal valve. **Valvulæ cuspidales,** the mitral and tricuspid valves.

Valyl (*val'-il*). See *Valerianic-acid Diethylamid.*

Valzin (*val'-zin*). See *Dulcitol* (Illus. Dict.).

Vanadate, Vanadiate (*van'-ad-āt, van-ad'-e-āt*). A salt of vanadic acid.

Vanadic (*van-ad'-ik*). Containing vanadium as a pentad radicle.

Vanadiferous (*van-ad-if'-ur-us*) [*vanadium; ferre*, to bear]. Yielding or containing vanadium.

Vanadin (*van'-ad-in*). A remedy recommended in pulmonary tuberculosis, said to consist of a solution of a vanadium salt with sodium chlorid. Dose, 6–30 drops daily.

Vanadious (*van-a'-de-us*). Containing vanadium as a trivalent radicle.

Vanadous (*van'-ad-us*). Relating to vanadium.

Vanillin. (See Illus. Dict.) **V.-paraphenetidin,**

$$C_6H_3\begin{cases}OH\\OCH_3\\CH.N.C_6H_4OC_2H_6\end{cases}$$

A crystalline condensation-product of vanillin with paraphenetidin at 140° C.; melts at 97° C.; soluble in water. It is hypnotic, antineuralgic, and styptic. Dose, 1.5–2 gm.

Van't Hoff's Theory of Solution. See under *Solution.*

Vapocauterization (*va-po-kaw-tur-iz-a'-shun*). See *Atmocausis.*

Vaporimeter (*va-por-im'-et-ur*) [*vapor; μέτρον*, measure]. Of Geissler, an apparatus for determining the tension of vapor.

Vaporish (*va'-por-ish*). Hysteric.

Varec, Varek (*var'-ek*) [Icel. *vāgrek*, "wave rack," anything thrown up by the sea]. Kelp.

Vareni. See *Ambulo* (Illus. Dict.).

Varicelliform (*var-is-el'-e-form*). Having the form of vesicles of varicella.

Varicole (*var'-ik-ōl*). See *Varicocele* (Illus. Dict.).

Variform (*var'-e-form*) [*varius*, various; *forma*, form]. Having diversity of forms.

Variola. (See Illus. Dict.) **V. amboinensis,** frambesia. **V. ambulans,** a mild form of smallpox. **V., Black.** See *V. nigra.* **V., Corymbose,** a variety in which the pustules are confluent in patches with inter-

vals of unaffected skin. **V. crystallina.** See *Varicella* (Illus. Dict.). **V. nigra**, the most fatal variety of smallpox; also called purpura variolosa and malignant or hemorrhagic smallpox. **Variolæ pusillæ** [Heberden]. See *Varicella* (Illus. Dict.). **V. vaccinatorum.** See *Varioloid* (Illus. Dict.). **V. volatica.** See *Varicella* (Illus. Dict.).

Variologist (*va-re-ol'-o-jist*). One skilled in the treatment of variola.

Variology (*va-re-ol'-o-je*) [*variola*; λόγος, science]. The science of variola.

Variolois [Ger.] (*va-re-o-lo'-is*). Modified or abortive smallpox; variola modificata or variola mitigata.

Variometer (*va-re-om'-et-ur*). An apparatus for observing slight variations in atmospheric pressure.

Varix. (See Illus. Dict.) **V., Lingual,** "varicose veins" at the base of the tongue, formerly held responsible for various throat symptoms.

Varolian (*var-o'-le-an*) [*Constant Varioli*, Italian anatomist, 1542–1575]. Relating to the pons [varolii].

Vas. (See Illus. Dict.) **V. aberrans of Haller,** a small, convoluted duct connected with the tail of the epididymis or the beginning of the vas deferens. **V. aberrans of Roth,** an inconstant diverticulum of the middle portion of the rete testis. **Vasa centralia retinæ,** the central artery and veins of the retina. **Vasa ciliaria,** the ciliary arteries and veins. **V. deferens mulieris,** the fallopian tube.

Vasculitis (*vas-ku-li'-tis*) [*vasculum*, a small vessel]. See *Angiitis* (Illus. Dict.).

Vasectomy (*vas-ek'-to-me*) [*vas*, vessel; ἐκτομή, a cutting out]. Resection of the vas deferens.

Vaselon (*vas'-el-on*). An ointment base consisting of a mixture of margaron and stearon dissolved in mineral oil.

Vasicin (*vas'-is-in*). An alkaloid found in combination with adhatodic acid in *Adhatoda vasica*, Nees. It is used in bronchial affections and as an insecticide.

Vasoconstriction (*va-zo-kon-strik'-shun*) [*vas*, vessel; *constringere*, to bind]. The constriction of blood-vessels.

Vasofactive. See *Vasifactive* (Illus. Dict.).

Vasohypotonic (*va-zo-hi-po-ton'-ik*). See *Vasoconstrictor* (Illus. Dict.).

Vasoinhibitor (*va-zo-in-hib'-it-or*) [*vas*, vessel; *inhibere*, to inhibit]. A drug or agent tending to inhibit the action of the vasomotor nerves.

Vasol (*va'-sol*). A mixture of liquid petrolatum with ammonium oleate. **V., Iodized,** vasol containing 7% of iodin.

Vasoparesis (*va-zo-par'-e-sis*) [*vas*, vessel; *paresis*]. Paresis affecting the vasomotor nerves.

Vasosection (*va-zo-sek'-shun*) [*vas*, vessel; *sectio*, a cutting]. Severing of the vas deferens.

Vasospastic (*va-zo-spas'-tik*). Angiospastic.

Vasothion (*va-zo-thi'-on*). A compound of vasogen and sulfur, 10%; it is used in chronic skin-diseases.

Vasotonic (*va-zo-ton'-ik*) [*vas*, vessel; τόνος, tone]. Relating to the tone or tension of vessels.

Vasotribe (*va'-zo-trib*) [*vas*, vessel; τρίβειν, to grind]. An instrument for controlling hemorrhages, an angiotribe.

Vasotrophic (*va-zo-tro'-fik*) [*vas*, vessel; τροφή, nourishment]. Concerned in the nutrition of vessels.

Vateria (*vah-te'-re-ah*) [*Abraham Vater*, German anatomist, 1684–1751]. A genus of plants of the order *Dipterocarpeæ*. **V. indica,** Linn., indigenous to the East Indies, yields white dammar. **V. ceylanica,** Wight, native of Ceylon, yields selan dammar.

Veal-skin. Same as *Vitiligo*.

Vegetaline (*vej'-et-al-in*). An artificial butter prepared by refining the oil extracted from dried cocoanut.

Vein. (See Illus. Dict.) **V.s, Accessory Portal, of Sappey,** a system of venules uniting to form small trunks, which redivide in the liver and empty into the sublobular veins. It consists of the minute nutrient veins of the portal vein, hepatic artery, and bile-ducts; of venules lying in the gastrohepatic omentum, the suspensory ligament of the liver, and about the fundus of the gallbladder; and of the group of small veins in the umbilical region. Through the branches lying in the suspensory ligament of the liver and through the paraumbilical group the portal vein communicates with the venæ cavæ. **V., Alveolar,** one corresponding to the alveolar branch of the internal maxillary artery and opening into the internal maxillary vein. **V., Anastomotic, Great.** See *V. of Trolard* (Illus. Dict.). **V., Anterior Internal Maxillary.** Same as *V., Facial, Deep.* **V., v. Burow's,** a slender vein joining the portal vein just before the latter enters the liver. It is formed by the two inferior epigastric veins and receives a branch from the veins of the bladder. **V.s, Cardiac, Anterior,** two or three veins on the ventral aspect of the right auricle and the right border of the heart emptying separately into the auricle. **V., Cardiac, Middle,** the largest of the veins on the posterior surface of the heart. It empties into the right extremity of the coronary sinus. **V.s, Cardiac, Posterior,** three or four veins on the posterior aspect of the ventricles which open into the coronary sinus at its lower border. **V., Coronary, Large,** of the heart, one arising upon the ventral surface of the apex of the heart, ascending in the anterior interventricular groove, and terminating on the posterior surface of the heart in the left end of the coronary sinus. **V., Epibranchial,** applied in comparative anatomy to a vein above the branchia or gills. **V., Facial, Deep,** one joining the facial vein below the malar bone; it receives the blood from the pterygoid plexus. **V., Falciform,** the inferior longitudinal sinus. **Veine fluide Theory of Breath-sounds.** See under *Breath-sounds*. **V., Hypogastric.** See *V., Iliac, Internal* (Illus. Dict.). **V., Jugular, Great.** See *V., Jugular, Internal* (Illus. Dict.). **V.s, Kohlrausch's,** the superficial veins that pass from the under surface of the penis upward to empty into the dorsal vein. **V., Labbé's.** See *V., Posterior Anastomosing* (Illus. Dict.). **V.s, Lingual, Dorsal,** two veins arising in a submucous plexus on the posterior portion of the dorsum of the tongue and opening into the common facial vein or internal jugular vein. **V.s, Plantar,** veins accompanying the plantar arteries. **V., Ranine,** the chief vein conveying blood from the tongue. It originates near the tip beneath the mucosa, accompanies the hypoglossal nerve across the hypoglossus muscle, and empties into the internal jugular vein. **V.s, Retzius',** the veins which form anastomoses between the mesenteric veins and the inferior vena cava. **V., Rosenthal's.** See *V., Basilar* (Illus. Dict.). **V.s, Santorini's,** the emissary veins which form a communication between the cerebral sinuses and the veins of the scalp; especially, the small veins passing through the parietal foramen and connecting the parietal with the superior longitudinal sinus. **V.s, Stellate.** See *Verheyen, Stars of* (Illus. Dict.). **V.s, Stenson's.** See *Venæ vorticosæ* (Illus. Dict.). **V., Sylvian,** one of the veins of the convexity of the brain, which courses at first along the fissure of Sylvius and then ascends across the hemisphere. **V.s, Testicular,** the pampiniform plexus. **V.s of Thebesius.** See *Venæ thebesii* (Illus. Dict.). **V.s, Vertebrospinal,** the veins connecting the plexuses of the spinal canal with the vertebral vein. **V.s, Vitelline,** in the embryo, several venous trunks conveying

the blood from the sinus terminalis to the meatus venosus. **V., Zuckerkandl's,** a small branch of the ethmoid veins through which the veins of the lateral wall of the nose communicate with the cerebral veins.

Veld Sore. A lesion common among troops during the Boer war in South Africa. It begins as a small papule attended with itching and soon develops into a running sore. It is probably due to the sting of a large brown horse-fly indigenous to the region.

Vellin (*vel'-in*). A glucosid contained in *Ammi visnaga*, Lam.

Vellolin (*vel-o'-lin*). A purified wool-fat.

Vellosin (*vel-o'-sin*). $C_{23}H_{28}N_2O_4$. An alkaloid contained in Paopereira bark, *Geissospermum vellosii*, All. Yellow crystals, almost insoluble in water, soluble in hot alcohol, ether, or chloroform; resembles brucin in physiologic action.

Velociphilia (*ve-los-e-fil'-e-ah*) [*velox*, swift; *φιλεῖν*, to love]. Excessive fondness for rapid locomotion.

Velosynthesis (*ve-lo-sin'-the-sis*) [*velum*, veil; *σύνθεσις*, a putting together]. Staphylorrhaphy.

Velum. (See Illus. Dict.) **V., Animal.** See *Cargile Membrane.* **V., Anterior, V., Superior,** the valve of Vieussens. **V., Artificial,** in dentistry, any appliance made to supply the loss of the posterior soft palate. **V., Inferior Medullary.** See *V., Posterior Medullary* (Illus. Dict.). **V., Medullary, Superior,** the valve of Vieussens. **V. terminale.** See *Terma* (Illus. Dict.).

Venenosalivary. See *Venomosalivary.*

Venenosity (*ven-en-os'-it-e*). The condition of being toxic.

Venerismus pyorrhoicus. Gonorrhea.

Venin (*ven'-in*) [*venenum*, poison]. The toxic principle resulting from cytolysis of certain portions of the cells (chromatin granules, *cf.* venogene) of venom glands of poisonous animals.

Venipuncture (*ven'-e-punk-chur*). Puncture of a vein.

Venisuture. See *Venesuture* (Illus. Dict.).

Venogene (*ven'-o-jēn*) [*venenum*, poison; *γεννᾶν*, to produce]. Nuclear, safranophil granules occurring in the cells of the parotid glands of *Vipera aspis.* These granules emigrate from the nucleus into the cytoplasm and at the moment of glandular activity are transformed into venin.

Venom. (See Illus. Dict.) **V., Daboia,** the venom of Russell's viper (*Daboia russellii*), the toxicity of which is principally due to its action on the blood; it causes rapid death from extensive intravascular clotting. Calmette's serum has no power to neutralize it. **V.-globulin,** name given by Langmann (1900) to an active principle of snake-venom. Cf. *Venom-peptone, Cobralysin, Cobra-nervin, Echidnase, Echidnotoxin.* **V.-hemolysis,** dissolution of red blood-corpuscles by snake-venom. **V.-leukolysis,** destruction of leukocytes by the action of venom.

Venomer (*ven'-om-ur*). A poisoner.

Venomized (*ven'-om-īzd*). Infected or rendered immune by means of a venom.

Venomosalivary (*ven-om-o-sal'-iv-a-re*). Secreting a toxic saliva.

Venomotor (*ven-o-mo'-tor*) [*vena*, a vein; *movere*, to move]. Causing the veins to contract or dilate.

Venosclerosis (*ven-o-skle-ro'-sis*) [*vena*, vein; *σκληρός*, hard]. Induration of the veins.

Venter. (See Illus. Dict.) **V. imus,** the hypogastrium. **V. propendens, V. propendulus.** See *Abdomen, Pendulous* (Illus. Dict.). **V. renum,** the pelvis of the kidney.

Ventose (*ven'-tōs*) [*ventosa*]. 1. A cupping glass. 2. [*ventosus.*] Flatulent.

Ventosity (*ven-tos'it-e*) [*ventum*, wind]. Flatulence.

Ventricle. (See Illus. Dict.) **V., Duncan's,** the fifth ventricle. **V., Krause's,** the terminal ventricle of the spinal cord. **V., Olfactory.** See *Rhinocele* (Illus. Dict.). **V., Vieussens',** the fifth ventricle.

Ventricularis (*ven-trik-u-la'-ris*). The thyroepiglottideus muscle. See *Table of Muscles* (Illus. Dict.).

Ventriduction (*ven-tre-duk'-shun*) [*venter*, belly; *ducere*, to lead]. The act of drawing a part to the ventral side.

Ventrifixation. See *Ventrofixation* (Illus. Dict.).

Ventrifixure (*ven-tre-fiks'-ur*). See *Ventrofixation* (Illus. Dict.).

Ventripotent (*ven-trip'-o-tent*) [*venter*, belly; *potens*, powerful]. Abdominous.

Ventrohysteropexy (*ven-tro-his-ter-o-peks'-e*) [*venter*, belly; *ὑστέρα*, womb; *πῆξις*, a fixing]. Ventrofixation of the uterus.

Ventrolateral (*ven-tro-lat'-ur-al*). Relating to the ventral and lateral aspects of a part.

Ventromedian. See *Ventrimesal* (Illus. Dict.).

Ventroptosis (*ven-tro-to'-sis*). See *Gastroptosis* (Illus. Dict.).

Ventroscopy (*ven-tros'-ko-pe*) [*venter*, belly; *σκοπεῖν*, to view]. De Ott's term for the method of direct examination of the abdominal and pelvic cavities by means of an apparatus resembling the cystoscope. Cf. *Gastroscopy.*

Ventrosuspension (*ven-tro-sus-pen'-shun*). See *Ventrofixation* (Illus. Dict.).

Ventrovesicofixation (*ven-tro-ves-ik-o-fiks-a'-shun*) [*venter*, belly; *vesica*, bladder; *figere*, to bind fast]. The suturing of the uterus to the bladder and abdominal wall. Syn., *Hysterocystopexy.*

Veratrate (*ver'-at-rāt*). A salt of veratric acid.

Veratrinize (*ver-at'-rin-īz*). To bring under the influence of veratrin.

Veratrism (*ver-a'-trism*). Poisoning with root of *Veratrum album*, L., or by overdosage of veratrin; marked by vomiting, diarrhea with bloody stools, collapse, fall of temperature, and muscular convulsions.

Veratroidin (*ver-a'-troid-in*). $C_{22}H_{53}NO_9$. An alkaloid contained in *Veratrum viride*, Ait., and *V. parviflorum*, Mich. It is depressant to the motor centers of the spinal cord.

Veratrol (*ver-a'-trol*). $C_8H_{10}O_2$. A colorless oil with aromatic odor obtained from veratric acid by action of baryta with heat; sp. gr., 1.086; melts at 15° C.; boils at 205° C.; soluble in alcohol, ether, and fatty oils. It is used as an antiseptic by inhalation and by application in 1% solution; less poisonous than guaiacol but more caustic. Syn., *Catechol dimethyl ether; C. dimethylate; Dimethylpyrocatechin.*

Vergences (*vur'-jen-sēz*) [*vergere*, to bend]. A term applied to associated disjunctive movements of the eyes, *e. g.*, *Convergence; Divergence; Supravergence.* Cf. *Torsions, Versions.*

Veridical (*vur-id'-ik-al*) [*vera*, true]. Relating to realities. **V. Hallucination.** See *Hallucination.*

Vermiceous (*vur-mish'-us*) [*vermis*, worm]. Relating to worms.

Vermicule (*vur'-mik-ūl*) [*vermis*, a worm]. A name given by Ross to the large pyriform zygote or sexually produced embryo of the malarial parasite.

Vermilingual, Vermilinguial (*vur-me-lin'-gwal, -gwe-al*) [*vermis*, worm; *lingua*, tongue]. Having a worm-shaped tongue.

Verminal (*vur'-min-al*). Relating to or due to worms.

Veronal (*ver'-on al*). Diethylmalonylurea; a white crystalline substance without odor, of a faintly bitter taste, soluble in 145 parts of water. A hypnotic. Dose, 7–20 gr. (0.5–1.3 gm.).

Version. (See Illus. Dict.) 2. Duane's term for parallel movements of the eyes, consisting in, **Deorsumversion**, movement of both eyes down. **Dextrodeorsumversion**, movement of both eyes down and to the right. **Dextrosursumversion**, movement of both eyes up and dextrad. **Dextroversion**, movement of both eyes to the right. **Lateriversion**, movement of both eyes laterally. **Levodeorsumversion**, movement of both eyes down and to the left. **Levosursumversion**, movement of both eyes up and sinistrad. **Levoversion**, movement of both eyes to the left. **Levovert**, to turn the eyes to the left (Duane). **Levoverter**, applied by Duane to the right internus or left externus muscle. **Sursumversion**, movement of both eyes up.

Vertebra. (See Illus. Dict.) **V.s, Lumbar**, the five vertebras anterior to the sacrum. **V.s, Primordial.** See *Protovertebræ* (Illus. Dict.).

Vertebralis (*vur-te-bra'-lis*). The vertebral artery.

Vertebrectomy (*vur-te-brek'-to-me*) [*vertebra*; ἐκτομή, excision]. Excision of a portion of a vertebra.

Vertebroarterial. See *Vertebrarterial* (Illus. Dict.).

Vertebrodymia (*vur-te-bro-dim'-e-ah*) [*vertebra*; δύειν, to enter]. A variety of somatodymia in which the union is in the vertebras.

Vertebromammary (*vur-te-bro-mam'-ar-e*). Relating to the vertebras and the mammæ.

Vertigo. (See Illus. Dict.) **V., Intestinal.** (See Illus. Dict.) 2. That caused by pressure on the terminal portions of the intestine, brought about by masses of gas or feces, or even when the finger is introduced into the rectum and irritates the intestinal wall. It is regarded by Leube as due to pressure on the hemorrhoidal plexus of the sympathetic system. [Hemmeter.] **V., Lithemic**, a form associated with gout and lithemia. **V., Organic**, that due to brain lesion. **V., Paroxysmal**, that occurring in epilepsy; also called *epileptic vertigo*, but this is inadvisable, as the term is used as a synonym of *petit mal*. **V., Peripheral**, that due to irritation that is not central. **V. tenebricosa**, that accompanied by dimness of vision and headache. **V., Toxemic**, that due to some poison in the blood.

Vesalian (*ves-a'-le-an*). Named for Andrew Vesalius, a Dutch anatomist, 1514 (?)–1564.

Vesanic (*ves-an'-ik*) [*vesania*, unsoundness of mind]. Relating to insanity.

Vesicle. (See Illus. Dict.) **V., Acoustic.** See *V., Auditory* (Illus. Dict.). **V.s, Ascherson's**, minute globules formed by agitating oil and liquid albumin. **V.s, Malpighi's**, the pulmonary alveoli. **V.s, Marochetti's**, those sometimes seen on the under surface of the tongue in rabies. **V.s, Müller's**, small round vacuoles, each containing one or more excretory granules, found in certain infusoria, *e. g.*, *Loxodes*. **V., Small Vestibular.** See *Sacculus of the Vestibule* (Illus. Dict.). **V., Wagner's.** See *Wagner's Spot* (Illus. Dict.).

Vesicofixation (*ves-ik-o-fiks-a'-shun*) [*vesica*, bladder; *figere*, to fix, to fasten]. 1. The operation of suturing the bladder to the abdominal wall. 2. The surgical attachment of the uterus to the bladder.

Vesicourachal (*ves-ik-o-u'-rak-al*). Relating to the bladder and the urachus.

Vesicouterovaginal (*ves-ik-o-u-tur-o-vaj'-in-al*). Relating to the bladder, uterus, and vagina.

Vessel. (See Illus. Dict.) **V.s, Jungbluth's**, nutrient vessels lying immediately beneath the amnion and disappearing usually at an early period of embryonic life. **V.s, Radicular**, branches of vertebral arteries supplying cerebral nerve-roots.

Vestibulourethral (*ves-tib-u-lo-u-re'-thral*). Relating to the bulbi vestibuli and to the urethra.

Vibralogy (*vi-bral'-oj-e*). A term used by quacks for the practice of conveying healing vibrations from one to another.

Vibrator (*vi-bra'-tor*) [*vibrare*, to shake]. A device for conveying mechanical vibration to a part.

Vibromassage (*vi-bro-mas-ahzh'*). 1. See *Massage, Vibratory*. 2. A form of pneumomassage for the ear.

Vibrometer (*vi-brom'-et-er*) [*vibrare*, to vibrate; *metare*, to measure]. A device for the treatment of deafness, by which rapid vibrations of the membrana tympani are induced.

Vibrophone (*vi'-bro-fōn*) [*vibrare*, to vibrate; φωνή, sound]. A device for applying sound massage to the membrana tympani in treatment of deafness.

Vibrotherapeutics (*vi-bro-ther-ap-u'-tiks*). The therapeutic appliance of vibration. See *Shaking Cure* (Illus. Dict.).

Vicilin (*vis'-il-in*) [*Vicia*, a genus of leguminous plants]. A globulin found in peas, lentils, and horse beans.

Vicosin (*vi'-ko-sin*). A mixture of caramel and an extract of *Saponaria officinalis*, L., used for producing a permanent foam on beer.

Victorium (*vik-to'-re-um*) [*Queen Victoria*]. An element of the yttrium-cerium group discovered by Sir William Crookes by photographing the spectrum produced by the influence of the negative electric discharge *in vacuo* on a product obtained from yttria by chemic fractionation. Originally called *monium*.

Vieirin (*vi-e'-ir-in*). An amorphous, bitter, white substance obtained from the bark of *Remijia vellosii*, D. C.; soluble in alcohol and chloroform; melts at 120° C. Used as a substitute for quinin. Dose, 0.065–0.26 gm. several times daily. Syn., *Vieric acid*.

Vigil (*vij'-il*) [L.]. Watchful wakefulness. **V. Coma.** See *Coma* (Illus. Dict.).

Vigilambulism (*vij-il-am'-bu-lizm*) [*vigil*, wakefulness; *ambulare*, to walk]. Ambulatory automatism in the waking state. A term given by Egger and Lereboullet to a form of somnambulism occurring in hysteric patients in which all the phenomena of somnambulism are present during perfect insomnia.

Vigintinormal (*vij-in-te-nor'-mal*) [*viginti*, twenty; *norma*, rule]. Possessing one-twentieth of what is normal.

Vigoral (*vig'-o-ral*). A proprietary preparation of beef.

Villiferous (*vil-if'-ur-us*) [*villus*, a tuft; *ferre*, to bear]. Furnished with hairs or villi.

Villoma (*vil-o'-mah*) [*villus*, a tuft]. See *Pilonidal Sinus* (Illus. Dict.).

Villosity (*vil-os'-it-e*) [*villus*, a tuft of hair]. A proliferation of a membranous surface. **Villosities, Intestinal**, slight proliferations of the intestinal mucosa almost contiguous to each other and situated along the entire length of the small intestine from the pylorus to the ileocecal valve.

Vincetoxicin, Vincetoxin (*vin-se-toks'-is-in, vin-se-toks'-in*). v. Tanret's name for two glucosids found by him in *Vincetoxicum officinale*, Mönch., with the formula $C_{16}H_{12}O_6$ (?). The soluble vincetoxin is a yellow, amorphous powder, soluble in water, alcohol, and chloroform, insoluble in ether; decomposes at 130° C. The insoluble vincetoxin dissolves in alcohol, chloroform, or ether, but not in water, except in the presence of the soluble vincetoxin.

Vincetoxicum (*vin-se-toks'-ik-um*) [*vincere*, to subdue; *toxicum*, poison]. A genus of the order *Asclepiadaceæ*. **V. officinale**, Mönch., swallowroot, indigenous to Europe; the root is used as an emetic and in menstrual disorders. It contains vincetoxin.

Vincin (*vin'-sin*). A principle found in *Vinca minor*, L.

Vinculum (*vin'-ku-lum*) [L., pl. *vincula*]. A ligament, a band, a frenum. **Vincula lingulæ cerebelli.** See *Folia* (2) (Illus. Dict.).

Vinic (*vi'-nik*) [*vinum*, wine]. Pertaining to wine, obtained from wine.

Vinyl. (See Illus. Dict.) **V. Trichlorid.** See *Ethylene Chlorid, Monochlorinated.*

Vioform (*vi'-o-form*). See *Iodochloroxyquinolin.*

Viola. (See Illus. Dict.) **V.-quercitrin,** $C_{42}H_{42}O_{24}$, a glucosid analogous to quercitrin, from *Viola tricolor*, L., var. *arvensis* (*V. arvensis*, Murray). From hot water it crystallizes in fine yellow needles. By boiling with dilute mineral acids it decomposes into quercitrin and a fermentable glucose.

Violet. (See Illus. Dict.) **V.-crystals.** See *Hexamethylenerosanilin.* **V.-cure,** the popular use of violet leaves in the treatment of cancer, in the belief that they constitute an infallible remedy. The "cure" was widely exploited in 1901, and the following is the formula as given by a newspaper of that year: "Take a handful of fresh green violet leaves and pour a pint of boiling water upon them, cover them and let them stand 12 hours, until the water is discolored and green. Then strain off the liquid, dip a piece of lint into the infusion, of which a sufficient quantity must be warmed. Put on the wet lint hot wherever the malady is. Cover the lint with oil silk or thin mackintosh and change it whenever dry or cold. The infusion should be fresh about every alternate day." **V., Hoyer's, V., Lauth's.** Synonym of *Thionin.* See *Pigments, Conspectus of* (Illus. Dict.).

Viper, Russell's. See *Daboia russellii.*

Viperin (*vi'-pur-in*). A toxalbumin extracted from the venom of vipers by Prince Louis Bonaparte, 1843. Syn., *Echidnin.*

Viraginity (*vir-aj-in'-it-e*) [*virago*, a woman]. A form of sexual perversion in which the female individual is essentially male in her feelings and tastes.

Virgula (*vir'-gu-lah*) [*virga*, a rod]. The penis.

Viriculture (*vir-e-kul'-chur*) [*vir*, a man; *cultura*, a cultivating]. Experimental evolution as applied to the purposive breeding of mankind for purposes of racial improvement. Cf. *Puericulture.*

Viripotent (*vir-ip'-o-tent*) [*vir*, a man; *potens*, able]. Marriageable.

Virola Tallow. An oil or fat from the seeds of *Myristica sebifera*, Sw.; a remedy for rheumatism.

Virus. (See Illus. Dict.) **V., Fixed, V. fixe,** rabies virus which, having been passed from rabbit to rabbit through a long series, finally reaches a fixed incubation period and no increase of virulence can be obtained.

Visceralism (*vis'-ur-al-izm*). The doctrine that all disease has its origin in the viscera.

Visceroinhibitory (*vis-ur-o-in-hib'-it-o-re*). Inhibiting the movements of viscera.

Visceropericardial. See *Visceripericardial* (Illus. Dict.).

Visceroptosis (*vis-ur-o-to'-sis*) [*viscera*, viscera; πτῶσις, a fall]. Abdominal ptosis, Glénard's disease.

Viscerosomatic (*vis-ur-o-so-mat'-ik*) [*viscera*; σῶμα, body]. Relating to the viscera and the body.

Viscogen (*vis'-ko-jen*). A milk adulterant of syrupy consistency, composed of sugar, lime, and water. When added to milk or cream, the lactic acid acting upon the lime gives rise to a white coagulum, which assimilating with the milk gives it a rich appearance and taste.

Viscoid (*vis'-koid*). Resembling viscin or the genus *Viscum.*

Viscometer. See *Viscosimeter.*

Viscometry. See *Viscosimetry.*

Viscosimeter (*vis-cos-im'-et-ur*) [*viscosus*, viscous; *metare*, to measure]. An apparatus to determine the degree of viscosity of a liquid.

Viscosimetry (*vis-kos-im'-et-re*). The quantitative estimation of viscosity in liquids.

Vision. (See Illus. Dict.) **V., Blue,** cyanopia, a perverted state of the vision rendering all objects blue. **V., Field of.** See under *Field.* **V., Half,** hemiopia. **V., Hering's Test,** if, on looking with both eyes through a tube blackened inside and having a thread across one end, a small round object be dropped immediately in front of or behind the thread, a subject with binocular vision can at once tell whether it has fallen nearer to his eyes or further away from them than the thread. In the absence of binocular vision a few trials will show that the relative distances of the falling object and the thread cannot be appreciated.

Visnagol (*vis'-nag-ol*). A substance contained in *Ammi visnaga*, Lam.

Visnin (*vis'-nin*). A substance contained in *Ammi visnaga*, Lam.

Visualization (*viz-u-al-iz-a'-shun*) [*visualitas*, the faculty of sight]. The act of rendering a mental perception visible to the eye; the recalling of a mental image with such distinctness that it seems reality.

Visuoauditory (*vis-u-o-aw'-dit-o-re*). Pertaining to both vision and hearing.

Visuometer (*viz-u-om'-et-ur*) [*visus*, sight; *metare*, to measure]. An apparatus for determining range of vision.

Visus. (See Illus. Dict.) **V. acrior,** nyctalopia. **V. acris,** acuteness of vision. **V. brevior,** myopia. **V. coloratus,** chromopsia. **V. debilitas,** asthenopia. **V. decolor,** achromatopsia. **V. duplicatus,** diplopia. **V. habetudo,** amblyopia. **V. juvenum,** myopia. **V. lucidus,** photopsia.

Vitalism. (See Illus. Dict.) Cf. *Medicine, Dogmatic System of.* **V., Bordeu's Doctrine of,** which held the existence of a general life of the body,—a composite life, resulting from the harmonious working of the individual lives and powers of all the organs, which were supposed to be associated with each other, but each for its own definite function; the most important—the stomach, heart, and brain—being called the "tripod of life." [Park.]

Vitascope (*vi'-tah-skōp*) [*vita*, life; σκοπεῖν, to view]. An apparatus for showing stereopticon pictures of beings in motion; a kinetoscope. Cf. *Stroboscope, Phenakistoscope, Zoetrope.*

Viticide (*vit'-is-id*) [*vitis*, a grapevine; *cædere*, to kill]. An agent destructive to the grape or grapevine.

Vitiligo. (See Illus. Dict.) In the plural, **Vitiligines,** the lineæ albicantes.

Vitiligoid (*vit'-il-ig-oid*). Resembling vitiligo.

Vitodynamic (*vi-to-di-nam'-ik*) [*vita*, life; δύναμις, energy]. Relating to vital forces.

Vitreocapsulitis (*vit-re-o-kap-su-li'-tis*). See *Hyalitis* (Illus. Dict.).

Vitrescence (*vit-res'-ens*) [*vitrum*, glass]. The condition of becoming hard and transparent like glass.

Vitric (*vit'-rik*). Relating to glass or any vitreous substance.

Vitriolated (*vit-re-ol-a'-ted*). Containing vitriol; containing sulfur or sulfuric acid.

Vitriolation (*vit-re-ol-a'-shun*). Conversion into glass or into a hyaloid structure.

Vitriolic. Relating to or obtained from vitriol.

Voandzeia (*vo-and-ze-e'-ah*) [native Madagascar

name]. A genus of leguminous plants indigenous to the African tropics. **V. subterranea**, Dup. Th., a food-plant largely cultivated in Africa under the name of *Woandsu*. It has been introduced into southern Asia and Brazil. It contains 58% starch, 4% cellulose, 19% nitrogenous substances, 10% water, 9% oily matter.

Volemit (*vol'-em-it*). A heptet or heptahydric alcohol isomeric with perseit, found by E. Fischer, 1895, in the mushroom, *Lactarius volemus*, Fr.

Volley (*vol'-e*) [*volare*, to fly]. A series of artificially induced muscle-twitches.

Voltage (*volt'-aj*). Electromotive strength measured in volts.

Voltagram (*volt'-ah-gram*). A faradic battery so arranged as to produce an almost continuous current.

Voltameter. (See Illus. Dict.) **V., Detonating,** a voltameter devised by Bertin in which a decomposition of water is accompanied by detonation.

Voltammeter (*volt-am'-et-ur*). A combined voltameter and transformer for measuring alternating currents.

Volumeter (*vol'-u-me-tur*) [*volumen*, volume; *metare*, to measure]. An instrument for determining the volume of gases.

Volumometer. See *Volumeter*.

Volution (*vol-u'-shun*) [*voluta*, a spiral scroll]. A convolution, a gyrus.

Volutoid (*vol'-u-toid'*). Resembling a volute; scroll-like.

Volvate (*vol'-vāt*) [*volva*, a wrapper, an integument]. Furnished with a volva.

Vomerobasilar (*vo-mur-o-bas'-il-ar*). Relating to the vomer and to the basal part of the cranium.

Vomicose (*vom'-ik-ōz*) [*vomicus*, purulent]. Purulent, ulcerative.

Vomiting. (See Illus. Dict.) **V., Cyclic,** vomiting recurring at regular periods. **V., Rosenthal's Hyperacid.** See *Disease, Rossbach's* (Illus. Dict.).

Vomito prieto. Yellow fever.

Vuerometer (*vu-ur-om'-el-ur*). An apparatus for determining the distance of the eyes from each other.

Vulneral (*vul'-nur-al*). A proprietary salve for wounds and ulcers said to consist of compound tincture of benzoin and myrrh, each 75 parts; paraffin and vaselin, each 300 parts; wax, spermaceti, and lanolin, each 100 parts; boric acid and zinc oxid, each 40 parts; carbolic acid, 12.5 parts; liquid aluminium acetate and camphor, each 7.5 parts; lard, 360 parts.

Vulvitis. (See Illus. Dict.) **V., Gonorrheal,** that due to infection with gonococcus.

Vulvouterine (*vul-vo-u'-ter-ēn*). Relating to the vulva and the uterus.

Vutrin (*vu'-trin*). A concentrated powdered meat extract.

W

Wabai-ki-bokhar [East Indian epidemic fever]. Vernacular for trypanosomiasis.

Wagogo. See *Mshangu* and *Acokanthera abyssinica*.

Wakker's Disease. A bacterial disease of hyacinths.

Waldeyer's Doctrine of the Individuality of the Nerve-elements. See under *Neuron*.

Waldiwin (*wal'-de-win*). A very poisonous alkaloid obtained from seeds of *Simaba waldivia*, Planch., indigenous to South America.

Wall-diseases. Applied by Vallin to the condition of the walls of inhabited houses marked by the presence of saltpeter, due to the penetration into the body of the walls of the bacilli of nitrification, making the houses cold and unwholesome, especially in damp localities. As a preventive the isolation of the walls from the surrounding exrth by trenches and the use of cement, asphalt, or coal-tar are recommended, as well as mixing the mortar with antiseptic solutions, such as dissolved sulfate of copper. Where the walls are infected the treatment indicated is the scraping and washing away of the traces of saltpeter and inoculating the walls with active cultures of the antinitrifying bacilli and covering them with impermeable paint.

Water. (See Illus. Dict.) **W. on the Brain,** hydrocephalus. **W. on the Chest,** hydrothorax. **W. Cress,** the plant *Nasturtium officinale*, R. Br. It is said to be a specific remedy for beri-beri. **W.-glass,** a solution of sodium silicate. **W., Heart.** See *Heart-water*. **W.-itch.** See *Itch, Coolie*. **W.-jags,** chicken-pox. **W. of Pagliari,** a preparation employed in France as a hemostatic consisting of crystallized alum, 15 gr.; gum benzoin, 75 gr.; distilled water, 3 oz. **W.-pox.** See *Itch, Coolie*. **W., St. Boniface,** water containing 1½ gr. of lithia to the pint, from springs near Frankfort, Germany; used in treatment of gout. **W. Sores.** See *Itch, Coolie*. **W.-stroke,** a name for meningitis when there is a rapid effusion of fluid. **W.-whistling,** Vierordt's term for designating a metallic rale heard in pneumothorax if the patient draws a breath when his position is such that the opening in the pleura is directly below the smooth surface of the fluid.

Watery Eye. See *Epiphora* (Illus. Dict.).

Wattle. (See Illus. Dict.) 3. The native Australian name for trees of the genus *Acacia*. **W.-gum,** any true gum furnished by a tree of the genus *Acacia*.

Wave. (See Illus. Dict.) **W.s, Erb's,** undulatory movements produced in a muscle by passing a moderately strong, constant current through it and leaving the electrodes in place, the circuit remaining closed. They are sometimes seen in Thomsen's disease. **W.-length,** the length from the crest of one wave to the crest of the next.

Wax. (See Illus. Dict.) **W., Japan,** wax consisting chiefly of glyceryl palmitate obtained from the pericarp of fruits of various species of *Rhus*, growing in Japan, particularly *Rhus succedanea*, L. It occurs in yellow, greasy, flat discs, cakes, or squares, soluble in carbon disulfid, petroleum ether, hot ether, hot alcohol, or alkalis; melts about 55° C. **W., Rod,** a natural mineral wax deposited on the pump-rods in oil wells. It has been used in bronchial affections.

Weak. (See Illus. Dict.) **W. Foot,** anterior metatarsalgia. **W.-mindedness, Chronic,** "progressive loss of control of the emotions, loss of memory, and tendency to collect articles of no value on the one hand, while there is thoughtless and reckless extravagance on the other, a redevelopment of lust and a tendency to intemperance." [Savage.]

Weakness. (See Illus. Dict.) **W., Cerebroacous-**

tic, Goltz's term for temporary deafness due to a lesion of the acoustic area of the cerebral cortex. **W., Cerebrooptical,** Goltz's name for temporary blindness due to a lesion of the visual area of the cerebral cortex.

Weber Meter-candle. See *Meter-candle.*

Westphal-Piltz's Pupil Phenomenon. See *Reflex, Gifford's.*

Wheezing. (See Illus. Dict.) **W. of Horses,** difficulty of respiration due at times to mechanical causes or presence of a tumor on the larynx.

Whettle-bones. The vertebras.

Whiskey. (See Illus. Dict.) **W., Bourbon,** a corn whiskey made originally in Bourbon County, Kentucky.

White. (See Illus. Dict.) **W., Permanent,** a commercial name for barium sulfate, Ba_2SO_4, used considerably as a substitute for white lead.

Whitlow. (See Illus. Dict.) **W., Melanotic,** a form of melanotic sarcoma simulating whitlow in appearance.

Wicking (*wik'-ing*). Loosely twisted unspun roving; it is employed in packing cavities.

Willemite (*wil'-em-it*) [named after William I, king of the Netherlands]. A native zinc silicate abundant in New Jersey.

Wind. (See Illus. Dict.) **W., Evening.** See *W., Mountain.* **W., Local,** one peculiar to and affecting the climate and healthfulness of a given region. Cf. *Foehn, Harmattan, Khamsin, Mistral, Norther, Simoon, Sirocco, Solano, Mumuku.* **W., Morning.** See *W., Valley.* **W., Mountain,** in climatology, the diurnal current of air in mountain valleys which generally moves downward from higher to lower altitudes; also called the evening wind. **W., Valley,** the diurnal current of air in mountain valleys which generally moves upward from the valley; also called morning wind.

Wine-press of Herophilus. See *Torcular* (Illus. Dict.).

Winter's Bark. (See Illus. Dict.) **W.-b., False,** the bark of *Cinnamodendron corticosum,* Miers., of the order *Canellaceæ,* indigenous to the West Indies.

Winterne (*win'-turn*). $C_{15}H_{24}$. An essential oil obtained from Winter's bark.

Winternitz's Extract of Bilberries. See under *Vaccinium myrtillus.*

Witherite (*with'-ur-it*) [*W. Withering,* English physician, 1741–1799]. Native barium carbonate.

Woandsu. See under *Voandzeia subterranea,* Dup.

Woen-kow. See *Eumenol.*

Wolf-flaps. Whole skin-flaps without pedicles.

Womb. (See Illus. Dict.) **W.-mirror.** See *Speculum matricis.*

Wongsby (*wongs'-be*). A yellow dye of Batavia obtained from the seed-vessels of plants of the gentian family.

Woolner's Tip. See *Tip.*

Woorali, Wooraly. Same as *Curare.*

Worm Bark. The bark of *Andira inermis,* H. B. K.

Wound. (See Illus. Dict.) **W., Penetrating,** one that pierces the walls of a cavity or enters into an organ. **W., Physiologic,** Gerhard's name for a locus minoris resistentiæ.

Wourari, Wouraru. See *Curare* (Illus. Dict.).

Wournils. See *Warbles* (Illus. Dict.).

Wrightin (*ri'-tin*). $C_{34}H_{40}N_2$. Stenhouse's name for an alkaloid first found by R. Haines, 1858, in Conessi bark, *Wrightia zeylanica,* R. Br., and named by him "conessin." It is a whitish or yellow-brown powder with bitter taste, slightly soluble in water or alcohol, melts 122° C.; used as an astringent and anthelmintic.

Wryneck. (See Illus. Dict.) **W., Spasmodic,** a serious form of spasmodic tic, consisting of a clonic spasm of the cervical muscles. Syn., *Spasmodic Torticollis, Torticollis spasmodica, Chronic Spasm in the Area of the Nervus accessorius, Spinal-accessory Spasm;* Fr. *Tic rotatoire.* Ger. *Nickkrampf.*

Wurras, Wurrus (*wur'-as, -us*). The native name in India for the coloring-matter extracted from the red glands of the fruit capsules of *Mallotus philippinensis,* Müll. (*q. v.*). Cf. *Rothlerin.* The name is also used incorrectly for kamala (*q. v.*). See *Warras* (Illus. Dict.).

Wyman's Strap. An arrangement of straps for holding a violently insane person in bed.

X

Xanthalin (*zan'-thal-in*) [ξανθός, yellow]. $C_{27}H_{36}N_2O_3$. An alkaloid from opium; a white, crystalline substance, forming yellow salts.

Xanthematin (*zan-them'-at-in*) [ξανθός, yellow; αἷμα, blood]. A bitter yellow substance obtained by dissolving hematin in dilute nitric acid.

Xanthochromia (*zan-tho-kro'-me-ah*) [ξανθός, yellow; χρῶμα, color]. Tuffier and Miliau's name (1902) for the yellow hemorrhagic discoloration of the cephalorachidian fluid, diagnostic of hemorrhage of the neuraxis. The normal lutein of the serum is attributed to the color.

Xanthocreatinin. Same as *Xanthokreatinin* (Illus. Dict.).

Xanthocyte (*zan'-tho-sit*) [ξανθός, yellow; κύτος, cell]. A cell secreting a yellow pigment.

Xanthokyanopy. See *Xanthocyanopia* (Illus. Dict.).

Xantholein (*zan-tho'-le-in*). A yellow coloring-matter obtained from the bark or outer part of *Sorghum vulgare,* Pers. Cf. *Purpurolein.*

Xanthoplasty (*zan'-tho-plas-te*) [ξανθός, yellow; πλάσσειν, to form]. Plastic surgery for xanthoderma.

Xanthopocrit (*zan-thop'-o-krit*). A synonym of berberin.

Xanthostrumarin (*zan-tho-stru'-ma-rin*). A glucosid found by A. Zander in the seeds of clotburr, *Xanthium strumarium,* L.

Xanthoxylin. (See Illus. Dict.) **X. Crystals,** $C_{10}H_{12}O_4$, a substance occurring in silky crystals, soluble in alcohol or ether, insoluble in water; melt at 80° C.; obtained from the ethereal oil of Japan pepper, *Xanthoxylum piperitum,* D. C.

Xenon (*ze'-non*) [ξένος, strange]. A gaseous element discovered by Ramsay and Travers (1900) and found to occur one part in one hundred and seventy million volumes of air. Its relative density is 64. A vacuum tube charged with xenon when excited assumes a sky-blue color. It melts at 140° C. and boils at 109°.

Xeroform (*zer'-o-form*). See *Tribromphenol-bismuth* (Illus. Dict.).

Xerophyte (*zer'-o-fit*) [ξηρός, dry; φυτόν, plant]. A plant indigenous to arid regions.

Xerosis. (See Illus. Dict.) **X. epithelialis, X. infantilis, X. triangularis,** is marked by lusterless, grayish-white, foamy, greasy, very persistent deposit on the conjunctiva.

Xiphodynia (*zif-o-din'-e-ah*) [ξίφος, sword; ὀδύνη, pain]. Pain in the ensiform cartilage.

Xiphopagism (*zif-op'-a-gism*) [ξίφος, sword; πάγος, fixed]. The state or condition of a xiphopagus.

Xiphosternal. See *Xiphisternal* (Illus. Dict.).

Xiphosternum. See *Xiphisternum* (Illus. Dict.).

X-leg. Genu valgum.

X-ray Photography. Synonym of *Skiagraphy*.

Xylan (*zi'-lan*). A furfuroid occurring abundantly in straw and manure; when hydrolyzed to xylose it furnishes the most natural and favorable carbohydrate food for denitrifying organisms.

Xylene (*zi'-lēn*). See *Xylol* (Illus. Dict.).

Xylenin, Xylenobacillin. See *Zylenin, Zylenobacillin*.

Xylochloral (*zi-lo-klo'-ral*). A crystalline compound of xylose and chloral, prepared by heating with hydrochloric acid; soluble in water, melts at 132° C. It is used as a hypnotic.

Y

Yaba Bark. The bark of *Andira excelsa*, H. B. K.

Yccotli (*ik-ot'-le*). See *Thevetia yccotli*, D. C.

Yeast. (See Illus. Dict.) **Y., Chinese,** a zygomycete (*Amylomyces rouxii*) which possesses not only an asexual method of reproduction, but forms spores on the mycelial filaments; they are carried at the ends of the filaments, the mode of production being similar to that in *Mucor*. **Y.-therapy.** See *Yeast-treatment* under *Treatment*.

Yellow. (See Illus. Dict.) **Y. Fever in Ireland** (Graves). Synonym of *Relapsing fever*. **Y.-seeing, Y. Vision.** See *Xanthopsia* (Illus. Dict.).

Yohimbé or Yohimbéhe Bark. The bark of *Corynanthe yohimbé*, K. Schumann, order *Rubiaceæ*, a tree of the Cameroon region.

Yohimbin (*yo-him'-bin*). A mixture of alkaloids from the bark of *Corynanthe yohimbé*, K. Schumann; used as an aphrodisiac. Dose, $\frac{1}{10}$–$\frac{1}{6}$ gr. 3 times daily and as a local anesthetic in 1 % solution.

Yolk. (See Illus. Dict) **Y.-nucleus.** See under *Nucleus*. **Y.-platelets,** bodies found in the eggs of certain fishes; they consist of albumins, lecithins, and mineral salts, and apparently possess a crystalline structure. **Y.-stalk,** the umbilical duct.

Yttria (*it'-tre-ah*). Yttrium oxid.

Yttriferous (*it-rif'-ur-us*) [*yttrium; ferre*, to bear]. Yielding yttrium.

Z

Zaharbad [East Indian blood poison]. Vernacular for trypanosomiasis.

Zakavaska. The name given in Russia to the grains used as a ferment to produce kephyr or kumiss.

Zaleski's Hepatin. See *Ferratin of Schmiedeberg*.

Zanzolin, Zanzolina (*zan'-zel-in, zan-zel-i'-nah*). A proprietary mixture of pyrethrum flowers, *Chrysanthemum coronopifolium*, Willd., and valerian root, *Valeriana officinalis*, L.; used to combat mosquitoes.

Zapota Gum. See *Balata* (Illus. Dict.).

Zean (*ze'-an*) [*Zea*, a genus of grasses]. A highly concentrated extract of corn silk; a diuretic and urinary antiseptic.

Zematone (*zem'-at-ōn*). A proprietary remedy for asthma said to consist of extractives of *Datura stramonium*, L., *Hyoscyamus niger*, L., each 8 parts; *Grindelia robusta*, Nutt., 15 parts; *Solanum nigrum*, L., 4 parts; *Atropa belladonna*, L., 6 parts; white agaric, 5 parts; poppy capsules, 5 parts; and potassium nitrate, 22 parts.

Zero. (See Illus. Dict.) **Z., Absolute,** the point at which thermic energy is not liberated, —273.1° C.

Zerquoun minium (*zur-kwo'-un min'-e-um*). An Oriental medicine used as a substitute for red oxid of mercury, but when analyzed by Guignes was found to be magnesium silicate colored with a coal-tar dye.

Zestocausis (*zes-to-kaw'-sis*) [ζεστός, boiling hot; καῦσις, a burning]. See *Atmocausis*.

Zestocautery (*zes-to-kaw'-ter-e*). A double channeled intrauterine catheter, the outer unfenestrated tube of which is heated by steam and acts as a cautery. Cf. *Atmocautery*.

Zherbad [East Indian poison wind or miasma]. Vernacular for trypanosomiasis.

Zinc. (See Illus. Dict.) **Z. Biborate, Z. Borate.** See *Z. Tetraborate*. **Z. Bromate,** $Zn(BrO_3)_2 + 6H_2O$, a white antiseptic powder, soluble in water or ammonia. **Z. Bromid,** $ZnBr_2$, white powder with sharp metallic taste, soluble in water, alcohol, ether, or ammonia; used internally in epilepsy in dilute solution. Dose, 1–2 gr.; max. dose, 10 gr. daily. **Z. Carbolate,** white antiseptic powder slightly soluble in water or alcohol; used as a surgical dusting-powder. **Z. Chrysophanate,** brown powder soluble in alkaline solutions; used as a dressing for wounds. **Z. Cyanid,** $Zn(CN)_2$, white, poisonous, crystalline powder; used in chorea, gastralgia, etc. Dose, $\frac{1}{10}$–¼–1 gr. (0.006–0.016–0.065 gm.). Antidotes, ammonia, a mixture of iron protosulfate and persulfate, inhalation of chlorin, etc. **Z.-ethyl,** $Zn(C_2H_5)_2$, a reaction product of zinc and zinc-sodium with ethyl iodid; a very dangerous colorless liquid which takes fire in contact with

air and is decomposed violently by water; boils 118° C.; sp. gr. 1.182 at 15° C. **Z. Ferrocyanid,** $Zn_2Fe(CN)_6 + 3H_2O$, white powder, used as an alterative and antiseptic. Dose, ½–4 gr. (0.032–0.26 gm.). **Z. Formate,** $Zn(CHO_2)_2 + 2H_2O$, prismatic crystals soluble in 24 parts of water; used in gonorrhea. **Z. Gynocardate,** a yellow, granular powder, readily soluble in alcohol, ether, chloroform, or acids. Recommended in treatment of psoriasis, prurigo, and other skin-diseases. **Z. Hemol.** See under *Hemol.* **Z. Hypophosphite,** $Zn(PH_2O_2)_2 + H_2O$, used as an antiseptic, antispasmodic, and astringent. Dose, ½–1½ gr. (0.032–0.1 gm.). **Z. Ichthyol-sulfonate,** $(C_{28}H_{36}S_3O_6H)Zn_2$. See *Ichthyol, Zinc.* **Z. Iodate,** iodic acid. **Z. Lactophosphate,** an antiseptic white powder used in nervous diseases. **Z. Mercuric Cyanid.** See *Mercury and Zinc Cyanid.* **Z. Monochloracetate,** $Zn(C_2H_2ClO_2)_2$, an antiseptic. **Z. Nitrate,** $Zn(NO_3)_2 + 6H_2O$, colorless prisms soluble in water; used externally as 50% paste with flour and water as an escharotic on cancerous affections. **Z. Oleate,** $Zn(C_{18}H_{33}O_2)_2$, a reaction-product of zinc acetate and sodium oleate containing 13% of zinc oxid; soluble in carbon disulfid and petroleum benzin. **Z. Permanganate,** $Zn(MnO_4)_2 + 6H_2O$, very dark crystalline granules, soluble in water; used in aqueous solution 1:4000 as injection in gonorrhea and in 1:1000 or 2:1000 solution as eye lotion. It is incompatible with all combustible or easily oxidizable substances. **Z. Phosphite,** $2ZnHPO_3 + 5H_2O$, a granular crystalline powder used as an antiseptic and tonic. **Z. Picrate, Z. Picronitrate,** $Zn(C_6H_2(NO_2)_3O)_2 + H_2O$, yellow powder, soluble in water, used as an antiseptic. **Z. Salicylate,** $(C_7H_5O_3)_2Zn + H_2O$, colorless crystals, soluble in 25.2 parts of cold and readily in boiling water, soluble in 36 parts of ether and 3.5 parts of alcohol. Recommended as antiseptic dusting-powder and wash in various skin-diseases. **Z. Sozoiodol, Z. Sozoiodolate,** $(C_6H_2I_2(OH)SO_3)_2Zn + 6H_2O$, colorless needles, soluble in 25 parts of water, used in 2% solution in treatment of gonorrhea and in nasal catarrh in 10–15% dusting-powder. **Z. Stearate,** $Zn(C_{18}H_{35}O_2)_2$, a reaction-product of zinc sulfate and potassium or sodium stearate; a white powder darkening on exposure, soluble in benzene, oil, turpentine, and slightly in alcohol. Used in gonorrhea attenuated with 35% of europhen. **Z. Subgallate,** a compound of zinc oxid, 44%, and gallic acid, 56%, forming a greenish-gray neutral powder, insoluble in the usual solvents. It is used as an intestinal antiseptic. Dose, 0.03–0.26 gm., and externally on wounds, gonorrhea, etc. **Z. Sulfhydrate,** $Zn(SH)_2$, a white precipitate, which decomposes on becoming dry. Recommended externally and internally in the treatment of chronic eczema, psoriasis, and vegeto-parasitic dermatoses. Internally the dose is 0.03–0.13 gm.; externally in ointment (10%), combined with lanolin and lard (2:3). **Z. Sulfite,** $ZnSO_3 + 2H_2O$, small crystals slightly soluble in water; used as an antiseptic on skin-diseases. **Z. Sulfoichthyolate,** brown tarry mass used externally as an antiseptic. **Z. Sulfophenate.** See *Z. Sulfocarbolate* (Illus. Dict.). **Z. Tannate,** $Zn_3(C_{27}H_{19}O_{17})_2$, a gray astringent powder used in diarrhea. Dose, 1½–3–4½ gr. (0.1–0.2–0.3 gm.) and externally in gonorrhea. **Z. Tetraborate,** ZnB_4O_7, a white antiseptic powder soluble in acids. **Z. Trichlorocarbolate,** $Zn(C_6H_2Cl_3O)_2$, a yellow antiseptic precipitate used in skin-diseases. Syn., *Z. Trichlorophenate.* **Z.-white,** zinc oxid, ZnO.

Zingiberin (*zin-jib-er'-in*). The oleoresin of ginger.

Zinol (*zin'-ol*). A mixture of zinc acetate and alumnol; used in solution in gonorrhea.

Zionist (*zi'-on-ist*). A follower of the faith-healer, Dowie.

Zirconia (*zir-ko'-ne-ah*). Zirconium oxid, ZrO_2.

Zoescope (*zo'-es-kōp*) [ζωή, life; σκοπεῖν, to view]. See *Stroboscope.*

Zomol (*zo'-mol*) [ζωμός, meat-juice]. Name applied by Hericourt (1901) to the plasma of raw beef. Evaporated to dryness it is used as a concentrated food. Dose, 10 gm. daily.

Zomotherapy (*zo-mo-ther'-ap-e*) [ζωμός, meat-juice; θεραπεία, therapy]. Richet and Hericourt's name for their method of treatment of tuberculosis by a raw meat diet; the meat, finely hashed or scraped, is given in daily doses of 200 gm. with soup, etc.

Zone, Zona. (See Illus. Dict.) **Z., Adoral,** the zone of cilia which circumscribes the peristome or frontal plain of infusoria. **Z., Barnes' Cervical.** See *Z., Cervical* (Illus. Dict.). **Z.s, Charcot's,** the hysterogenic zones. **Z., Charcot's Posterior Root.** See *Column, Burdach's* (Illus. Dict.). **Z.s of His,** in the embryo the four thickenings which run the entire length of the medullary cord. (Minot.) **Z., Hitzig's,** a hypesthetic zone extending around the trunk in tabes dorsalis. **Z., Hypnogenous,** an area or tract, pressure upon which induces sleep. **Z., Neogenic,** the subcapsular layer of the kidney, so called because it is the one in which the most active processes are going on. **Z., Outer Gray,** of Kölliker. See *Cappa* (Illus. Dict.). **Z., Sclerotic,** a condition occurring in iritis, marked by a ring of anastomoses of deep conjunctival vessels around the periphery of the cornea, which perforate the sclerotic and anastomose with those of the iris and choroid. Syn., *Arthritic Ring.* **Zona terminalis.** See *Terma* (Illus. Dict.). **Z., Weber's Orbicular,** that portion of the iliofemoral ligament which forms a loop around the neck of the femur. **Z., Westphal's,** a zone in the posterior column of the lumbar spinal cord, which is bounded externally by the inner side of the posterior horn, internally by an imaginary anteroposterior line drawn through the point at which the posterior horn turns inward, and posteriorly by the periphery of the cord. It contains the afferent fibers concerned in the patellar reflex mechanism.

Zonulitis (*zon-u-li'-tis*). Inflammation of Zinn's zonule.

Zooamylon (*zo-o-am'-il-on*) [ζῶον, animal; *amylum,* starch]. Maupas' term for the ternary substance allied to starch and glycogen found included in the cytoplasm of certain sporozoa. Cf. *Paraglycogen.*

Zoocyst (*zo'-o-sist*) [ζῶον, animal; κύστις, cell]. Zopf's term for a variety of encysted rhizopods resembling a sporocyst, except in the thickness and number of the protective layers.

Zoodermic (*zo-o-dur'-mik*). Pertaining to or taken from the skin of some animal other than man, a form of skin-grafting (*q. v.*).

Zoogenous (*zo-oj'-en-us*) [ζῶον, animal; γεννᾶν, to produce]. Transmissible from animals to man.

Zoogony (*zo-oj'-on-e*). See *Zoogenesis* (Illus. Dict.).

Zooiatria (*zo-o-i-at'-re-ah*). See *Zoiatria* (Illus. Dict.).

Zoolak (*zo'-ol-ak*). An additional commercial name for matzoon.

Zoolite, Zoolith (*zo'-ol-it, -ith*) [ζῶον, animal; λίθος, stone]. A fossil animal or any part or specimen of it.

Zoomagnetism (*zo-o-mag'-net-izm*). Animal magnetism.

Zoonomy (*zo-on'-om-e*) [ζῶον, animal; ὄνομα, name]. A term proposed by Powell under which to group the many generalities respecting animals.

Zoopeliometry (*zo-o-pe-le-om'-et-re*) [ζῶον, animal; πέλις, pelvis]. Pelvimetry applied to cattle.

Zoopharmacology (*zo-o-far-ma-kol'-o-je*) [ζῶον, animal; *pharmacology*]. Veterinary pharmacology.

Zoophilism (*zo-of'-il-izm*) [ζῶον, animal; φιλεῖν, to love]. The love of animals; it is usually immoderate and toward certain animals, illustrated in the fanaticism of antivivisection.

Zootrophotoxism (*zo-o-tro-fo-toks'-izm*) [ζῶον, animal; τροφή, nourishment; τοξικόν, poison]. Husemann's term for poisoning with infected animal food. **Z., Gastric, Z., Intestinal,** that occurring through ingestion of spoiled flesh, milk, or cheese, and marked by cholera nostras, colic, diarrhea, fever, cramps, progressing to collapse and cyanosis. **Z., Tropeinic, Zootrophotoxismus tropeinicus,** occurs through ingestion of poisonous sausage and salted fish accompanied by symptoms similar to tropeinism. Syn., *Ptomatropism.*

Zosteric (*zos-ter'-ik*). Relating to herpes zoster.

Zosteriform (*zos-ter'-e-form*). Resembling herpes zoster.

Zygapophysis. (See Illus. Dict.) **Z., Postaxial.** See *Postzygapophyses* (Illus. Dict.). **Z., Preaxial.** See *Prezygopophysis* (Illus. Dict.).

Zygomaxillary (*zi-go-maks'-il-a-re*). See *Jugomaxillary* (Illus. Dict.).

Zygomycetes (*zi-go-mi-se'-tēz*) [ζυγόν, a yoke; μύκης, fungus]. A group of fungi characterized by sexual reproduction through the union of two similar gametes (zygospores).

Zygoneure (*zi'-go-nūr*) [ζυγόν, a yoke; νεῦρον, nerve]. A nerve-cell joining other nerve-cells.

Zygotoblast (*zi-go'-to-blast*) [ξυγόν, yoke; βλαστός, germ]. A term used by Ross (1899) as the equivalent of sporozoit (*q. v.*).

Zylenin (*zi'-len-in*). Zylenobacillin, a toxin extracted by Auclair from tubercle bacilli.

Zymase. (See Illus. Dict.) 2. The unorganized ferment or enzyme to which the fermentative activity of the yeast cell is due; discovered by E. Buchner. **Z., Buchner's,** that expressed from dried yeast; yeast-cell plasma.

Zymetology. See *Zymology* (Illus. Dict.).

Zymin. (See Illus. Dict.) 2. Sterile dried yeast, mixed with sugar and water it is used as an application for fluor albus of gonorrheal origin.

Zyminized (*zi'-min-izd*) [ζύμη, leaven]. A term applied to milk in which a fermentative change has been induced, comparable to peptonization.

Zymohydrolysis (*zi-mo-hi-drol'-is-is*) [ζύμη, leaven; ὕδωρ, water; λύειν, to loose]. The hydrolysis produced by the cleavage action of enzymes.

Zymoidin (*zi-moid'-in*). A proprietary wound antiseptic said to be a mixture of oxids of zinc, bismuth, and aluminium with iodin, boric acid, salicylic acid, carbolic acid, gallic acid, etc.

Zymometer (*zi-mom'-et-er*). See *Zymosimeter* (Illus. Dict.).

Zymophore (*zi'-mo-fōr*). See *Toxophore.*

Zymophoric, Zymophorous (*zi-mof'-or-ik, zi-mof'-or-us*) [ζύμη, leaven; φορεῖν, to bear]. Exerting a fermentative action, bearing specific fermentative properties.

Zymosia, Zymosis. (See Illus. Dict.) 3. Applied to an infectious disease on the assumption that the process of contagion and of further development is a chemic process. Ger. *Nährungskrankheit.* **Z. gastrica,** a form of organacidia gastrica in which the organic acids are due to the presence in the stomach of growing, sporulating, budding yeast.

Zymotoxic (*zi-mo-toks'-ik*) [ζύμη, leaven; τοξικόν, poison]. In the side-chain theory, relating to the hemolytic action of the toxophore group.
